- Procedures for the recording, reporting and maintenance of workplace records and information
- Environmental protection requirements

- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials and equipment relevant to researching styles and movements.

MSFFDT4013 Select, use and maintain hand tools for the creation of custom furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting and using hand tools in applications relating to custom furniture making sector and includes manufacturing specialist hand tools to support unique functions. It involves application of skills and knowledge at the highly skilled craftsman or artisan level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---------------------|-----|---|
| 1 | Identify hand tools | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to the selection and use of hand tools are verified and complied with |
| | | 1.2 | Type and range of hand tools, their functions, manufacturing specifications and quality reputations are identified and researched |
| 2 | Select hand tools | 2.1 | Hand tools most appropriate for the job are selected |
| | | 2.2 | Selected hand tools are checked for serviceability, precision settings, maintenance compliance and safety |

		2.3	Faults are rectified or passed to qualified persons for rectification
		2.4	Equipment is selected to hold or support material for hand tools application where applicable
3	Manufacture specialist hand tools	3.1	The need for specialist hand tools is established after full research and discounting of existing capabilities and availabilities
		3.2	The design of the specialist tool is completed and verified
		3.3	The material for the specialist tool is selected after full consideration of the functions and the material options
		3.4	The specialist tool is manufactured to specification
		3.5	The specialist tool is tested and modified to satisfy the function
		3.6	Design specifications are documented and retained in the enterprise filing systems
4	Use hand tools	4.1	Hand tools are safely located when not in immediate use
		4.2	Material is located and held in position for hand tool application
		4.3	Hand tools safety requirements are complied with throughout the operation
		4.4	The full capability of the hand tool is professionally applied and adjusted to achieve the required specificity of outcome
		4.5	Mid-operation maintenance is carried out to ensure continuing achievement of specified outcomes
5	Clean up work area and tools	5.1	All tools are cleaned, maintained and stored in accordance with manufacturer specifications
		5.2	Equipment is cleaned, maintained and stored
		5.3	Work area is cleared and waste removed
		5.4	Workplace documentation and/or reports are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------|---|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving• customers or suppliers may be internal or external |
| Instructions include: | <ul style="list-style-type: none">• workplace procedures relating to the use and operation of tools and equipment• production planning figures• workplace instructions:<ul style="list-style-type: none">• job sheets• plans• specifications• drawings and designs• workplace procedures relating to reporting and communications• manufacturer instructions for the use of equipment and materials |
| Hand tools include: | <ul style="list-style-type: none">• hand planes• chisels• hand saws• spokeshave |

- hammer
- mallet
- marking-out tools
- files
- rasps
- scraper
- screwdrivers
- hand drill
- straight edges
- knives
- clamps
- steel/bronze wool
- sandpaper
- brushes
- stone and whetstone
- grinder

Fault reporting includes: • verbal or written reporting

Personal protective equipment includes: • that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- work procedures/instructions
- manufacturer specifications and instructions
- standard forms of workplace process and procedures
- organisation work specifications and requirements
- legislation, regulations and codes of practice
- quality and Australian Standards and procedures

Assessment Requirements for MSFFDT4013 Select, use and maintain hand tools for the creation of custom furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Locate and apply relevant information related to hand tools
- Adopt and carry out correct procedures prior to and during use of the range of hand tools including hand planes, chisels, hand saws, spokeshave, hammer, mallet, marking-out tools, files, rasps, scrapers, screwdrivers, hand drills, straight edges, knives and clamps
- Design and manufacture one (1) specialist hand tool for a specified production function
- Tune and sharpen:
 - chisels
 - hand planes
 - spokeshave
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to use of hand tools
- Organisational and site standards, requirements, policies and procedures for use of hand tools
- Types, characteristics, uses, limitations and maintenance requirements of the range of hand tools used in furniture production
- Manufacturing specifications for hand tools
- Processes for evaluating the quality of hand tools in terms of specifications, safety, maintainability and commercial reputation
- Established communication channels and protocols
- Techniques for the design of specialised hand tools and the manufacturer of one-off tools
- Relevant problem identification and resolution
- Workplace safety requirements and WHS legislation
- Work flow within the workplace

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to range of quality hand tools and support documentation, legitimate specialist hand tool requirements and specifications.

MSFFDT4014 Set up and operate a wood-turning lathe to produce off-centre work

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers maintaining, setting up and operating a wood-turning lathe and holding devices used to produce off-centre work for the production of furniture and building work. It involves application of skills and knowledge at the highly skilled craftsman or artisan level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements and instructions relevant to lathe operations are verified and complied with
		1.2	Work instructions are used to determine job requirements including design, quality, materials, equipment and quantity
		1.3	Material for turning is selected and inspected for safety
		1.4	The wood-turning lathe, holding devices, tools and

			gauges are identified and checked for safe and efficient operations
		1.5	Procedures are determined for minimising waste
		1.6	Procedures are identified for maximising energy efficiency while completing the job
2	Set up machines with holding devices	2.1	Lathe speed is selected in accordance with job requirements, safety considerations and manufacturer recommendations
		2.2	Holding devices are mounted in accordance with job requirements and safety considerations
		2.3	Necessary gauges and tools are selected for job
3	Operate lathe	3.1	Lathe start-up instructions are carried out in accordance with manufacturer instructions
		3.2	Material is mounted in lathe in accordance with manufacturer instructions, safe handling procedures and standard workplace operating procedures
		3.3	Lathe is operated in accordance with its designed capacity, purpose and to manufacturer recommendations
		3.4	Lathe operation is monitored to ensure produce quality and output
		3.5	Waste quantities are checked and minimised
		3.6	Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures
		3.7	Problems with the required work and/or operation of the machine are identified and reported to the appropriate person
4	Clean up work area and maintain equipment	4.1	Materials that can be re-used are collected and stored
		4.2	Waste and scraps are removed following workplace procedures
		4.3	Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures
		4.4	Unserviceable equipment is tagged and faults identified in accordance with workplace procedures

- 4.5 Operator maintenance is completed in accordance with manufacturer specifications and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving
 - customers or suppliers may be internal or external
- Instructions include:**
- workplace procedures relating to the use and operation of tools and equipment
 - production planning figures
 - workplace instructions:
 - job sheets
 - plans
 - specifications
 - drawings and designs
 - workplace procedures relating to reporting and communications

- manufacturer instructions for the use of equipment and materials
- Procedures include:**
 - drawing articles from plans or samples
 - manufacturing pencil and scratch gauges
 - freehand grinding of tools
 - set-up and operation of the lathe to produce turned components
- Holding devices include:**
 - faceplates
 - scroll checks
 - function checks
- Personal protective equipment includes:**
 - that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
 - work procedures/instructions
 - manufacturer specifications and instructions
 - standard forms of workplace process and procedures
 - organisation work specifications and requirements
 - legislation, regulations and codes of practice
 - quality and Australian Standards and procedures
-

Assessment Requirements for MSFFDT4014 Set up and operate a wood-turning lathe to produce off-centre work

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up and maintain holding devices, safe speed selection and balance limitations to complete:
 - freehand turn articles between centres that have multiple axis
 - a minimum of eight (8) hand turned articles to detail between centres
 - manufacture of templates and gauges
 - scroll cut material prior to turning
 - a minimum of four (4) hand turned articles to detail with grain at 90° to the axis of the lathe
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to wood-turning

- Terminology covering wood-turning operations and materials
- Types, characteristics, used and limitations of timber species for wood-turning
- Techniques for the design and documentation of specifications for wood-turned products
- Organisational and site standards, requirements, policies and procedures for turning of wood
- Types, characteristics, uses, limitations and maintenance requirements of the range of tools used in wood-turning
- Processes for evaluating the quality of wood-turning tools in terms of specifications, safety, maintainability and commercial reputation
- Range of commonly used wood-turning techniques
- Established communication channels and protocols
- Relevant lathe and wood-turning problem identification and resolution
- Workplace safety requirements and WHS legislation
- Work flow within the workplace

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to significant wood turning requirements, including design brief or specification, a range of optional timbers, a range of quality wood turning tools, materials and specifications for the preparation of the product for finishing.

MSFFDT4015 Produce templates and jigs for custom-made furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers producing templates and jigs for custom-made furniture in a wide variety of fine woods operations. It involves application of skills and knowledge at a craftsman or artisan level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to producing templates and jigs for custom-made furniture
		1.2	Instructions, plans or design briefs are read and interpreted to identify processes and materials required to complete work tasks
		1.3	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.4	Sequence of work is planned and documented, including

			the starting point, to ensure efficiency and quality outcomes
		1.5	Quality checking procedures are developed and documented for each step in the process
2	Plan for the production of templates or patterns	2.1	Size requirements are checked in relation to the production process and finishing capacity of the workplace
		2.2	Material for pattern or template is identified for approximate size and characteristics
		2.3	Procedures for using pattern development instruments and tools are checked and equipment is prepared for use
		2.4	Each dimension is measured, exploded and plotted maintaining appropriate angles, arcs and curves
		2.5	Visual inspection and measurements are used to compare pattern dimensions and shapes with drawings and specifications
3	Complete templates or patterns	3.1	Equipment and tools are used following normal workplace procedures
		3.2	Pattern or template is completed ensuring that the pattern indicates completion date and original drawing details
		3.3	Required workplace approval of pattern or template is obtained
		3.4	Plans are marked with notations for workplace requirements, including authorship, process or customer requirements, authorisation and any review dates
		3.5	Plans are copied and filed, as required, according to workplace policies and procedures
4	Design and construct jig for custom-made furniture	4.1	Design of proposed jig or fixture is produced
		4.2	Production process incorporating jig is planned
		4.3	Tools and equipment are used following normal workplace procedures
		4.4	Jig is constructed in accordance with design and within tolerances

		4.5	Jig is used to produce prototype to ascertain its adherence to set tolerances and to assess its match to original design
		4.6	Jig is adjusted as required to meet requirements for custom-made furniture design
5	Complete housekeeping	5.1	Unused materials are stored or recycled as required
		5.2	Tools and equipment are cleaned, maintained and stored appropriately
		5.3	Faulty or defective equipment is tagged and reported in accordance with workplace practices
		5.4	Work area is cleaned and rubbish disposed of appropriately
		5.5	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

Instructions include:	<ul style="list-style-type: none">• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving• customers or suppliers may be internal or external• workplace procedures relating to the use and operation of tools and equipment• production planning figures• workplace instructions, including:<ul style="list-style-type: none">• job sheets• plans• specifications• drawings and designs• workplace procedures relating to reporting and communications• manufacturer instructions for the use of equipment and materials
Tools and equipment include:	<ul style="list-style-type: none">• computer numerically controlled (CNC) machines• static woodworking machines• relevant hand tools• routers• spindle moulders• panel saws• copy shapers• radial arm saws
Materials include:	<ul style="list-style-type: none">• manufactured board• solid timbers• composite materials
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work procedures/instructions• manufacturer specifications and instructions• standard forms of workplace process and procedures• organisation work specifications and requirements• legislation, regulations and codes of practice• quality and Australian Standards and procedures

Assessment Requirements for MSFFDT4015 Produce templates and jigs for custom-made furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare a minimum of two (2) templates and two (2) jigs for custom-made furniture
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the production of templates and jigs
- Organisational and site standards, requirements, policies and procedures for the production of templates and jigs
- Types, characteristics, uses and limitations of templates and jigs
- Techniques for the manufacture and application of templates and jigs
- The interpretation of plan representation of furniture design
- The preparation of drawings/set-outs

- Types, characteristics, uses and limitations of tools and equipment and procedures for their safe use, operation and maintenance
- Work flow in relation to furniture production
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to realistic tasks, equipment, materials and specifications for the production of jigs and templates for custom-made furniture.

MSFFDT5001 Apply ergonomics, anthropometrics and proxemic considerations to a product

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying ergonomic, anthropometric and proxemic considerations to a product with integral design elements and principles based on a given design brief in an industry workplace or design studio environment. It involves application of skills and knowledge at a paraprofessional level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan for application	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to applying ergonomics, anthropometrics and proxemic considerations to a product are verified and complied with
		1.2	Design brief is reviewed, confirmed and clarified with appropriate personnel
		1.3	Client requirements and desires are reviewed, confirmed and clarified

- | | | |
|---|---|--|
| | 1.4 | Communication with others is established and maintained |
| | 1.5 | Problems or underlying factors to be addressed by the design brief are verified |
| | 1.6 | Elements of design are diagnosed for the intended design brief |
| | 1.7 | Principles of design are diagnosed for the intended design brief |
| 2 | Apply ergonomics, anthropometrics and proxemics | |
| | 2.1 | Concepts for the proposed solution to the design brief are reviewed for ergonomic, anthropometric and proxemic considerations |
| | 2.2 | Human body functions are assessed in the context of solutions for possible problems in supporting bodies of all shapes and sizes |
| | 2.3 | Ergonomic factors of a design are interrogated and refined |
| | 2.4 | Anthropometric factors of a design are interrogated and refined |
| | 2.5 | Proxemic considerations of a design are interrogated and reviewed |
| | 2.6 | Sample maquette and prototype are reviewed in accordance with ergonomics, anthropometrics and proxemics |
| | 2.7 | Different solutions to satisfy the requirements of the design brief are explored and reviewed |
| | 2.8 | Final working drawings in full scale are developed to test the ergonomic values of a design |
| | 2.9 | Specifications are reviewed and compiled in readiness for production |
| | 2.10 | Concept is planned for manufacture taking into account available equipment, resources, production sequences, schedules and timelines |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---------------------------------------|---|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving• customers or suppliers may be internal or external |
| Design brief includes: | <ul style="list-style-type: none">• the aims, objectives, milestones for the design project• organisational or personal profiles• target audience• budget• timeline• consultation requirements• colour requirements• image requirements• function |
| Appropriate personnel include: | <ul style="list-style-type: none">• trainers• supervisors• suppliers• clients• colleagues• managers |

Clients include:

- suppliers
- manufacturers
- private clients
- colleagues
- retailers
- the public

Principles of design include:

- balance
- proportion (symmetry and asymmetry)
- harmony
- contrast
- pattern
- movement
- rhythm
- unity
- style
- focus
- scale
- dominant
- sub-dominant
- subordinate relationship
- emphasis
- proximity
- alignment
- space
- anthropometry
- ergonomics
- arrangement
- workload materials handling capacity
- skills available
- equipment capabilities
- aesthetic relations
- tension
- development methods

Concepts include:

- ideas generated to respond to the design brief through both ideation drawings or sketching and written explanation

Ergonomics include:

- the study of the efficiency of persons in their working environment

Anthropometrics include:

- the scientific study of the measurements of the human body

Proxemics include:

- the study of socially conditioned spatial factors in ordinary human relations

Maquette includes:	<ul style="list-style-type: none">• a miniature version of the intended final product to establish if the elements and principles of design have been achieved
Prototypes include:	<ul style="list-style-type: none">• a full size replica of the intended product outcome based on concept sketches and freehand development drawings, produced from stiff cardboard, scrap timber or moulding clay
Working drawings include:	<ul style="list-style-type: none">• drafted technical drawings or drawings produced on computer using computer-aided design (CAD) software packages
Specifications include:	<ul style="list-style-type: none">• the measurements and procedures by which a product is constructed, and materials to be utilised
Manufacturing processes include:	<ul style="list-style-type: none">• the methods by which the product will be produced, these steps entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Information and procedures include:	<ul style="list-style-type: none">• work procedures/instructions• manufacturer specifications and instructions• standard forms of workplace process and procedures• organisation work specifications and requirements• legislation, regulations and codes of practice• quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFDT5001A Apply ergonomics, anthropometrics and proxemic considerations to a product

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFFDT5001 Apply ergonomics, anthropometrics and proxemic considerations to a product

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply ergonomics, anthropometrics and proxemic considerations to enhance a product for a design brief
- Apply design elements and principles to the application of ergonomics, anthropometrics and proxemic considerations to a product
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for applying ergonomics, anthropometrics and proxemic considerations to a product
- Organisational and site standards, requirements, policies and procedures for applying ergonomics, anthropometrics and proxemic considerations to a product
- Elements and principles of design

- Ergonomics, anthropometrics, proxemics and aesthetic values
- Human body functions
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Relevant computer programs
- Product machining, assembly and finishing techniques
- Sketching and drawing
- Storage systems and labelling
- Australian Standards for product design
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials and equipment relevant to applying ergonomics, anthropometrics and proxemic considerations to a product and specifications

MSFFDT5002 Assess and resolve technical integrity of a design

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assessing and resolving technical integrity of a design for a product using fundamental design elements and principles in an industry workplace or design studio environment. It involves application of skills and knowledge at a paraprofessional level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for assessment	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to assessing and resolving technical integrity of a design are verified and complied with
		1.2	Design brief is reviewed, confirmed and clarified with appropriate personnel
		1.3	Communication with others is established and maintained
		1.4	Problems or underlying factors being addressed by the design brief are verified

- | | | | |
|---|-----------------------------|-----|--|
| | | 1.5 | Client requirements and desires are reviewed, confirmed and clarified |
| | | 1.6 | Elements of design are assessed for the intended outcome |
| | | 1.7 | Principles of design are assessed for the intended outcome |
| 2 | Assess technical integrity | 2.1 | Requirements of the brief are prioritised and assessed for conflicts |
| | | 2.2 | Integrity of a design is tested for structural and ergonomic compliance |
| | | 2.3 | Mechanical strength and stress points of a design are evaluated and reported |
| | | 2.4 | Success and failure points of a design are analysed and reviewed |
| | | 2.5 | Distinctive and strong points of a design are highlighted and recorded |
| | | 2.6 | Level of innovation and technical merit of a design is assessed and recorded |
| 3 | Resolve technical integrity | 3.1 | Most suitable materials, equipment and manufacturing processes to resolve the technical faults of a brief are assessed to comply with the requirements |
| | | 3.2 | Alternative design solutions for a technical failure are researched and instigated |
| | | 3.3 | Restoration of existing designs are considered and acted upon for viable cases |
| | | 3.4 | Final documentation outlining the full analysis of the design brief is compiled and produced as a report |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---------------------------------------|---|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving• customers or suppliers may be internal or external |
| Design brief includes: | <ul style="list-style-type: none">• the aims, objectives, milestones for the design project• organisational or personal profiles• target audience• budget• timeline• consultation requirements• colour requirements• image requirements• function |
| Appropriate personnel include: | <ul style="list-style-type: none">• trainers• supervisors• suppliers• clients• colleagues• managers |

Clients include:	<ul style="list-style-type: none">• suppliers• manufacturers• private clients• colleagues• retailers• the public
Elements of design include:	<ul style="list-style-type: none">• line• shape• form (geometric or organic)• texture• colour• function
Principles of design include:	<ul style="list-style-type: none">• balance• proportion (symmetry and asymmetry)• harmony• contrast• pattern• movement• rhythm• unity• style• focus• scale• dominant• sub-dominant• subordinate relationship• emphasis• proximity• alignment• space• anthropometry• ergonomics• arrangement• workload materials handling capacity• skills available• equipment capabilities• aesthetic relations• tension• development methods
Structural includes:	<ul style="list-style-type: none">• construction methods for all or parts of a designed product which are not intended to fail under regular and continual use

Ergonomics include:	<ul style="list-style-type: none">• the study of the efficiency of persons in their working environment
Mechanical strength includes:	<ul style="list-style-type: none">• the strength of parts or joints under the pressure of operation in general usage situations
Materials include:	<ul style="list-style-type: none">• timber (native and imported)• man-made timber products• plastic• metal• alloys• stone• glass• textiles• fibreglass• foam• cardboard• paper products• any other manipulable substance
Equipment includes:	<ul style="list-style-type: none">• hand tools• static machinery• portable power tools and computer numerically controlled (CNC) equipment• and also includes procedures for lock out protecting operators and co-workers from accidental injury by isolating the machine from the power source
Manufacturing processes include:	<ul style="list-style-type: none">• the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work procedures/instructions• manufacturer specifications and instructions• standard forms of workplace process and procedures• organisation work specifications and requirements• legislation, regulations and codes of practice• quality and Australian Standards and procedures

Assessment Requirements for MSFFDT5002 Assess and resolve technical integrity of a design

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply design elements and principles to assess and resolve technical integrity of a design, working through the design process, assessing the requirements and recording the intended resolution
- Produce a report on the intended resolution as a result of assessing and resolving technical integrity of a design
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to assessing and resolving technical integrity of a design
- organisational and site standards, requirements, policies and procedures for assessing and resolving technical integrity of a design
- Environmental protection requirements

- Established communication channels and protocols
- Relevant design integrity problem identification and resolution
- Elements and principles of design
- Technical integrity of design
- Ergonomics and aesthetic values
- Types of tools, equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Product assembly techniques and equipment capabilities
- Sketching and drawing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to assessing and resolving technical integrity of a design.

MSFFDT5003 Develop self as a furniture designer

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers developing self as a furniture designer technically, professionally and artistically through research and reflection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Critically analyse and evaluate products and images for visual aesthetics	1.1	Qualities of three-dimensional (3-D) principles and elements of design are identified and reviewed from reference material
		1.2	Products and images are evaluated for 3-D elements and principles and recorded in accordance with enterprise practice
		1.3	Cultural and psychological factors of visual appeal are identified from reference documents and recorded in accordance with enterprise practice and requirements
		1.4	Products and images are assessed for cultural and psychological factors influencing their aesthetic appeal

2	Use a visual language in own work	2.1	Own work is documented and collated
		2.2	Works are analysed for contemporary visual aesthetic design elements and principles
		2.3	Visual language is developed within own work
		2.4	Visual language in own work is recognised and recorded in accordance with enterprise practice
3	Critically analyse social and ethical issues in contemporary society affecting furniture design	3.1	Details of social and ethical issues in contemporary society which may impact on the furniture are identified and documented in accordance with enterprise practice
		3.2	Issues are analysed against the practice of furniture design and conclusions are recorded in accordance with enterprise practice
		3.3	Conclusions are used to influence new design developments
4	Recognise historical context of furniture products	4.1	Details of furniture from historical periods are identified from reference materials and existing examples and recorded in accordance with enterprise practice
		4.2	Historical design elements and details are identified in own design proposals and product
		4.3	Contemporary design elements are assessed against details of historical periods and recorded in accordance with enterprise practice
5	Critically analyse and recognise the impact of art and design movements on the development of products	5.1	Dominant ideas and details of art and design movements are identified from reference material or product examples
		5.2	Product proposals are assessed for visual attributes and results are recorded in accordance with enterprise practice
		5.3	Design attributes are compared with the dominant ideas and details of art and design movements and results recorded in accordance with enterprise practice
6	Identify technical skill needs to improve own practice of	6.1	Details of current design skills are identified and documented
		6.2	Needs analysis for improvement of own design practice is undertaken

designing products	6.3	Details of technical skills required to improve are documented
	6.4	Training opportunities for required technical skills are identified and documented
7 Establish networks with other furniture designers, makers and other design professionals	7.1	Career relationships with other design professionals are mapped
	7.2	New areas of network possibilities are identified and documented
	7.3	New network contacts are established with other furniture design professionals

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving

Principles and elements

- point

of design include:

- line
- plane
- volume
- shape
- form
- tone
- colour
- surface
- texture
- scale
- size
- vertex
- edge
- face
- position
- direction
- space
- balance
- movement
- proportion
- rhythm
- repetition
- pattern
- relief
- mass
- movement

Visual language includes:

- the visual traits in work and proposals which communicate clearly information needed

Social and ethical issues include:

- social justice
- environmental sustainability
- biodiversity
- cultural heritage
- social responsibility of furniture makers

Historical art and design periods and movements include:

- historical periods of furniture styles from Egyptian to deconstructivism
- design schools and groups from the 20th and 21st Centuries

Information and procedures include:

- work procedures/instructions
- manufacturer specifications and instructions
- standard forms of workplace process and procedures
- organisation work specifications and requirements
- legislation, regulations and codes of practice

- quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFDT5004A Develop self as a furniture designer

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFFDT5003 Develop self as a furniture designer

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing
- Report on design principles and elements for at least three (3) other furniture designer's product and produce a documented portfolio of own work
- Identify visual language in own work and further develop this through subsequent projects
- Document ethical issues in design, manufacture and society in accordance with enterprise practice
- Identify and document art and design movements, elements and historical context in own product
- Identify and document personal skill needs, including:
 - conducting and documenting a needs analysis on required design skills
 - preparing and producing a training plan and career map
 - establishing and maintaining networks with other professionals
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- Art and design movements
- Elements and principles of design
- Furniture historical periods
- Cultural factors on aesthetic appeal
- Psychological factors on aesthetic appeal
- Critical analysis techniques
- Contemporary techniques and technologies for preparation and presentation of design information
- Established communication channels and protocols
- Personal needs identification

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to specific information covering aesthetic appeal, historical context, art and design movements, details of enterprise practice and the technical skills needs of contemporary furniture makers.

MSFFDT5004 Construct custom furniture using advanced techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers constructing original and unique custom furniture using or adapting traditional and innovative construction techniques. It includes interpreting and adapting design specifications that are compatible with the product material, purpose and style of the furniture and involves application of skills and knowledge at a highly skilled artisan level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential

operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving
 - customers or suppliers may be internal or external
- Instructions include:**
- workplace procedures relating to the use and operation of tools and equipment
 - production planning figures
 - workplace instructions:
 - job sheets
 - set-outs
 - plans
 - specifications
 - drawings and designs
 - workplace procedures relating to reporting and communications
 - manufacturer instructions for the use of equipment and materials
- Shaping, bending and forming techniques include:**
- steam/heat bending
 - curfing
 - pressure bending
 - shaping by hand or static machine
- Shaped components include:**
- timber shaped by hand or static machine tools
- Cutting and shaping tools and equipment include:**
- measuring tapes and rules
 - hammers
 - mallets
 - squares
 - bevels
 - chisels
 - planes

- hand saws
- power saws
- power drills/screwdrivers
- pneumatic tools
- clamps
- screwdrivers
- pincers
- rasps
- surface planers
- panel planers
- belt sanders
- horizontal borers
- vertical drill presses
- table saws
- dove-tailers
- pedestal grinders
- wood turning lathes
- veneer guillotines
- presses

Materials include:

- timber
- glass
- metal
- manufactured board
- furniture hardware
- adhesives
- screws
- nails
- dowels
- decorative finishes
- finishing material

Veneering tools and equipment include:

- knives
- chisels
- measuring tapes or rules
- mallets
- squares
- levels
- planes
- band saws
- power saws
- pneumatic tools
- vacuum bags and presses
- clamps

	<ul style="list-style-type: none">• moulds• jigs and fixtures• rollers• laminate trimmers• cutters and hand routers• sandpaper• wire wool• sanding block
Veneered components include:	<ul style="list-style-type: none">• thin slices of wood, usually thinner than 3 mm (1/8"), which is usually glued onto a substrate
Veneer materials include:	<ul style="list-style-type: none">• timber• manufactured board• laminates• timber strips• adhesives• cleaning materials• tapes
Joints and variations of joints for custom furniture include:	<ul style="list-style-type: none">• dowel• mortise and tenon• dovetail• lap joint• biscuit joint• finger joint• housing joint• mitre• bridle joints
Jointing tools and equipment include:	<ul style="list-style-type: none">• chisels• mallets• mortise gauges• vernier callipers• vices• dovetail saws• tenon saws• coping saws• planes• files• hand drills• power drills• dowel jigs• power routers• jigs and fixtures

	<ul style="list-style-type: none">• portable biscuit machines• power saws
Jointing materials include:	<ul style="list-style-type: none">• timber (both indigenous and overseas)• adhesives• fasteners
Sub-assembly includes:	<ul style="list-style-type: none">• part-constructions of the main assembly needed to allow for gluing and clamping of internal and intricate parts of the furniture item
Assembly materials include:	<ul style="list-style-type: none">• timber (both indigenous and overseas)• adhesives• screws• dowels• furniture hardware• glass• decorative finishes
Assembly tools and equipment include:	<ul style="list-style-type: none">• measuring tapes or rules• hammers• mallets• squares• clamps• presses
Furniture surface preparation includes:	<ul style="list-style-type: none">• sanding by hand or power sander• scraping• planing• other smoothing techniques• and is to take account of the fact that the wood's colour may be changed by staining, bleaching, painting, ammonia fuming and/or a number of other techniques
Surface filling includes:	<ul style="list-style-type: none">• using wood plugs or other fillers
Finishing processes and materials include:	<ul style="list-style-type: none">• waxing• shellacking• nitrocellulose lacquering• conversion lacquering• linseed oiling• tung oiling• alkyd varnishing• polyurethane varnishing• water-based polyurethane and/or oil-varnish mixes
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- work procedures/instructions
- manufacturer specifications and instructions
- standard forms of workplace process and procedures
- organisation work specifications and requirements
- legislation, regulations and codes of practice
- quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFDT5005A Construct custom furniture using advanced techniques

Assessment Requirements for MSFFDT5004 Construct custom furniture using advanced techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete all aspects of the construction and finishing of two (2) furniture items requiring advanced construction techniques and satisfying high-quality custom-made furniture standards and expectations in terms of innovation, complexity, tolerance and fit of components and quality
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to moisture suppressants and barrier systems
- Organisational, workshop and site standards, requirements, policies and procedures for the construction of custom furniture
- Types of tools and equipment used in construction and procedures for their safe use, operation and maintenance

- Work flow techniques appropriate for the management of the construction work/project
- Presentation and interpretation of plan representation of a furniture design
- Techniques for timber bending, forming and shaping
- Techniques for the preparation of drawings/set-outs/rods and geometrical concepts
- Types, characteristics, uses and limitations of materials
- Techniques for the manufacture and application of veneers
- Techniques for assembly, fixing and finishing of custom furniture components
- Types, characteristics, uses, limitations and safety requirements of adhesives, fasteners and hardware used in custom furniture assembly
- Matching requirements of adhesives and fasteners to timbers/materials used
- Finishing techniques
- Characteristics, properties and selection criteria of finishing materials
- Finishing characteristics and properties of timber being used
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to an agreed unique and innovative furniture construction requirement/project, appropriate materials, tools, equipment and specifications relevant to constructing custom furniture.

MSFFDT5005 Design a batch or limited production item of furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying the qualities of a batched or limited production furniture item and the design of a contemporary furniture product for a client or retail outlet that requires batch or limited production methodology in a wide variety of furniture making operations. It includes details and fittings being produced with jigs and fixtures to allow for further batches to be made.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify and analyse qualities and properties of batched or limited production furniture items	1.1	Applicable work health and safety (WHS), legislative and enterprise requirements relevant to the design of batch or limited production items of furniture are verified and complied with
		1.2	Details of the qualities and properties of batch produced furniture making methods are identified
		1.3	Features of limited production methods are identified
		1.4	Resource and equipment implications for batch and

			limited production methods are assessed
2	Research product needs	2.1	All external parameters affecting the design of the contemporary furniture product are obtained from the client or from information sources
		2.2	Client or market needs for contemporary product are obtained and recorded
		2.3	Inspirational information is collected from relevant sources
		2.4	Visual needs of the product are identified and documented
		2.5	Ethical considerations are obtained, reviewed and documented
		2.6	Product needs are prioritised and recorded in accordance with enterprise practice
3	Prepare the design brief	3.1	Product needs and external parameters and factors are reviewed and clarified with the client or retail customers
		3.2	Report on product needs is produced, including design opportunities
		3.3	Feedback from the client or customer is gained and recorded
		3.4	Details of changes are negotiated with the client or customer and recorded
		3.5	Outcomes of design process are clarified and agreed to with the client or customer
		3.6	Design brief is prepared and documented, including budget, timelines, production needs and methods
4	Generate ideas in response to design brief	4.1	All relevant information on product and client needs are analysed and integrated into generation of ideas using lateral thinking methods
		4.2	Ideas are visually presented
		4.3	Ideas are matured through review and re-working
		4.4	New ideas are generated from initial ideas
		4.5	Final ideas are visually presented

5	Evaluate and develop design proposals	5.1	Each design idea is evaluated against design brief and requirements for batch or limited production manufacture
		5.2	Design proposals are scored against weighted assessment criteria and results recorded
		5.3	Feasible high scoring design proposals are selected for further development
		5.4	Design proposals are completed in response to evaluation feedback
6	Present product proposals to client	6.1	Product proposals are prepared for presentation to client
		6.2	Presentation arrangements are made, checked and confirmed
		6.3	Design proposals are presented to the client
		6.4	Client feedback is gained, analysed and confirmed
		6.5	Design proposals are completed with consideration to client feedback
7	Produce final product proposal information ready for making	7.1	Construction details are finalised and documented
		7.2	Visual aspects of product proposal are documented
		7.3	Part details are documented
		7.4	Manufacturing methods are documented
		7.5	Details are recorded in accordance with enterprise practice

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFDT5005 Design a batch or limited production item of furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify the limitations and opportunities of batch and limited production design work for contemporary furniture products and develop and present final proposals for batch and limited production furniture items to meet a design brief
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the design of furniture products
- Ideas generation and conceptual development techniques
- Historical furniture styles and movements
- Contemporary furniture styles and movements
- Furniture design methodology
- Current ethical issues in society affecting furniture makers
- Ergonomic and anthropometric standards
- Environmental issues in making a furnishing product

- Visual aesthetics of furnishing products
- Current market segment products
- Batch production techniques for product types
- Production methodologies of furniture makers
- Physical needs of product type
- Materials and finishes used to produce furnishing products
- Making techniques for product types
- Costing techniques including overhead components
- Options and technologies for presenting visual information
- Established communication channels and protocols
- Relevant production problem identification and resolution methods
- Relevant document control methods.

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic product need, specific information covering client needs, batch production capabilities, details of the product requirements and options.

MSFFDT5006 Design a furniture product using high volume technology services (HVTS) in production

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying qualities of high volume technology production and designing a furniture product which utilises this technology to produce details and components for the design. It applies to a custom furniture business and/or design support environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify and analyse qualities and properties of HVTS	1.1	Applicable work health and safety (WHS), legislative and enterprise requirements relevant to the design of furniture product using HVTS are verified and complied with
		1.2	Details of types of HVTS production methods are identified and documented
		1.3	Details of qualities and properties of HVTS are analysed and reviewed for suitability for furniture products
		1.4	Features of HVTS production methods are identified

		1.5	Resource and equipment implications for HVTS production methods are assessed
2	Research product needs	2.1	All external parameters affecting the design of the furniture product are obtained from the client or from information sources
		2.2	Client needs for product are obtained and recorded
		2.3	Inspirational information is collected from relevant sources
		2.4	Visual needs of the product are identified and documented
		2.5	Ethical considerations are obtained, reviewed and documented
		2.6	Product needs are prioritised and recorded in accordance with enterprise practice
3	Prepare the design brief	3.1	Product needs and external parameters and factors are reviewed and clarified with the client
		3.2	Report on product needs is produced, including HVTS opportunities
		3.3	Feedback from the client is recorded
		3.4	Details of changes are negotiated with client and recorded
		3.5	Outcomes of design process are clarified and agreed to with client
		3.6	Design brief is prepared and documented, including budget, timelines, production needs and methods
4	Generate ideas in response to design brief	4.1	All relevant information on product need and client needs are analysed and absorbed
		4.2	Ideas are generated from information provided using lateral thinking methods
		4.3	Ideas are visually presented
		4.4	Ideas are matured through review and re-working
		4.5	New ideas are generated from initial ideas

		4.6	Final ideas are visually presented
5	Evaluate and develop design proposals	5.1	Each design idea is evaluated against design brief and requirements for HVTS production
		5.2	Design proposals are scored against weighted assessment criteria and results recorded
		5.3	Feasible high scoring design proposals are selected for further development
		5.4	Design proposals are completed in response to evaluation feedback
6	Present product proposals to client	6.1	Product proposals are prepared for presentation to client
		6.2	Presentation arrangements are made, checked and confirmed
		6.3	Design proposals are presented to the client
		6.4	Client feedback is gained, analysed and confirmed
		6.5	Design proposals are completed with consideration to client feedback
7	Produce final product proposal information ready for making	7.1	Construction details are finalised and documented
		7.2	Visual aspects of product proposal are documented
		7.3	Part details are documented
		7.4	Manufacturing methods are documented
		7.5	Details are recorded in accordance with enterprise practice

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFDT5006 Design a furniture product using high volume technology services (HVTs) in production

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify the features of HVTs and required specifications when designing a furniture product
- Document and communicate three (3) product proposals, including:
 - customer requirements
 - aesthetics
 - materials and construction
 - costing calculations for products, materials and finishes
 - HVTs components
- Document the product needs analysis and evaluate product proposals
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

MSFFDT5007 Design a one-off item of furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying the qualities of a one-off designed furniture item and designing a furniture product for a client or for exhibition based on those qualities. It can apply to a custom furniture business and/or design support environment and can include custom-made details and fittings in the construction of the product.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify and analyse qualities and properties of one-off made furniture items	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the design of one-off furniture items are verified and complied with
		1.2	Details of the qualities and properties of one-off made furniture methods are identified, reviewed and documented
		1.3	Details are recorded in accordance with enterprise practice
2	Prepare design brief	2.1	Product needs and external parameters and factors are reviewed and clarified with the client

- | | | | |
|---|--|-----|--|
| | | 2.2 | Report on product needs is produced, including design opportunities |
| | | 2.3 | Feedback from the client is recorded |
| | | 2.4 | Details of changes are negotiated with client and recorded |
| | | 2.5 | Outcomes of design process are clarified and agreed to with client |
| | | 2.6 | Design brief is prepared and documented, including budget, timelines, production needs and methods |
| 3 | Generate ideas in response to design brief | 3.1 | All relevant information on produce need and client needs are analysed and absorbed |
| | | 3.2 | Ideas are generated from information provided using lateral thinking methods |
| | | 3.3 | Ideas are visually presented |
| | | 3.4 | Ideas are matured through review and re-working |
| | | 3.5 | New ideas are generated from initial ideas |
| | | 3.6 | Final ideas are visually presented |
| 4 | Evaluate and develop design proposals | 4.1 | Each design idea is evaluated against prioritised product and client needs and recommendation recorded |
| | | 4.2 | Design proposals are scored against weighted assessment criteria and results recorded |
| | | 4.3 | Feasible high scoring design proposals are selected for further development |
| | | 4.4 | Design proposals are developed in response to evaluation feedback |
| 5 | Present product proposals to client | 5.1 | Product proposals are prepared for presentation to client |
| | | 5.2 | Presentation arrangements are made, checked and confirmed |
| | | 5.3 | Design proposals are presented to the client |
| | | 5.4 | Client feedback is gained, analysed and confirmed |
| | | 5.5 | Design proposals are completed with consideration to |

			client feedback
6	Produce final product proposal information ready for making	6.1	Construction details are finalised and documented
		6.2	Visual aspects of product proposal are documented
		6.3	Part details are documented
		6.4	Manufacturing methods are documented
		6.5	Details are recorded in accordance with enterprise practice

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving
- customers or suppliers may be internal or external

Inspirational information includes:

- catalogues
- brochures

Visual needs of the product include:

- magazines
- existing products
- reference books
- other existing enterprise design information
- transferable technological ideas or concepts
- natural or man-made structures and objects
- point
- line
- plane
- volume
- shape
- form
- tone
- colour
- surface
- texture
- scale
- size
- vertex
- edge
- face
- position
- direction
- space
- balance
- movement
- proportion
- rhythm
- repetition
- pattern
- relief
- mass
- movement

Ethical considerations include:

- social justice
- environmental sustainability
- biodiversity
- cultural heritage
- social responsibility of furniture makers

Lateral thinking methods include:

- suspending belief
- looking for gaps of need alternatives
- daydreaming
- creative leaping

Information and procedures include:

- filaments
- brainstorming
- six thinking hats
- asking questions of norms and beliefs
- work procedures/instructions
- manufacturer specifications and instructions
- standard forms of workplace process and procedures
- organisation work specifications and requirements
- legislation, regulations and codes of practice
- quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFDT5009A Design a one-off item of furniture

Assessment Requirements for MSFFDT5007 Design a one-off item of furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify the limitations and opportunities of one-off design for furniture product and produce and communicate three (3) product proposals, including:
 - customer requirements
 - aesthetics
 - materials and construction
 - costing calculations for products
 - materials and finishes
- Document the product needs analysis, visual references, physical constraints and the evaluation of initial product proposals
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the design of furniture maker product
- Ideas generation and conceptual development techniques

- Historical furniture styles and movements
- Contemporary furniture styles and movements
- Furniture design methodology
- Current ethical issues in society affecting furniture makers
- Ergonomic and anthropometric standards
- Environmental issues in making a furnishing product
- Visual aesthetics of furnishing products
- Current market segment products
- Production methodologies of furniture makers
- Physical needs of product type
- Materials used to produce furnishing products
- Furniture materials and finishes
- Making techniques for product types
- Costing techniques, including overhead components
- Options and technologies for presenting visual information
- Established communication channels and protocols
- Relevant design and production problem identification and resolution methods
- Relevant document control methods

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic product need, specific information covering client needs, manufacturing capabilities, details of the product requirements and options.

MSFFDT5008 Research and recommend alternative manufacturing processes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching and recommending alternative manufacturing processes for various design solutions in accordance with the integral elements and principles of design. It applies to an industry workplace or design studio environment and involves application of skills and knowledge at a paraprofessional level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan for alternative manufacturing research	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending alternative manufacturing processes are verified and complied with
		1.2	Design brief is reviewed, confirmed and clarified with appropriate personnel
		1.3	Communication with others is established and maintained
		1.4	Client requirements and desires are reviewed, confirmed

			and clarified
2	Research alternative manufacturing processes	2.1	Aesthetic requirements of alternative manufacturing processes are assessed
		2.2	New manufacturing processes are researched and reported
		2.3	Costs of alternative manufacturing processes are assessed and compared
		2.4	Environmental impact of alternative manufacturing processes are assessed
		2.5	Hazards associated with alternative manufacturing processes are researched
		2.6	Quality of alternative manufacturing processes are assessed and reported
3	Recommend alternative manufacturing processes	3.1	Research information is critically analysed in the context of the design brief requirements
		3.2	Alternative manufacturing processes and their elements of design are promoted, research explained and evaluated for the client
		3.3	Alternative manufacturing processes and their principles of design are promoted, research explained and evaluated for the client
		3.4	Presentation of research information is made highlighting the findings and rationale for the alternative manufacturing processes chosen

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving• customers or suppliers may be internal or external
Design brief includes:	<ul style="list-style-type: none">• the aims, objectives, milestones for the design project• organisational or personal profiles• target audience• budget• timeline• consultation requirements• colour requirements• image requirements• function
Appropriate personnel include:	<ul style="list-style-type: none">• trainers• supervisors• suppliers• clients• colleagues• managers
Clients include:	<ul style="list-style-type: none">• suppliers• manufacturers• private clients• colleagues• retailers• the public
Aesthetics include:	<ul style="list-style-type: none">• the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Alternative	<ul style="list-style-type: none">• the various methods by which the product can be produced,

manufacturing process include:	these steps entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Environmental impacts include:	<ul style="list-style-type: none">• how the use of alternative manufacturing processes effects the environment and how continued use will affect the surrounding environment• energy consumption• greenhouse gases created• waste levels and resource utilisation• what impact will be felt by reducing or stopping use of the alternative manufacturing processes
Hazards include:	<ul style="list-style-type: none">• high-speed machinery• open cutting blades• threat from electric shock• materials handling incidents• toxic substances• gases
Critical analysis includes:	<ul style="list-style-type: none">• comparing• contrasting• reflecting• critiquing• considering merit• discussion• debate
Elements of design include:	<ul style="list-style-type: none">• line• shape• form (geometric or organic)• texture• colour• function
Principles of design include:	<ul style="list-style-type: none">• balance• proportion (symmetry and asymmetry)• harmony• contrast• pattern• movement• rhythm• unity• style• focus• scale

	<ul style="list-style-type: none">• dominant• sub-dominant• subordinate relationship• emphasis• proximity• alignment• space• anthropometry• ergonomics• arrangement• workload materials handling capacity• skills available• equipment capabilities• aesthetic relations• tension• development methods
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work procedures/instructions• manufacturer specifications and instructions• standard forms of workplace process and procedures• organisation work specifications and requirements• legislation, regulations and codes of practice• quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFDT5010A Research and recommend alternative manufacturing processes

Assessment Requirements for MSFFDT5008 Research and recommend alternative manufacturing processes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Research and recommend at least three (3) alternative manufacturing processes to assist with informing the design process and arrive at a solution which meets client requirements
- Apply design elements and principles to the research and recommendation of alternative manufacturing processes in accordance with the concepts and design brief
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to researching and recommending alternative manufacturing processes
- Organisational and site standards, requirements, policies and procedures for researching and recommending alternative manufacturing processes
- Environmental protection requirements
- Established communication channels and protocols

- Relevant production problem identification and resolution
- Elements and principles of design
- Aesthetic values
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Research techniques
- Alternative manufacturing processes
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment, specifications and work instructions relevant to researching and recommending alternative manufacturing processes.

MSFFDT5009 Research and recommend machine technology

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching and recommending machine technology for various design solutions in accordance with the integral elements and principles of design. It applies to an industry workplace or design studio environment and involves application of skills and knowledge at a paraprofessional level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan for machine technology research	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending machine technology are verified and complied with
		1.2	Design brief is reviewed, confirmed and clarified with appropriate personnel
		1.3	Communication with others is established and maintained in accordance with WHS requirements
		1.4	Client requirements and desires are reviewed, confirmed and clarified

2	Research machine technology	2.1	Aesthetic requirements of the machine technology are assessed
		2.2	New machine technologies are researched and reported
		2.3	Manufacturing processes and available expertise for the desired material are assessed
		2.4	Capabilities and scope of machine technology is compared and evaluated
		2.5	Cost of machine technology is assessed and compared
		2.6	Environmental impact of machine technology are assessed
		2.7	Longevity and restorability of machine technology are researched
		2.8	Hazards associated with the use and application of machine technology are researched
		2.9	Quality of machine technology are assessed and reported
3	Recommend machine technology	3.1	Research information is critically analysed in the context of the design brief requirements
		3.2	Machine technology and the relationship to elements of design are promoted, research explained and evaluated for the client
		3.3	Machine technology and the relationship to principles of design are promoted, research explained and evaluated for the client
		3.4	Presentation of research information is made highlighting the findings and rationale for the machine technology chosen

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving• customers or suppliers may be internal or external |
| Design brief includes: | <ul style="list-style-type: none">• the aims, objectives, milestones for the design project• organisational or personal profiles• target audience• budget• timeline• consultation requirements• colour requirements• image requirements• function |
| Appropriate personnel include: | <ul style="list-style-type: none">• trainers• supervisors• suppliers• clients• colleagues• managers |
| Clients include: | <ul style="list-style-type: none">• suppliers• manufacturers• private clients• colleagues• retailers• the public |

Aesthetics include:	<ul style="list-style-type: none">• the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Machine technology includes:	<ul style="list-style-type: none">• traditional or contemporary finishing equipment• assembly equipment• static machinery• portable power tools• computer numerically controlled (CNC) equipment• and also includes procedures for lock out protecting operators and co-workers from accidental injury by isolating the machine from the power source
Manufacturing processes include:	<ul style="list-style-type: none">• the methods by which the product will be produced, these steps entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Environmental impacts include:	<ul style="list-style-type: none">• how the use of alternative manufacturing processes effects the environment and how continued use will affect the surrounding environment• energy consumption• greenhouse gases created• waste levels and resource utilisation• what impact will be felt by reducing or stopping use of the alternative manufacturing processes
Longevity and restorability include:	<ul style="list-style-type: none">• an analysis of how long the machinery will remain operational with minimum downtime• how readily the machine can be repaired or replaced
Hazards include:	<ul style="list-style-type: none">• saw and cutter blades• heavy equipment• moving parts• burns• electric shock
Critical analysis includes:	<ul style="list-style-type: none">• comparing• contrasting• reflecting• critiquing• considering merit• discussion• debate
Elements of design include:	<ul style="list-style-type: none">• line• shape• form (geometric or organic)• texture

Principles of design include:

- colour
- function
- balance
- proportion (symmetry and asymmetry)
- harmony
- contrast
- pattern
- movement
- rhythm
- unity
- style
- focus
- scale
- dominant
- sub-dominant
- subordinate relationship
- emphasis
- proximity
- alignment
- space
- anthropometry
- ergonomics
- arrangement
- workload materials handling capacity
- skills available
- equipment capabilities
- aesthetic relations
- tension
- development methods

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- work procedures/instructions
- manufacturer specifications and instructions
- standard forms of workplace process and procedures
- organisation work specifications and requirements
- legislation, regulations and codes of practice
- quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFDT5011A Research and recommend machine technology

Assessment Requirements for MSFFDT5009 Research and recommend machine technology

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Research and recommend machine technology to assist with informing the design process and arrive at a solution which meets client requirements
- Apply design elements and principles to the research and recommendation of machine technology in accordance with the concepts and design brief
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to researching and recommending machine technology
- Organisational and site standards, requirements, policies and procedures for researching and recommending machine technology
- Environmental protection requirements
- Established communication channels and protocols

- Relevant machine problem identification and resolution
- Elements and principles of design
- Aesthetic values
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Research techniques
- Machine technology types and manufacturing processes
- CNC equipment
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment, specifications and work instructions relevant to researching and recommending machine technology.

MSFFDT5010 Evaluate furniture design proposals and concepts

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers evaluating own designs and designs generated by others as proposals and concepts against set criteria established from original design briefs and enterprise objectives. It applies to a custom furniture business or design support environment and involves application of skills and knowledge at a paraprofessional level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Establish evaluation criteria for design	1.1	Applicable work health and safety (WHS), legislative and enterprise requirements relevant to the evaluation of design proposals and concepts are verified and complied with
		1.2	Original design brief is analysed to establish criteria to use in assessing design proposals and concepts
		1.3	Enterprise business objectives are reviewed to identify criteria to use in assessing designs
		1.4	Enterprise production capacity is identified and strengths and limitations incorporated into evaluation criteria

		1.5	Current industry design trends are researched and identified
		1.6	Workplace and industry standards in relation to design presentation are researched and identified
		1.7	Quality criteria that apply to design processes are researched and identified
		1.8	Criteria for assessment are identified and clarified with client and colleagues
		1.9	The weighting of each criteria for assessment is confirmed
		1.10	Details are recorded in accordance with enterprise practice
2	Evaluate design	2.1	Design is assessed to evaluate if it fits the intention of the design brief
		2.2	Form, function and style of the design are assessed and evaluated
		2.3	Environmental impact of the design is assessed and evaluated
		2.4	Cultural relevance of the design is analysed and evaluated
		2.5	Economic significance of the design is assessed and evaluated
		2.6	Design methodology is reviewed for adherence to the elements and principles of design
		2.7	Material choice appropriateness is analysed and evaluated
		2.8	Technical integrity of the design is assessed and evaluated
		2.9	The design is evaluated for consistency with current industry trends and influences
3	Evaluate design concepts for construction and production	3.1	Details of enterprise and related construction constraints are assessed
		3.2	Details of enterprise and subcontractor production

	suitability		constraints are identified and reviewed
		3.3	Production ability of the design is analysed and evaluated
		3.4	Equipment selection is assessed and evaluated
		3.5	Manufacturing process, assembly and finishing techniques selected for the design are reviewed and evaluated
		3.6	Design is evaluated against construction and production constraints
		3.7	Changes to design are recommended and recorded in accordance with enterprise practice
4	Determine and report on design suitability	4.1	Design is evaluated against each criteria
		4.2	Weighted assessment is used to make comparisons and rank components of design
		4.3	Recommendations are made for improvements to design in order to further address criteria
		4.4	Design suitability in meeting criteria is determined and documented with recommendations for improvements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving• customers or suppliers may be internal or external
Design brief includes:	<ul style="list-style-type: none">• the aims, objectives, milestones for the design project• organisational or personal profiles• target audience• budget• timeline• consultation requirements• colour requirements• image requirements• function
Form includes:	<ul style="list-style-type: none">• proportion• aesthetics
Function includes:	<ul style="list-style-type: none">• ergonomics• practicality
Style includes:	<ul style="list-style-type: none">• traditional• contemporary• modern• functional• commercial• artistic
Environmental impacts include:	<ul style="list-style-type: none">• how the use of alternative manufacturing processes affects the environment and how continued use will affect the surrounding environment• energy consumption• greenhouse gases created• waste levels and resource utilisation• what impact will be felt by reducing or stopping use of the alternative manufacturing processes
Cultural relevance includes:	<ul style="list-style-type: none">• demography• geography (local, regional and national)• religious• climatic

	<ul style="list-style-type: none">• societal• lifestyle• attitudinal• gratification• honour• living conditions• infrastructure• status• habitude
Economic significance includes:	<ul style="list-style-type: none">• the potential financial return which the product could return, including sales volume and profitability
Materials include:	<ul style="list-style-type: none">• timber (native and imported)• man-made timber products• plastic• metal• alloys• stone• glass• textiles• fibreglass• foam• cardboard• paper products• any other manipulable substance
Technical integrity includes:	<ul style="list-style-type: none">• the intended structural qualities and construction methods of a designed product
Construction constraints include:	<ul style="list-style-type: none">• the types of construction methods of joining parts and sub-assemblies together to make the structure and form of the product produced within the enterprise
Production constraints include:	<ul style="list-style-type: none">• the methods of producing the individual parts and sub-assemblies of a product dependent on the enterprise's machinery and skills and knowledge of their operators
Production ability includes:	<ul style="list-style-type: none">• how readily a design can be produced• the cost of producing it• the availability of equipment and skilled personnel
Equipment includes:	<ul style="list-style-type: none">• hand tools• static machinery• portable power tools• computer numerically controlled (CNC) equipment• and also includes procedures for lock out protecting operators and co-workers from accidental injury by isolating

Personal protective equipment includes:

- the machine from the power source
- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- work procedures/instructions
- manufacturer specifications and instructions
- standard forms of workplace process and procedures
- organisation work specifications and requirements
- legislation, regulations and codes of practice
- quality and Australian Standards and procedures

Assessment Requirements for MSFFDT5010 Evaluate furniture design proposals and concepts

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Determine and document evaluation criteria clearly from an original design brief
- Assess and document an evaluation of product proposals or concepts against the agreed criteria to move forward in the design process
- Recommend design improvements for concepts, construction, production and final design presented
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the evaluation of furniture design proposals and concepts
- Furniture design methodology
- Furniture styles and movements
- Visual aesthetics of furnishing products

- Environmental and ethical issues in making a furnishing product
- Materials used to produce furnishing products
- Production methodologies of furniture makers
- Assessment and evaluation techniques
- Overhead components and costing techniques
- Contemporary techniques for collating and preparing visual information
- Established communication channels and protocols
- Relevant design and production problem identification and resolution
- Relevant document control methods

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to realistic product proposals, specific information covering materials, constructions and production methods, design brief and client instructions with details of the product requirements.

MSFFDT5011 Assess economic impact of a design

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assessing the economic impact of a design, and recording its marketability, volume potential and competition. It applies in an industry workplace or design studio environment and involves application of skills and knowledge at a managerial level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Research economic factors	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to assessing the economic impact of a design are verified and complied with
		1.2	Design brief is reviewed, confirmed and clarified with appropriate personnel
		1.3	Communication with others is established and maintained in accordance with WHS requirements
		1.4	Market research fundamentals undertaken to assess the size and nature of a market are considered and analysed

- | | | | |
|---|--------------------------------------|------|---|
| | | 1.5 | Potential designed products sales volume of amount sold within a specified time period, expressed in monetary terms or in terms of the total amount of stock or products sold f are analysed and evaluated |
| | | 1.6 | Niche markets are discovered and analysed for cost-benefit analysis assigning monetary value to the costs and benefits (social, environmental and monetary) associated with a project for the purpose of selecting and evaluating project investment opportunities |
| 2 | Assess economic impact of the design | 2.1 | Production costs of a design are assessed and evaluated |
| | | 2.2 | Longitudinal statistical studies of a design that produces data gathered over a period of time are undertaken to explore potential success factors |
| | | 2.3 | Scale of production is estimated taking into account market analysis |
| | | 2.4 | Profit margins of the amount by which income exceeds expenditure, including the sale price minus the cost of production, distribution and marketing are analysed based on expected turnover

Full costing of product, including the price point of the cost for sale placed on a product which caters to a market segment based on production costs, overheads and profit margins in relation to demand, supply and volume of sales in the market and demand for the product is conducted |
| | | 2.5 | Competition in the market place with similar design solutions or products in that market segment are analysed and strategies reviewed |
| | | 2.6 | Availability of resources is assessed to ascertain what impact this will have on economic viability |
| | | 2.7 | Product lifecycle analysis is evaluated for economic significance |
| | | 2.8 | Long-term economic impact on the business, staff and associated suppliers is analysed and strategised |
| | | 2.9 | Intended manufacturing processes, including assembly and finishing, are assessed for their economic impact |
| | | 2.10 | Final documentation outlining the full analysis of the designs economic impact is compiled and produced as a |

report

2.11 Production costs of a design are assessed and evaluated

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Organisational

requirements include:

- legal, organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- WHS, emergency and evacuation requirements
- ethical standards
- recording and reporting
- access and equity principles and practices
- equipment use, maintenance and storage
- environmental management (waste disposal, recycling and re-use guidelines)

Design brief includes:

- the aims, objectives, milestones for the design project
- organisational or personal profiles
- target audience
- budget
- timeline
- consultation requirements
- colour requirements

	<ul style="list-style-type: none">• image requirements• function
Appropriate personnel include:	<ul style="list-style-type: none">• trainers• supervisors• suppliers• clients• colleagues• managers
Niche markets include:	<ul style="list-style-type: none">• a very specific market segment within a broader segment of the market that involves the provision of specialist products where relatively few or no competitors exist
Resources include:	<ul style="list-style-type: none">• materials• personnel• equipment• systems
Product lifecycle includes:	<ul style="list-style-type: none">• the evolution of a product from its raw source, through its inception, development, manufacture, completion and time as a completed product until potential renewal
Manufacturing processes include:	<ul style="list-style-type: none">• the methods by which the product will be produced, these steps entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Assembly methods include:	<ul style="list-style-type: none">• nailing• gluing• screwing• welding• pressing• sewing• bonding• jointing• other methods of connecting various materials
Finishing includes:	<ul style="list-style-type: none">• paints• waxes• lacquers• stains• pigments• oils• plastic coatings

Unit Mapping Information

Assessment Requirements for MSFFDT5011 Assess economic impact of a design

Modification History

Release 1 - New unit of competency

Performance Evidence

- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assess the economic impact of a design from inception through manufacture, including marketing, sales volume and competition impact, and recording of the impact study outcomes
- Research, contrast and compare a range of economic factors upon a design and interpret costing and financial documentation
- Produce a report on the economic impact study outcomes of a product
- Use mathematical ideas and techniques to correctly complete calculations for design assessment
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to assessing the economic impact of a design
- Organisational and site standards, requirements, policies and procedures for assessing the economic impact of a design
- Economic conditions and markets nationally and internationally
- Established communication channels and protocols
- Relevant problem identification and resolution

- Elements and principles of design
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of furniture materials, products, sources and defects
- Relevant computer programs
- Product assembly techniques and equipment capabilities
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to specifications, materials and equipment relevant to assessing the economic impact of a design.

MSFFDT5012 Design for mass production

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers designing products for mass production specifying equipment requirements and personnel capabilities, while also considering cost-effective opportunities and future planning considerations. It applies to mass production in an industry workplace or design studio environment and involves application of skills and knowledge at a managerial level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan for design	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for mass production are verified and complied with
		1.2	Design brief is reviewed, confirmed and clarified with appropriate personnel
		1.3	Client requirements and desires are reviewed, confirmed and clarified
		1.4	Communication with others is established and maintained in accordance with WHS requirements

- | | | | |
|---|----------------------------|------|---|
| | | 1.5 | Problems or underlying factors to be addressed by the design brief are verified |
| | | 1.6 | Elements of design are diagnosed for the intended design brief |
| | | 1.7 | Principles of design are diagnosed for the intended design brief |
| | | 1.8 | Volumes of mass production runs are set, costed and relevance to the market evaluated |
| 2 | Design for mass production | 2.1 | Concepts for the proposed solution to the design brief are reviewed in accordance with mass production requirements |
| | | 2.2 | Different solutions to satisfy the requirements of the design brief are presented and reviewed |
| | | 2.3 | Sample maquette and prototype are reviewed in accordance with the concept sketches |
| | | 2.4 | Final working drawings and specifications are reviewed and compiled in readiness for mass production |
| | | 2.5 | Concept is designed for mass manufacture taking into account available equipment and resources |
| | | 2.6 | Equipment capabilities are reviewed and assessed and design brief modified in accordance with available or obtainable equipment |
| | | 2.7 | Personnel capabilities are reviewed and assessed and design brief modified in accordance with assessed and available skills |
| | | 2.8 | Material or resource supply chain to the company is assessed, stock sizes set and design brief modified or altered to cater for availability of resources |
| | | 2.9 | Outsourcing opportunities are assessed and reviewed in accordance with cost-benefit analysis assigning monetary value to the costs and benefits (social, environmental and monetary) associated with a project for the purpose of selecting and evaluating project investment opportunities |
| | | 2.10 | Work flow methods are reviewed and the design brief or work flow methods amended to cater for mass |

		production
	2.11	Opportunities for innovation in mass production procedures are researched and implemented
3	Implement design	3.1 Manufacturing process is planned and organised taking into account available equipment and resources
		3.2 Material is processed in accordance with the manufacturing plan and safe working procedures
		3.3 Jigs are produced to assist with the manufacture of components
		3.4 Components are produced and prepared for assembly
		3.5 Components are assembled in accordance with the working drawings
		3.6 Final product is finished according to specifications
		3.7 Final product is evaluated for functionality and aesthetic appeal
		3.8 Mass production methodology is reviewed
		3.9 Production run products are packaged and despatched to transport methods
		3.10 Mass production anomalies are recorded and reported to the appropriate personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Unit Mapping Information

Supersedes and is equivalent to LMFFDT6002A Design for mass production

Assessment Requirements for MSFFDT5012 Design for mass production

Modification History

Release 1 - New unit of competency

Performance Evidence

- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply research, analytical and mathematical skills to the identification and selection of materials and the selection of appropriate production and construction techniques for products
- Create innovative designs which satisfy the agreed parameters and consider but are not limited by other historical or contemporary influences
- Prepare and work through a design brief taking into account the requirements of mass production to fulfil the design brief and oversee a mass production run
- Review information provided and creatively generate proposals for a furnishing product
- Apply design elements and principles to designing for mass production in accordance with a design brief
- Use mathematical ideas and techniques to correctly complete calculations for design assessment
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to designing for mass production

- Organisational and site standards, requirements, policies and procedures for designing for mass production
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Elements and principles of design
- Ergonomics and aesthetic values
- Supply chain management
- Outsourcing arrangements
- Cost-benefit analysis methods
- Company resource audit techniques
- Design and manufacture for mass production
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of furniture making equipment
- Relevant computer programs
- Furniture product machining, assembly and finishing techniques
- Sketching and drawing techniques
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement.

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.

- Access is required to specifications, materials and equipment relevant to designing for mass production.

MSFFDT5013 Evaluate and participate in design industry networks

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers evaluating and participating in design industry networks to learn from others and develop networks which may assist with the progressing of own initiatives.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Evaluate networks	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to evaluating and participating in design industry networks are verified and complied with
		1.2	Networking opportunities are assessed and scheduled for attendance
		1.3	Networking opportunities are prioritised in order of benefit and importance
		1.4	Peak bodies or associations and links to international agencies are assessed for networking opportunities

2	Participate in networks	2.1	Chosen networks are identified and joined
		2.2	Communication with others is established and maintained in accordance with WHS requirements
		2.3	Chosen networks are attended
		2.4	Design shows are attended and networking opportunities instigated
		2.5	Business opportunities with others in networks are pursued
		2.6	Shared business interests or ideas are sought and followed up on
		2.7	International networking opportunities are pursued
		2.8	Networks are followed up with and regularly attended

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Organisational requirements include:

- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- WHS, emergency and evacuation requirements

- Networking includes:**
- ethical standards
 - recording and reporting
 - access and equity principles and practices
 - building up and maintaining relationships with people whose interests are similar or whose friendship could bring advantages, such as job or business opportunities, and includes involvement with:
 - design agencies
 - furnishing industry alliances
 - associations
 - peak bodies
 - government functions
 - exhibitions
 - showcases
 - industry events
 - functions
 - information networks
 - design hubs
- Peak bodies or associations include:**
- design agencies
 - furnishing industry bodies
- Business opportunities include:**
- joint ventures
 - shared or loaned equipment
 - combined purchasing arrangements
 - design or manufacturing hub arrangements
 - design critiquing opportunities
 - new ideas
 - improving ideas
 - new contracts
- International networking opportunities include:**
- overseas business opportunities
 - international showcases
 - investor or contract opportunities

Unit Mapping Information

Supersedes and is equivalent to LMFFDT6003A Evaluate and participate in design industry networks

Assessment Requirements for MSFFDT5013 Evaluate and participate in design industry networks

Modification History

Release 1 - New unit of competency

Performance Evidence

- Evaluate and participate in design industry networks, establish and maintain important contacts
- Apply design elements and principles to involvement in design industry networks
- Use appropriate industry terminology and language to convey meaning
- Conduct quality checks on own work
- Use communication tools, such as computers, internet, email and databases
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to evaluating and participating in design industry networks
- Organisational and site standards, requirements, policies and procedures for evaluating and participating in design industry networks
- Networking and networking opportunities and techniques
- Established communication channels and protocols
- Elements and principles of design
- Ergonomics and aesthetic values

Assessment Conditions

- Assessors must:
- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to opportunities for evaluating and participating in design industry networks.

MSFFDT5014 Investigate legal requirements for design

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers investigating legal requirements for design, including procurement, business legalities, contractual obligations and operational issues. It applies to an industry workplace or design studio environment and involves application of skills and knowledge at a managerial level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Research legal requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to investigating legal requirements for design are verified and complied with
		1.2	Communication with others is established and maintained in accordance with WHS requirements
		1.3	Legal requirements affecting the enterprise are detected and researched
		1.4	Enterprise legal requirements are analysed and procedures developed and implemented to ensure full

			compliance
2	Comply with legal requirements	2.1	Business registration and government procedures are adhered to
		2.2	Suitable employment conditions, including industrial relations, are abided by
		2.3	Contracts and invoices used comply with legal requirements
		2.4	Operational codes of practice are researched and applied to day-to-day procedures
		2.5	Essential insurances are obtained and are regularly updated
		2.6	Procurement rights are adhered to and applied for own products
		2.7	WHS regulations are stringently applied and followed
		2.8	Import and export regulations are adhered to
		2.9	Risk management policies are applied, updated and maintained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Organisational

- policies and procedures relating to own role and responsibility

- requirements include:**
- quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - WHS, emergency and evacuation requirements
 - ethical standards
 - recording and reporting
 - access and equity principles and practices
- Legal requirements include:**
- laws, regulations or policies which affect the operating systems of an enterprise
- Enterprises include:**
- sole traders
 - partnerships
 - trusts
 - franchises
 - agencies
 - companies
 - consortiums
- Business registration includes:**
- business name registration
 - achievement of an Australian Business Number (ABN)
 - ownership transfer arrangements and licensing
- Government procedures include:**
- taxation and accounting requirements
 - superannuation provisions
 - business activity statements and the Goods and Services Tax (GST)
 - tax file number
 - Pay As You Go (PAYG)
 - withholding tax
- Employment conditions include:**
- industrial relations
 - award rates
 - employment conditions
 - unfair dismissal laws
 - equal employment opportunities (EEO)
 - anti-discrimination
 - enterprise agreements
 - privacy
 - confidentially
 - duty of care
- Contracts and invoices include:**
- contracts deemed legal by authorities with:
 - suppliers
 - owners
 - employees

	<ul style="list-style-type: none">• landlords• agents• distributors• customers
Operational codes of practice include:	<ul style="list-style-type: none">• Australian Standards• industry codes of practice• equipment operating standards or regulations• resource access regulations
Insurances include:	<ul style="list-style-type: none">• professional indemnity• public liability• income protection• third party• comprehensive• building and contents insurance• workers compensation• any other legally prescribed insurance
Procurement rights include:	<ul style="list-style-type: none">• royalties• copyright• patents• trademarks• design registration• intellectual property• software licences
Import and export regulations include:	<ul style="list-style-type: none">• duties• tariffs• customs• immigration• any countries relevant import and export laws
Risk management includes:	<ul style="list-style-type: none">• provisions for ensuring all potential legal possibilities have been investigated and evaluated to minimise threats to continuing efficiency, profitability and success of its operations

Assessment Requirements for MSFFDT5014 Investigate legal requirements for design

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret and analyse legal documentation and industry standards
- Investigate legal requirements for design and for the protection and efficient operation of the enterprise, ensuring all relevant legal requirements are in place
- Produce reports on the legal requirements for a design business
- Use communication tools, such as computers, internet, email and databases
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to investigating legal requirements for design
- Organisational and site standards, requirements, policies and procedures for investigating legal requirements for design
- Business and operational legal requirements
- Relevant computer programs
- Procedures for the recording, reporting and maintenance of workplace records and information
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to resources for investigating legal requirements for design.

MSFFDT5015 Work collaboratively on a design project

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers working collaboratively on a design project from initial agreement to fulfilment and delivery of the final product, applying integral design elements and principles. It applies to an industry workplace or design studio environment and involves application of skills and knowledge at a managerial level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture design and technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan for project collaboration	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to collaborating on a design project are verified and complied with
		1.2	Project requirements are agreed with client, confirmed and clarified
		1.3	Communication with others is established and maintained with all involved in the design process
		1.4	Potential collaborators are scrutinised and confirmed based on displayed expertise potential
		1.5	End users and other interested parties are involved in the

			collaboration
2	Work collaboratively on projects	2.1	Methods of collaboration are negotiated and followed
		2.2	Project objectives are researched, a design brief developed and instigated
		2.3	Ideas for concept development are shared and worked through
		2.4	Concepts are critiqued and final outcomes agreed upon in accordance with the elements and principles of design
		2.5	Management systems are set in place, plan developed and quality control measures adopted for the project
		2.6	Type and quantity of material to be used is debated, agreed and obtained
		2.7	Equipment requirements are debated and selected appropriate to project requirements
		2.8	Project manufacturing procedures are debated and final manufacturing processes agreed, including assembly techniques and finishing methods
		2.9	Distribution channels, marketing and despatch strategies are debated and instigated
		2.10	Final presentation of the project is made displaying respect for all collaborators
3	Evaluate design collaboration	3.1	Quality systems are evaluated for effectiveness of outcomes
		3.2	Client satisfaction with the project outcome is measured
		3.3	Observations from collaborators on improvement of the process is collected
		3.4	Collaborators are assessed and reviewed for their effectiveness in the process
		3.5	Systems are analysed for improvement opportunities

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Organisational requirements include:

- legal, organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- WHS, emergency and evacuation requirements
- ethical standards
- recording and reporting
- access and equity principles and practices
- equipment use, maintenance and storage
- environmental management (waste disposal, recycling and re-use guidelines)

Design brief includes:

- the aims, objectives, milestones for the design project
- organisational or personal profiles
- target audience
- budget
- timeline
- consultation requirements
- colour requirements
- image requirements
- function

Collaboration includes:

- a group of people working together to achieve an outcome, including:
 - designers
 - senior management

	<ul style="list-style-type: none">• tradespeople• consumers• sales staff• distributors• clients
Elements of design include:	<ul style="list-style-type: none">• line• shape• form (geometric or organic)• texture• colour• function

Assessment Requirements for MSFFDT5015 Work collaboratively on a design project

Modification History

Release 1 - New unit of competency

Performance Evidence

- Apply design elements and principles and work collaboratively on a design project in accordance with client requirements, setting a project plan and design brief
- Plan processes and encourage interchange of ideas to facilitate collaborative development of design concepts
- Evaluate design processes to determine improvements
- Determine report requirements and present information in appropriate formats
- Use mathematical ideas and techniques to correctly complete calculations for design assessment
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for working collaboratively on a design project
- Organisational and site standards, requirements, policies and procedures for working collaboratively on a design project
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Elements and principles of design
- Ergonomics and aesthetic values
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of furnishing materials, products and defects
- Set-up and operation of equipment

- Relevant computer programs
- Product machining, assembly and finishing techniques
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement.

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to specifications and opportunities for working collaboratively on a design project.

