- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- End use of leadlight panels and required safety, quality and structural standards
- Characteristics, including hazards and workplace safety system requirements, associated with the materials used in leadlight panel construction
- Operation of tools and equipment used in constructing/repairing leadlight panels
- Research techniques to establish the historical importance of stained glass and leadlighting works
- Processes and procedures involved in the construction/repair process of leadlight panels, including historically important works
- Impact of design features of the leadlight panel on purpose, materials and construction
- Relevant Australian Standards

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to leadlight panels for repair or plans for new panels, glass, leadlighting materials, personal protective equipment and work instructions.

MSFGG3015 Fabricate and install shower screens and wardrobe doors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning, fabricating and installing shower screens and wardrobe doors fitted with safety vinyl backed mirror or textured vinyl coated board in residential and commercial locations.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify work requirements

- 1.1 Work requirements for the type of shower screen/wardrobe door to be fabricated and installed are identified from work instructions, including the identification of its pattern or plan
- 1.2 Work health and safety (WHS) requirements for fabrication and installation of shower screens and wardrobe doors, including personal protective equipment, are observed throughout the work

- | | | | |
|---|---|-----|--|
| | | 1.3 | The process for fabricating and installing shower screens and wardrobe doors is identified |
| | | 1.4 | Glass fixing method and joining devices or materials are identified in accordance with specifications or type of materials to be used and Australian Standards |
| | | 1.5 | Quantities of materials required are calculated from plans/work instructions or by measuring the fixture opening |
| | | 1.6 | Tools and equipment appropriate to the fixing method are identified |
| 2 | Prepare for work | 2.1 | Work sequence is determined in a logical order to suit the job and workplace procedures |
| | | 2.2 | Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition |
| | | 2.3 | Components of the shower screen/wardrobe door are checked against specifications or job order for size, quantity, finish and profile |
| 3 | Fabricate and install shower screen/wardrobe door | 3.1 | If required, aluminium frame is fabricated in accordance with workplace procedures or industry practice |
| | | 3.2 | Fittings are attached to screen in accordance with workplace procedures or industry practice |
| | | 3.3 | Shower screen/wardrobe door is installed in shower opening/wardrobe in accordance with workplace procedures or industry practice |
| | | 3.4 | Shower screen is waterproof sealed in accordance with workplace procedures or industry practice |
| 4 | Complete work | 4.1 | Shower screen/wardrobe door is inspected for quality of work and repaired, re-fabricated or reinstalled, as required, in accordance with workplace procedures |
| | | 4.2 | Material which can be reused is collected and stored and waste and scrap material are removed for disposal or recycling, as required |
| | | 4.3 | Work area is cleaned and rubbish disposed of, as |

appropriate

- 4.4 Tools, equipment and unused materials are cleaned and removed and stored appropriately
- 4.5 Workplace documentation is completed in accordance with workplace requirements including calculating the cost of glass, fittings, materials and labour

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Shower screens are glass panels and include:**
- framed
 - semi-frameless and frameless screens
 - sliding screens
 - pivot screens and returns
- Materials include:**
- aluminium shower screen and wardrobe extrusions
 - laminated
 - toughened and organic coated glass
 - vinyl backed mirror
 - textured vinyl board

	<ul style="list-style-type: none">• glazing and bump rubbers• shower screen• wardrobe hardware• sealants
Tools and equipment include:	<ul style="list-style-type: none">• power saws• pneumatic equipment• hydraulic and manual presses• tooling• drills• screwdrivers and rubber mallets and general glazing tools• spirit and laser levels
Fittings include:	<ul style="list-style-type: none">• wheels• hinges• handles• pivot blocks• corner blocks• fasteners
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear• aprons and overalls