MSFFF1001 Complete a basic furniture finishing project

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning, preparing and completing a basic furniture finishing project involving the coating of surfaces by either hand or spray application.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan and prepare for work	1.1	Work requirements are correctly identified from drawings, specifications and instructions
		1.2	Quality assurance requirements are recognised and adhered to in accordance with enterprise operation
		1.3	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.4	Tools, equipment and materials selected are consistent with job requirements and work instructions, checked for safety and serviceability, and any faults reported to supervisor
2	Prepare surface	2.1	Surfaces are checked for contamination and correct

	and materials for finishing process		preparation according to workplace procedures and standards
		2.2	Products with surface or other faults are identified and faults are reported or repaired according to workplace procedures and standards
		2.3	Techniques for application of materials for finishing process are identified and used according to workplace procedures
		2.4	Materials suitable for basic surface finishing are prepared
3	Colour is applied to timber surface	3.1	Stain is applied to timber surfaces in accordance with manufacturer specifications and workplace procedures and standards
		3.2	Stained surface is sealed with polish using mop brush, blender or swooge
		3.3	Sealed surface is lightly sanded to make smooth
		3.4	Wood filler or sanding sealer are applied in accordance with manufacturer specifications and workplace procedures and standards
		3.5	Filled-in surface is sealed with oil varnish in accordance with manufacturer specifications and workplace procedures and standards
		3.6	Sealed surface is lightly sanded to make smooth
4	Finishing material is applied to surface	4.1	Finishing material is applied in accordance with manufacturer specifications until required build is achieved
		4.2	Finishing material is cut back to remove surface defects and/or foreign material in accordance with workplace procedures and standards
		4.3	Surface is burnished with fine steel wool and lubricating oil to achieve even sheen
5	Clean up work area	5.1	Workplace is cleared of debris and unused materials
		5.2	Wood filler and lubricating oil rags are disposed of safely having regard for spontaneous combustion
		5.3	Tools and equipment are cleaned, maintained and stored

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|---|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individual to demonstrate some discretion, judgement and problem solving in the accurate application of polish |
| A basic project includes: | <ul style="list-style-type: none">• the coating of tables, chairs or stools and other furnishing items |
| Stains include: | <ul style="list-style-type: none">• water stain• pigment oil stain• lacquer-based wiping stain |
| Wood grain fillers include: | <ul style="list-style-type: none">• oil-based filler• polyurethane (plastic) filler• water-based filler |
| Finishing materials include: | <ul style="list-style-type: none">• oil varnish• marine varnish• lacquer and sanding sealer |
| Lubricating oils include: | <ul style="list-style-type: none">• linseed oil• paraffin oil |

Surface faults include:	<ul style="list-style-type: none">• 'teak' oil• machine marks• bruising• pencil marks• grease• cross-sanding marks• scratches• glue marks• dirt marks• insect and termite holes• holes• knots• and blisters
Tools and equipment include:	<ul style="list-style-type: none">• filler blades• brushes• spray equipment• sandpapers• skinning in• bodying up and spiriting out rubbers• mop brush• blender• swooge and scrapers
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFF1001B Complete a basic furniture finishing product

Assessment Requirements for MSFFF1001 Complete a basic furniture finishing project

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a basic furniture finishing project
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Characteristics, limitations and uses of coating materials required for the project
- Coating application equipment, techniques and safe working procedures
- Basic repair techniques to defects in timber surfaces
- Safe handling of materials associated with applying coatings

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to coating materials, timber components/furnishings requiring finishing and cleaning materials.

MSFFF2001 Use furniture finishing sector hand and power tools

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using hand and power tools, and basic static machines, in applications relating to the furniture finishing sector of the furnishing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify hand and power tools, and basic static machines	1.1	Types of hand and power tools, and basic static machines and their functions are identified
		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	Sources of power supply are recognised
2	Select and use hand tools	2.1	Hand tools selected are consistent with needs of the job
		2.2	Selected hand tools are checked for serviceability and safety and any faults reported to supervisor
		2.3	Equipment is selected to hold or support material for

		hand tool application, where applicable
	2.4	Material is located and held in position for hand tool application
	2.5	Hand tools are safely and effectively used according to their intended use
	2.6	Hand tools are safely located when not in immediate use
3	Select and use power tools and basic static machines	3.1 Power tools and basic static machines are selected consistent with needs of the job in accordance with conventional work practice
		3.2 Power tools and basic static machines are visually checked for serviceability/safety in accordance with WHS requirements and any faults reported to supervisor
		3.3 Equipment is selected to hold or support materials for application as applicable
		3.4 Material is located and held in position for power tool and/or machining applications as applicable
		3.5 Power tools and basic static machines are safely and effectively used in application processes
		3.6 Power tools are safely located when not in use
4	Clean up work area and tools	4.1 All tools are cleaned, maintained and stored
		4.2 Equipment is cleaned, maintained and stored
		4.3 Work area is cleared and waste removed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Hand tools for furniture finishing include:

- cabinet scraper
- chisel
- hammer
- nail punch
- cork sanding block
- putty knife
- paint scraper
- paint brush
- blender
- mop brush
- swooge
- pencil brush
- file
- oil stone
- polish rubbers
- clamps
- screwdrivers
- rubber mallet
- spokeshave
- pliers
- pincers
- spanners

Power tools for furniture finishing include:

- orbital sander
- steam iron
- spray gun
- compressor

Fixed/static machinery for furniture finishing include:

- belt/stroke sander
- compressor

Fault reporting includes:

- verbal or written reporting

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFF2001B Use furniture finishing sector hand and power tools

Assessment Requirements for MSFFF2001 Use furniture finishing sector hand and power tools

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Select, safely use, clean and maintain the suite of hand and power tools, and static machines used in furniture finishing
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses, limitations and maintenance requirements of hand tools commonly used in furniture finishing operations
- Types, characteristics, uses, limitations and maintenance requirements of power tools and basic static machines commonly used in furniture finishing operations
- WHS requirements and legislation
- Work flow within the workplace

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to furniture polishing sector hand and power tools, and basic static machines and materials used in the finishing of furniture.

MSFFF2002 Dismantle and re-assemble furniture

Modification History

Release 1 - New unit of competency

Application

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan and prepare for work	1.1	Work requirements are correctly identified from drawings, specifications and instructions
		1.2	Quality assurance requirements are recognised and adhered to in accordance with enterprise operation
		1.3	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.4	Tools, equipment and materials selected are consistent with job requirements and work instructions, checked for safety and serviceability, and any faults reported to supervisor
2	Dismantle furniture and/or fitting item	2.1	Items to be dismantled are identified
		2.2	Items are dismantled to the extent required in the work instructions using appropriate tools and procedures
		2.3	Fasteners and attachments are removed, tagged and stored

		2.4	Component parts are separated, tagged and stored following workplace procedures
		2.5	Component parts are despatched to the next process according to workplace procedures
3	Re-assemble furniture and/or fitting item	3.1	Items to be re-assembled are identified
		3.2	Items are re-assembled to the extent required in the work instructions using appropriate tools and procedures
		3.3	Fasteners and attachments selected and used according to workplace procedures
		3.4	Fasteners and attachments selected and used according to workplace procedures
		3.5	Assembled item is despatched to the next process according to workplace procedures
4	Clean work area maintain equipment and complete operations	4.1	Equipment used is cleaned, inspected for serviceable condition and stored according to workplace procedures
		4.2	Equipment faults are identified, tagged and reported to appropriate personnel
		4.3	Work area is cleaned and returned to operational condition

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving during the process of dismantling and re-assembling of furniture and/or furnishings

Furniture and/or fittings include:

- chairs
- tables
- desks
- wall units
- buffets
- side tables
- drawers

Tools and equipment include:

- measuring tapes or rulers
- hammers
- rubber mallet
- pincers
- screwdrivers
- shifting spanner
- spanners
- socket set
- hacksaw and blades
- clamps
- timber wedges
- long nose pliers
- power drill/screwdrivers
- air compressor and hoses

Materials include:

- timber
- manufactured board
- veneer
- brass
- metal
- adhesive
- laminate
- perspex

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFF2002B Dismantle/re-assemble furniture

Assessment Requirements for MSFFF2002 Dismantle and re-assemble furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Dismantle and re-assemble at least three (3) different items, including:
 - one (1) assembled with knockdown fittings, and
 - one (1) with glued joints
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types and characteristics of materials used in furniture and/or fitting construction
- Construction techniques and processes
- Identification of equipment, processes and procedures
- Work flow in relation to dismantling and re-assembling furniture and/or fittings

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to furniture/fittings for dismantling/re-assembling, work instructions, tools and equipment.

MSFFF2003 Remove surface coatings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers safely removing surface coatings by hand or chemical means in preparation for the application of new surface coatings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for surface coating removal	1.1	Materials safety data sheets (MSDS) and/or product application and safety information are read and used to inform work practices
		1.2	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.3	Surface coating is tested to identify the type of material and methods required to remove the coating
		1.4	Tools, equipment and materials suitable for the removal tasks are selected and checked for safe operation/application

		1.5	Accessories and consumables are identified for the removal tasks
2	Remove surface coatings	2.1	Sequence of work is identified for the removal operation, including the efficient and effective use of chemicals to be used
		2.2	Equipment, chemicals and abrasives are used within manufacturer specifications and workplace procedures
		2.3	Surface coating is removed according to workplace procedures and specifications
		2.4	Surfaces are inspected to ensure removal of surface coating is to workplace standard
		2.5	Defects found after removal of surface coating are dealt with and/or reported in accordance with workplace procedures
3	Clean work area and maintain equipment	3.1	Item is stored and labelled ready for next process
		3.2	Equipment is cleaned and inspected for serviceable condition and stored appropriately
		3.3	Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed
		3.4	Chemicals and other materials are stored or disposed of correctly according to regulations
		3.5	Work area is cleaned ready for next process or task

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential

operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving in the removal of surface coatings
- Coated surfaces include:**
- solid timber
 - manufactured board
 - metal
- Tools and equipment include:**
- liquid containers
 - brushes
 - scrapers
 - scrubbing brush
 - steel wool
 - sanding blocks
 - heat guns
 - high-pressure water cleaners
 - dipping tanks
 - stainless steel stripping bench
 - iron
 - plane
 - chisels
 - power sanders
 - air compressor and hoses
- Materials include:**
- caustic soda
 - thinners
 - turpentine
 - methylated spirits
 - gun wash
 - gel stripper
 - putties
 - hot water
 - glues
 - abrasive paper

Coating removal methods include:

- sanding and scrubbing
- chemical stripping and dipping
- heat application and hand scraping
- high pressure water application

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Assessment Requirements for MSFFF2003 Remove surface coatings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Remove surface coating from timber and metal surfaces and apply appropriate techniques to remove coatings from flat, vertical, carved and curved surfaces, using a minimum of four (4) different removal techniques and materials
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow in relation to the removal of surface coatings
- Types, properties and characteristics of coatings
- Coating removal techniques, materials, applications and limitations
- Material safety management systems

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a range of surfaces to be removed, removal methods, tools, equipment and consumables.

MSFFF2004 Prepare surfaces for finishing

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing a range of furniture surfaces for the application of surface coatings by hand or machine.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for surface preparation	1.1	Characteristics of the surface and the required surface coating materials are identified
		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	Tools and equipment required, and related engineering controls are identified and set up
		1.4	Sources of contamination in work area are identified and excluded
		1.5	Workplace procedures for surface preparation are identified and followed according to the surface and surface coating materials being used

- | | | | |
|---|--|-----|--|
| 2 | Prepare surfaces | 2.1 | Surfaces are prepared according to workplace procedures and specification |
| | | 2.2 | Surface preparation is checked for conformity with workplace specifications throughout the process |
| | | 2.3 | Rectification of surface preparation faults are made as required |
| | | 2.4 | Products are inspected and approved for suitability for further processing |
| | | 2.5 | Defects are rectified and/or reported in accordance with workplace procedures |
| 3 | Clean work area and maintain equipment | 3.1 | Prepared products are packed, stored and labelled ready for next process |
| | | 3.2 | Equipment used is cleaned and inspected for serviceable condition and stored appropriately |
| | | 3.3 | Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed |
| | | 3.4 | Chemicals used are stored or disposed of correctly according to regulations |
| | | 3.5 | Work area is cleaned ready for next process or task |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the preparation of surfaces

Surfaces include:

- solid hardwood and softwood
- veneered board
- metal

Tools and equipment include:

- measuring tapes and rulers
- squares
- hammer
- nail punch
- liquid containers
- brushes
- cabinet scrapers
- file
- oil stone
- steel wool/scourers
- sanding blocks
- steam iron
- chisels
- power sanders
- air compressor and hoses
- fixed belt/stroke sander
- plane spanners
- screwdrivers
- clamps
- drill
- mallet
- vice
- saw

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFF204B Prepare surfaces for finishing

Assessment Requirements for MSFFF2004 Prepare surfaces for finishing

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare furniture surfaces on a minimum of four (4) occasions, including a:
 - horizontal surface
 - vertical surface
 - internal surface
 - curved surface (moulding)
 - surfaces are to include:
 - solid hardwood
 - solid softwood
 - veneered board
 - metal
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, properties and characteristics of coatings
- Surface preparation techniques and equipment/materials
- Hazardous substances and materials used in surface preparation
- Work flow in relation to the application and removal of surface coatings

Assessment Conditions

- Assessors must:
- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a range of surfaces to be prepared, preparation tools, equipment and consumables.

MSFFF2005 Maintain spray equipment and booth

Modification History

Release 2 - Missing text from Assessment Requirements reinstated

Release 1 - New unit of competency

Application

This unit of competency covers stripping, cleaning, restoring and servicing spray equipment and booths.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Work instructions are used to determine job requirements, including timings, equipment to be maintained and materials
		1.2	Work health and safety (WHS) requirements, including ventilation and personal protection needs, are observed throughout the work
		1.3	Tools, equipment and accessories are identified and checked for safe and effective operation
		1.4	Work area is cleared of unwanted stock, products and materials

		1.5	Equipment is isolated from power sources and made safe in accordance with site procedures
2	Maintain the equipment	2.1	Equipment is dismantled in accordance with manufacturer specifications and site procedures
		2.2	Components are laid out in a logical re-assembly sequence
		2.3	Components are cleaned and serviced using authorised materials and tools/equipment
		2.4	Components are inspected and faulty items repaired, replaced or referred for further maintenance action
		2.5	Equipment is re-assembled and operations are tested
		2.6	Equipment maintenance is reported/recorded in accordance with site procedures
3	Maintain booths	3.1	Combustion and ignition sources are neutralised throughout the work sequence
		3.2	Ventilation and other services are inspected for operation, cleaned out and, where appropriate, replenished, replaced or referred for further maintenance action
		3.3	Surfaces and floors are cleaned and restored in accordance with site and industry standards
		3.4	Materials and consumable stores are cleaned and restored in accordance with site, industry and regulatory standards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements |
| Spray equipment includes: | <ul style="list-style-type: none">• computerised spray system• electrostatic spray gun• powder coating spray gun• air compressor, and hoses and dryers |
| Booths include: | <ul style="list-style-type: none">• dry filter bath• purpose-designed, positive-pressure, down-draft water booth |
| Booth services include: | <ul style="list-style-type: none">• lighting• ventilation• electricity supply• water supply• paint lines• consumables storage areas |
| Tools and equipment include: | <ul style="list-style-type: none">• liquid containers• feeding systems• spray guns• scrapers (non-ferrous) screwdrivers• shifting spanner• spanners |
| Materials include: | <ul style="list-style-type: none">• water• solvents• other cleaning compounds and chemicals• rags• steel wool• brushes• hoses• brooms• squeegees |

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFF2005B Maintain spray equipment and booth

Assessment Requirements for MSFFF2005 Maintain spray equipment and booth

Modification History

Release 2 - Missing text from Assessment Requirements reinstated

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Disassemble, maintain and re-assemble at least two (2) different spray systems
- Maintain a booth and booth services on at least two (2) occasions
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Identification of spray system equipment, processes and procedures
- Types, characteristics and maintenance requirements for spray booth services, including at a minimum, ventilation, lighting, water and electrical reticulation
- Characteristics of spray coatings and base materials in terms of toxicity, reactivity and flammability
- Types, characteristics, uses and limitations of cleaning solvents and agents
- Effects of fumes, heat and other radiations on surface coatings
- Material safety management systems

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to spray systems and equipment, spray booth, cleaning and maintenance materials.

MSFFF2006 Apply surface coatings by spray gun

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying surface coatings by a handheld spray gun.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan and prepare for work	1.1	Characteristics of the surface and the required surface coating are identified from work orders or instructions
		1.2	Processing and application techniques, time and safety requirements are identified and used for work planning
		1.3	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.4	Tools, equipment and accessories are identified and checked for safe and effective operation for the surface coating task
		1.5	Surface coatings are identified and prepared, as required, for the surface coating tasks

- | | | | |
|---|--------------------------------|-----|--|
| 2 | Check and prepare for spraying | 2.1 | Products with surface or other faults are identified and faults reported or repaired as appropriate |
| | | 2.2 | Other products and equipment in the workplace are protected from overspray |
| | | 2.3 | Trial applications of surface materials are made to check condition of spray system, spray patterns, equipment operation, materials viscosity and specified surface finish |
| | | 2.4 | Unserviceable components are cleaned or replaced and spray system re-assembled |
| | | 2.5 | Spray pattern faults are identified and rectified in accordance with workplace procedures. |
| | | 2.6 | Material faults are identified and workplace procedures for rectification are followed |
| 3 | Apply surface coating | 3.1 | Surfaces are kept free of contamination |
| | | 3.2 | Surface coatings are applied according to workplace procedures |
| | | 3.3 | Surface build and coverage is checked against workplace requirements for even spread and thickness |
| | | 3.4 | Rectification of surface faults are made in accordance with workplace procedures |
| | | 3.5 | Products are inspected and approved for suitability for further processing |
| 4 | Clean work area | 4.1 | Equipment is cleaned and inspected for serviceable condition and stored appropriately |
| | | 4.2 | Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed |
| | | 4.3 | Work area, including spray booth, is cleaned and returned to approved condition |
| | | 4.4 | Workplace records are completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|---|

Assessment Requirements for MSFFF2006 Apply surface coatings by spray gun

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Select and apply surface coatings, including the adjustment of spray equipment, to effect required spray pattern for a minimum of three (3) different surface types and shapes
- Maintain spray equipment and work area, including spray booth
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Identification of spray equipment, processes and procedures
- Characteristics of the coatings and base materials in terms of toxicity, reactivity, flammability, required viscosity and recoatability
- Effects of fumes, heat and other radiations on surface coatings
- Methods to prevent contamination of surfaces during and after surface coating
- Work flow in relation to spraying operations

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

MSFFF2007 Apply stains, fillers and bleach

Modification History

Release 1 - New unit of competency

Application

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Workplace information, including materials application and safety information, and material safety data sheets (MSDS), is used to inform work practices
		1.2	Characteristics of the surface and the required surface treatment are identified from work orders or instructions
		1.3	Processing and application techniques, time and safety requirements are identified and used for work planning
		1.4	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.5	Tools, equipment and accessories are identified and checked for safe and effective operation for the staining, filling or bleaching task
2	Prepare for application of materials	2.1	Surfaces are checked for contamination and correct preparation according to workplace procedures and standards
		2.2	Products with surface or other faults are identified and

- faults repaired as appropriate
- 2.3 Materials required to stain and fill in are identified and prepared for the task
 - 2.4 Trial applications of stains and/or fillers are made to check equipment operation, materials consistency, viscosity and specified colour
 - 2.5 Faults and/or inconsistencies in colour are identified and workplace procedures for rectification and adjustment are followed
 - 2.6 Materials required for bleaching are identified and labelled to prevent cross-contamination of bulk material during application
- 3 Apply finishing materials
 - 3.1 Techniques for application of stain, filler or bleach are identified
 - 3.2 Materials are applied according to job instructions, manufacturer specifications and workplace procedures
 - 3.3 Bleached items are appropriately stored for drying
 - 3.4 Finished products are inspected and approved for suitability for further processing
 - 3.5 Products which do not meet quality specifications are re-stained, filled, bleached or tagged for further investigation
 - 4 Clean work area and maintain equipment
 - 4.1 Equipment used is cleaned and inspected for serviceable condition and stored appropriately
 - 4.2 Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed
 - 4.3 Bleaching materials are disposed of in accordance with environmental requirements and workplace procedures
 - 4.4 Work area is cleaned and returned to approved condition, and all areas used for bleaching are washed down with water
 - 4.5 Workplace records are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFF2008 Apply surface coatings by hand

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare for and apply coatings by hand on a minimum of five (5) occasions covering:
 - one (1) solid timber surface
 - one (1) manufactured board surface
 - one (1) metal surface
 - using four (4) different coatings:
 - one-pot polyurethane, acrylic, enamel and polish
- Maintain application equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Identification of hand application techniques
- Characteristics of coatings, waxes and oils in terms of toxicity, reactivity, flammability and required viscosity.
- Methods to prevent contamination of surfaces during and after finishing
- Work flow in relation to the application of finishing material

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to hand finishing application equipment, coating materials and surfaces to be coated.

MSFFF3001 Match and make up colours

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers matching and making up colours for surfaces which have previously been coated or polished, or for new work which must match existing work or a specified sample.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan and prepare work	1.1	Work instructions are used to determine job requirements, including design, colour, finish process and quality
		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	Colour matching aids and colouring materials are accessed and readied for use
		1.4	Types of colouring materials are identified and prepared for colouring task
		1.5	Tools, equipment and accessories are identified and

			checked for safe and effective operation
2	Match colours	2.1	Surfaces are cleaned and prepared to enable accurate colour matching
		2.2	Characteristics of the surface and the impact of these on colouring are taken into account
		2.3	Techniques for colour application are identified and selected according to workplace practices
		2.4	Properties of colouring agents are assessed in relation to the specific circumstances
		2.5	Colour matching techniques are applied to identify most likely fit in terms of product, colour and application techniques
		2.6	Colour matching outcomes are confirmed through trials of proposed products, colours and application techniques
		2.7	Colour matching formulae are recorded to enterprise or industry standards
3	Make up colours	3.1	Product quantities are identified from client demand or accurate assessment of coating/colouring requirement
		3.2	Colouring additives are calculated from manufacturer specifications
		3.3	Colouring additives are accurately measured and blended with the base product
4	Apply colours	4.1	Colour solution is applied in accordance with selected application techniques and workplace procedures
		4.2	Colour application is constantly checked against sample colour
		4.3	Surface is inspected for faults in applied colour film and defects are rectified
		4.4	Coloured or matched up surface is sealed with finishing material in accordance with job specification and workplace procedures
5	Clean up work area	5.1	Colouring materials are stored and labelled ready for next process
		5.2	Waste and unwanted material is disposed of safely and

in accordance with relevant environmental regulations

5.3 Unused materials are sealed and stored

5.4 Tools and equipment are cleaned, maintained and stored

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFF3001 Match and make up colours

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Accurately colour match using pigments and/or stains on a minimum of five (5) occasions
- Record colour formulae for production situations
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics and degradation patterns of coatings and stains
- Properties of coated and stained surface materials and the impact of these on colouring
- Types, characteristics, uses and limitations of colouring agents
- Types, uses and limitations of matching aids
- Product catalogues and other information systems
- Material safety management systems and related safety requirements

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to sample colouring requirements, colouring agents, base coating products, mixing and testing equipment, and cleaning equipment and materials.

MSFFF3002 Set up, operate and maintain mechanical coating systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating and maintaining mechanical coating systems in order to apply coatings to specifications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Characteristics of the surface and the required surface coating are identified from work orders or instructions
		1.2	Processing and application techniques, time and safety requirements are identified and used for work planning
		1.3	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.4	Tools, equipment and accessories are identified and checked for safe and effective operation for the surface coating task

- | | | | |
|---|--|-----|---|
| | | 1.5 | Coating materials are identified and prepared |
| 2 | Check and prepare for spraying | 2.1 | Products with surface or other faults are identified and faults reported or repaired as appropriate |
| | | 2.2 | Other products and equipment in the workplace are protected from overspray |
| | | 2.3 | Trial applications of surface materials are made to check equipment operation, materials consistency and specified surface finish |
| | | 2.4 | Machine faults are identified and rectified or reported |
| | | 2.5 | Material faults are identified and workplace procedures for rectification are followed |
| 3 | Apply surface coating | 3.1 | Surfaces are kept free of contamination |
| | | 3.2 | Surface coatings are applied according to workplace procedures |
| | | 3.3 | Surface coating viscosity and coverage is monitored and checked against workplace requirements for even spread and thickness |
| | | 3.4 | Rectification of surface faults is made as required |
| | | 3.5 | Products are inspected and approved for suitability for further processing |
| | | 3.6 | Defects are dealt with and/or reported in accordance with workplace procedures |
| 4 | Clean work area and maintain equipment | 4.1 | Equipment is cleaned and inspected for serviceable condition and stored appropriately |
| | | 4.2 | Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed |
| | | 4.3 | Work area, including spray booth, is cleaned and returned to approved condition |
| | | 4.4 | Workplace records are completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate discretion, judgement and problem solving in the application of surface coatings |
| Mechanical coating systems include: | <ul style="list-style-type: none">• curtain coating• UV coating• tumbling• dipping• electrostatic powder coating• automatic (robotic) spray equipment |
| Tools and equipment include: | <ul style="list-style-type: none">• computerised spray system• electrostatic spray gun• baking oven• barrel tumbler• spray booth• liquid containers• air compressor and hoses• screwdrivers• shifting spanner and spanners• ford cup |

Assessment Requirements for MSFFF3002 Set up, operate and maintain mechanical coating systems

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Select and apply surface coatings, including the adjustment of spray equipment, to effect required coating using a minimum of two (2) different mechanical systems
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Identification of mechanical spray system equipment, processes and procedures
- Characteristics of the coatings and base materials in terms of toxicity, reactivity, flammability, required viscosity and recoatability
- Effects of fumes, heat and other radiations on surface coatings
- Methods to prevent contamination of surfaces during and after surface coating
- Work flow in relation to spraying operations

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

MSFFF3003 Apply plural component coatings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying plural component coatings, including polyurethane, polyester coatings and acid catalysed, to surfaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Workplace information, including materials application and safety information, and material safety data sheets (MSDS), is used to inform work practices
		1.2	Characteristics of the surface and the required surface treatment are identified from work orders or instructions
		1.3	Processing and application techniques, time and safety requirements are identified and used for work planning
		1.4	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.5	Tools, equipment and accessories are identified and checked for safe and effective application of plural

component coatings		
2	Prepare for application of materials	2.1 Surfaces are checked for contamination and correct preparation according to workplace procedures and standards
		2.2 Products with surface or other faults are identified and faults repaired as appropriate
		2.3 Materials required are identified and prepared for the task
		2.4 Spray booths and work documentation are inspected to ensure nitro-cellulose lacquer has not been sprayed in the same booth as that used for the application of plural component coatings
		2.5 Nitro-cellulose overspray is cleaned off booth surfaces if necessary before application of plural component coatings
		2.6 Trial applications of plural component coatings are made to check equipment operation, materials consistency and viscosity
		2.7 Faults and/or inconsistencies in applied coating are identified and workplace procedures for rectification and adjustment are followed
3	Apply finishing materials	3.1 Techniques for application of plural component coatings are identified and selected
		3.2 Materials are applied according to job instructions, material manufacturer specifications and workplace procedures
		3.3 Finished products are inspected and approved for suitability for further processing
		3.4 Products which do not meet quality specifications are rectified or tagged for further investigation
4	Clean work area and maintain equipment	4.1 Equipment used is cleaned and inspected for serviceable condition and stored appropriately
		4.2 Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed
		4.3 Work area is cleaned and returned to approved condition

4.4 Workplace records are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. MSFFF3004 Apply soft rubber techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying polish and/or spirit varnish to surfaces using soft rubber techniques.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Workplace information, including materials application and safety information, and material safety data sheets (MSDS), is used to inform work practices
		1.2	Characteristics of the surface and the required surface finish are identified from work orders or instructions
		1.3	Processing and application techniques, time and safety requirements are identified and used for work planning
		1.4	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.5	Tools, equipment and accessories are identified and checked for safe and effective operation for the surface

			finishing task
2	Prepare for application of materials	2.1	Surfaces are checked for contamination and correct preparation according to workplace procedures and standards
		2.2	Products with surface or other faults are identified and faults repaired as appropriate
		2.3	Finishing materials required are identified and prepared for the task
		2.4	Trial applications of flat surface or furniture materials are made to check rubber operation, materials consistency and specified surface finish
		2.5	Faults are identified and workplace procedures for rectification are followed
3	Apply soft varnish/rubber polish and/or varnish using soft rubber	3.1	Surface is lightly sanded and checked for defects which are rectified in accordance with workplace procedures
		3.2	Rubber is suitably charged
		3.3	Surface is soft-rubbered/varnish rubbered using correct amount of pressure and suitable rubber movements
		3.4	Surface is inspected and any defects repaired/rectified
4	Clean work area and maintain equipment	4.1	Equipment used is cleaned and inspected for serviceable condition and stored appropriately
		4.2	Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed
		4.3	Work area is cleaned and returned to approved condition
		4.4	Workplace records are completed

MSFFF3005 Enhance finishes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting and buffing, and applying materials to a coated surface by hand to enhance the finish.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Workplace information, including materials application and safety information, and material safety data sheets (MSDS), is used to inform work practices
		1.2	Characteristics of the surface and the required surface finish are identified from work orders or instructions
		1.3	Processing and application techniques, time and safety requirements are identified and used for work planning
		1.4	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.5	Tools, equipment and accessories are identified and

			checked for safe and effective operation for the surface finishing task
2	Prepare for application of materials	2.1	Surfaces are checked for contamination and correct preparation according to workplace procedures and standards
		2.2	Products with surface or other faults are identified and faults repaired as appropriate
		2.3	Surfaces are cut and buffed to prepare for finishing as required
		2.4	Finishing materials required are identified and prepared for the task
		2.5	Trial applications of surface materials are made to check equipment operation, materials consistency and specified surface finish
		2.6	Faults are identified and workplace procedures for rectification are followed
3	Apply finishing materials	3.1	Techniques for hand application of materials are identified
		3.2	Finishing materials are applied according to job instructions, manufacturer specifications and workplace procedures
		3.3	Finished products are inspected and approved for suitability for further processing
		3.4	Products which do not meet quality specifications are refinished or tagged for further investigation
4	Clean work area and maintain equipment	4.1	Equipment used is cleaned and inspected for serviceable condition and stored appropriately
		4.2	Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed
		4.3	Work area is cleaned and returned to approved condition
		4.4	Workplace records are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFF3005 Enhance finishes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- On two (2) occasions, one (1) including a curved surface, enhance existing finishes by:
 - cutting down
 - pulling in
 - compounding and buffing
- On two (2) occasions wax and oil to achieve a satin finish
- Maintain application equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Identification of hand application techniques
- Functions and safety requirements of hand and power tools, particularly in wet working environments
- Characteristics of compounds, waxes and oils in terms of toxicity, reactivity, flammability and required viscosity
- Methods to prevent contamination of surfaces during and after finishing
- Work flow in relation to the application of finishing material

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to hand finishing application equipment, compounds, waxes, oils and finishes requiring enhancement.

MSFFF3006 Repair and touch up surfaces

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying techniques to repair and touch up damaged surfaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Workplace information, including materials application and safety information, and material safety data sheets (MSDS), is used to inform work practices
		1.2	Characteristics of the surface and the required surface coating are identified from work orders or instructions
		1.3	Processing and application techniques, time and safety requirements are identified and used for work planning
		1.4	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.5	Tools, equipment and accessories are identified and checked for safe and effective operation for the surface

			coating task
2	Repair surfaces	2.1	Surfaces are checked for contamination and correct preparation according to workplace procedures and standards
		2.2	Products with surface or other faults are identified and assessed
		2.3	Materials required for repair are selected and prepared
		2.4	Repairs are completed to manufacturer standards and/or industry practices
3	Prepare for application of materials	3.1	Techniques for hand application of materials are identified and selected
		3.2	Coating materials required are identified and prepared for the surface coating task
		3.3	Trial applications of surface materials are made to check equipment operation, materials consistency and specified surface finish
		3.4	Faults are identified and workplace procedures for rectification are followed
4	Apply surface coating	4.1	Surface coatings are applied according to job instructions, manufacturer specifications and workplace procedures
		4.2	Coated products are inspected and approved for suitability for further processing
		4.3	Products which do not meet quality specifications are recoated or tagged for further investigation
5	Clean work area and maintain equipment	5.1	Equipment used is cleaned and inspected for serviceable condition and stored appropriately
		5.2	Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed
		5.3	Work area, including painting locations, is cleaned and returned to approved condition
		5.4	Workplace records are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFF3006 Repair and touch up surfaces

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Repair and finish a minimum of four (4) damaged surfaces, including:
 - a strip off and re-finish
 - two (2) touch ups involving different repair techniques
 - with only one (1) being a metal surface
- Maintain application equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Repair and touch up techniques
- Decontamination materials, techniques and safety requirements
- Identification of application techniques
- Characteristics of coatings and base materials in terms of toxicity, reactivity, flammability, required viscosity and recoatability
- Methods to prevent contamination of surfaces during and after surface coating
- Work flow in relation to the application of surface coatings

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to surface coating application equipment, coatings, other consumables and materials to be repaired.

MSFFF3007 Apply graining and decorative finishes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying material to a surface to imitate timber grain and decorative (faux) finishes

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Workplace information, including materials application and safety information, and material safety data sheets (MSDS), is used to inform work practices |
| | | 1.2 | Characteristics of the surface and the required surface treatment are identified from work orders or instructions |
| | | 1.3 | Processing and application techniques, time and safety requirements are identified and used for work planning |
| | | 1.4 | Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work |
| | | 1.5 | Tools, equipment and accessories are identified and checked for safe and effective operation for the task |

- | | | | |
|---|--|-----|--|
| 2 | Prepare for application of materials | 2.1 | Surfaces are checked for contamination and correct preparation according to workplace procedures and standards |
| | | 2.2 | Products with surface or other faults are identified and faults repaired as appropriate |
| | | 2.3 | Materials required to complete the task are identified and prepared |
| | | 2.4 | Trial applications of material are made to check equipment operation, materials consistency, viscosity and sample match |
| | | 2.5 | Faults and or inconsistencies in colour and surface appearance are identified and workplace procedures for rectification and adjustment are followed |
| 3 | Apply finishing materials | 3.1 | Techniques for application of graining solution and other finishes are identified |
| | | 3.2 | Materials are applied according to job instructions, manufacturer specifications and workplace procedures |
| | | 3.3 | Finished products are inspected and approved for suitability for further processing |
| | | 3.4 | Products which do not meet quality specifications are rectified or tagged for further investigation |
| 4 | Clean work area and maintain equipment | 4.1 | Equipment used is cleaned and inspected for serviceable condition and stored appropriately |
| | | 4.2 | Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed |
| | | 4.3 | Work area is cleaned and returned to approved condition, and all areas used for bleaching are washed down with water |
| | | 4.4 | Workplace records are completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. MSFFF3008 Apply traditional French polishing techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers hand application of shellac polish to timber surfaces using traditional French polishing techniques.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Plan and prepare for work	1.1	Work requirements are correctly identified from drawings, specifications and instructions
		1.2	Quality assurance requirements are recognised and adhered to in accordance with company operations
		1.3	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.4	Tools and equipment selected are consistent with job requirements and work instructions, checked for safety and serviceability, and any faults reported to supervisor
		1.5	Skinning in, bodying up and spiriting out/stiffening up rubbers are prepared consistent with the requirements of

			the work
2	Prepare for application of polish	2.1	Surfaces are checked for contamination and correct preparation according to workplace procedures and standards
		2.2	Products with surface or other faults are identified and faults are reported or repaired
		2.3	Techniques for hand application of polish using traditional methods are identified and used according to workplace procedures
		2.4	Materials and equipment suitable for skinning in, bodying up and spiriting out/stiffening up operations are prepared
		2.5	Surfaces are stained, filled in and then sealed with polish using a mop brush, blender or swooge
3	Skin in job surface	3.1	Surface is lightly sanded and checked for defects which are rectified in accordance with workplace procedures
		3.2	Skinning in rubber is suitably charged with polish having regard for job colour and clarity
		3.3	Surface is skinned in, covering small areas at a time, using correct amount of pressure and suitable rubber movements
		3.4	Pumice powder is applied, as necessary, in accordance with workplace procedures
		3.5	Skinned in surface is inspected and any defects are repaired using suitable materials
4	Body up a skinned in surface	4.1	Polish, lubricating oil and pumice powder is used to body up the skinned in surface, using correct amount of pressure and suitable rubber movements
		4.2	Rubber and job surface are continuously monitored to evaluate their condition
		4.3	Body up rubber is recharged and lubricating oil and pumice are applied, as necessary, to ensure surface faults and blemishes do not develop
		4.4	Bodied up surface is full and flat with an even sheen and shows no blemishes

5	Spirit off/stiffen up surface	5.1	Surface is stiffened up/spirited off using correctly charged rubber, correct amount of pressure and suitable rubber movements
		5.2	Stiffened up/spirited off surface is free of oil, full, flat with an even sheen and shows no blemishes or rubber marks
6	Clean up work area	6.1	Workplace is cleared of debris and unused materials
		6.2	Rubbers are stored separately in airtight glass or plastic containers in accordance with workplace procedures
		6.3	Tools and equipment are cleaned, maintained and stored

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the process of French polishing

Polishes include:	<ul style="list-style-type: none">• shellac• button lac• de-waxed lac• de-waxed/de-coloured lac• white or bleached lac
Surfaces include:	<ul style="list-style-type: none">• solid timber or veneered manufactured board
Lubricating oils include:	<ul style="list-style-type: none">• paraffin• linseed
Surface faults include:	<ul style="list-style-type: none">• machine marks• bruising• pencil marks• grease• cross-sanding marks• scratches• glue marks• dirt marks• insect and termite holes• holes• knots• blisters• rubber marks• burns or tears• ropiness and foreign matter in the polish
Tools and equipment include:	<ul style="list-style-type: none">• filler blades• brushes• abrasive papers• skinning in• bodying up and spiriting out rubbers• mop brush• blender• swooge and scrapers
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication

- manufacturer specifications and operational procedures

Assessment Requirements for MSFFF3008 Apply traditional French polishing techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Accurately apply traditional French polishing techniques on a minimum of two (2) occasions which must include and cover flat and curved surfaces and an enclosed panel
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
-

Knowledge Evidence

- Workplace and equipment safety requirements, including relevant regulations, codes and standards
- Construction techniques of rubbers
- Safe handling of materials associated with traditional French polishing, including:
 - lac
 - polishes
 - paraffin and linseed oils
 - methylated spirits
- Shellac mixing procedures
- Repair techniques to defects in timber surfaces and polish film
- Appropriate rubber charging and movements for each stage of French polishing

- Storage requirements for lac products and rubbers

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to French polishing materials, timber components/furnishings requiring polish and cleaning materials.

MSFFF3009 Set up, operate and maintain computer numerically controlled (CNC) coating systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating and maintaining CNC coating systems in order to apply coatings to specifications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for work	1.1	Characteristics of the surface and the required surface coating are identified from work orders or instructions
		1.2	Processing and application techniques, time and safety requirements are identified and used for work planning
		1.3	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.4	Tools, equipment and accessories are identified and checked for safe and effective operation for the surface coating task

- | | | | |
|---|--|-----|---|
| | | 1.5 | Coating materials are identified and prepared |
| 2 | Check and prepare for spraying | 2.1 | Products with surface or other faults are identified and faults reported or repaired as appropriate |
| | | 2.2 | Other products and equipment in the workplace are protected from overspray |
| | | 2.3 | Trial applications of surface materials are made to check equipment operation, materials consistency and specified surface finish |
| | | 2.4 | Machine faults are identified and rectified or reported |
| | | 2.5 | Material faults are identified and workplace procedures for rectification are followed |
| 3 | Apply surface coating | 3.1 | Surfaces are kept free of contamination |
| | | 3.2 | Surface coatings are applied according to workplace procedures |
| | | 3.3 | Surface coating viscosity and coverage is monitored and checked against workplace requirements for even spread and thickness |
| | | 3.4 | Rectification of surface faults are made as required |
| | | 3.5 | Products are inspected and approved for suitability for further processing |
| | | 3.6 | Defects are dealt with and/or reported in accordance with workplace procedures |
| 4 | Clean work area and maintain equipment | 4.1 | Equipment is cleaned and inspected for serviceable condition and stored appropriately |
| | | 4.2 | Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed |
| | | 4.3 | Work area, including spray booth is cleaned and returned to approved condition |
| | | 4.4 | Workplace records are completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Assessment Requirements for MSFFF3009 Set up, operate and maintain computer numerically controlled (CNC) coating systems

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Select and apply surface coatings, including the adjustment of system controls, to effect required coating using a minimum of two (2) different CNC systems for curtain coating, UV coating, tumbling, dipping, and electrostatic powder coating tasks
- Maintain equipment and work area, including spray booth
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Identification of CNC coating system equipment, processes and procedures
- Characteristics of coatings and base materials in terms of toxicity, reactivity, flammability, required viscosity and recoatability
- Effects of fumes, heat and other radiations on surface coatings
- Methods to prevent contamination of surfaces during and after surface coating
- Work flow in relation to spraying operations

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to CNC coating systems and equipment, spray booth, coatings and cleaning products.

MSFFL1001 Complete simple floor covering installation

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers completing installation of timber, carpet or resilient floor coverings in a simple context.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Lay out materials	1.1	Plans and/or drawings are read and interpreted
		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.4	Suitable adhesives, trims and accessories are selected if required

		1.5	Materials are laid out to meet specification requirements and minimise waste and joins
2	Prepare materials for installation	2.1	Sequence of work is planned to ensure lay out and fixing is in logical order
		2.2	Underlay is cut to specification
		2.3	Materials are cut to shape, length and size for final laying
		2.4	Adhesives and edge strips are prepared for use as required
3	Lay flooring	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Appropriate underlay is laid according to manufacturer recommendations
		3.3	Materials for fixing are organised and used in accordance with relevant safety management requirements
		3.4	Fixing methods and equipment are used following manufacturer recommendations
		3.5	Finished job is inspected and any imperfections are rectified following workplace procedures
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- this unit is designed for a VET in Schools or equivalent program where the level of supervision is likely to be more direct than under normal working conditions
 - WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individual to demonstrate some discretion, judgement and problem solving
 - simple floor covering contexts include those where:
 - sub-floor preparations are not required or have been completed
 - the area to be covered is rectangular or square
 - no pattern, border design or colour matching is required
- Timber flooring includes:**
- floating floor
 - strip timber flooring (non-structural)
 - parquetry and cork tiles
- Carpet flooring includes:**
- tufted carpet
 - woven carpet
 - needle punch carpet and fusion bonded carpet
- Resilient flooring includes:**
- homogenous/heterogeneous backed PVC
 - linoleum sheet
 - rubber sheet and composition vinyl
- Tools and equipment for timber floor covering installation include:**
- drop saw
 - jig saw
 - hand saw
 - undercut saw
 - plunge saw
 - nail gun
 - straight edge

Tools and equipment for carpet floor covering installation include:

- cramps
- clamps
- hammer
- bar scribe
- tape measure and utility knife
- carpet knee kicker
- power stretcher
- carpet wall trimmer
- trolley
- hammer
- trimming knife
- spiked carpet roller
- weight or seam roller
- awl
- carpet spreader
- carpet shears
- napping shears and tape measure

Tools and equipment for resilient floor covering installation include:

- utility knife
- straight edge
- square
- chalk and chalk-line
- tape measure
- hacksaw
- serrated trowel
- hammer
- scribing bar
- divider
- roller
- gas bottle and gun
- rubber mallet
- paint brush and bucket
- spatula knife
- trolley and wall trimmer

Materials include:

- flooring materials
- underlay
- edge strips
- reducing strips
- tapes
- adhesives
- adhesive tapes
- skirting
- domestic carpet gripper strips

Personal protective equipment includes:

- heat seam tape
- hessian tape and thread
- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFL1001A Complete simple floor covering installation

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFFL1001 Complete simple floor covering installation

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply ventilation standards
- Complete a minimum of one (1) simple floor covering installation, which may be either timber, carpet or resilient flooring
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of flooring materials
- Types and uses of installation tools and equipment
- Types, characteristics, uses and limitations of fixing methods and adhesives
- Types, characteristics, uses and limitations of underlays
- Workplace safety system requirements related to flooring installation
- Work flow in relation to flooring installation operations

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to timber, carpet or resilient flooring materials; timber, carpet or resilient flooring tools and equipment; installation materials and area requiring flooring.

MSFFL2001 Use flooring technology sector hand and power tools

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using hand and power tools in applications relating to the flooring and finishing sector of the furnishing industry. It supports competent workplace performance in the wide variety of flooring technology operations in a work room and on-site environment and involves application of skills and knowledge at a production and trade worker level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify hand and power tools	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the use of flooring sector hand and power tools. are verified and complied with
		1.2	Types of hand and power tools and their functions are identified from relevant information sources
2	Select and use hand tools	2.1	Hand tools are selected consistent with the needs of the job
		2.2	Tools are checked for serviceability and safety and any faults are corrected or processed for repair

- | | | | |
|---|----------------------------|-----|---|
| | | 2.3 | Equipment is selected to hold or support material for hand tool application where applicable |
| | | 2.4 | Material is located and held in position for hand tool application |
| | | 2.5 | Hand tools are safely and effectively used according to their intended use |
| | | 2.6 | Hand tools are safely located when not in immediate use |
| 3 | Select and use power tools | 3.1 | Appropriate personal protective equipment is selected, correctly fitted and used |
| | | 3.2 | Power tools are selected consistent with the needs of the job in accordance with conventional work practice |
| | | 3.3 | Power tools are visually checked for serviceability/safety in accordance with WHS requirements and any faults are sent for repair |
| | | 3.4 | Equipment is selected to hold or support materials for power tool application where applicable |
| | | 3.5 | Material is located and held in position for power tool application where applicable |
| | | 3.6 | Power tools are safely and effectively used in application processes |
| | | 3.7 | Power tools are safely located when not in use |
| 4 | Complete housekeeping | 4.1 | Unused materials are stored or recycled as required |
| | | 4.2 | Tools and equipment are cleaned and stored appropriately |
| | | 4.3 | Work area is cleaned and rubbish disposed of appropriately |
| | | 4.4 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL2001 Use flooring technology sector hand and power tools

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply sector hand and power tools correctly and safely
- Complete operator maintenance on sector hand and power tools
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to preparing and presenting design information relevant to the use of hand and power tools
- Organisational and site standards, requirements, policies and procedures for preparing and presenting design information for the use of hand and power tools
- Types of hand and power tools and procedures for their safe use, operation and maintenance
- Function, purpose and operator maintenance requirements of hand tools used in the furnishing technology workplace
- Function, purpose and operator maintenance requirements of power tools used in the furnishing technology workplace
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a range of hand and power tools relevant to the sector and manufacturer/user instructions and/or manuals.

MSFFL2002 Receive and prepare floor covering materials for installation

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning, preparing, packaging, protecting, transporting and loading floor covering materials to an installation site with minimum damage to floor coverings and components. Acclimatisation on site is required to ensure that material being installed is installed whilst at the same temperature and humidity as the area being covered so that the fitted material does not subsequently shrink or stretch from its fitted form.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify preparation requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to receiving, preparing, packaging, protecting, transporting, loading and storage of floor coverings are verified and complied with
		1.2	Floor covering materials to be prepared are identified against work orders
		1.3	Instructions, work plans and product information are read and interpreted to identify the preparation process

			required to complete work tasks
		1.4	Details of the site conditions, including safety and security requirements, are confirmed from reports or physical inspection
		1.5	Delivery point, access and storage on site are identified and methods for loading/hoisting floor coverings are determined
		1.6	Size, shape and special packaging requirements are determined for transportation to site
		1.7	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
2	Receive flooring materials	2.1	Flooring materials are received and segregated into products
		2.2	Received materials are checked against delivery documentation for type and quantity
		2.3	Received materials are inspected for defects and damage and unacceptable items rejected or segregated
		2.4	Receipt documentation is completed to enterprise procedures
3	Prepare and package floor coverings	3.1	Types and quantities of materials required for the work plan are confirmed
		3.2	Floor coverings are laid out, measured and cut to required size
		3.3	Floor coverings and accessory products are packaged ready for transport to site taking into account potential damage factors
4	Load floor coverings on to the worksite	4.1	Roles and related responsibilities for the successful completion of the loading and lifting activity are identified and applied
		4.2	Time requirements to complete the loading/lifting of floor coverings are estimated
		4.3	Materials handling equipment appropriate to the task is selected, accessed and used in accordance with regulatory and/or site requirements

		4.4	Labour requirements to support the floor covering loading/lifting requirements are confirmed and accessed
		4.5	Movement activities are completed as an individual or working directly with others as required by the work tasks
5	Store floor coverings and accessories on site	5.1	Condition of floor coverings and accessory products are observed on arrival on site and any damaged product is identified and separated for further action
		5.2	Floor coverings and accessory products are stored on site observing any requirements for protection from potential damage factors
		5.3	Product and site acclimatisation requirements are identified and satisfied
		5.4	Materials are stacked appropriately for weight loading, size and crushability of floor coverings or accessory products
		5.5	Products are located to enable ready access when required on site
		5.6	Work is undertaken in accordance with workplace procedures
6	Complete housekeeping	6.1	Packing materials are stored or recycled as required
		6.2	Tools and equipment are cleaned and stored appropriately
		6.3	Work area is cleaned and rubbish disposed of appropriately
		6.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures, or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individual to demonstrate some discretion, judgement and problem solving
Floor covering materials include:	<ul style="list-style-type: none">• underlays• carpets• resilient• timber and cork products• non-perishable inventory required to support installation operations
Tools and equipment include:	<ul style="list-style-type: none">• pre-fabricated and fixed shelving• open and enclosed pallets• shipping containers• non-motorised lifting and movement aids• other material handling equipment
Potential damage factors include:	<ul style="list-style-type: none">• humidity• moisture• temperature• weather effects• handling• crushing• scratching• contamination
Materials handling equipment include:	<ul style="list-style-type: none">• those restricted to non-regulated machines and appliances
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment

- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Assessment Requirements for MSFFL2002 Receive and prepare floor covering materials for installation

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare, package, protect, transport and load floor coverings and plan layout of storage areas taking into account potential damage factors
- Establish and maintain storage areas for floor covering materials
- Use a range of non-regulated materials handling devices
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to handling, transporting and storage of flooring materials
- Potential damage factors to flooring products
- Organisational and site standards, requirements, policies and procedures for handling, transporting and storage of flooring materials
- Characteristics of materials, products and common defects
- Work flow in relation to use of goods and materials in store
- Requirements for minimising damage to and maintaining contaminant free unfinished materials goods and completed products
- Potential hazards, including fire and explosion risk, security issues and operator safety, around products to be stored

- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Set-up and operation of loading/lifting equipment
- Appropriate controls and safety equipment to manage risk
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Requirements of working with others in a team
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic requirement to receive, prepare, package, move and store floor coverings and associated materials; materials and equipment relevant to the preparation of floor coverings; a range of non-regulated materials handling devices; and material specifications and work instructions.

MSFFL2003 Select, operate and maintain floor covering cutting machine

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers operating and maintaining cutting machine equipment in applications relating to a wide variety of floor coverings preparation in a workroom.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the use of cutting equipment are verified and complied with
		1.2	Types of cutting equipment and their functions are identified from relevant information sources
		1.3	Sources of power supply are recognised
2	Start-up checks on cutting equipment	2.1	Cutting equipment and attachments are selected consistent with the needs of the job

	are conducted	2.2	Cutting equipment is checked for serviceability and safety and any faults are correct or processed for repair
3	Prepare to cut floor coverings	3.1	Appropriate personal protective equipment is selected, correctly fitted and used
		3.2	Roll of floor covering is loaded onto the cutting machine
		3.3	Preparation is carried out to measure the floor covering
		3.4	Counter is programmed to make the cut
4	Cut floor coverings	4.1	Work sequence and starting point are selected
		4.2	Floor coverings are rolled up and cut
		4.3	Roll of floor coverings is removed from the cutting machine
		4.4	Cut floor coverings are wrapped
5	Complete housekeeping	5.1	Unused materials are stored or recycled as required
		5.2	Tools and equipment are cleaned and stored appropriately
		5.3	Work area is cleaned and rubbish disposed of appropriately
		5.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individual to demonstrate some discretion, judgement and problem solving
- Types of cutting equipment include:**
- 'cut and roll' floor covering cutting machines
- Sources of power supply include:**
- electric
 - pneumatic
- Attachments include:**
- computer-aided software
- Fault reporting includes:**
- verbal or written reporting
- Australian Standards include:**
- AS/NZS 2455.1:2007 Textile floor coverings - Installation practice - General
 - AS 1884-2012 Floor coverings - Resilient sheet and tiles - Installation practices
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Release 1 - New unit of competency

Application

This unit of competency covers moisture testing and formally reporting on the condition of timber and concrete floors. It applies to a wide variety of flooring technology operations in an on-site environment and involves application of skills and knowledge at a sub-trade and trade worker level.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to moisture testing timber and concrete are verified and complied with
		1.2	Customer enquiry and relevant information are consulted to determine the type of proposed flooring operation and other work requirements
		1.3	Moisture content requirements for the proposed flooring are determined from manufacturer or workplace

		information
		1.4 Tools, equipment and required materials are obtained and prepared for the work
2	Conduct moisture testing on timber flooring and components	2.1 The type of floor construction materials and the building floor structure and substructure are identified
		2.2 Timber flooring is visually inspected to identify irregularities in moisture content
		2.3 Ventilation flow is confirmed and irregularities noted
		2.4 Floor joists, bearers and stumps are visually checked for moisture content irregularities
		2.5 Moisture testing of timber flooring, floor joists, bearers and stumps, and equilibrium moisture content (EMC) is completed in accordance with the approved process and standard
3	Conduct moisture testing on concrete floors	3.1 The type of floor construction materials and the building floor structure and substructure are identified
		3.2 Concrete floor is visually inspected to identify irregularities in moisture content
		3.3 Moisture testing is completed in accordance with the approved process and Australian Standard
4	Notify findings of moisture tests	4.1 Notification of the findings of the moisture tests is completed in accordance with the current and relevant Australian standards
		4.2 Copies of the notification are sent to appropriate personnel and suitably filed following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Legislative requirements include:

- applicable legislation from all levels of government that affect organisational operation
- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- WHS
- the environment
- equal employment opportunity (EEO)
- anti-discrimination
- relevant industry codes of practice
- duty of care and heritage

WHS requirements include:

- Commonwealth, state or territory legislation and regulations
- organisational safety policies and procedures
- use of personal protective equipment
- firefighting equipment
- first aid equipment
- hazard and risk control and elimination of hazardous materials and substances
- manual handling, including lifting and carrying

Organisational requirements include:

- legal, organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- WHS
- emergency and evacuation
- ethical standards
- recording and reporting
- access and equity principles and practices
- equipment use, maintenance and storage
- environmental management (waste disposal, recycling and re-use guidelines)

Relevant information

- workplace procedures relating to the use and operation of

includes:	<ul style="list-style-type: none">moisture testing tools and equipmentworkplace instructions, including job sheets, plans, drawings and designsworkplace procedures relating to notification and communicationsmanufacturer instructions for the use of moisture testing equipment and materials

Assessment Requirements for MSFFL2004 Moisture test timber and concrete floors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for sub-floor inspection
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of:
 - an electrical resistance moisture test on timber flooring, floor joists, bearers and stumps, including written notification of the test results
 - a hygrometer moisture test on concrete flooring, including written notification of test results
 - a capacitance moisture test on concrete flooring, including written notification of test results
- Modify activities to cater for variations in workplace contexts and environment
- Collect, organise and understand information related to work orders, plans and safety procedures
- Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of moisture testing outcomes and problems
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use pre-checking and inspection techniques to anticipate moisture testing problems to avoid re-work and wastage
- Diagnose and identify the causes and consequences of moisture irregularities
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities, including the obtaining of equipment and materials to avoid any backtracking, work flow interruptions or wastage
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- Maintain current knowledge of:
 - moisture testing equipment and processes

- timber and concrete materials
- Use the workplace technology related to the moisture testing of timber and concrete, including tools, equipment, calculators and measuring devices

Knowledge Evidence

- Workplace safety system requirements related to moisture testing timber and concrete
- Types, characteristics and moisture content of:
 - timber sub-floor structures
 - concrete sub-floor structures
- Types and uses of moisture testing equipment and procedures for their safe use, operation and maintenance
- Requirements for moisture content of selected timber flooring components
- Characteristics and requirements of sub-floor moisture testing
- Work flow in relation to moisture testing processes and procedures

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to testing equipment, tools and materials relevant to moisture testing.

MSFFL2005 Remove existing floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers removing existing floor coverings.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to floor covering removal are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.4	Sequence of work is planned to ensure removal of floor coverings is in logical order

		1.5	Materials and equipment are prepared and positioned for use
2	Remove floor coverings	2.1	Starting point is selected to ensure entry and exit access throughout the operation
		2.2	First section of floor covering is removed
		2.3	Removed floor coverings are securely packaged in manageable bundles for removal from the area
		2.4	Remaining floor covering is progressively removed
		2.5	Exposed floor is checked, and any protruding nails, carpet grippers, adhesives, levelling compounds and remnants of floor covering are removed
3	Complete housekeeping	3.1	Unused materials are stored or recycled as required
		3.2	Tools and equipment are cleaned and stored appropriately
		3.3	Work area is cleaned and rubbish disposed of appropriately
		3.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and

	dangerous goods codes, and local safe operating procedures or equivalent
	<ul style="list-style-type: none">• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individual to demonstrate some discretion, judgement and problem solving
Tools and equipment include:	<ul style="list-style-type: none">• hammer• moulding lifter• scraper• utility knife• vacuum cleaner• vinyl tile lifter• floor stripper• adhesive tape• twine• rubbish bags
Floor coverings include:	<ul style="list-style-type: none">• carpet and carpet tiles• hard and soft underlay• resilient sheet and tiles• parquetry• strip timber• floating floor• cork tiles
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Assessment Requirements for MSFFL2005 Remove existing floor coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Remove at least one (1) of each of the following floor coverings:
 - carpet with soft underlay and gripper strips
 - parquetry with hard underlay
 - resilient floor covering installed on concrete
 - carpet, resilient and cork tile
 - adhesive bonded carpet
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to removing floor coverings
- Organisational and site standards, requirements, policies and procedures for removing existing floor coverings
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Procedures for the recording, reporting and maintenance of workplace records and information
- Characteristics and techniques of fixing floor coverings
- The correct use of equipment, processes and procedures to remove floor coverings
- Workplace safety system requirements related to removing floor coverings
- Work flow in relation to removing floor coverings

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to specifications and work instructions, materials and equipment relevant to removing existing floor coverings.

MSFFL2006 Prepare, select and apply smoothing and patching compounds

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing, selecting and applying cementitious products using smoothing and skim coating techniques to concrete and timber sub-floors in readiness for the installation of floor coverings and coatings for internal and external applications.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Assessment Requirements for MSFFL2006 Prepare, select and apply smoothing and patching compounds

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete, to Australian Standards, a minimum of two (2) sub-floor preparations which are to include:
 - a patch and repair
 - a level pour
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to floor patching and smoothing techniques
- Organisation and site standards, requirements, policies and procedures for applying smoothing and patching compounds
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- AS/NZS 2455.1:2007 Textile floor coverings - Installation practice - General

- AS 1884-2012 Floor coverings - Resilient sheet and tiles - Installation practices
Characteristics of materials, products and defects
- Set-up and operation of equipment
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Characteristics and requirements of concrete and timber sub-floor preparation
- Type, characteristics, uses and limitations of smoothing compounds and primers
- Workplace safety system requirements related to the application of smoothing compounds and primers

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.

MSFFL2007 Select and apply appropriate compounds and additives

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting and applying appropriate compounds and additives to sub-floors in preparation for the installation of floor coverings.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify the sub-floor properties	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the use of appropriate compounds and additives are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Appropriate personal protective equipment is selected, correctly fitted and used
		1.4	The type of floor and wall construction and the building

			floor and wall structure and sub-structure are identified
		1.5	Datum lines are run and checked to confirm dimensions
		1.6	Timber and/or concrete flooring inspections are completed to identify irregularities
		1.7	Wall inspections are completed to identify irregularities
2	Select appropriate compounds and additives	2.1	Types of floor and wall preparation compounds and additives and their functions are identified from relevant information sources
		2.2	Sub-floors and walls are checked for contamination, moisture content, plane, smooth and suitable preparation
		2.3	Suitable compounds and additives are selected consistent with the needs of the job
3	Prepare compounds and additives	3.1	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		3.2	Selected compounds and additives for application are organised and prepared in accordance with relevant safety management requirements
		3.3	The method of application is selected
		3.4	Sequence of work is planned to ensure the application of appropriate compounds and additives is in logical order
4	Apply compounds and additives	4.1	Working lines are established and starting point is selected
		4.2	Mixing station is established and selected compounds and additives are mixed to manufacturer instructions
		4.3	Selected compounds and additives are applied to the sub-floor surface following manufacturer instructions
		4.4	Sub-floors are inspected and re-worked as required
5	Complete housekeeping	5.1	Tools and equipment are cleaned and stored appropriately
		5.2	Work area is cleaned and rubbish disposed of appropriately
		5.3	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

MSFFL2008 Prepare concrete sub-floors using wet cleaning methods

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers wet cleaning concrete sub-floors using high and low pressure water cleaning applications relating to sub-floor preparation.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------------------|-----|---|
| 1 | Identify wet cleaning operations | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to the application of wet cleaning methods are verified and complied with |
| | | 1.2 | Types of wet cleaning equipment and their functions are identified from relevant information sources and Australian Standards |
| | | 1.3 | Sources of power supply are recognised |
| 2 | Select wet | 2.1 | Wet cleaning method, equipment and attachments are |

	cleaning method		selected consistent with the needs of the job
		2.2	Wet cleaning equipment is checked for serviceability and safety and any faults are corrected or processed for repair
		2.3	Sequence of work is planned to ensure efficiency and quality of sub-floor cleaning
3	Prepare sub-floor for cleaning	3.1	Appropriate personal protective equipment is selected, correctly fitted and used
		3.2	Fittings and fixtures are removed from the sub-floor
		3.3	Sub-floor is cleared of loose debris and dirt, and cleaned
		3.4	A safe flooring technology work environment is established and maintained
4	Clean the floor	4.1	The start point is established and work plan implemented
		4.2	Perimeter is cleaned using appropriate method and equipment
		4.3	Main area is cleaned to the required standard using the most appropriate available equipment in accordance with manufacturer specifications
		4.4	Floor area is inspected and re-worked as required
5	Complete housekeeping	5.1	Tools and equipment are cleaned and stored appropriately
		5.2	Work area is cleaned and rubbish disposed of appropriately
		5.3	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|---|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individual to demonstrate some discretion, judgement and problem solving |
| Wet cleaning methods include: | <ul style="list-style-type: none">• high and low pressure water hosing• detergent cleaning• acid etching |

Assessment Requirements for MSFFL2008 Prepare concrete sub-floors using wet cleaning methods

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Adopt and carry out correct procedures prior to and during the application of each of the following wet cleaning methods:
 - high and low water pressure cleaning
 - detergent cleaning
 - acid etching
- Apply ventilation standards
- Complete operator maintenance on wet cleaning high and low water pressure equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the use of wet cleaning methods
- Australian Standards, including AS/NZS 2455.1:2007 Textile floor coverings - Installation practice – General, and AS 1884-2012 Floor coverings - Resilient sheet and tiles - Installation practices
- Organisational and site standards, requirements, policies and procedures for the use of wet cleaning methods

- Types and characteristics of high and low water pressure, including requirements for their safe use, operation and maintenance
- High and low water pressure equipment attachments, their uses, limitations and maintenance requirements
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to access to high and low pressure wet cleaning equipment and manufacturer/user instructions and/or manuals.

MSFFL2009 Select, prepare and apply moisture barriers and damp proof membranes to concrete sub-floors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing concrete sub-floors and applying moisture barriers and damp proof membranes in readiness for the installation of floor coverings and coatings.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to moisture barriers and damp proof membranes are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Sub-floors are inspected in accordance with Australian Standards and treatment system identified
		1.4	Tools, equipment and materials are selected and checked

			prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.5	Material safety data sheets (MSDS), or equivalent, are read and applied during work
		1.6	Materials and equipment are prepared and positioned for use
		1.7	Surfaces are cleaned in accordance with manufacturer recommendations
2	Apply moisture suppressant	2.1	Surface coating is applied with the depth and coverage in accordance with manufacturer specifications and job requirements
		2.2	Sub-floor is checked and cleared for further processing
3	Apply moisture barrier	3.1	Moisture is established as hydrostatic pressure, capillary moisture, or new concrete with high moisture content
		3.2	Moisture content is established as reducing, construction moisture or a result of damaged membrane or capillary action
		3.3	All corners, cracks and other penetrations are strengthened
		3.4	barrier material is laid in accordance with manufacturer instructions
		3.5	Second coating is applied as required
		3.6	Sub-floor is checked and cleared for further processing
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Remains of compounds used are cleaned up and disposed of appropriately
		4.3	Tools and equipment are cleaned and stored appropriately
		4.4	Work area is cleaned and rubbish disposed of appropriately
		4.5	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL2009 Select, prepare and apply moisture barriers and damp proof membranes to concrete sub-floors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete two (2) moisture suppressant/barrier installations:
 - one (1) moisture barrier (dealing with an external moisture problem that may be due to hydrostatic pressure or capillary action)
 - one (1) moisture suppressant (dealing with construction moisture in green concrete)
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to moisture suppressants and barrier systems
- Organisational and site standards, requirements, policies and procedures for moisture suppressant and barrier systems
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance

- Characteristics of materials, products and defects
- Types, application and features of moisture barriers and moisture suppressant techniques
- Set-up and operation of equipment
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials and equipment relevant to moisture suppressant/barrier activities and their specifications.

MSFFL2010 Prepare walls for coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cleaning and preparing walls to a smooth flat surface in preparation for resilient wall coverings and coatings.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements and Australian Standards relevant to wall preparation for coverings on wall substrate are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	The condition of the walls are assessed to prepare walls to a smooth flat surface, and the extent of preparation required is confirmed
		1.4	Suitable primers, smoothing and repairing compounds

- are selected
- 1.5 Surfaces are checked for contamination, moisture content, plane, smooth, square internal and external corners and suitable preparation
 - 1.6 Material safety data sheets (MSDS), or equivalent, are read and applied during the work
 - 1.7 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
 - 1.8 Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
- 2 Apply levelling compounds and primers
- 2.1 A mixing station is established where materials and equipment are prepared and positioned for use
 - 2.2 Trial applications of surface materials are made to check equipment operation, materials consistency and specified surface finish
 - 2.3 Surface coating is applied with the depth and coverage in accordance with manufacturer specifications and job requirements
 - 2.4 Internal and external corners are checked for square, wall surfaces are checked for plane and smooth and cleared for further processing
 - 2.5 Completed work is checked for flaws in installation and materials and faults rectified
- 3 Complete housekeeping
- 3.1 Unused materials are stored or recycled as required
 - 3.2 Tools and equipment are cleaned and stored appropriately
 - 3.3 Work area is cleaned and rubbish disposed of appropriately
 - 3.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Assessment Requirements for MSFFL2010 Prepare walls for coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete, to Australian Standards, a minimum of two (2) wall preparations which are to include:
 - a patch and repair to a wall, including internal and external corners
 - a skim coat to walls, including internal and external corners
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to patching and smoothing techniques
- Organisation and site standards, requirements, policies and procedures for applying smoothing and patching compounds
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment

- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Characteristics and requirements of substrate preparation
- Type, characteristics, uses and limitations of smoothing compounds and primers
- Workplace safety system requirements related to the application of smoothing compounds and primers

Assessment Requirements for MSFFL2011 Select, operate and maintain grinding equipment

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Smooth a concrete sub-floor using single headed, double headed and planetary action grinders correctly and safely to the relevant Australian Standard
- Complete operator maintenance on grinding equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the use of grinding equipment
- Australian Standards, including AS/NZS 2455.1:2007 Textile floor coverings - Installation practice – General, and AS 1884-2012 Floor coverings - Resilient sheet and tiles - Installation practices
- Organisational and site standards, requirements, policies and procedures for the use of grinding equipment
- Types of grinders and procedures for their safe use, operation and maintenance
- Grinder attachments, their uses, limitations and maintenance requirements
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to access to single, double and planetary action grinders, manufacturer/user instructions and/or manuals and a realistic smoothing task.

MSFFL2012 Select, operate and maintain shot blasting equipment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting, operating and maintaining shot blasting equipment in applications relating to floor preparation.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify shot blasting equipment	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the use of shot blasting equipment are verified and complied with
		1.2	Types of shot blasting equipment and their functions are identified from relevant information sources
		1.3	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
2	Select shot blasting equipment	2.1	Shot blasting equipment and shot size are selected consistent with the needs of the job

		2.2	Shot blasting equipment is checked for serviceability and safety and any faults are corrected or processed for repair
3	Clean and prepare sub-floor	3.1	Appropriate personal protective equipment is selected, correctly fitted and used
		3.2	Fittings and fixtures are removed from the sub-floor
		3.3	Sub-floor is cleared of loose debris and dirt, and cleaned
4	Shot blast the floor	4.1	Work sequence and starting point are selected
		4.2	Perimeter is shot blasted using light equipment and appropriate cutter
		4.3	Main area is shot blasted to the required standard using the most appropriate available equipment in accordance with manufacturer specifications
		4.4	Floor area is cleaned, inspected and re-worked as required
5	Complete housekeeping	5.1	Tools and equipment are cleaned and stored appropriately
		5.2	Work area is cleaned and rubbish disposed of appropriately
		5.3	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

Assessment Requirements for MSFFL2012 Select, operate and maintain shot blasting equipment

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Shot blast a minimum of two (2) concrete sub-floors to the relevant Australian Standard
- Complete operator maintenance on shot blasting equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to shot blasting
- Australian Standards, including AS/NZS 2455.1:2007 Textile floor coverings - Installation practice – General, and AS 1884-2012 Floor coverings - Resilient sheet and tiles - Installation practices
- Organisational and site standards, requirements, policies and procedures for the use of shot blasting equipment
- Types of shot blasters and procedures for their safe use, operation and maintenance
- Shot blaster attachments, their uses, limitations and maintenance requirements
- Characteristics, uses and limitations of the available shot sizes
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to shot blasting equipment and manufacturer/user instructions and/or manuals, and a reasonable shot blasting task.

MSFFL2013 Select, operate and maintain demolition equipment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting, operating and maintaining demolition equipment in applications relating to floor preparation.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify demolition equipment	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the use of demolition equipment are verified and complied with
		1.2	Types of demolition equipment and their functions are identified from relevant information sources
		1.3	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.4	Sources of power supply are recognised
2	Select demolition	2.1	Demolition equipment and attachments are selected

	equipment		consistent with the needs of the job
		2.2	Demolition equipment is checked for serviceability and safety and any faults are corrected or processed for repair
3	Clean and prepare sub-floor	3.1	Appropriate personal protective equipment is selected, correctly fitted and used
		3.2	Fittings and fixtures are removed from the sub-floor
		3.3	Sub-floor is cleared of loose debris and dirt, and cleaned
4	Remove floor portions	4.1	Work sequence and starting point are selected
		4.2	Perimeter of floor portion is identified and marked
		4.3	Depth of removal requirement is confirmed
		4.4	Floor portion is removed in the most efficient manner
		4.5	Floor area is cleaned, inspected and re-worked as required
5	Complete housekeeping	5.1	Tools and equipment are cleaned and stored appropriately
		5.2	Work area is cleaned and rubbish disposed of appropriately
		5.3	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. MSFFL2015 Coarse sand timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers coarse sanding of existing floors using a drum or belt driven sanding machine to grade the surface to remove cupping, ridges, high points or deep scratches usually involving three passes and the gradual overlapping of each run.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for the work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to coarse sanding of timber flooring are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Timber flooring is checked for contamination and moisture content
		1.4	Timber flooring condition is assessed and the extent of

- floor preparation required to meet job specifications is confirmed
- 1.5 Timber flooring is inspected for suitability for sanding operations and any pre-sanding tasks are completed
 - 1.6 Mechanical fixings are removed avoiding damage to equipment and surfaces
 - 1.7 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
 - 1.8 Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
- 2 Conduct coarse sanding operations
- 2.1 Coarse sanding equipment is set up in accordance with manufacturer instructions and operating procedures
 - 2.2 Emergency stops, gauges, guards and controls are identified and checked
 - 2.3 Equipment settings and adjustments are made and checked
 - 2.4 Trial runs are conducted to check machine operations and quality of finished work
 - 2.5 Sanding belts or papers are attached, routinely checked and changed as required
 - 2.6 Sanding is completed systematically and effectively within the minimum required timeframe
 - 2.7 Routine lubrication and adjustments to the equipment are completed as required
 - 2.8 Timber flooring is cleared and checked for further processing
- 3 Conduct edge sanding operations
- 3.1 Edge sanding equipment is set up in accordance with manufacturer instructions and operating procedures
 - 3.2 Emergency stops, gauges, guards and controls are identified and checked
 - 3.3 Equipment settings and adjustments are made and checked
 - 3.4 Sanding papers are selected

- | | | |
|---|-----------------------|---|
| | 3.5 | Trial runs are conducted to check machine operations and quality of finished work |
| | 3.6 | Sanding papers are attached, routinely checked and changed as required |
| | 3.7 | Edge sanding is completed systematically and effectively within the minimum required timeframe |
| | 3.8 | Routine lubrication and adjustments to the equipment are completed as required |
| | 3.9 | Finished timber flooring is cleaned, inspected and any imperfections are rectified following workplace procedures |
| 4 | Complete housekeeping | |
| | 4.1 | Unused materials are stored or recycled as required |
| | 4.2 | Tools and equipment are cleaned and stored appropriately |
| | 4.3 | Work area is cleaned and rubbish disposed of appropriately |
| | 4.4 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures

	or equivalent
	<ul style="list-style-type: none">• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individual to demonstrate some discretion, judgement and problem solving
Coarse sanding of timber flooring includes:	<ul style="list-style-type: none">• removal of mechanical fixings• punching of nails• sanding the timber flooring to grade the surface and removing cupping, ridges, high points or deep scratches
Mechanical fixings include:	<ul style="list-style-type: none">• tacks• nails• staples• screws
Tools and equipment include:	<ul style="list-style-type: none">• hammer• scrapers• punches• brooms• vacuums• leads• dust masks
Materials include:	<ul style="list-style-type: none">• sanding belts• sanding paper• sanding discs• oil• lubricants
Coarse sanding equipment includes:	<ul style="list-style-type: none">• split drum and belt floor sanders• edge sander• sanding discs using 24–60 grit papers
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Assessment Requirements for MSFFL2015 Coarse sand timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare a minimum of two (2) timber floors to specifications using coarse sanding methods
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to coarse sanding timber flooring
- Organisational and site standards, requirements, policies and procedures for coarse sanding timber flooring
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques

- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Characteristics and requirements of timber flooring coarse sanding
- Type, characteristics, uses and limitations of coarse sanding timber flooring
- Types and uses of relevant tools and equipment used to conduct coarse sanding operations
- Workplace safety system requirements related to coarse sanding timber flooring

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to coarse sanding timber floors.

MSFFL2016 Install hard underlays

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting and fitting hard underlay materials prior to laying floor coverings.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--------------------------|-----|--|
| 1 | Prepare for installation | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of hard underlays are verified and complied with |
| | | 1.2 | Instructions and/or plans are read and interpreted to identify the process required to complete work tasks |
| | | 1.3 | Sub-floor condition is assessed for the type of underlay/floor covering to be installed |
| | | 1.4 | Underlay material suitable to the final surface to be laid is selected |

- | | | | |
|---|-----------------------|-----|--|
| | | 1.5 | Suitable adhesives and fastenings are selected |
| | | 1.6 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.7 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials | 2.1 | Hard underlay to be installed is checked against order |
| | | 2.2 | Hard underlay is acclimatised according to manufacturer recommendations |
| | | 2.3 | Working lines and starting point are established |
| | | 2.4 | Materials are laid out to meet specification requirements and to minimise waste |
| | | 2.5 | Material is marked and cut to specification with minimum waste |
| | | 2.6 | Hard underlay is accurately and clearly marked for cutting |
| | | 2.7 | Hard underlay is cut to required shape with minimum waste of materials |
| 3 | Lay underlay | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Materials for fixing are organised and used in accordance with relevant safety management requirements |
| | | 3.3 | Fixing methods and equipment are used following manufacturer instructions |
| | | 3.4 | Completed installation is checked for flaws in installation and materials and faults rectified |
| 4 | Complete housekeeping | 4.1 | Unused materials are stored or recycled as required |
| | | 4.2 | Tools and equipment are cleaned and stored appropriately |
| | | 4.3 | Work area is cleaned and rubbish disposed of appropriately |
| | | 4.4 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL2016 Install hard underlays

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of:
 - one (1) installation using hardboard
 - one (1) installation using fibrous cement board
 - one (1) installation using MDF/HDF board
 - one (1) installation using ply flooring/construction flooring
 - one (1) installation floating substrate underlay
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing hard underlays
- Organisational and site standards, requirements, policies and procedures for installing hard underlays
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects

- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing hard underlays.

MSFFL2017 Install carpet cushion underlays and gripper accessories

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing, laying out, cutting, laying and fixing carpet cushion/underlays, and carpet gripper accessories prior to laying carpet floor coverings using the carpet gripper system.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the preparation for the installation of carpets are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Sub-floor condition is assessed for the type of carpet cushion underlay/floor covering to be installed

- | | | | |
|---|-----------------------|-----|--|
| | | 1.4 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.5 | Suitable adhesives, fixing trims and accessories are selected |
| | | 1.6 | Materials are laid out to meet specification requirements and to minimise waste |
| | | 1.7 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials | 2.1 | Carpet cushion/underlay and gripper accessories to be installed are checked against order |
| | | 2.2 | Carpet cushion/underlays are acclimatised according to manufacturer recommendations |
| | | 2.3 | Carpet grippers are fitted in accordance with specifications, plan and/or enterprise procedures |
| | | 2.4 | Metal mouldings are fitted at thresholds and abutments to other flooring surfaces in accordance with specifications, plan and/or enterprise procedures |
| 3 | Lay floor covering | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Underlay is cut to required shape with minimum waste of materials |
| | | 3.3 | Materials for fixing are organised and used in accordance with relevant safety management requirements |
| | | 3.4 | Underlay is fixed using methods and equipment which follow manufacturer instructions |
| 4 | Complete housekeeping | 4.1 | Unused materials are stored or recycled as required |
| | | 4.2 | Tools and equipment are cleaned and stored appropriately |
| | | 4.3 | Work area is cleaned and rubbish disposed of appropriately |
| | | 4.4 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individual to demonstrate some discretion, judgement and problem solving
Carpet cushion/underlays include:	<ul style="list-style-type: none">• single fibre• composite fibre• foam rubber• bonded foam
Tools and equipment include:	<ul style="list-style-type: none">• utility knife• straight edge• hammer• heavy-duty electrical drill• hacksaw• carpet gripper strip cutters• extension hammer driving bar• staple hammer• mitre box• nail driving bar• pneumatic 'T' nailer• nail gun

- Materials include:**
- soft underlays
 - carpet gripper strips
 - metal mouldings
 - tapes
 - adhesives
 - nails
 - plugs
 - staples
 - primers
- Adhesives include:**
- solvent and water-based contact
 - construction adhesive
 - latex/resin/acrylic
- Fixing trims include:**
- nails
 - nylon fasteners
- Carpet grippers include:**
- teathed metal or timber strips to which floor coverings are attached to maintain its position, tension and shape
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

MSFFL2018 Install unpatterned tufted and bonded carpet floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing unpatterned tufted and bonded carpet floor coverings, including preparing, cutting, laying out, joining, power stretching, trimming and finishing, using the carpet gripper installation system.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of unpatterned tufted and bonded carpet floor coverings are verified and complied with
		1.2	Instructions and/or plans/sketchers are read and interpreted to identify the process required to complete work tasks
		1.3	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the

			work, serviceable and in a safe condition
		1.4	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out materials	2.1	Carpet to be installed is checked against order
		2.2	Carpet is acclimatised according to manufacturer recommendations
		2.3	Underlay and gripper strips are inspected to confirm correct fitting
		2.4	Work area is cleared of scraps or other contaminants
3	Lay carpet	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Carpet pieces are laid out and checked for size, direction of pile match
		3.3	Carpet pieces are cut, sealed and joined
		3.4	Stretching and fixing methods are used following manufacturer instructions and Australian Standards
		3.5	Finished work is inspected for compliance with work order, workplace and Australian Standards of finish
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. MSFFL2019 Install carpet tiles using standard installation procedures

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing carpet tiles to single and connecting rooms using single directional installation methods, including the preparation, layout, cutting, laying and fixing of carpet tiles.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of carpet tiles are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Sub-floor condition is assessed for installation for carpet tiles
		1.4	Suitable adhesives, trims and accessories are selected

- | | | | |
|---|-----------------------|-----|--|
| | | 1.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.6 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials | 2.1 | Carpet tiles to be installed are checked against the order |
| | | 2.2 | Carpet tiles are acclimatised according to manufacturer recommendation |
| | | 2.3 | Materials for fixing are organised and used in accordance with relevant safety management requirements |
| | | 2.4 | Working lines and starting point are established |
| 3 | Lay carpet tiles | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Materials are laid out to meet specification requirements and to minimise waste |
| | | 3.3 | Material grains and patterns are matched or contrasted as appropriate |
| | | 3.4 | Tiles are accurately and clearly marked for cutting |
| | | 3.5 | Tiles are cut to required shape with minimum waste of materials and laid |
| | | 3.6 | Completed installation is checked for flaws in installation and materials and faults are rectified |
| 4 | Complete housekeeping | 4.1 | Unused materials are stored or recycled as required |
| | | 4.2 | Tools and equipment are cleaned and stored appropriately |
| | | 4.3 | Work area is cleaned and rubbish disposed of appropriately |
| | | 4.4 | Workplace documentation is completed |

MSFFL2020 Install unpatterned tufted and bonded carpet floor coverings to stairs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing unpatterned tufted and bonded carpet floor coverings to box and wider steps using the carpet gripper system.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing unpatterned tufted and bonded carpet to stairways are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Floor condition is assessed for suitability for installation of unpatterned tufted and bonded carpet

- | | | | |
|---|---------------------|-----|---|
| | | 1.4 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.5 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials | 2.1 | Carpet to be installed is checked against order |
| | | 2.2 | Tufted and bonded carpets are acclimatised according to manufacturer recommendations |
| | | 2.3 | Stairway or step is measured and the required amount of floor covering, and underlay, including allowances for type of stairs, is calculated and obtained |
| | | 2.4 | Suitable adhesives, gripper strips and edge strips are selected |
| | | 2.5 | Gripper strips are cut and installed as specified in AS/NZS 2455.1:2007 Textile floor coverings - Installation practice – General |
| | | 2.6 | Underlay is checked against specified type and fitted as specified in AS/NZS 2455.1:2007 Textile floor coverings - Installation practice - General |
| 3 | Lay floor coverings | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Carpet floor coverings are laid out to meet allowances for type of stair requirements and minimise waste |
| | | 3.3 | Carpet floor coverings are accurately and clearly marked for cutting |
| | | 3.4 | Carpet floor coverings are cut to required shape with minimum waste of materials and laid |
| | | 3.5 | Instructions, sequence, fixing methods and equipment are used following specifications and AS/NZS 2455.1:2007 Textile floor coverings - Installation practice - General |
| | | 3.6 | Installation is completed to specification |
| | | 3.7 | Finished stairway is checked for flaws in installation and materials and faults rectified |

4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individual to demonstrate some discretion, judgement and problem solving
Carpets include:	<ul style="list-style-type: none">• unpatterned• tufted• fusion bonded
Stairways include:	<ul style="list-style-type: none">• box steps• kite winder treads
Tools and equipment	<ul style="list-style-type: none">• knee kicker

include:

- stair tool
- carpet gripper cutters
- trimmer
- hammer
- staple hammer
- compressor
- air staple gun
- utility knife
- straight edge
- drill
- hacksaw
- sewing needles

Materials include:

- underlay
- tapes and adhesives
- trims
- nosing
- gripper strips
- smooth edges
- other accessories

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFL2204A Install unpatterned tufted and bonded carpet floor coverings to stairs

Assessment Requirements for MSFFL2020 Install unpatterned tufted and bonded carpet floor coverings to stairs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of the installation of one (1) tufted carpet and one (1) fusion bonded carpet to:
 - a box step stairway containing at least 12 steps, and
 - a kite winder treads stairway containing at least 3 steps
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing unpatterned tufted and bonded carpet on stairs
- Organisational and site standards, requirements, policies and procedures for the installation of unpatterned tufted and bonded carpet on stairs
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment

- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Types and characteristics of stairway
- Types and uses of carpet installation tools, equipment and materials
- Types, uses and limitations of stairway carpet fixing techniques
- Characteristics of timber and concrete sub-floors
- Workplace safety system requirements related to stairway carpet installation
- Work flow in relation to the installation of carpets on stairways

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to preparing and installing tufted and bonded carpet to box and winder steps.

MSFFL2021 Install lay flat vinyl floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing lay flat vinyl floor coverings to single and connecting rooms including pattern matching, seam cutting, joining and sealing.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing lay flat vinyl floor coverings are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Sub-floor condition is assessed for installation of lay flat vinyl flooring
		1.4	Sub-floor is prepared for lay flat vinyl floor covering
		1.5	Suitable adhesives, trims and accessories are selected

- | | | | |
|---|-----------------------|-----|--|
| | | 1.6 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.7 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials | 2.1 | Lay flat vinyl coverings to be installed are checked against order |
| | | 2.2 | Lay flat vinyl floor coverings are acclimatised according to manufacturer recommendations |
| | | 2.3 | Lay flat resilient floor coverings for fixing are organised and used in accordance with relevant safety management requirements |
| | | 2.4 | Working lines and starting point are established |
| 3 | Lay flat vinyl | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Lay flat vinyl floor coverings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate |
| | | 3.3 | Lay flat vinyl floor coverings are accurately and clearly marked for cutting |
| | | 3.4 | Lay flat vinyl floor coverings are cut to required pattern and shape with minimum waste of materials |
| | | 3.5 | Adhesives are applied (if required) |
| | | 3.6 | Seams are sealed |
| | | 3.7 | Completed installation is checked for flaws in installation and materials and faults rectified |
| 4 | Complete housekeeping | 4.1 | Unused materials are stored or recycled as required |
| | | 4.2 | Tools and equipment are cleaned and stored appropriately |
| | | 4.3 | Work area is cleaned and rubbish disposed of appropriately |
| | | 4.4 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. MSFFL2022 Install resilient tiles using standard installation procedures

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing resilient tiles to single and connecting rooms using single directional installation methods.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to install resilient tiles using standard installation procedures are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Sub-floor condition is assessed for installation for resilient tiles
		1.4	Suitable adhesives, trims and accessories are selected

- | | | | |
|---|-----------------------|-----|--|
| | | 1.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.6 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials | 2.1 | Resilient tiles to be installed are checked against order |
| | | 2.2 | Resilient tiles are acclimatised according to manufacturer recommendations |
| | | 2.3 | Materials for fixing are organised and used in accordance with relevant safety management requirements |
| | | 2.4 | Working lines and starting point are established |
| 3 | Lay resilient tiles | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Materials are laid out to meet specification requirements and to minimise waste |
| | | 3.3 | Material grains and patterns are matched or contrasted as appropriate |
| | | 3.4 | Tiles are accurately and clearly marked for cutting |
| | | 3.5 | Tiles are cut to required shape with minimum waste of materials and laid |
| | | 3.6 | Completed installation is checked for flaws in installation and materials and faults are rectified |
| 4 | Complete housekeeping | 4.1 | Unused materials are stored or recycled as required |
| | | 4.2 | Tools and equipment are cleaned and stored appropriately |
| | | 4.3 | Work area is cleaned and rubbish disposed of appropriately |
| | | 4.4 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL2022 Install resilient tiles using standard installation procedures

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Install resilient tiles where cutting and fixing is required on either a timber or concrete sub-floor to complete a minimum of:
 - one (1) homogeneous resilient tile installation using single direction pattern, including the appropriate trim and accessories
 - one (1) heterogeneous resilient tile installation using single direction pattern, including the appropriate trim and accessories
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing resilient tiles using standard installation procedures
- Organisational and site standards, requirements, policies and procedures for the installation of resilient tiles using standard installation procedures
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance

- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Types, characteristics, uses and limitations of:
 - resilient tiles
 - resilient tile installation adhesives
- Types and uses of resilient tile installation tools and equipment
- Workplace safety system requirements related to resilient tile laying
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to cutting and laying resilient tiles

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing resilient tiles using standard installation procedures.

MSFFL2023 Install laminate timber and bamboo flooring

Modification History

Release 2 - Mapping corrected - supersedes and is not equivalent to LMFFL2501A

Release 1 - New unit of competency

Application

This unit of competency covers floating a laminate, pre-finished timber or bamboo floor within a space over a soft underlay, including preparation, cutting, laying and fixing. It applies to a variety of flooring technology installation operations in an on-site environment and involves application of skills and knowledge at the sub-trade worker level.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare materials for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing laminate timber and bamboo flooring are verified and complied with
		1.2	WHS requirements, including personal protection needs, are observed throughout the work
		1.3	Instructions and/or plans are read and interpreted to

			identify process required to complete work tasks
		1.4	Sub-floor condition is assessed for suitability for installation of laminate timber or bamboo flooring
		1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.6	Sequence of work is planned, including the selection of a starting point, to ensure efficiency and quality of installation
2	Set out materials for installation	2.1	Laminate timber or bamboo flooring is acclimatised according to manufacturer recommendations
		2.2	Laminate timber flooring or bamboo for fixing is organised and used in accordance with relevant safety management requirements
		2.3	Skirting boards or cover trims are removed or undercut, if required, and stored for re-fitting or sent for machining
		2.4	Adhesives and edge strips are prepared for use as required
		2.5	Working lines and starting point are established
3	Lay out flooring	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Appropriate underlay is laid according to manufacturer recommendations
		3.3	Laminate timber or bamboo flooring is laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins
		3.4	The aesthetics of the materials are maximised, including matching grains and colours
		3.5	Laminate timber or bamboo flooring materials are accurately and clearly marked for cutting
		3.6	Materials are cut to length and size for final laying ensuring minimum waste
4	Lay flooring	4.1	Materials for fixing are organised and used in accordance with relevant safety management

		requirements
	4.2	Adhesives and edge strips/accessories are prepared for use as required
	4.3	Fixing methods and equipment are used following manufacturer recommendations
	4.4	Appropriate field and perimeter expansion joints are allowed
	4.5	Skirting boards or cover trims are fitted/re-fitted and finished
	4.6	Finished job is inspected and any imperfections are rectified following workplace procedures
	4.7	Any required preparations for sanding of flooring are made
5	Complete housekeeping	5.1 Unused materials are stored or recycled as required
		5.2 Tools and equipment are cleaned and stored appropriately
		5.3 Work area is cleaned and rubbish is disposed of appropriately
		5.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Legislative requirements include:**
- applicable legislation from all levels of government that affect organisational operation
 - award and enterprise agreements
 - industrial relations
 - Australian Standards
 - confidentiality and privacy
 - WHS
 - the environment
 - equal employment opportunity (EEO)
 - anti-discrimination
 - relevant industry codes of practice
 - duty of care and heritage
- WHS requirements include:**
- Commonwealth, state or territory legislation and regulations
 - organisational safety policies and procedures
 - the use of personal protective equipment and clothing
 - firefighting equipment
 - first aid equipment
 - hazard and risk control and elimination
 - control of hazardous materials and substances
 - manual handling, including lifting and carrying
- Organisational requirements include:**
- legal, organisational and site guidelines
 - policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - WHS
 - emergency and evacuation
 - ethical standards
 - recording and reporting
 - access and equity principles and practices
 - equipment use, maintenance and storage
 - environmental management (waste disposal, recycling and re-use guidelines)
- Instructions include:**
- workplace procedures relating to the use and operation of tools and equipment
 - workplace instructions, instructions, including job sheets, plans, drawings and designs
 - workplace procedures relating to reporting and communications
 - manufacturer instructions for the use of equipment and materials

Sub-floor assessment includes:	<ul style="list-style-type: none">• testing for moisture content, expansion, rot, structural strength, smoothness and plane
Tools and equipment include:	<ul style="list-style-type: none">• drop saw• jig saw• hand saw• undercut saw• plunge saw• hammer• bar scribe• utility knife• circular saw• bench saw• straight edge• glue gun• staple gun• nailers• flooring cramps• strap clamps• wall clamps
Materials include:	<ul style="list-style-type: none">• flooring materials• underlay• edge strips• tapes• adhesives
Adhesives include:	<ul style="list-style-type: none">• polyvinyl alcohol (PVA)• epoxy• polyurethane elastomeric

Unit Mapping Information

Supersedes and is not equivalent to LMFFL2501A Install laminate and engineered timber flooring

Assessment Requirements for MSFFL2023 Install laminate timber and bamboo flooring

Modification History

Release 2 - Mapping corrected - supersedes and is not equivalent to LMFFL2501A

Release 1 - New unit of competency

Performance Evidence

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing laminate timber and bamboo flooring, including ventilation standards
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
- Complete the following different types of installation:
 - glue-together system
 - self-locking system
- inserted plastic tongue system
- Modify activities to cater for variations in workplace contexts and environment
- Collect, organise and understand information related to work orders, basic plans and safety procedures
- Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- Use pre-checking and inspection techniques to anticipate installation problems to avoid re-work and wastage
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials, to avoid any backtracking, work flow interruptions or wastage
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- Maintain current knowledge of:
 - tools and materials
 - laminate timber and bamboo flooring installation techniques
- Use the limited workplace technology related to the installing requirement, including tools, equipment, calculators and measuring devices

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the installation of laminate timber and bamboo flooring
- Organisational and site standards, requirements, policies and procedures for the installation of laminate timber and bamboo flooring
- Types, characteristics, uses and limitations of:
 - laminate timber flooring
 - bamboo flooring
 - installation adhesives
 - underlays
- The types and uses of installation tools and equipment
- Workplace safety systems relevant to the installation of laminate timber and bamboo flooring
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to flooring installation operations
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a location relevant for the installation of laminate timber and bamboo flooring.

MSFFL2024 Install engineered timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers floating or installing stick by stick an engineered timber floor within a space over a soft underlay, including preparation, cutting, laying and fixing. It applies to a variety of flooring technology installation operations in an on-site environment and involves application of skills and knowledge at the sub-trade worker level.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare materials for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing engineered timber flooring are verified and complied with
		1.2	WHS requirements, including personal protection needs, are observed throughout the work
		1.3	Instructions and/or plans are read and interpreted to identify process required to complete work tasks

- | | | | |
|---|------------------------------------|-----|--|
| | | 1.4 | Sub-floor condition is assessed for suitability for installation of engineered timber flooring |
| | | 1.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.6 | Sequence of work is planned, including the selection of a starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials for installation | 2.1 | Engineered timber flooring is acclimatised according to manufacturer recommendations |
| | | 2.2 | Engineered timber flooring for fixing is organised and used in accordance with relevant safety management requirements |
| | | 2.3 | Skirting boards or cover trims are removed or undercut, if required, and stored for re-fitting or sent for machining |
| | | 2.4 | Adhesives and edge strips are prepared for use as required |
| 3 | Lay out flooring | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Engineered timber flooring is laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins |
| | | 3.3 | The aesthetics of the materials are maximised, including matching grains and colours |
| | | 3.4 | Engineered timber flooring materials are accurately and clearly marked for cutting |
| | | 3.5 | Materials are cut to length and size for final laying ensuring minimum waste |
| 4 | Lay flooring | 4.1 | Materials for fixing are organised and used in accordance with relevant safety management requirements |
| | | 4.2 | Adhesives and edge strips/accessories are prepared for use as required |
| | | 4.3 | Fixing methods and equipment are used following |

		manufacturer recommendations
	4.4	Appropriate field and perimeter expansion joints are allowed
	4.5	Skirting boards or cover trims are fitted/re-fitted and finished
	4.6	Finished job is inspected and any imperfections are rectified following workplace procedures
	4.7	Any required preparations for sanding of flooring are made
5	Complete housekeeping	5.1 Unused materials are stored or recycled as required
		5.2 Tools and equipment are cleaned and stored appropriately
		5.3 Work area is cleaned and rubbish is disposed of appropriately
		5.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Legislative requirements include:**
- applicable legislation from all levels of government that affect organisational operation
 - award and enterprise agreements
 - industrial relations
 - Australian Standards

	<ul style="list-style-type: none">• confidentiality and privacy• WHS• the environment• equal employment opportunity (EEO)• anti-discrimination• relevant industry codes of practice• duty of care and heritage
WHS requirements include:	<ul style="list-style-type: none">• Commonwealth, state or territory legislation and regulations• organisational safety policies and procedures• the use of personal protective equipment and clothing• firefighting equipment• first aid equipment• hazard and risk control and elimination• control of hazardous materials and substances• manual handling, including lifting and carrying
Organisational requirements include:	<ul style="list-style-type: none">• legal, organisational and site guidelines• policies and procedures relating to own role and responsibility• quality assurance• procedural manuals• quality and continuous improvement processes and standards• WHS• emergency and evacuation• ethical standards• recording and reporting• access and equity principles and practices• equipment use, maintenance and storage• environmental management (waste disposal, recycling and re-use guidelines)
Instructions include:	<ul style="list-style-type: none">• workplace procedures relating to the use and operation of tools and equipment• workplace instructions, instructions, including job sheets, plans, drawings and designs• workplace procedures relating to reporting and communications• manufacturer instructions for the use of equipment and materials
Sub-floor assessment includes:	<ul style="list-style-type: none">• testing for moisture content, expansion, rot, structural strength, smoothness and plane

Tools and equipment include:

- drop saw
- jig saw
- hand saw
- undercut saw
- plunge saw
- hammer
- bar scribe
- utility knife
- circular saw
- bench saw
- straight edge
- glue gun
- staple gun
- nailers
- flooring cramps
- strap clamps
- wall clamps

Materials include:

- timber flooring materials
- underlay
- edge strips
- tapes
- adhesives

Adhesives include:

- polyvinyl alcohol (PVA)
- epoxy
- polyurethane elastomeric

Unit Mapping Information

No equivalent unit

Assessment Requirements for MSFFL2024 Install engineered timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing engineered timber flooring, including ventilation standards
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
- maintain required production output and product quality
- Complete the following different types of installation:
 - direct stick system
 - self-locking system
 - inserted plastic tongue system
- Modify activities to cater for variations in workplace contexts and environment
- Collect, organise and understand information related to work orders, basic plans and safety procedures
- Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use pre-checking and inspection techniques to anticipate installation problems to avoid re-work and wastage
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials, to avoid any backtracking, work flow interruptions or wastage
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- Maintain current knowledge of:
 - tools and materials
 - parquetry installation techniques

- Use the limited workplace technology related to the timber flooring installing requirement, including tools, equipment, calculators and measuring devices

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the installation of engineered timber flooring
- Organisational and site standards, requirements, policies and procedures for the installation of engineered timber flooring
- Types, characteristics, uses and limitations of:
 - engineered timber flooring
 - installation adhesives
- The types and uses of installation tools and equipment
- Workplace safety systems relevant to the installation of engineered timber flooring
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to flooring installation operations
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.

- Access is required to a realistic installation workplace location, and materials and equipment relevant for the installation of engineered timber flooring.

MSFFL2025 Install impact and sound absorption underlay

Modification History

Release 2 - Unit code corrected in mapping - Supersedes and is equivalent to LMFFL2502A

Release 1 - New unit of competency

Application

This unit of competency covers installing impact and sound absorption underlay over a new or existing sub-floor to provide impact and sound reduction in preparation for the installation of a laminate or engineered timber floor.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing impact and sound absorbing underlay are verified and complied with |
| | | 1.2 | Instructions and/or plans are read and interpreted to identify process required to complete work tasks |
| | | 1.3 | Sub-floor condition is assessed for suitability for installation of impact and sound absorption underlay for |

			timber flooring installation
		1.4	Suitable adhesives, trims and accessories are selected if required
		1.5	Impact and sound absorption underlay is checked against work orders
		1.6	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.7	Sequence of work is planned, including the starting point, to ensure cutting, laying and fitting is in logical order
2	Set out materials	2.1	Impact and sound absorption underlay to be installed is checked against the order
		2.2	Impact and sound absorption underlay are acclimatised according to manufacturer recommendations
		2.3	Impact and sound absorption underlay for fixing are organised and used in accordance with relevant safety management requirements
		2.4	Working lines and starting point are established
3	Cut impact and sound absorption underlay	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Impact and sound absorption underlay is laid out to meet directional sequence, specification requirements and to minimise waste and joins as appropriate
		3.3	Impact and sound absorption underlay is cut to required shape with minimum waste of materials
4	Lay impact and sound absorption underlay	4.1	Materials for fixing are organised and used in accordance with relevant safety management requirements
		4.2	Adhesives and edge strips/accessories are prepared for use as required
		4.3	Adhesive is applied to sub-floor, if required
		4.4	Impact and sound absorption underlay is fixed using methods and equipment which follow manufacturer instructions

		4.5	Completed installation is checked for flaws in installation and materials and faults rectified following workplace procedures
5	Complete housekeeping	5.1	Unused materials are stored or recycled as required
		5.2	Tools and equipment are cleaned and stored appropriately
		5.3	Work area is cleaned and rubbish disposed of appropriately
		5.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none"> WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements work requires individual to demonstrate some discretion, judgement and problem solving
Impact and sound absorption underlays include:	<ul style="list-style-type: none"> single fibre composite fibre bonded foam

Adhesives include:	<ul style="list-style-type: none">• recycled rubber• solvent and water-based contact• acrylic or polyurethane elastomeric
Tools and equipment include:	<ul style="list-style-type: none">• utility knife• straight edge• chalk-line,• hammer• heavy-duty electrical drill• hacksaw• notched trowel
Materials include:	<ul style="list-style-type: none">• impact and sound absorption underlay• PVC tapes• adhesives• nails• plugs• primers
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFL2502A Install impact and sound absorption underlay

Assessment Requirements for MSFFL2025 Install impact and sound absorption underlay

Modification History

Release 2 - Unit code corrected in mapping - Supersedes and is equivalent to LMFFL2502A

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of two (2) impact and sound absorption underlay installations with one (1) incorporating such obstructions as doorways, fittings and irregular (obtuse/acute) angles (dual-bonded and conventional)
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing impact and sound absorption underlay
- Organisational and site standards, requirements, policies and procedures for installing impact and sound absorption underlay
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment

- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Types, characteristics, uses and limitations of impact and sound absorption underlay
- Types and uses of impact and sound absorption underlay installation tools and equipment
- Workplace safety system requirements related to cutting and fitting impact and sound absorption underlay
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to cutting and fitting impact and sound absorption underlay

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing impact and sound absorption underlay.

MSFFL2026 Nail strip timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing strip timber flooring onto a sub-floor applying top-nailing or secret nailing methods.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Assessment Requirements for MSFFL2026 Nail strip timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete the nailing of strip timber flooring using:
 - top-nailing methods
 - secret nailing methods
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to nailing of strip timber flooring
- Organisational and site standards, requirements, policies and procedures for nailing strip timber flooring on plywood underlay or timber battens
- Types and uses of tools and equipment used during the nailing of strip timber flooring on the plywood underlay and timber battens
- Basic wood working techniques relevant to the nailing of timber strip flooring onto to plywood underlay and timber battens
- Workplace safety system requirements relevant to the nailing of strip timber flooring onto plywood underlay and timber battens
- Type, characteristics, uses and limitations of:
 - installation adhesives

- nails or staples
- Work flow in relation to the nailing of strip timber flooring onto plywood underlay and timber battens operations
- Characteristics and requirements of sub-floor preparation
- Environmental protection requirements
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to the nailing of strip timber flooring.

MSFFL2027 Install expansion joints

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing expansion joints and gaps, calculating how many and how often they are to be installed, and what size and type are necessary for the application at hand.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of expansion joints to timber and engineered flooring are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Timber and engineered flooring is assessed for the type, number and installation requirements of expansion joints consistent with Australian Standards, industry standards and manufacturer recommendations

- | | | | |
|---|---|-----|--|
| | | 1.4 | Suitable expansion joints, cover strips, fixings and adhesives are selected as required |
| | | 1.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.6 | Sequence of work is planned, including the position of each expansion joint, to ensure efficiency and quality of installation |
| 2 | Set out expansion joints for installation | 2.1 | Expansion joints are positioned according to the requirements of the flooring type, manufacturer specifications and Australian Standards |
| | | 2.2 | Timber or metal mouldings or cork expansion strip for fixing are organised and used in accordance with relevant safety management requirements |
| | | 2.3 | Adhesives and fixings, are prepared for use as required |
| | | 2.4 | Working lines and starting point are established |
| 3 | Prepare expansion joints | 3.1 | Instructions and sequence for cutting and fixing are followed |
| | | 3.2 | Timber or metal mouldings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins, as appropriate |
| | | 3.3 | The aesthetics of the materials are maximised, where appropriate, matching grains and colours |
| | | 3.4 | Timber or metal moulding or cork expansion strip materials are accurately and clearly marked for cutting |
| | | 3.5 | Timber or metal moulding or cork expansion strip is cut to length and size for final fixing ensuring minimum waste |
| 4 | Install expansion joints | 4.1 | Timber or metal mouldings or cork expansion strip for fixing are organised and used in accordance with relevant safety management requirements |
| | | 4.2 | Adhesives and mechanical fixings are prepared for use as required |
| | | 4.3 | Fixing methods and equipment are used following |

		manufacturer recommendations
	4.4	Timber or metal mouldings or cork expansion strip are fitted to perimeter wall expansion gaps, expansion joints in the body of the flooring or transitions of the timber or engineered flooring
	4.5	Finished job is inspected and any imperfections are rectified following workplace procedures
5	Complete housekeeping	5.1 Unused materials are stored or recycled as required
		5.2 Tools and equipment are cleaned and stored appropriately
		5.3 Work area is cleaned and rubbish disposed of appropriately
		5.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individual to demonstrate some discretion,

	judgement and problem solving
Expansion joint materials include:	<ul style="list-style-type: none">• skirtings• scotias• quads• beading• cover strips• threshold strips (end, edge and T mouldings)• angle end sections• reducer strips• ramping strips• stair nosings
Materials include:	<ul style="list-style-type: none">• adhesives• metal fixings• timber and metal mouldings• cork expansion strip
Adhesives include:	<ul style="list-style-type: none">• polyvinyl alcohol (PVA)• epoxy• polyurethane elastomeric
Mechanical fixings include:	<ul style="list-style-type: none">• ring grooved nails• pins• staples• screws• nylon plug• screws (tap-ins)• rawl plugs
Tools and equipment include:	<ul style="list-style-type: none">• jig saw• hand saw• hacksaw• hammer• nail punch• bar scribe• utility knife• circular saw• bench saw• straight edge• staple gun
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• Australian Standard AS I684.1-1999 Residential timber-framed construction – Design criteria and the Australian Timber Code

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFL2504A Install expansion joints

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFFL2027 Install expansion joints

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of the placement and fitting of expansion joints to:
 - one (1) strip timber floor
 - one (1) parquetry floor
 - one (1) engineered floating floor
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to placement and fitting of expansion joints to timber and engineered flooring
- Organisational and site standards, requirements, policies and procedures for the placement and fitting of expansion joints to timber and engineered flooring
- Types, characteristics, uses and limitations of:
 - the placement and fitting of expansion joints for timber and engineered flooring
 - timber or metal mouldings and cork expansion strip when fitting expansion joints to timber and engineered flooring
- Types and uses of tools and equipment used during the placement and fitting of expansion joints to timber and engineered flooring.

- Basic wood working techniques relevant to the placement and fitting of expansion joints to timber and engineered flooring
- Workplace safety system requirements relevant to the placement and fitting of expansion joints to timber and engineered flooring
- Work flow in relation to the placement and fitting of expansion joints to timber and engineered flooring
- Characteristics and requirements of expansion joint preparation
- Environmental protection requirements
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials and equipment for the placement and fitting of expansion joints to one strip timber floor, one parquetry floor and one engineered floating floor.

MSFFL2028 Install mouldings and edge trims to timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing timber or metal mouldings and trims to timber and engineered flooring after installation, replacement, sanding and finishing.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to fitting and fixing timber and metal mouldings and trims to timber and engineered flooring are verified and complied with |
| | | 1.2 | Instructions and/or plans are read and interpreted to identify process required to complete work tasks |
| | | 1.3 | Finished timber/engineered flooring condition is assessed for suitability for installation of timber and metal mouldings and trims consistent with Australian Standards, industry standards and manufacturer recommendations |

		1.4	Suitable adhesives, mouldings, trims and fixings are selected as required
		1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.6	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out materials for installation	2.1	Timber or metal mouldings and trims are acclimatised according to manufacturer recommendations
		2.2	Timber or metal mouldings and trims for fixing are organised and used in accordance with relevant safety management requirements
		2.3	Adhesives and fixings, are prepared for use as required
		2.4	Working lines and starting point are established
3	Cut mouldings/trims	3.1	Instructions and sequence for cutting and fixing are followed
		3.2	Timber or metal mouldings and trims are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate
		3.3	The aesthetics of the materials are maximised, where appropriate, matching grains and colours
		3.4	Timber or metal moulding and trim materials are accurately and clearly marked for cutting
		3.5	Timber or metal moulding and trim is cut to length and size for final fixing ensuring minimum waste
4	Fix mouldings/trims	4.1	Timber or metal mouldings and trims for fixing are organised and used in accordance with relevant safety management requirements
		4.2	Adhesives, mechanical fixings and accessories are prepared for use as required
		4.3	Fixing methods and equipment are used following manufacturer recommendations
		4.4	Skirting boards/mouldings are fitted to perimeter walls

			allowing for expansion joints
		4.5	Cover trims and edge strips are fitted/re-fitted to expansion joints and transitions of the timber flooring
		4.6	Finished job is inspected and any imperfections are rectified following workplace procedures
5	Complete housekeeping	5.1	Unused materials are stored or recycled as required
		5.2	Tools and equipment are cleaned and stored appropriately
		5.3	Work area is cleaned and rubbish disposed of appropriately
		5.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving

Timber and metal mouldings and trims include:

- skirtings
- scotias
- quads
- beading
- cover strips
- threshold strips (end, edge and T mouldings)
- angle end sections
- reducer strips
- ramping strips
- stair nosings

Adhesives include:

- polyvinyl alcohol (PVA)
- epoxy
- polyurethane elastomeric

Tools and equipment include:

- drop saw
- jig saw
- hand saw
- hacksaw
- hammer
- nail punch
- bar scriber
- utility knife
- circular saw
- bench saw
- straight edge
- staple gun

Materials include:

- adhesives
- metal fixings
- timber and metal mouldings
- trims

Mechanical fixings include:

- ring grooved nails
- pins
- staples
- screws
- nylon plug
- screws (tap-ins)
- rawl plugs

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans,

drawings and designs

- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFL2505A Install mouldings and edge trims to timber flooring

Assessment Requirements for MSFFL2028 Install mouldings and edge trims to timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of two (2) installations of the following mouldings and trims types:
 - skirting boards
 - scotia
 - edge and end mouldings
 - metal cover strips
 - stair nosing
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to fitting and fixing timber and metal mouldings and trims to timber and engineered flooring
- Organisational and site standards, requirements, policies and procedures for the fitting and fixing timber and metal mouldings and trims to timber and engineered flooring
- Types, characteristics, uses and limitations of:
 - adhesives and mechanical fixings used to install timber and metal mouldings and trims fitted to timber and engineered flooring
 - timber and metal mouldings and trims for fixing to timber and engineered flooring

- Types and uses of tools and equipment used during the fitting and fixing timber and metal mouldings and trims to timber flooring
- Basic wood working techniques relevant to the fitting and fixing of timber and metal mouldings and trims to timber flooring
- Workplace safety system requirements relevant to the fitting and fixing timber and metal mouldings and trims to timber flooring
- Work flow in relation to the fitting and fixing timber and metal mouldings and trims to timber flooring
- Characteristics and requirements of sub-floor preparation
- Environmental protection requirements
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing mouldings and edge trims to timber flooring.

MSFFL3001 Plan and cost flooring technology work

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying and analysing work requirements to plan a wide range of flooring work, including identification of all resources, and to cost the work as a part of a tender or quotation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Identify and analyse work requirements | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements and Australian Standards relevant to the planning and costing of flooring technology work are verified and complied with |
| | | 1.2 | Details of customer requirements are obtained through discussion with customer or from information required |
| | | 1.3 | Details of the site conditions are confirmed from reports or physical inspection |
| | | 1.4 | Details of products and/or services required for the work are identified, developed and quantified |
| | | 1.5 | Delivery point and methods of transportation are |

			determined
		1.6	Details are recorded in accordance with enterprise practice
2	Develop a work plan	2.1	The technical and material options for completing the work are identified and considered
		2.2	The outline work proposal is confirmed with the client and amended as necessary
		2.3	A detailed work plan is developed and recorded
3	Estimate materials, time and labour	3.1	Types and quantities of materials required for the work plan are calculated
		3.2	Types and duration of usage of major tools and equipment required to support the work plan are calculated
		3.3	Labour requirements to support the preparation for and implementation of the work plan are calculated
		3.4	Time requirements to complete the work plan are estimated
4	Calculate costs	4.1	Total materials, labour and equipment costs are calculated in accordance with enterprise procedures
		4.2	Total job cost is calculated, including overheads and mark-up percentages
		4.3	Final cost to customer is calculated
5	Document details and verify, where necessary	5.1	Details of job costs and charges are documented in accordance with enterprise practice
		5.2	Calculations, costs or other details are verified in accordance with enterprise practice
		5.3	Customer quotation is prepared
		5.4	Details are documented for future reference in accordance with enterprise practice

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL3001 Plan and cost flooring technology work

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection
- Document and communicate work-related information, including:
 - customer requirements
 - products
 - materials and labour required
 - costing calculations for products
 - materials and labour
 - special conditions
- Use calculators, computer programs and other aids in the estimation and cost calculation processes
- Estimate and cost three (3) varied jobs, including:
 - estimate quantities of material required
 - determine the types and amount of labour required to complete the work
 - estimate time required to complete the work
 - estimate overheads associated with the job
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the planning and costing of flooring technology work
- Australian Standards, including AS/NZS 2455.1:2007 Textile floor coverings - Installation practice – General, and AS 1884-2012 Floor coverings - Resilient sheet and tiles - Installation practices

- Preparing and presenting design information
- Organisational and site standards, requirements, policies and procedures for preparing and presenting design information
- Floor preparation methods and techniques
- Floor covering, installation and finishing techniques applicable to the required streams
- Types of major tools and equipment, their applications, planning and costing techniques and data
- Costing techniques for labour and materials
- Overhead components and costing techniques
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic planning and costing requirement; a customer requiring technical, planning and costing advice; and specific information covering materials, equipment, labour and overheads required for planning and costing work and their specifications.

MSFFL3002 Establish and maintain a safe flooring technology work environment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers conducting a systematic risk assessment of the work and work area to establish and maintain a safe work environment throughout the conduct of flooring technology operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify and interpret operational and environmental information	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the establishment and maintenance of a safe work environment are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process which will be undertaken to complete work tasks
		1.3	Tools and equipment to be used are identified and their operating characteristics are analysed
		1.4	The flooring materials to be used, including adhesives, are identified and their characteristics analysed

- | | | | |
|---|---------------------------------------|-----|--|
| 2 | Identify hazards | 2.1 | Work area conditions are analysed to identify/recognise potential hazards |
| | | 2.2 | Relevant safety systems information is accessed and analysed to eliminate situations covered by existing and adequate procedures |
| | | 2.3 | The type and scope of unresolved hazards and their likely impact are recognised |
| 3 | Assess risk | 3.1 | Likelihood of the event happening is considered and determined |
| | | 3.2 | Consequence if the event should occur is evaluated and determined |
| | | 3.3 | Risk level (likelihood and consequence combined) is considered and determined |
| 4 | Identify and decide on risk treatment | 4.1 | Range of treatments which may eliminate or minimise the risk are identified |
| | | 4.2 | All possible options for resolution of the problem/dealing with the risk are identified and considered |
| | | 4.3 | Feasible options are subject to detailed analysis, including the identification of resource requirements |
| | | 4.4 | Most appropriate treatment for dealing with the situation is selected |
| 5 | Implement the risk treatment | 5.1 | The course of action/treatment is planned and prepared in detail |
| | | 5.2 | Resources required for the treatment are acquired or obtained |
| | | 5.3 | Safety information and procedures are accessed and applied throughout the operations |
| | | 5.4 | The treatment is implemented |
| | | 5.5 | Information on the treatment and implementation is communicated to the relevant people |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Tools and equipment include: | <ul style="list-style-type: none">• knives• angle grinder• scrapers• saws• hammers• mallets and chisels• staple gun• bolsters• hand brush and brooms• vacuum cleaners• trowels• scribes• rollers• spatulas• gauging tools• laser levels• sealers• drills |

	<ul style="list-style-type: none">• mixing paddles• gas bottle and gun• hot air welding gun• drop saw• nail gun• buckets• moisture meters• material pumps• grinders• demolition equipment• scarifiers• shot blasters• cutting equipment
Materials include:	<ul style="list-style-type: none">• soft underlays• carpet gripper strips• metal mouldings• tapes• adhesives• nails• plugs• staples• primers
Adhesives include:	<ul style="list-style-type: none">• solvent and water-based contact• construction adhesive• latex/resin/acrylic
Hazards and risks include:	<ul style="list-style-type: none">• dust inhalation• power sources and leads• flying debris• fume inhalation• trips• falls• lack of control during pouring• machine safety• vibration (direct and indirect consequences)
Treatments include:	<ul style="list-style-type: none">• dust and fumes extraction systems• isolation through testing, distance, barriers, entry limits and signage• power source protection, such as earth leakage and coded leads• debris protection, such as machine guards, skirts, distance and access controls• pour protection through area sealing and plugs

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFL3002A Establish and maintain a safe flooring technology work environment

Links

Assessment Requirements for MSFFL3002 Establish and maintain a safe flooring technology work environment

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of one (1) formal risk assessment, including the determination and implementation of required treatments
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to risk management in a flooring technology work environment
- Organisational and site standards, requirements, policies and procedures for flooring technology
- Types of tools and equipment, their operating characteristics and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Common flooring technology related hazards and the range of commonly applied treatments
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Appropriate mathematical procedures for estimation and measurement

- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to establishing and maintaining a safe flooring technology work environment.

MSFFL3003 Inspect sub-floors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers inspecting and formally reporting on the condition of both timber and concrete sub-floors.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to the inspection of sub-floors are verified and complied with |
| | | 1.2 | Customer enquiry and relevant information is consulted to determine the type of proposed flooring operation and other work requirements |
| | | 1.3 | Floor surface requirements for the proposed coverings are determined from manufacturer or workplace information |
| | | 1.4 | Tools, equipment and required materials are obtained |

- and prepared for the work
- | | | | |
|---|---|-----|---|
| 2 | Conduct inspection of timber flooring | 2.1 | The type of floor construction materials and the building floor structure and substructure are identified |
| | | 2.2 | Datum lines to confirm floor fall, dips and irregularities and finished floor height in relation to other floor coverings and door clearances are run and checked to confirm dimensions |
| | | 2.3 | Moisture testing is completed in accordance with the approved process and standard |
| | | 2.4 | Timber sub-flooring inspections are completed to identify irregularities |
| | | 2.5 | Ventilation flow is confirmed and irregularities noted |
| | | 2.6 | Floor joists, bearers and stumps are checked for irregularities |
| 3 | Conduct inspection of concrete flooring | 3.1 | The type of floor construction materials and the building floor structure and substructure are identified |
| | | 3.2 | Datum lines are run and checked to confirm dimensions |
| | | 3.3 | Moisture testing is completed in accordance with the approved process and standard |
| | | 3.4 | Concrete sub-floor inspections are completed to identify irregularities |
| | | 3.5 | Expansion joints are inspected to ensure they are clean and unobstructed |
| 4 | Notify findings of inspection | 4.1 | Notification of the findings of the inspection is completed in accordance with current and relevant standards |
| | | 4.2 | Copies of the notification are sent to appropriate personnel and suitably filed following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Tools and equipment include: | <ul style="list-style-type: none">• straight edges (150 mm – 3 m)• spirit level• string line and chalk line• electrical resistance meter• tape measure• laser level• dumpy level• measuring pole• water level• hygrometer• thermometer probe• acid and alkaline testing equipment• electric drill• masonry drill bits |
| Materials include: | <ul style="list-style-type: none">• timber strip flooring• construction sheet flooring• concrete floors• above grade, on grade and below grade floors |

Timber sub-flooring inspections include:	<ul style="list-style-type: none">• tests for moisture content• protruding nails• loose metal and other objects• cracked, loose, rotting or damaged boards• insect attack• cross-flow ventilation
Concrete sub-floor inspections include:	<ul style="list-style-type: none">• checks for any protruding obstacles• cracks or damage• moisture• damage to expansion joints• concrete surface for weakness or damage• the presence of during agents
Inspection notifications include:	<ul style="list-style-type: none">• the type of the inspection completed, testing methods used, inspection findings, suggested remedies to any faults identified and recommendations for floor coverings or finishing
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Assessment Requirements for MSFFL3003 Inspect sub-floors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of:
 - one (1) timber sub-floor inspection and written notification
 - one (1) concrete sub-floor inspection and written notification
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Workplace safety system requirements related to floor inspection
- Type, characteristics and defects of:
 - timber sub-floor structures
 - concrete sub-floor structures
- Types and uses of inspection tools and equipment and procedures for their safe use, operation and maintenance
- Requirements for floor condition for floor coverings
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to inspection processes and procedures

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to testing equipment, tools, materials and specifications relevant to sub-floor inspection.

MSFFL3005 Install carpet tiles using custom designs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing carpet tiles to multiple connecting rooms and/or large commercial sites using multi-directional patterns, motifs, logos and custom design requirements, including preparation, layout, cutting, laying and fixing.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of carpet tiles using custom designs are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Sub-floor condition is assessed for installation of carpet tiles
		1.4	Suitable adhesives, trims and accessories are selected

- | | | | |
|---|-----------------------|-----|--|
| | | 1.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.6 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials | 2.1 | Carpet tiles to be installed are checked against order |
| | | 2.2 | Carpet tiles are acclimatised according to manufacturer recommendations |
| | | 2.3 | Materials for fixing are organised and used in accordance with relevant safety management requirements |
| | | 2.4 | Patterns, motifs, logos and custom design requirements are set out |
| | | 2.5 | Working lines and starting point are established |
| 3 | Lay carpet tiles | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Materials are laid out to meet specification requirements and to minimise waste |
| | | 3.3 | Material grains and patterns are matched or contrasted as appropriate |
| | | 3.4 | Tiles are accurately and clearly marked for cutting |
| | | 3.5 | Tiles are cut to required shape with minimum waste of materials and laid |
| | | 3.6 | Complete installation is checked for flaws in installation and materials and faults are rectified |
| 4 | Complete housekeeping | 4.1 | Unused materials are stored or recycled as required |
| | | 4.2 | Tools and equipment are cleaned and stored appropriately |
| | | 4.3 | Work area is cleaned and rubbish disposed of appropriately |
| | | 4.4 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL3005 Install carpet tiles using custom designs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of:
 - one (1) carpet installation to multiple connecting rooms using multi-directional patterns/borders, including appropriate trims and accessories
 - one (1) full-spread installation that includes a motif/logo, including appropriate trim and accessories
 - one (1) full-spread installation to large commercial site that includes a link-up and custom design requirement, including appropriate trims and accessories
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing carpet tiles using custom design requirements
- Organisational and site standards, requirements, policies and procedures for installing carpet tiles using custom design requirements
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Types, characteristics, uses and limitations of:
 - carpet tiles
 - carpet tile installation adhesives
- Types and uses of carpet tile installation tools and equipment
- Workplace safety system requirements related to carpet tile laying
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to floor covering operations

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to laying carpet tiles using custom designs.

MSFFL3006 Install adhesive fixed carpet floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing adhesive fixed carpet floor coverings, including preparation, cutting, laying, fixing, joining and finishing, of direct stick and dual-bonded installation methods.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to install adhesive fixed carpet floor coverings are verified and complied with
		1.2	Floor inspection report is consulted to confirm suitability of floor for carpet installation
		1.3	Instructions and/or plans/sketches are read and interpreted to identify the process required to complete work tasks

- | | | | |
|---|---------------------|-----|--|
| | | 1.4 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.5 | Suitable perimeter finishing, joining materials, metal mouldings, cover and PVC strips are selected and prepared |
| | | 1.6 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| | | 1.7 | Suitable primers and adhesives are selected and prepared for the installation |
| 2 | Set out materials | 2.1 | Carpet to be installed is checked against order |
| | | 2.2 | Adhesive fixed carpet floor coverings are acclimatised according to manufacturer recommendations |
| | | 2.3 | Underlay and carpet to be installed is checked against work instruction and appropriate standards |
| | | 2.4 | Appropriate primers are applied to the sub-floors |
| 3 | Lay carpet flooring | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Underlay is cut and installed to specification |
| | | 3.3 | Carpet pieces are laid out and checked for size, direction of pile and pattern |
| | | 3.4 | Carpet is trimmed to shape as necessary, joins are cut and sealed following manufacturer instructions and Australian Standards |
| | | 3.5 | Adhesives are applied following manufacturer instructions |
| | | 3.6 | Carpet is installed following manufacturer instructions and Australian Standards |
| | | 3.7 | Cover and finishing strips are appropriately fixed for the type of sub-floor |
| | | 3.8 | Protective coverings are installed as specified |
| | | 3.9 | Finished work is inspected for compliance with work order, workplace and Australian Standards of finish |

- | | | | |
|---|-----------------------|-----|--|
| 4 | Complete housekeeping | 4.1 | Unused materials are stored or recycled as required |
| | | 4.2 | Tools and equipment are cleaned and stored appropriately |
| | | 4.3 | Work area is cleaned and rubbish disposed of appropriately |
| | | 4.4 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for MSFFL3006 Install adhesive fixed carpet floor coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of the following:
 - one (1) direct stick carpet installation using a PVC-backed carpet to connecting rooms, including at least one (1) cross join and one (1) seam join
 - one (1) dual-bond carpet installation using a woven carpet to connecting rooms, including at least one (1) cross join and one (1) seam join
 - one (1) dual-bond carpet installation using tufted carpet and pre-applied adhesive underlay to connection rooms, including at least one (1) cross join and one (1) seam join using gripper strips and heat bond tape
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to adhesive fixed carpet and underlays carpet systems
- Organisational and site standards, requirements, policies and procedures for adhesive fixed carpet and underlay carpet system
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Types, characteristics, uses and limitations of:
 - adhesive fixed carpets and underlays
 - installation adhesives
- Types and uses of adhesive fixed carpet installation tools and equipment
- Workplace safety system requirements, including ventilation needs, related to the installation of adhesive fixed carpets
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to the cutting, laying, fixing, joining and finishing of adhesive fixed carpet

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to lay adhesive fixed carpet floor coverings.

MSFFL3007 Install commercial carpet floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing commercial grade carpet to multiple connecting rooms, large commercial areas, multi-storey buildings, including preparation, cutting, laying out, joining, power stretching and finishing of carpet floor coverings.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing commercial carpet floor coverings are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Resources required in terms of labour, equipment, materials, transport, site loading and hoisting, storage facilities, air conditioning, heating, lighting, power supply, security and time are assessed

		1.4	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.5	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out materials	2.1	Carpet to be installed is checked against work order
		2.2	Commercial carpet floor coverings are acclimatised according to manufacturer recommendations
		2.3	Type of perimeter finishing, joining materials, gripper strip, metal mouldings and cover strips are selected following specification or work order
		2.4	Underlay, gripper strips and metal mouldings are inspected to confirm correct fitting
		2.5	Work area is cleared of scraps or other contaminants
		2.6	Working lines and starting point are established
3	Lay carpet	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Carpet pieces are laid out and checked for size, direction of pile
		3.3	Stretching equipment, joining and fixing methods are used following manufacturer instructions and Australian Standards
		3.4	Cover and finishing strips are suitably fixed for the type of sub-floor
		3.5	Protective coverings are installed as specified
		3.6	Finished work is inspected for compliance with work order, workplace and Australian Standards of finish
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of:
 - one (1) commercial tufted carpet installation using the carpet gripper strip system to an area containing at least three (3) rooms connected by a common corridor, including at least three (3) seam joins and three (3) cross joins
 - one (1) commercial woven carpet installation using the carpet gripper strip system to an area containing at least three and a half (3.5) broadloom widths of carpet by approximately ten (10) metres in length and including at least one (1) cross join
 - one (1) commercial tufted carpet installation using the carpet gripper strip system to an area of a minimum of fifteen (15) lineal metres by twelve (12) lineal metres containing a lift lobby or similar obstacle
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installation of commercial carpet
- Organisational and site standards, requirements, policies and procedures for the installation of commercial carpet
- Environmental protection requirements

- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Characteristics and requirements for underlays
- Type, characteristics, uses and limitations of commercial carpets
- Techniques for:
 - stretching and joining carpet
 - the use of hook and loop fastening tape and equivalent systems
- Workplace safety system requirements related to carpet installation
- Work flow in relation to preparation, layout, stretching, cutting and finishing of carpet

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to laying commercial carpet floor coverings.

MSFFL3008 Install patterned carpet floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit covers installing woven and tufted carpet floor coverings containing geometric and decorative patterns using adhesive-bonded and carpet gripper systems.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to install patterned carpet floor covering are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Resources required in terms of labour, equipment, materials, transport, site loading and hoisting, storage facilities, air conditioning, heating, lighting, power supply, security and time are assessed

		1.4	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.5	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out materials	2.1	Carpet to be installed is checked against work order
		2.2	Patterned carpet floor coverings are acclimatised according to manufacturer recommendations
		2.3	Type of perimeter finishing, joining materials, gripper strip, metal mouldings and cover strips are selected following specification or work order
		2.4	Underlay, gripper strips and metal mouldings are inspected to confirm correct fitting
		2.5	Work area is cleared of scraps or other contaminants
		2.6	Work lines and starting point are established
3	Lay patterned floor coverings	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Carpet pieces are laid out and checked for size and direction of pile
		3.3	Stretching equipment, joining and fixing methods are used following manufacturer instructions and Australian Standards
		3.4	Cover and finishing strips are suitably fixed for the type of sub-floor
		3.5	Protective coverings are installed as specified
		3.6	Finished work is inspected for compliance with work order, workplace and Australian Standards of finish
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL3008 Install patterned carpet floor coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Install woven patterned carpet requiring pattern matching at seams and cross joints using the carpet gripper strip installation system
- Install tufted patterned carpet requiring pattern matching at seams and cross joints using the carpet gripper strip installation system
- Install tufted patterned carpet using adhesive bonded methods of installation including pattern matching at seams and cross joints
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the installation of patterned carpet
- Organisational and site standards, requirements, policies and procedures for the installation of patterned carpet
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance

- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.

MSFFL3009 Install custom design carpet and decorative finishes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing carpet floor coverings containing logos, motifs and custom design concepts to walls and floors, including preparation, layout, stretching, cutting, joining and finishing of carpet.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of custom design carpet floor coverings are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Resources required in terms of labour, equipment, materials and time are assessed
		1.4	Tools, equipment and materials are selected and checked

			prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.5	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out materials	2.1	The carpet to be installed and design requirements are checked against work orders
		2.2	Carpet is acclimatised according to manufacturer recommendations
		2.3	Type of perimeter finishing, joining materials, gripper strips, metal mouldings and cover strips are selected following specification or work order
		2.4	Underlay gripper strips and metal mouldings are inspected to confirm correct fitting
		2.5	Work area is cleared of scraps or other contaminants
		2.6	Work lines and starting point are established
3	Install carpet	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Patterns, motifs, logos and custom design requirements are set out
		3.3	Carpet pieces are laid out and checked for size, direction of pile and pattern match
		3.4	Carpet pieces are accurately and clearly marked for cutting
		3.5	Carpet pieces are cut to required shape with minimum waste of materials
		3.6	Carpet pieces are joined using joining and installation methods appropriate to the installation system being used
		3.7	Carpet installation methods are to follow manufacturer instructions and Australian Standards
		3.8	Cover and finishing strips are suitably fixed for the type of installation method, floor covering and sub-floor
		3.9	Complete installation is checked for flaws in installation and materials and faults rectified

		3.10	Floor covering protection is installed in accordance with specifications
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Custom design carpet floor coverings include:**
- tufted carpet
 - woven carpet
 - fusion-bonded carpet
 - needle punch carpet

Tools and equipment include:

- PVC-backed carpet
- bonded foam underlay
- styrene-butadiene rubber (SBR) foam underlay
- needle punched fibre underlay
- carpet knee kicker
- power stretcher
- carpet stair tool
- hand trucks
- carpet trolleys
- hammer
- utility knife
- hook knife
- carpet wall trimmer
- heat seam iron
- spiked carpet roller
- weight or seam roller
- awl
- carpet spreader
- carpet shears
- napping shears
- loop pile cutter
- cushion backed cutter
- moulding lifter
- sewing needle

Materials include:

- architectural carpet gripper strips
- metal mouldings and PVC trims
- heat seam tape
- hessian tape
- thread
- adhesives

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of:
 - one (1) installation of a needle punch carpet to wall or floor, containing a logo/motif using adhesive-bonded installation systems
 - one (1) installation of a tufted carpet containing a motif and custom design concepts using the carpet gripper strip system of installation
 - one (1) installation of a woven carpet containing a motif and custom design concepts (bordered installation) and pattern matching, using the dual-bond system of installation
 - one (1) installation of PVC-backed carpet to a floor containing a logo/motif and custom design concepts using adhesive bonded installation systems
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the installation of custom design carpet and decorative finishes
- Organisational and site standards, requirements, policies and procedures for the installing of custom design carpet
- Environmental protection requirements
- Established communication channels and protocols

- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Characteristics and requirements for underlays
- Types, characteristics, uses and limitations of pattern carpets
- Types and uses of carpet installation tools, equipment and materials
- Techniques for:
 - stretching and joining carpet
 - adhesive bonding and joining of carpet
- The use of hook and loop fastening tape and equivalent systems
- Workplace safety system requirements related to carpet installation
- Work flow in relation to preparation, layout, stretching, cutting and finishing of carpet

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing custom design carpet and decorative finishes.

MSFFL3010 Install synthetic floor coverings to sports facilities and outdoor spaces

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing synthetic textile and other floor coverings to indoor and outdoor sporting facilities and outdoor spaces, including the preparation, cutting, laying out, joining, fixing and finishing of the covering material. It applies to a wide variety of flooring technology installation operations and involves application of skills and knowledge at a trade worker level.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare for installation

1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of synthetic textile floor coverings are verified and complied with

1.2 Instructions and/or plans are read and interpreted to identify the process required to complete work tasks

- | | | | |
|---|--------------------|-----|--|
| | | 1.3 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.4 | Sub-floor condition is assessed for suitability for installation |
| | | 1.5 | Suitable adhesives, trims and accessories are selected, if required |
| | | 1.6 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials | 2.1 | Synthetic floor covering material to be installed is checked against the work order |
| | | 2.2 | Synthetic floor covering is acclimatised according to manufacturer recommendations |
| | | 2.3 | Soft underlays for synthetic floor coverings, where applicable, are cut and laid to specification |
| | | 2.4 | Working lines and starting point are established |
| | | 2.5 | Adhesives and edge strips are prepared for use as required |
| 3 | Lay floor covering | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Materials for fixing are organised and used in accordance with relevant safety management requirements |
| | | 3.3 | Synthetic floor coverings are laid out to meet pattern and specification requirements and to minimise waste and joins |
| | | 3.4 | Synthetic floor coverings are accurately and clearly marked for cutting |
| | | 3.5 | Synthetic floor coverings are cut to length, joins are cut and prepared for final laying |
| | | 3.6 | Line marking is completed where required |
| | | 3.7 | Cover trims are fitted and finished |
| | | 3.8 | Completed installation is checked for flaws in |

			installation and materials and faults rectified
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriate
		4.4	Workplace documentation is completed

Foundation Skills

Assessment Requirements for MSFFL3010 Install synthetic floor coverings to sports facilities and outdoor spaces

Modification History

Release 1 - New unit of competency

Performance Evidence

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing synthetic textile and other floor coverings to sports facilities and outdoor spaces, including ventilation standards
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete installation of a minimum of two (2) types of synthetic floor covering, one (1) textile and one (1) non-textile, to an indoor sports floor and one (1) to an outdoor installation
- Modify activities to cater for variations in workplace contexts and environment
- Collect, organise and understand information related to work orders, basic plans and safety procedures
- Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use pre-checking and inspection techniques to anticipate problems installing synthetic textile floor coverings to sport facilities to avoid re-work and wastage
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, work flow interruptions or wastage
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- Maintain current knowledge of:
 - tools and materials
 - installation techniques
 - indoor and outdoor synthetic flooring materials and adhesives

- Use the limited workplace technology related to the installation of synthetic textile floor coverings to sports facilities and outdoor spaces, including tools, equipment, calculators and measuring devices

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing synthetic floor coverings for sports facilities
- Organisational and site standards, requirements, policies and procedures for installing synthetic floor coverings for sports facilities
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Types, characteristics, uses and limitations of:
 - synthetic textile and other floor coverings used in sporting facilities and outdoor spaces
 - installation adhesives and their uses
 - underlay cushions
- Types and uses of installation tools and equipment
- Workplace safety system requirements related to installing synthetic textile floor coverings used in sporting facilities
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to flooring installation operations

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.

- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a location relevant to installing synthetic textile and other floor coverings to sports facilities and outdoor spaces.

MSFFL3011 Install carpet floor coverings to custom design stairs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing plain and patterned carpet floor coverings to angular, curved, rounded and wrap-rounded stairs, including patterns, metal moulding and decorative finishes using adhesive-bonded and carpet gripper systems. Work involves planning, preparation, cutting, joining and fixing.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing carpet floor coverings to custom designed stairs are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Floor condition is assessed for suitability for installation of carpet floor coverings to custom designed stairs

- | | | | |
|---|----------------------|-----|--|
| | | 1.4 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.5 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials | 2.1 | Carpet to be installed is checked against work order |
| | | 2.2 | Carpet floor coverings are acclimatised according to manufacturer recommendations |
| | | 2.3 | Stairway or step is measured and the required amount of floor covering and underlay, including allowances for type of stairs, is calculated and obtained |
| | | 2.4 | Suitable adhesives, gripper strips and edge strips are selected |
| | | 2.5 | Work lines and starting point are established |
| | | 2.6 | Gripper strips, if required, are cut and installed as specified in AS/NZS 2455.1:2007 Textile floor coverings - Installation practice - General |
| | | 2.7 | Underlay, if required, is checked against specified type and fitted as specified in AS/NZS2455.1:2007 Textile floor coverings - Installation practice - General |
| 3 | Lay carpet to stairs | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Carpet floor coverings are laid out to meet allowances for type of stair requirements and minimise waste |
| | | 3.3 | Carpet floor coverings are accurately and clearly marked for cutting |
| | | 3.4 | Carpet floor coverings are cut to required shape with minimum waste of materials and laid |
| | | 3.5 | Instructions, sequence, fixing methods and equipment are used following specifications and AS/NZS2455.1:2007 Textile floor coverings - Installation practice - General |
| | | 3.6 | Installation is completed to specification |
| | | 3.7 | Finished stairway is checked for flaws in installation and |

			materials and faults rectified
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none"> • WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving
Carpet floor coverings include:	<ul style="list-style-type: none"> • tufted carpet • woven carpet • needle punch carpet • fusion-bonded carpet
Tools and equipment	<ul style="list-style-type: none"> • carpet knee kicker

include:

- power stretcher
- carpet stair tool
- hand trucks
- carpet trolleys
- hammer
- utility knife
- hook knife
- carpet wall trimmer
- heat seam iron
- spiked carpet roller
- weight or seam roller
- awl
- carpet spreader
- carpet shears
- napping shears
- loop pile cutter
- cushion backed cutter
- moulding lifter
- sewing needle

Materials include:

- underlay
- tapes and adhesives
- trims
- nosing
- smooth edges
- accessories

Stairways include:

- open newell
- bullnose steps
- circular
- recessed steps
- open tread
- box steps
- kit winder treads

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Assessment Requirements for MSFFL3011 Install carpet floor coverings to custom design stairs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete the installation of at least one (1) tufted carpet and one (1) patterned woven carpet to:
 - concrete or timber staircases
 - open newell
 - bullnose step
 - circular
 - recessed steps
 - open tread
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing carpet floor coverings to custom designed stairs
- Organisational and site standards, requirements, policies and procedures for installing carpet floor coverings to custom designed stairs
- AS/NZS 2455.1:2007 Textile floor coverings - Installation practice - General
- Environmental protection requirements

- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Types and characteristics of stairways
- Types and uses of carpet installation tools, equipment and materials
- Types, uses and limitations of stairway carpet fixing techniques
- The characteristics of timber and concrete sub-floors
- Workplace safety system requirements related to stairway carpet installation
- Work flow in relation to the installation of carpets on stairways

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing carpet floor coverings to customer designed stairs.

MSFFL3012 Install linoleum floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing linoleum floor coverings to domestic and commercial installations using templating and scribing methods.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing linoleum floor coverings are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Sub-floor condition is assessed for suitability for installation of linoleum floor coverings
		1.4	Suitable adhesives, trims and accessories are selected
		1.5	Tools, equipment and materials are selected and checked

			prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.6	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out materials	2.1	Linoleum to be installed is checked against work order
		2.2	Linoleum floor coverings are acclimatised according to manufacturer recommendations
		2.3	Linoleum floor coverings for fixing are organised and used in accordance with relevant safety management requirements
		2.4	Working lines and starting point are established
		2.5	Soft underlay, if required, is cut to specification
		2.6	Pre-form fillet is set out, cut and fitted, if required
3	Cut materials	3.1	Linoleum floor coverings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate
		3.2	Linoleum floor coverings are accurately and clearly marked for cutting
		3.3	Linoleum floor coverings are cut to required pattern and shape with minimum waste of materials
4	Lay linoleum	4.1	Instructions and sequence for laying and fixing are followed
		4.2	Materials for welding and fixing are organised and used in accordance with relevant safety management requirements
		4.3	Welding and fixing methods and equipment are used following manufacturer instructions
		4.4	Resilient skirting, reducer and edge strips are set-out and installed, as required
		4.5	Completed installation is checked for flaws in installation and materials and faults rectified
5	Complete housekeeping	5.1	Unused materials are stored or recycled as required
		5.2	Tools and equipment are cleaned and stored

- appropriately
- 5.3 Work area is cleaned and rubbish disposed of appropriately
- 5.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL3012 Install linoleum floor coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Cut, lay and heat weld linoleum sheet floor coverings using fillet cove internal and external mitres to custom design and pattern scribe covering
- Cut, lay and heat weld linoleum sheet floor coverings using pre-formed linoleum coving with internal and external mitres to a corridor and connecting room
- Cut, lay and butt join linoleum sheet floor coverings to single/connecting room
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to install linoleum floor coverings
- Organisational and site standards, requirements, policies and procedures for installing linoleum floor coverings
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects

- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Type, characteristics, uses and limitations of:
 - weldable vinyl floor coverings
 - resilient floor covering installation adhesives
- Types and uses of linoleum floor covering installation tools and equipment
- Workplace safety system requirements related to resilient floor covering laying
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to cutting, welding and laying linoleum floor coverings

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

MSFFL3013 Install commercial vinyl floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing vinyl floor coverings to commercial premises, including laying out, cutting, welding, coving and fixing.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--------------------------|-----|---|
| 1 | Prepare for installation | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing commercial vinyl floor coverings are verified and complied with |
| | | 1.2 | Instructions and/or plans are read and interpreted to identify process required to complete work tasks |
| | | 1.3 | Sub-floor condition is assessed for suitability for installation of commercial vinyl floor coverings |
| | | 1.4 | Suitable adhesives, trims and accessories are selected |

- 1.5 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
 - 1.6 Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
- 2 Set out materials
 - 2.1 Vinyl to be installed is checked against work order
 - 2.2 Commercial vinyl floor coverings are acclimatised according to manufacturer recommendations
 - 2.3 Commercial vinyl floor coverings for fixing are organised and used in accordance with relevant safety management requirements
 - 2.4 Working lines and starting point are established
 - 2.5 Soft underlay, if required, is cut to specification
 - 2.6 Pre-form fillet is cut and fitted, if required
- 3 Lay vinyl
 - 3.1 Instructions and sequence for laying and fixing are followed
 - 3.2 Commercial vinyl floor coverings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate
 - 3.3 Commercial vinyl floor coverings are accurately and clearly marked for cutting
 - 3.4 Commercial vinyl floor coverings are cut to required pattern and shape with minimum waste of materials
 - 3.5 Materials for welding and fixing are organised and used in accordance with relevant safety management requirements
 - 3.6 Welding and fixing methods and equipment are used following manufacturer instructions
 - 3.7 Vinyl skirting, reducer and edge strips are set-out and installed, as required
 - 3.8 Completed installation is checked for flaws in installation and materials and faults rectified

4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. MSFFL3014 Install resilient floor coverings using custom designs and decorative finishes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing resilient sheet floor coverings using custom designs, mechanically and hand cut motifs, logos and decorative finishes.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing resilient floor coverings using custom designs and decorative finishes are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Sub-floor condition is assessed for suitability for installation of resilient floor coverings
		1.4	Suitable adhesives, trims and accessories are selected

- | | | | |
|---|------------------------------|-----|---|
| | | 1.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.6 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials | 2.1 | Resilient floor coverings to be installed are checked against work order |
| | | 2.2 | Resilient floor coverings are acclimatised according to manufacturer recommendations |
| | | 2.3 | Resilient floor coverings for fixing are organised and used in accordance with relevant safety management requirements |
| | | 2.4 | Working lines and starting point are established and marked on the sub-floor |
| | | 2.5 | Motifs, logos or custom designs are set out and marked on the sub-floor |
| 3 | Lay resilient floor covering | 3.1 | Instructions and sequence for laying and fixing is followed |
| | | 3.2 | Resilient floor coverings are laid out to meet directional sequence, pattern match and specification requirements, and to minimise waste and joins as appropriate |
| | | 3.3 | Resilient flooring materials are accurately and clearly marked for cutting |
| | | 3.4 | Resilient floor coverings are cut to required shape ensuring minimum waste |
| | | 3.5 | Materials for fixing are organised and used in accordance with relevant safety management requirements |
| | | 3.6 | Adhesives and edge strips/accessories are prepared for use as required |
| | | 3.7 | Welding and fixing methods and equipment are used following manufacturer instructions |
| | | 3.8 | Finished job is inspected and any imperfections are rectified following workplace procedures |

4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Resilient floor coverings include:	<ul style="list-style-type: none">• homogenous/heterogeneous• linoleum sheet• encapsulated glass fibre• inlaid• rotogravure
Adhesives include:	<ul style="list-style-type: none">• plasticised and rubber resign acrylic• two-part epoxy

Tools and equipment include:

- poly-methane, water-based and solvent-based contact adhesive
- utility knife with hook
- straight and concave blades
- straight edge
- square
- chalk and chalk-line
- tape measure
- hacksaw
- notched trowel
- hammer
- seam and edge trimmer
- recess scribe and pre-formed linoleum recess scribes

Assessment Requirements for MSFFL3014 Install resilient floor coverings using custom designs and decorative finishes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Cut and lay resilient floor coverings using custom designs and decorative finishes with internal and external mitres for the following:
 - one (1) piece and performed coving
 - one (1) custom designed and pattern-scribed coving using commercial grade resilient floor coverings
- Cut and lay resilient floor coverings using custom design containing logo/motifs using commercial grade resilient floor coverings, including decorative welding, inlays and borders
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing resilient floor covering using custom designs and decorative finishes
- Organisational and site standards, requirements, policies and procedures for installing resilient floor coverings using custom designs and decorative finishes
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Type, characteristics, uses and limitations of:
 - weldable resilient floor coverings
 - resilient floor covering installation adhesives
- Types and uses of resilient floor covering installation tools and equipment
- Workplace safety system requirements related to resilient floor covering laying
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to cutting, welding and laying resilient sheet flooring

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing resilient floor coverings using custom designs and decorative finishes.