Assessment Requirements for MSFGG3015 Fabricate and install shower screens and wardrobe doors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Measure for fabrication and installation of two (2) of the following in accordance with AS 3740:2010 Waterproofing of domestic wet areas:
 - sliding shower door
 - pivot shower door
 - semi-frameless and frameless shower screens
- Measure for installation of wardrobe doors:
 - working from product specification data sheets identifying and selecting product materials
 - selecting glass in accordance with AS 1288:2006 Glass in buildings - Selections and installation
 - fabricating frame and sash components, including cutting, tooling and drilling
 - identifying, selecting and installing component hardware, including weather seals, wheels, hinges, guides and handles
 - assembling frames, including glass and gaskets
- Install shower screens and wardrobe doors
- Calculate the cost of shower screens and wardrobe doors
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow requirements in relation to the fabrication and installation of shower screens and wardrobe doors
- Characteristics of materials used and uses of products produced
- Workplace safety system requirements related to the fabrication and installation of shower screens and wardrobe doors
- Correct identification of equipment, processes and procedures
- Relevant Australian Standards

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to shower screen/wardrobe door glass and mirror, aluminium framing material, fixtures, waterproof sealant, workplace operating procedures, personal protective equipment and a fabrication and installation location.

MSFGG3016 Fabricate and install residential windows and doors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning, fabricating and installing residential windows and doors, including framing, using aluminium, steel, unplasticised polyvinyl chloride (uPVC) and timber materials.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------------------------|--|
| 1 Identify work requirements | 1.1 Work requirements in the form of type of residential window or residential door to be fabricated and installed are identified from work instructions, including the identification of its pattern or plan |
| | 1.2 Work health and safety (WHS) requirements for fabrication and installation of windows and doors, including personal protective equipment, are observed throughout the work |
| | 1.3 The process for fabricating and installing windows and doors is identified |

- 1.4 Types and quantities of materials, including glass required, are calculated from plans or work instructions or by measuring the fixture opening in accordance with Australian Standards and industry practice
 - 1.5 Cutting lists are prepared from plans, work instructions or measurements of opening to suit the window or door to be installed
 - 1.6 Fittings, fixings and joining devices or materials are selected in accordance with specifications or type of materials to be joined or fixed and Australian Standards
 - 1.7 Tools and equipment appropriate to the fixing method are identified
- 2 Prepare for work
 - 2.1 Work sequence is determined in a logical order to suit the job and workplace procedures
 - 2.2 Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
 - 2.3 Components of the window or door and hardware are checked against specifications or job order for size, quantity, finish and profile
- 3 Fabricate and install window or door
 - 3.1 Materials are measured and marked to cutting list requirements and most economical use of materials
 - 3.2 Materials are cut to cutting list requirements in accordance with workplace procedures or industry practice
 - 3.3 Metal, timber or uPVC components of the window or door are assembled in accordance with recognised industry standards
 - 3.4 Fittings are installed to window or door in accordance with workplace procedures or industry practice
 - 3.5 Window or door is installed in opening using appropriate fixing method in accordance with recognised industry standard
- 4 Complete work
 - 4.1 Installed window or door is inspected for quality of work and repaired, re-fabricated or reinstalled, as required, in accordance with workplace procedures
 - 4.2 Material which can be re-used is collected and stored

- 4.3 Waste and scrap material are removed for disposal or recycling, as required
- 4.4 Work area is cleaned and rubbish disposed of, as appropriate
- 4.5 Tools, equipment and unused materials are cleaned and removed and stored appropriately
- 4.6 Workplace documentation is completed in accordance with workplace requirements, including calculating the cost of glass, fittings, materials and labour

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Residential windows include:

- aluminium or steel sliding
- timber or uPVC framed
- double hung
- casement and awning windows
- louvre windows

Residential doors include:	<ul style="list-style-type: none">• double glazed windows• aluminium or steel sliding• timber framed• hinged• bi-fold doors
Tools and equipment include:	<ul style="list-style-type: none">• assembly benches• hand, drop and up-cut saws• pneumatic equipment• hydraulic and manual presses• frame and sash tooling• copy routers• end millers• crimpers• electric and pneumatic powered drills and screwdrivers• pop rivet guns• heat guns for uPVC• glue guns• general hand tools
Materials include:	<ul style="list-style-type: none">• aluminium alloys and steel• uPVC• hardware• fasteners (screws, pop rivets and knock-downs)• plastics• sealants• tapes• gaskets• flashings• timber• timber reveals
Glass includes:	<ul style="list-style-type: none">• annealed glass• safety glass• patterned glass• tinted• heat reflective• insulated glass units (IGU)
Hardware includes:	<ul style="list-style-type: none">• locks• wheels• stays• hinges• springs and balances and any component required for the operation of residential windows