MSFFL3015 Install resilient tiles using custom designs and decorative finishes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing resilient tiles to multiple connecting rooms and/or large commercial sites using multi-directional patterns, custom designs, mechanically and hand cut motifs, logos and decorative finishes, including preparation, laying out, cutting, laying and fixing.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of resilient tiles using custom designs and decorative finishes are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Sub-floor condition is assessed for installation of

			resilient tiles
		1.4	Suitable adhesives, trims and accessories are selected
		1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.6	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out materials	2.1	Resilient tiles to be installed are checked against order
		2.2	Resilient tiles are acclimatised according to manufacturer recommendations
		2.3	Materials for fixing are organised and used in accordance with relevant safety management requirements
		2.4	Patterns, motifs, logos and custom design requirements are set out
		2.5	Working lines and starting point are established
3	Lay resilient tiles	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Materials are laid out to meet specification requirements and to minimise waste
		3.3	Material grains and patterns are matched or contrasted as appropriate
		3.4	Resilient tiles are accurately and clearly marked for cutting
		3.5	Resilient tiles are cut to required shape with minimum waste of materials and laid
		3.6	Complete installation is checked for flaws in installation and materials and faults are rectified
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately

4.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL3015 Install resilient tiles using custom designs and decorative finishes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Install resilient tiles where cutting and fixing is required on either a timber sub-floor, or a concrete sub-floor, in multiple rooms with complex design requirements
- Complete a minimum of:
 - one (1) resilient installation to multiple connecting rooms using multi-directional patterns/borders, including appropriate trims and accessories
 - one (1) resilient plank installation that includes a motif/logo, including appropriate trim and accessories
 - one (1) resilient tile installation to large commercial site that includes a 'link-up' and custom design requirement, including appropriate trims and accessories
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing resilient tiles using custom design requirements
- Organisational and site standards, requirements, policies and procedures for installing resilient tiles using custom design requirements
- Environmental protection requirements
- Established communication channels and protocols

- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Types, characteristics, uses and limitations of:
 - resilient tiles
 - resilient tile installation adhesives
- Types and uses of resilient tile installation tools and equipment
- Workplace safety system requirements related to resilient tile installation
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to cutting and laying resilient tiles

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing resilient tiles using custom designs and decorative finishes.

MSFFL3016 Install rubber floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing rubber sheet and tile floor coverings, including preparation, cutting, laying and fixing.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing rubber floor coverings are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Sub-floor condition is assessed for suitability for installation of rubber floor coverings
		1.4	Suitable adhesives, trims and accessories are selected, if required

		1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.6	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out materials	2.1	Rubber floor covering to be installed is checked against order
		2.2	Rubber floor coverings are acclimatised according to manufacturer recommendations
		2.3	Rubber floor coverings for fixing are organised and used in accordance with relevant safety management requirements
		2.4	Instructions and sequence for laying and fixing are followed
		2.5	Working lines and starting point are established
3	Lay rubber floor coverings	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Rubber floor coverings are laid out to meet directional sequence, pattern match, specification requirements, and to minimise waste and joins as appropriate
		3.3	Rubber flooring materials are accurately and clearly marked for cutting
		3.4	Rubber floor covering materials are cut to required shape ensuring minimum waste
		3.5	Rubber floor covering materials for fixing are organised and used in accordance with relevant safety management requirements
		3.6	Adhesives and edge strips/accessories are prepared for use as required
		3.7	Fixing methods and equipment are used following manufacturer recommendations
		3.8	Finished job is inspected and any imperfections are rectified following workplace procedures
4	Complete	4.1	Unused materials are stored or recycled as required

housekeeping	4.2	Tools and equipment are cleaned and stored appropriately
	4.3	Work area is cleaned and rubbish disposed of appropriately
	4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none"> • WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving
Rubber floor coverings include:	<ul style="list-style-type: none"> • smooth and studded rubber in both sheet and tile and are normally vulcanised
Adhesives include:	<ul style="list-style-type: none"> • two-part epoxy • polyurethane • acrylic • contact
Tools and equipment	<ul style="list-style-type: none"> • utility knife • straight edge

include:

- square
- chalk and chalk-line
- tape measure
- hacksaw
- notched trowel
- hammer
- recess scribe
- scribing bar
- dividers
- hand roller
- roller
- mixing equipment (epoxy)
- paint brush and bucket
- spatula knife
- builders pencils
- contact bucket
- brushes
- linoleum trolley
- dolly rollers

Materials include:

- rubber floor covering (tile or sheet)
- trims and accessories
- adhesives

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Assessment Requirements for MSFFL3016 Install rubber floor coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of two (2) different types of installation, which are to include:
 - one (1) epoxy rubber tile installation to connecting rooms
 - one (1) polyurethane rubber sheet installation to connecting rooms
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing rubber floor coverings
- Organisational and site standards, requirements, policies and procedures for installing rubber floor coverings
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing resilient sheet to walls are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Substrate condition is assessed for suitability for installation of resilient coverings to the walls
		1.4	Suitable adhesives, trims and accessories are selected
		1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the

			work, serviceable and in a safe condition
		1.6	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out floor coverings	2.1	Resilient sheet to be installed is checked against work order
		2.2	Resilient sheets are acclimatised according to manufacturer recommendations
		2.3	Resilient sheets for fixing are organised and used in accordance with relevant safety management requirements
		2.4	Working lines and starting point are established
		2.5	Pre-form fillet is cut and fitted, if required
		2.6	Feathering systems and applications are prepared and applied in accordance with the installation plan
3	Install resilient sheet	3.1	Resilient sheet are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate
		3.2	The aesthetics of the materials is maximised, where appropriate, matching grains, colours and patterns
		3.3	Materials are cut to length and size, allowing for final adjustment, trimming and welding processes
		3.4	Header and/or perimeter contact adhesive is applied to surfaces
		3.5	Adhesive is applied to the body of the walls as specified by the adhesive manufacturer
		3.6	Resilient sheet is positioned in accordance with the plan, pressed out and hand-rolled
		3.7	Resilient sheet is heated to form required profiles
		3.8	Seams are prepared and welded in accordance with the plan, manufacturer instructions and industry standards
		3.9	Joins and/or seams are trimmed and finished to industry standards
		3.10	Resilient sheet are sealed to floor coverings, door and

			window frames, as well as fixtures and fittings in wet area installations
		3.11	Completed installation is checked for flaws in installation and materials and faults rectified following workplace procedures
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Assessment Requirements for MSFFL3017 Install resilient sheet to walls

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of:
 - one (1) installation of a wet wall resilient wall covering installation using a horizontal installation system, including internal and external corners to walls, the covering of window reveals, and sealing to door frames and fittings
 - one (1) installation of a wet wall resilient wall covering installation using a vertical installation system, including internal and external corners to walls, the covering of window reveals and sealing to door frames and fittings
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing resilient sheet to walls
- Organisational and site standards, requirements, policies and procedures for installing resilient sheet to walls
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Type, characteristics, uses and limitations of:
 - weldable resilient wall coverings
 - resilient wall covering installation adhesives
- Types and uses of resilient wall covering installation tools and equipment
- Workplace safety system requirements related to resilient wall covering installation
- Characteristics and requirements of substrate preparation for wall coverings
- Work flow in relation to fixing, welding and finishing of resilient wall coverings

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing resilient sheet to walls.

MSFFL3018 Install resilient sheet to bench and counter tops

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing resilient sheet to bench and counter tops.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare materials for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing resilient sheet to bench and counter tops are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Substrate condition is assessed for suitability for installation of resilient sheet to the bench/counter top
		1.4	Suitable adhesives, trims and accessories are selected
		1.5	Tools, equipment and materials are selected and checked

			prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.6	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
		1.7	The aesthetics of the materials is maximised where appropriate, matching grains, colours and patterns
2	Set out materials	2.1	Resilient sheets to be installed are checked against work order
		2.2	Resilient sheets are acclimatised according to manufacturer recommendations
		2.3	Resilient sheets for fixing are organised and used in accordance with relevant safety management requirements
		2.4	Working lines and starting point are established
		2.5	Pre-form fillet is cut and fitted, if required
		2.6	Feathering systems and applications are prepared and applied in accordance with the installation plan
3	Install resilient sheet	3.1	Instructions and sequence for laying and fixing is followed
		3.2	Resilient sheets are laid out to meet directional sequence, pattern match, specification requirements, and to minimise waste and joins as appropriate
		3.3	The aesthetics of the materials is maximised, where appropriate, matching grains, colours and patterns
		3.4	Pattern templates of the bench/counter tops are produced, if required
		3.5	Resilient sheets are accurately and clearly marked for cutting
		3.6	Resilient sheets are cut to required pattern and shape with minimum waste of materials, allowing for final adjustment, trimming and welding processes
		3.7	Header and/or perimeter contact adhesive is applied to surfaces
		3.8	Resilient sheets are positioned in accordance with the

		plan, pressed out and hand-rolled
	3.9	Resilient sheet is heated to form required profiles
	3.10	Seams are prepared and welded in accordance with the plan, manufacturer instructions and industry standards
	3.11	Joins and/or seams are trimmed and finished to industry standards
	3.12	Completed installation is checked for flaws in installation and materials and faults rectified following workplace procedures
4	Complete housekeeping	
	4.1	Unused materials are stored or recycled as required
	4.2	Tools and equipment are cleaned and stored appropriately
	4.3	Work area is cleaned and rubbish disposed of appropriately
	4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative

	obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
	<ul style="list-style-type: none">• work requires individual to demonstrate some discretion, judgement and problem solving
Resilient sheets include:	<ul style="list-style-type: none">• homogeneous/heterogeneous• linoleum sheet• encapsulated glass fibre• inlaid• rotogravure
Adhesives include:	<ul style="list-style-type: none">• acrylic adhesives• water and solvent-based contacts recommended by manufacturers
Tools and equipment include:	<ul style="list-style-type: none">• flat trowel• notched trowel• pencil• wall roller• hand roller• cove and corner roller• recess scribe• reverse recess scribes• hook and straight knife• chalk-line• spirit level• tape measure• water level• laser level• height gauge• contact bucket/tray/roller and brushes
Materials include:	<ul style="list-style-type: none">• resilient sheet• skirting• reducing and edge strips• welding rod• coving accessories• tapes• pattern paper• fillers• adhesives
Feathering systems include:	<ul style="list-style-type: none">• the fitment of PVC edge fillet diminishing strip and the use of pre-mixed or mixed cementitious compounds
Welding includes:	<ul style="list-style-type: none">• rod welding

Profiles include:	<ul style="list-style-type: none">• self welding• fusion• internal and external angles• bullnoses• coves• profiling to pipe work
Trimmed and finished includes:	<ul style="list-style-type: none">• trimming weld rod• abrading and fusing external corners• chemically finishing to industry standards and manufacturer specifications
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFL3307A Install resilient sheet to bench and counter tops

Assessment Requirements for MSFFL3018 Install resilient sheet to bench and counter tops

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete, including rod and self welding and fusion welding requirements, a minimum of:
 - one (1) installation of resilient sheets to a bench/counter top which must include:
 - internal and external corners
 - a bull-nose and coved returns
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installing resilient sheet to bench and counter
- Organisational and site standards, requirements, policies and procedures for installing resilient sheet to bench and counter
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects

- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Type, characteristics, uses and limitations of:
 - weldable resilient coverings used on bench and counter tops
 - resilient coverings installation adhesives
- Types and uses of resilient bench and countertop installation tools and equipment
- Workplace safety system requirements related to bench and counter top resilient covering installation
- Characteristics and requirements of substrate preparation to bench and counter tops
- Work flow in relation to fixing, welding and finishing of resilient coverings to bench and countertops

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing resilient sheet to bench and counter tops

MSFFL3019 Install anti-static resilient floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing anti-static resilient floor coverings, including preparation, cutting, laying and fixing.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing anti-static resilient floor coverings are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Sub-floor condition is assessed for suitability for installation of anti-static resilient floor covering
		1.4	Suitable adhesives, trims and accessories are selected, if required

- | | | | |
|---|------------------------------------|-----|--|
| | | 1.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.6 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials | 2.1 | Anti-static resilient floor covering to be installed is checked against order |
| | | 2.2 | Anti-static resilient floor coverings are acclimatised according to manufacturer recommendations |
| | | 2.3 | Anti-static resilient floor coverings are organised and used in accordance with relevant safety management requirements |
| | | 2.4 | Working lines and starting point are established |
| 3 | Lay anti-static resilient flooring | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Anti-static resilient floor coverings are laid out to meet directional sequence, pattern match, specification requirements, and to minimise waste and joins as appropriate |
| | | 3.3 | Anti-static resilient flooring materials are accurately and clearly marked for cutting |
| | | 3.4 | Anti-static resilient flooring materials are cut to required shape ensuring minimum waste |
| | | 3.5 | Adhesives and edge strips/accessories are prepared for use as required |
| | | 3.6 | Anti-static resilient floor coverings for fixing are organised and used in accordance with relevant safety management requirements |
| | | 3.7 | Anti-static resilient floor covering is laid and fixed to meet job specifications |
| | | 3.8 | Anti-static resilient floor covering fixing methods and equipment are used following manufacturer recommendations |
| | | 3.9 | Completed installation is checked for flaws in installation and materials and faults rectified following |

			workplace procedures
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none"> • WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individual to demonstrate some discretion, judgement and problem solving
Anti-static resilient floor coverings include:	<ul style="list-style-type: none"> • resilient flooring with a resistance rating from 108 to 1010 ohms
Adhesives include:	<ul style="list-style-type: none"> • acrylic • conductive acrylic
Tools and equipment	<ul style="list-style-type: none"> • utility knife

include:

- straight edge
- square
- chalk and chalk-line
- tape measure
- hacksaw
- serrated trowel
- hammer
- seam and edge trimmer
- recess scribe
- scribing bar
- welding gun and accessories
- grooving tool
- straight edge
- divider
- hand roller
- gas bottle and gun
- rubber mallet
- paint brush and bucket
- spatula knife
- dividers
- builders pencil
- contact bucket
- brush and roller
- linoleum trolley

Materials include:

- anti-static resilient flooring materials
- trims and accessories
- tapes
- adhesives

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Assessment Requirements for MSFFL3019 Install anti-static resilient floor coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete at least one (1) anti-static resilient floor installation using a conductive acrylic adhesive system
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to install anti-static resilient floor coverings
- Organisational and site standards, requirements, policies and procedures for installing anti-static resilient floor coverings
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques

- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Types, characteristics, uses and limitations of:
 - anti-static resilient floor coverings
 - installation adhesives
- Types and uses of installation tools and equipment
- Workplace safety system requirements related to anti-static resilient floor coverings
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to the installation of anti-static resilient floor coverings

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing anti-static resilient floor coverings.

MSFFL3021 Cut and install resilient floor coverings to stairs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing resilient floor covering to stairs, stringers and steps, including planning, preparation, cutting, welding, layout and fixing.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--------------------------|-----|--|
| 1 | Prepare for installation | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to cutting and installing resilient floor coverings to stairs are verified and complied with |
| | | 1.2 | Instructions and/or plans are read and interpreted to identify process required to complete work tasks |
| | | 1.3 | Sub-floor condition is assessed for suitability for installation of resilient floor coverings to stairs |
| | | 1.4 | Any remedial work to stairway is carried out |

- | | | | |
|---|-------------------------------|-----|--|
| | | 1.5 | Stairway or step is measured and the required amount of floor covering, including allowances for type of stairs, is calculated and obtained |
| | | 1.6 | Underlay, if required, is checked against specified type and fitting |
| | | 1.7 | Suitable adhesives, trims and accessories are selected |
| | | 1.8 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.9 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out floor coverings | 2.1 | Resilient floor coverings to be used are checked against work order |
| | | 2.2 | Resilient floor coverings are acclimatised according to manufacturer recommendations |
| | | 2.3 | Resilient floor coverings for fixing are organised and used in accordance with relevant safety management requirements |
| | | 2.4 | Working lines and starting point are established |
| | | 2.5 | Pre-form fillet is cut and fitted, if required |
| 3 | Lay resilient floor coverings | 3.1 | Instructions and sequence for laying and fixing is followed |
| | | 3.2 | Resilient floor coverings are laid out to meet directional sequence, pattern match, specification requirements, and to minimise waste and joins as appropriate |
| | | 3.3 | Patterns are cut as required for stairs and used to accurately and clearly mark resilient floor covering for cutting |
| | | 3.4 | Resilient floor coverings are cut to required pattern and shape with minimum waste of materials |
| | | 3.5 | Materials for welding and fixing are organised and used in accordance with relevant safety management requirements |
| | | 3.6 | Welding and fixing methods, equipment and materials |

		are used following manufacturer instructions
	3.7	Resilient skirting, reducer and edge strips are set out and installed, as required
	3.8	Completed installation is checked for flaws in installation and materials and faults rectified following workplace procedures
4	Complete housekeeping	4.1 Unused materials are stored or recycled as required
		4.2 Tools and equipment are cleaned and stored appropriately
		4.3 Work area is cleaned and rubbish disposed of appropriately
		4.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Resilient floor coverings include:

- homogenous/heterogeneous
- linoleum sheet
- encapsulated glass fibre
- inlaid
- rotogravure

Stairs include:

- open newell
- bullnose steps
- circular
- recessed steps
- open tread
- box steps
- kit winder treads

Adhesives include:

- plasticised and rubber resin acrylic
- two-part epoxy
- polyurethane
- water-based and solvent-based contact adhesive

Tools and equipment include:

- utility knife with hook, straight and concave blades
- straight edge
- square
- chalk and chalk-line
- tape measure
- hacksaw
- notched trowel
- hammer
- seam and edge trimmer
- recess scribe and pre-formed linoleum recess scribes
- scribing bar
- welding gun and accessories
- hot air gun
- grooving tool
- divider
- pencil cove roller
- hand roller
- cove gauging tool
- roller
- gas bottle and gun
- rubber mallet
- paint brush and bucket
- spatula knife
- builder's pencil
- contact bucket

Assessment Requirements for MSFFL3021 Cut and install resilient floor coverings to stairs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of the installation of resilient floor coverings to:
 - a box step stairway, stringer and PVC stair nosing
 - a kite winder treads stairway and PVC stair nosing
 - a bull nose step stairway and PVC stair nosing
 - a recessed step stairway
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to cutting and installing resilient floor coverings to stairs
- Organisational and site standards, requirements, policies and procedures for cutting and installing resilient coverings to stairs
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance

- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Type, characteristics, uses and limitations of:
 - weldable resilient floor coverings
 - resilient floor covering installation adhesives
- Forming and welding techniques for installing resilient floor coverings to stairs
- Types and uses of resilient floor covering installation tools and equipment
- Workplace safety system requirements related to resilient floor covering installation
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to cutting, welding and laying resilient flooring to stairs

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing resilient floor coverings to stairs.

MSFFL3022 Mix and apply epoxy and seamless floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparation, application and finishing of epoxy and seamless floor coverings.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|--|
| 1 | Prepare for the work | 1.1 | Applicable work health and safety (WHS), legislative, organisational and information requirements relevant to the application of epoxy and seamless floor coverings are verified and complied with |
| | | 1.2 | Work orders and/or plans are read and interpreted |
| | | 1.3 | The condition of the sub-floor is inspected and confirmed as suitable for use |
| | | 1.4 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |

		1.5	Floor preparation, including conventional and decorative formwork, is established, levelled and secured
2	Apply epoxy materials for floor coverings	2.1	Surfaces are checked for contamination, moisture content and suitable preparation
		2.2	Materials and equipment are prepared and positioned for use
		2.3	Material safety data sheets (MSDS), or equivalent, are read and applied during the work
		2.4	Epoxy is mixed and trial application of surface materials is made to check equipment operation, materials consistency and specified surface finish
		2.5	Surface coatings are applied with the depth and coverage in accordance with manufacturer specifications and job requirements
		2.6	Decorative additives are applied in accordance with job requirements
		2.7	Floor is checked and cleared for further processing
3	Complete housekeeping	3.1	Unused materials are stored or recycled as required
		3.2	Tools and equipment are cleaned and stored appropriately
		3.3	Work area is cleaned and rubbish disposed of appropriately
		3.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Epoxy and seamless flooring includes:	<ul style="list-style-type: none">• trowelled epoxy• self-levelling epoxy• flake floors• granule floors• epoxy coatings (seamless)• spray on roller coatings• waterproofing• joint sealing
Sub-floor preparation includes:	<ul style="list-style-type: none">• sanding• grinding• the application of levelling compounds and primers
General tools and equipment include:	<ul style="list-style-type: none">• utility knife• straight edge• square• tape measure• trowels• rollers• brushes• buckets• trolley
Sanding equipment includes:	<ul style="list-style-type: none">• sander• edger• belt-sander• sander belts and paper
Materials include:	<ul style="list-style-type: none">• acrylics• epoxy

- polyurethane
 - separating strips
 - flushing strips
 - joining strips
 - expansion jointing
 - additives (flakes and granules)
 - oil and lubricants for equipment
- Grinding equipment includes:**
- grinder
 - grinding stones and materials
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFL3401A Mix and apply epoxy and seamless floor coverings

Assessment Requirements for MSFFL3022 Mix and apply epoxy and seamless floor coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of three (3) of the following:
 - a trowelled epoxy floor
 - a self-levelling epoxy floor
 - a flake floor
 - a seamless floor
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the application of epoxy and seamless floor coverings
- Organisational and site standards, requirements, policies and procedures for moisture suppressant and barrier systems
- Environmental protection requirements
- Types, characteristics, uses and limitations of:
 - epoxy and seamless floor coverings
 - sanders/grinders
- Techniques for preparing epoxy and seamless materials, including decorative additives

- Workplace safety system requirements related to sanding and grinding
- Types and uses of relevant tools and equipment
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Characteristics and requirements of monolithic sub-floor preparation
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to the preparation for and application of epoxy and seamless floor coverings.

MSFFL3023 Apply solvent-based coatings to timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting solvent-based coating systems appropriate for the job, preparing for the work and applying the selected coatings to timber and parquet floors.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify and prepare for work requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the application of solvent-based coatings to timber floors are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Solvent-based coating material is selected with regard to durability, longevity, aesthetics, manufacturer recommendations and client expectations
		1.4	Selected coating materials are assessed as being

		compatible with each other, with the surface to be finished and with manufacturer recommendations
	1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
	1.6	Surface to be finished is inspected and assessed as being ready for coating and barrier signs to coating area are erected
	1.7	Work sequence is planned to ensure efficiency and quality of application
	1.8	WHS requirements, including isolation, ventilation and other personal protection needs, are observed throughout the work
2	Apply finishing system	
	2.1	Ventilation is checked before chemical fumes are released, and all WHS requirements are met, including use of personal protective equipment
	2.2	Environmental protection regulations are complied with
	2.3	Coating material is applied in accordance with manufacturer recommendations
	2.4	Recommended drying times between coats are observed
	2.5	Buffing or sanding between coats, where required, is carried out according to manufacturer recommendations
	2.6	Final finish meets the requirements of the job
	2.7	Floor maintenance instructions and warranty provisions are provided to the client, where required, in accordance with workplace procedures
3	Complete housekeeping	
	3.1	Unused materials are resealed and stored
	3.2	Tools and equipment are cleaned, maintained and stored
	3.3	Work area is cleaned and waste material is removed and disposed of safely
	3.4	Barriers and signs are removed and stored
	3.5	Workplace documentation/reporting is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Solvent-based coating materials include:	<ul style="list-style-type: none">• resin solutions• epoxy resins• two-can epoxy resins• two-can polyurethanes• moisture curing polyurethanes which may have matt, satin or gloss finish
Tools and equipment include:	<ul style="list-style-type: none">• orbital sander• rotary sander• hand sander• vacuum cleaner• brushes• applicators• rollers• roller tray• hammer• nail punch• spatula
Surfaces to be finished	<ul style="list-style-type: none">• tongue and groove strip flooring

include:	<ul style="list-style-type: none">• gluedown or floating strip flooring• engineered timber flooring• block or mosaic parquetry flooring
Surface inspection includes:	<ul style="list-style-type: none">• ensuring that surface is free from dust and debris, moisture content is acceptable and stable, and any preservatives, protective coatings or other contaminants are adequately removed
Work sequence includes:	<ul style="list-style-type: none">• preparation• inspection• coating applications and intermediate steps• finalisation• acceptance inspection
WHS requirements include:	<ul style="list-style-type: none">• personal protective equipment which is to include that prescribed under legislation, regulation and enterprise policies and practices• isolation processes, including barriers• tapes and entry access controls• breathing support and ventilation extraction systems
Application methods include:	<ul style="list-style-type: none">• rags• brushes• rollers• applicators• spatula
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Assessment Requirements for MSFFL3023 Apply solvent-based coatings to timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete at least the application of two (2) different solvent-based products to two (2) different timber species
- Identify faults/problems and identify and carry out corrective action
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the application of solvent-based coatings to timber flooring
- Organisational and site standards, requirements, policies and procedures for applying solvent-based coatings to timber flooring
- Methods of floor preparation from basic sanding to finishing sanding and edging
- Characteristics of solvent-based coatings in relation to ventilation, moisture content and reaction to change of temperature and relative humidity
- Type, characteristics, uses and limitation of solvent-based coating materials, including manufacturer recommendations
- Types and uses of floor finishing tools and equipment
- Workplace safety systems related to floor finishing processes
- Work flow in relation to the application of solvent-based coatings to timber floors

- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:

 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete at least the application of two (2) different oil-based products to two (2) different timber species
- Identify faults/problems and identify and carry out corrective action
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the application of oil-based coating to timber flooring
- Organisational and site standards, requirements, policies and procedures for applying oil-based coatings
- Methods of floor preparation from basic sanding to finishing sanding and edging
- Characteristics of oil-based coatings in relation to ventilation, moisture content and reaction to change of temperature and relative humidity
- Type, characteristics, uses and limitation of oil-based coating materials, including manufacturer recommendations
- Types and uses of floor finishing tools and equipment
- Workplace safety systems related to cork floor finishing processes
- Work flow in relation to the application of oil-based coatings to timber floors

- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic finishing requirement, materials, equipment and specifications relevant to the coating application.

MSFFL3026 Apply composite-based coatings to timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting composite-based coating systems appropriate for the job, preparing for the work and applying the selected coatings to timber flooring.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify and prepare for work requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the application of composite-based coatings to timber flooring are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Composite-based coating material is selected with regard to durability, longevity, aesthetics, manufacturer recommendations and client expectations
		1.4	Selected coating materials are assessed as being

		compatible with each other, with the surface to be finished and with manufacturer recommendations
	1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
	1.6	Surface to be finished is inspected and assessed as being ready for coating and barrier signs to coating area are erected
	1.7	Work sequence is planned to ensure efficiency and quality of application
	1.8	WHS requirements, including isolation, ventilation and other personal protection needs, are observed throughout the work
2	Apply finishing system	
	2.1	Ventilation is checked before chemical fumes are released, and all WHS requirements are met, including use of personal protective equipment
	2.2	Environmental protection regulations are complied with
	2.3	Coating material is prepared in accordance with manufacturer specifications
	2.4	Coating material is applied in accordance with manufacturer recommendations
	2.5	Recommended drying times between coats are observed
	2.6	Buffing or sanding between coats, where required, is carried out according to manufacturer recommendations
	2.7	Final finish meets the requirements of the job
	2.8	Floor maintenance instructions and warranty provisions are provided to the client, where required, in accordance with workplace procedures
3	Complete housekeeping	
	3.1	Unused materials are resealed and stored
	3.2	Tools and equipment are cleaned, maintained and stored
	3.3	Work area is cleaned and waste material is removed and disposed of safely
	3.4	Barriers and signs are removed and stored

3.5 Workplace documentation/reporting is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL3026 Apply composite-based coatings to timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete at least the application of two (2) different composite-based products to two (2) different timber species, one (1) to strip timber flooring and one (1) to parquet flooring
- Identify faults/problems and identify and carry out corrective action
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the application of composite-based coatings to timber flooring
- Organisational and site standards, requirements, policies and procedures for applying composite-based coatings to timber flooring
- Methods of floor preparation from basic sanding to finishing sanding and edging
- Characteristics of composite-based coatings in relation to ventilation, moisture content of timber, timber species and reaction to change of temperature and relative humidity
- Type, characteristics, uses and limitation of composite-based coating materials including manufacturer recommendations
- Types and uses of floor finishing tools and equipment
- Workplace safety systems related to floor finishing processes
- Work flow in relation to the application of composite-based coatings to timber floors

- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Appropriate mathematical procedures for measurement and estimation of composite-based coatings for a given area
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic finishing requirement, materials, equipment and specifications relevant to the coating application.

MSFFL3027 Apply emulsion wax to timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting emulsion wax coating systems appropriate for the job, preparing for the work and applying selected coatings to timber flooring.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify and prepare for work requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the application of emulsion wax to timber flooring are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Emulsion wax coating material is selected with regard to durability, longevity, aesthetics, manufacturer recommendations and the client's expectations
		1.4	Selected coating materials are assessed as being

		compatible with each other, with the surface to be finished and with manufacturer recommendations
	1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
	1.6	Surface to be finished is inspected and assessed as being ready for coating and barrier signs to coating area are erected
	1.7	Work sequence is planned to ensure efficiency and quality of application
	1.8	WHS requirements, including isolation, ventilation and other personal protection needs, are observed throughout the work
2	Apply finishing system	
	2.1	Ventilation is checked before chemical fumes are released, and all WHS requirements are met, including use of personal protective equipment
	2.2	Environmental protection regulations are complied with
	2.3	Emulsion wax is prepared in accordance with manufacturer specifications
	2.4	Emulsion wax is applied in accordance with manufacturer recommendations
	2.5	Recommended drying times between coats are observed
	2.6	Buffing or sanding between coats, where required, is carried out according to manufacturer recommendations
	2.7	Final finish meets the requirements of the job
	2.8	Floor maintenance instructions and warranty provisions are provided to the client in accordance with workplace procedures
3	Complete housekeeping	
	3.1	Unused materials are resealed and stored
	3.2	Tools and equipment are cleaned, maintained and stored
	3.3	Work area is cleaned and waste material is removed and disposed of safely
	3.4	Barriers and signs are removed and stored

3.5 Workplace documentation/reporting is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify and prepare for work requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the application of stains and fillers to timber flooring are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Stain and filling material are selected with regard to durability, longevity, aesthetics, manufacturer recommendations and client expectations
		1.4	Selected stain and filler materials are assessed as being

- compatible with each other, with the surface to be finished, and with manufacturer recommendations
- 1.5 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
 - 1.6 Products with surface or other faults are identified and faults repaired as appropriate
 - 1.7 Surface to be stained and/or filled is inspected and assessed as being ready for coating with the selected stain/filler
 - 1.8 Work sequence is planned to ensure efficiency and quality of application
 - 1.9 WHS requirements, including isolation, ventilation and other personal protection needs, are observed throughout the work
- 2 Apply finishing system
- 2.1 Ventilation is checked before chemical fumes are released, and all WHS requirements are met, including use of personal protective equipment
 - 2.2 Environmental protection regulations are complied with and barrier signs to work area are erected
 - 2.3 Staining and/or filling material is prepared in accordance with manufacturer specifications
 - 2.4 Trial applications of stains and/or fillers are made to check equipment operation, materials consistency, viscosity and specified colour
 - 2.5 Faults and/or inconsistencies in colour are identified and workplace procedures for rectification and adjustment are followed
 - 2.6 Staining and/or filling material is applied in accordance with manufacturer recommendations
 - 2.7 Recommended drying times between coats are observed
 - 2.8 Buffing or sanding between coats, where required, is carried out according to manufacturer recommendations
 - 2.9 Finished products are inspected and approved for suitability for further processing

		2.10	Final finish meets the requirements of the job
3	Complete housekeeping	3.1	Unused materials are resealed and stored
		3.2	Tools and equipment are cleaned, maintained and stored
		3.3	Work area is cleaned and waste material is removed and disposed of safely
		3.4	Barriers and signs are removed and stored
		3.5	Workplace documentation/reporting is completed

Foundation Skills

Assessment Requirements for MSFFL3028 Apply stains and fillers to timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete the selection and application of a minimum of two (2) types of stains, including:
 - lacquer-based
 - spirit-based
- Apply fillers to a minimum of one (1) parquet floor and one (1) strip floor of two (2) different timber types
- Identify faults/problems and identify and carry out corrective action
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the application of stains and fillers to timber flooring
- Organisational and site standards, requirements, policies and procedures for applying stains and fillers to timber flooring
- Methods of floor preparation from basic sanding to finishing sanding and edging
- Characteristics of stains and fillers in relation to ventilation, moisture content of timber, timber species and reaction to change of temperature and relative humidity
- Types, characteristics, uses and limitations of stain and filling materials, including manufacturer recommendations

- Types and uses of floor staining and filling tools and equipment
- Workplace safety systems related to floor staining and filling processes
- Work flow in relation to the application of stains and fillers to timber floors
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Appropriate mathematical procedures for measurement, estimation and mixing of stains and fillers for a given area
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic finishing requirement, materials, equipment and specifications relevant to the coating application.

MSFFL3029 Adapt and apply custom designs to timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing and presenting a range of design concepts as solutions to a design brief in accordance with integral design elements and principles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Select and adapt the design	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to timber flooring design are verified and complied with
		1.2	Client design concept is matched with available custom designs and the preferred design selected
		1.3	Design concept is adapted to suit the dimensions of the floor area
		1.4	Scale representations of the design application are prepared
2	Select the timber	2.1	Budget and availability constraints are used to identify realistic timber options

		2.2	Timber options are analysed on the basis of durability, longevity, aesthetics, manufacturer recommendations and client expectations
		2.3	Most appropriate timber options are selected and incorporated into the job specification
3	Select the finishing technique and materials	3.1	Effects of finishing materials on the final appearance of the design are identified and analysed
		3.2	Effects of the finishing technique on the final appearance of the design are identified
		3.3	Finishing techniques and materials which best complement the design aesthetics are selected and incorporated into the job specification
4	Finalise the job specification	4.1	Job specifications covering working drawings, material specifications and costs are finalised
		4.2	Client approval for the job specification is obtained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation

	<ul style="list-style-type: none">insurance requirements
Timber flooring design includes:	<ul style="list-style-type: none">work requires individuals to demonstrate some discretion, judgement and problem solvingthe pattern, logo or motif that is being incorporated into the timber floor
Available custom designs include:	<ul style="list-style-type: none">those created by others, including material providers, manufacturers and professional design outlets and made available through complementary or commercial means
Scale representations include:	<ul style="list-style-type: none">the adaptation of the custom design to the specific dimensions of the intended flooring coverage and may be prepared manually or using computer-aided means
Timber options include:	<ul style="list-style-type: none">those timbers which are within the cost envelope and are capable of being used to achieve the design requirements in terms of:<ul style="list-style-type: none">colourtexturehardnessworkabilitycompatibilityendurance

Assessment Requirements for MSFFL3029 Adapt and apply custom designs to timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Adapt a minimum of two (2) custom designs for timber flooring, including the preparation of detailed job specifications with:
 - one (1) for a strip floor
 - one (1) for a parquet floor
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to adapting and applying custom designs to timber flooring
- Organisational and site standards, requirements, policies and procedures for adapting and applying custom designs to timber flooring
- Types, characteristics, uses and limitations of commonly used flooring timbers
- Types, characteristics, uses, limitations and effects on timber of finishing materials
- Availability and costs of flooring timbers
- Manual and CAD techniques
- Established communication channels and protocols
- Relevant problem identification and resolution
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to realistic tasks covering a strip floor and parquetry floor, a range of custom designs, information and equipment relevant to adapting and presenting design information, and a real/simulated client.

MSFFL3030 Cut and install timber flooring materials to stairs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing timber flooring materials to stairs and steps.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare materials for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing timber flooring materials to stairs and steps are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Floor condition is assessed for suitability for installation of timber flooring to stairs
		1.4	Stairway or steps are measured and the required amount flooring materials is calculated

		1.5	Suitable adhesives, trims and accessories are selected if required
		1.6	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.7	Sequence of work is planned, including a starting point, to ensure efficiency and quality of installation
2	Set out materials for installation	2.1	Timber flooring to be installed is checked against work order
		2.2	Timber flooring is acclimatised according to manufacturer recommendations
		2.3	Materials for fixing is organised and used in accordance with relevant safety management requirements
		2.4	Working lines and starting point are established
3	Lay out flooring material	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Materials are laid out to meet any design and specification requirements and minimise waste
		3.3	The aesthetics of the materials are maximised, including matching grains and colours
		3.4	Underlay, if required, is checked against specified type, manufacturer recommendations and fittings
		3.5	Any remedial work to stairway is carried out
4	Install flooring material	4.1	Flooring materials are cut following workplace procedures
		4.2	Underlay, if required, is installed following manufacturer recommendations
		4.3	Fixing methods and equipment are used following manufacturer recommendations
		4.4	Flooring materials are installed to specifications to the sub-floor following workplace procedures
		4.5	Finished stairway is checked for flaws in installation and materials and faults rectified

5	Complete housekeeping	5.1	Unused materials are stored or recycled as required
		5.2	Tools and equipment are cleaned and stored appropriately
		5.3	Work area is cleaned and rubbish disposed of appropriately
		5.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none"> • WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving
Timber flooring materials include:	<ul style="list-style-type: none"> • parquetry • floating floors • strip timber floors (non-structural)
Stairs and steps include:	<ul style="list-style-type: none"> • open newel • bullnose steps • circular • recessed steps

	<ul style="list-style-type: none">• open tread• box steps• kite winder treads
Tools and equipment include:	<ul style="list-style-type: none">• hammer• compressor• staple gun• bar scribe• utility knife• straight edge• drill• hand saw• chisels• drop saw• nail gun• planer• circular saw• combination saw
Materials include:	<ul style="list-style-type: none">• parquet• floating floor and strip flooring materials• underlay• adhesives• nails• trims• nosing• accessories
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Assessment Requirements for MSFFL3030 Cut and install timber flooring materials to stairs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of three (3) types of the timber flooring material installation to stairs from the following different options:
 - floating
 - strip timber flooring
 - parquetry
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the installation of timber flooring to stairs
- Organisational and site standards, requirements, policies and procedures for the installation of timber flooring to stairs
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects

- Set-up and operation of equipment
- Products assembly techniques
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information
- Types, characteristics, uses and limitations of timber flooring materials
- Types and uses of timber flooring cutting and installation tools, equipment and materials
- Characteristics of timber and monolithic sub-floors
- Techniques for preparing sub-floors
- Techniques and requirements for conducting moisture testing
- Workplace safety system requirements relating to cutting and installing timber flooring materials
- Work flow in relation to the installing of timber flooring materials, including parquetry, floating floors and strip timber floors (non-structural)

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to the installation of timber flooring materials to stairs.

MSFFL3031 Install direct stick timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers directly sticking a pre-finished, engineered or direct stick timber floor within a space to a hard underlay base or sub-floor.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of direct stick timber flooring are verified and complied with |
| | | 1.2 | Instructions and/or plans are read and interpreted to identify process required to complete work tasks |
| | | 1.3 | Sub-floor condition is assessed for suitability for installation of direct stick timber flooring consistent with Australian Standards, industry standards and manufacturer recommendations |

- | | | | |
|---|------------------------------------|-----|---|
| | | 1.4 | Suitable underlays, adhesives, trims and accessories are selected as required |
| | | 1.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.6 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Set out materials for installation | 2.1 | Pre-finished, engineered or direct stick timber flooring are acclimatised according to manufacturer recommendations |
| | | 2.2 | Pre-finished, engineered or direct stick timber flooring for fixing are organised and used in accordance with relevant safety management requirements |
| | | 2.3 | Skirting boards or cover trims are removed or undercut, if required, and stored for re-fitting or sent for machining |
| | | 2.4 | Adhesives and edge direct sticks are prepared for use as required |
| | | 2.5 | Working lines and starting point are established |
| 3 | Cut flooring | 3.1 | Instructions and sequence for laying and fixing are followed |
| | | 3.2 | Appropriate underlay is laid according to manufacturer recommendations |
| | | 3.3 | Pre-finished, engineered or direct stick timber flooring are laid out to meet directional sequence, pattern match, specification requirements, and to minimise waste and joins as appropriate |
| | | 3.4 | The aesthetics of the materials are maximised, where appropriate, matching grains and colours |
| | | 3.5 | Pre-finished, engineered or direct stick timber flooring materials are accurately and clearly marked for cutting |
| | | 3.6 | Timber battens are accurately and clearly marked for cutting |
| | | 3.7 | Timber flooring is cut to length and size for final laying ensuring minimum waste |

- | | | | |
|---|-----------------------|-----|--|
| 4 | Lay flooring | 4.1 | Materials for fixing are organised and used in accordance with relevant safety management requirements |
| | | 4.2 | Adhesives and edge direct sticks/accessories are prepared for use as required |
| | | 4.3 | Fixing methods and equipment are used following manufacturer recommendations |
| | | 4.4 | Appropriate field and perimeter expansion joints are allowed |
| | | 4.5 | Skirting boards or cover trims are fitted/re-fitted and finished |
| | | 4.6 | Finished job is inspected and any imperfections are rectified following workplace procedures |
| 5 | Complete housekeeping | 5.1 | Unused materials are stored or recycled as required |
| | | 5.2 | Tools and equipment are cleaned and stored appropriately |
| | | 5.3 | Work area is cleaned and rubbish disposed of appropriately |
| | | 5.4 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Direct stick timber flooring includes:	<ul style="list-style-type: none">• direct stick tongue and groove floating floors• manufactured engineered flooring used for indoor sporting applications
Adhesives include:	<ul style="list-style-type: none">• polyvinyl alcohol (PVA)• epoxies• polyurethane elastomeric
Tools and equipment include:	<ul style="list-style-type: none">• drop saw• jig saw• hand saw• undercut saw• plunge saw• hammer• bar scribe• utility knife• circular saw• bench saw• straight edge• cramps• staple gun• secret nailer• roller• flooring cramps• strap clamps• wall clamps• sanding machines (drum, belt and rotary)• edger
Materials include:	<ul style="list-style-type: none">• flooring materials• underlay• edge direct sticks• tapes• adhesives• metal fixings

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Assessment Requirements for MSFFL3031 Install direct stick timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of three (3) of the following types of installation:
 - glue-together system
 - direct stick system
 - self-locking system
 - inserted plastic tongue system
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installation of direct stick timber flooring
- Organisational and site standards, requirements, policies and procedures for the installation of direct stick timber flooring
- Environmental protection requirements
- Types, characteristics, uses and limitations of:
 - direct stick timber flooring installed
 - installation adhesives

- Types and uses of tools and equipment used during the installation of direct stick timber flooring
- Basic wood working techniques relevant to the installation of direct stick timber flooring installed
- Workplace safety system requirements relevant to the installation of direct stick timber flooring
- Work flow in relation to the laying of direct stick timber flooring operations
- Characteristics and requirements of sub-floor preparation
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to installing direct stick timber flooring.

MSFFL3032 Inspect defective timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing for, carrying out and reporting on inspections of defective timber flooring.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan and prepare for the inspection	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the inspection of timber flooring are verified and complied with
		1.2	WHS requirements, including personal protection needs, are observed throughout the work
		1.3	The purpose, scope, formality and reporting requirements for the inspection are identified, clarified and agreed
		1.4	The need for, and liability associated with, the outcome

		of invasive inspection techniques are documented and agreed
	1.5	Tools, equipment and materials required for the inspection are selected and checked prior to use to ensure that they are appropriate for the work and in a safe condition
	1.6	Sequence of work is planned to ensure efficiency and quality of outcome
2	Conduct the inspection	2.1 Initial visual and other non-invasive inspections are completed to identify and isolate further inspection needs
	2.2	Finishing faults and remedial options are identified and analysed
	2.3	Structural faults and remedial options are identified and analysed
	2.4	Material faults, including infestation and moisture effects, and remedial options are identified and analysed
	2.5	Sub-floor faults, their impacts and remedial options are identified and analysed
	2.6	Areas invasively inspected are made safe
3	Report on the inspection	3.1 The inspection report addresses the agreed terms of reference
	3.2	The report clearly identifies the scope of the inspection, the findings and the suggested options for addressing the faults or findings
	3.3	The report is presented to the client together with any required clarification

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|

MSFFL3033 Install block parquetry flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing, setting out, cutting and installing block parquetry flooring in domestic and commercial sites.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of block parquetry are verified and complied with
		1.2	WHS requirements, including personal protection needs, are observed throughout the work
		1.3	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.4	Sub-floor condition is assessed for suitability for installation of block parquetry flooring consistent with

			Australian Standards, industry standards and manufacturer recommendations
		1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.6	Skirting boards or cover trims are removed or undercut if required and stored for re-fitting
		1.7	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out block parquetry flooring	2.1	Block parquetry flooring are acclimatised according to manufacturer recommendations
		2.2	Block parquetry flooring for fixing are organised and used in accordance with relevant safety management requirements
		2.3	Adhesives and edge strips are prepared for use as required
		2.4	Area to be covered is measured, working lines and starting point are established
3	Lay out and cut parquetry blocks	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Appropriate underlay is laid according to manufacturer recommendations
		3.3	Block parquetry flooring is laid out to meet directional sequence, pattern match, specification requirements, and to minimise waste and joins
		3.4	The aesthetics of the materials are maximised, including matching grains and colours
		3.5	Parquetry blocks are accurately and clearly marked for cutting
		3.6	Parquetry blocks are cut, where required, to provide appropriate size and shape ensuring minimum waste
4	Install block parquetry	4.1	Adhesives and edge strips/accessories are prepared for use as required
		4.2	Adhesives are used following workplace procedures

- | | | |
|---|-----------------------|--|
| | 4.3 | Fixing methods and equipment are used following manufacturer recommendations |
| | 4.4 | Parquet is installed and fixed to produce required pattern |
| | 4.5 | Appropriate field and perimeter expansion joints are allowed |
| | 4.6 | Skirting boards or cover trims are fitted/re-fitted and finished |
| | 4.7 | Finished job is inspected and any imperfections are rectified following workplace procedures |
| 5 | Complete housekeeping | 5.1 Unused materials are stored or recycled as required |
| | | 5.2 Tools and equipment are cleaned and stored appropriately |
| | | 5.3 Work area is cleaned and rubbish disposed of appropriately |
| | | 5.4 Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent

	<ul style="list-style-type: none">• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Sub-floor assessment includes:	<ul style="list-style-type: none">• testing for moisture content• expansion• rot• structural strength• smoothness• plane
Tools and equipment include:	<ul style="list-style-type: none">• drop saw• hand saw• radial arm saw• router• stringline• chalk and chalk-line• square• notched trowel• moisture meter• straight edge• template• plunge saw• jig saw• bench saw• band saw• circular saw• planer• laser level
Materials include:	<ul style="list-style-type: none">• underlays• adhesives• timber fillers• skirting boards• cover trims• accessories
Adhesives include:	<ul style="list-style-type: none">• polyvinyl alcohol (PVA)• epoxy• polyurethane elastomeric
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Assessment Requirements for MSFFL3033 Install block parquet flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of two (2) block parquet floors, which are to include at least:
 - one (1) personally designed pattern
 - one (1) block floor, herringbone pattern with a two block border
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installation of block parquet
- Organisational and site standards, requirements, policies and procedures for the installation of block parquet
- Environmental protection requirements
- Types, characteristics, uses and limitations of block parquet flooring
- Types and uses of tools and equipment used during the installation of block parquet flooring
- Types, uses and limitations of adhesives
- Workplace safety systems relevant to the installation of block parquet flooring
- Work flow in relation to the laying of block parquet flooring
- Appropriate mathematical procedures for estimation and measurement

- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic block parquet installation requirement, materials, equipment and specifications relevant to the installation of block parquet flooring.

MSFFL3034 Install cork tiles

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting and installing pre-finished or raw cork tiles or cork supplied in other forms, over a pre-prepared hard underlay or sub-floor.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for installation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to installing cork tiles are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify the process required to complete work tasks
		1.3	Floor condition is assessed for suitability for installation of cork tiles
		1.4	Suitable adhesives, trims and accessories are selected
		1.5	Tools, equipment and materials are selected and checked

			prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.6	Sequence of work is planned to correctly identify the starting point and to ensure lay out and fixing is in logical order
2	Set out materials	2.1	Cork tiles to be installed are checked against work order
		2.2	Cork tiles are acclimatised according to manufacturer recommendation
		2.3	Materials for fixing are organised and used in accordance with relevant safety management requirements
		2.4	Working lines and starting point are established
3	Lay cork tiles	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Tiles are laid out to meet specification requirements and to minimise waste
		3.3	Tile grains and patterns are matched or contrasted as appropriate
		3.4	Tiles are accurately and clearly marked for cutting
		3.5	Tiles are cut to required shape with minimum waste of materials and laid
		3.6	Completed installation is checked for flaws in installation and materials and faults rectified
4	Complete housekeeping	4.1	Unused materials are stored or recycled as required
		4.2	Tools and equipment are cleaned and stored appropriately
		4.3	Work area is cleaned and rubbish disposed of appropriately
		4.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

MSFFL3035 Install patterned parquet flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing, setting out, cutting and installing patterned parquet flooring in domestic and commercial sites.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of patterned parquet flooring are verified and complied with
		1.2	WHS requirements, including personal protection needs, are observed throughout the work
		1.3	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.4	Sub-floor condition is assessed for suitability for installation of patterned parquet flooring consistent

			with Australian Standards, industry standards and manufacturer recommendations
		1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.6	Skirting boards or cover trims are removed or undercut, if required, and stored for re-fitting
		1.7	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out patterned parquetry flooring	2.1	Patterned parquetry flooring are acclimatised according to manufacturer recommendations
		2.2	Patterned parquetry flooring for fixing are organised and used in accordance with relevant safety management requirements
		2.3	Adhesives and edge strips are prepared for use as required
		2.4	Area to be covered is measured, working lines and starting point are established
3	Lay out and cut parquetry patterns	3.1	Instructions and sequence for laying and fixing are followed
		3.2	Appropriate underlay is laid according to manufacturer recommendations
		3.3	Patterned parquetry flooring is laid out to meet directional sequence, pattern match, specification requirements, and to minimise waste and joins
		3.4	The aesthetics of the materials are maximised, including matching grains and colours
		3.5	Cutting jigs for pattern components are measured and set for repetitive use
		3.6	Parquetry blocks are set in appropriate jig and cut
4	Install patterned parquetry	4.1	Adhesives and edge strips/accessories are prepared for use as required
		4.2	Adhesives are used following workplace procedures
		4.3	Fixing methods and equipment are used following

		manufacturer recommendations
	4.4	Parquetry is installed and fixed to produce required pattern
	4.5	Appropriate field and perimeter expansion joints are allowed
	4.6	Skirting boards or cover trims are fitted/re-fitted and finished
	4.7	Finished job is inspected and any imperfections are rectified following workplace procedures
5	Complete housekeeping	5.1 Unused materials are stored or recycled as required
		5.2 Tools and equipment are cleaned and stored appropriately
		5.3 Work area is cleaned and rubbish disposed of appropriately
		5.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. MSFFL3037 Install sprung timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing a special purpose sprung platform-based timber floor for use in sporting or leisure facilities.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installing sprung timber flooring are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Sub-floor condition is assessed for suitability for installation of sprung timber flooring consistent with Australian Standards, industry standards and manufacturer recommendations
		1.4	Suitable underlays, adhesives, trims and accessories are

		selected if required
	1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
	1.6	Sequence of work is planned to identify the starting point and to ensure efficiency and quality of the work
2	Set out materials	2.1 Timber flooring to be installed is checked against order
		2.2 Timber flooring is acclimatised according to manufacturer recommendations
		2.3 Skirting boards or cover trims are removed or undercut, if required, and stored for re-fitting or sent for machining
		2.4 Timber flooring for fixing is organised and used in accordance with relevant safety management requirements
		2.5 Adhesives and edge strips are prepared for use as required
		2.6 Area to be covered is measured, working lines and starting point are established
3	Cut timber flooring	3.1 Instructions and sequence for laying and fixing are followed
		3.2 Underfloor pads are laid according to manufacturer recommendations
		3.3 Timber flooring is laid out to meet directional sequence, pattern match, specification requirements, and to minimise waste and joins as appropriate
		3.4 The aesthetics of the materials are maximised, including matching grains and colours
		3.5 Timber flooring is accurately and clearly marked for cutting
		3.6 Timber flooring is cut to length and size for final laying to provide appropriate size and shape ensuring minimum waste
		3.7 Materials for fixing are organised and used in accordance with relevant safety management

			requirements
4	Lay sprung timber flooring	4.1	Instructions and sequence for laying and fixing are followed
		4.2	Materials for fixing are organised and used in accordance with relevant safety management requirements
		4.3	Fixing methods and equipment are used following manufacturer recommendations
		4.4	Appropriate field and perimeter expansion joints are allowed
		4.5	Skirting boards or cover trims are fitted/re-fitted and finished
		4.6	Finished job is inspected and any imperfections are rectified following workplace procedures
5	Complete housekeeping	5.1	Unused materials are stored or recycled as required
		5.2	Tools and equipment are cleaned and stored appropriately
		5.3	Work area is cleaned and rubbish disposed of appropriately
		5.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Sprung timber flooring includes:**
- strip tongue and groove
 - parquetry floating floors
 - manufactured engineered flooring used for indoor sporting applications
- Adhesives include:**
- polyvinyl alcohol (PVA)
 - polyurethane elastomeric
- Tools and equipment include:**
- drop saw
 - jig saw
 - hand saw
 - undercut saw
 - hammer
 - bar scribe
 - utility knife
 - and may include:
 - circular saw
 - bench saw
 - straight edge
 - cramps
 - clamps
 - staple gun
 - secret nailer
 - roller
 - sanding machines (drum, belt and rotary)
 - edger
- Materials include:**
- flooring materials
 - underlay
 - edge strips
 - tapes
 - adhesives
 - underfloor pads
 - ventilated skirtings

- Underfloor pads include:**
- rubber
 - neoprene
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFL3509A Install sprung timber flooring

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFFL3037 Install sprung timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of one (1) type of sprung timber sports floor installation
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installation of sprung timber sports flooring
- Organisational and site standards, requirements, policies and procedures for the installation of sprung timber sports flooring
- Environmental protection requirements
- Types and uses of tools and equipment used during the installation of sprung timber sports flooring
- Workplace safety system requirements relevant to the installation of sprung timber sports flooring
- Work flow in relation to the laying of sprung timber sports flooring
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information
- Types, characteristics, uses and limitations of:

- sprung timber sports flooring
- installation adhesives
- underfloor pads
- Basic wood working techniques relevant to the installation of sprung timber sports flooring
- Characteristics and requirements of sub-floor preparation
- Work flow in relation to flooring installation operations

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic sprung timber floor installation requirement, materials, equipment and specifications relevant to installing sprung timber flooring.

MSFFL3038 Install strip timber flooring onto battens

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing tongue and groove strip timber flooring onto battens which may be over joists or a sub-floor to either raise a floor or correct the level of a floor.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of strip timber flooring onto battens are verified and complied with |
| | | 1.2 | Instructions and/or plans are read and interpreted to identify process required to complete work tasks |
| | | 1.3 | Sub-floor condition is assessed for suitability for installation of strip timber flooring consistent with Australian Standards, industry standards and manufacturer recommendations |

		1.4	Suitable moisture membrane, fixings, adhesives, trims and accessories are selected as required.
		1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.6	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Lay moisture membrane	2.1	Instructions and sequence for laying and fixing are followed
		2.2	Skirting boards or cover trims are removed or undercut, if required, and stored for re-fitting or sent for machining
		2.3	Moisture proof membrane is fixed following manufacturer recommendations and Australian Standards
3	Cut and fix timber battens	3.1	Timber flooring to be installed is checked against work order
		3.2	Timber flooring is acclimatised according to manufacturer recommendations
		3.3	Area to be covered is measured, working lines and starting point are established
		3.4	Timber battens for fixing are organised and used in accordance with relevant safety management requirements
		3.5	Timber battens are accurately and clearly marked for cutting
		3.6	Timber battens are cut to length and size for final laying to provide appropriate size and shape ensuring minimum waste
		3.7	Fixings are prepared for use as required
		3.8	Timber battens are fixed using methods and equipment that follows manufacturer recommendations
4	Cut and fix timber flooring	4.1	Instructions and sequence for laying and fixing timber flooring are followed

- | | | | |
|---|---------------------------|-----|---|
| | | 4.2 | Work lines and starting point are established |
| | | 4.3 | Timber flooring is laid out to meet directional sequence, pattern match, specification requirements, and to minimise waste and joins as appropriate |
| | | 4.4 | The aesthetics of the materials are maximised, where appropriate, matching grains and colours |
| | | 4.5 | Fixing methods and equipment are used following manufacturer recommendations |
| | | 4.6 | Timber flooring is cut to length and size for final laying to provide appropriate size and shape ensuring minimum waste |
| 5 | Lay strip timber flooring | 5.1 | Materials for fixing are organised and used in accordance with relevant safety management requirements |
| | | 5.2 | Fixing methods and equipment are used following manufacturer recommendations and Australian Standards |
| | | 5.3 | Appropriate field and perimeter expansion joints are allowed |
| | | 5.4 | Skirting boards or cover trims are fitted and finished |
| | | 5.5 | Finished job is inspected and any imperfections are rectified following workplace procedures |
| 6 | Complete housekeeping | 6.1 | Unused materials are stored or recycled as required |
| | | 6.2 | Tools and equipment are cleaned and stored appropriately |
| | | 6.3 | Work area is cleaned and rubbish disposed of appropriately |
| | | 6.4 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL3038 Install strip timber flooring onto battens

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of one (1) installation of strip timber flooring onto battens
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installation of strip timber flooring
- Organisational and site standards, requirements, policies and procedures for the installation of strip timber flooring
- Environmental protection requirements
- Types, characteristics, uses and limitations of:
 - strip timber flooring installed onto battens
 - installation adhesives used in timber flooring
 - timber battens
- Types and uses of tools and equipment used during the installation of strip timber flooring
- Basic wood working techniques relevant to the installation of timber strip flooring installed onto to battens
- Workplace safety system requirements relevant to the installation of strip timber flooring installed onto battens

- Work flow in relation to the laying of strip timber flooring onto battens operations
- Characteristics and requirements of sub-floor preparation
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.

MSFFL3039 Install strip timber flooring onto plywood

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing tongue and groove strip timber flooring onto plywood which may be over joists, concrete or a sub-floor to either raise a floor or correct the level of a floor.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the installation of strip timber flooring onto plywood are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Sub-floor condition is assessed for suitability for installation of strip timber flooring consistent with Australian Standards, industry standards and manufacturer recommendations

- | | | | |
|---|------------------------------|-----|--|
| | | 1.4 | Suitable moisture membrane, fixings, adhesives, trims and accessories are selected as required. |
| | | 1.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.6 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Lay moisture membrane | 2.1 | Instructions and sequence for laying and fixing are followed |
| | | 2.2 | Skirting boards or cover trims are removed or undercut, if required, and stored for re-fitting or sent for machining |
| | | 2.3 | Moisture proof membrane is fixed following manufacturer recommendations and Australian Standards |
| 3 | Cut and fix plywood underlay | 3.1 | Timber flooring to be installed is checked against order |
| | | 3.2 | Timber flooring is acclimatised according to manufacturer recommendations |
| | | 3.3 | Area to be covered is measured, working lines and starting point are established |
| | | 3.4 | Plywood underlay for fixing is organised and used in accordance with relevant safety management requirements |
| | | 3.5 | Plywood underlay is accurately and clearly marked for cutting |
| | | 3.6 | Plywood underlay is cut to length and size for final laying to provide appropriate size and shape ensuring minimum waste |
| | | 3.7 | Fixings are prepared for use as required |
| | | 3.8 | Plywood underlay is fixed using methods and equipment that follows manufacturer recommendations |
| 4 | Cut and fix timber flooring | 4.1 | Instructions and sequence for laying and fixing timber flooring are followed |
| | | 4.2 | Work lines and starting point are established |

		4.3	Timber flooring is laid out to meet directional sequence, pattern match, specification requirements, and to minimise waste and joins as appropriate
		4.4	The aesthetics of the materials are maximised, where appropriate, matching grains and colours
		4.5	Fixing methods and equipment are used following manufacturer recommendations
		4.6	Timber flooring is cut to length and size for final laying to provide appropriate size and shape ensuring minimum waste
5	Lay strip timber flooring	5.1	Materials for fixing are organised and used in accordance with relevant safety management requirements
		5.2	Fixing methods and equipment are used following manufacturer recommendations and Australian Standards
		5.3	Appropriate field and perimeter expansion joints are allowed
		5.4	Skirting boards or cover trims are fitted and finished
		5.5	Finished job is inspected and any imperfections are rectified following workplace procedures
6	Complete housekeeping	6.1	Unused materials are stored or recycled as required
		6.2	Tools and equipment are cleaned and stored appropriately
		6.3	Work area is cleaned and rubbish disposed of appropriately
		6.4	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Assessment Requirements for MSFFL3039 Install strip timber flooring onto plywood

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of one (1) installation of strip timber flooring onto plywood underlay fixed to a concrete sub-floor
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to installation of strip timber flooring onto plywood underlay
- Organisational and site standards, requirements, policies and procedures for the installation of strip timber flooring onto plywood underlay
- Type, characteristics, uses and limitations of:
 - strip timber flooring installed onto plywood underlay
 - installation adhesives
 - plywood underlay
- ISO Type 5 system for product reliability to AS/NZS 2269.0:2012 Plywood - Structural - Specifications
- Types and uses of tools and equipment used during the installation of strip timber flooring onto plywood underlay

- Basic wood working techniques relevant to the installation of timber strip flooring onto plywood underlay
- Workplace safety system requirements relevant to the installation of strip timber flooring onto plywood underlay
- Work flow in relation to the laying of strip timber flooring onto plywood underlay operations
- Characteristics and requirements of sub-floor preparation
- Environmental protection requirements
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information.

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic strip timber floor installation requirement, materials, equipment and specifications relevant to installing strip timber flooring onto plywood underlay.

MSFFL3040 Repair timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers neatly removing existing defective floor components which may have cracked, split or have been defaced or damaged, and replacing the defective component with a matching piece.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the repairing timber flooring are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Work instructions or customer feedback are used to identify required work
		1.4	Damaged floor is inspected to determine probable causes of damage or faults and assist in the repair planning

		process
	1.5	Damage assessment and work plan are used to select required materials
	1.6	Timber materials are matched to existing materials
	1.7	Quantities of replacement flooring and materials required are confirmed from the work plan
	1.8	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
	1.9	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Set out materials	2.1 Timber flooring to be installed is checked against work order
		2.2 Timber flooring to be installed is acclimatised according to manufacturer recommendations
		2.3 Area to be repaired is measured and starting points are marked
		2.4 Damaged sections of floor are removed and/or prepared for repair following workplace procedures
		2.5 Suitable adhesives/fasteners, fillers and/or stains are selected following workplace procedures or work instructions
3	Repair flooring	3.1 Replacement flooring materials are cut to provide appropriate alignment of joints
		3.2 Adhesives/fasteners are used following workplace procedures
		3.3 Replacement flooring materials are installed to produce required finish
		3.4 Damaged areas are filled and/or re-stained to complete repair following workplace procedures
4	Complete housekeeping	4.1 Unused materials are stored or recycled as required
		4.2 Tools and equipment are cleaned and stored appropriately

- 4.3 Work area is cleaned and rubbish disposed of appropriately
- 4.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL3040 Repair timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of two (2) types of repair involving removing and replacing:
 - strip timber flooring
 - parquet flooring, and/or
 - floating flooring
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to repairing timber flooring
- Organisational and site standards, requirements, policies and procedures for the repairing of timber flooring
- Environmental protection requirements
- Types, characteristics, uses and limitations of timber floors
- Types and uses of tools and equipment used during the repairing of timber flooring
- Workplace safety system requirements relevant to the repairing of timber flooring
- Work flow in relation to the repairing of timber flooring
- Causes of imperfections and damage to timber flooring
- Characteristics of timber and concrete sub-floors
- Requirements of sub-floor ventilation

- Techniques and requirements for conducting moisture testing
- Workplace system requirements relating to inspecting and repairing timber flooring materials
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic sprung timber floor installation requirement, materials, equipment and specifications relevant to repairing timber floors.

MSFFL3041 Maintain timber, laminate and engineered flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing and implementing maintenance systems to maintain timber, laminate and engineered flooring. The maintenance plan must be cost-effective, environmentally sensitive and specific to floor type and location.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare maintenance plan	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to flooring maintenance requirements are verified and complied with
		1.2	Instructions or plans are read and interpreted to identify process required to complete work tasks
		1.3	Maintenance requirements for timber, laminate and engineered flooring are identified from relevant information sources

- | | | | |
|---|----------------------------|-----|---|
| | | 1.4 | Maintenance costs are identified and quantified |
| | | 1.5 | Maintenance requirements are checked against warranty, insurance agreements and indemnity provisions |
| | | 1.6 | Maintenance plan is developed to promote and sustain performance and production systems in line with enterprise requirements |
| | | 1.7 | Effective workplace communication strategies are established with regard to maintenance plan, environmental and WHS policies, and enterprise requirements |
| 2 | Implement maintenance plan | 2.1 | Tools, equipment and materials are selected and checked prior to use |
| | | 2.2 | Resource and supply requirements are identified, secured and included in enterprise budgets and operational considerations |
| | | 2.3 | Prepared maintenance schedules and procedures are effectively communicated to customers, staff, contractors and suppliers to minimise negative impacts on maintenance systems and costs |
| | | 2.4 | Maintenance plans and work sequences are implemented and scheduled to minimise disruption to customer operations |
| | | 2.5 | Potential risks/hazards are assessed with regard to staff and supply problems, and contingency plans prepared accordingly |
| | | 2.6 | Timber, laminate and engineered flooring are maintained to manufacturer specifications, WHS and enterprise requirements |
| 3 | Monitor maintenance plan | 3.1 | Maintenance activities and performance are monitored against maintenance plan for efficiency and effectiveness |
| | | 3.2 | Workplace hazards and environmental implications associated with maintenance procedures are monitored and controlled in line with WHS and customer requirements |
| | | 3.3 | Costs are monitored and controlled within maintenance system budget requirements |

- 3.4 Relevant information with regard to the maintenance plan is documented in accordance with customer requirements
- 3.5 Timber, laminate and engineered flooring are maintained in clean and safe operational condition

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|---|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Maintenance requirements include: | <ul style="list-style-type: none">• wear• corrosion• design problems• equipment modifications• incorrect use• accidents and acts of nature |
| Maintenance plan includes: | <ul style="list-style-type: none">• maintenance activities and schedules• maintenance costs and budget details• staff |

Enterprise requirements include:

- resources and supply requirements
- roles and responsibilities
- contingency plan for staff and supply problems
- reporting requirements
- hazard and risk control measures
- WHS procedures
- personal protective clothing and equipment requirements
- environmental impact control measures
- standard operating procedures
- industry standards
- production schedules
- material safety data sheets (MSDS)
- legislative and licensing requirements
- work notes
- product labels
- manufacturer specifications
- operator manuals
- enterprise policies and procedures (including waste disposal, recycling and re-use guidelines)
- WHS procedures

Environmental policies include:

- environmental impacts resulting from emissions
- the unsafe use and disposal of maintenance debris (chemical residues)
- hazardous substances (cleaning solvents)
- dust problems
- unsafe cleaning and servicing activities

Tools and equipment include:

- brooms
- brushes
- vacuum cleaner
- mops
- mop buckets
- squeeze mops
- dust mops
- scissor mops
- buffing pads
- paint brushes
- polimate and wool applicators
- rotary brushes
- scouring pads
- paint rollers
- roller tray

Work sequence includes:	<ul style="list-style-type: none">• preparation• inspection• coating applications and intermediate steps• finalisation• acceptance inspection
Risks/hazards include:	<ul style="list-style-type: none">• dust• mechanical vibration• hazardous substances (cleaning solvents)• hazardous atmosphere• the presence of bystanders• adverse weather conditions• electricity• power lines• mechanical malfunctions and other machinery, including hydraulics and exposed moving parts
Resource and supply include:	<ul style="list-style-type: none">• metallised polish• wax emulations• furniture protection felt pads• barrier mats• window coverings• wood floor cleaner• antistatic mop• vacuum cleaner• damp mop
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• maintenance performance, costs, problems, priorities, solutions, schedules, and completed work• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFL3513A Maintain timber, laminate and engineered flooring

Assessment Requirements for MSFFL3041 Maintain timber, laminate and engineered flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare and implement maintenance system for:
 - one (1) strip timber floor
 - one (1) parquet flooring
 - one (1) cork flooring
 - one (1) laminate floating flooring
 - one (1) pre-finished engineered flooring
- Identify faults/problems and identify and carry out corrective action
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the preparation and implementation of maintenance systems
- Organisational and site standards, requirements, policies and procedures for the preparation and implementation of maintenance systems for timber, laminate and engineered flooring
- The methods of the preparation and implementation of maintenance systems for timber, laminate and engineered flooring

- Characteristics of maintenance systems for timber, laminate and engineered flooring in relation to ventilation, moisture content of timber, timber species and reaction to change of temperature and relative humidity
- The type, characteristics, uses and limitation of maintenance systems for timber, laminate and engineered flooring, including manufacturer recommendations
- The types and uses of tools and equipment maintaining timber, laminate and engineered flooring
- Workplace safety systems related to processes for maintaining timber, laminate and engineered flooring
- Work flow in relation to planning and implementing maintenance systems for timber, laminate and engineered flooring.
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Mathematical techniques may be applied to estimate and calculate maintenance and repair costing within budgetary guidelines
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a realistic maintenance requirement, materials, equipment and specifications relevant to maintaining timber, laminate and engineered flooring.

MSFFL3042 Fine sand timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers fine sanding of existing floors either after coarse sanding, or where only minor rectification of scratches or wear and tear has occurred, or between coats. It involves operating rotary sanding machines.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for the work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to fine sanding timber flooring are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Timber flooring is inspected for contamination, moisture content and suitability for fine sanding operations, and any pre-sanding tasks are completed
		1.4	Timber flooring condition is assessed and the extent of

			fine sanding required to meet job specifications is confirmed
		1.5	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.6	The job site is isolated and/or encapsulated to contain dust fallout from sanding operation
		1.7	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Conduct finish sanding operations	2.1	Sanding equipment is set up in accordance with manufacturer instructions and operating procedures
		2.2	Emergency stops, gauges, guards and controls are identified and checked
		2.3	Equipment settings and adjustments are made and checked
		2.4	Sanding belts or papers are selected
		2.5	Trial runs are conducted to check machine operations and quality of finished work
		2.6	Sanding belts or papers are attached, routinely checked and changed as required
		2.7	Sanding is completed systematically and effectively within the minimum required timeframe
		2.8	Routine lubrication and adjustments to the equipment are completed as required
		2.9	Finished timber flooring is cleaned, inspected and any imperfections are rectified following workplace procedures
3	Conduct edge sanding operations	3.1	Edge sanding equipment is set up in accordance with manufacturer instructions and operating procedures
		3.2	Emergency stops, gauges, guards and controls are identified and checked
		3.3	Equipment settings and adjustments are made and checked
		3.4	Sanding papers are selected

- | | | |
|---|---------------------------------|---|
| | 3.5 | Trial runs are conducted to check machine operations and quality of finished work |
| | 3.6 | Sanding papers are attached, routinely checked and changed as required |
| | 3.7 | Edge sanding is completed systematically and effectively within the minimum required timeframe |
| | 3.8 | Routine lubrication and adjustments to the equipment are completed as required |
| | 3.9 | Finished timber flooring is cleaned, inspected and any imperfections are rectified following workplace procedures |
| 4 | Conduct fine sanding operations | |
| | 4.1 | Fine sanding equipment is set up in accordance with manufacturer instructions and operating procedures |
| | 4.2 | Emergency stops, gauges, guards and controls are identified and checked |
| | 4.3 | Equipment settings and adjustments are made and checked |
| | 4.4 | Sanding papers are selected |
| | 4.5 | Trial runs are conducted to check machine operations and quality of finished work |
| | 4.6 | Sanding papers are attached, routinely checked and changed as required |
| | 4.7 | Fine sanding is completed systematically and effectively within the minimum required timeframe |
| | 4.8 | Finished timber flooring is cleaned, inspected and any imperfections are rectified following workplace procedures |
| 5 | Complete housekeeping | |
| | 5.1 | Unused materials are stored or recycled as required |
| | 5.2 | Tools and equipment are cleaned and stored appropriately |
| | 5.3 | Work area is cleaned and rubbish disposed of appropriately |
| | 5.4 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for MSFFL3042 Fine sand timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Fine sand three (3) different types of timber floors from the following list:
 - strip
 - parquetry
 - cork
 - floating floor
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to moisture suppressants and barrier systems for fine sanding timber flooring
- Organisational and site standards, requirements, policies and procedures for fine sand timber flooring
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance

- Characteristics of materials, products and defects
- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Characteristics and requirements of fine sanding timber flooring
- Type, characteristics, uses and limitations of fine sanding timber flooring
- Types and uses of relevant tools and equipment used to conduct fine sanding operations
- Workplace safety system requirements related to fine sanding timber flooring

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to fine sanding of timber floors.

MSFFL3043 Edge sand timber flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers edge sanding of existing floors using a disc, orbital or belt sander to grade the surface and remove cupping, ridges, high points or deep scratches along the edges of the room, in corners or areas of reduced access, such as wardrobes. The pattern of sanding is to overlap and blend the floor boards into the body of the sanded floor.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for the work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to edge sanding of timber flooring are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Timber flooring is checked for contamination and moisture content
		1.4	Timber flooring condition is assessed and the extent of

		floor preparation required to meet job specifications is confirmed
	1.5	Timber flooring is inspected for suitability for sanding operations and any pre-sanding tasks are completed
	1.6	Mechanical fixings are removed avoiding damage to equipment and surfaces
	1.7	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
	1.8	The job site is isolated and/or encapsulated to contain dust fallout from sanding operation
	1.9	Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2	Conduct edge sanding operations	2.1 Edge sanding equipment is set up in accordance with manufacturer instructions and operating procedures
		2.2 Emergency stops, gauges, guards and controls are identified and checked
		2.3 Equipment settings and adjustments are made and checked
		2.4 Sanding papers are selected
		2.5 Trial runs are conducted to check machine operations and quality of finished work
		2.6 Sanding papers are attached, routinely checked and changed as required
		2.7 Edge sanding is completed systematically and effectively within the minimum required timeframe
		2.8 Routine lubrication and adjustments to the equipment are completed as required
		2.9 Finished timber flooring is cleaned, inspected and any imperfections are rectified following workplace procedures
3	Complete housekeeping	3.1 Unused materials are stored or recycled as required
		3.2 Tools and equipment are cleaned and stored appropriately

- 3.3 Work area is cleaned and rubbish disposed of appropriately
- 3.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individual to demonstrate some discretion, judgement and problem solving

Pre-sanding tasks include:

- removal of mechanical fixings
- punching of nails

Mechanical fixings include:

- tacks
- nails
- staples
- screws

Tools include:

- hammer
- scraper
- punch
- broom

- vacuum
- lead and dust mask
- Materials include:**
 - sanding belts
 - sanding paper
 - sanding discs
 - oil and lubricants
- Edge sanding equipment includes:**
 - disc sanders
 - orbital or belt sanders
- Personal protective equipment includes:**
 - that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
 - workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Assessment Requirements for MSFFL3043 Edge sand timber flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of two (2) timber flooring preparations requiring edge sanding:
 - to grade the surface
 - to remove cupping, ridges, high points or deep scratches along the edges of the room, in corners or areas of reduced access, such as wardrobes
 - to blend the floor boards into the body of course and fine sanded timber floor
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to edge sand timber flooring
- Organisational and site standards, requirements, policies and procedures for edge sanding of timber flooring
- Characteristics, requirements and techniques for timber flooring edge sanding
- Types and uses of relevant tools and equipment used to conduct edge sanding operations
- Workplace safety system requirements related to edge sanding timber flooring
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects

- Set-up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to edge sanding timber floors.

| | | 1.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.6 | The job site is isolated and/or encapsulated to contain dust fallout from sanding operation |
| | | 1.7 | Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation |
| 2 | Conduct finish sanding operations | 2.1 | Finishing sanding equipment, including split drum/belt sanding equipment, is set up in accordance with manufacturer instructions and operating procedures |
| | | 2.2 | Emergency stops, gauges, guards and controls are identified and checked |
| | | 2.3 | Equipment settings and adjustments are made and checked |
| | | 2.4 | Sanding papers are selected |
| | | 2.5 | Trial runs are conducted to check machine operations and quality of finished work |
| | | 2.6 | Sanding papers are attached, routinely checked and changed as required |
| | | 2.7 | Sanding is completed systematically and effectively within the minimum required timeframe |
| | | 2.8 | Routine lubrication and adjustments to the equipment are completed as required |
| | | 2.9 | Finish sanded cork flooring is cleaned, inspected and any imperfections are rectified following workplace procedures |
| 3 | Conduct fine sanding operations | 3.1 | Rotary/orbital sanding equipment is set up in accordance with manufacturer instructions and operating procedures |
| | | 3.2 | Emergency stops, gauges, guards and controls are identified and checked |
| | | 3.3 | Equipment settings and adjustments are made and checked |

- 3.4 Sanding papers are selected
 - 3.5 Trial runs are conducted to check machine operations and quality of finished work
 - 3.6 Sanding papers are attached, routinely checked and changed as required
 - 3.7 Cork sanding is completed systematically and effectively within the minimum required timeframe
 - 3.8 Fine sanded cork flooring is cleaned, inspected and any imperfections are rectified following workplace procedures
- 4 Conduct edge sanding operations
 - 4.1 Edge sanding equipment is set up in accordance with manufacturer instructions and operating procedures
 - 4.2 Emergency stops, gauges, guards and controls are identified and checked
 - 4.3 Equipment settings and adjustments are made and checked
 - 4.4 Sanding papers are selected
 - 4.5 Trial runs are conducted to check machine operations and quality of finished work
 - 4.6 Sanding papers are attached, routinely checked and changed as required
 - 4.7 The edge and difficult to get to areas are sanded and completed systematically to blend into the body of the sanded cork floor
 - 4.8 Routine lubrication and adjustments to the equipment are completed as required
 - 4.9 Finished cork flooring is cleaned, inspected and any imperfections are rectified following workplace procedures
- 5 Complete housekeeping
 - 5.1 Unused materials are stored or recycled as required
 - 5.2 Tools and equipment are cleaned and stored appropriately
 - 5.3 Work area is cleaned and rubbish disposed of

appropriately

5.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|---|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Pre-sanding tasks include: | <ul style="list-style-type: none">• isolating and/or encapsulating the job site• nail punching• filling• scraping• sweeping• vacuuming• cleaning and removal of all foreign objects, such as nails, tacks and staples |

Assessment Requirements for MSFFL3044 Sand cork flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Sand three (3) different types of cork floors from the following:
 - cork tiles
 - cork planks
 - patterned cork tiles (bevelled edge)
 - stained cork tiles
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to moisture suppressants and barrier systems for sanding cork flooring
- Organisational and site standards, requirements, policies and procedures for sanding cork flooring
- Characteristics of materials, products and defects
- Set-up and operation of sanding equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Characteristics and requirements of sanding cork flooring

- Type, characteristics, uses and limitations of sanding cork flooring
- Types and uses of relevant tools and equipment used to conduct fine sanding operations
- Workplace safety system requirements related to sanding cork flooring
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to sanding of cork floors.

MSFFL3045 Sand and fill parquetry flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers sanding and filling of parquetry floors in preparation for applying coating or re-coating to the flooring. It involves operating split drum/belt floor sander, rotary or orbital sanding and edge sanding machines.

Licensing, legislative or certification requirements may apply to this unit and relevant State and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for the work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to coarse, finish and fine sanding and filling parquetry flooring are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Parquetry flooring is inspected for contamination, moisture content and suitability for coarse, finish and fine sanding operations and any pre-sanding tasks are completed

- 1.4 Parquetry flooring condition is assessed and the extent of coarse, finish and fine sanding and filling required to meet job specifications is confirmed
 - 1.5 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
 - 1.6 The job site is isolated and/or encapsulated to contain dust fallout from sanding operation
 - 1.7 Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
- 2 Conduct coarse sanding operations
 - 2.1 Sanding equipment is set up in accordance with manufacturer instructions and operating procedures
 - 2.2 Emergency stops, gauges, guards and controls are identified and checked
 - 2.3 Equipment settings and adjustments are made and checked
 - 2.4 Sanding belts or papers are selected
 - 2.5 Trial runs are conducted to check machine operations and quality of finished work
 - 2.6 Sanding belts or papers are attached, routinely checked and changed as required
 - 2.7 Coarse sanding is completed systematically and effectively with the grain, against the grain and across the grain within the minimum required timeframe
 - 2.8 Routine lubrication and adjustments to the equipment are completed as required
 - 2.9 Coarse sanded parquetry flooring is cleaned, inspected and any imperfections are rectified following workplace procedures
- 3 Conduct edge sanding operations
 - 3.1 Edge sanding equipment is set up in accordance with manufacturer instructions and operating procedures
 - 3.2 Emergency stops, gauges, guards and controls are identified and checked
 - 3.3 Equipment settings and adjustments are made and

- checked
- 3.4 Sanding papers are selected
- 3.5 Trial runs are conducted to check machine operations and quality of finished work
- 3.6 Sanding papers are attached, routinely checked and changed as required
- 3.7 Edge sanding is completed systematically and effectively within the minimum required timeframe
- 3.8 Routine lubrication and adjustments to the equipment are completed as required
- 3.9 Edge sanded parquetry flooring is cleaned, inspected and any imperfections are rectified following workplace procedures
- 4 Conduct filling operations
 - 4.1 Surface to be filled is inspected and assessed as being ready for filling with the selected filler
 - 4.2 Work sequence is planned to ensure efficiency and quality of application
 - 4.3 Ventilation is checked before chemical fumes are released, and all WHS requirements are met, including use of personal protective equipment
 - 4.4 Environmental protection regulations are complied with
 - 4.5 Filling material is prepared in accordance with manufacturer specifications
 - 4.6 Trial applications of fillers are made to check equipment operation, materials consistency, viscosity and specified colour
 - 4.7 Faults and or inconsistencies in colour are identified and workplace procedures for rectification and adjustment are followed
 - 4.8 Filling material is applied in accordance with manufacturer recommendations
 - 4.9 Recommended drying times are observed before fine sanding
 - 4.10 Sanding between coats, where required, is carried out

- according to manufacturer recommendations
- 4.11 Finished floors are inspected and approved for suitability for further processing
- 4.12 Final finish meets the requirements of the job
- 5 Conduct fine sanding operations
- 5.1 Fine sanding equipment is set up in accordance with manufacturer instructions and operating procedures
- 5.2 Emergency stops, gauges, guards and controls are identified and checked
- 5.3 Equipment settings and adjustments are made and checked
- 5.4 Sanding papers are selected
- 5.5 Trial runs are conducted to check machine operations and quality of finished work
- 5.6 Sanding papers are attached, routinely checked and changed as required
- 5.7 Fine sanding of the body and perimeter of the floor is completed systematically and effectively within the minimum required timeframe
- 5.8 Fine sanded parquetry flooring is cleaned, inspected and any imperfections are rectified following workplace procedures
- 6 Complete housekeeping
- 6.1 Unused materials are stored or recycled as required
- 6.2 Tools and equipment are cleaned and stored appropriately
- 6.3 Work area is cleaned and rubbish disposed of appropriately
- 6.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

MSFFL3046 Apply finishes to cork flooring

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting coating systems appropriate for the job, preparing for the work and applying the selected finishes to cork flooring.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify and prepare for work requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the application of finishes are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Coating material is selected with regard to durability, longevity, aesthetics, manufacturer recommendations and client expectations
		1.4	Selected coating materials are assessed as being compatible with each other, with the surface to be

- finished and with manufacturer recommendations
- 1.5 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
 - 1.6 Surface to be finished is inspected and assessed as being ready for coating
 - 1.7 Work sequence is planned to ensure efficiency and quality of application
 - 1.8 WHS requirements, including isolation, ventilation and other personal protection needs, are observed throughout the work
- 2 Apply finishing system
- 2.1 Ventilation is checked before chemical fumes are released, and all WHS requirements are met, including use of personal protective equipment
 - 2.2 Environmental protection regulations are complied with
 - 2.3 Coating material is applied in accordance with manufacturer recommendations
 - 2.4 Recommended drying times between coats are observed
 - 2.5 Buffing or sanding between coats, where required, is carried out according to manufacturer recommendations
 - 2.6 Final finish meets the requirements of the job
- 3 Complete housekeeping
- 3.1 Unused materials are stored or recycled as required
 - 3.2 Tools and equipment are cleaned and stored appropriately
 - 3.3 Work area is cleaned and rubbish disposed of appropriately
 - 3.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFL3046 Apply finishes to cork flooring

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum application of two (2) differently based coating/finishing products
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the application of finishing systems for cork flooring
- Organisational and site standards, requirements, policies and procedures for finishing and coating for cork flooring
- Methods of floor preparation from basic sanding to finishing sanding and edging
- Characteristics of floor finishing for cork flooring in relation to ventilation, moisture content and reaction to change of temperature and relative humidity
- Type, characteristics, uses and limitation of coating materials, including manufacturer recommendations
- Types and uses of cork floor finishing tools and equipment
- Workplace safety systems related to cork floor finishing processes
- Work flow in relation to the application of finishes to cork floors
- Environmental protection requirements
- Established communication channels and protocols

- Relevant problem identification and resolution
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.

MSFFL3047 Polish concrete floors using planetary machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting and operating floor surfacing machines designed for wet or dry polishing of concrete floors. It applies to concrete cleaning and polishing operations in on-site commercial and residential environments and involves application of skills and knowledge at a sub-trade worker level.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Select concrete polishing equipment	1.1	Planetary concrete grinding/polishing equipment and attachments are selected consistent with the needs of the job
		1.2	Hand edge and corner polishing tools are selected consistent with the needs of the job
		1.3	Equipment is checked for serviceability and safety and any faults are corrected or processed for repair
2	Clean and prepare	2.1	Applicable work health and safety (WHS), legislative

sub-floor	and organisational requirements relevant to polishing concrete floors are followed including selecting, correctly fitting and using personal protective equipment	
	2.2	Fittings, fixtures, loose debris, dirt and other items are removed from the sub-floor
	2.3	Sub-floor is inspected to determine the need for removal of existing adhesive, paint or other contaminants
	2.4	Planetary polishing machine, appropriate machine rotation speed, direction and diamond tools are selected for removal of contaminants
	2.5	Machine is attached to a suitable power supply, emergency stop is released, the machine powered up and contaminants are removed in accordance with manufacturer specifications
3		Polish the floor
	3.1	Machine is attached to a suitable power supply, emergency stop is released, the machine powered up, a passing pattern established and main area is polished to the required standard in accordance with manufacturer specifications
	3.2	Outer zones are overlapped and passes staggered to achieve desired finish
	3.3	Machine operation is monitored constantly to ensure motor/motors are running within manufacturer's safe operational limits and no electrical faults are evident
	3.4	Perimeter of the designated area is polished using edge and corner polishing equipment and appropriate attachments
	3.5	Diamond polishing tools are examined for wear and exchanged, when required, throughout the polishing process
	3.6	Excessive wear of polishing tools is recognised and remedial action taken as required
	3.7	Floor area is cleaned, inspected and re-worked as required
4		Clean up work area and tools
	4.1	All tools and grinding/polishing equipment are cleaned, maintained and stored

- 4.2 Equipment is cleaned, maintained and stored
- 4.3 Work area is cleared and waste removed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|---|
| Legislative requirements include: | <ul style="list-style-type: none">• applicable legislation from all levels of government that affect organisational operation• award and enterprise agreements• industrial relations• Australian Standards• confidentiality and privacy• work health and safety (WHS)• the environment• equal employment opportunity (EEO)• anti-discrimination• relevant industry codes of practice• duty of care and heritage |

Assessment Requirements for MSFFL3047 Polish concrete floors using planetary machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for operating and maintaining planetary grinding/polishing equipment
- Apply safe handling practices for equipment, products and materials
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Polish a concrete sub-floor using single headed, double headed and planetary action concrete polishing equipment correctly and safely
- Complete operator maintenance on concrete polishing equipment
- Modify activities to cater for variations in workplace contexts and environment
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of faults and problems
- Collect and understand information related to the use and maintenance of grinding and polishing equipment
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use pre-checking and inspection techniques to anticipate polishing problems to avoid re-work and wastage
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities, including the preparation and layout of the worksite and the obtaining of tools
- Use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- Maintain current knowledge of:
 - tools and materials
 - concrete surface polishing techniques
- Use workplace technology related to the use and operator maintenance of concrete polishers and associated materials

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the use of concrete polishing equipment
- Organisational and site standards, requirements, policies and procedures for the use of concrete polishing equipment
- Types of concrete polishers and procedures for their safe use, operation and maintenance
- Polisher attachments, their uses, limitations and maintenance requirements
- Diamond polishing tools, uses and wear factors
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to single, double and planetary action grinders/polishers and hand grinding and edging tools, manufacturer/user instructions and/or manuals, and a defined polishing standard.

MSFFL3048 Select and fit diamond tools for concrete surface preparation and polishing

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting and fitting appropriate diamond grinding and polishing tools for use in concrete floor preparation and finishing machines. It applies to concrete cleaning and polishing operations on-site in commercial and residential environments and involves application of skills and knowledge at a sub-trade worker level

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify the required concrete surface application	1.1	Concrete surface to be prepared and polished is examined to evaluate the level, any undulations and surface condition
		1.2	Types of grinding and polishing techniques required for the job are established, including wet or dry application and any additional abrasives required
		1.3	Floor moisture test results, where applicable, are evaluated to determine the floor grinding and polishing

			steps for the job
2	Select diamond grinding tools	2.1	Required diamond tools and bond type for surface preparation are identified
		2.2	Grit size for the grinding job is determined
		2.3	Segments of diamond tool and bond type are matched to the job requirements and machine to be used for grinding
		2.4	Diamond tools are fitted to the planetary machine for surface preparation operations ensuring tool rotation is correct for the machine set-up
3	Select floor diamond polishing tools	3.1	Required diamond tools and bond type for surface polishing are identified
		3.2	Grit size for the polishing job is determined
		3.3	Segments of diamond tool and bond type are matched to the job requirements and machine to be used for polishing
		3.4	Diamond tools are fitted to the planetary machine for surface polishing operations ensuring tool rotation is correct for the machine set up
4	Clean up work area and tools	4.1	All diamond tools are examined to establish which are able to be re-used then cleaned and stored
		4.2	Diamond tools that can no longer be used are identified, recorded in workplace documentation and disposed of in accordance with manufacturer recommendations
		4.3	Work area is cleared and waste removed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Legislative requirements include:

- applicable legislation from all levels of government that affect organisational operation
- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- work health and safety (WHS)
- the environment
- equal employment opportunity (EEO)
- anti-discrimination
- relevant industry codes of practice
- duty of care and heritage

WHS requirements include:

- Commonwealth, state or territory legislation and regulations
- organisational safety policies and procedures
- the use of personal protective equipment and clothing
- firefighting equipment
- first aid equipment
- hazard and risk control and elimination
- control of hazardous materials and substances
- manual handling, including lifting and carrying

Organisational requirements include:

- legal, organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- WHS
- emergency and evacuation
- ethical standards
- recording and reporting
- access and equity principles and practices
- equipment use, maintenance and storage
- environmental management (waste disposal, recycling and re-use guidelines)

Concrete surface condition includes:	<ul style="list-style-type: none"> • rain damage • contaminants, such as glue/adhesives and epoxy paint • loose debris
Diamond tools include:	<ul style="list-style-type: none"> • full set of single or twin segments (for when a flat floor finish is required) • half set of single or twin segments (for when flat floor finish is not required)
Diamond tool bond types include:	<ul style="list-style-type: none"> • metal • resin • ceramic • hybrid
Diamond tool applications include:	<ul style="list-style-type: none"> • floor flattening and removing undulation (hard, medium and soft concrete) • removal of surface contaminants: <ul style="list-style-type: none"> • carpet glue • vinyl adhesive • epoxy paint • smoothing exposed aggregate • grinding exposed aggregate • concrete surface polishing (hard, medium and soft)
Diamond abrasive wear includes influence of:	<ul style="list-style-type: none"> • hardness of material being ground (e.g. aggregate and sand abrasiveness) • the grinding/polishing pressure • hardness of the bond • diamond grit size • number of segments • presence of water • use of additional abrasives such as sand, silicone or carbide
Diamond tool selection faults include:	<ul style="list-style-type: none"> • grit size • too small so surface contaminants, such as glue smears • too coarse leaving scratching and excessive diamond wear • bond • too soft, leaving machine marks and excessive diamond wear • too hard, resulting in glazed surface • not using hardest bond first • incorrect choice of segments could result in an uneven floor, excessive diamond consumption and overloading the planetary machine
Instructions include:	<ul style="list-style-type: none"> • equipment manufacturer specifications and operational procedures • workplace procedures relating to WHS, tool handling and

- operation, reporting and communication
 - work instructions, including job sheets, plans, drawings and designs
- Fault reporting includes:** • verbal or written reporting
- Personal protective equipment includes:** • that prescribed under legislation, regulation and enterprise policies and practices

MSFFL3049 Apply densifiers and sealers to concrete surfaces

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting densifying and sealing materials appropriate for the job, preparing for the work and applying the selected materials to concrete floors prior to polishing. It applies to a wide variety of flooring technology operations in an on-site environment and involves application of skills and knowledge at a trade worker level.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking flooring work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify and prepare for work requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the application of densifiers and sealers are verified and complied with
		1.2	Instructions and/or plans are read and interpreted to identify process required to complete work tasks
		1.3	Relevant densifying and sealing materials are selected with regard to job requirements, manufacturer recommendations and client expectations

- | | | | |
|---|------------------------------------|-----|--|
| | | 1.4 | Selected materials are assessed as being compatible with the surface to be treated |
| | | 1.5 | Application tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 1.6 | Surface to be densified or sealed is inspected and assessed as being ready for application, with any minor surface imperfections corrected and signs erected to warn others of the application process |
| | | 1.7 | Work sequence is planned to ensure efficiency and quality of application |
| | | 1.8 | WHS requirements, including isolation, ventilation and other personal protection needs, are observed throughout the work |
| 2 | Apply densifying or sealing system | 2.1 | Ventilation is checked before application, and all WHS requirements are met, including use of personal protective equipment |
| | | 2.2 | Environmental protection regulations are complied with |
| | | 2.3 | Surface is wetted and densifier or sealing material is applied in accordance with manufacturer recommendations |
| | | 2.4 | Recommended drying times are observed |
| | | 2.5 | Applied material is checked when dry to ensure it meets the requirements of the job |
| 3 | Complete housekeeping | 3.1 | Unused materials are resealed and stored |
| | | 3.2 | Tools and equipment are cleaned, maintained and stored |
| | | 3.3 | Work area is cleaned and waste material is removed and disposed of safely |
| | | 3.4 | Barriers and signs are removed and stored |
| | | 3.5 | Workplace documentation/reporting is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Legislative requirements include:

- applicable legislation from all levels of government that affect organisational operation
- award and enterprise agreements
- industrial relations
- Australian Standards
- confidentiality and privacy
- work health and safety (WHS)
- the environment
- equal employment opportunity (EEO)

Assessment Requirements for MSFFL3049 Apply densifiers and sealers to concrete surfaces

Modification History

Release 1 - New unit of competency

Performance Evidence

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for applying densifiers and sealers to concrete floors
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Establish and maintain appropriate ventilation
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - minimise the risk of injury to self and others
- Achieve a final densified and sealed finish in accordance with accepted industry practices
- Complete application of densifying and sealing products to both new and older concrete surfaces
- Modify activities to cater for variations in workplace contexts and environment
- Identify any application faults/problems and identify and carry out corrective action
- Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use pre-checking and inspection techniques to anticipate concrete surface problems to avoid re-work and wastage
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, work flow interruptions or wastage
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate densifier or sealer material requirements
- Maintain current knowledge of:
 - application tools and materials
 - concrete densifier and sealer application techniques
- Use the workplace technology related to the application of finishes, including tools, equipment, calculators and measuring devices
- Interpret the technical specifications of materials and analyse their properties to optimise their use

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the application of densifiers and sealers
- Organisational and site standards, requirements, policies and procedures for densifying and sealing of concrete
- Methods of concrete floor preparation
- Characteristics of densifier and sealer products in relation to ventilation and reaction to change of temperature and relative humidity
- Type, characteristics, uses and limitation of densifier and sealer materials, including manufacturer recommendations
- Types and uses of application tools and equipment
- Workplace safety systems related to densifier and sealer uses and application processes
- Work flow in relation to the application of densifiers and sealers to concrete floors
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information.

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a location relevant to the application of densifiers and sealers to concrete surfaces.

MSFFL3050 Provide advice to customers on floor coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers providing advice to customers on a range of floor coverings, including carpet and other textile, resilient, timber and laminate products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Flooring technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Develop and maintain knowledge of flooring products and services	1.1	Current information on a range of floor covering products and services is actively and regularly researched from authoritative sources
		1.2	Characteristics of floor covering products and services are identified and understood using available product and service documentation
		1.3	Information on floor covering products and services is accurately documented and maintained in a format consistent with organisational requirements
		1.4	Acquired knowledge is applied to improve quality within personal work areas
2	Identify customer	2.1	Customers are questioned in detail and listened to

	needs		actively to determine product/service requirements
		2.2	Customer flooring needs are agreed with the customer
		2.3	Technical/specialist advice is offered to the customer where such advice is considered beneficial to the closing of the sale and customer understanding and decision making
		2.4	Customer's financial limitations and expectations for flooring product purchase are established
3	Recommend flooring products and services	3.1	Recommendations on floor covering products and services are in line with organisational requirements
		3.2	Recommendations emphasise floor covering product and service issues relevant to client needs
		3.3	Advantages of dealing with the enterprise are promoted
		3.4	Evidence in support of recommendations is verifiable and presented in a suitable format
		3.5	Impact of activities is estimated from verifiable customer feedback sources

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- workplace health and safety (WHS) requirements, which may include WHS legislation, building codes, material safety management systems, hazardous and dangerous

	goods codes, local safe operating procedures or equivalent and manufacturers' recommendations
	<ul style="list-style-type: none">• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate discretion, judgement and problem-solving skills in providing advice to customers on floor coverings
Advice on products and services include:	<ul style="list-style-type: none">• types and applications of available, such as:<ul style="list-style-type: none">• timber and laminate flooring materials, coatings and finishes• resilient floor coverings, colours and patterns• carpet and other textile floor covering colours and patterns• methods and techniques for:<ul style="list-style-type: none">• timber and laminate flooring installation, sanding and finishing• care and maintenance of carpet and other textile flooring• techniques for resilient flooring installation, care and maintenance
Relevant legislation, codes, regulations and standards include:	<ul style="list-style-type: none">• Privacy Act• equal employment opportunity (EEO) and anti-discrimination legislation• Telecommunication Act• Trade Practices Act• Consumer Credit Code
Product and service documentation includes:	<ul style="list-style-type: none">• operational guidelines• marketing data• consumer reports• industry reports• sales figures
Information includes:	<ul style="list-style-type: none">• competitive features of products or services• product trends and sales trends• problems with products or service• innovations• cost and production data• distribution process• sales records (monthly forecasts, targets achieved)
Authoritative sources include:	<ul style="list-style-type: none">• industry associations• authorised suppliers• industry conferences and recognised industry media sources

Tools and equipment include:

- measuring and calculating equipment, including tapes, rulers, calculators, desk and portable computers

Information and procedures includes:

- workplace procedures relating to the use and operation of tools and equipment
- workplace instructions, including job sheets, plans, drawings and designs
- workplace procedures relating to reporting and communications
- manufacturer recommendations for the use of equipment and materials

Assessment Requirements for MSFFL3050 Provide advice to customers on floor coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Provision of accurate advice to customers on timber, laminate, resilient, carpet and other textile floor covering types, including their characteristics, suitability for the customer needs, maintenance and installation techniques
- Collect, organise and understand information related to customer requests, product definition, work orders, basic plans and safety procedures
- Communicate ideas and information to convince customers of the appropriateness of particular products to their needs
- Plan and organise activities to interest customers and to ensure the product is viewed in a favourable way
- Work with others and in a team by recognising dependencies and using cooperative approaches to promote the image of the enterprise and product range
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Apply analytical techniques to correctly match customer needs with flooring products and services
- Use workplace technology related to providing advice to customers, including tools, materials, calculators and measuring devices

Knowledge Evidence

- The type, characteristics, uses and limitation of :
 - timber and laminate floor coverings products and services
 - resilient floor coverings products and services
 - carpet and other textile floor coverings products and services
- Workplace safety systems related to floor coverings and their installation
- Work flow in relation to seeking information from customers and providing advice
- Enterprise pricing policies
- Enterprise protocols associated with customer service and sales

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to relevant customers.

MSFFM1001 Construct a basic timber furnishing product

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers constructing, assembling and finishing a basic timber furnishing product. It applies to a VET in Schools or pre-vocational program for new entrants to the furnishing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare for work | 1.1 Work instructions are used to determine job requirements, including design variations, tolerances, process, materials, finish and quantity |
| | 1.2 Construction and assembly sequence are planned |
| | 1.3 Procedures are determined for checking quality at each stage of the process |
| | 1.4 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.5 Suitable work area is selected for the task |

- 1.6 Preparatory drawings/set-outs for tasks are confirmed
 - 1.7 Cutting list for project components is accessed and interpreted
 - 1.8 Materials are selected following work instructions
 - 1.9 Tools and equipment suitable for construction are identified and checked for safe and effective operation
- 2 Complete construction
 - 2.1 Material is set out and prepared according to work instructions and components are marked according to workplace procedures
 - 2.2 Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications
 - 2.3 Components are manufactured, including any specified shapes, angles or curves, and checked against set-outs and job requirements
 - 2.4 Components are assembled using jigs and/or clamps and fastenings
 - 2.5 Adhesives are applied according to workplace procedures and/or manufacturer instructions
 - 2.6 Joining process is undertaken according to workplace procedures
 - 2.7 Assembled product is checked for compliance with specifications
 - 2.8 Item is finished in accordance with work instructions
- 3 Finalise operation and maintain equipment
 - 3.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
 - 3.2 Off-cuts and unused materials are collected and stored for re-use or disposed of following workplace procedures
 - 3.3 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Basic timber furnishing products include:

- occasional and coffee tables
- jewellery boxes
- tool boxes
- CD racks
- small cabinets
- entertainment units
- timber stools
- clocks

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods, code and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work involves reading and interpreting the project plan, using hand and power tools, operating basic woodworking machinery, applying quality requirements and applying product finishing techniques and materials
- competency may be demonstrated in workplaces or simulated workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture and/or furniture components or a suitably simulated environment

Tools and equipment include:

- measuring tapes or rulers
- hammers
- mallets
- squares

	<ul style="list-style-type: none">• bevels• chisels• planes• hand saws• power drills, saws, planers and other power tools• cordless drills/screwdrivers or other cordless tools• fixing and joining devices• jigs• clamping devices• pincers
Machines include:	<ul style="list-style-type: none">• band saws• cross cut saws• rip saws• panel planers/thicknessers• edge planer/jointer• belt sander• biscuit machine• horizontal borers• vertical drill presses• pedestal grinders• hand wood-turning lathes
Materials include:	<ul style="list-style-type: none">• timber• manufactured board• adhesives• screws• nails• bolts• dowels• metal fasteners• steel• plastics• primers and coating materials
Checking of constructed product is to cover:	<ul style="list-style-type: none">• squareness, wind or twist and measurements against drawings• alignment of fittings, attachments and moving parts• suitability of design, hardware and materials• overall quality of finish
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment

- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM1001B Construct a basic timber furnishing product.

Assessment Requirements for MSFFM1001 Construct a basic timber furnishing product

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work instructions and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - achieve required production output and product quality
- Adapt or vary furnishing product designs
- Construct, assemble and finish at least one (1) basic furnishing product from the list in the Range of Conditions
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Interpretation of plan representation of furniture design
- Preparation of drawings/set-outs
- Work flow in relation to furniture construction
- Identification of hand and/or power tools, materials, equipment, processes and procedures

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required plans, hand and/or power tools, equipment, materials and woodworking machinery.

MSFFM1002 Operate basic woodworking machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers operating basic woodworking machines used for sawing, planing, sanding and drilling in the production of furniture. It applies to a VET in Schools or pre-vocational program for new entrants to the furnishing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Work instructions are used to identify job requirements, including quality, materials, equipment, and quantities |
| | | 1.2 | Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work |
| | | 1.3 | Material for machining is selected and inspected for quality |
| | | 1.4 | Machines, cutting tools and jigs are identified and checked for safe and effective operation |
| 2 | Operate machines | 2.1 | Safety equipment, including emergency stops, gauges, guards and controls are checked |

- | | | | | | | | | | | |
|-----|---|---|-----|--|-----|--|-----|---|-----|---|
| | 2.2 | Machine start-up procedure is carried out in accordance with manufacturer instructions | | | | | | | | |
| | 2.3 | Material is fed into machine in accordance with manufacturer instructions, safe handling procedures and standard workplace operating procedures | | | | | | | | |
| | 2.4 | Machine is operated in accordance with its designed capacity and purpose, tooling requirements and to manufacturer recommendations | | | | | | | | |
| | 2.5 | Machine operation is monitored to ensure product quality and output | | | | | | | | |
| | 2.6 | Waste quantities are minimised | | | | | | | | |
| | 2.7 | Items that do not meet quality requirements are recycled or discarded according to workplace procedures | | | | | | | | |
| | 2.8 | Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons | | | | | | | | |
| 3 | Clean up work area and maintain equipment | <table border="0"> <tr> <td>3.1</td> <td>Material that can be re-used is collected and stored</td> </tr> <tr> <td>3.2</td> <td>Waste and scrap are removed following workplace procedures</td> </tr> <tr> <td>3.3</td> <td>Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</td> </tr> <tr> <td>3.4</td> <td>Unserviceable equipment is reported in accordance with workplace procedures</td> </tr> </table> | 3.1 | Material that can be re-used is collected and stored | 3.2 | Waste and scrap are removed following workplace procedures | 3.3 | Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures | 3.4 | Unserviceable equipment is reported in accordance with workplace procedures |
| 3.1 | Material that can be re-used is collected and stored | | | | | | | | | |
| 3.2 | Waste and scrap are removed following workplace procedures | | | | | | | | | |
| 3.3 | Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures | | | | | | | | | |
| 3.4 | Unserviceable equipment is reported in accordance with workplace procedures | | | | | | | | | |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential

operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Basic woodworking machines include:

- cross cut saw
- rip saw
- band saw
- panel saw
- surface planer (buzzer/jointer)
- panel planer (thicknesser)
- bobbin sander
- disc sander
- belt sander (finisher) – stroke and finisher
- vertical drill press
- horizontal borer (single bit)

Tasks include:

- machine face
- machine edge
- off fence ripping
- freehand ripping
- freehand curve cutting
- parallel rip (oversize by 5 mm+)
- docking:
 - (oversize + 20 mm)
 - (accurate to +/- 0.25 mm)
 - square (no tolerance)
- cut flat panel board (off rip fence using scribe saw)
- cut flat panel board (off cross-cut fence using scribe saw)
- parallel plane width
- parallel plane thickness
- sand concave surface
- sand straight surface
- sand end grain and outside curve
- sand flat surfaces
- hinge boring
- drill holes to pre-determined depths vertically, selecting and replacing drill bits as required
- changing belts and blades
- drill holes to pre-determined depths horizontally (and to create a mortise)

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating

procedures

- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
- solid timber and manufactured board

Materials to be machined include:

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM1002B Operate basic woodworking machines.

Assessment Requirements for MSFFM1002 Operate basic woodworking machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Identify work requirements and materials used in the work process
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Operate and monitor the machines, including changing belts, blades and drill bits as required, and complete the tasks identified in the Range of Conditions for:
 - one (1) saw
 - one (1) planer
 - one (1) drill
 - one (1) sander
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Characteristics, uses and limitations of woodworking machines
- General workplace quality standards and procedures
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to basic woodworking machinery, standard operating procedures and materials.

MSFFM2001 Use furniture making sector hand and power tools

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using hand and power tools in applications relating to furniture making.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|-------------------------------|-----|--|
| 1 | Identify hand and power tools | 1.1 | Types of hand and power tools and their functions are identified |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Sources of power supply are recognised |
| 2 | Select and use hand tools | 2.1 | Hand tools selected are consistent with needs of the job, checked for serviceability and safety, and any faults reported to supervisor |
| | | 2.2 | Equipment is selected to hold or support material for hand tools application where applicable |

- | | | | |
|---|------------------------------|-----|--|
| | | 2.3 | Material is located and held in position for hand tool application |
| | | 2.4 | Hand tools are safely and effectively used according to their intended use and safely located when not in immediate use |
| 3 | Select and use power tools | 3.1 | Power tools are selected consistent with needs of the job in accordance with conventional work practice, are visually checked for serviceability and safety in accordance with WHS requirements, and any faults reported to supervisor |
| | | 3.2 | Equipment is selected to hold or support materials for power tool application as applicable |
| | | 3.3 | Material is located and held in position for power tool application as applicable |
| | | 3.4 | Power tools are safely and effectively used in application processes and safely located when not in use |
| 4 | Clean up work area and tools | 4.1 | All tools are cleaned, maintained and stored |
| | | 4.2 | Equipment is cleaned, maintained and stored |
| | | 4.3 | Work area is cleared and waste removed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Hand tools for furniture

- hand planes
- chisels

making include:	<ul style="list-style-type: none">• hand saws• spokeshave• hammers (claw, Warrington, tack and ball pein)• mallet• marking-out tools• files• rasps• scraper• screwdrivers and hand drills
Power tools for furniture making include:	<ul style="list-style-type: none">• drop saw• circular power saw• planer• drill• jig saw• router• trimmer• biscuit machine• brad/nail and staple gun and sanders
Unit scope includes:	<ul style="list-style-type: none">• individuals to demonstrate skill, accuracy and dexterity in the application of tools to perform work tasks which should include dressing materials, cutting joints, finishing surfaces, cutting straight and compound angles, jointing materials, edge trimming and the basic sharpening of cutting tools
Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manufacturer's specifications, manual handling procedures and organisation insurance requirements
Fault reporting includes:	<ul style="list-style-type: none">• verbal or written reporting
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Assessment Requirements for MSFFM2001 Use furniture making sector hand and power tools

Modification History

Release 1 - New unit of competency

Performance Evidence

- Locate and apply relevant information related to hand and power tools
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- Adopt and carry out correct procedures prior to and during use of the range of hand and power tools stipulated in the Range of Conditions
- Carry out operator maintenance on hand and power tools, including the grinding and sharpening of:
 - chisels
 - hard plane blades or irons
 - drill bits
- Use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise waste of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses, limitations and maintenance requirements of hand tools commonly used in furniture production
- Types, characteristics, uses, limitations and maintenance requirements of power tools commonly used in furniture production
- Workplace safety requirements and WHS legislation
- Work flow within the workplace

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to furniture making sector hand and power tools, and materials used in the manufacturing and/or installation of furnishing products.

MSFFM2002 Assemble furnishing components

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assembling of timber components to produce furniture frames or furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|---|
| 1 | Prepare for assembly | 1.1 | Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity |
| | | 1.2 | Assembly sequence is planned |
| | | 1.3 | Procedures are determined for checking quality at each stage of the process |
| | | 1.4 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.5 | Suitable work area is selected for the task |
| | | 1.6 | Tools and equipment suitable to the fixing method are |

- selected and checked for safe operation
- 1.7 Components, hardware, fittings and attachments are collected
 - 1.8 Fixing and joining devices are selected in line with work instructions and type of materials to be joined
 - 1.9 Jigs are selected and checked for suitability of purpose
- 2 Assemble components
- 2.1 Components are laid out and joined using jigs and appropriate fastenings
 - 2.2 Hand and/or power tools and equipment are used as required
 - 2.3 Components are prepared, assembled and fitted in accordance with specifications
 - 2.4 Assembled component is checked for compliance with specifications
 - 2.5 Components which do not meet quality specifications are repaired or tagged for further processing or recycling/disposal
 - 2.6 Finished products are organised and stored in holding area
- 3 Clean work area and maintain equipment
- 3.1 Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures
 - 3.2 Waste and scrap are removed following workplace procedures
 - 3.3 Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures
 - 3.4 Equipment and work area clean-up is maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Furnishing components include:

- carcasses
- doors
- drawers
- frames
- shelves
- ends
- tops

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the assembly of furnishing components
- competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Tools and equipment include:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels
- chisels
- planes

	<ul style="list-style-type: none">• hand saws• power saws• power drills/screwdrivers• clamps/cramps• screwdrivers and/or spanners• pincers• pneumatic tools, compressor and spray equipment
Materials to be used include:	<ul style="list-style-type: none">• timber• manufactured board• glues• screws• nails• dowels and knock-down fittings
Assembled component checking is to cover:	<ul style="list-style-type: none">• squareness, alignment and wind• hardware, fittings and attachments• functionality and tolerances• conformity to work instruction and quality requirements
Storage requirements include:	<ul style="list-style-type: none">• ensuring that there is no obstruction to traffic• components are not damaged in storage• incompatible items are not stored together• products are arranged to match the sequence of work
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• manufacturer specifications and operational procedures

Assessment Requirements for MSFFM2002 Assemble furnishing components

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assemble at least four (4) furnishing components from the list in the Range Statement
- Use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of common furnishing components
- Interpretation of basic furniture plans
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to tools, equipment and materials required to assemble furnishing components.

MSFFM2003 Select and apply hardware

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting and applying hardware to new and refurbished furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|-----------------------|-----|--|
| 1 | Plan and prepare work | 1.1 | Work instructions are used to determine job requirements, including design, colour, finish process and required hardware quality |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Types of hardware are identified and selected for the work |
| | | 1.4 | Tools, equipment and accessories for application are identified and checked for safe and effective operation |
| | | 1.5 | Surfaces are cleaned and prepared to enable accurate colour matching |

- | | | | |
|---|---|-----|--|
| 2 | Apply and/or fit and finish | 2.1 | Hardware items are laid out/placed in the required design |
| | | 2.2 | Machinery is used in accordance with workplace procedures, including use of personal protective equipment |
| | | 2.3 | Joining/securing process is undertaken according to workplace procedures |
| | | 2.4 | Adhesives are applied according to workplace procedures and/or manufacturer instructions |
| | | 2.5 | Work is checked against required quality standards |
| 3 | Finalise operation and maintain equipment | 3.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | | 3.2 | Machinery is cleaned and left in a safe mode |
| | | 3.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | | 3.4 | Unused hardware is collected and stored for re-use or disposal following workplace procedures |
| | | 3.5 | Waste and scrap materials are dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Hardware includes:	<ul style="list-style-type: none">• hinges• handles• drawer-runners• metal drawer systems• sliding rail systems• rotating storage systems and slide-out storage systems
Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving in selecting and applying hardware• competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Tools and equipment include:	<ul style="list-style-type: none">• measuring tapes or rulers• levelling devices• hammers• mallets• squares• bevels• chisels• planes• hand saws• power saws• power drills/screwdrivers• pneumatic tools, compressor and spray equipment• clamps• screwdrivers• pincers
Materials include:	<ul style="list-style-type: none">• timber• manufactured board• hardware consumables• cleaning chemicals and materials
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM2003B Select and apply hardware.

Assessment Requirements for MSFFM2003 Select and apply hardware

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self or others
- Select and apply/fit six (6) different items of hardware
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of hardware
- Interpretation of plan representation of furniture design
- Preparation of drawings/set-outs
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, hand and/or power tools, equipment, hardware materials and woodworking machinery.

MSFFM2004 Apply sheet laminates by hand

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing, laying out, applying and finalising processes for applying sheet laminates by hand.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare the work | 1.1 Work instructions are used to determine job requirements, including process, materials, finish and quantity |
| | 1.2 Application sequence is planned |
| | 1.3 Procedures are determined for checking quality at each stage of the process |
| | 1.4 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.5 Suitable work area is selected for the task |
| | 1.6 Tools and equipment suitable for application are identified and checked for safe and effective operation |

- | | | | |
|---|---|-----|--|
| 2 | Lay out and prepare materials | 2.1 | Substrata (surfaces to be laminated) are prepared for laminating |
| | | 2.2 | Laminates are selected and checked for flaws following work instructions |
| | | 2.3 | Laminates are prepared for application and laid out |
| | | 2.4 | Suitable joining processes are selected and prepared |
| 3 | Apply fit and finish | 3.1 | Tools and equipment are used in accordance with workplace procedures, including use of personal protective equipment |
| | | 3.2 | Laminates are measured, marked and cut to size |
| | | 3.3 | Adhesives are applied according to workplace procedures and/or manufacturer instructions and the laminate applied to the substrata (base material) |
| | | 3.4 | Laminates are rolled or hammered to secure according to enterprise practices |
| | | 3.5 | Final trim and finishing are completed to specifications |
| | | 3.6 | Work is checked against required quality standards |
| 4 | Finalise operation and maintain equipment | 4.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | | 4.2 | Tools and equipment are cleaned and left in a safe mode |
| | | 4.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | | 4.4 | Off-cuts and unused materials are collected and stored for re-use or disposal following workplace procedures |
| | | 4.5 | Waste and scrap materials are dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in applying laminates by hand
- competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Tools and equipment include:

- measuring tapes, rulers and marking equipment
- mallets and hammers
- squares, sliding bevels and protractors
- pincers and pliers
- chisels
- planes
- hand saws
- power/battery tools
- power drills/screwdrivers
- pneumatic tools, compressor and spray equipment
- clamps and cramps
- screwdrivers, spanners and files
- laminate rollers
- laminate trimmers and cutters

- Materials include:**
 - adhesive spray gun, brushes and applicators
 - scrapers
 - timber
 - manufactured board
 - laminates
 - timber strips
 - adhesives and cleaning materials
- Personal protective equipment includes:**
 - that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
 - workplace procedures relating to use and operation of tools and equipment
 - work instructions, including job sheets, plans, drawings and designs
 - workplace procedures relating to reporting and communications
 - manufacturer instructions for the use of equipment and materials

Unit Mapping Information

Supersedes and is equivalent to LMF2004B Apply sheet laminates by hand.

MSFFM2005 Join solid timber

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers joining solid timber required for the manufacture of solid timber flat surfaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare the work | 1.1 Work instructions are used to determine job requirements, including process, materials, finish and quantity |
| | 1.2 Work sequence is planned |
| | 1.3 Procedures are determined for checking quality at each stage of the process |
| | 1.4 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.5 Suitable work area is selected for the task |
| | 1.6 Tools and equipment suitable for application are identified and checked for safe and effective operation |

- | | | | |
|---|---|-----|--|
| 2 | Lay out and prepare materials | 2.1 | Timbers are selected and checked for defects following work instructions |
| | | 2.2 | Suitable joining processes are selected and prepared |
| | | 2.3 | Timbers are prepared for joining and laid out |
| 3 | Join timber | 3.1 | Timbers are measured, marked and cut to size |
| | | 3.2 | Machinery is used in accordance with workplace procedures, including use of personal protective equipment |
| | | 3.3 | Adhesives are applied according to workplace procedures and/or manufacturer instructions |
| | | 3.4 | Final trim and finishing are completed to specifications |
| | | 3.5 | Work is checked against required quality standards |
| 4 | Finalise operation and maintain equipment | 4.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | | 4.2 | Machinery is cleaned and left in a safe mode |
| | | 4.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | | 4.4 | Off-cuts and unused materials are collected and stored for re-use or disposal following workplace procedures |
| | | 4.5 | Waste and scrap materials are dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Edge joining methods include:

- butt and dowel
- moulded edge joint (finger-joint, tongue in groove and zig-zag)
- biscuit joint
- slip-tongue joint

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in joining solid timber
- competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Machines include:

- panel saw
- cross-cut saw
- rip saw
- surface planers
- panel planer
- spindle moulder
- sanders and vertical and horizontal drills

Tools and equipment include:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels
- chisels
- planes
- hand saws
- power saws
- power drills
- biscuit machines
- pneumatic tools, compressor and spray equipment
- dowel jigs
- hoses

- Materials include:**
 - clamps and pincers
 - adhesives
 - abrasives and cleaning materials
- Personal protective equipment includes:**
 - that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
 - workplace procedures relating to the use and operation of tools and equipment
 - workplace instructions, including job sheets, plans, drawings and designs
 - workplace procedures relating to reporting and communications
 - manufacturer instructions for the use of equipment and materials

Unit Mapping Information

Supersedes and is equivalent to LMFFM2005B Join solid timber.

Assessment Requirements for MSFFM2005 Join solid timber

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Join at least four (4) solid timber tops of a minimum of three (3) sections and using a minimum of four (4) different edge joining methods
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics (including cupping, expansion, twisting, bowing, spring and grain direction), uses and limitations of timbers
- Interpretation of plan representation of furniture design
- Joining techniques and their effect on timbers
- Types of sawing methods, including back sawn and quarter sawn, and the impact of these on joining
- Preparation of drawings/set-outs
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, hand and/or power tools, equipment, joining and finishing materials and woodworking machinery.

MSFFM2006 Hand make timber joints

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers joining timber by constructing joints using hand and portable power tools.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare the work | 1.1 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.2 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | 1.3 Product purpose, furniture style and joint type are identified from workplace documentation |
| | 1.4 Tools, adhesives and fasteners are selected to match the joint type |
| 2 Make joint | 2.1 Cutting and joining lines are marked out to suit joint type |

- | | | | | | | | | | | | | |
|-----|--|---|-----|--|-----|--|-----|---|-----|--|-----|---|
| | 2.2 | Measurements and calculations are checked for accuracy to ensure quality outcomes | | | | | | | | | | |
| | 2.3 | Timber is joined in accordance with workplace requirements | | | | | | | | | | |
| | 2.4 | Fasteners and adhesives are used to make joints firm where required | | | | | | | | | | |
| | 2.5 | Finished joint is checked against quality requirements | | | | | | | | | | |
| 3 | Finalise operation and maintain equipment | <table border="0"> <tr> <td>3.1</td> <td>Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures</td> </tr> <tr> <td>3.2</td> <td>Machinery is cleaned and left in a safe mode</td> </tr> <tr> <td>3.3</td> <td>Faulty and/or defective equipment is tagged and reported in accordance with workplace practices</td> </tr> <tr> <td>3.4</td> <td>Off-cuts and unused materials are collected and stored for re-use or disposal following workplace procedures</td> </tr> <tr> <td>3.5</td> <td>Waste and scrap materials are dealt with following workplace procedures</td> </tr> </table> | 3.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures | 3.2 | Machinery is cleaned and left in a safe mode | 3.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices | 3.4 | Off-cuts and unused materials are collected and stored for re-use or disposal following workplace procedures | 3.5 | Waste and scrap materials are dealt with following workplace procedures |
| 3.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures | | | | | | | | | | | |
| 3.2 | Machinery is cleaned and left in a safe mode | | | | | | | | | | | |

Assessment Requirements for MSFFM2006 Hand make timber joints

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Select appropriate joint types for the furniture item and utilise at least three (3) different adhesive types
- Produce a minimum of four (4) different joint types in accordance with industry standards on tolerances with at least two (2) produced substantially by hand operations
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Characteristics, properties and selection criteria of adhesives used
- Capabilities and limitations of tools used
- Matching requirements of adhesives and fasteners to timbers/materials used
- Work flow in relation to the furniture items being made or repaired

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to tools, materials and equipment required to hand make timber joints.

MSFFM2007 Follow plans to assemble production furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assembling production furniture using modular construction methods and components to a given plan.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|---|
| 1 | Prepare for assembly | 1.1 | Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity |
| | | 1.2 | Assembly sequence is planned |
| | | 1.3 | Procedures are determined for checking quality at each stage of the process |
| | | 1.4 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.5 | Suitable work area is selected for the task |
| | | 1.6 | Tools and equipment suitable to the assembly are selected |

- and checked for safe operation
- 1.7 Fixing and joining devices are selected in line with work instructions and type of materials to be joined
 - 1.8 Components, hardware, fittings and attachments are collected
- 2 Assemble furniture
- 2.1 Components are laid out and joined using appropriate fastenings
 - 2.2 Hand and/or power tools are used as required
 - 2.3 Assembled furniture is checked for compliance with specifications
 - 2.4 Doors, drawers, shelves and/or runners are prepared and fitted in accordance with set-out
 - 2.5 Hardware and decorative accessories are applied to specification
 - 2.6 Item is prepared for finishing, including the removal of bruises, scratches, dents and marks
 - 2.7 Work is checked against required standard and non-conforming items rectified
 - 2.8 Finished products are organised and stored in holding area
- 3 Finalise operation and maintain equipment
- 3.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
 - 3.2 Machinery is cleaned and left in a safe mode
 - 3.3 Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
 - 3.4 Off-cuts and unused materials are collected and stored for re-use or disposal following workplace procedures
 - 3.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Production furniture includes:

- wall units
- vanity units
- kitchen cabinets
- sideboards/buffets
- drawer units
- display cabinets
- counters
- tables
- beds
- clocks

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the assembly of furniture
- competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Tools and equipment include:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels

	<ul style="list-style-type: none">• chisels• planes• hand saws• power saws• power drills• pneumatic tools, compressor and spray equipment• clamps• screwdrivers• pincers
Materials include:	<ul style="list-style-type: none">• timber• manufactured board• glass• alloys• adhesives• screws• nails• dowels• knock-down fittings• metal fasteners and associated hardware
Assembled furniture checking process is to cover:	<ul style="list-style-type: none">• squareness, alignment and wind• hardware, fittings and attachments• functionality and tolerances• conformity to work instruction and quality requirements
Storage of assembled furniture must ensure that:	<ul style="list-style-type: none">• there is no obstruction to traffic• products are not damaged in storage• incompatible items are not stored together• products are arranged to match the sequence of work
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM2007B Follow plans to assemble production furniture.

Assessment Requirements for MSFFM2007 Follow plans to assemble production furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assemble at least two (2) items of production furniture, one (1) of manufactured board and one (1) of solid timber construction, with each featuring:
 - a door
 - a drawer
 - shelving
- Use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Interpretation of plan representation of furniture design
- Preparation of drawings/set-outs
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, equipment and materials required to assemble production furniture.

MSFFM2008 Bend and form cane

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers bending and forming cane for use in furniture construction.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.2	Tools, machines and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.3	Furniture design, tolerances, process, materials and quantities are determined from work instructions
		1.4	Work sequence is planned
		1.5	Procedures are determined for checking quality at each stage of the process
		1.6	Suitable work area is selected for the task

- | | | | |
|---|---|-----|--|
| | | 1.7 | Preparatory drawings/set-outs for tasks are completed, where required |
| 2 | Complete bending and forming process | 2.1 | Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications |
| | | 2.2 | Materials are visually inspected for flaws and faults |
| | | 2.3 | Cane is sanded to remove exterior blemishes, flaws or faults |
| | | 2.4 | Cane is prepared by straightening, where required, and marked for bending |
| | | 2.5 | Cane is heated in steam ovens or kilns in accordance with design/pattern bending requirements |
| | | 2.6 | Cane is bent in accordance with design/pattern requirements |
| | | 2.7 | Product is checked against plans at identified checkpoints to ensure compliance with specifications |
| | | 2.8 | Non-conformity with the required quality standards is rectified |
| 3 | Finalise operation and maintain equipment | 3.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | | 3.2 | Machinery is cleaned and left in a safe mode |
| | | 3.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | | 3.4 | Unused hardware is collected and stored for re-use or disposal following workplace procedures |
| | | 3.5 | Waste and scrap materials are dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Cane furniture includes:**
- lounge chairs
 - dining chairs
 - tables
 - side tables
 - coffee tables
 - entertainment units
 - bookcases
- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work involves reading and interpreting plans, developing set-outs, using hand and/or power tools, equipment and operating machinery
 - competency may be demonstrated in workplaces involved in the manufacture of cane furniture
- Tools and equipment include:**
- hand sanders and planers
- Machines include:**
- bench saws
 - drop saws
 - stationary sanding machines
 - steam ovens or kilns
 - bending presses
- Personal protective**
- that prescribed under legislation, regulations and enterprise

equipment includes:

policies and practices

**Information and
procedures include:**

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM2008B Bend and form cane.

MSFFM2009 Construct cane furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers constructing and assembling cane furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.2	Tools, machines and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.3	Furniture design, tolerances, process, materials and quantities are determined from work instructions
		1.4	Construction and assembly sequence is planned
		1.5	Procedures are determined for checking quality at each stage of the process
		1.6	Suitable work area is selected for the task

- 1.7 Preparatory drawings/set-outs for tasks are completed
 - 1.8 Cutting list for components is developed
 - 1.9 Materials are selected following work instructions
 - 2 Complete construction
 - 2.1 Material is set out and prepared according to work instructions and components are marked according to workplace procedures
 - 2.2 Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications
 - 2.3 Components are manufactured, including any specified shapes, angles or curves, and checked against set-out and job requirements
 - 2.4 Components are assembled using jigs and/or clamps and fastenings
 - 2.5 Adhesives are applied according to workplace procedures and/or manufacturer instructions
 - 2.6 Joining process is undertaken according to workplace procedures
 - 2.7 Assembled furniture is checked for compliance with specifications
 - 2.8 Furniture is prepared for finishing
 - 2.9 Any non-conformity with the required quality standards is rectified
 - 3 Finalise operation and maintain equipment
 - 3.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
 - 3.2 Machinery is cleaned and left in a safe mode
 - 3.3 Faulty and/or defective equipment is tagged and reported in accordance with workplace practices

MSFFM2010 Set up and operate basic static machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers operating and maintaining basic static machines used for sawing, planing, sanding and drilling in the production of furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|---|
| 1 Prepare for work | 1.1 Work instructions are used to determine job requirements, including design, quality, materials, equipment, and quantities |
| | 1.2 Cutting list and job specifications are read and interpreted |
| | 1.3 Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work |
| | 1.4 Material for machining is selected and inspected for quality |
| | 1.5 Machines, cutting tools and jigs are identified and checked for safe and effective operation |
| | 1.6 Procedures are determined for minimising waste material |

- | | | | |
|---|---|-----|---|
| | | 1.7 | Procedures are identified for maximising energy efficiency while completing the job |
| 2 | Set up machines | 2.1 | Safety equipment, including emergency stops, gauges, guards and controls are checked |
| | | 2.2 | Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions |
| | | 2.3 | Trial runs are conducted to check machine operation, accuracy and quality of finished work |
| | | 2.4 | Necessary adjustments are made to machine settings |
| 3 | Operate machines | 3.1 | Machine start-up procedure is carried out in accordance with manufacturer instructions |
| | | 3.2 | Material is fed into machine in accordance with manufacturer instructions, safe handling procedures and standard workplace operating procedures |
| | | 3.3 | Machine is operated in accordance with its designed capacity and purpose, tooling requirements and to manufacturer recommendations |
| | | 3.4 | Machine operation is monitored to ensure product quality and output |
| | | 3.5 | Waste quantities are checked and minimised |
| | | 3.6 | Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures |
| | | 3.7 | Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons |
| 4 | Finalise operation and maintain equipment | 4.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | | 4.2 | Machinery is cleaned and left in a safe mode |
| | | 4.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | | 4.4 | Unused hardware is collected and stored for re-use or disposal following workplace procedures |

- 4.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Basic static machines include:

- cross-cut saw
- rip saw
- panel saw
- surface planer (buzzer/jointer)
- disc sander
- belt sander, including finisher, edge sander and stroke (Lacey) sander
- vertical drill press
- horizontal borer (single bit)
- band saw
- panel planer (thicknesser)
- bobbin sander

Tasks include:

- docking, including:
 - (oversize + 20 mm)
 - (accurate to +/- 0.25 mm)
 - square (no tolerance)
- parallel rip (oversize by 5 mm+)
- setting up scribe saw
- setting up riving knife to AS 1473-1991 Guarding and safe use of woodworking machinery
- cutting flat panel board (off rip fence using scribe saw)
- cutting flat panel board (off cross-cut fence using scribe saw)

- machining face
 - machining edge
 - machining chamfer or bevel
 - sanding straight surface
 - sanding convex surface
 - sanding end grain
 - removing/replacing belts
 - sanding veneer face of flat panel board
 - sanding solid timber face
 - sanding solid timber edges (remove arris/shape)
 - selecting and replacing drill bits
 - drilling holes to pre-determined depths vertically
 - drilling holes to pre-determined depths horizontally
 - hinge boring
 - removing/replacing saw blade
 - folding, unfolding, reversing saw blade
 - blade identification/selection
 - off fence ripping
 - freehand ripping
 - freehand curve cutting
 - parallel plane width
 - parallel plane thickness
 - sand concave surface
 - machine fault-finding
- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving in the set up, operation and maintenance of machines
 - competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
- Materials to be machined include:**
- solid timber
 - manufactured board
 - metal
 - uPVC

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM2010B Set up, operate and maintain basic static machines.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFFM2010 Set up and operate basic static machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Read and interpret cutting lists and job specifications to prepare for work
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up, operate and monitor the machines and complete the tasks identified in the Range of Conditions
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Range, characteristics, uses and limitations of basic static machines
- Characteristics of materials and uses of products produced
- Workplace:
 - quality standards and procedures
 - guidelines regarding acceptable tolerance levels
 - safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to basic static machinery, standard operating procedures and unprocessed materials.

MSFFM2011 Apply manufactured board conversion techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting out and cutting manufactured board to produce component parts of flat panel furniture and manufactured board panel doors applying manufactured board conversion techniques.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Work instructions are used to determine job requirements, including design, quality, materials, equipment and quantities |
| | | 1.2 | Cutting list and job specifications are read and interpreted |
| | | 1.3 | Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work |
| | | 1.4 | Material for machining is selected and inspected for quality |
| | | 1.5 | Cutting patterns are applied to minimise waste material |
| | | 1.6 | Procedures are identified for maximising energy efficiency |

- while completing the job
- | | | | |
|---|---|-----|--|
| 2 | Set up machines | 2.1 | Safety equipment, including emergency stops, gauges, guards and controls are checked |
| | | 2.2 | Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions |
| | | 2.3 | Machines, cutting tools and jigs are identified and checked for safe and effective operation |
| | | 2.4 | Trial runs are conducted to check machine operation, accuracy and quality of finished work |
| | | 2.5 | Necessary adjustments are made to machine settings |
| 3 | Apply conversion techniques | 3.1 | Machine start-up procedure is carried out in accordance with manufacturer instructions |
| | | 3.2 | Material is fed/placed into machine in accordance with manufacturer instructions, safe handling procedures and standard workplace operating procedures |
| | | 3.3 | Machine is operated in accordance with its designed capacity and purpose, tooling requirements and to manufacturer recommendations |
| | | 3.4 | Machine operation is monitored to ensure product quality and output |
| | | 3.5 | Waste quantities are checked and minimised |
| | | 3.6 | Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures |
| | | 3.7 | Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons |
| 4 | Finalise operation and maintain equipment | 4.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | | 4.2 | Machinery is cleaned and left in a safe mode |
| | | 4.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | | 4.4 | Unused hardware is collected and stored for re-use or |

disposal following workplace procedures

- 4.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Products of conversion techniques include:

- end panels
- shelving
- bench tops
- backs
- bottoms
- doors and fixing rails

Machines include:

- panel saw with scoring blade
- numerically controlled (NC) beam saw and wall saw

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the set up, operation and maintenance of machines
- competency may be demonstrated in workplaces involved in the production of manufactured board domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or

	components
Tools and equipment include:	<ul style="list-style-type: none">• measuring devices• machine associated tools• materials handling equipment/lifting devices
Manufactured board includes:	<ul style="list-style-type: none">• raw board• melamine surfaces• veneered board• plywood and hard board
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM2011B Apply manufactured board conversion techniques.

Assessment Requirements for MSFFM2011 Apply manufactured board conversion techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

- Read and interpret cutting lists and job specifications to prepare for work
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply at least five (5) different conversion operations using different operations/methods, including the:
 - preparation of cutting plans to minimise waste
 - selection of the correct materials
 - cutting at least one (1) surfaced board requiring the use of a panel saw using a scoring blade
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of manufactured board
- Range, characteristics, uses and limitations of panel saw (with and without a scoring blade), NC beam saw and wall saw
- Workplace:
 - quality standards and procedures
 - guidelines regarding acceptable tolerance levels
 - safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to selected saws, materials handling equipment and unprocessed materials required to apply manufactured board conversion techniques.

MSFFM2012 Set up, operate and maintain pressure and clamping machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating and maintaining pressure and clamping machines using their full potential and capacities in the production of furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Work instructions are used to determine job requirements, including design, quality, materials, equipment and quantities |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Material for machining is selected and inspected for quality |
| | | 1.4 | Pressure and clamping machines, cutting tools and jigs are identified and checked for safe and effective operation |
| | | 1.5 | Procedures are determined for minimising waste material |

- | | | | |
|---|---|-----|--|
| | | 1.6 | Procedures are identified for maximising energy efficiency while completing the job |
| 2 | Set up machines | 2.1 | Safety equipment, including emergency stops, gauges, guards and controls are checked |
| | | 2.2 | Pressure and clamping machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions |
| | | 2.3 | Trial runs are conducted to check machine operation, accuracy and quality of finished work |
| | | 2.4 | Necessary adjustments are made to machine settings |
| 3 | Operate machines | 3.1 | Machine start-up procedure is carried out in accordance with manufacturer instructions |
| | | 3.2 | Material is placed into machine in accordance with manufacturer instructions, tooling requirements, safe handling procedures and standard workplace operating procedures |
| | | 3.3 | Machine is operated in accordance with its designed capacity and purpose and to manufacturer recommendations |
| | | 3.4 | Machine operation is monitored to ensure product quality and output |
| | | 3.5 | Items that do not meet quality requirements are recycled or discarded according to workplace procedures |
| | | 3.6 | Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons |
| 4 | Finalise operation and maintain equipment | 4.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | | 4.2 | Machinery is cleaned and left in a safe mode |
| | | 4.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | | 4.4 | Unused material is collected and stored for re-use or disposal following workplace procedures |

- 4.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|--|
| Pressure and clamping machines include: | <ul style="list-style-type: none">• manual clamps and presses• hydraulic vacuum presses and clamping machines• post-forming machines |
| Materials to be pressed/clamped include: | <ul style="list-style-type: none">• solid timber• manufactured board and decorative treatments• laminates |
| Products include: | <ul style="list-style-type: none">• vacuum formed doors• widening joints• framed construction• drawers and laminating veneers |
| Unit scope includes: | <ul style="list-style-type: none">• individuals to read and interpret production instructions, complete adjustments to machine configurations and settings, using jigs and fixtures, select and apply adhesives and operate machines to finish products |
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, |

	judgement and problem solving in the set up and operation of machines
	<ul style="list-style-type: none">• competency may be demonstrated in workplaces involved in the manufacture of domestic and commercial furniture, including kitchen and bathroom cabinets and/or furniture components
Tools and equipment include:	<ul style="list-style-type: none">• screwdrivers• hammers and spanners
Materials include:	<ul style="list-style-type: none">• pressure and clamping machine consumables• oils and lubricants, trial materials and packing
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM2012B Set up, operate and maintain pressure and clamping machines.

Assessment Requirements for MSFFM2012 Set up, operate and maintain pressure and clamping machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage and wastage of goods, equipment and products
 - maintain required production output and product quality
- Identify, set up, operate and maintain at least one (1) pneumatically/hydraulically operated pressure and clamping machine to perform a significant production function covering three (3) different set-ups
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of pressure and clamping machines
- Pressure and clamping processes and techniques
- Characteristics of materials and uses of products produced
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.

MSFFM3001 Construct chair and couch frames

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers constructing and assembling chair and couch frames.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity
		1.2	Construction and assembly sequence is planned
		1.3	Procedures are determined for checking quality at each stage of the process
		1.4	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.5	Suitable work area is selected for the task
		1.6	Preparatory drawings/set-outs for tasks are completed

- 1.7 Cutting list for components is developed
 - 1.8 Materials are selected following work instructions
 - 1.9 Tools and equipment suitable for construction are identified and checked for safe and effective operation
- 2 Complete construction
 - 2.1 Material is set out and prepared according to work instructions and components are marked according to workplace procedures
 - 2.2 Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications
 - 2.3 Components are manufactured, including any specified shapes, angles or curves, and checked against set-outs and job requirements
 - 2.4 Components are assembled using jigs and/or clamps and fastenings
 - 2.5 Adhesives are applied according to workplace procedures and/or manufacturer instructions
 - 2.6 Joining process is undertaken according to workplace procedures
 - 2.7 Assembled chair/couch is checked for compliance with specifications
 - 2.8 Item is finished to suitable state for surface preparation
 - 2.9 Any non-conformity with the required quality standards is rectified
- 3 Finalise operation and maintain equipment
 - 3.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
 - 3.2 Machinery is cleaned and left in a safe mode
 - 3.3 Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
 - 3.4 Unused hardware is collected and stored for re-use or disposal following workplace procedures
 - 3.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFM3002 Construct furniture using leg and rail method

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Construct a minimum of two (2) furniture products, using mortise and tenon, mitre, dowel and bridle, which are to include:
 - a table with a drawer
 - a chair with shaped and angled components
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Interpretation of plan representation of furniture design
- Preparation of drawings/set-outs/rods
- Types, characteristics, properties and limitations of timber used in furniture construction
- Material selection and structural standards
- Application of ergonomic principles and guidelines to furniture construction
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, tools and equipment required to construct furniture using leg and rail method.

MSFFM3003 Produce angled and curved furniture using manufactured board

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers constructing and assembling manufactured board furniture using angled and curved construction methods.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity |
| | | 1.2 | Construction and assembly sequence are planned |
| | | 1.3 | Procedures are determined for checking quality at each stage of the process |
| | | 1.4 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.5 | Suitable work area is selected for the task |

- 1.6 Preparatory drawings and set-outs for tasks are completed
 - 1.7 Cutting list for components is developed
 - 1.8 Materials are selected following work instructions
 - 1.9 Tools and equipment suitable for construction are identified and checked for safe and effective operation
- 2 Complete construction
 - 2.1 Materials are set out and prepared according to work instructions and components are marked according to industry practices
 - 2.2 Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications
 - 2.3 Materials are bent and formed in accordance with the plan
 - 2.4 Components are manufactured and checked against set-out for tolerances, fit and accuracy
 - 2.5 Components are assembled and checked against set-out for accuracy, fit, twist and distortion
 - 2.6 Doors, drawers and shelves are assembled and fitted
 - 2.7 Product is prepared for final finish, including the removal of bruises, scratches, dents and marks
 - 2.8 Product is checked against plans at identified checkpoints
- 3 Finalise operation and maintain equipment
 - 3.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
 - 3.2 Machinery is cleaned and left in a safe mode
 - 3.3 Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
 - 3.4 Unused hardware is collected and stored for re-use or disposal following workplace procedures
 - 3.5 Waste and scrap materials are dealt with following workplace procedures

Assessment Requirements for MSFFM3003 Produce angled and curved furniture using manufactured board

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Produce a minimum of two (2) significant manufactured board products which must include one (1) curved cabinet with rails and one (1) cabinet with glass shelves, panels and doors
- Conduct operator maintenance on machines and related tools and equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of manufactured board
- Interpretation of plan representation of furniture design
- Preparation of drawings and set-outs
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, tools and equipment required to produce angled and curved furniture using manufactured board.

MSFFM3004 Produce angled and curved furniture using solid timber

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers constructing and assembling solid timber furniture using angular construction methods.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity |
| | | 1.2 | Construction and assembly sequence are planned |
| | | 1.3 | Procedures are determined for checking quality at each stage of the process |
| | | 1.4 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.5 | Suitable work area is selected for the task |

- 1.6 Preparatory drawings and set-outs for tasks are completed
 - 1.7 Cutting list for components is developed
 - 1.8 Materials are selected following work instructions
 - 1.9 Tools and equipment suitable for construction are identified and checked for safe and effective operation
- 2 Complete construction
 - 2.1 Materials are set out and prepared according to work instructions and components are marked according to industry practices
 - 2.2 Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications
 - 2.3 Materials are bent and formed in accordance with the plan
 - 2.4 Components are manufactured and checked against set-outs for tolerances, fit and accuracy
 - 2.5 Components are assembled and checked against set-outs for accuracy, fit, twist and distortion
 - 2.6 Doors, drawers and shelves are assembled and fitted
 - 2.7 Product is prepared for final finish, including the removal of bruises, scratches, dents and marks
 - 2.8 Product is checked against plans at identified checkpoints
- 3 Finalise operation and maintain equipment
 - 3.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
 - 3.2 Machinery is cleaned and left in a safe mode
 - 3.3 Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
 - 3.4 Unused hardware is collected and stored for re-use or disposal following workplace procedures
 - 3.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Furniture includes:	<ul style="list-style-type: none">angular structures and curved cabinets incorporating rails and oval design
Material bending and forming techniques include:	<ul style="list-style-type: none">steam/heat and bendgroove and bend
Unit scope includes:	<ul style="list-style-type: none">reading and interpreting plansdeveloping set-outspreparing and using jig, templates and shaped caulsusing hand and/or power tools and equipment and operating woodworking machinery

Assessment Requirements for MSFFM3004 Produce angled and curved furniture using solid timber

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Produce a minimum of two (2) significant timber products which must include:
 - one (1) curved cabinet with rails
 - one (1) item involving oval design using traditional construction methods and jointing
- Conduct operator maintenance on machines and related tools and equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of solid timbers most common to furniture production
- Interpretation of plan representation of furniture design
- Preparation of drawings/set-outs/rods and geometrical concepts
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

MSFFM3005 Fabricate custom furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning, constructing and assembling custom furniture in response to specific orders and job requests.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|---|
| 1 Prepare for work | 1.1 Custom job requirements, including design, tolerances, process, materials, finish and quantity, are determined from job request and customer specifications |
| | 1.2 Construction and assembly sequence are planned |
| | 1.3 Procedures are determined for checking quality at each stage of the process |
| | 1.4 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.5 Suitable work area is selected for the task |
| | 1.6 Preparatory drawings and set-outs for tasks are completed |

- | | | | |
|---|---|-----|--|
| | | 1.7 | Cutting list for components is developed |
| | | 1.8 | Materials are selected following work instructions |
| | | 1.9 | Tools and equipment suitable for construction are identified and checked for safe and effective operation |
| 2 | Complete construction | 2.1 | Materials are set out and prepared according to work instructions and components are marked according to industry practices |
| | | 2.2 | Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications |
| | | 2.3 | Materials are bent and formed in accordance with the plan |
| | | 2.4 | Components are manufactured and checked against set-outs for tolerances, fit and accuracy |
| 3 | Assemble custom furniture | 3.1 | Components are assembled and checked against set-outs for accuracy, fit, twist and distortion |
| | | 3.2 | Doors, drawers and shelves are assembled and fitted |
| | | 3.3 | Hardware and decorative accessories are applied to specification |
| | | 3.4 | Product is prepared for final finish, including the removal of bruises, scratches, dents and marks |
| | | 3.5 | Product is checked against plans at identified checkpoints and customer acceptance determined |
| 4 | Finalise operation and maintain equipment | 4.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | | 4.2 | Machinery is cleaned and left in a safe mode |
| | | 4.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | | 4.4 | Unused hardware is collected and stored for re-use or disposal following workplace procedures |
| | | 4.5 | Waste and scrap materials are dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Custom furniture includes:

- one-off manufacture in response to specific customer requirements. It does not include variations or modification to a production line item. It covers:
 - wall units
 - vanity units
 - kitchen cabinets
 - sideboards/buffets
 - drawer units
 - display cabinets
 - counters
 - tables
 - beds

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work involves reading and interpreting plans, customer liaison, developing set-outs, using hand and/or power tools, equipment and operating woodworking machinery
- competency may be demonstrated in workplaces involved in the manufacture of solid timber domestic furniture, commercial furniture and/or furniture components

Material bending and forming techniques

- steam and bend
- machined curves

include:**Tools and equipment include:**

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels
- chisels
- planes
- hand saws
- power saws
- portable routers and trimmers
- power drills/screwdrivers
- pneumatic tools, compressor and spray equipment
- hoses
- clamps
- screwdrivers and pincers

Machines include:

- band saws
- cross-cut saws
- mitre saws
- panel and rip saws
- surface planers
- panel planers
- shaping machines and jigs
- sanders
- horizontal borers
- vertical drill presses
- dovetailers
- pedestal grinders
- wood-turning lathes
- veneer guillotines and presses

Materials include:

- timber
- adhesives
- screws
- nails
- dowels
- metal fasteners
- knock-down fittings
- glass
- decorative finishes and abrasive paper

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3005B Fabricate custom furniture.

MSFFM3006 Install furnishing products

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers the installation of furnishing products to a given plan.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Work instructions are used to determine job requirements, including location, type of installation, tolerances, process, finish and quality
		1.2	Installation location and sequence are planned
		1.3	Procedures are determined for checking quality at each stage of the process
		1.4	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.5	Hardware, fittings and attachments are collected
		1.6	Tools and equipment suitable for installation are identified and checked for safe and effective operation

- 1.7 Fixing and joining devices are selected in line with work instructions and types of materials
 - 1.8 Required installation aids are selected and checked for suitability for purpose
- 2 Complete installation
 - 2.1 Site is prepared for installation
 - 2.2 Furnishing products are prepared to site requirements
 - 2.3 Hand and/or power tools and equipment are used in accordance with workplace requirements, including use of personal protective equipment
 - 2.4 Fixing methods are undertaken according to site conditions
 - 2.5 Installed furniture product is checked for compliance with specification
 - 2.6 Tops and/or appliances are installed in accordance with plans and specifications
 - 2.7 Hardware and decorative accessories are installed
 - 2.8 Work is checked against required quality standards
- 3 Finalise operation and maintain equipment
 - 3.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
 - 3.2 Machinery is cleaned and left in a safe mode
 - 3.3 Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
 - 3.4 Unused hardware is collected and stored for re-use or disposal following workplace procedures
 - 3.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Furnishing products for installation include:

- kitchen cabinets
- bathroom cabinets
- wall units
- desks
- counters
- wardrobes
- dressing tables
- entertainment units
- laundry cabinets

Appliances to be installed include:

- ovens
- range hoods
- sinks
- basins
- cooktops
- refrigerators

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the installation of furnishing products
- competency may be demonstrated on worksites of enterprises involved in the installation of solid timber furniture, domestic furniture, commercial furniture, kitchen

	and bathroom cabinets
Tools and equipment include:	<ul style="list-style-type: none">• measuring tapes or rulers• hammers• mallets• squares• bevels• chisels• levels• plumb lobs• planes• hand saws• power saws• power planers• cordless drills• power drills• screwdrivers• explosive fixing gun• clamps• supporting devices• screwdrivers
Materials include:	<ul style="list-style-type: none">• timber• manufactured board• laminates• granite• marble• stainless steel• adhesives• screws• nails• masonry anchors• dowels• cavity wall fixing
Product checking is to cover:	<ul style="list-style-type: none">• level• plumb• twirl• alignment of doors and/or drawers
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans,

- drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

MSFFM3007 Prepare and apply decorative surfaces for furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing, constructing and applying veneers and inlays to furniture components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|---|
| 1 Prepare the work | 1.1 Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity |
| | 1.2 Construction sequence is planned |
| | 1.3 Procedures are determined for checking quality at each stage of the process |
| | 1.4 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.5 Suitable work area is selected for the task |
| | 1.6 Tools and equipment suitable for construction are |

			identified and checked for safe and effective operation
2	Lay out and prepare materials	2.1	Materials are selected and checked for flaws following work instructions
		2.2	Materials are laid out to requirements
		2.3	Suitable joining points are selected
		2.4	Material is prepared for cutting
3	Construct and apply decorative surfaces	3.1	Material is cut to size and required thickness
		3.2	Materials are laid out in the required design
		3.3	Machinery is used in accordance with workplace procedures, including use of personal protective equipment
		3.4	Items are cut to requirements
		3.5	Joining process is undertaken according to workplace procedures
		3.6	Adhesives are applied according to workplace procedures and/or manufacturer instructions
		3.7	Work is checked against required quality standards
		3.8	Any non-conformity with the required quality standards is rectified
4	Finalise operation and maintain equipment	4.1	Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
		4.2	Machinery is cleaned and left in a safe mode
		4.3	Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
		4.4	Unused hardware is collected and stored for re-use or disposal following workplace procedures
		4.5	Waste and scrap materials are dealt with following workplace procedures

Assessment Requirements for MSFFM3007 Prepare and apply decorative surfaces for furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- Prepare and apply a minimum of three (3) different decorative surfaces to various substrates
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of decorative surfaces
- Interpretation of plan representation of furniture design
- Preparation of drawings/set-outs
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, tools and equipment required to prepare and apply decorative surfaces for furniture.

MSFFM3008 Select timbers for furniture production

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting suitable timbers for use in production by applying knowledge of timber technology.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine timber requirement	1.1	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.2	Structural requirements for timbers are determined from workplace documentation
		1.3	Timber is assessed for suitability in accordance with selection criteria
		1.4	Written report is prepared substantiating selection of timber
2	Evaluate timber selected	2.1	Other materials which may be incorporated into furnishing item are identified and compatibility factors to be considered are recorded for inclusion in production plans

- 2.2 Moisture content of timber selected is determined to ensure compliance with production requirements
- 2.3 Density and working properties of timber are determined to ensure compliance with production requirements
- 2.4 Any faults or features in the timber are identified and strategies are suggested to overcome/minimise their effects
- 2.5 Recommendations on any changes to appropriate finishes and adhesives are recorded for inclusion in production plans

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Furnishing items include:**
- solid timber furniture
 - upholstered furniture and occasional items
- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Timbers include:**
- indigenous and overseas timbers
 - softwood
 - hardwood
- Selection criteria**
- aesthetic appeal
 - shape

- includes:**
 - volumes required and characteristics
- Working properties include:**
 - hardness
 - strength and brittleness
- Personal protective equipment includes:**
 - that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
 - workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3010B Select timbers for furniture production.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFFM3008 Select timbers for furniture production

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- From a range of ten (10) common furniture species samples, identify the species correctly, match it to a specified application and justify the choice
- Correctly identify natural and seasoning faults in selected timbers
- Use a moisture meter to measure the moisture content in a minimum of three (3) samples, including one (1) hard and one (1) soft timber
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Characteristics and uses of a range of available indigenous and overseas timber
- Commonly used complementary materials and their compatibility when used in conjunction with others
- Impact of climate and workshop conditions on timbers
- Timber seasoning methods, techniques and faults
- Solid timber conversion techniques

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a range of timber and moisture content measuring devices.

MSFFM3009 Produce manual and computer-aided production drawings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers producing manual and computer-aided production drawings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify object to be drawn	1.1	The purposes and any operational characteristics of object to be drawn are identified
		1.2	Production materials and method are identified
2	Establish drawing criteria and limitations	2.1	Type of drawing to be completed is identified
		2.2	Drawing requirements are established and documented identifying dimensions, angles, shapes and finished sizes
		2.3	Drawing conventions and specifications to be noted on the drawing are identified
		2.4	Appropriate medium for drawings is identified and

		selected
3	Quantify and draft initial drawing	<p>3.1 Dimensions are plotted from criteria and documented specifications</p> <p>3.2 Dimensional points are connected to match appropriate drawing views</p> <p>3.3 Any production notes or special requirements are noted</p> <p>3.4 Drawing conventions and specifications are noted on the documentation</p>
4	Complete drawing	<p>4.1 Angles, shapes and dimensions are checked against specifications and sample</p> <p>4.2 Adjustments are made to the drawing within scope of authority</p> <p>4.3 Drawing is checked for compliance with workplace documentation requirements</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFM3009 Produce manual and computer-aided production drawings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Identify the factors and criteria relevant to the drawings
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Prepare production drawings of furniture/furnishings:
 - covering a scope of at least three (3) products
 - applying both manual and computer-aided techniques and processes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Furniture design and planning criteria
- Structural geometry
- Measurement techniques and equipment/tools
- Theory and practice of calculations (addition, subtraction, multiplication and division)
- Types, techniques and processes of manual production drawing
- Types of computer-aided drawing equipment, software, techniques and processes
- Conventional signs and markings for drawings

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to information on the subjects for drawing, computer-aided drawing systems, measuring, calculating and recording devices.

MSFFM3010 Prepare cutting list from plans and job specifications

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers reading plans and job specifications to prepare cutting lists and providing data for subsequent processing operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Read plans and job specifications	1.1	Job specifications, set-out rods and plans are used to determine the job requirements, including cutting list, dimension, design, quality materials and processes
		1.2	Job components are established according to job specification and workplace procedures
		1.3	Geometry of components are established according to specifications
2	Prepare cutting lists	2.1	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		2.2	Cutting list is checked and set out in accordance with

		workplace procedures, plans and specifications
	2.3	Components are identified and described using common workplace terminology
	2.4	Sizes and tolerance of components are established and documented in accordance with workplace procedures
	2.5	Processing requirements are identified and documented
	2.6	Dimensional allowances for further processing are identified and documented
3	Read and interpret cutting lists	3.1 Cutting list is read and interpreted in accordance with the job requirements
		3.2 Quantities and dimensions are interpreted
		3.3 Quality standards and waste factors are considered
		3.4 Processing methods are established
		3.5 Processing time is identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit scope includes:	<ul style="list-style-type: none"> reading of plans and specifications and the preparation of cutting lists for the production of furniture components preparation of cutting lists may be completed by both manual and computer assisted/generated means
Unit context includes:	<ul style="list-style-type: none"> WHS requirements, including legislation, building codes, material safety management systems, hazardous substances

	and dangerous goods codes, and local safe operating procedures
	<ul style="list-style-type: none">• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving in the reading of plans and specifications and the preparation of cutting lists• competency may be determined in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Materials to be considered include:	<ul style="list-style-type: none">• solid timber• manufactured board• metal• plastics• glass
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3012B Prepare cutting list from plans and job specifications.

Assessment Requirements for MSFFM3010 Prepare cutting list from plans and job specifications

Modification History

Release 1 - New unit of competency

Performance Evidence

- Locate, interpret and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials and tools used in the work process
- Follow work instructions, operating procedures and manufacturers' instructions to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain optimum production output and product quality
- Interpret production plans and prepare cutting lists on a minimum of four (4) occasions with lists each having at least ten (10) different components and, overall, the lists incorporating four (4) different types of material
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Characteristics of materials and tooling used and use of products programmed
- Identification of equipment, processes and procedures
- Pattern techniques for optimising materials

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans and specifications, standard cutting list formats and workplace standard processing procedures.

MSFFM3011 Measure and draw site layout for manufactured furniture products

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers measuring and recording site layout details to provide an accurate basis for both manufacture and installation of furniture products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------------------------|---|
| 1 Obtain measurements | <div style="margin-left: 20px;">1.1 The purpose of obtaining measurements is clarified and confirmed</div> <div style="margin-left: 20px;">1.2 The most appropriate method of obtaining the measurement is selected and applied</div> <div style="margin-left: 20px;">1.3 Accurate measurements are obtained, confirmed and recorded</div> <div style="margin-left: 20px;">1.4 Calculations required for the measurement or validation are selected and correctly applied</div> <div style="margin-left: 20px;">1.5 Quality assurance requirements, standards and tolerances associated with enterprise operations are recognised and adhered to</div> |
|------------------------------|---|

- | | | | |
|---|------------------|-----|---|
| 2 | Draw site layout | 2.1 | Intended use of the site is clarified and confirmed |
| | | 2.2 | A site plan is prepared showing all features and measurements |
| | | 2.3 | A site elevation is completed showing all features and measurements |
| | | 2.4 | Unique and non-complying features which may impact on manufacture and/or installation are highlighted and referred to the appropriate party |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|--|
| Unit scope includes: | <ul style="list-style-type: none">• measurement and drawing of site layout related to the manufacture and installation of furniture, cabinets, glass, soft furnishings, upholstery, picture framing and floor covering products |
| Drawing include: | <ul style="list-style-type: none">• manual or computer-aided |
| Measurements: | <ul style="list-style-type: none">• are to be in metric scale, cover all dimensions of the site and furnishings and involve the use of:<ul style="list-style-type: none">• rulers• tape measures• squares• service detectors• laser or equivalent technology |
| Critical dimensions that may impact on | <ul style="list-style-type: none">• the square of the structure• angles of floor to walls |

manufacture and installation include:	<ul style="list-style-type: none">• walls to ceiling• vertical walls• horizontal floor and ceiling• service locations and critical structural criteria
Calculations include:	<ul style="list-style-type: none">• area• perimeter• volume• mass• scales and ratios (ingredients/elements and triangulation) and require the application of addition• subtraction• multiplication and division processes• calculations are to be performed both manually and with the aid of a calculator
Unit context includes:	<ul style="list-style-type: none">• work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

Assessment Requirements for MSFFM3011 Measure and draw site layout for manufactured furniture products

Modification History

Release 1 - New unit of competency

Performance Evidence

- Identify the factors relevant to the measurements and drawings
- Communicate effectively to enable accurate calculations, measurements and drawings
- Accurately measure and record particulars for required sector sites and materials
- Draw accurate, scaled plans and elevations relevant to the site using manual or computer-aided methods
- Identify and communicate on measurements and dimensions which may impact on manufacture and/or installation
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money

Knowledge Evidence

- Furniture design and planning criteria
- Drawing techniques, technologies and processes
- Furniture installation methods, criteria and techniques
- Measurement techniques and equipment/tools
- Theory and practice of calculations (addition, subtraction, multiplication and division)
- Conventional signs and markings for plans and drawings

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to information on the site and products for measurement and calculation, suitable work area appropriate to the activity, suitable site plans/drawings and/or specifications, and measuring, calculating and recording devices.

MSFFM3012 Set up, operate and maintain sawing machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating and maintaining sawing machines using their full technical potential and capacities. It encompasses and builds on the machines and tasks covered in unit *MSFFM2010 Set up, operate and maintain basic static machines*.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare for work | 1.1 Work instructions are used to determine job requirements, including design, quality, materials, equipment and quantities |
| | 1.2 Cutting list and job specifications are read and interpreted |
| | 1.3 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.4 Material for machining is selected and inspected for quality |
| | 1.5 Sawing machines, cutting tools and jigs are identified and checked for safe and effective operation |

- | | | |
|---|---|---|
| | 1.6 | Procedures are determined for minimising waste material |
| | 1.7 | Procedures are identified for maximising energy efficiency while completing the job |
| 2 | Set up machines | |
| | 2.1 | Safety equipment, including emergency stops, gauges, guards and controls are checked |
| | 2.2 | Saw settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions |
| | 2.3 | Trial runs are conducted to check saw operation, accuracy and quality of finished work |
| | 2.4 | Necessary adjustments are made to saw settings |
| 3 | Operate machines | |
| | 3.1 | Saw start-up procedure is carried out in accordance with manufacturer instructions |
| | 3.2 | Material to be sawed is positioned in accordance with manufacturer instructions, tooling requirements, safe handling procedures and standard workplace operating procedures |
| | 3.3 | Saw is operated in accordance with its designed capacity and purpose, and to manufacturer recommendations |
| | 3.4 | Saw operation is monitored to ensure product quality and output |
| | 3.5 | Waste quantities are checked and minimised |
| | 3.6 | Items that do not meet quality requirements are recycled or discarded according to workplace procedures |
| | 3.7 | Problems with the required work and/or the operation of the saw are identified and reported to appropriate persons |
| 4 | Finalise operation and maintain equipment | |
| | 4.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | 4.2 | Machinery is cleaned and left in a safe mode |
| | 4.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | 4.4 | Unused hardware is collected and stored for re-use or |

disposal following workplace procedures

- 4.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Sawing machines include:

- cross-cut saws
- circular rip saws
- sliding table panel saws and scroll-band saws
- numerically controlled (NC) beam saws
- wall saws
- band re-saws and straight line edgers

Materials to be machined include:

- solid timber
- manufactured board
- laminates
- plastics
- acrylics
- synthetic solids

Unit scope includes:

- reading and interpreting plans
- deep ripping
- cutting angles and compound angles
- trenching flat panel components
- shaping components
- using jigs and fixtures
- breaking down boards
- maintaining machine parts and saw blades

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machines• competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Tools and equipment include:	<ul style="list-style-type: none">• machine-specific tools• screwdrivers• hammers• spanners• jigs and fixtures
Materials include:	<ul style="list-style-type: none">• sawing machine consumables• oils and lubricants and trial materials
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3020B Set up, operate and maintain sawing machines.

Assessment Requirements for MSFFM3012 Set up, operate and maintain sawing machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up, operate and maintain at least four (4) different types of saws, using safety cut-outs and guards
- Conduct operator maintenance on the machines and related equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of sawing machines
- Sawing processes and techniques
- Characteristics of materials and uses of products produced
- Workplace guidelines regarding acceptable tolerance levels
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to sawing machinery, standard operating procedures and unprocessed materials.

MSFFM3013 Set up, operate and maintain drilling machines

Modification History

Release 2 - Mapping corrected

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating and maintaining drilling machines using their full technical potential and capacities. It encompasses and builds on the drilling machines and tasks covered in unit *MSFFM2010 Set up, operate and maintain basic static machines*.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Work instructions are used to determine job requirements, including design, quality, materials, equipment and quantities |
| | | 1.2 | Cutting list and job specifications are read and interpreted |
| | | 1.3 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.4 | Material for machining is selected and inspected for quality |
| | | 1.5 | Drilling machines, cutting tools and jigs are identified and |

		checked for safe and effective operation
	1.6	Procedures are determined for minimising waste material
	1.7	Procedures are identified for maximising energy efficiency while completing the job
2	Set up machines	
	2.1	Safety equipment, including emergency stops, gauges, guards and controls are checked
	2.2	Drill settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions
	2.3	Trial runs are conducted to check drill operation, accuracy and quality of finished work
	2.4	Necessary adjustments are made to drill settings
3	Operate machines	
	3.1	Drill start-up procedure is carried out in accordance with manufacturer instructions
	3.2	Material to be drilled is positioned in accordance with manufacturer instructions, tooling requirements, safe handling procedures and standard workplace operating procedures
	3.3	Drill is operated in accordance with its designed capacity and purpose, and to manufacturer recommendations
	3.4	Drill operation is monitored to ensure product quality and output
	3.5	Items that do not meet quality requirements are recycled or discarded according to workplace procedures
	3.6	Problems with the required work and/or the operation of the drill are identified and reported to appropriate persons
4	Finalise operation and maintain equipment	
	4.1	Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
	4.2	Machinery is cleaned and left in a safe mode
	4.3	Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
	4.4	Unused hardware is collected and stored for re-use or disposal following workplace procedures

- 4.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Drilling machines include:

- single-head multi-spindle machines
- single-spindle vertical and horizontal machines
- multi-head multi-spindle machines

Materials to be machined include:

- solid timber
- manufactured board
- metal
- glass

Unit scope includes:

- reading and interpreting working drawing and manufacturer hardware specification
- drilling pattern selection
- cutter fitting to meet job specification
- adjustment and use of pressures and stops

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machines

	<ul style="list-style-type: none">• competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Tools and equipment include:	<ul style="list-style-type: none">• machine-specific tools• screwdrivers• hammers• spanners• jigs and fixtures
Materials include:	<ul style="list-style-type: none">• drilling machine consumables• oils and lubricants and trial materials
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3021B Set up, operate and maintain drilling machines.

disposal following workplace procedures

- 4.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Joining machines include:

- mortise and tenoners (either joinery or furniture)
- dovetailers (single or multi-pin)
- dowelling and inserting machines

Materials to be machined include:

- solid timber
- manufactured board

Unit scope includes:

- reading and interpreting working drawings
- machining mortise and tenon joints, dovetailing, scribed joints, angle joints and compound angle joints
- maintaining tools and cutters

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machines
- competency may be demonstrated in workplaces involved in

	the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

- 4.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
 - 4.2 Machinery is cleaned and left in a safe mode
 - 4.3 Faulty and/or defective equipment is tagged and reported in accordance with workplace practices

- 4.4 Unused hardware is collected and stored for re-use or disposal following workplace procedures
- 4.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Planing and finishing machines include:

- surface planer
- panel planer and wide belt sander
- planer sander and over and under machines
- multi-drum sander

Material to be machined include:

- solid timber
- manufactured board

Unit scope includes:

- changing and monitoring straight cutters and knives
- setting pressures
- chip breaker and fences
- changing abrasive belts and adjusting pressures
- feed and belt tracking devices

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion,

judgement and problem solving in the set up and operation of machines

- competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Tools and equipment include:

- machine-specific tools and tension wrenches
- screwdrivers
- hammers
- spanners
- jigs and fixtures

Materials include:

- planing and finishing machine consumables
- oils and lubricants and trial materials

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3023B Set up, operate and maintain planing and finishing machines.

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage and wastage of goods, equipment and products
 - maintain required production output and product quality
- Identify, set up, operate and maintain multi-headed planing and moulding machine, including the use of safety cut-outs and guards, to complete the following:
 - square dress timber
 - produce a minimum range of three (3) detailed mouldings profiled on at least one edge and one face to a minimum of Australian Standards criteria
- Conduct operator maintenance on the machine
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of planing and moulding machines
- Planing and moulding processes and techniques
- Characteristics of materials and uses of products produced
- Workplace guidelines regarding acceptable tolerance levels
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a planing and moulding machine, standard operating procedures, and unprocessed materials.

MSFFM3017 Set up, operate and maintain routing and shaping machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating and maintaining routing and shaping machines using their full potential and capacities in the production of furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Work instructions are used to determine job requirements, including design, quality, materials, equipment and quantities |
| | | 1.2 | Cutting list and job specifications are read and interpreted |
| | | 1.3 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.4 | Material for machining is selected and inspected for quality |
| | | 1.5 | Routing and shaping machines, cutting tools and jigs are identified and checked for safe and effective operation |

- | | | |
|---|---|---|
| | 1.6 | Procedures are determined for minimising waste material |
| | 1.7 | Procedures are identified for maximising energy efficiency while completing the job |
| 2 | Set up machines | |
| | 2.1 | Safety equipment, including emergency stops, gauges, guards and controls are checked |
| | 2.2 | Routing and shaping machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions |
| | 2.3 | Trial runs are conducted to check machine operation, accuracy and quality of finished work |
| | 2.4 | Necessary adjustments are made to machine settings |
| 3 | Operate machines | |
| | 3.1 | Machine start-up procedure is carried out in accordance with manufacturer instructions |
| | 3.2 | Material is fed into machine in accordance with manufacturer instructions, tooling requirements, safe handling procedures and standard workplace operating procedures |
| | 3.3 | Machine is operated in accordance with its designed capacity and purpose, and to manufacturer recommendations |
| | 3.4 | Machine operation is monitored to ensure product quality and output |
| | 3.5 | Items that do not meet quality requirements are recycled or discarded according to workplace procedures |
| | 3.6 | Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons |
| 4 | Finalise operation and maintain equipment | |
| | 4.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | 4.2 | Machinery is cleaned and left in a safe mode |
| | 4.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | 4.4 | Unused hardware is collected and stored for re-use or |

disposal following workplace procedures

- 4.5 Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Routing and shaping machines include:

- spindle moulding machine
- overhead or inverted pin routing machine

Material to be routed and shaped include:

- solid timber
- manufactured board
- plastics and laminates

Unit scope includes:

- setting up fences and guides
- maintaining cutters
- selecting feed and spindle speeds
- the use of feed unit
- safety pressure devices/guards
- linear, convex and concave shaping
- rebating
- moulding and grooving material
- using jigs and fixtures

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation

	insurance requirements
	<ul style="list-style-type: none">• work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machines• competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Tools and equipment include:	<ul style="list-style-type: none">• machine-specific tools• screwdrivers• hammers• spanners• jigs and fixtures
Materials include:	<ul style="list-style-type: none">• routing and shaping machine consumables• oils and lubricants and trial materials
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3025B Set up, operate and maintain routing and shaping machines.

workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Lathes include:

- two of fixed knife
- rotary knife and copying lathe

Unit scope includes:

- reading the plans and specifications
- manufacture of templates

Unit context includes:

- freehand grinding of cutters
- application of cutting tools
- set-up and operation of lathes to produce turned components
- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machines
- competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Tools include:

- machine-specific tools
- tension wrench

- | | |

Assessment Requirements for MSFFM3018 Set up, operate and maintain mechanical wood-turning lathes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up, operate and maintain at least two (2) different lathes, including the use of safety cut-outs and guards, to complete the following:
 - off-hand grind a range of cutters
 - manufacture and apply a template
 - complete a minimum of two (2) detailed turnings which are to include fillets, beads, covers and square shoulder
- Conduct operator maintenance on the lathes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of lathes
- Characteristics of materials and uses of products produced
- Workplace guidelines regarding acceptable tolerance levels
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to lathes, standard operating procedures and unprocessed materials.

Assessment Requirements for MSFFM3019 Set up, operate and maintain automated edge banding machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up and operate an automated (not fully automatic) edging machine to complete the following:
 - the set up and application of at least three (3) different edge treatment materials
 - the identification and correction of at least two (2) real or simulated machining faults
- Conduct operator maintenance on the machines and equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of machines
- Characteristics, uses and limitations of board products, edging products and adhesives
- Workplace guidelines regarding acceptable tolerance levels
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to an automated edge banding machine, standard operating procedures, and unprocessed materials.

MSFFM3020 Fabricate synthetic solid surface products

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers fabricating synthetic solid surface furniture and furnishing products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|---|
| 1 Prepare for work | 1.1 Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity |
| | 1.2 Fabrication sequence is planned |
| | 1.3 Procedures are determined for checking quality at each stage of the process |
| | 1.4 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.5 Suitable work area is selected for the task |
| | 1.6 Preparatory drawings and set-outs for tasks are completed |

- | | | |
|---|---|--|
| | 1.7 | Cutting list for components is developed |
| | 1.8 | Materials are selected following work instructions |
| | 1.9 | Tools and equipment suitable for fabrication are identified and checked for safe and effective operation |
| 2 | Complete fabrication | 2.1 Materials are set out and prepared according to work instructions and components are marked according to industry practices |
| | 2.2 | Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications |
| | 2.3 | Components are fabricated and checked against set-outs for accuracy tolerances, fit and distortion |
| | 2.4 | Doors, drawers, shelves or decorative treatments are fitted as required |
| | 2.5 | Product is prepared for final finish, including the removal of bruises, scratches, dents and marks |
| | 2.6 | Product is checked against plans at identified checkpoints |
| 3 | Finalise operation and maintain equipment | 3.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | 3.2 | Machinery is cleaned and left in a safe mode |
| | 3.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | 3.4 | Unused hardware is collected and stored for re-use or disposal following workplace procedures |
| | 3.5 | Waste and scrap materials are dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Fabricate a minimum of three (3) synthetic solid surface material products, including at least one (1) full benchtop
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of synthetic solid surface materials
- Interpretation of plan representation of furniture design
- Preparation of drawings and set-outs
- Identification of hand and/or power tools, materials, machines, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, hand and/or power tools, machines, equipment, materials and a work area.

MSFFM3021 Set up, operate and maintain computer numerically controlled (CNC) sizing machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating and maintaining CNC sizing machines to produce furniture or components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for work	<div><div>1.1</div><div>Work instructions are used to determine job requirements, including design, quality, materials, equipment and quantities</div></div> <div><div>1.2</div><div>Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work</div></div> <div><div>1.3</div><div>Material for machining is selected and inspected for appropriate quality</div></div> <div><div>1.4</div><div>Procedures are determined for minimising waste material</div></div> <div><div>1.5</div><div>Procedures are identified for maximising energy efficiency while completing the job</div></div>

- | | | | |
|---|---|-----|--|
| 2 | Set up machines | 2.1 | CNC program is set to job requirements |
| | | 2.2 | Safety equipment, including emergency stops, gauges, guards and controls are checked |
| | | 2.3 | Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions |
| | | 2.4 | Machines, cutting tools and jigs are checked for safe and effective operation |
| | | 2.5 | Trial runs are conducted to check machine operation and quality of finished work |
| | | 2.6 | Final adjustments are made to CNC programs and equipment according to workplace procedures |
| 3 | Operate machines | 3.1 | Machines are operated and monitored to ensure product quality and output |
| | | 3.2 | Waste quantities are checked and minimised |
| | | 3.3 | Problems with the required work are identified and reported to appropriate persons |
| | | 3.4 | Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures |
| | | 3.5 | Any authorised changes in working procedures are followed |
| 4 | Finalise operation and maintain equipment | 4.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | | 4.2 | Machinery is cleaned and left in a safe mode |
| | | 4.3 | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices |
| | | 4.4 | Unused hardware is collected and stored for re-use or disposal following workplace procedures |
| | | 4.5 | Waste and scrap materials are dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

CNC sizing machines include:

- CNC beam saws
- double end profiling machines

Unit scope includes:

computer programming skills
reading and interpreting drawings
stock control
setting cutting speeds
computer-aided machining operations
saw and tool maintenance

Materials to be sized include:

- solid timber
- manufactured board
- laminate
- solid synthetic materials and plastics

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machines
- competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Tools include:

- machine-specific tools
- screwdrivers
- hammers
- spanners

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM3030B Set up, operate and maintain CNC sizing machines.

Assessment Requirements for MSFFM3021 Set up, operate and maintain computer numerically controlled (CNC) sizing machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Locate, interpret and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Identify, set up and operate CNC sizing equipment, including the use of safety cut-outs and guards, to produce a range of complex cutting patterns
- Conduct operator maintenance on the machine and related equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of CNC sizing machines
- CNC theory, practices and techniques
- Characteristics of materials used and uses of products produced
- Work flow processes
- Procedures for reporting materials, product or equipment faults

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to CNC controlled equipment, standard operating procedures and unprocessed materials.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

CNC machining and processing centres include

- a three axis machining centre
- multi-tasking machining centres
- flat-bed routers and mortise

Materials to be machined and processed include:

- solid timber
- manufactured board

Unit scope includes:

- reading and interpreting drawings
- selecting and installing tooling
- setting jigs and fixtures
- programming (sub-programs and parametrics)
- performance of computer-aided design (CAD)/computer-aided manufacture (CAM) functions
- downloading and storage of data to complete detailed profiling
- other specified operations

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machining and processing centres
- competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic

	furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Tools and equipment include:	<ul style="list-style-type: none">• stand-alone or integral computing systems• machine-specific tools

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Machines include:

- a tool and cutter grinder or a profile grinder
- a straight knife grinder and a bench or pedestal grinder

Unit scope includes:

- identification of cutter design requirements
- geometrical development of cutter profiles
- inspection and identification of maintenance requirements
- selection and matching of abrasives for job requirements
- producing templates
- maintenance of detailed cutter profiles
- maintenance of straight cutters for a range of woodworking machines

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machines

Cutting tools include:

- profile knives
- router cutters
- straight knives
- profile cutter heads

Assessment Requirements for MSFFM3023 Produce and maintain cutting tools

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Produce a set of two (2) matching profile cutters
- Maintain a router cutter and solid profile cutter head
- Conduct operator maintenance on the machines/ equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of grinding machines
- Cutter development geometry and principles
- Characteristics, properties and limitations of cutter steels
- Grinding practices and techniques
- Types, characteristics and limitations of grinding adhesives and processes
- Workplace guidelines regarding acceptable tolerance levels
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to grinding machines, standard operating procedures and unprocessed materials.

MSFFM3024 Construct jigs and fixtures

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing and constructing jigs and fixtures to produce furniture components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify the purpose of the jig or fixture	1.1	Purpose of the jig or fixture, and the equipment it is to be used on is established
		1.2	Proposed service life of jig or fixture is established
		1.3	Tolerances allowed are identified
		1.4	Materials for jig construction are established
		1.5	Quality requirements for each stage of the construction process are identified
2	Plan jig or fixture construction	2.1	Plan of proposed jig or fixture is produced
		2.2	Approval of design is gained through workplace

		procedures
	2.3	Steps or stages in production are planned, noting check points for measurements and tests
3	Collect materials and equipment	3.1 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
	3.2	Sufficient materials to complete the project are assembled ready for use
	3.3	Suitable work area is selected
	3.4	Hand and/or power tools are identified and checked for serviceability and assembled in work area
	3.5	Appropriate equipment required is identified and checked for serviceability
4	Construct the jig or fixture	4.1 Production plan is followed to construct the jig or fixture
	4.2	Tools and equipment are used in accordance with workplace procedures
	4.3	Quality checks are conducted at the identified points
	4.4	Modifications are identified and recommended within workplace procedures
	4.5	Modifications to the plan are documented and followed
	4.6	Jig or fixture is checked for fitness for purpose
5	Finalise operation and maintain equipment	5.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
	5.2	Machinery is cleaned and left in a safe mode
	5.3	Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
	5.4	Unused hardware is collected and stored for re-use or disposal following workplace procedures
	5.5	Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Machines for which jigs and fixtures are made include:

- band saws
- cross-cut saws
- jig saws
- mitre saws
- panel and rip saws
- belt sanders
- panel planers
- surface planers
- horizontal borers
- vertical drill presses
- mortisers
- tenoners
- spindle moulders
- overhead and inverted pin routing machines

Uses for jigs and fixtures include:

- holding
- shaping
- drilling
- cutting
- routing

Production of components requiring jigs and fixtures include:

- chair legs
- shaping curved components
- end panels
- trenching
- grooving

Tools and equipment include:

- measuring tapes or rulers
- hammers

	<ul style="list-style-type: none">• mallets• squares• bevels• chisels• planes• hand saws• power saws• power drills/screwdrivers• pneumatic tools, compressor and spray equipment• clamps• screwdrivers• pincers
Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machines• competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Assessment Requirements for MSFFM3024 Construct jigs and fixtures

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- Select materials and construct a minimum of three (3) different types of jigs/fixtures, including one (1) for a shaping machine and one (1) which is adjustable
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of jigs and fixtures
- Criteria for selecting material for use in jigs and fixtures
- Requirements for cutting, shaping and joining materials
- Identification of equipment, processes and procedures
- Work flow in relation to the use of jigs and fixtures

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a job context, materials and equipment for jig or fixture construction.

MSFFM4001 Hand carve wood to custom design

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers confirming the design requirements, selecting the wood, hand carving it to custom design and preparing the carving for finishing. It applies to a work room and on-site environment and involves application of skills and knowledge at the highly skilled craftsman or artisan level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Confirm the design requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements and instructions relevant to the hand carving of wood are verified and complied with
		1.2	Product design requirements are accessed and confirmed as being feasible
		1.3	Product design requirements are elaborated on as required and documented to enterprise requirements
2	Select and prepare the wood to be hand carved	2.1	The design requirements in terms of product specification and product usage are analysed and confirmed

- | | | |
|---|----------------------------|---|
| | 2.2 | Wood species to satisfy the product specifications are identified |
| | 2.3 | Wood for carving is selected from a detailed analysis and comparison of the product specification and the characteristics, properties and costs of the available wood species |
| | 2.4 | Selected wood is prepared for hand carving |
| 3 | Select carving tools | 3.1 Carving tools selected are the most appropriate for the job |
| | | 3.2 Selected carving tools are checked for serviceability, sharpness, maintenance compliance and safety |
| | | 3.3 Faults are rectified or passed to qualified persons for rectification |
| | | 3.4 Equipment is selected to hold or support material for hand tools application, where applicable |
| 4 | Carve the wood | 4.1 Method and style of wood carving are selected to meet the design requirements and the selected wood |
| | | 4.2 Carving patterns are applied to and enfaced on the wood to guide the carving and optimise the use of the wood |
| | | 4.3 Carving tools are applied initially to bulk clearances which confirm the wood grain selection and the appropriateness of the tools |
| | | 4.4 Carving tools are applied to the precision requirements of the product design |
| 5 | Finalise the work sequence | 5.1 The product is prepared for finishing in accordance with the design specification |
| | | 5.2 Carving tools are cleaned, maintained and stored in accordance with manufacturer specification |
| | | 5.3 Work area is cleared and waste removed |
| | | 5.4 Workplace documentation and/or reports are completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|--|
| Legislative requirements include: | <ul style="list-style-type: none">• applicable legislation from all levels of government that affect organisational operation• award and enterprise agreements• industrial relations• Australian Standards• confidentiality and privacy• WHS• the environment• equal employment opportunity (EEO)• anti-discrimination• relevant industry codes of practice• duty of care and heritage |
| WHS requirements include: | <ul style="list-style-type: none">• Commonwealth, state or territory legislation and regulations• organisational safety policies and procedures• the use of personal protective equipment and clothing• firefighting equipment• first aid equipment• hazard and risk control and elimination of hazardous materials and substances• manual handling, including lifting and carrying |
| Organisational requirements include: | <ul style="list-style-type: none">• legal, organisational and site guidelines, policies and procedures relating to own role and responsibility• quality assurance• procedural manuals• quality and continuous improvement processes and standards• ethical standards• recording and reporting |

- Instructions include:**
- access and equity principles and practices
 - equipment use, maintenance and storage
 - environmental management (waste disposal, recycling and re-use guidelines)
 - workplace procedures relating to the use and operation of tools and equipment
 - production planning figures
 - workplace instructions, including job sheets, plans, specifications, drawings and designs
 - workplace procedures relating to reporting and communications
 - manufacturer instructions for the use of equipment and materials
- Wood species for carving include:**
- lime and ash
 - maple
 - cherry
 - English oak
 - American oak
 - Japanese oak
 - walnut
 - Brazilian mahogany
 - sycamore
 - holly
 - apple
 - pear
 - beech
 - teak
 - iroko
 - rosewood
 - ebony
 - ramin
 - blackwood
- Preparation of wood for hand carving includes:**
- confirmation of grain
 - identification and response to faults
 - knots and contaminants
 - cutting of wood to workable size and shape
- Carving tools include:**
- carving knives
 - chisels (straight and curved)
 - short bent front bent
 - spoon bit
 - back bent
 - skew

	<ul style="list-style-type: none">• fishtail• spade• parting tool• macaroni (fluterino and backeroni)• palm tools• rasps• riffers• punches• gouges• venier• router
Tool sharpening includes:	<ul style="list-style-type: none">• grinding and sharpening using a sandstone wheel or high-speed carborundum stone, a fine oilstone or a fine carving stone• sharpening a carver's chisel/implement involves sharpening bevels on both sides and rounding off bevels
Methods and styles of wood carving include:	<ul style="list-style-type: none">• chip carving• relief carving• Scandinavian flat plane• caricature carving• love spoon• treen• whittling
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices

Unit Mapping Information

Supersedes and is equivalent to LMFFM4005A Hand carve wood to custom design.

Assessment Requirements for MSFFM4001 Hand carve wood to custom design

Modification History

Release 1 - New unit of competency

Performance Evidence

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the use of hand tools
- Interpret product design and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Hand carve a minimum of two (2) significant products, including:
 - the interpretation and necessary adoption of the design specifications
 - the selection of timber for the carving
 - the completion of the carving to specification or commercially acceptable standard
 - the preparation of the products for finishing
- Carry out operator maintenance on hand tools, including the grinding and sharpening of a range of knives and chisels
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to hand carving of wood
- Terminology covering hand carving operations and materials
- Types, characteristics, used and limitations of timber species for hand carving
- Techniques for the design and documentation of specifications for hand carved products
- Organisational and site standards, requirements, policies and procedures for hand carving of wood

- Types, characteristics, uses, limitations and maintenance requirements of the range of tools used in wood carving
- Processes for evaluating the quality of carving tools in terms of specifications, safety, maintainability and commercial reputation
- Range of commonly used hand carving techniques
- Established communication channels and protocols
- Relevant problem identification and resolution
- Workplace safety requirements and WHS legislation
- Work flow within the workplace

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to significant hand carving requirements, including design brief or specification, a range of optional timbers, and a range of quality carving tools and materials for the preparation of the product for finishing.

MSFFM4002 Construct joints for custom furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers joining timber by constructing joints using hand and portable power tools. It includes adapting/designing joints that are compatible with the product material, purpose and style of the furniture and supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of furnishing maker operations. The competency applies to a work room and on-site environment and involves application of skills and knowledge at a highly skilled craftsman or artisan level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Plan and prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to constructing joints for custom furniture are verified and complied with
		1.2	Instructions, plans and/or design briefs are read and interpreted to identify furniture joint requirements
		1.3	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.4	Product purpose, furniture style and construction material

- are identified
- 1.5 Joints are identified and type of joint to be used is selected and adapted/designed as necessary
 - 1.6 Tools, adhesives and fasteners are selected to match the joint type
 - 1.7 Quality checking procedures are developed and documented for each step in the joint construction process
- 2 Make joint
- 2.1 Cutting and joining lines are marked out to suit joint type
 - 2.2 Measurements and calculations are checked for accuracy to ensure quality outcomes
 - 2.3 Timber features are identified and optimal usage criteria are observed
 - 2.4 Timber is cut to specification, inspected and prepared for joining
 - 2.5 Timber is joined in accordance with the job specifications
 - 2.6 Fasteners and adhesives are used to make joints firm where required
 - 2.7 Finished joint is checked against quality requirements
- 3 Finalise the work sequence
- 3.1 The product is prepared for finishing in accordance with the design specification
 - 3.2 Carving tools are cleaned, maintained and stored in accordance with manufacturer specification
 - 3.3 Work area is cleared and waste removed
 - 3.4 Workplace documentation and/or reports are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Joints for custom furniture include:

- dowel
- mortise and tenon
- dovetail
- lap joint
- biscuit joint
- finger joint
- housing joint
- mitre or bridle joints

Tools and equipment include:

- chisels
- mallets
- mortise gauges
- vernier callipers
- vices
- dovetail saws
- tenon saws
- coping saws
- planes
- files
- hand and power drills
- dowel jigs
- power routers
- portable biscuit machines
- power planers
- power saws
- power sanders

Materials include:

- timber (both indigenous and overseas)
- adhesives
- fasteners

Adhesives include:

- resorcinol formaldehyde
- polyurethane
- epoxy
- cyanoacrylate

WHS requirements include:

- Commonwealth, state or territory legislation and regulations
- organisational safety policies and procedures
- the use of personal protective equipment and clothing

- Procedures include:**
- firefighting equipment
 - first aid equipment
 - hazard and risk control and elimination of hazardous materials and substances
 - manual handling, including lifting and carrying
 - work instructions
 - standard operating procedures
 - written, verbal or computer-based procedures
- Organisational requirements include:**
- legal, organisational and site guidelines, policies and procedures relating to own role and responsibility
 - quality assurance
 - procedural manuals
 - quality and continuous improvement processes and standards
 - ethical standards
 - recording and reporting
 - access and equity principles and practices
 - equipment use, maintenance and storage
 - environmental management (waste disposal, recycling and re-use guidelines)

Unit Mapping Information

Supersedes and is equivalent to LMFFM4006A Construct joints for custom furniture.

Assessment Requirements for MSFFM4002 Construct joints for custom furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Select appropriate joint types for the furniture item and produce a minimum of four (4) different joint types in accordance with industry standards and tolerances with at least two (2) produced substantially by hand operations
- Utilise at least three (3) different adhesive types
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to constructing joints for custom furniture moisture suppressants and barrier systems
- Organisational and site standards, requirements, policies and procedures for the creation of joints
- Types of tools and equipment used in joint construction and procedures for their safe use, operation and maintenance
- Characteristics and properties of timber being used
- Characteristics, properties and selection criteria of adhesives used
- Matching requirements of adhesives and fasteners to timbers/materials used
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

- Work flow in relation to the furniture items being made or repaired

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials and equipment relevant to the design and application of jointing techniques, and specifications and work instructions.

MSFFM4003 Produce curved and shaped components for custom furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers production of curved and shaped components for custom furniture in a wide variety of furniture maker operations. It applies to a work room and on-site environment and involves application of skills and knowledge at a highly skilled craftsman or artisan level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to the production of curved and shaped components for custom furniture are verified and complied with |
| | | 1.2 | Instructions or plans are read and interpreted to identify process required to complete work tasks |
| | | 1.3 | Production materials are identified, evaluated and selected |
| | | 1.4 | Tools and equipment are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |

		1.5	Techniques for bending, forming and shaping components are identified, evaluated and selected for the particular applications
		1.6	Sequence of work is planned, including the starting point, to ensure efficiency and quality of construction
		1.7	Quality checking procedures are developed and documented for each step in the production process
2	Complete construction	2.1	Component specifications are set out according to work instructions and materials marked according to industry practices
		2.2	Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications
		2.3	Material bending, forming and shaping are undertaken in accordance with the production plan
		2.4	Components are checked against specified tolerances, fit and accuracy
3	Finalise the work sequence	3.1	The product is prepared for finishing in accordance with the design specification
		3.2	Carving tools are cleaned, maintained and stored in accordance with manufacturer specification
		3.3	Work area is cleared and waste removed
		3.4	Workplace documentation and/or reports are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Curved components include:

- curved timber components produced by:
 - laminating
 - coopering
 - steam bending
 - saw kerfing

Shaped components include:

- timber shaped by hand or static machine tools

Instructions include:

- workplace instructions regarding techniques, materials, tools and equipment required in the production of curved and shaped components for custom furniture
- workplace procedures relating to the use and operation of tools and equipment
- workplace instructions, including job sheets, plans, specifications, drawings and designs
- workplace procedures relating to reporting and communications
- manufacturer instructions for the use of equipment and materials

Materials include:

- timber
- plywood
- medium density fibreboard (MDF)
- veneer
- plastic laminate
- sheet metal
- adhesives
- screws
- nails
- dowels
- decorative finishes
- abrasive paper
- finishing materials

Tools and equipment include:

- measuring tapes or rules
- hammers
- mallets
- squares
- bevels
- chisels
- planes
- hand and power saws

	<ul style="list-style-type: none">• power drills/screwdrivers• pneumatic tools, compressor and spray equipment• clamps• screwdrivers• pincers• rasps

Assessment Requirements for MSFFM4003 Produce curved and shaped components for custom furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Produce a minimum of six (6) significant timber curved components, five (5) from solid timber and one (1) using ply:
 - one (1) involving shaping from solid timber using hand techniques
 - one (1) involving shaping from solid timber using machine techniques
 - one (1) involving laminating
 - one (1) involving use of heat/steam
 - one (1) involving other techniques
 - items must demonstrate appropriate design, use of materials and strength for purpose
- Conduct operator maintenance on machines and related tools and equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the production of curved and shaped components for custom furniture
- Organisational and site standards, requirements, policies and procedures for the production of curved and shaped components for custom furniture
- Techniques for timber bending, forming and shaping

- Types, characteristics, uses, limitations and maintenance requirements of solid timbers commonly used in furniture production
- Types, characteristics, uses and limitations on hand and power tools used in timber bending, forming and shaping
- Interpretation of plan representations of furniture design
- Techniques for the preparation of drawings/set-outs/rods and geometrical concepts
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Work flow within the workplace

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to realistic curved and shaped component tasks, materials and equipment relevant to production of curved and shaped components for custom furniture, and specifications and work instructions.

MSFFM4004 Produce timber veneered components for custom furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers production of timber veneered components for custom-made furniture in a wide variety of fine wood operations. It applies to a workshop environment and involves application of skills and knowledge at a craftsman or artisan level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to producing timber veneered components for custom-made furniture are complied with
		1.2	Instructions, plans or design briefs are read and interpreted to identify processes and materials to complete work tasks
		1.3	Suitable timber or timber veneer material is identified, evaluated and selected
		1.4	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition

		1.5	Sequence of work is planned and documented, including the starting point, to ensure efficiency and quality of finish
		1.6	Quality checking procedures are developed and documented for each step in the veneering process
2	Prepare timber veneer	2.1	Timber is selected and the cutting face is prepared
		2.2	Veneer timber is cut along grain at the specified thickness
		2.3	Veneer thickness and consistency are monitored with respect of size and tolerances
		2.4	Veneer is dressed to the required tolerances for further use
3	Lay out and prepare materials	3.1	Design of veneer is laid out
		3.2	Veneers are selected and checked for flaws
		3.3	Veneers are matched and method of joining to adjacent veneers is selected and prepared for
		3.4	Veneers are prepared for application and laid out
		3.5	Suitable joining processes to backing and adjacent veneers are selected and prepared
		3.6	The style of edge finish is selected and prepared for
4	Apply and/or fit and finish	4.1	Veneers are measured, marked and cut to size, and applied to base material
		4.2	Adhesives are applied according to workplace procedures and manufacturer instructions
		4.3	Selected joining process is applied in accordance with workplace procedures, including the use of protective equipment
		4.4	Final trim and finishing are completed to specifications
		4.5	Work is checked against required quality standards
		4.6	Any non-conformity with the required quality standard is rectified
5	Finalise the work sequence	5.1	The product is prepared for finishing in accordance with the design specification

- 5.2 Carving tools are cleaned, maintained and stored in accordance with manufacturer specification
- 5.3 Work area is cleared and waste removed
- 5.4 Workplace documentation and/or reports are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Veneered components include:

- thin slices of wood, usually thinner than 3 mm (1/8"0 glued and pressed onto core panels of different material, including:
 - wood
 - particleboard
 - medium density fibreboard (MDF)
- veneers are also used in parquetry, marquetry, intarsia and inlays

Instructions include:

- workplace veneering instructions, including job sheets, plans, specifications, drawings and designs
- workplace procedures relating to reporting and communications
- manufacturer instructions for the use of equipment and materials

Tools and equipment include:

- knives
- chisels
- measuring tapes or rules
- mallets
- squares
- levels

- planes
- band saws
- rotary lathe
- slicing machine
- half round lathe
- power saws
- power drills/screwdrivers
- hand drills
- pneumatic tools, compressor and spray equipment
- clamps
- screwdrivers
- rollers
- laminate trimmers
- cutters and hand routers
- sandpaper
- wire wool
- sanding block

Materials include:

- timber
- manufactured board
- laminates
- timber strips
- adhesives
- cleaning materials
- tapes

Veneers include:

- two or more layers of veneer adhered to each other and referred to as laminates employed to provide:
 - structured strength or shape (e.g. the back of a chair) that also has visual appeal
 - applied to a laminate of different material for visual appeal whilst maintaining other structural benefits

Suitable joining processes include:

- mechanical press that uses two flat plates being brought together to press the veneer to the substrate during the gluing process either purely mechanical using a screw or level action or closed with a hydraulic ram. This method is only used for veneering flat surfaces
- vacuum technique involving the component being veneered being placed in a form of bag from which the air is extracted. This method is favoured for veneering curved surfaces and also by smaller operators because of its flexibility
- hot glue hammering that is a traditional method of veneering involving using hot glue on the surfaces being veneered and then hammering the veneer to the subsurface

	with a hammer
Joining to adjacent veneers includes:	<ul style="list-style-type: none">• butting two right angle edges together then ‘stitching’ the veneer using a hot melt glue or tape (commonly used for flat surfaces)• using a scarf joint then gluing the surfaces together (commonly used on curved surfaces)
Style and edge finish include:	<ul style="list-style-type: none">• solid timber• veneer to cover the exposed edge
WHS requirements include:	<ul style="list-style-type: none">• Commonwealth, state or territory legislation and regulations• organisational safety policies and procedures• the use of personal protective equipment and clothing• firefighting equipment• first aid equipment• hazard and risk control and elimination of hazardous materials and substances• manual handling, including lifting and carrying
Procedures include:	<ul style="list-style-type: none">• work instructions• standard operating procedures• written, verbal or computer-based procedures
Organisational requirements include:	<ul style="list-style-type: none">• legal, organisational and site guidelines, policies and procedures relating to own role and responsibility• quality assurance• procedural manuals• quality and continuous improvement processes and standards• ethical standards• recording and reporting• access and equity principles and practices• equipment use, maintenance and storage• environmental management (waste disposal, recycling and re-use guidelines)

Unit Mapping Information

Supersedes and is equivalent to LMFFM4008A Produce timber veneered components for custom furniture.

Assessment Requirements for MSFFM4004 Produce timber veneered components for custom furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Prepare a minimum of one(1) significant veneer, including:
 - the selection of materials
 - the preparation of the cutting face
 - the cutting and dressing of the veneer
- Apply and finish veneers to at least three (3) different surfaces, including one (1) flat, one (1) curved and one (1) being a laminate, including at least two (2) requiring veneer edging
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the production of timber veneer components
- Organisational and site standards, requirements, policies and procedures for the production of timber veneer components
- Types, characteristics, uses and limitations of veneers
- Techniques for the manufacture and application of veneers
- Types, characteristics, uses and limitations of different veneering timbers
- Interpretation of plan representations of furniture design
- The preparation of drawings/set-outs

- Types, characteristics, uses and limitations of tools and equipment and procedures for their safe use, operation and maintenance
- Work flow in relation to furniture production
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to realistic tasks related to the application of veneers, materials and equipment relevant to the production and application of veneers, and specifications and work instructions.

MSFFT4001 Coordinate on-site installation of furnishing products

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers coordinating tradespersons who provide services involved in the installation, refurbishment, restoration or repair of furnishing products, primarily in a kitchen, bathroom or laundry setting.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Plan the coordination of trade services involved in the project | 1.1 Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity |
| | 1.2 Load bearing walls are located |
| | 1.3 Worksite is inspected for compliance with contract documentation, including confirmation that all work can be undertaken as a non-structural improvement |

- | | | | |
|---|---|-----|---|
| | | 1.4 | Additional information or revised drawings are sourced where necessary |
| | | 1.5 | Tradespersons are identified for the required installing services |
| | | 1.6 | Timeframes for carrying out the work are developed |
| 2 | Coordinate and inspect trade service outcomes | 2.1 | Appropriate trade services are coordinated in accordance with relevant timeframes |
| | | 2.2 | The impact of any variations are assessed and timeframes are varied as necessary |
| | | 2.3 | Trade works are progressively checked to ensure compliance with contract documentation |
| | | 2.4 | Satisfactory performance of trade services carried out by trade provider is monitored |
| | | 2.5 | The rectification of identified faults is organised and coordinated |
| | | 2.6 | The restoration of the site is coordinated to ensure compliance with contractual and industry standards |
| 3 | Verify trade work compliance with contract requirements | 3.1 | Final trade work is inspected, assessed and accepted or rejected |
| | | 3.2 | Payments for accepted trade services are authorised |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

- | | |
|---|---|
| Unit context includes: | <ul style="list-style-type: none">• work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate discretion, judgement and problem solving |
| Furnishing installation processes include: | <ul style="list-style-type: none">• cabinets and the full range of products required in the installation• refurbishment, restoration or repair of furnishing, particularly in kitchens, bathrooms or laundries |
| Coordinated tradespersons include: | <ul style="list-style-type: none">• those who, by regulation and competency, have the authority to work on:<ul style="list-style-type: none">• water supply• fixtures and fittings• drainage• natural and artificial lighting• power sources• ceiling and wall linings• waterproofing and sealants• ceramic tiling• interior painting• floor/finish coverings |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices |
| Information and procedures include: | <ul style="list-style-type: none">• contractual documents and explanatory notes• building codes, Australian Standards and CSIRO Notes on the Science of Building• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures |

Unit Mapping Information

Supersedes and is equivalent to LMFFT4001B Coordinate on-site installation of furnishing products.

Assessment Requirements for MSFFT4001 Coordinate on-site installation of furnishing products

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Coordinate a site involving at least three (3) tradespeople on three (3) separate occasions
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Tasks, functions, responsibilities and regulatory requirements for tradespeople involved in water supply and drainage, supply of power and lighting, ceiling and wall linings, tiling and waterproofing, flooring and painting
- Relevant building codes, regulations and codes of practice
- Plan interpretation techniques and standards
- Workplace coordination and communication techniques
- Conflict resolution techniques

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work instructions, plans, work orders, associated and supporting tradespeople, industry and other standards, communication equipment and work areas.

MSFFT4002 Customise stock lines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying and clarifying customer and stock requirements; analysing and selecting options; and developing, implementing and testing customisation processes necessary to adapt stock lines to meet the requirements of a furnishing enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Assess requirements	1.1	Customer/specification is consulted to determine requirements
		1.2	Cost and feasibility of requirements are evaluated and development requirements are explored taking into consideration process, material, quantity, cost and outcome requirements
		1.3	Codes, regulations and technical documentation are consulted to establish design limitations, where applicable
		1.4	Specialist expertise is consulted as required
2	Propose options	2.1	Options for the use and modification of stock lines are defined and proposed to the customer to determine most

		appropriate modifications
	2.2	Modification of stock lines is considered to take into account production, facility, ergonomic requirements, work health and safety (WHS) and environmental factors
3	Develop modifications to stock lines	3.1 Modifications are developed to meet customer specifications/standards, use and all legislative or regulatory requirements
	3.2	Verification of the development is undertaken in accordance with workplace procedures
4	Coordinate implementation and testing of modifications	4.1 Implementation of modifications is arranged and coordinated
	4.2	Outcome is tested and assessed to establish conformance to requirements
	4.3	Variations to the design are carried out where necessary
	4.4	Documentation is prepared to meet all requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work involves customisation of existing stock lines to satisfy particular site and/or customer requirements
- work is performed with little external assistance and with

	minimal supervision or direction. The development of modifications may require the assistance and cooperation of others
Personal protective equipment includes:	<ul style="list-style-type: none">• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving skills• customers may be internal or external• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• product drawings, prototype, design brief, patterns and specifications• machine manufacturer specifications and operational procedures• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures• quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT4002B Customise stock lines.

Assessment Requirements for MSFFT4002 Customise stock lines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify the impact of decisions in terms of commercial, environmental and safety risks for at least one (1) stock line
- Evaluate existing stock line designs and propose modifications
- Evaluate design and design modification performance and coordinate modification and testing
- Suggest improvements to stock line designs and, where authorised, negotiate changes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids, and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Company business policies and plans, including procedures for product modification and product development
- Ergonomic principles for furniture design and manufacture
- Enterprise design practices and processes
- The range of company products, market, work systems and equipment
- Relevant regulatory requirements, recognised standards and codes, and industry practices

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to stock lines, including design, production specifications and procedures, customer requirements and access to realistic customisation options.

MSFFT4003 Organise production processes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers organising the production of mass-produced and customised fittings, equipment and assemblies in the furnishing industry using all available information and resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Collect information and analyse job requirements	1.1	Job specifications are read and key requirements are confirmed
		1.2	Steps and stages in the process are identified and clarification of specifications is sought where required
		1.3	Equipment capabilities are assessed in terms of meeting job specifications
		1.4	Enterprise production plans, including run time and quantities, are compared with plant capabilities
2	Complete preparatory activities	2.1	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work

- | | | |
|---|---|---|
| | 2.2 | Reports are made to appropriate personnel |
| | 2.3 | Proposals for modifications/adaptation of equipment are made |
| | 2.4 | Requirements for tooling/dies are listed |
| | 2.5 | Raw material requirements are listed and communicated to appropriate personnel |
| 3 | Develop and implement operational plans | |
| | 3.1 | Operational work plans, including timeframes and milestones, are developed |
| | 3.2 | Production operations are organised ensuring optimum use of resources |
| | 3.3 | Operational plans are recorded and amended in accordance with enterprise procedures and industry practice |
| 4 | Conduct trials to monitor equipment operation and product quality | |
| | 4.1 | Equipment is set up to make appropriate use of guards, warning devices and safety features, and standard operating procedures are modified to suit the production |
| | 4.2 | Equipment operations are monitored to ensure variations or inconsistencies in output are identified, reported and rectified |
| | 4.3 | Required adjustments to equipment controls and settings are made to ensure consistency and continuity in production |
| | 4.4 | Equipment maintenance, set-up and close-down procedures are planned and documented |
| | 4.5 | Product quality is inspected and compared to requirements |
| | 4.6 | Process is modified, where required, to improve product quality |
| 5 | Monitor product finish | |
| | 5.1 | Product finish is checked for conformity to design specification |
| | 5.2 | Any non-conformity in product finish is noted and possible causes investigated and documented |
| 6 | Evaluate production process | |
| | 6.1 | Productivity information and reports are prepared and processed |
| | 6.2 | All procedures for the process are checked for conformity |

with trial outcomes

- 6.3 Work procedures are authorised by appropriate personnel for implementation
- 6.4 Recommendations for variations to design specifications are made to appropriate personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements
- work requires individuals to demonstrate conceptual ability, discretion, judgement and problem solving
- work is performed with little assistance from others and with minimal supervision or direction
- organising production is undertaken in accordance with established enterprise procedures and practices
- customers or suppliers may be internal or external

Operational planning information sources include:

- enterprise production plan/schedule
- product drawings and specifications
- equipment instructions and capacities
- relevant standards
- inspection requirements and design rules
- customer orders

- archives
 - records
 - cutting lists
- Machines/equipment used in the production process include:**
- microprocessor or computer-controlled machines
 - both production and facility equipment used in the enterprise
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- enterprise production plan/schedule
 - work procedures/instructions
 - manufacturer technical specifications and instructions
 - legislation, regulations and codes of practice relevant to the production environment and processes
 - quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT4003B Organise production processes.

Assessment Requirements for MSFFT4003 Organise production processes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Analyse job requirements and materials and equipment capabilities for a specified and significant production operation and organise the implementation of operational plans, including:
 - conduct of trials
 - coordination of the production process
 - evaluation of the production process
 - reporting on the success of the process
- Lead others and work effectively to organise for production
- Encourage participation of employees in the planning of work activities and changes
- Suggest improvements to production operations and, where appropriate, negotiate changes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Organisational and work flow theory
- Work leadership theory

- Company business policies and plans, including procedures for setting up for production
- Company products, market, work systems and equipment
- Machine processes relevant to the production
- Quality procedures, inspection and testing requirements
- Legislative requirements of the work activities

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to production equipment, raw materials, personnel, and production plans and schedules.

MSFFT4004 Establish and monitor production inventory requirements

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers determining, specifying and documenting the production materials and consumables required for the production of mass-produced and customised fittings, equipment and assemblies. It does not cover the management of the inventory.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify materials requirements	1.1	Drawings and specifications for materials are read and interpreted
		1.2	Sources of product supply are identified
		1.3	Normal quantity supply and matching storage facilities and equipment are identified
		1.4	Material safety data sheets (MSDS) or other supplier safety information are read and any relevant engineering controls or personal protection equipment are identified, and any additional resources required for safe workplace handling and storage of the materials are documented and reported

- | | | | |
|---|--|-----|---|
| | | 1.5 | Procedures to deal with fire or explosion risk, spills or injury are identified and recorded |
| 2 | Monitor consumables and production materials | 2.1 | Consumables and production materials are checked for conformity to design specification and capacity to meet the requirements of the end product |
| | | 2.2 | Any non-conformity in materials is noted and possible causes investigated and documented, including any variations, which may need to be made to the production process or materials used |
| | | 2.3 | Materials and consumables are compared with competitive products, market information and recommendations are made on preferred options |
| | | 2.4 | Preparation procedures for consumables and production materials are identified and checked for required additives, consumables and other materials or equipment requirement |
| | | 2.5 | Materials ordering, storage, safe movement and waste disposal needs are identified |
| 3 | Document materials estimates | 3.1 | All procedures for the estimates process are checked for conformity with workplace procedures |
| | | 3.2 | Cost reports, including time and maintenance, are prepared |
| | | 3.3 | Estimates are authorised by appropriate personnel for implementation |
| | | 3.4 | Recommendations for variations to materials specifications are made to appropriate personnel |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate conceptual ability, discretion, judgement and problem solving
 - decisions are made within the context of application of process, materials knowledge and estimates and extensive knowledge of the required production output and product quality standards
 - function is undertaken in accordance with established enterprise procedures, and practices may include requirements recommended by manufacturers
 - work is performed with minimal supervision or direction and may involve individual and team related
 - customers or suppliers may be internal or external
- Machines and equipment include:**
- microprocessor or computer-controlled machines
 - both production and facility equipment used in the enterprise
- Materials include:**
- timber
 - metal alloys
 - cloth and glass
 - flooring materials
 - the full range of consumables required to directly support the production process
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- work procedures/instructions
 - manufacturer specifications and instructions
 - production process supply support information and specifications
 - commercial supply system indices, catalogues and bulletins
 - supplier evaluation histories
 - budgetary/fiscal constraints
 - legislation/regulation/national and industry codes and

- practices relevant to the product
- quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT4004B Establish and monitor production inventory requirements.

Assessment Requirements for MSFFT4004 Establish and monitor production inventory requirements

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify process requirements in terms of materials and specialist equipment
- Determine appropriate materials and consumables to match production and product quality standards and identify commercially viable sources of their supply
- Calculate materials and other resource requirements and costs, and cost and document requirements
- Identify the impact of decisions in terms of commercial, environmental and safety risks
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Company business policies and plans, including procedures for company products, market, work systems and equipment
- Authorised production processes and plans and related materials and consumables
- Materials and process characteristics and special requirements
- Commercial supply systems, including standard documentation support processes
- Cost-benefit analysis or equivalent techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to production plans, materials and consumables specifications, commercial supply system indices, directories and catalogues, financial resources and delegations, and appropriate software.

MSFFT4005 Install and commission computer numerically controlled (CNC) software

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing and commissioning CNC process and machine control programs in the furnishing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for software installation	1.1	Program format and operational intent is accurately determined and required applications identified
		1.2	Specifications are checked for required operating conditions
		1.3	Program instructions are checked for compliance with specifications
		1.4	Software timers are set to specification where required
2	Install automatic process machine control program	2.1	Appropriate program loading technique is selected
		2.2	External loading devices are correctly connected to automatic process machine control systems

- | | | |
|---|--|---|
| | 2.3 | Machine control system is placed in correct operational mode to accept program loading |
| | 2.4 | Program is downloaded in accordance with manufacturer recommended procedures and enterprise requirements |
| | 2.5 | Checks are made during and after downloading to ensure accurate and complete data transfer |
| | 2.6 | External program loading devices and connections are disconnected from process and machine control system |
| 3 | Commission automatic process and machine control program | |
| | 3.1 | Operation of the equipment using the program is observed |
| | 3.2 | Outputs are checked and measured for compliance with specifications |
| | 3.3 | External inputs are checked for compliance with specifications according to specified procedures |
| | 3.4 | Total operation is checked for compliance with specifications where applicable |
| | 3.5 | Location of program master copy storage is confirmed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative

	obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
	<ul style="list-style-type: none">• work requires individuals to demonstrate analytical and organisational ability, judgement and problem solving• work involves individual and team-related activities in workplaces where the CNC equipment is either new or being substantially upgraded• work is performed without other qualified assistance• customers are normally internal
Machines requiring CNC software installation and commission include:	<ul style="list-style-type: none">• individual production/manufacturing or treatment machines• processing and machining centres
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• manufacturer specifications and instructions• procedures for installing and commissioning CNC programs• organisation work specifications and requirements• legislation/regulation/national and industry codes and practices relevant to the installation and commissioning• quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT4005B Install and commission CNC software.

Assessment Requirements for MSFFT4005 Install and commission computer numerically controlled (CNC) software

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Install and commission CNC software on at least two (2) different machines and:
 - identify requirements of tasks and organise work to achieve goals and results
 - select and install software programs for the CNC equipment
 - select and apply appropriate loading techniques
 - check and adjust machine operations and programming
 - suggest improvements
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Computer science theory relevant to CNC machine operation
- CNC control system characteristics, applications and limitations
- Procedures and techniques for programming CNC equipment
- Operation requirements of equipment and work systems to be programmed

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to CNC equipment, software and production materials.

MSFFT4006 Construct prototypes and samples

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers the construction of prototypes and samples in accordance with established plans, drawings or specifications using hand and power tools, basic static and specialised machines, and applying joinery, construction and finishing techniques.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Establish the work requirements	<p>1.1 Purpose of the prototype or sample is identified from plans and drawings</p> <p>1.2 Materials specifications for the item are identified from workplace documentation</p> <p>1.3 Ergonomic requirements are identified, clarified and satisfied throughout the work process</p> <p>1.4 Construction requirements and methods are identified appropriate for the materials used</p>
2 Plan prototype or sample construction	<p>2.1 Work plan for the item construction is drafted</p>

- | | | |
|---|-----------------------------------|--|
| | 2.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 2.3 | Compatibility of materials in specifications is checked and any discrepancies reported |
| | 2.4 | Steps or stages in construction are identified, noting checkpoints for measurements and tests |
| | 2.5 | Suitable work area is located and cleared ready for work |
| 3 | Obtain materials and equipment | |
| | 3.1 | Materials are selected according to specifications and assembled ready for use |
| | 3.2 | Compatibility of materials with specifications is checked and any discrepancies reported |
| | 3.3 | Equipment and accessories suitable for working the specified material are assembled |
| | 3.4 | Appropriate jigs and other construction aids are identified and, where required, adjusted to suit the work |
| 4 | Construct the prototype or sample | |
| | 4.1 | Work plan is followed to construct the item |
| | 4.2 | Checks are conducted at the identified points |
| | 4.3 | Modifications to designs and plans are identified and recommended within workplace procedures |
| | 4.4 | Modifications to the plan are documented and followed |
| | 4.5 | Prototype or sample is checked for fitness for purpose |
| 5 | Finalise the work sequence | |
| | 5.1 | The product is prepared for finishing in accordance with the design specification |
| | 5.2 | Tools and equipment are cleaned, maintained and stored in accordance with manufacturer specification |
| | 5.3 | Work area is cleared and waste removed |
| | 5.4 | Workplace documentation and/or reports are completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate analytical and organisational ability, discretion, judgement and problem solving
 - prototypes and samples may be produced by hand, by using appropriate machines, tools and equipment, or by computer-assisted production and will reflect the finished products produced by the enterprise
 - work is performed with little external assistance and with minimal supervision or direction
 - customers may be internal or external
- Machines and equipment include:**
- microprocessor or computer-controlled machines
 - production and facility equipment used in the enterprise
- Materials include:**
- timber
 - metal alloys
 - glass
 - fabrics and textiles
 - plastics
 - leather
 - adhesives
 - fillers and finishes, as appropriate
- Personal protective**
- that prescribed under legislation, regulations and enterprise

equipment includes: policies and practices

**Information and
procedures include:**

- work procedures/instructions
- designer/drawer specifications and instructions
- organisation work specifications and requirements
- legislation/regulations/national or industry codes and practices relevant to the prototype/sample construction
- quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT4006B Construct prototypes and samples.

Assessment Requirements for MSFFT4006 Construct prototypes and samples

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Construct a minimum of two (2) different prototypes/samples, and:
 - identify compatibility/incompatibility of materials, adhesives, fittings and fasteners for the application
 - select and apply appropriate joinery, construction and finishing techniques
 - select and use appropriate materials, equipment and processes for the item being constructed
 - demonstrate how the design of the prototype components will influence the working lifetime of the item
 - ensure that the prototype satisfies the original or varied specification
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Characteristics of the materials used in relation to the use of the end item
- Design features and requirements for the prototype or sample
- Operation of tools and equipment used and the application of the finished product

- Identification of equipment, processes and procedures

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, work order, specifications, plans, tools, equipment and consumables.

MSFFT4007 Sample, inspect and test products to specifications

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers taking product samples, identifying and applying authorised testing procedures, interpreting test results and reporting findings within a furnishing enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|---|
| 1 | Identify specifications and test procedures | 1.1 | Product quality specifications are read, drawings interpreted and test parameters are identified |
| | | 1.2 | Test methods for each required test parameter are identified and the most efficient test method is noted |
| | | 1.3 | Any requirement for testing by personnel external to the work area is identified and appropriate permission is obtained |
| | | 1.4 | Design features that impact on testing and inspection are identified |
| 2 | Select evidence | 2.1 | Appropriate conforming and/or non-conforming products, |

		materials and/or waste are selected for testing in accordance with enterprise requirements
	2.2	Observations of operators and copies of procedures are collected
3	Conduct and interpret tests	3.1 Tests are conducted following workplace procedures and results are documented 3.2 Comparisons of all data collected are made 3.3 Any recommendations are noted and considered for feasibility
4	Report findings	4.1 Findings of tests are documented 4.2 Any potential or existing problems and appropriate recommendations are identified and reported in accordance with enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for MSFFT4007 Sample, inspect and test products to specifications

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Arrange and conduct a minimum of four (4) different processes covering sampling, inspection and testing
- Analyse test results and interpret outcomes against requirements
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- General quality systems theory
- Sampling techniques for commonly encountered materials
- Inspection techniques and faults common within the sector products
- Testing techniques (destructive and non-destructive) relevant to the sector and related equipment/aids
- Work flow in relation to required times and stages where quality checking is required

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to production or product finishing facility, testing equipment and procedures.

MSFFT4008 Interpret and use workplace information

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers locating, using, interpreting and manipulating workplace information and statistics in support of development or production activities within the furnishing industry. Statistic access and manipulation can be computer-assisted, either integrated into the enterprise processes, or stand-alone.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.						
1 Identify situations where statistics are used in the workplace	<table><tr><td>1.1</td><td>Types of statistical representations of data used in the workplace are identified</td></tr><tr><td>1.2</td><td>Users of statistical data in the workplace are identified</td></tr><tr><td>1.3</td><td>Statistical data representations are matched for applications to monitor work flow, inventory and stock levels, customer surveys, and supplier and market analysis</td></tr></table>	1.1	Types of statistical representations of data used in the workplace are identified	1.2	Users of statistical data in the workplace are identified	1.3	Statistical data representations are matched for applications to monitor work flow, inventory and stock levels, customer surveys, and supplier and market analysis
1.1	Types of statistical representations of data used in the workplace are identified						
1.2	Users of statistical data in the workplace are identified						
1.3	Statistical data representations are matched for applications to monitor work flow, inventory and stock levels, customer surveys, and supplier and market analysis						
2 Collect data	<table><tr><td>2.1</td><td>Purpose of data collection is identified</td></tr><tr><td>2.2</td><td>Sources of information are identified</td></tr><tr><td>2.3</td><td>Data collection methods are used</td></tr></table>	2.1	Purpose of data collection is identified	2.2	Sources of information are identified	2.3	Data collection methods are used
2.1	Purpose of data collection is identified						
2.2	Sources of information are identified						
2.3	Data collection methods are used						

- | | | |
|---|---|---|
| | 2.4 | Mathematical processes are used to arrange data |
| | 2.5 | Data collected is checked for accuracy |
| | 2.6 | Potential for inaccurate results arising from variables is estimated and described |
| 3 | Make calculations to present data for analysis | 3.1 Data collected is represented on graphs as required
3.2 Calculating equipment and spreadsheets are used to analysis data |
| 4 | Interpret trends and patterns from numerical data | 4.1 Non-conforming results outside of the predicted outcome are noted and reasons identified
4.2 Trends or patterns in data are noted
4.3 Possible reasons for trends or patterns are generated
4.4 Potential solutions are identified |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Assessment Requirements for MSFFT4008 Interpret and use workplace information

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Use general and statistical data representations to explain work processes and/or outcomes
- Identify and read graphs, charts, tables and statistical results and interpret general and statistical data accurately
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Contemporary business information and statistical reporting, forecasting and presentation techniques
- Mathematical calculations, including:
 - addition
 - subtraction
 - multiplication
 - division
 - percentages

- Company business policies and plans, including procedures for reports
- Company quality systems and business equipment

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a range of business information and statistical data, graphical, tabular and spreadsheet presentation capabilities.

MSFFT4009 Match furnishing style and materials to customer requirements

Modification History

Release 2 - Mapping corrected

Release 1 - New unit of competency

Application

This unit of competency covers assessing customer requirements, analysing all available and practical options to match furnishing styles and materials to those requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---------------------------------|-----|--|
| 1 | Determine customer requirements | 1.1 | Customer is consulted to determine requirements |
| | | 1.2 | Examples of furnishing styles and materials are shown to the customer |
| | | 1.3 | Limitations and benefits of styles and materials are explained |
| | | 1.4 | Options for the use and modification of styles or materials are defined and proposed to the customer |
| | | 1.5 | Product requirements are explored, taking into consideration design parameters, material, process, |

		quantity, cost and outcome requirements
	1.6	Cost and feasibility of customer requirements/options are evaluated
2	Match options to customer requirements	2.1 Customer specifications/standards and user requirements are compared to furnishing styles and materials options
	2.2	Range of best-fit styles and materials are presented to the customer for evaluation
	2.3	Customer queries are answered and examples used to illustrate answers
3	Document requirements	3.1 Requirements are confirmed and/or approved in the appropriate format
	3.2	Specification details are established and confirmed, including quality standards, in accordance with enterprise procedures
	3.3	Required completion date and any delivery requirements are documented
	3.4	Special instructions to production team are added where required
	3.5	Appropriate cost details are incorporated when necessary

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate conceptual ability, discretion, judgement and problem solving
 - work is performed with little external assistance and with minimal supervision or direction
 - customers may be internal or external
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- customer requirements
 - product and style catalogues
 - work procedures/instructions
 - manufacturer/designer specifications and instructions
 - organisation work specifications and requirements
 - legislation/regulations/national and industry codes and practices relevant to the product
 - quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT4009B Match furnishing style/materials to customer requirements.

Assessment Requirements for MSFFT4009 Match furnishing style and materials to customer requirements

Modification History

Release 2 - Mapping corrected

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Match furnishing style/materials to meet customer requirements on two (2) occasions involving different products, and:
 - evaluate design and design requirements
 - evaluate furnishing styles and materials and compare them to customer requirements
 - identify the impact of commercial, environmental and safety risks
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage

Knowledge Evidence

- Range of company products, market, work systems and equipment
- Relevant furnishing styles and materials
- Company business policies and plans, including procedures for product modification and product development
- Legislative requirements of the work activities

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to product lists, furnishing style catalogues or references and customer requirements.

MSFFT4010 Identify and calculate production costs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers estimating materials, labour and time requirements, and establishing costs for the provision of products, including all overheads in a significant mass production environment. It may involve referral of matters to other enterprise personnel.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--------------------|-----|---|
| 1 | Gather information | 1.1 | Details of the particular product and competition products are obtained |
| | | 1.2 | Details of the proposed production operation are obtained and analysed |
| | | 1.3 | Labour unit cost projections are obtained and agreed |
| | | 1.4 | Logistic support contracts, supply agreements or equivalent are obtained and analysed |
| | | 1.5 | Details of proposed warehousing and physical distribution systems and related cost factors are obtained |
| | | 1.6 | Information is converted to usable form and stored ready |

			for retrieval and application
2	Estimate materials and labour	2.1	Types and quantities of materials required for production are estimated and recorded
		2.2	Time requirements for production activities and other lead times are estimated
		2.3	Labour requirements for direct production and handling operations are estimated and recorded
3	Determine and calculate overheads	3.1	Components contributing to overhead costs are identified
		3.2	Overhead costs to be attributed to work in accordance with commercial and enterprise procedures are identified
4	Calculate production costs	4.1	Total materials costs and labour costs are calculated in accordance with enterprise procedures
		4.2	Total production cost is calculated, including overheads and mark-up percentages
		4.3	Final cost to customer is calculated in conjunction with marketing/sales personnel
5	Document details and verify, where necessary	5.1	Details of costs and charges are documented in accordance with enterprise practice
		5.2	Costs, calculations or other details are verified by other enterprise personnel, as required
		5.3	Details are documented for future reference in accordance with enterprise practices

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFT4010 Identify and calculate production costs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- For a significant mass production operation, determine the production and product costs using the following or equivalent steps:
 - obtain all information relevant to the determination of costs
 - interpret plans, specifications and instructions for production and materials to be used
 - estimate quantities of materials required
 - determine the types and amount of labour required to complete the work
 - estimate time required to complete the work
 - determine/calculate overheads
 - document the process and outcomes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Production systems documentation processes
- Enterprise costing procedures

- Mathematical formulae and processes relevant to costing
- Components of labour costs
- Enterprise/commercial approach to overhead costs
- Enterprise/commercial approaches to warehousing and physical distribution costs
- Enterprise information management processes, including storage requirements

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to all necessary facilities and associated equipment, including calculators, computers and relevant software.

MSFFT4011 Purchase materials and consumables

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers purchasing materials and consumables required for production within a furnishing enterprise, through existing contracts and other formal purchasing arrangements or through local purchase delegation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify purchasing requirements	1.1	Purchasing requirements are identified from material specifications, orders and instructions in accordance with workplace procedures
		1.2	Purchasing requirements are prioritised, where required, in consultation with others
		1.3	Quantities, quality of goods, price limitations and delivery requirements are determined or confirmed in consultation with appropriate personnel
2	Source materials and consumables	2.1	Sources of materials and/or consumables are identified from workplace preferred supplier lists or through networks and knowledge of local and/or overseas suppliers

- | | | | |
|---|---|-----|--|
| | | 2.2 | Difficulties in supply are reported in accordance with workplace procedures |
| | | 2.3 | Availability of supply is confirmed |
| 3 | Compare costs | 3.1 | Alternative suppliers are contacted to check costing |
| | | 3.2 | Actual costs are compared to predicted costs |
| | | 3.3 | Any recommendations regarding alternative suppliers are communicated to appropriate personnel following workplace procedures |
| | | 3.4 | Delegation to order goods/materials/equipment is exercised |
| 4 | Purchase materials and consumables | 4.1 | Capacity of supplier to meet price, quality and delivery expectations is checked |
| | | 4.2 | Purchase order/list is developed in accordance with workplace procedures |
| | | 4.3 | Order is placed with supplier and delivery schedules are confirmed |
| | | 4.4 | Appropriate orders and invoices are exchanged according to workplace procedures |
| 5 | Maintain and monitor material and consumable supplies | 5.1 | Stock is regularly monitored using inventory records and physical checks, where applicable, to ensure maintenance of supply |
| | | 5.2 | Up-to-date records of materials and consumables are maintained |
| | | 5.3 | Acquisition requirements are documented in accordance with workplace procedures |
| 6 | Liaise with other departments | 6.1 | Communication channels with other departments are established in accordance with workplace procedures |
| | | 6.2 | Liaison with other departments is conducted to ensure customer requirements are achieved |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate administrative ability, discretion, judgement and problem solving
- work is performed with little external assistance and with minimal supervision or direction
- customers may be internal or external

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- work procedures/instructions
- existing contracts or formal purchasing arrangements
- supply system directories, indexes and catalogues
- machinery/equipment/system technical manuals
- legislation/regulations/national and industry codes and practices related to the materials and consumables
- quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT4011B Purchase materials and consumables.

Assessment Requirements for MSFFT4011 Purchase materials and consumables

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Purchase materials on a minimum of four(4) occasions, including two (2) different materials and at least one (1) perishable consumable
- Suggest improvements to purchasing operations and, where authorised, negotiate changes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids, and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Contemporary supply/purchasing systems theory
- Company operating procedures, including procedures for purchasing materials and consumables
- Material and consumable usage rates
- Operation requirements of equipment and work systems in own work area

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to production operation with consumable and material requirements, preferred supplier lists and workplace procedures.

MSFFT4012 Prepare a tender submission

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing and submitting a tender for supply of products and services in the furnishing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Identify opportunity to provide goods and/or services | 1.1 Opportunities that are within the operational scope of the business unit or organisation are identified |
| | 1.2 Organisational resources which are available, or expertise which may be accessed, is identified and matched to opportunities |
| | 1.3 The feasibility of undertaking the proposed project/work is assessed and approval is sought according to organisational policies and procedures |
| 2 Analyse tender requirements | 2.1 Tender specifications and scope of tender requirement are identified and clarified with the originator if required |
| | 2.2 Proposed methodology for satisfying the request is |

- developed
- 2.3 Required resources are identified and their availability confirmed with the provider in accordance with organisational procedures
 - 2.4 Methodology is adjusted to accommodate the availability of resources and expertise available
- 3 Prepare a tender estimate
- 3.1 Estimate is prepared taking all requirements into account and providing for contingencies as required by organisational policies, procedures and requirements
 - 3.2 Costing of estimate conforms to organisational policies and procedures
 - 3.3 The estimate satisfies the total requirement and where this cannot be provided, an explanation/compromise/option is identified
 - 3.4 Estimate is checked for accuracy and detail in accordance with organisational procedures
- 4 Submit a tender
- 4.1 Tender is prepared in accordance with organisational policies and procedures
 - 4.2 Tender addresses required details and meets originator's requirements
 - 4.3 Tender is submitted within the required timeframe in the form required by the request
 - 4.4 Organisational requirements for record keeping and documentation of tenders are completed
- 5 Review tender process
- 5.1 Changes and variations to the tender are negotiated to meet the needs of the client and the organisation in accordance with contractual arrangements, organisational policies, procedures and delegated authority
 - 5.2 The tender content and process is reviewed and evaluated using the outcome and the feedback provided by client and stakeholders
 - 5.3 Procedures are adjusted if required to improve subsequent bids

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate analytical ability, discretion, judgement and problem solving
- work requires the analysis of, at times, complex requirements, the preparation and presentation of the tender and the follow-up action for both successful and unsuccessful tenders
- work is performed with little external assistance and with minimal supervision or direction

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- work procedures/instructions
- tender brief/specifications issued by the requesting agency
- organisation work specifications and requirements
- legislation/regulations/national and industry codes and practices relevant to the product
- quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT4012B Prepare a tender submission.

Assessment Requirements for MSFFT4012 Prepare a tender submission

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- On a minimum of two (2) occasions and for different/significant goods or services, prepare and submit formal tenders that are framed to serve marketing purposes and which address or are supported by:
 - the full requirements of the tender brief
 - total resource requirements
 - total costing covering all components and scenarios
 - appropriate legislative requirements
 - options for the client
- Negotiate changes/variations to tender and conduct review of outcome
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Enterprise operating procedures and requirements
- Organisation resources, capacities and capabilities

- Tender management, preparation, submission and review processes
- Tender evaluation processes
- Financial and legal requirements for tendering
- Relevant legislation relating to tendering and contracting for goods and/or services of the organisation

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to requests for tender, previous tenders and outcomes, information relating to relevant resources, appropriate staff/advisers and supporting technology.

MSFFT5001 Evaluate and select production materials and equipment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching and evaluating the full range of materials and equipment used in furnishing, and selecting that most appropriate for each particular specified application, taking into account the availability of, and access to, production equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine production requirements	1.1	Requirements for production activities are identified, including the types of products produced and related materials and equipment, quantities of products in order, in store, in production, storage and handling requirements and stock management methods
		1.2	A rating system is developed to facilitate comparisons of cost/benefits and other qualitative properties of equipment and systems
2	Gather data and specifications	2.1	Current best practice and future trends for manufacturing the products are assessed to establish comparisons and benchmarks

- | | | |
|---|---|---|
| | 2.2 | Steps required for production processes are identified and flow charts produced, where necessary |
| | 2.3 | Specifications are identified to match the production process |
| | 2.4 | Consultations are conducted with relevant employees and management to identify additional or altered specifications |
| | 2.5 | Materials, tooling, and/or equipment requirements for the production are identified and documented |
| | 2.6 | Existing equipment and stock on hand is evaluated to match requirements of the proposed operations |
| | 2.7 | Work health and safety (WHS) requirements to provide safe work systems for the equipment and materials are identified, including associated training requirements, work practices and equipment |
| | 2.8 | Appropriate data is compiled |
| 3 | Evaluate equipment and materials against requirements | 3.1 Materials are assessed for required quality, finish, durability and conformity to standards

3.2 Equipment options are identified

3.3 Equipment and materials are selected based on comparisons of performance, cost and specifications compared to the prepared rating system |
| 4 | Prepare reports and recommendations | 4.1 Recommendations are developed to meet requirements of the workplace

4.2 Report with recommendations is prepared and forwarded according to workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|---|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving• customers or suppliers may be internal or external |
| Machines and equipment include: | <ul style="list-style-type: none">• microprocessor or computer-controlled machines• production and facility equipment used in the enterprise |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices |
| Information and procedures include: | <ul style="list-style-type: none">• trade journals and publications• work procedures/instructions• manufacturer specifications and instructions• standard forms of workplace process and procedures• organisation work specifications and requirements• legislation, regulations and codes of practice• quality and Australian Standards and procedures |

Unit Mapping Information

Supersedes and is equivalent to LMFFT5001B Evaluate and select production materials and equipment.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFFT5001 Evaluate and select production materials and equipment

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Evaluate materials, equipment and work processes considering:
 - product innovations and potential
 - nature of products produced and the associated markets for the products
 - workforce availability and capabilities
 - equipment capabilities and availabilities
 - cost-benefit analysis (or equivalent)
- Identify the impact of decisions in terms of commercial, environmental and safety risks
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- Industry sector developments and trends in terms of materials and equipment
- Company business policies and plans, including future production systems and products

- Company products, market, work systems and equipment
- Legislative requirements of the work activities

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to production plans, process machinery, equipment, materials and a work location.

Release 1 - New unit of competency

Application

This unit of competency covers establishing the production processes, including jointing, fabrication, assembly and finishing, and area layouts to optimise production potential.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify production area objectives	1.1	Production objectives are clearly and unambiguously identified and clarified in conjunction with design, engineering, production and other relevant staff in accordance with company requirements
		1.2	Production area processes and specifications are identified
2	Determine production staffing and resource requirements	2.1	Production staffing requirements are determined based on task requirements and necessary competencies
		2.2	Suitable staff and/or contractors are selected based on competence and availability in accordance with company requirements

- | | | | |
|---|---|-----|---|
| | | 2.3 | Required materials, tools, equipment, assembly or fabrication jigs and other physical resources needed for the production are identified and a specification drawn up detailing the required quality and quantities |
| | | 2.4 | Costing of staffing and resource requirements are developed in accordance with company procedures |
| 3 | Establish the area layout and process | 3.1 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 3.2 | Layout of equipment, materials and other factors take account of area layout work plans, recognising the resourcing available and factors of cost effectiveness and efficiency |
| | | 3.3 | Production area tasks and component activities are clearly identified and specified and staff assigned to them based on their competence, experience and availability |
| | | 3.4 | The production team is briefed and trained on their respective roles and responsibilities in accordance with company procedures |
| 4 | Review production progress and outcomes | 4.1 | Production progress is closely monitored against required quality of products and adherence to both budget and time schedule and reported to appropriate personnel in accordance with company requirements |
| | | 4.2 | Opportunities for preventative or corrective changes are identified using outcomes of monitoring activity or feedback from production staff |
| | | 4.3 | Preventative or corrective action is recommended and implemented where appropriate |
| | | 4.4 | Changes are communicated to relevant personnel in a logical and easily understood manner |
| | | 4.5 | Changes are monitored to confirm improvement to production efficiency |
| | | 4.6 | Adequate records are maintained of all key information pertaining to the production process in accordance with company requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|---|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving with minimal supervision or direction• work requires work flow analysis, planning and modification in a new or existing plant layout situation• customers or suppliers may be internal or external |
| Machines and equipment include: | <ul style="list-style-type: none">• microprocessor or computer-controlled machines• production and facility equipment used in the enterprise |
| Tools and equipment include: | <ul style="list-style-type: none">• hand tools• power tools |
| Materials include: | <ul style="list-style-type: none">• timber• metal alloys• fabric• glass• plastics• a full range of consumables required for production |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices |

Information and procedures include:

- work procedures/instructions
- manufacturer specifications and instructions
- standard forms of workplace process and procedures
- organisation work specifications and requirements
- legislation, regulations and codes of practice
- quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT5002B Establish and develop production processes and area layout.

Assessment Requirements for MSFFT5002 Establish and develop production processes and area layout

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- For a significant production process, either establish the process and area layout, or review and make recommendations on an existing process. In either case:
 - identify/confirm production area objectives
 - determine production staffing and resource requirements
 - establish the area layout and process
 - monitor and review achievements
 - document the outcomes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- Process engineering techniques and systems
- Production and manufacturing processes applicable to the product

- Materials handling techniques and options
- Equipment and machines to be used to achieve business outcome
- Business processes used in workplace
- Resource availability, including competencies of individuals in the team/group

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to relevant documentation, legislation and statutory requirements, industry codes of practice, WHS legislation, regulations and codes of practice, and access to a work team.

MSFFT5003 Manage installation and commissioning of equipment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning and managing installation and commissioning of equipment in a manner which minimises disruption and facilitates continuing optimum production outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--------------|-----|--|
| 1 | Prepare work | 1.1 | Items to be included in work plan and specification document are identified and confirmed |
| | | 1.2 | Legal, environmental and work health and safety (WHS) requirements related to installation and commissioning of equipment/systems are identified |
| | | 1.3 | Work plan for installation and commissioning of equipment/systems is drawn up, including management and reporting procedures |
| | | 1.4 | Specification document is prepared according to workplace and/or manufacturer procedures |

- | | | |
|---|---|--|
| 2 | Coordinate and monitor installation arrangements | 2.1 Arrangements for the installation and commissioning of equipment, including necessary legal, insurance and safety requirements, are coordinated in accordance with workplace and/or legislative procedures |
| | | 2.2 Contract arrangements for the installation and commissioning of equipment/systems are coordinated in accordance with workplace procedures |
| | | 2.3 Installation process, including testing, is monitored to ensure compliance with contractual requirements |
| | | 2.4 Variations are dealt with to ensure installation meets specification requirements |
| 3 | Manage installation schedules and budgets | 3.1 Installation process is monitored to ensure compliance with installation specifications, schedule and budget |
| | | 3.2 Scheduling and budgeting processes are adjusted where variations or alternative plans are indicated |
| | | 3.3 Deviations are documented and reported |
| 4 | Administer legal, environmental and WHS requirements | 4.1 Formal processes of the organisation are used to document the administration of regulatory requirements |
| | | 4.2 Legal, environmental and WHS requirements related to installation and commissioning of equipment/systems are defined |
| | | 4.3 Monitoring of the process is carried out to ensure compliance with legal, environmental and WHS requirements related to installation and commissioning of equipment/systems |
| 5 | Conduct trials to confirm operating status of equipment | 5.1 Machine operations are evaluated in a trial run and results confirmed against requirements |
| | | 5.2 Machines are adjusted to achieve performance outcome specifications |
| | | 5.3 Employee duties are communicated to match equipment operating requirements |
| | | 5.4 Maintenance documentation is completed and processed |

		5.5	Process and machine specification documentation is completed and appropriate records maintained
6	Assess and report on completion of installation	6.1	Completed work is assessed to confirm required specifications have been met
		6.2	Report on work completed is prepared in accordance with enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving with minimal supervision and direction
 - installation and commissioning may follow an established process or it may require a unique process to cover a one-off situation
 - work may involve a multi-disciplinary group, including those with specific regulatory authority for aspects of the work
 - customers or suppliers may be internal or external

- | | |
|--|---|
| Machines and equipment include: | <ul style="list-style-type: none">• microprocessor or computer-controlled machines• production and facility equipment used in the enterprise |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices |
| Information and procedures include: | <ul style="list-style-type: none">• work procedures/instructions• manufacturer specifications and instructions• standard forms of workplace process and procedures• organisation work specifications and requirements• legislation, regulations and codes of practice• quality and Australian Standards and procedures |

Unit Mapping Information

Supersedes and is equivalent to LMFFT5003B Manage installation and commissioning of equipment.

Assessment Requirements for MSFFT5003 Manage installation and commissioning of equipment

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Manage the installation and commissioning of significant equipment within a production or simulated production environment, including the following tasks:
 - identifying the impact of decisions in terms of commercial, environmental and safety risks
 - planning and arranging equipment installation and commissioning
 - leading others and working effectively to arrange for installation and commissioning of equipment
 - allocating tasks to others considering:
 - competency requirements for the work
 - requirements of workplace operating procedures
 - completing post-installation trials and evaluation
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- Risk management process
- Requirements for installation and commissioning of equipment
- Extent of responsibility for each stage of the process
- Company business policies and plans, including procedures for equipment installation
- Company products, market, work systems and equipment
- Legislative requirements of the work activities

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to equipment for installation, installation and commissioning service providers and location.

MSFFT5004 Develop and document procedures and specifications

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers analysing requirements and developing and documenting procedures and specifications that provide concise and unambiguous direction and guidance for workplace activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify relevant requirements	1.1	Information required for operating procedures is identified and assembled
		1.2	Specification requirements and format are established and confirmed, where necessary
		1.3	Requirements for information entry, storage, output and quality of document production are identified in accordance with enterprise procedures
		1.4	Document and work sheet design is appropriate for efficient entry of information and maximised appearance and presentation of document
		1.5	Range of functions incorporated the document design

			reflects the nominated requirements
2	Prepare specifications	2.1	Specifications are written in an appropriate format to ensure requirements can be met
		2.2	Special needs are incorporated in the specifications
		2.3	Specifications are written in a manner that is clear and understood in the workplace
3	Prepare standard operating procedures and/or manuals	3.1	Documentation is prepared to formalise processes for achieving the enterprise objectives
		3.2	Responsibility for all updates and changes to the procedures or manuals is assigned or designated
4	Review procedures and specifications against standards	4.1	Compliance with procedures and specification requirements is monitored in relation to the required application
		4.2	Results are assessed, reported and/or acted upon according to enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:
- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation

	insurance requirements
	<ul style="list-style-type: none">• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving• work may be on a one-to-one basis with a client or client group and involve writing of specifications and procedures for the workplace, including:<ul style="list-style-type: none">• operating procedures• complex cutting lists and specification sheets• customers or suppliers may be internal or external
Machines and equipment include:	<ul style="list-style-type: none">• microprocessor or computer-controlled machines• production and facility equipment used in the enterprise
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work procedures/instructions• manufacturer specifications and instructions• standard forms of workplace process and procedures• organisation work specifications and requirements• legislation, regulations and codes of practice• quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT5004B Develop and document procedures and specifications.

Assessment Requirements for MSFFT5004 Develop and document procedures and specifications

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and itemise steps and stages in processes and procedures and complete a significant operational procedure, incorporating safety obligations, and covering:
 - full analysis of the topic area
 - step-by-step operational procedure
 - specification, which is part of the procedure, or a supporting document
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- Technical writing and presentation techniques
- Company operating procedures, including procedures for documenting and changing specifications and procedures
- Operation requirements of equipment and work systems in own work area

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to enterprise or equivalent formats for procedures/specifications and subjects/topics.

MSFFT5005 Organise enterprise maintenance programs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers establishing, organising and implementing preventative and reactive maintenance programs and capabilities required to optimise operational and production performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Clarify maintenance requirements	1.1	Equipment specifications, service requirements and workplace procedures are checked for recommended maintenance intervals and processes
		1.2	Special requirements for maintenance are separated from normal lubrication, adjustment and maintenance schedules
		1.3	Comparisons with previous experience, future equipment use, production requirements and standard operating procedures are made
		1.4	An outline plan for maintenance and a related work schedule are identified and developed
2	Establish	2.1	Costing for process is identified based on work schedule,

	maintenance systems	equipment manufacturer recommendations, charges for materials, equipment and consumables, and external/internal labour charges
	2.2	Required production interruptions, processes and procedures are documented and recorded
	2.3	Maintenance providers are identified
	2.4	Maintenance systems options are analysed and recommendations processed to management
	2.5	Approvals for the maintenance systems concepts and resources are obtained
3	Organise maintenance activities	<p>3.1 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work</p> <p>3.2 Production schedules and staff rosters are checked to identify times when the maintenance process may be scheduled, including optimum timing for shutdown</p> <p>3.3 Permission from supervisory personnel is obtained for timing of maintenance to optimise the maintenance process and production</p> <p>3.4 Detailed work plans are developed in accordance with production schedules covering the availability of expertise and scheduling of resource availability</p> <p>3.5 Employees with the required competencies are identified and, where necessary, appropriate training and assessment are facilitated</p> <p>3.6 Approvals for production schedule, employee work pattern and maintenance schedule adjustments are obtained</p> <p>3.7 Work plan is refined to ensure the maintenance program will maintain workplace outputs in terms of workplace policy</p>
4	Resource maintenance requirements	<p>4.1 Required consumables for maintenance and their reliable supply is established</p> <p>4.2 Externally sourced equipment is determined and supply arranged</p>
5	Complete	5.1 Maintenance work schedule is completed following the

maintenance
procedures

work plan

- 5.2 Appropriate readings, measurements and recordings are made and compared to equipment, product and other relevant specifications
- 5.3 Areas requiring further testing are identified and appropriate procedures for testing recommended to supervisory staff
- 5.4 Appropriate adjustments to the work schedule plan are made based on experience and documentation completed
- 5.5 Maintenance records are completed and forwarded to appropriate personnel
- 5.6 Areas where changes to equipment operation or routine maintenance are required to maintain optimum work output and equipment life are noted

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem

	solving and is generally performed with little external assistance and with minimal supervision or direction
	<ul style="list-style-type: none">• work activities of other employees are supervised and assistance to others is provided• customers are normally internal
Machines and equipment include:	<ul style="list-style-type: none">• microprocessor or computer-controlled machines• production and facility equipment used in the enterprise
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work procedures/instructions• manufacturer specifications and instructions• standard forms of workplace process and procedures• organisation work specifications and requirements• legislation, regulations and codes of practice• quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT5005B Organise enterprise maintenance programs.

Assessment Requirements for MSFFT5005 Organise enterprise maintenance programs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Establish the maintenance program for a real or simulated significant production operation, including:
 - coordination of maintenance within the context of production schedules
 - identification of resource requirements for maintenance, including skills of employees involved
 - recording and reporting requirements to provide system visibility and accountability potential
- Complete a benefit analysis of an existing and significant maintenance program and suggest improvements to maintenance operations and, where authorised, negotiate changes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- Contemporary equipment maintenance theories covering benefits and costs
- The effects of production schedules, time and resource requirements when scheduling the maintenance process
- Risk analysis processes
- Company operating procedures, including procedures for maintenance
- Operation requirements of equipment and work systems in the work area
- Competency requirements of the work activities
- Relevant WHS requirements

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to production information and schedules, equipment specifications, and workshop manuals for production process equipment requiring maintenance.

MSFFT5006 Plan production

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning and documenting the overall requirements of production in a furnishing enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Establish production requirements	1.1	Data from the sales/market forecast is interpreted for inclusion in the production plan
		1.2	Specifications and supporting data are analysed
		1.3	Projected requirements regarding product quantity, quality, raw materials and performance characteristics are established
		1.4	Production capacity of machines and personnel is determined and/or confirmed
		1.5	Resources required, including raw materials supply requirements for the production line, are identified

2	Prepare production plan	2.1	Information and details to include in the production plan are assembled and confirmed, where necessary
		2.2	Inefficiencies and constraints are considered and potential improvements or variations to the plan are identified, where applicable
		2.3	Production plan is prepared in accordance with enterprise procedures
3	Monitor and coordinate variations to plan	3.1	Production plan is monitored to ensure efficient and effective production performance and any variations required are identified
		3.2	Plans are modified, where necessary, to reflect out of stock and overstock situations, machine and human resource requirements or variations
		3.3	Implementation of plan variations is coordinated to ensure compliance with instructions/specifications
4	Maintain records	4.1	Production planning records are maintained and reports prepared, where necessary, in accordance with enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:
- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative

	obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
	<ul style="list-style-type: none">• work relates to the interface between sales/marketing, purchasing and production areas and may involve dealing with the unpredictability of variables, such as sales, raw materials, machinery availability, operator availability and quality variations• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving under limited guidance in line with a broad plan, budget or strategy• customers or suppliers may be internal or external
Production operations include:	<ul style="list-style-type: none">• repetitive production runs• short runs• quick changes• indent orders• stock replenishment
Large scale production or small business types include:	<ul style="list-style-type: none">• cabinet making• wood machining• furniture polishing• glass and glazing• soft furnishing• upholstery• bed and mattress making• floor covering and finishing• picture framing• musical instruments
Production planning includes:	<ul style="list-style-type: none">• the establishment of an overall plan for manufacture/product delivery in conjunction with marketing/merchandising area

Assessment Requirements for MSFFT5006 Plan production

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Establish and confirm the production requirements for a significant production requirement by:
 - preparing the production plan
 - monitoring and coordinating variations to the plan
 - maintaining records
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- Production processes, products, machines, planning and forecasting software
- Work and workplace organisation systems
- Suppliers, their capabilities and customer requirements
- Safety and environmental aspects of relevant enterprise activities
- Workplace procedures and reporting/recording processes
- Relevant regulatory requirements and codes of practice

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, information on work specifications, relevant safety procedures and regulations, quality standards, organisation procedures and customer requirements.

MSFFT5007 Optimise computer numerically controlled (CNC) operations

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers analysing production orders, production histories and machine capabilities and manipulating CNC machine control programs to optimise production performance in the furnishing industry. It requires the integration of process machines that may normally function on a stand-alone basis.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify optimal operating conditions	1.1	The production potential of the components of the system are identified
		1.2	Production orders and plans are analysed to identify sustained production requirements
		1.3	Integration options are identified and analysed to ascertain the optimal integration model
		1.4	Software and programming requirements to attain and sustain optimal integration are identified and recorded
2	Prepare for software	2.1	Program format and operational intent are accurately

installation		determined and required applications identified
3	Install and integrate automatic process machine control programs	2.2 Specifications are checked for required operating conditions
		2.3 Program instructions are checked for compliance with specifications
		2.4 Software timers are set to specification, where required
		3.1 Appropriate program loading technique is selected
		3.2 External loading devices are correctly connected to automatic process machine control systems
		3.3 Machine control system is placed in correct operational mode to accept program loading
		3.4 Program is downloaded in accordance with manufacturers' recommended procedure and enterprise requirements
		3.5 Checks are made during and after downloading to ensure accurate and complete data transfer
		3.6 External program loading devices and connections are disconnected from process and machine control system
		3.7 Integration protocols and actions are completed
4	Commission automatic process and machine control programs	4.1 Operation of the production system using the programs is observed
		4.2 Outputs are checked and measured for compliance with specifications
		4.3 External inputs are checked for compliance with specifications according to specified procedures
		4.4 Total operation is checked for compliance with specifications where applicable
		4.5 Location of program master copy storage is confirmed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|---|
| Unit context includes: | <ul style="list-style-type: none">• work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving and is generally performed without other qualified assistance• customers are normally internal |
| Production systems include: | <ul style="list-style-type: none">• CNC machining• processing centres |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices |
| Information and procedures include: | <ul style="list-style-type: none">• work procedures/instructions• manufacturer specifications and instructions• standard forms of workplace process and procedures• organisation work specifications and requirements• legislation, regulations and codes of practice• quality and Australian Standards and procedures |

Unit Mapping Information

Supersedes and is equivalent to LMFFT5010B Optimise CNC operations.

Assessment Requirements for MSFFT5007 Optimise computer numerically controlled (CNC) operations

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Optimise production and suggest improvements to CNC operations and, where authorised, negotiate changes on a minimum of two (2) occasions with at least one (1) involving a CNC machining and processing centre
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- Company operating procedures, including procedures for programming CNC equipment
- Operation requirements of equipment and work systems to be programmed

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

MSFFT5008 Develop, trial and evaluate prototypes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers developing specifications, identifying and selecting materials and processes, production trialling of prototypes and completing evaluation documentation. Prototypes may be produced by hand, by using appropriate machines, tools and equipment or by computer-assisted production.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------------------|-----|---|
| 1 | Develop prototype specifications | 1.1 | The purpose and outline requirements for the prototype are identified from design concepts and/or customer requirements |
| | | 1.2 | Materials are identified following detailed analysis of the options |
| | | 1.3 | Detailed prototype design specifications are prepared and documented |
| | | 1.4 | Construction requirements and methods are identified appropriate for the materials to be used |
| | | 1.5 | Ergonomic requirements are identified, clarified and |

			satisfied throughout the work process
2	Plan and prepare prototype construction	2.1	Work plan for the prototype construction is drafted
		2.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		2.3	Compatibility of materials in specifications is checked and any discrepancies reported
		2.4	Steps or stages in construction are identified, noting checkpoints for quality checks
		2.5	Suitable work area is located and cleared ready for work
		2.6	Materials and consumables to meet specifications are prepared for use
		2.7	Equipment and accessories suitable for working the specified material are prepared for use
		2.8	Appropriate jigs and other construction aids are identified and where required adjusted to suit the work
3	Produce the prototype	3.1	Work plan is followed to produce the prototype
		3.2	Checks are conducted at the identified points
		3.3	Modifications to designs and plans are identified and recommended and managed within workplace procedures
		3.4	Modifications to the plan are documented and followed
		3.5	Prototype or sample is checked for compliance with specifications
4	Trial and evaluate the prototype	4.1	Trial objectives and processes are developed, specified and documented
		4.2	Personnel involved in the trial and evaluation are prepared for their responsibilities and functions
		4.3	Trial equipment, tools and materials are prepared and certified prior to use
		4.4	Prototype trials are conducted and results captured and recorded in accordance with the trial specification
		4.5	Results of trials are evaluated and evaluation records and recommendations are processed in accordance with

enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving and may be carried out on a team basis or with the support of dedicated specialist personnel
- customers or suppliers may be internal or external

Machines and equipment include:

- microprocessor or computer-controlled machines
- production and facility equipment used in the enterprise

Materials for prototypes include:

- timber
- metal alloys
- glass
- fabrics and textiles
- plastics
- leather
- cardboard and paper
- adhesives
- fillers and finishes as appropriate

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- design concepts/customer requirements
- designer/drawer specifications and instructions
- work procedures/instructions
- organisation work specifications and requirements
- legislation/regulations/national or industry codes and practices relevant to the prototype/sample construction
- quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT5011B Develop, trial and evaluate prototypes.

Assessment Requirements for MSFFT5008 Develop, trial and evaluate prototypes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Develop and evaluate a minimum of two (2) different prototypes, and:
 - develop the prototype specification
 - identify compatibility/incompatibility of materials, adhesives, fittings and fasteners for the application
 - select and use appropriate materials, equipment and processes for the item being constructed
 - demonstrate how the design of the prototype components will influence the working lifetime of the item
 - ensure that the prototype satisfies the original or varied specification
 - prepare for and conduct evaluation trials
 - record outcomes and make recommendations for future activities
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- Intellectual property law requirements
- Elements and principles of design
- Trends and detailed knowledge of furniture construction
- Destructive and non-destructive testing techniques and processes
- Use of colour and other features
- Range, properties and characteristics of materials used in the furnishing industry
- Safety and environmental aspects of relevant enterprise activities
- Workplace procedures and reporting process
- Relevant WHS legislation, regulatory requirements and codes of practice

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to information on design concepts, customer requirements, quality standards and organisation procedures.

MSFFT5009 Determine production feasibility of designs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers systematically analysing, assessing and determining the feasibility of designs for translation into commercially viable production that can refer to enterprise and client initiated ideas or requests. It may involve applications associated with original design, adaptation of designs or interpretation of sketches, single or multiple production styles and ranges, and made to order.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Define the design objectives and detail	1.1 The purpose of the design is defined and/or clarified
	1.2 The potential market for the design product is considered and defined
	1.3 Intended production materials and outline production processes are identified and agreed as the basis for determination
2 Establish the design assessment criteria	2.1 Criteria for the assessment of production material options are established

- 2.2 Criteria for the assessment of product functionality are established
 - 2.3 Criteria for the assessment of production process options and impacts of these on overall business operations are established
 - 2.4 Criteria for the assessment of work health and safety (WHS), and potential liability issues are established
 - 2.5 Criteria for assessment of costs and marketability are established
- 3 Apply the assessment criteria
 - 3.1 The determination process, including personnel, information/input collection and recording, scoring or grading criteria, and decision making processes are established and agreed
 - 3.2 Products which are competitors/potential competitors in the market place are selected for comparative purposes
 - 3.3 The design is scored/graded against agreed criteria and the results recorded
 - 3.4 Competition products are scored/graded against the agreed criteria and the results recorded
 - 3.5 Assessment results are completed in accordance with the agreed process
- 4 Determine feasibility and options
 - 4.1 Assessment results of the design and competition products are analysed
 - 4.2 Designs which fail to satisfy assessment and provide no optional potential are rejected
 - 4.3 Designs which fail to satisfy assessment but which have optional/alternative potential are referred to the appropriate party
 - 4.4 Designs which satisfy potential are conditionally endorsed, with the conditions being recorded and passed to the appropriate party
 - 4.5 Formal records of the determination are completed and processed in accordance with enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFT5009 Determine production feasibility of designs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Determine and report on the feasibility of a minimum of two (2) different product designs by completing the following or equivalent steps:
 - define the design objectives and detail
 - establish assessment criteria
 - apply assessment criteria impartially
 - determine feasibility options
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- Intellectual property law requirements
- Design principles and professional practices
- Ergonomic principles for furniture design and manufacture

- Elements and principles of design and how they can be used to create good design in the furnishing industry
- Detailed knowledge of contemporary furnishing industry products
- Range of furnishing product materials and their characteristics
- Materials, trims, accessories and their properties and characteristics
- Costing processes
- Workplace procedures and reporting process
- Relevant WHS legislation, regulatory requirements and codes of practice

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to information on work specifications, customer requirements, quality standards and enterprise procedures.

MSFFT5010 Develop products and related processes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers defining requirements, confirming feasibility, developing and trialling options, and analysing and reporting on proposed products and related processes. It may involve original creation, adaptation of designs or interpretation of sketches within contexts related to single or multiple production runs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furnishing Technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Assess product feasibility	1.1	Provisional specifications are identified and interpreted in consultation with others, where required
		1.2	Provisional specifications are subject to feasibility modelling and analysis
		1.3	Recommendations from the feasibility study are processed
2	Participate in developing and engineering prototype product	2.1	Product or process specifications are interpreted and/or preliminary specifications are developed from the feasibility study
		2.2	Specifications are used to develop or engineer the prototype product

		2.3	Results are analysed and decisions to move to a trial are confirmed
3	Conduct trials	3.1	Trial procedures/parameters are established and recorded
		3.2	Organisation and liaison issues with production areas are resolved
		3.3	Raw materials are checked or selected and machines and skill availability allocated against requirements
		3.4	Trials are carried out in accordance with the established procedures
4	Analyse, interpret and report results	4.1	Results of the trials are analysed to determine performance and acceptability for production
		4.2	Variations and improvements necessitated by the findings are recorded and/or trialled
		4.3	Reports and recommendations are prepared and processed in accordance with enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation

	insurance requirements
Activities include:	<ul style="list-style-type: none">• work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving• customers or suppliers may be internal or external• work allocation• reviewing/evaluating processes and products• liaising with relevant personnel, client and/or other functional areas
Work responsibilities will vary in scope according to:	<ul style="list-style-type: none">• size of the workplace• range of designs• specialisation in the workplace and workplace quality standards
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work specifications• provisional product specifications and design brief• provisional marketing strategies• organisation work specifications and requirements• legislation, regulations and codes of practice• quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFT5013B Develop products and related processes.

Assessment Requirements for MSFFT5010 Develop products and related processes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to furnishing work instructions and work orders and safety procedures
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Develop a significant product and related processes, either individually or as part of a multi-disciplinary team, and:
 - interpret/develop specifications
 - conduct feasibility studies
 - produce prototype
 - organise/conduct trials
 - assess results against specifications
 - communicate effectively with development team and customers
 - prepare reports/presentations
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Lead others and work effectively to improve production quality and outcomes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity and encourage participation of employees in the planning of work activities and changes

Knowledge Evidence

- Intellectual property obligations and codes of practice
- Products and process development processes and procedures
- Team management and coordination processes
- Recording and reporting processes (as they may apply in the enterprise)
- Safety and environmental aspects of relevant enterprise activities
- Technical background relevant to the sector

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to information on work specifications, quality standards, organisation procedures and customer requirements.

MSFGG1001 Complete a basic glass and glazing project

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing, fabricating and assembling a basic glass and glazing project. It is designed for VET in Schools or pre-employment programs to introduce basic glass and glazing techniques and materials.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare for work | 1.1 Work instructions are used to determine job requirements for a basic glass and glazing job, including design variations, tolerances, process, materials, finish and quantity |
| | 1.2 Work sequence is planned and procedures are determined for checking quality at each stage of the process |
| | 1.3 Work health and safety requirements (WHS), including personal protective equipment, are observed throughout the work |
| | 1.4 Preparatory drawings/set-outs for tasks are confirmed and a suitable work area selected |

- | | | |
|---|---|---|
| | 1.5 | Materials are selected following work instructions |
| | 1.6 | Tools and equipment and a table suitable for the work are identified and checked for safe and effective operation |
| 2 | Fabricate and assemble components | |
| | 2.1 | Material is set out according to work instructions, prepared, and components marked according to workplace procedures |
| | 2.2 | Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications |
| | 2.3 | Components are fabricated, including any specified shapes, angles or curves, and checked against set-out and job requirements |
| | 2.4 | Components are fitted to job requirements and the assembly process undertaken according to workplace procedures |
| | 2.5 | Item is checked for compliance with specifications and finished in accordance with work instructions using edging equipment, where required |
| 3 | Finalise operation and maintain equipment | |
| | 3.1 | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | 3.2 | Off-cuts and unused materials are collected and stored for re-use or disposed of following workplace procedures |
| | 3.3 | Waste and scrap materials are dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Work instructions include:	<ul style="list-style-type: none">• reading and interpreting plans• developing set-outs• using hand and power tools• operating basic machinery• applying quality requirements• applying product finishing techniques and materials
A basic glass and glazing project includes:	<ul style="list-style-type: none">• fish tank• display case• flower vase/box• ornamental box/case
Tools and equipment include:	<ul style="list-style-type: none">• flat felt covered cutting tables• tungsten wheel glass cutters• speed cutters• circle cutters• L-squares and straight edges• tape measures• glass handling gloves• safety glasses• gauntlets• aprons• marking pens• chinagraph pencils• templates and lubricants <p>drilling equipment (e.g. portable or wall-mounted)</p> <ul style="list-style-type: none">• free-standing diamond drill presses and saws
Tables appropriate for cutting large glass sheets include:	<ul style="list-style-type: none">• air flotation tables• roller castor tables or tilt tables with air flotation• breaker bars or roller castors

Materials include:	<ul style="list-style-type: none">• annealed glass (less than or 7 mm thick) and laminated glass (less than or 6.38 mm thick) as deemed appropriate for the project
Edging equipment includes:	<ul style="list-style-type: none">• finishing or belt machines• diamond or pencil edgers• pumice or cork polishers• horizontal wheels• finger slotters• hand tools
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices:<ul style="list-style-type: none">• gloves• safety glasses• gauntlets• footwear• earmuffs• aprons and overalls
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures• AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass

Unit Mapping Information

Supersedes and is equivalent to LMFGG1001C Complete a basic glass and glazing project.

Assessment Requirements for MSFGG1001 Complete a basic glass and glazing project

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Adapt or vary glass and glazing designs and prepare, fabricate and assemble at least one (1) basic glass and glazing project which:
 - is of thin glass (annealed glass or laminated glass of less than or 7 mm thick)
 - requires the use of glass and glazing hand tools and basic glass and glazing processing machines
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Interpretation of plan representation of product design
- Preparation of drawings/set-outs
- Work flow requirements in relation to glass and glazing projects
- Identification of glass and glazing hand and basic processing tools, materials, equipment, processes and procedures

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans/designs, glass and glazing hand tools and/or basic processing machines, project materials and a specified project.

MSFGG2001 Use glass and glazing sector hand and power tools

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting and using hand and power tools in applications relating to the glass and glazing sector of the furnishing industry, including basic aluminium fabrication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---------------------------------|---|
| 1 Identify hand and power tools | 1.1 Types of hand and power tools and their functions are identified |
| | 1.2 Sources of, and access to, power supply are recognised and used safely |
| | 1.3 Work health and safety (WHS) requirements for using hand and power tools are recognised and implemented |
| 2 Select and use hand tools | 2.1 Hand tools are selected consistent with needs of job |
| | 2.2 Hand tools are checked for serviceability and safety and any faults reported to supervisor in accordance with enterprise procedures |

- | | | | |
|---|------------------------------|--|---|
| | 2.3 | Equipment is selected to hold, position or support material for hand tool application, where applicable | |
| | 2.4 | Material is located and held in position for hand tool application | |
| | 2.5 | Hand tools are safely and effectively used according to their intended use and safely stored when not in immediate use | |
| 3 | Select and use power tools | 3.1 | Appropriate personal protective equipment is selected, correctly fitted and used at all times |
| | | 3.2 | Power tools are selected consistent with needs of job in accordance with conventional work practice |
| | | 3.3 | Power tools are visually checked for serviceability/safety in accordance with WHS requirements and any faults reported to supervisor in accordance with enterprise procedures |
| | | 3.4 | Equipment is selected to hold, position or support materials for power tool application, where applicable |
| | | 3.5 | Material to be worked on is located and held in position for power tool application, where applicable |
| | | 3.6 | Power tools are safely and effectively used in application processes |
| | | 3.7 | Power tools are safely switched off and stored when not in use |
| 4 | Clean up work area and tools | 4.1 | All tools and equipment are cleaned, maintained and stored with relevant documentation completed in accordance with enterprise procedures |
| | | 4.2 | Work area is cleared and waste removed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|---|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and organisational safe operating procedures or equivalent• work is carried out in accordance with state and federal legislative obligations, environmental legislation, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Hand tools used in the glass and glazing sector include: | <ul style="list-style-type: none">• tungsten wheel glass cutters• speed cutters• circle cutters• vacuum straight edges• lever and vacuum lifters• plate and running pliers• pop rivet pliers• screwdrivers• tools for aluminium:<ul style="list-style-type: none">• knives• sheers• measuring devices• straight edge• square• assorted hammers• rollers• combination saw |
| Power tools used in the glass and glazing sector include: | <ul style="list-style-type: none">• portable electric drills• grinders• circular saws and jig saws• plunge routers• sanders• drop, radius, mitre and upcut saws• bench drills and grinders• portable pneumatic drills |

- Personal protective equipment includes:**
- nail and staple guns
 - pop rivet guns and compressors
 - tools for aluminium:
 - assorted air tools
 - assorted electric tools
 - compressor
 - rivet gun
 - metal press and dies
 - that prescribed under legislation, regulation and enterprise policies and practices:
 - gauntlets
 - gloves
 - safety glasses
 - ear protection
 - hard hats
 - safety footwear
 - aprons and overalls
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment and personal protective equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFGG2001C Use glass and glazing sector hand and power tools.

Assessment Requirements for MSFGG2001 Use glass and glazing sector hand and power tools

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Carry out correct procedures prior to, during and after use of hand and power tools
- Identify six (6) commonly used glass and glazing sector hand and power tools
- Indicate hand and power tool applications and limitations
- Effectively and safely use hand and power tools in the workplace environment
- Maintain and safely store hand and power tools
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow requirements and standards within the workplace
- Workplace safety requirements and WHS legislation
- Function and purpose of hand and power tools used in the workplace
- Characteristics of glass and/or aluminium, and glass and/or aluminium products and defects, including hazards and handling requirements
- Industry standard cross-sections and lengths
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to glass and glazing sector and aluminium hand and power tools, materials used in the manufacturing and/or processing of glass and glazing and aluminium products and operating procedures.

MSFGG2002 Use, handle and store glass and glazing products and consumables

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers accurately identifying glass, glazing product and consumable characteristics and limitations to handle, correctly use and store them safely and effectively.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify glass types, glazing products and consumables	1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to glass and glazing work are verified and complied with
	1.2 The characteristics of glass types and glazing products are identified to determine their use and suitability for a range of glazing work
	1.3 Types and quantities of glazing consumables required for a glazing job are identified from plans or work instructions
2 Prepare to use glass and glazing products	2.1 Work requirements for glass and glazing work are determined in a logical order to suit the job
	2.2 Common glass and glazing tools, equipment, personal

		protective equipment, and their use in glass and glazing work are identified
	2.3	Glass to match work requirements is checked for type, size and imperfections
	2.4	Glazing products are selected in accordance with customer orders and Australian Standards
	2.5	Defective glazing products are reported for repair or replacement in accordance with workplace procedures
3	Handle and use glass and glazing consumables	3.1 Consumables are selected and checked prior to use to ensure they are appropriate for the planned glazing work
		3.2 Consumables are handled and used according to workplace procedures, manufacturer instructions and industry practice
		3.3 Any problems occurring when using consumables are identified, rectified and/or reported, where appropriate
4	Store glass and glazing consumables	4.1 Unused glass, glazing products and consumables are assembled after completion of the job, checked for reusability, cleaned and stored safely and effectively
		4.2 Waste and scrap material are removed for disposal or recycling, as required
		4.3 Work area is cleaned and rubbish disposed of, as appropriate

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Glass types, their characteristics and appropriate use include:

- annealed glass
- heat toughened and chemically strengthened glass
- laminated glass
- wired glass
- tinted and heat reflective glass
- coated glass and insulated glass units
- low iron glass
- self-cleaning glass
- electrically heatable glass
- low emissivity glass
- mirrored glass

Glazing products, their characteristics and appropriate use include:

- g clamps:
 - flat
 - radius
 - holeless
- setting blocks and packers
- U channel rubber
- spider fittings:
 - 2, 3 and 4 arm
 - medium
 - heavy duty
- frameless glass hinges, brackets and handles
- patch fittings and locks
- articulated bolts
- stand-offs, anchors, spigots and mini-posts
- handrail brackets, slotted tube, joiners and body
- A frame 'top hat' sections and grommets
- ball castors
- clamp bars

Glazing consumables

- silicone sealants:

include:

- neutral cure (clear, white and coloured)
- anti-mildew sanitary (clear, white and coloured)
- high performance/high joint movement for structural glazing
- polyurethane sealants
- glass cleaners and silicone removers
- abrasives belts, discs and slurries:
 - silicon carbide
 - diamond
- polishing items:
 - sprays and waxes
 - cerium oxide
 - acids (sulphuric and hydrofluoric)
 - felt polishing bobs
- backing rod
- butyl glazing tape
- setting blocks
- glazing pins
- foam tape:
 - single
 - double-sided
 - structural
- masking tape
- mirror mounting tape
- putty
- horseshoe packers
- safety glass decals
- labels
- gloves
- blades
- film
- glass paint

Manufacturer instructions include:

- safe handling procedures
- strength and load bearing rates
- glazing product fixing procedures, techniques and templates
- cutting and bending techniques
- glass fixing materials
- surface preparation before use
- application techniques
- tooling procedures
- category of use, performance and structural strength

Tools and equipment include:

- temperature range for use, curing and storage
- shelf life
- other storage requirements
- tungsten wheel glass cutters
- speed cutters
- circle cutters
- squares, vacuum and other straight edges
- plate and running pliers and snips
- drills and countersinks
- spine rollers
- mallets
- silicone guns
- squeegees and holsters
- five-way cutting-in tools
- trim knives
- scrapers
- scourers
- measures
- calculator
- chamois
- heat guns
- screwdrivers
- spanners
- restraint straps and ratchets
- vacuum lifters:
 - flat
 - curved
 - double/single cup

Problems with consumables include:

- poor quality
- past use-by date
- damaged in storage
- wrong category/rating consumable for the job
- used on contaminated surfaces
- poor gunning and silicone application technique

Personal protective equipment includes:

- that prescribed under legislation, regulation and enterprise policies and practices:
 - gauntlets
 - gloves
 - safety glasses
 - ear protection
 - hard hats

Information and procedures include:

- safety footwear
- aprons and overalls
- workplace procedures relating to the use of tools and equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures
- types and quantities of products and consumables obtained, used and stored

Unit Mapping Information

Supersedes and is equivalent to LMFGG2011A Use, handle and store glass and glazing products and consumables.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFGG2002 Use, handle and store glass and glazing products and consumables

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify a range of glass types, their characteristics, uses and limitations
- Identify the properties, uses and limitations of common glass, and glazing tools and equipment
- Identify the types, properties, uses and limitations of common glazing products and consumables
- Identify and rectify problems with glass and glazing products and consumables
- Identify the likely impact of various environmental effects when using glass and glazing consumables
- Safely and effectively handle and store glass, glazing products and consumables
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for using glass, glazing products and consumables to meet specified outcomes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards, codes of practice, organisational and site standards, requirements, and policies and procedures relevant to glass, glazing product and consumables handling, storage and use

- Types of glass, glazing products and glass fixing materials used in the glazing industry, including their correct terminology, characteristics, properties, uses and limitations
- Environmental protection requirements relating to the disposal of waste material
- Established communication channels and protocols
- Relevant problem identification and resolution for glass, glazing products and consumables
- Storage systems and labelling for glass, glazing products and consumables
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation of glass, glazing product and consumables use

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a range of commonly used glass, glazing products and consumables, specifications, equipment for using glass, glazing products and consumables and a suitable storage location.

MSFGG2003 Operate glass freefall rack and table

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using freefall racks and tables in glass and glazing work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to glass and glazing work are verified and complied with
		1.2	Work requirements are identified and work sequence is planned in a logical order to suit the job
		1.3	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.4	Planned route for relocating glass is checked for hazards and the work area is cleared of obstructions
		1.5	Work area is cleared of unauthorised personnel prior to and during freefall operations in accordance with workplace procedures

	1.6	Freefall rack and table is checked for correct operation, levelled and cleared of any foreign material
2	Freefall glass	
	2.1	Freefall is conducted in accordance with workplace procedures to move glass safely
	2.2	Problems occurring during operation are identified and reported to appropriate persons in accordance with workplace procedures
	2.3	Authorised changes in working procedures and/or requirements are followed
3	Complete work	
	3.1	Waste and scrap material is removed for disposal or recycling, as required
	3.2	Work area is cleaned and rubbish disposed of, as appropriate
	3.3	Workplace documentation is completed, as required
	3.4	Tools, equipment and unused materials are removed and stored appropriately

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, and manual handling

	procedures
	<ul style="list-style-type: none">• work requires individuals to demonstrate some discretion, judgement and problem solving

Assessment Requirements for MSFGG2003 Operate glass freefall rack and table

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Follow pre-freefall glass inspections and safety procedures
- Deal with freefall factory run sizes (FRS) glass up to, and including, 10 mm thick
- Freefall 6.38 mm (or less) laminated glass
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements
- Principles and techniques of freefalling glass from a rack to a table
- Workplace safety system requirements related to the freefalling of glass
- Work flow requirements in relation to freefalling of glass using rack and table

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment may be conducted in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment may occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to glass freefall rack and table, workplace operating procedures and glass sheets.

MSFGG2004 Process thin glass by hand

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting, shaping and applying finishing techniques to annealed glass up to, and including, 10 mm thick, and laminated glass up to, and including, 11.76 mm thick.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------------------------|--|
| 1 Identify work requirements | <div style="margin-left: 20px;">1.1 Work requirements, including materials, types of cuts, shapes, holes and edges, processes and quantities required, are identified from work instructions or job order in accordance with workplace procedures</div> <div style="margin-left: 20px;">1.2 Work health and safety (WHS) requirements, including personal protective equipment, are observed throughout the work</div> <div style="margin-left: 20px;">1.3 Tools, equipment and thin glass materials are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition</div> <div style="margin-left: 20px;">1.4 Cutting list and quality standards are determined and procedures identified in accordance with workplace</div> |
|-------------------------------------|--|

- requirements and industry standards
- 1.5 Glass to be cut, and holes drilled or shaped by hand are selected using information from the work order, including type of glass, thickness, colour and dimensions
 - 1.6 Equipment and settings required to perform the work are identified and prepared
- 2 Prepare for work
- 2.1 Sequence of work is planned to ensure processing is conducted in a logical order
 - 2.2 Suitable cutting, shaping and lubrication methods are selected
 - 2.3 Glass processing table is selected and work surface is cleared of debris and dust
 - 2.4 Work area is cleared of obstructions and potential hazards with cullet bins located close to work area
 - 2.5 Glass is checked for imperfections and damage prior to handling
 - 2.6 Glass to be processed is located in the work area using correct manual handling procedures
 - 2.7 Glass is measured accurately to minimise waste and within specified tolerances according to enterprise standards
- 3 Process glass
- 3.1 Tools and equipment are operated and monitored in accordance with manufacturer instructions and workplace procedures to ensure correct product quality and output
 - 3.2 Glass is processed to required standard in accordance with job order, work instructions and procedures, including the performance of routine lubrication and adjustments of tools/equipment
 - 3.3 Problems occurring during work operations are identified and reported to appropriate persons
 - 3.4 Authorised changes in working procedures are followed
 - 3.5 Completed product is inspected for quality of work and repaired, reprocessed or discarded in accordance with workplace procedures
- 4 Complete work
- 4.1 Processed glass is labelled and stored following workplace

procedures ensuring there are no projections

- 4.2 Scraps and off-cuts are removed for disposal or recycling, as required
- 4.3 Work area is cleaned and rubbish disposed of, as appropriate
- 4.4 Workplace documentation is completed, as required
- 4.5 Tools, equipment and unused materials are removed and stored appropriately

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFGG2004 Process thin glass by hand

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and use AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
- Complete straight cuts by hand and speed cutter and cut simple shapes, truncated and radius corners, circles, fan holes and freehand pay holes in annealed glass less than or equal to 10 mm and up to 1.0 m²
- Cut simple shapes, truncated corners and ovals in laminated glass less than or equal to 11.76 mm and up to 1.0 m²
- Calculate the cost of glass jobs
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements
- Correct identification and use of glass cutting equipment, their functions and procedures for use
- The set-up and operation of glass cutting equipment, including procedures for reporting product defects or equipment faults
- Workplace safety system requirements related to glass cutting
- Work flow requirements in relation to glass cutting

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to glass sheet/product, cutting equipment, such as hand glass cutter, circle cutter and speed cutter and a table.

MSFGG2005 Apply basic glass handling

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers handling and moving sheets of flat glass by hand safely and efficiently in a production, processing or installation environment, as an individual and involving teamwork for lifting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for glass handling	<p>1.1 Work requirements in the form of type and quantity of glass to be relocated are identified from work instructions</p> <p>1.2 Work health and safety (WHS) requirements for movement of glass sheets by hand, including personal protective equipment, are observed throughout the work</p> <p>1.3 Sheet glass to be moved is identified and weight, shape and points of balance, and dimensions estimated or calculated</p> <p>1.4 Tools and equipment and manual handling procedures for lifting, lowering and carrying, pushing and pulling are identified</p>

- 1.5 Risks to self, others, material and equipment are identified arising from the required lifting, load carrying, set down or movement of the glass
 - 1.6 Need for glass lifting equipment or team lifting is determined and team lifting processes are considered for application
 - 1.7 Glass is checked for imperfections and damage prior to movement
- 2 Plan glass movement
 - 2.1 Locations for glass storage are identified and routes to be followed determined
 - 2.2 Required clearances are compared to available space and adjustments made, as required
 - 2.3 Process for relocating glass is planned, including predicting and planning for potential difficulties
 - 2.4 Proposed process is checked against advisory standards and workplace procedures for compliance
- 3 Relocate glass
 - 3.1 Actions of lifting, lowering and carrying, pulling and pushing are carried out in accordance with approved advisory standards and workplace procedures
 - 3.2 Team lifting tasks (where used) are coordinated according to approved advisory standards
 - 3.3 Planned process and route are followed and glass is relocated without damage to material, personnel or equipment
 - 3.4 Glass is labelled and stored following workplace procedures ensuring there are no projections
 - 3.5 Relocation is checked to see that it meets work requirements, and any differences reported
- 4 Complete work
 - 4.1 Work area is cleaned and rubbish disposed of, as appropriate
 - 4.2 Workplace documentation is completed, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFGG2005 Apply basic glass handling

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Demonstrate safety and inspection procedures prior to lifting
- Safely lift and relocate annealed and laminated glass up to, and including, 1.2 m² (17 kg)
- Safely team lift and relocate annealed and laminated glass up to, and including, 4.5 m² (68 kg)
- Load and unload glass safely and efficiently
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements and the behaviour of glass sheets when lifted and moved
- Work flow requirements in relation to the movement of glass by hand
- Principles, requirements and techniques of moving glass sheets by hand and loading and unloading glass to/from trucks and skips
- Workplace safety system requirements related to the moving of glass sheets by hand

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

MSFGG2006 Move single glass sheets by mechanical means

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers moving single sheets of flat glass by mechanical means individually or in a team environment in workplaces which are involved in the manufacture, processing and/or installation of sheet glass.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-----------------------------------|--|
| 1 Prepare for glass moving | 1.1 Work requirements in the form of type and quantity of glass to be relocated are identified from work instructions |
| | 1.2 Work health and safety (WHS) requirements for movement of glass sheets by mechanical means, including personal protective equipment, are observed throughout the work |
| | 1.3 Glass sheets to be moved are identified and weight is estimated or calculated and safe movement requirements applied |
| | 1.4 Appropriate mechanical handling equipment, tools and equipment are identified |
| | 1.5 Risks arising from the required lifting to self, others, |

- material and equipment are identified, load carrying, set down or movement of the glass
- 1.6 Equipment and controls, including emergency stops and guards, are identified and checked for safe operation with any damaged or worn parts reported to appropriate personnel
 - 1.7 Glass is checked for imperfections and damage prior to movement
- 2 Plan glass movement
 - 2.1 Locations for glass storage are identified and routes to be followed determined
 - 2.2 Required clearances are compared to available space and adjustments made
 - 2.3 Process for relocating glass is planned, including predicting and planning for potential difficulties
 - 2.4 Proposed process is checked against advisory standards and workplace procedures for compliance
- 3 Relocate glass
 - 3.1 Equipment is operated in accordance with approved advisory standards, manufacturer instructions, workplace procedures and WHS requirements
 - 3.2 Planned process and route are followed and glass is relocated without damage to material, personnel or equipment
 - 3.3 Glass is labelled and stored following workplace procedures ensuring there are no projections
 - 3.4 Relocation is checked to see that it meets work requirements, and any differences reported
- 4 Complete work
 - 4.1 Waste and scrap material are removed for disposal or recycling, as required
 - 4.2 Work area is cleaned and rubbish disposed of, as appropriate
 - 4.3 Handling equipment is cleaned, maintained and stored according to workplace procedures
 - 4.4 Workplace documentation is completed, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Assessment Requirements for MSFGG2006 Move single glass sheets by mechanical means

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Use correct personal protective safety apparel and safety regulations for overhead lifting
- Safely use gantry cranes up to 4.9 SWL, including relevant standards and regulations
- Safely use vacuum rigs or scissor grabs for lifting single glass sheets
- Follow pre-safety and inspection procedures, calculate weight, and safely load and secure glass
- Relocate single sheets of glass by vacuum or scissor grabs up to 4.5 m² (170 kg)
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements, and the behaviour of glass sheets when lifted and moved
- Work flow requirements in relation to the movement of glass by mechanical means
- Principles, requirements and techniques of moving glass sheets by mechanical means
- Workplace safety system requirements related to the moving of glass sheets by mechanical means
- Capabilities, operating processes and procedures of mechanical handling equipment

Assessment Conditions

MSFGG2007 Process glass by basic machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting, shaping, drilling and edging annealed glass up to, and including, 6 mm thick, and laminated glass up to 7 mm thick by basic machines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------------------------|---|
| 1 Identify work requirements | <div style="margin-left: 20px;">1.1 Work requirements, including materials, types of cuts, shapes and edges, processes and quantities required, are identified from work instructions or job order in accordance with workplace procedures</div> <div style="margin-left: 20px;">1.2 Work health and safety (WHS) requirements, including personal protective equipment, are observed throughout the work</div> <div style="margin-left: 20px;">1.3 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, of the appropriate quality, serviceable and in a safe condition</div> <div style="margin-left: 20px;">1.4 Cutting list and quality standards are determined and procedures for operation of basic cutting machines</div> |
|-------------------------------------|---|

- identified in accordance with workplace requirements and industry standards
- 1.5 Glass to be cut, shaped, drilled or edged is selected using information from the work order, including type of glass, thickness, colour and dimensions
 - 1.6 Machines, equipment and settings required to perform the work are identified
- 2 Prepare for work
- 2.1 Technique and sequence of work are planned to ensure glass processing is conducted in a logical order
 - 2.2 Procedures for monitoring quality of materials, work in progress and finished items are identified in accordance with workplace requirements and industry practice
 - 2.3 Suitable cutting, shaping, drilling and edging machines are selected
 - 2.4 Glass processing table is selected and work surface is cleared of debris and dust
 - 2.5 Components and controls of machines, including emergency stops and guards, are identified and tested, and appropriate action taken if not in working order
 - 2.6 Work area is cleared of obstructions and potential hazards
 - 2.7 Glass to be processed is located in the work area using appropriate handling techniques
 - 2.8 Glass is measured accurately to minimise waste and within specified tolerances according to enterprise standards
 - 2.9 Glass is checked for imperfections and damage prior to handling
- 3 Conduct processing operations
- 3.1 Tools and equipment are operated and monitored in accordance with manufacturer instructions and workplace procedures to ensure correct product quality and output
 - 3.2 Glass is processed to required standard in accordance with job order, work instructions and procedures, including the performance of routine lubrication and adjustments of machines/equipment, if required
 - 3.3 Problems occurring during work operations are identified and reported to appropriate persons in accordance with enterprise procedures

- | | | |
|---|---------------|---|
| | 3.4 | Authorised changes in working procedures are followed |
| | 3.5 | Completed product is inspected for quality of work and repaired, reprocessed or discarded in accordance with workplace procedures |
| 4 | Complete work | |
| | 4.1 | Processed glass is labelled and stored following workplace procedures ensuring there are no projections |
| | 4.2 | Scraps and off-cuts are removed for disposal or recycling, as required |
| | 4.3 | Work area clean-up is completed following workplace procedures |
| | 4.4 | Equipment is cleaned and stored according to workplace requirements |
| | 4.5 | Tools, equipment and unused materials are removed and stored appropriately |
| | 4.6 | Workplace documentation is completed in accordance with workplace requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health

	regulations, manual handling procedures and organisation insurance requirements
Materials include:	<ul style="list-style-type: none">• work requires individuals to demonstrate some discretion, judgement and problem solving• annealed and laminated glass for residential and commercial glazing and furniture applications
Tools and equipment include:	<ul style="list-style-type: none">• flat felt covered cutting tables• tungsten wheel glass cutters• L-squares and straight edges• tape measures• glass handling gloves• safety glasses• gauntlets• aprons• marking pens• chinagraph pencils• templates• lubricants
Basic cutting machines include:	<ul style="list-style-type: none">• portable diamond saw• circle cutters• speed cutters
Drilling equipment includes:	<ul style="list-style-type: none">• portable diamond drill• wall-mounted and free-standing diamond drill presses
Edging includes:	<ul style="list-style-type: none">• arrising• flat• round and mitre grinding• round and mitre polishing and bevelling
Glass processing includes:	<ul style="list-style-type: none">• straight cutting• circle cutting• freehand cutting• drilling and edging
Edging machines include:	<ul style="list-style-type: none">• finishing or belt machines• diamond or pencil edgers• pumice or cork polishers• horizontal wheels• finger slotters• hand tools
Tables appropriate for cutting large glass sheets include:	<ul style="list-style-type: none">• air flotation tables• roller castor tables or tilt tables with air flotation• breaker bars or roller castors

Personal protective equipment includes:

- that prescribed under legislation, regulation and enterprise policies and practices:
 - gauntlets
 - gloves
 - safety glasses
 - hard hats
 - safety footwear
 - aprons and overalls

Information and procedures include:

- workplace procedures relating to the use of tools and equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures
- AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass

Unit Mapping Information

Supersedes and is equivalent to LMFGG2007C Process glass by basic machines.

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
- Set up for and prepare to process glass identifying and using AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
- Complete straight cuts, truncated and radius corners, circles and fan holes, and pay holes by basic cutting machine in glass up to 7 mm in annealed, and laminated glass up to 1.0 m²
- Cut up to 7 mm annealed and laminated glass using a diamond saw
- Arrise, grind and polish flat, round and mitre edges on up to 7 mm annealed, and laminated glass up to 0.5 m²
- Drill holes with tungsten or diamond drill bits in up to 7 mm annealed, and laminated glass up to 0.5 m²
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements
- Workplace safety system requirements related to glass processing by basic machines
- Identification of glass processing equipment, including functions and procedures

- Set-up and operation of glass processing equipment, including procedures for reporting machine/product defects or equipment faults
- Work flow requirements in relation to glass processing

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to glass sheet/product up to 7 mm thick, processing facilities/equipment (such as basic cutting and edging machines), table, work area, work orders and appropriate safety and personal protection equipment.

MSFGG2008 Glaze and re-glaze residential windows and doors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers fitting glass to residential windows and doors, other openings, or to other frames performed in workplaces involving on-site and off-site fabrication, installation and replacement of glass.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify work requirements	<p>1.1 Work requirements for the type of glass to be used and the method of fixing are identified from work instructions</p> <p>1.2 Work health and safety (WHS) requirements for glazing/re-glazing of windows and doors, including personal protective equipment, are observed throughout the work</p> <p>1.3 The process for fitting glass to window and doorframes is identified</p>
2 Prepare for work	<p>2.1 Work sequence is planned in a logical order to suit the job and in accordance with workplace procedures</p> <p>2.2 Tools, equipment and materials (other than glass and</p>

- frames) are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
- 2.3 Type of glass to be fitted and frames are selected to match job requirements and glass checked for type, size and imperfections
 - 2.4 Glass fixing method is selected and frame condition is assessed to ensure suitability for glazing in accordance with customer order and Australian Standards
 - 2.5 Defective frames are reported for repair or replacement in accordance with workplace procedures
 - 2.6 Fixing and sealing materials are prepared by mixing or cutting to length, as appropriate
- 3 Identify site conditions and restraints
 - 3.1 On-site difficulties are recognised and corrective action taken in accordance with regulations and workplace requirements
 - 3.2 Covering material is applied, where necessary, to protect existing fixtures and fittings
 - 3.3 Special characteristics of the window or door which may affect the finished job are identified and corrective action taken
 - 3.4 Prefabricated, modular scaffolding system to a maximum of one platform is erected safely and in the correct order of assembly, if required
 - 3.5 Access stairway or ladder and edge protection components are fitted to the modular scaffolding, where used
 - 4 Perform glazing
 - 4.1 Frame is prepared to receive glass by checking size against specifications, removing remains of glass and any sealants, cleaning and surface preparation, if required
 - 4.2 Glass is fixed to the frame using the selected method and in accordance with recognised industry procedures and Australian Standards
 - 4.3 Solvents and sealants are used in accordance with manufacturer recommendations and Australian Standards
 - 4.4 Excess sealing material is removed and glass and frame cleaned after fixing

- | | | | |
|---|---------------|-----|--|
| 5 | Complete work | 5.1 | Completed installation is checked to ensure compliance with customer requirements and specifications |
| | | 5.2 | Prefabricated modular scaffolding, where used, is dismantled safely in the correct order and packed for transport |
| | | 5.3 | Tools, equipment and materials are cleaned and stored following workplace procedures |
| | | 5.4 | Work area is cleaned and left in a safe condition and rubbish disposed of, as appropriate |
| | | 5.5 | Waste and scrap materials are removed for disposal or recycling, as required |
| | | 5.6 | Workplace documentation is completed in accordance with workplace requirements including calculating the cost of glass, fittings, materials and labour |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods code, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion,

	judgement and problem solving
Types of glass include:	<ul style="list-style-type: none">• annealed glass• toughened glass• laminated glass• wired glass• tinted and heat reflective glass• coated glass and insulated glass units• patterned glass
Methods of glazing include:	<ul style="list-style-type: none">• channel glazing• beaded glazing and double glazing
Glazing and re-glazing includes:	<ul style="list-style-type: none">• installation of glass to metal and/or timber doors, windows and other frames, and re-glazing of existing windows and doors• residential glazing/re-glazing that is confined to simple doors and windows:<ul style="list-style-type: none">• residential windows, such as fixed, sliding, casement, awning and double hung and louvres• residential doors, such as sliding, hinged, pivot and bi-fold
Tools and equipment include:	<ul style="list-style-type: none">• tungsten wheel glass cutters• speed cutters• cutting lubricants• running pliers• straight edges and squares• tape measures• glass handling and lifting equipment• hack-out knives• chisels• putty knives• sprig/diamond guns• vinyl cutters and rollers• pry bars• sealant guns• blade and Phillips head screwdrivers• pop rivet guns• electric and pneumatic drills• rubber mallets• claw hammers• nail punches• personal protective equipment
Materials include:	<ul style="list-style-type: none">• flat glass and acrylic glazing products

	<ul style="list-style-type: none">• plastic• aluminium• steel• solid timber• gaskets• sealants• adhesives• glazing tapes• setting blocks
Matching job requirements includes:	<ul style="list-style-type: none">• customer order• existing glass type
Glass fixing factors include:	<ul style="list-style-type: none">• specification• type of glass and frame• security requirements• sealing methods• compliance with relevant Australian Standards
Prefabricated, modular restricted height scaffolding includes:	<ul style="list-style-type: none">• completed scaffolding less than 3 m in completed height from the ground• erection as close as practicable to the working face, and where the scaffold is greater than 225 mm from the working face, guardrails and mid-rails to the inner face must be installed• dismantling by accessing the scaffold platform by stairway or ladder and start dismantling from an end bay• dismantling sequence is to dismantle guardrails, mid-rails, ledgers, transoms and standards first
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear• aprons and overalls
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures• on-site procedures and regulations relating to the handling

and movement of glass

- Australian Standards:
 - AS 1288:2006 Glass in buildings - Selection and installation
 - AS/NZS 2208:1996 Safety glazing materials in buildings
 - AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
 - AS 2047:1999 Windows in buildings - Selection and installation
 - AS/NZS 4666:2000 Insulating glass units

Unit Mapping Information

Supersedes and is equivalent to LMFGG2008C Glaze/re-glaze residential windows and doors.

Assessment Requirements for MSFGG2008 Glaze and re-glaze residential windows and doors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Optimise glass sizes for economical cutting and assembling of required materials and glaze or re-glaze the following:
 - timber putty faced window sashes or door panel
 - timber beaded sidelight, fixed panel, sliding, hinged, pivot and/or bi-fold doors
 - metal framed channel glazed door or window
 - metal framed beaded door or window
- Glazing is to include:
 - calculating glazing clearance and cutting size
 - cutting glass to AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
 - selecting correct glazing tools, equipment, glazing sealants, vinyls and tapes
 - preparing the working area
 - preparing glazing rebates and channels prior to installation
 - cleaning glass, tools, equipment and work area
 - calculating the cost of glass, glazing materials and labour
 - selecting re-glazing tools and equipment
 - hacking out/removing beads and glass safely from timber windows and doors
 - removing and disassembling metal window sashes and doors and removing glass safely
 - installing and/or adjusting sash cords, unique, spiral or spring balances on double hung windows
- Erect, use and dismantle modular scaffolding equipment safely
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements

- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements
- Techniques, methods, materials and process of glazing simple/complex window and doorframes
- Workplace safety system requirements related to the glazing simple/complex window and doorframes
- Relevant Australian Standards
- Work flow requirements in relation to fitting glass
- Characteristics, purpose and operation of tools and equipment used in glazing simple/complex window and doorframes
- Safe methods for erecting and dismantling restricted height modular scaffolding systems
- Correct identification of equipment, processes and procedures

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to frames, glass, fixing material, sealants, modular scaffolding, workplace operating procedures and work orders, personal protective equipment and an appropriate work area/site.

MSFGG2009 Fabricate and assemble frames

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers fabricating and assembling frames from aluminium and/or steel, timber or unplasticised polyvinyl chloride (uPVC) and involves the set-up and operation of relevant machines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify work requirements and components

- 1.1 Work requirements in the form of product to be fabricated and assembled, its use, specifications, components and attachments are identified from work instructions
- 1.2 Australian Standards relating to glass components and products associated with the process are identified and complied with
- 1.3 Work health and safety (WHS) requirements for fabrication and assembly of metal frames, including personal protective equipment, are observed throughout the work
- 1.4 Components, attachments, materials and tools required for the fabrication and assembly are identified and their

		availability, suitability (in terms of size, quantity, finish and profile), quality and serviceability ascertained
	1.5	Tools, equipment and fasteners, fixing and joining devices suitable for the method of fixing are identified and the process for the fabrication and assembly of metal frames determined
2	Prepare for fabrication and assembly	
	2.1	Work sequence is planned in a logical order to suit the product specifications and workplace procedures
	2.2	Tools, equipment, components, attachments and materials are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
	2.3	Required jigs are prepared or selected and checked for suitability for purpose
	2.4	Measurements are checked for accuracy, legibility and tolerance, and mating or directional marks noted and positioned
	2.5	Machines and equipment are set up in accordance with production objectives, manufacturer instructions and workplace procedures
3	Fabricate and assemble components	
	3.1	Machines, tools and equipment are operated in accordance with manufacturer instructions and workplace procedures to produce components in conformance to specifications
	3.2	Components are laid out and frames assembled ensuring conformity to specifications, alignment and appropriate fastening
4	Complete work	
	4.1	Completed frame is inspected to ensure compliance with quality standards and customer requirements
	4.2	Equipment is cleaned, inspected and stored in accordance with workplace procedures, with unserviceable items tagged, faults identified and appropriate personnel informed
	4.3	Work area is cleaned and rubbish disposed of, as appropriate
	4.4	Waste materials are removed from work area and disposed of in accordance with relevant statutory requirements and

enterprise requirements

- 4.5 Tools, equipment and unused materials are removed and stored appropriately
- 4.6 Workplace documentation is completed in accordance with enterprise requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Fabrication and assembly includes:

- selection of materials, components and attachments required for a frame, its fabrication and assembly prior to its installation
- cutting
- routing
- milling
- pressing
- drilling
- crimping

Materials include:	<ul style="list-style-type: none">• aluminium alloys and steel• timber and plastic-coated timber• uPVC and other composite materials• hardware• fasteners (screws and pop rivets)• plastics• sealants• tapes• vinyl• gaskets• timber reveals
Tools and equipment include:	<ul style="list-style-type: none">• assembly benches• drop and up-cut saws• pneumatic• hydraulic and manual presses• frame and sash tooling• copy routers• end millers• crimpers• electric and pneumatic powered drills and screwdrivers• pop rivet guns• pleuws guns• hand tools
Components are assembled using:	<ul style="list-style-type: none">• a jig (if required)• appropriate fastenings• appropriate tools and equipment
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear• aprons and overalls
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures• AS 2047:1999 Windows in buildings - Selection and

installation

Unit Mapping Information

Supersedes and is not equivalent to LMFGG2009C Fabricate and assemble metal frames.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFGG2009 Fabricate and assemble frames

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete work from product specification data sheets which may include fabricating frame and sash components, identifying and selecting necessary product materials
- Identify, select and install component hardware, including:
 - weather seals
 - wheels
 - stays
 - hinges
 - guides
 - locks
- Assemble metal, timber or uPVC frames, including:
 - gaskets
 - tapes
 - sealants
 - adhesives
 - fasteners
- Reveal linings and flashings in accordance with AS 2047:1999 Windows in buildings - Selection and installation (Section 6)
- Label and certify frames in accordance with AS 2047:1999 Windows in buildings - Selection and installation (Section 8)
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures

- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow requirements in relation to frame production
- Workplace safety system requirements related to the fabrication and assembly of metal, timber and uPVC frames
- Operation of tools and equipment used in the fabrication and assembly process
- Identification of equipment, processes and procedures
- Relevant Australian Standards

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to frame materials and components, consumables, workplace operating procedures, personal protective equipment and appropriate work area.

MSFGG2010 Fabricate and install insect and security screens

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers measuring, fabricating and installing insect screens, heavy-duty security mesh, security doors and window grills using aluminium.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-----------------|--|
| 1 Plan for work | 1.1 Work requirements in the form of type of insect or security screen to be fabricated and installed are determined from work instructions, including the identification of its pattern or plan |
| | 1.2 Work health and safety (WHS) requirements for fabrication and installation of insect or security screens, including personal protective equipment, are observed throughout the work |
| | 1.3 The suitable process for fabricating and installing insect or security screens is identified |
| | 1.4 Quantities of materials required are calculated from plans and/or work instructions and/or by measuring the screen opening in accordance with Australian Standards and |

- industry practice
- 1.5 Cutting lists are prepared from plans, work instructions or measurements of opening to suit the type of screen to be installed
 - 1.6 Fittings, fixings and joining devices or materials are selected in accordance with specifications or type of materials to be joined or fixed
 - 1.7 Tools and equipment appropriate to the work method are identified and assembled for use
- 2 Prepare for work
 - 2.1 Work sequence is determined in a logical order to suit the job and workplace procedures
 - 2.2 Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
 - 2.3 Components of the insect or security screen are checked against specifications or job order for size, quantity, finish and profile
- 3 Fabricate and install insect or security screen
 - 3.1 Materials are measured and marked to cutting list requirements and most economical use of materials
 - 3.2 Materials are cut and stamped to cutting list requirements in accordance with workplace procedures or industry practice
 - 3.3 Components of insect or security screen are assembled in accordance with recognised industry standards
 - 3.4 Fittings are installed to screen in accordance with workplace procedures or industry practice
 - 3.5 Insect or security screen is installed in opening in accordance with recognised industry standards
- 4 Complete work
 - 4.1 Installed insect or security screen is inspected for quality of work and repaired, re-fabricated or reinstalled, as required, in accordance with workplace procedures
 - 4.2 Material which can be reused is collected and stored
 - 4.3 Waste and scrap materials are removed for disposal or recycling, as required

- 4.4 Work area is cleaned and rubbish disposed of, as appropriate
- 4.5 Tools, equipment and unused materials are cleaned and removed and stored appropriately
- 4.6 Workplace documentation is completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Insect and security screens include: | <ul style="list-style-type: none">• fixed, sliding and emergency exit grills to suit various commercial and domestic window types• sliding and hinged door applications |
| Materials include: | <ul style="list-style-type: none">• extruded door framing• corner stakes• interlocks• fly mesh• heavy-duty security mesh |

Fittings include:	<ul style="list-style-type: none">• fittings and fixing/fasteners (screws and pop rivets)• anti-jemmy protection hardware• hinges• wheels• lock mechanisms that comply with Australian Standards• door closures• lock guards
Tools and equipment include:	<ul style="list-style-type: none">• assembly benches• drop and up-cut saws• pneumatic and manual presses• stamping and notching tools• copy routers• end millers• crimpers• electric and pneumatic powered drills and screwdrivers• pop rivet guns• fly screen spline rollers• soft rubber mallets• knives• bolt cutters or mechanical shears

Assessment Requirements for MSFGG2010 Fabricate and install insect and security screens

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Measure for security windows and doors and identify and select product materials to be used
- Fabricate frame and components, including optimisation of materials, cutting, tooling, drilling and/or crimping to ensure compliance to Australian Standards
- Select and install component hardware, including wheels, hinges, guides and locks
- Assemble frames and/or grills to comply with Australian Standard requirements
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow requirements in relation to the fabrication and installation of insect and security screens
- Characteristics of materials used and uses of products produced
- Workplace safety system requirements related to fabricating and installing insect and security screens
- Correct identification of equipment, processes and procedures
- Relevant Australian Standards

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to aluminium or other framing material, aluminium or other sheeting, fittings, fixing and fasteners, workplace operating procedures, personal protective equipment and an appropriate work area.

MSFGG3001 Store and handle glass

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers handling, relocating and storing sheet glass in the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify storage requirements	1.1	Work requirements in the form of type and quantity of glass to be handled and stored are identified from work instructions
		1.2	Work health and safety (WHS) requirements for storage and handling of glass, including personal protective equipment, are observed throughout the work
		1.3	Glass to be stored is checked against paperwork and any discrepancies reported according to workplace procedures
		1.4	Storage requirements are identified from manufacturer instructions, statutory regulations and workplace procedures
		1.5	Locations for glass storage are identified and checked for availability and suitability

- | | | |
|---|----------------------------|---|
| | 1.6 | The process and procedures for moving, handling and storing glass are identified |
| | 1.7 | Team lifting processes are considered for application, including nomination of a team leader and calculating the capacity of the team |
| 2 | Prepare for glass movement | |
| | 2.1 | Work sequence is planned in a logical order to suit the job in accordance with workplace procedures |
| | 2.2 | Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition |
| | 2.3 | Planned route for relocating glass is determined and checked for hazards, and the work area is cleared of obstructions |
| | 2.4 | Risks to self and others are identified and acted upon according to statutory requirements and workplace procedures |
| | 2.5 | Required clearances are compared to available space and adjustments made |
| | 2.6 | Process for relocating glass is planned, including predicting and planning for potential difficulties |
| | 2.7 | Proposed process is checked against codes of practice and workplace procedures for compliance |
| 3 | Relocate glass | |
| | 3.1 | Safety checks are carried out on required handling equipment, and any damaged or worn parts reported according to workplace practices |
| | 3.2 | Handling equipment is operated safely and correctly in accordance with manufacturer instructions and workplace procedures |
| | 3.3 | Planned process and route are followed and glass relocated without damage to material, personnel or equipment |
| | 3.4 | Glass is labelled and stored following workplace procedures ensuring there are no projections |
| | 3.5 | Relocation is checked to see that it meets work requirements, and any differences are reported |
| 4 | Complete job | |
| | 4.1 | Handling equipment is cleaned, maintained and stored |

requirements

according to workplace procedures

- 4.2 Work area is cleaned and rubbish disposed of, as appropriate
- 4.3 Workplace documentation is completed, as required, according to workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Glass includes:

- annealed
- laminated
- toughened
- patterned
- tinted
- heat reflecting
- domestic and commercial glass
- mirrors
- shower screens
- furniture glass

Handling and storing glass includes:	<ul style="list-style-type: none">• safety glass• patterned or specialty glass• handling and storing of glass in quantities appropriate to the workplace requirement• team lifting as well as the application of individual skills
Tools and equipment include:	<ul style="list-style-type: none">• hand trolleys• pallet truck• gantry crane• scissors• slings• air and tilt tables• vacuum lifters• crawler track• articulating spider lifts
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear• aprons and overalls
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures• quality standards, including AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass

Unit Mapping Information

Supersedes and is equivalent to LMFGG3001C Store and handle glass.

Assessment Requirements for MSFGG3001 Store and handle glass

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify equipment for the handling and storage of glass and calculate the weight of glass
- Handle annealed and/or laminated glass up to, and including, 2.3 m² (17 kg)
- Team handle annealed and/or laminated glass up to, and including, 4.5 m² (68 kg)
- Relocate single sheets of glass by vacuum and/or scissor grabs up to 4.5 m² (170 kg)
- Safely load and secure glass
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements
- Work flow requirements in relation to the movement and storage of glass
- Glass storage requirements
- Correct identification of equipment, processes and procedures
- Workplace safety system requirements related to the handling, relocation and storage of glass

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to glass to be stored, workplace operating procedures, personal protective equipment, and an appropriate work area and others to assist, as required.

MSFGG3002 Assess glass and glazing requirements

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assessing and identifying glass and glazing requirements for buildings to comply with Australian Standards. It involves determining and evaluating glass and glazing requirements and may be performed in workplaces which are involved in the manufacture, processing and/or installation of sheet glass.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------------|-----|---|
| 1 | Identify work requirements | 1.1 | Customer requirements and expectations regarding glass and glazing work or technical advice are identified |
| | | 1.2 | Work health and safety (WHS) requirements for assessing glass and glazing requirements are observed throughout the work |
| | | 1.3 | Requirements are recorded according to workplace procedures and requirements |
| | | 1.4 | The process for assessing glass and glazing requirements is identified |
| 2 | Prepare for work | 2.1 | Work sequence is planned in a logical order to suit the job |

- | | | |
|---|--------------------|--|
| | 2.2 | Research materials are accessed and analysed for applicability |
| | 2.3 | Product supply sources are contacted to ascertain current developments, if appropriate |
| 3 | Conduct assessment | 3.1 Influencing factors are identified and their significance and impact on the end product determined |
| | 3.2 | Products/types of glass are identified and their application determined |
| | 3.3 | Technical or other professional advice is sought, if applicable and available, in accordance with workplace procedures |
| | 3.4 | Optimal solution is identified and specifications confirmed |
| 4 | Complete work | 4.1 Solution is converted into work instructions/job orders in accordance with workplace procedures |
| | 4.2 | Other documentation, including any advice/referral to customer, is completed in accordance with workplace practices |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Glass and glazing assessment includes:

- the formal and documented process or informal on-the-job assessment of a situation/requirement assessment required for all glass and glazing tasks
- compliance with:

	<ul style="list-style-type: none">• AS 1288:2006 Glass and glazing in buildings - Selection and installation (sections 4, 5 and 8)• AS/NZS 2208:1996 Safety glazing materials in buildings• AS/NZS 4668:2000 Glossary of terms used in the glass and glazing industry• factors influencing the assessment, including:<ul style="list-style-type: none">• wind loading considerations• human impact considerations
Tools and equipment include:	<ul style="list-style-type: none">• tape measures• calculators• glass thickness and glazing material indicators• product data and samples• relevant standards/codes• stationery and calculator
Workplace procedures include:	<ul style="list-style-type: none">• work procedures/instructions relating to assessment of glass and glazing requirements• regulatory/legislative requirements, particularly those pertaining to building codes, WHS and environmental requirements• manufacturer specifications and instructions, particularly those pertaining to new products/developments

Unit Mapping Information

Supersedes and is not equivalent to LMFGG3002C Assess glass and glazing requirements.

Assessment Requirements for MSFGG3002 Assess glass and glazing requirements

Modification History

Release 1 - New unit of competency

Performance Evidence

- Locate, interpret and apply information for situation to be assessed and:
 - apply the requirements of AS 1288:2006 Glass in buildings - Selection and installation (sections 4, 5 and 8, including scope, definitions, abbreviations and symbols) and AS/NZS 2208:1996 Safety glazing materials in buildings and AS/NZS 4668:2000 Glossary of terms used in the glass and glazing industry
 - correctly complete measurements, calculate work requirements, optimise glass sizes for application and assembly of required resources
 - use workplace technology related to the assessment of glass and glazing requirements
 - determine thickness limits for standard nominal thickness of glass
 - identify and calculate aspect ratios
 - understand and apply the principles of wind loadings
 - determine minimum nominal glass thicknesses for various glazing situations affected by human impact
 - identify types of safety glazing materials
 - determine the appropriate safety glazing materials for various glazing situations
 - identify basic installation details for glazing
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Workplace operating procedures and AS 1288:2006 Glass in buildings - Selection and installation (sections 4, 5 and 8)
- AS/NZS 2208:1996 Safety glazing materials in buildings
- AS/NZS 4668:2000 Glossary of terms used in the glass and glazing industry
- Qualities and characteristics of glass, including types, qualities, applications and limitations
- Products and processes and current trends and developments in glass and glazing techniques/applications
- Workplace safety system requirements related to the handling and installation of glass

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work requirements for glass and glazing assessment, workplace operating procedures and relevant equipment.

MSFGG3003 Move block and bulk glass sheet by mechanical means

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers moving block/bulk flat glass by mechanical means in workplaces which are involved in the manufacture, processing and/or installation of sheet glass.

It may include meeting local licensing requirements for use of slings and chains where these apply.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|--|
| 1 | Prepare for the task | 1.1 | Work requirements in the form of type and quantity of glass to be relocated are identified from work instructions |
| | | 1.2 | Work health and safety(WHS) requirements for movement of bulk/block glass sheet by mechanical means, including personal protective equipment, are observed throughout the work |
| | | 1.3 | Blocks of glass sheet to be moved are identified and weight estimated or calculated |
| | | 1.4 | Appropriate mechanical handling equipment is identified |
| | | 1.5 | Risks to self, others, material and equipment are identified |

- arising from the required lifting, load carrying, set down or movement of the glass
- 1.6 Equipment and controls, including emergency stops and guards, are identified and checked for safe operation, and any damaged or worn parts reported to appropriate personnel
 - 1.7 Glass is checked for imperfections and damage prior to movement
- 2 Plan glass movement
- 2.1 Locations for glass storage are identified and routes to be followed determined
 - 2.2 Required clearances are compared to available space and adjustments made
 - 2.3 Process for relocating glass is planned, including predicting and planning for potential difficulties
 - 2.4 Proposed process is checked against advisory standards and workplace procedures for compliance
- 3 Relocate glass
- 3.1 Equipment is operated in accordance with approved advisory standards, manufacturer instructions, workplace procedures and WHS requirements
 - 3.2 Planned process and route are followed and glass relocated without damage to material and equipment or injury
 - 3.3 Glass is labelled and stored following workplace procedures ensuring there are no projections
 - 3.4 Relocation is checked to see that it meets work requirements, and any differences are reported
- 4 Complete work
- 4.1 Waste and scrap material are removed for disposal or recycling, as required
 - 4.2 Work area is cleaned and rubbish disposed of, as appropriate
 - 4.3 Handling equipment is cleaned, maintained and stored according to workplace procedures
 - 4.4 Workplace documentation is completed, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Block/bulk glass sheets include: | <ul style="list-style-type: none">• end caps• cased or factory run size (FRS) blocks• large glass panels• annealed or laminated glass |
| Mechanical handling equipment include: | <ul style="list-style-type: none">• gantry cranes up to 4.9 safe working load (SWL)• block grabs• slings and chains (AS 1418 Set:2009 Cranes, hoists and winches Set, and licensing requirements for use of slings and chains should be considered) |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices for overhead lifting:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• safety footwear• hard hats• aprons and overalls• Bolero and harness |

Information and procedures include:

- workplace procedures relating to the use of tools and equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFGG3003C Move block/bulk glass sheet by mechanical means.

Assessment Requirements for MSFGG3003 Move block and bulk glass sheet by mechanical means

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Use personal protective safety apparel and follow safety regulations for overhead lifting
- Safely use gantry cranes up to 4.9 SWL, complying with relevant standards and regulations
- Use block grabs, slings and/or chains for lifting blocks or end caps of glass sheets
- Calculate the weight of glass and safely load and secure glass
- Relocate blocks and/or end caps of glass sheets by grabs, slings and/or chains up to 2 tonnes, complying with AS 1418 Set:2009 Cranes, hoists and winches Set and licensing requirements, where applicable
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements, and the behaviour of block glass sheet when lifted and moved
- Work flow requirements in relation to the movement of glass by mechanical means
- Principles, requirements and techniques of moving block glass sheet by mechanical means
- Workplace safety system requirements related to the moving of block glass by mechanical means
- Capabilities, operating processes and procedures of mechanical handling equipment

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to mechanical glass handling equipment, glass sheet to be relocated, workplace operating procedures, personal protection equipment and an appropriate work area.

MSFGG3004 Process thick glass

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting, shaping, drilling and edging annealed and laminated glass, which is 12 mm thick and over. It involves the planning, preparation and processing of thick glass sheet.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify work requirements

- 1.1 Work requirements for processing thick glass, including materials, types of cuts, shapes and edges, processes and quantities required, are identified from work instructions or job order in accordance with workplace procedures
- 1.2 Work health and safety (WHS) requirements, including personal protective equipment, are observed throughout the work
- 1.3 Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
- 1.4 Cutting list and quality standards are determined and procedures identified in accordance with workplace

- requirements and industry standards
- 1.5 Glass to be cut, shaped, drilled or edged is selected using information from the work order, including type of glass, thickness, colour and dimensions
 - 1.6 Machines, equipment and settings required to perform the work are identified
- 2 Prepare for work
- 2.1 Sequence of work is planned to ensure processing is conducted in a logical order
 - 2.2 Suitable cutting, shaping, drilling, edging and lubrication methods are selected
 - 2.3 Glass processing table is selected and work surface is cleared of debris and dust
 - 2.4 Work area is cleared of obstructions and potential hazards with cullet bins located close to work area
 - 2.5 Glass is checked for imperfections and damage prior to handling
 - 2.6 Glass to be processed is located in the work area using correct manual handling procedures
 - 2.7 Glass is measured accurately to minimise waste and within specified tolerances according to enterprise standards
 - 2.8 Components and controls of machines, including emergency stops and guards, are identified and tested for working order
- 3 Process glass
- 3.1 Tools and equipment are operated and monitored in accordance with manufacturer instructions and workplace procedures to ensure correct product quality and output
 - 3.2 Glass is processed to required standard in accordance with job order, work instructions and procedures, including the performance of routine lubrication and adjustments of machines/equipment
 - 3.3 Problems occurring during work operations are identified and reported to appropriate persons, and any authorised changes in working procedures followed
 - 3.4 Completed product is inspected for quality of work and repaired, reprocessed or discarded in accordance with workplace procedures

- | | | | |
|---|---------------|-----|---|
| 4 | Complete work | 4.1 | Processed glass is labelled and stored following workplace procedures ensuring there are no projections |
| | | 4.2 | Scraps and off-cuts are removed for disposal or recycling, as required |
| | | 4.3 | Work area is cleaned and rubbish disposed of, as appropriate |
| | | 4.4 | Tools, equipment and unused materials are removed and stored appropriately |
| | | 4.5 | Workplace documentation is completed, as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|---|
| Thick glass includes: | <ul style="list-style-type: none">• annealed sheet and laminated glass for residential and commercial windows and doors greater than 12 mm thick• structural glass |
| Materials include: | <ul style="list-style-type: none">• table tops• shower screens |
| Glass processing includes: | <ul style="list-style-type: none">• cutting• use of portable diamond saws• shaping• drilling and edging (edging may include arising) |
| Tools and equipment include: | <ul style="list-style-type: none">• cutting tables• tungsten wheel glass cutters• speed cutters• circle cutters |

	<ul style="list-style-type: none">• portable diamond saws• L-squares and straight edges• tape measures• marking pens• chinagraph pencils• templates and lubricants
Drilling equipment includes:	<ul style="list-style-type: none">• portable diamond drills• glass drilling machine
Edging tools include:	<ul style="list-style-type: none">• edging stones and hand arrisers• upright belt• handheld belt machines
Glass processing tables include:	<ul style="list-style-type: none">• air flotation tables• roller castor table or tilt table with air flotation or roller castors
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise practices and procedures:<ul style="list-style-type: none">• glass handling gloves• safety glasses• gauntlets• aprons• safety footwear
Workplace procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment required for the handling and processing of glass• workplace instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communications• manufacturer instructions for the use of equipment and materials• quality standards and procedures

Unit Mapping Information

Supersedes and is not equivalent to LMFGG3004C Process thick glass.

Assessment Requirements for MSFGG3004 Process thick glass

Modification History

Release 1 - New unit of competency

Performance Evidence

- Identify the materials, patterns/plans, processes, machines, equipment and settings to undertake a glass processing task
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Set up for and prepare to process glass
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Use AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass to process glass to specifications
- Complete straight cuts by hand and diamond saws, simple shapes, truncated and radius corners, circles and ovals in annealed and laminated glass 12 mm and over and up to 1.0 m²
- Rough and smooth arrise annealed and laminated glass 12 mm and over by hand and up to 0.5 m²
- Drill holes with diamond drills in annealed glass 12 mm and over and up to 0.5 m²
- Use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate glass requirements and minimise waste
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements
- Identification of glass processing equipment, functions and procedures
- Set-up and operation of glass processing equipment, including procedures for reporting product defects or equipment faults
- Workplace safety system requirements related to glass processing
- Work flow requirements in relation to glass processing

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to glass sheet/product greater than 12 mm thick; processing facilities/equipment, such as cutting equipment and glass edging/drilling equipment; a work table and appropriate work area; work orders; and appropriate safety and personal protective equipment.

|-------------------------------------|--|

- 1.5 Glass to be cut, shaped, drilled or edged is selected using information from the work order, including the type of glass, thickness, colour and dimensions
 - 1.6 Semi-automatic machines, related equipment and settings required to perform the work are identified, and information required to be entered into machine to match work requirements or job order is calculated
- 2 Prepare for work
 - 2.1 Technique and sequence of work is planned to ensure processing is conducted in a logical order
 - 2.2 Procedures for monitoring quality of materials, work in progress and finished items are identified in accordance with workplace requirements and industry practice
 - 2.3 Tools, equipment and attachments required for the work are assembled and checked for good working order
 - 2.4 Components and controls of machines, including emergency stops and guards, are identified and appropriate action taken if not in working order
 - 2.5 Information required by machine for required process is entered
 - 2.6 Work area is cleared of obstructions and potential hazards
 - 2.7 Glass to be processed is located in the work area using appropriate handling techniques
 - 2.8 Glass to be processed is checked for imperfections and damage
- 3 Conduct processing operations
 - 3.1 Tools, equipment and tables are operated and monitored in accordance with manufacturer instructions and workplace procedures to ensure correct product quality and output
 - 3.2 Glass is processed to required standard in accordance with job order, work instructions and procedures, including the performance of routine lubrication and adjustments of machines/equipment, if required
 - 3.3 Problems occurring during work operations are identified and reported to appropriate persons in accordance with enterprise procedures, and any authorised changes in working procedures followed
 - 3.4 Completed product is inspected for quality of work and

			repaired, reprocessed or discarded in accordance with workplace procedures
4	Complete work	4.1	Processed glass is labelled and stored following workplace procedures ensuring there are no projections
		4.2	Scraps and off-cuts are removed for disposal or recycling, as required
		4.3	Work area clean-up is completed following workplace procedures
		4.4	Equipment is cleaned and stored according to workplace requirements
		4.5	Tools, equipment and unused materials are removed and stored appropriately
		4.6	Workplace documentation is completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Glass includes:

- annealed or laminated
- float glass and coated glass
- commercial windows and doors
- architectural glazing
- mirrors and furniture applications

Glass processing includes:

- cutting
- shaping
- drilling and edging

Tools and equipment include:	<ul style="list-style-type: none">• flat felt covered cutting tables• gloves• safety glasses• marking pens• chinagraph pencils• templates and lubricants
Cutting includes:	<ul style="list-style-type: none">• straight line cutting• shape cutting• circle and oval cutting
Edging includes:	<ul style="list-style-type: none">• arrising• flat and mitre grinding• polishing and bevelling
Semi-automatic machines include:	<ul style="list-style-type: none">• milling• washing• semi-automatic straight line and variable angle edgers• semi-automatic straight line annealed and laminated glass cutters• shape cutters• single and double head diamond drill machine
Glass processing tables include:	<ul style="list-style-type: none">• air flotation tables• roller castor table or tilt table with air flotation or roller castors
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gloves• gauntlets• safety glasses• footwear• aprons/overalls
Workplace procedures include:	<ul style="list-style-type: none">• machine manufacturer specifications, operational and maintenance procedures• workplace procedures relating to the setting and operation of computerised glass cutting, shaping, drilling and edging machines• work instructions, including job sheets, cutting lists and plans• safety standards, including personal protective equipment, WHS regulations and enterprise requirements• AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass

Unit Mapping Information

LMFGG3005C Process glass by semi-automatic and automatic machines replaced by MSFGG3005 Process glass by semi-automatic machines and MSFGG3006 Process glass by automatic machines. Not equivalent.

Assessment Requirements for MSFGG3005 Process glass by semi-automatic machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Identify the materials, patterns/plans, processes, machines, equipment and settings to undertake a glass cutting, drilling, shaping and/or edging task with semi-automatic machines
- Apply safe handling requirements for machines, equipment, products and materials, including use of personal protective equipment
- Set up for and prepare to process glass
- Using developing workplace technology related to the processing of glass by semi-automatic machines, including handling aids, tools and equipment
- Using pre-checking and inspection techniques to anticipate processing problems, and avoid re-working and wastage
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Load and position sheets onto semi-automatic cutting, drilling and edging machines and/or tables
- Perform tool and machinery checks and cut given dimensions from stock sheets with minimal wastage/off-cuts
- Drill and edge glass to specification
- Cut shapes from optimisation data
- Remove, pack and store processed glass, including labelling for despatch
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements
- Workplace safety system requirements related to glass processing by semi-automatic machines

- Correct identification of semi-automatic glass processing machines, including their functions and procedures
- Set-up and operation of semi-automatic glass processing machines, including procedures for reporting machine/product defects or equipment faults
- Work flow requirements in relation to glass processing

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to semi-automatic glass processing equipment, an appropriate work area, standard operating procedures, work orders, unprocessed materials, and appropriate safety and personal protection equipment.

MSFGG3006 Process glass by automatic machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting, drilling, shaping and edging glass by automatic glass processing equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------------------------|---|
| 1 Identify work requirements | 1.1 Work requirements, including glass, types of cuts, shapes and edges, processes and quantities required, are identified from work instructions or job order in accordance with workplace procedures |
| | 1.2 Work health and safety (WHS) requirements, including personal protective equipment, are observed throughout the work |
| | 1.3 Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, of the appropriate quality, serviceable and in a safe condition |
| | 1.4 Cutting list and quality standards are determined and procedures identified in accordance with workplace requirements and industry standards |

- 1.5 Glass to be cut, shaped, drilled or edged is selected using information from the work order, including the type of glass, thickness, colour and dimensions
 - 1.6 Automatic, including computer numerically controlled (CNC) machines, related equipment and settings required to perform the work are identified, and information required to be entered into machine to match work requirements or job order is calculated
- 2 Prepare for work
 - 2.1 Technique and sequence of work is planned to ensure processing is conducted in a logical order
 - 2.2 Procedures for monitoring quality of materials, work in progress and finished items are identified in accordance with workplace requirements and industry practice
 - 2.3 Tools, equipment and attachments required for the work are assembled and checked for good working order
 - 2.4 Components and controls of machines, including emergency stops and guards, are identified and appropriate action taken if not in working order
 - 2.5 Information required by machine for required process is entered
 - 2.6 Work area is cleared of obstructions and potential hazards
 - 2.7 Glass to be processed is located in the work area using appropriate handling techniques
 - 2.8 Glass to be processed is checked for imperfections and damage
- 3 Conduct processing operations
 - 3.1 Tools, equipment and tables are operated and monitored in accordance with manufacturer instructions and workplace procedures to ensure correct product quality and output
 - 3.2 Glass is processed to required standard in accordance with job order, work instructions and procedures, including the performance of routine lubrication and adjustments of machines/equipment, if required
 - 3.3 Problems occurring during work operations are identified and reported to appropriate persons in accordance with enterprise procedures, and any authorised changes in working procedures followed

- | | | |
|---|---------------|---|
| | 3.4 | Completed product is inspected for quality of work and repaired, reprocessed or discarded in accordance with workplace procedures |
| 4 | Complete work | 4.1 Processed glass is labelled and stored following workplace procedures ensuring there are no projections |
| | 4.2 | Scraps and off-cuts are removed for disposal or recycling, as required |
| | 4.3 | Work area clean-up is completed following workplace procedures |
| | 4.4 | Equipment is cleaned and stored according to workplace requirements |
| | 4.5 | Tools, equipment and unused materials are removed and stored appropriately |
| | 4.6 | Workplace documentation is completed in accordance with workplace requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFGG3006 Process glass by automatic machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Identify the materials, patterns/plans, processes, machines, equipment and settings to undertake a glass cutting, drilling, shaping and/or edging task with automatic machines
- Apply safe handling requirements for automatic machines, equipment, products and materials, including use of personal protective equipment
- Set up for and prepare to process glass
- Using developing workplace technology related to the processing of glass by automatic machines, including handling aids, tools and equipment
- Using pre-checking and inspection techniques to anticipate processing problems, and avoid re-working and wastage
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Load and position sheets onto automatic cutting, drilling and edging machines
- Perform tool and machinery checks and cut given dimensions from stock sheets with minimal wastage/off-cuts
- Drill and edge glass to specification
- Cut shapes from optimisation data
- Remove, pack and store processed glass, including labelling for despatch
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements
- Workplace safety system requirements related to glass processing by automatic machines
- Correct identification of automatic glass processing machines, including their functions and procedures
- Set-up and operation of automatic glass processing machines, including procedures for reporting machine/product defects or equipment faults

- Work flow requirements in relation to glass processing

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to automatic glass processing equipment, an appropriate work area, standard operating procedures, work orders, unprocessed materials and appropriate safety and personal protection equipment.

MSFGG3007 Apply and handle films and coated glass

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing glass surfaces and applying window film and coatings in an enterprise workplace or in a domestic, commercial or automotive application.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking application of window film and coating work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------------------------|--|
| 1 Identify work requirements | <div style="margin-left: 20px;">1.1 Work requirements in the form of type and quantity of glass and type and colour/nature of coating/film and related materials are identified from work instructions</div> <div style="margin-left: 20px;">1.2 Work health and safety (WHS) requirements for application of coating/film to glass, including personal protective equipment, are observed throughout the work</div> <div style="margin-left: 20px;">1.3 Tools, equipment, accessories and materials are identified for the application of coating/film in accordance with workplace procedures</div> <div style="margin-left: 20px;">1.4 Materials safety data sheets (MSDS) and/or product</div> |
|-------------------------------------|--|

- application and safety information are read and used to guide work practices
- 1.5 Particular process techniques, time and safety requirements are noted and used to plan work, and the appropriate process for applying coating/film to glass are identified
- 2 Prepare for work
- 2.1 Work sequence is planned in a logical order to suit the job
- 2.2 Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
- 2.3 Coating/film to be applied is checked for defects or damage
- 2.4 Surfaces are measured and materials and templates cut without causing damage according to accepted industry methods, materials and procedures
- 2.5 Glass is checked for damage and suitable preparation, and cleaned/prepared using approved methods, materials and equipment following coating/film product manufacturer instructions and/or workplace practices
- 2.6 Any faults/flaws are identified and reported in accordance with workplace procedures
- 2.7 Appropriate workplace documentation is completed and handled, as required, by measuring, cutting and surface preparation outcomes
- 3 Apply coating/film
- 3.1 Equipment and accessories are used to handle the coating/film in accordance with manufacturer and workplace instructions
- 3.2 Surfaces are kept clean and free of contamination according to the specifications and procedures for materials/product used
- 3.3 Problems occurring during operation are identified and reported to appropriate persons in accordance with workplace procedures, and any authorised changes in working procedures and/or requirements followed
- 4 Inspect tinted product and refurbish work area
- 4.1 Glass is inspected and any film faults rectified in accordance with workplace procedures
- 4.2 Australian Standard sticker is applied, if appropriate

- | | | |
|---|---------------|--|
| | 4.3 | Tinted/coating products are removed for storage/further processing as required by workplace procedures |
| 5 | Complete work | <p>5.1 Waste and scrap material are removed for disposal or recycling, as required</p> <p>5.2 Work area is cleaned and rubbish disposed of, as appropriate</p> <p>5.3 Tools, equipment and unused materials are removed and stored appropriately</p> <p>5.4 Appropriate workplace documentation to reflect application and inspection is completed and handled as required by workplace procedures</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Glass includes:**
- annealed, laminated or toughened glass for:
 - automotive

	<ul style="list-style-type: none">• domestic and commercial glass• mirrors• shower screens• furniture glass
Coatings/films include:	<ul style="list-style-type: none">• solar• reflective• tinted• safety• security• decorative film
Materials include:	<ul style="list-style-type: none">• window film• coatings• trim and scraper blades• slip solution• glass cleaner• soft coat glass• hard coat glass• adhesive remover and other consumables (e.g. towel and steel wool)
Tools and equipment include:	<ul style="list-style-type: none">• squeegees and holsters• five-way cutting-in tools• edge bumping gold card tools• hard edge spear cards• screen wiping tools• trim knives• scrapers• scourers• measures• drop sheets• calculator• chamois• steamers• heat guns• flushing units• filter units• hand tools (e.g. pliers, files, screwdrivers and spanners)
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses

Information and procedures include:

- hard hats
- safety footwear
- aprons and overalls
- workplace procedures relating to the use of tools and equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures
- quality and Australian Standards and procedures
- coating/film manufacturer specifications and instructions
- vehicle manufacturer specifications/insurance company instructions/statutory requirements, including Australian Design Rules (ADRs)
- customer requirements

Unit Mapping Information

Supersedes and is equivalent to LMFGG3006C Apply and handle films and coated glass.

Assessment Requirements for MSFGG3007 Apply and handle films and coated glass

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Indicate ideal shapes for accurate pattern making
- Demonstrate a sound knowledge of glass types and the need for care in cutting both film, glass and coating procedures
- Accurately cut film from patterns and trim film on glass correctly handling and processing filmed and/or coated glass products
- Clean all types of glass to ensure it is correctly prepared in accordance with coating/film manufacturer recommendations prior to coating/film applications
- Follow manufacturer guidelines for correct processing procedures for the application of various films and coated products ensuring correct handling, storage and application of the products
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements, for the different types of coated and/or filmed glass
- Work flow requirements in relation to the application of coating/film to glass
- Workplace safety system requirements and relevant technical information for applying coating/film to glass

- Relevant Australian Standards
- Glass film measuring and cutting procedures
- Relevant surface preparation procedures, including cleaning agents and relevant cleaning procedures
- Relevant application methods, including equipment, processes and procedures
- Statutory legislation appropriate to the range of duties, including ADRs

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to film/coating materials, coated and uncoated glass sheet/product for processing, personal protective equipment, cleaning and other consumables, and work orders.

MSFGG3008 Form glass

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers operating and monitoring glass forming in kilns for manufacture of customised formed glass products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------------------------|--|
| 1 Identify work requirements | 1.1 Work requirements are identified from work instructions |
| | 1.2 Work health and safety (WHS) requirements relevant to forming glass, including personal protective equipment, are observed throughout the work |
| | 1.3 The process for obtaining materials and moving completed work to the next process is identified |
| | 1.4 Procedures for checking the quality of materials and items produced, working condition of kiln and any other equipment/attachments and the quality requirements for each stage of the forming process are identified |
| | 1.5 Communication with others involved with the work is |

- established and maintained to ensure efficient work flow coordination, personnel cooperation and safety throughout the work
- | | | | |
|---|----------------------------------|-----|---|
| 2 | Prepare for work | 2.1 | Work sequence is planned in a logical order to suit the job |
| | | 2.2 | Kiln, tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition |
| | | 2.3 | Kiln components and controls, including emergency stops and guards, are identified and checked for correct operation |
| 3 | Conduct glass forming operations | 3.1 | Kiln and forming equipment are operated, adjusted and monitored in accordance with workplace procedures to ensure correct product quality and output |
| | | 3.2 | Problems occurring during work operations are identified and reported to appropriate personnel in accordance with workplace procedures |
| | | 3.3 | Authorised changes in working procedures and/or requirements are followed |
| 4 | Complete work | 4.1 | Product is inspected for quality against work instructions, and items that do not meet requirements are re-worked or discarded |
| | | 4.2 | Waste and scrap material are removed for disposal or recycling, as required |
| | | 4.3 | Tools, equipment and unused materials are removed and/or stored, as appropriate |
| | | 4.4 | Work area and kiln are cleaned and rubbish disposed of, as appropriate |
| | | 4.5 | Workplace documentation is completed as required by workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Work instructions include: | <ul style="list-style-type: none">• materials to be used• pattern or mould to be used• process required to complete work tasks• number of sheets to be formed and holding area for completed items• the correct kiln settings for the glass being formed |
| Glass for forming includes: | <ul style="list-style-type: none">• sheet glass• float glass• patterned glass |
| Materials include: | <ul style="list-style-type: none">• float glass• sand and patterning material, such as silicone• dowel• sea shells |
| Tools and equipment include: | <ul style="list-style-type: none">• kiln bed (sand bed screed flat and firm to create the patterns or artwork)• moulds and items for background patterns, such as paint rollers• wire• trowels |

Personal protective equipment includes:

- that prescribed under legislation, regulation and enterprise policies and practices:
 - gauntlets
 - gloves
 - safety glasses
 - hard hats
 - safety footwear
 - aprons and overalls

Information and procedures include:

- workplace procedures relating to the use of tools and equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFGG3007C Form glass.

Assessment Requirements for MSFGG3008 Form glass

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete forming glass of four (4) differing patterns using varying slumping techniques to the capacity of the kiln being used (patterns may be existing moulds or improvised designs)
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass, including hazards and handling requirements
- Correct identification of equipment, processes and procedures for forming glass
- Procedures for reporting materials, product or equipment faults
- Correct operation of kilns
- Workplace safety system requirements related to the forming of glass
- Work flow requirements in relation to forming of glass
- Characteristics of materials used and uses of products produced

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to glass forming equipment, kiln, an appropriate work area, work order, standard operating procedures and unprocessed materials.

MSFGG3009 Apply patterns and designs to glass

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying patterns and/or designs to glass surfaces to manufacture decorative glass products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify work requirements

1.1 Work instructions are obtained and followed

1.2 Work health and safety (WHS) requirements for application of patterns and designs to glass surfaces, including personal protective equipment, are observed throughout the work

1.3 Tools and equipment suitable to the work method are assembled and the process for applying patterns and designs to glass surfaces identified

2 Prepare for work

2.1 Work sequence is planned in a logical order to suit the job and workplace procedures

2.2 Tools, equipment and materials are selected and checked

- prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
- 2.3 Pattern or design template, if required, is produced from plan or design or drafted from existing design or pattern
 - 2.4 Procedures are identified for checking the quality of materials and items produced and quality requirements for each stage of the application process
- 3 Apply pattern or design to glass surface
 - 3.1 Pattern or design template is applied or glass surface is masked, as necessary, with appropriate materials
 - 3.2 Pattern or design is applied to glass surface in accordance with workplace procedures or industry practice
 - 3.3 Problems occurring during operation are identified and reported to appropriate personnel in accordance with workplace procedures, and any authorised changes in working procedures followed
- 4 Complete work
 - 4.1 Product is inspected for quality of work and repaired or discarded, as required, in accordance with workplace procedures
 - 4.2 Waste and scrap material are removed for disposal or recycling, as required
 - 4.3 Work area is cleaned and rubbish disposed of, as appropriate
 - 4.4 Tools and equipment are cleaned and stored following workplace procedures
 - 4.5 Workplace documentation is completed, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Work instructions include:	<ul style="list-style-type: none">• material to be used for application of design or pattern• pattern or plan to be followed• process required to complete work tasks• items to which pattern or design is to be applied• holding area for completed items• the material curing time (if required) for the type of material used and type of glass
Applying patterns and designs includes:	<ul style="list-style-type: none">• chemical etching• sandblasting• screen printing
Tools and equipment include:	<ul style="list-style-type: none">• sandblasting equipment• masking materials• templates• etching chemicals• screen printing equipment
Materials include:	<ul style="list-style-type: none">• annealed glass• laminated glass• toughened glass• mirrors
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear

Information and procedures include:

- aprons and overalls
- workplace procedures relating to the use of tools and equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFGG3008C Apply patterns and designs to glass.

Assessment Requirements for MSFGG3009 Apply patterns and designs to glass

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Draw and cut freehand designs
- Set up, process, upload and cut designs from computerised software programs
- Stage sandblasting on glass
- Stage screen printing on glass
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glass and materials, including hazards and handling requirements
- Procedures, techniques and means of applying patterns and designs to glass surfaces
- Workplace safety system requirements related to the application of patterns and designs to glass surfaces
- Work flow requirements in relation to other stages of the work process

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to template materials/patterns, masking materials, application equipment, workplace operating procedures, unprocessed glass, personal protective equipment and an appropriate work area.

MSFGG3010 Set up and operate glass laminating equipment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, monitoring and operating glass laminating equipment, including operator maintenance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare for work | 1.1 Work requirements from work instructions are determined |
| | 1.2 Work health and safety (WHS) requirements relevant to operating glass laminating equipment, including personal protective equipment, are observed throughout the work |
| | 1.3 Work sequence is planned in a logical order to suit the job and workplace procedures |
| | 1.4 Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, of the required quality, serviceable and in a safe condition |
| | 1.5 Machines, cutting tools and jigs are identified and checked for safe and effective operation, including emergency stops, gauges, guards and controls |

- 1.6 Procedures for checking the quality of materials and items produced, rating system compliance, working condition of equipment and quality requirements for each stage of the laminating process are identified
 - 1.7 Communication with others involved with the work is established and maintained to ensure efficient work flow coordination, personnel cooperation and safety throughout the work
- 2 Set up equipment
 - 2.1 Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions
 - 2.2 Trial runs are conducted to check machine operation, accuracy and quality of finished work, and any necessary adjustments made to machine settings
- 3 Conduct glass laminating operations
 - 3.1 Glass to be laminated is prepared for the process in accordance with workplace procedures or industry practice
 - 3.2 Start-up and shutdown procedures for equipment used in the laminating process are completed in accordance with manufacturer instructions or workplace procedures
 - 3.3 Glass flopping and washing procedures are conducted in accordance with manufacturer instructions or workplace procedures
 - 3.4 White room procedures are conducted in accordance with manufacturer instructions or workplace procedures
 - 3.5 White room hoist is operated in accordance with manufacturer instructions or workplace procedures
 - 3.6 Pre-press oven and glass stacker are operated in accordance with manufacturer instructions or workplace procedures to recognised industry standards
 - 3.7 Air lifter is operated in accordance with manufacturer instructions or workplace procedures
 - 3.8 Autoclave is loaded, operated and unloaded in accordance with manufacturer instructions or workplace procedures
 - 3.9 Cutting table is operated to cut glass to required size (if applicable) in accordance with manufacturer instructions or workplace procedures

- | | | |
|---|--------------------------------------|--|
| | 3.10 | Straight line linear machine is operated in accordance with manufacturer instructions or workplace procedures |
| 4 | Complete work and maintain equipment | <p>4.1 Product is inspected for quality of work and items which do not meet quality requirements discarded or returned for reprocessing in accordance with workplace procedures</p> <p>4.2 Completed work is placed in holding area in accordance with workplace procedures</p> <p>4.3 Work area is cleaned and rubbish disposed of, as appropriate</p> <p>4.4 Equipment is cleaned and inspected for serviceability in accordance with workplace procedures</p> <p>4.5 Unserviceable equipment is tagged and faults identified in accordance with workplace procedures</p> <p>4.6 Equipment and tooling is maintained in accordance with workplace procedures</p> <p>4.7 Tools, equipment and unused materials are removed and stored appropriately</p> <p>4.8 Workplace documentation is completed in accordance with workplace requirements</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and

	dangerous goods codes, and local safe operating procedures or equivalent
	<ul style="list-style-type: none">• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Work instructions include:	<ul style="list-style-type: none">• material to be used• process required to complete work tasks• the type, thickness and colour of the interlayer• number of sheets to be laminated and holding area for completed items• the correct machine heat and pressure settings for the materials being used
Laminated glass includes:	<ul style="list-style-type: none">• safety glass• automotive glass• bullet and bandit resistant glass• patterned laminated glass• insulated glass
Tools and equipment include:	<ul style="list-style-type: none">• glass flopping and washing machines• white room• hoist• pre-press oven• glass stacker• air lifter• autoclave• packing equipment• cutting machine• straight line linear machine• standards stamping equipment, including stamp
Materials include:	<ul style="list-style-type: none">• annealed float• sheet and patterned glass
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear• aprons and overalls
Information and	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and

procedures include:

- equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures
- AS/NZS 2208:1996 Safety glazing materials in buildings

Unit Mapping Information

Supersedes and is equivalent to LMFGG3009C Set up and operate glass laminating equipment.

Assessment Requirements for MSFGG3010 Set up and operate glass laminating equipment

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and demonstrate glass flopping and washing operation and procedures
- Identify and demonstrate the white room operation and procedures
- Safely load glass into the pre-press oven and stacker and operate the pre-press oven and stacker during the glass laminating process
- Operate an air lifter and an autoclave
- Safely complete the requirements of the packing area
- Operate a laminating cutting table and carry out post-laminating procedures
- Perform testing, classification and marking of laminated glass in accordance with AS/NZS 2208:1996 Safety glazing materials in buildings
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Procedures for the set-up, operation and operator maintenance of glass laminating equipment
- Glass and window rating systems for noise, fade control and security applications
- Work flow requirements relating to the operation of glass laminating equipment
- Characteristics of materials used and uses of products produced in the glass laminating process

- Workplace procedures for the reporting of material, product or equipment faults
- Workplace safety system requirements related to the operation of glass laminating equipment
- Relevant Australian Standards

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to glass laminating equipment, workplace operating procedures, unprocessed materials, personal protective equipment and an appropriate work area.

MSFGG3011 Set up and operate glass toughening equipment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up and operating glass toughening equipment, including operator maintenance of plant and equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare for work | 1.1 Work requirements are determined from work instructions |
| | 1.2 Work health and safety (WHS) requirements relevant to operating glass toughening equipment, including personal protective equipment, are observed throughout the work |
| | 1.3 Work sequence is planned in a logical order to suit the job and workplace procedures |
| | 1.4 Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, of the required quality, serviceable and in a safe condition |
| | 1.5 Machines are identified and checked for safe and effective operation, including emergency stops, gauges, guards and controls |

- | | | | |
|---|--------------------------------------|-----|---|
| | | 1.6 | Procedures for checking the quality of materials and items produced, working condition of equipment, and quality requirements for each stage of the toughening process are identified |
| | | 1.7 | Communication with others involved with the work is established and maintained to ensure efficient work flow coordination, personnel cooperation and safety throughout the work |
| 2 | Set up equipment | 2.1 | Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions |
| | | 2.2 | Trial runs are conducted to check machine operation, accuracy and quality of finished work and any necessary adjustments made to machine settings |
| 3 | Conduct glass toughening operations | 3.1 | Glass to be toughened is prepared for process in accordance with workplace procedures or industry practice |
| | | 3.2 | Glass to be toughened is positioned on furnace load table and stamped with product identification in accordance with workplace procedures or industry practice |
| | | 3.3 | Glass is loaded into furnace in accordance with manufacturer instructions and workplace procedures |
| | | 3.4 | Correct furnace pre-start, start-up and set-up procedures are completed in accordance with manufacturer instructions and workplace procedures |
| | | 3.5 | Furnace operation is monitored and adjustments made, as required, in accordance with manufacturer instructions or workplace procedures |
| | | 3.6 | Problems occurring during work operations are identified and reported to appropriate persons |
| | | 3.7 | Correct furnace shutdown and end of shift procedures are followed in accordance with manufacturer instructions and workplace procedures |
| | | 3.8 | Glass is unloaded from furnace in accordance with manufacturer instructions and workplace procedures |
| 4 | Complete work and maintain equipment | 4.1 | Product is inspected for quality of work and items which do not meet quality requirements discarded or returned for |

- reprocessing in accordance with workplace procedures
- 4.2 Completed work is placed in holding area in accordance with workplace procedures
 - 4.3 Work area is cleaned and rubbish disposed of, as appropriate
 - 4.4 Equipment is cleaned and inspected for serviceability, unserviceable equipment tagged, and faults identified and reported in accordance with workplace procedures
 - 4.5 Equipment is maintained in accordance with workplace procedures
 - 4.6 Tools, equipment and unused materials are removed and stored appropriately
 - 4.7 Workplace documentation is completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for MSFGG3011 Set up and operate glass toughening equipment

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify the features of the glass toughening process, including the principles, purpose and properties of toughened glass
- Identify the procedures required in the glass toughening process
- Perform pre-inspection and preparation procedures on glass for toughening and safely load and operate a glass toughening furnace
- Perform testing, classification and marking of toughened glass in accordance with AS/NZS 2208:1996 Safety glazing materials in buildings
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Correct procedures for the set-up, operation and operator maintenance of glass toughening equipment
- Work flow requirements relating to the operation of glass toughening equipment
- Workplace procedures for the reporting of material, product or equipment faults
- Characteristics of materials used and uses of products produced in the glass toughening process
- Correct identification of relevant equipment, processes and procedures

- Workplace safety system requirements related to the operation of glass toughening equipment

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to glass toughening equipment, workplace operating procedures, unprocessed materials, personal protective equipment and an appropriate work area.

MSFGG3012 Set up and operate glass mirroring equipment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up and operating glass mirroring equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Work requirements are determined from work instructions
		1.2	Work health and safety (WHS) requirements relevant to operating glass mirroring equipment, including personal protective equipment, are observed throughout the work
		1.3	Work sequence is planned in a logical order to suit the job requirements and workplace procedures
		1.4	Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, of the required quality, serviceable and in a safe condition
		1.5	Machines are identified and checked for safe and effective operation, including emergency stops, gauges, guards and controls

- 1.6 Procedures for checking the quality of materials and items produced, working condition of equipment and quality requirements for each stage of the mirroring process are identified
 - 1.7 Communication with others involved with the work is established and maintained to ensure efficient work flow coordination, personnel cooperation and safety throughout the glass mirroring process
 - 1.8 The processes for obtaining materials and moving completed work to the next process are identified
- 2 Prepare glass for mirroring
 - 2.1 If applicable, existing mirror is removed by acid washing, cleaning and/or polishing
 - 2.2 Glass to be mirrored is washed with detergent in accordance with workplace procedures or industry practice
 - 2.3 Glass to be mirrored is rinsed with demineralised water in accordance with workplace procedures or industry practice
- 3 Conduct glass mirroring operations
 - 3.1 Tinning solution is applied in accordance with workplace procedures or industry practice
 - 3.2 Glass is rinsed with demineralised water in accordance with workplace procedures or industry practice
 - 3.3 Mirror solution is applied to glass in accordance with workplace procedures or industry practice
 - 3.4 Glass is washed and blow dried in accordance with workplace procedures or industry practice
 - 3.5 Backing paint is applied in accordance with workplace procedures or industry practice
- 4 Complete work
 - 4.1 Product is inspected for quality of work and items which do not meet quality requirements discarded or returned for reprocessing in accordance with workplace procedures
 - 4.2 Completed work is placed in holding area in accordance with workplace procedures
 - 4.3 Work area is cleaned and rubbish disposed of, as appropriate
 - 4.4 Equipment is cleaned and inspected for serviceability and stored in accordance with workplace procedures, unserviceable equipment tagged, and faults identified and

reported in accordance with workplace procedures

- 4.5 Tools, equipment and unused materials are removed and stored appropriately
- 4.6 Workplace documentation is completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Work requirements include: | <ul style="list-style-type: none">• material to be used• process required to complete work tasks• number of sheets to be mirrored and holding area for completed items |
| Glass mirroring involves: | <ul style="list-style-type: none">• processes and equipment to mirror glass for the manufacture of mirrors and other glass products |
| Tools and equipment include: | <ul style="list-style-type: none">• semi-automatic and computer-navigated mirroring equipment• buffing and cleaning tables• spray booths |

	<ul style="list-style-type: none">• copper plating electrodes• extractor fans• dual nozzle spray guns• compressors• solution containers• heated drying racks• water distiller• mirroring formulas• tinning solution• backing paint• stripping acid tanks for re-mirroring
Materials include:	<ul style="list-style-type: none">• annealed glass• sheet glass• laminated glass• toughened glass
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear• aprons and overalls• respiratory masks
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures• relevant Australian Standards

Unit Mapping Information

Supersedes and is equivalent to LMFGG3011C Set up and operate glass silvering equipment.

Assessment Requirements for MSFGG3012 Set up and operate glass mirroring equipment

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare mirroring formulae
- Perform equipment checks and set up and prepare mirroring equipment
- Clean and prepare glass for mirroring
- Apply tinning, mirroring and copper solutions on glass, dry and apply packing paint
- Strip, buff, clean, prepare and re-mirror mirrors
- Handle and store mirrors
- Clean solution tanks, lines, spray guns and equipment after use
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Correct procedures for the planning, preparation, operation and completion of glass mirroring operations
- Work flow requirements in relation to the operation of glass mirroring equipment
- Workplace procedures for the reporting of material, product or equipment faults
- Relevant Australian Standards
- Correct identification, handling and storage requirements for hazardous chemicals
- Characteristics of materials used and uses of products produced by glass mirroring operations

- Workplace safety system requirements related to the operation of glass mirroring equipment

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to glass mirroring equipment, demineralised water, acid, mirroring chemicals, backing paint, workplace operating procedures, unprocessed materials, personal protective equipment and an appropriate work area.

MSFGG3013 Set up and operate insulated glass unit (IGU) manufacturing equipment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up and operating IGU manufacturing equipment to process two sheets of glass that are separated by a spacer, and sealed to form an airtight unit and conducting associated quality testing.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Work requirements are determined from work instructions |
| | | 1.2 | Work health and safety (WHS) requirements relevant to operating insulating glass equipment, including personal protective equipment, are observed throughout the work |
| | | 1.3 | Work sequence is planned in a logical order to suit the job requirements and workplace procedures |
| | | 1.4 | Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, of the required quality, serviceable and in a safe condition |
| | | 1.5 | IGU machines, tools and equipment are identified and |

- checked for safe and effective operation, including emergency stops, gauges, guards and controls
- 1.6 Procedures for checking quality of materials and items produced, rating system compliance, working condition of equipment, and quality requirements for each stage of the IGU manufacturing process are identified
 - 1.7 Communication with others involved with the work is established and maintained to ensure efficient work flow coordination, personnel cooperation and safety throughout the insulated glass manufacturing process
- 2 Set up equipment
- 2.1 Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions
 - 2.2 IGU spacers are cut and sorted into order of run in accordance with workplace procedures
 - 2.3 The desiccant hygroscopic substance that induces or sustains a state of dryness (desiccation) to be used in process is tested in accordance with industry standards and workplace practices
 - 2.4 Trial runs are conducted to check machine operation, accuracy and quality of finished work, and any necessary adjustments made to machine settings
- 3 Conduct IGU manufacturing operations
- 3.1 Glass sheets are loaded into IGU machine using the appropriate mechanical handling equipment
 - 3.2 IGU spacers are assembled in accordance with specification/order and workplace procedures
 - 3.3 IGU machine is operated to wash and dry glass and to press the unit
 - 3.4 Unit is unloaded from IGU machine and relocated for sealing using appropriate mechanical handling equipment in accordance with workplace practices
 - 3.5 Primary and secondary seal equipment is operated in accordance with workplace procedures
 - 3.6 Testing for water vapour (dewpoint) and integrity of sealing (moisture) is conducted in accordance with workplace procedures

- | | | | |
|---|--------------------------------------|-----|--|
| | | 3.7 | Serviceable units are labelled and stored in accordance with industry standards and workplace procedures, with items not meeting quality requirements being discarded or returned for reprocessing in accordance with workplace procedures |
| 4 | Complete work and maintain equipment | 4.1 | Work area is cleaned and rubbish disposed of, as appropriate |
| | | 4.2 | IGU machine is cleaned and inspected for serviceability in accordance with workplace procedures |
| | | 4.3 | Unserviceable equipment is tagged and faults identified in accordance with workplace procedures |
| | | 4.4 | Equipment and tooling are maintained in accordance with workplace procedures |
| | | 4.5 | Tools, equipment and unused materials are removed and stored appropriately |
| | | 4.6 | Documentation is completed in accordance with workplace requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health

	regulations, manual handling procedures and organisation insurance requirements
Work requirements include:	<ul style="list-style-type: none">• work requires individuals to demonstrate some discretion, judgement and problem solving• material to be used• process required to complete work tasks• the required size of the units• number of IGUs required and holding area for completed items
Tools and equipment include:	<ul style="list-style-type: none">• cutting equipment (e.g. saws)• spacer preparation equipment (appropriate size)• sieve machine and desiccant equipment• primary seal equipment• secondary seal equipment• basic hand tools (e.g. screwdrivers and scrapers)• mechanical handling equipment
Materials include:	<ul style="list-style-type: none">• customer requirements for glass (annealed, toughened or laminated)• corner keys for spacers• appropriate primary (polyisobutylene) and secondary sealant (polysulphide)• separation paper
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hearing protection• hard hats• safety footwear• aprons and overalls
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures• Australian Standards:<ul style="list-style-type: none">• AS 1288:2006 Glass in buildings - Selection and installation.• AS/NZS 2208:1996 Safety glazing materials in

buildings

- AS/NZS 4666:2000 Insulating glass units
- AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass

Unit Mapping Information

Supersedes and is equivalent to LMFGG3012C Set up and operate insulated glass unit manufacturing equipment.

Assessment Requirements for MSFGG3013 Set up and operate insulated glass unit (IGU) manufacturing equipment

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare, set up, manufacture and conduct the appropriate quality testing of five (5) differing IGU patterns to the capacity of the IGU machine
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Correct procedures for the set-up, operation and operator maintenance of IGU manufacturing equipment
- Glass and window rating systems for insulation applications
- Work flow requirements relating to the operation of IGU manufacturing equipment
- Characteristics of materials used and uses of products produced in the IGU manufacturing process
- Relevant workplace procedures for the reporting of material, product or equipment faults
- Workplace safety system requirements related to the operation of IGU manufacturing equipment
- Relevant Australian Standards

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to IGU manufacturing equipment, workplace operating procedures, unprocessed materials, personal protective equipment and an appropriate work area.

MSFGG3014 Construct and repair leadlight panels

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers constructing and repairing leadlight panels and may involve restoration and conservation of historically important stained glass and leadlighting works. It includes measuring, design and selection of materials and tools, and disassembly/assembly, weatherproofing and polishing of leadlight panels.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------------------------|---|
| 1 Identify work requirements | 1.1 Purpose of the leadlight panel is established, including performance requirements in terms of safety, quality and function |
| | 1.2 Research is conducted, where necessary, to establish if leadlight panels to be repaired are historically important |
| | 1.3 Construction method and materials to be used in the panel to be constructed or repaired are identified |
| | 1.4 Leadlight panel to be repaired is inspected to identify faults and any faults found compared with customer requirements and any previous identified faults |

- | | | | |
|---|---|-----|--|
| 2 | Plan leadlight panel construction/repair | 2.1 | Plan or design of leadlight panel to be constructed/repared is analysed to identify work requirements, methods and/or specifications |
| | | 2.2 | Work health and safety (WHS) requirements for construction and repair of leadlight panels, including personal protective equipment, are observed throughout the work |
| | | 2.3 | Work sequences are identified and a personal work plan is developed, when required, compliant with workplace procedures |
| | | 2.4 | Steps or stages in construction/repair are planned, noting check points for (any) measurements and tests |
| | | 2.5 | Approval of work construction plan is obtained as required by workplace procedures and a suitable work area identified |
| 3 | Identify suitable materials and equipment | 3.1 | Tools and equipment are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition |
| | | 3.2 | Leadlight construction materials are selected according to specification of performance requirements, proposed use, cost and availability of materials, if required, matching the original texture, colour, thickness and opacity of the stained glass |
| | | 3.3 | Equipment suitable for working the chosen material is identified |
| 4 | Construct/repair the leadlight panel | 4.1 | Plan is followed to construct/repair the leadlight panel, including any special requirements for historically important works |
| | | 4.2 | Checks are conducted at the identified points |
| | | 4.3 | Modifications are identified and recommended within workplace procedures |
| | | 4.4 | Modifications to the plan are documented and appropriate approvals are sought in accordance with workplace procedures |
| 5 | Complete work | 5.1 | Leadlight panel is inspected for quality of work and repaired or reconstructed, as required, in accordance with workplace procedures |
| | | 5.2 | Material which can be re-used is collected and stored |

- 5.3 Waste and scrap material are removed for disposal or recycling, as required
- 5.4 Work area is cleaned and rubbish disposed of, as appropriate
- 5.5 Equipment is cleaned and stored according to workplace requirements
- 5.6 Workplace documentation is completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Repair methods include: | <ul style="list-style-type: none">• re-leading• strap repair and lead lifting• restoration and conservation of historically important stained glass and leadlighting works |
| Tools and equipment include: | <ul style="list-style-type: none">• timber benches• light boxes• glass grinders |

	<ul style="list-style-type: none">• lead knives• lead vice• lathekins• farrier's nails• glass cutters• grozing and small running pliers• soldering irons and bits• suede• cleaning and polishing brushers and pickers
Leadlight construction materials include:	<ul style="list-style-type: none">• coloured/plain glass panels• patterns/templates• timber lathes• ornamental fittings• lead came• solder and fluxes
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• safety footwear
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures• quality and Australian Standards and procedures

Unit Mapping Information

Supersedes and is equivalent to LMFGG3013C Construct and repair leadlight panels.

Assessment Requirements for MSFGG3014 Construct and repair leadlight panels

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Interpret work order/job instruction to identify requirements and plan the process to construct/repair leadlight panels
- Select and use appropriate materials and processes for the panel being constructed/repairs optimising glass sizes for economical cutting and assembling of required materials
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