Personal protective equipment includes:

- that prescribed under legislation, regulation and enterprise policies and practices:
 - gauntlets
 - gloves
 - safety glasses
 - hard hats
 - safety footwear
 - aprons and overalls

Information and procedures include:

- workplace procedures relating to the use of tools and equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures
- Australian Standards:
 - AS 2047:1999 Windows in buildings - Selection and installation; section 6 regarding construction and section 8 on labelling and certification of glass installations
 - AS 1288:2006 Glass in buildings - Selection and installation
 - AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
 - AS/NZS 4666:2000 Insulating glass units
 - AS/NZS 4668:2000 Glossary of terms used in the glass and glazing industry
- the Window Energy Rating System (WERS)

Unit Mapping Information

Supersedes and is equivalent to LMFGG3016C Fabricate and install residential windows and doors.

Assessment Requirements for MSFGG3016 Fabricate and install residential windows and doors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Measure for the installation of windows and doors and plan work from product specification data sheets and/or specified software programs
- Identify and select product materials, including selection of mullions and transoms in relation to wind loading
- Fabricate frame and sash components from metal and uPVC, including cutting, tooling, routing, milling, drilling and/or crimping
- Identify, select and install component hardware, including weather seals, wheels, stays, hinges, guides and/or locks
- Apply the WERS
- Select and cut glass in accordance with AS 1288:2006 Glass in buildings - Selection and installation and AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
- Assemble frames, including glass, gaskets, tapes, sealants, adhesives, fasteners, reveal linings and flashings in accordance with AS 2047:1999 Windows in buildings - Selection and installation (Section 6)
- Label frames in accordance with AS 2047:1999 Windows in buildings - Selection and installation (Section 8) and AS/NZS 4668:2000 Glossary of terms used in the glass and glazing industry
- Install residential windows and doors
- Calculate cost of residential windows and doors
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage

- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow requirements in relation to the fabrication and installation of windows and doors
- Characteristics of glass and framing materials used and uses of products produced
- Workplace safety system requirements related to the fabrication and installation of windows and doors
- Correct identification of equipment, processes and procedures
- AS 1288:2006 Glass in buildings - Selection and installation

MSFGG3017 Fabricate and install commercial glazing

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning, fabricating and installing flat or curved glass in commercial shopfronts, doors and windows.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify work requirements	1.1	Work requirements in the form of type of glass, frames and the method of fixing are identified from work instructions
		1.2	Work health and safety (WHS) requirements for fabrication and installation of commercial glazing, including personal protective equipment, are identified and observed throughout the work
		1.3	Process for fabricating and installing commercial flat and/or curved glazing is determined
2	Prepare for work	2.1	Work sequence is planned in a logical order to suit the job

- and workplace procedures
- 2.2 Tools, equipment and materials, other than glass and frames, are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
 - 2.3 Type of glass to be fitted and frames are selected to match the customer order
 - 2.4 Glass is checked for type, size and imperfections
 - 2.5 Glass fixing method and appropriate method of glazing are selected
- 3 Identify site conditions and constraints
- 3.1 Site safety hazards are recognised and corrective action taken to reduce injury to self and others
 - 3.2 Other on-site difficulties are identified and corrective action taken in accordance with regulations and enterprise agreements
 - 3.3 Special characteristics of the glass aperture are identified in relation to the effect of the glass fitting process on the finished job
 - 3.4 Covering material is applied, where necessary, to protect existing fixtures and fittings
- 4 Prepare frame
- 4.1 Frame condition is assessed to ensure suitability for glazing in accordance with customer order and Australian Standards
 - 4.2 Defective frames are reported for repair or replacement in accordance with workplace procedures
 - 4.3 Frame is prepared, if required, to receive glass
 - 4.4 Fixing and sealing materials are prepared by mixing or cutting to length, as appropriate
- 5 Fit glass
- 5.1 Glass is fixed to the frame using the selected method and in accordance with recognised Australian and industry standards
 - 5.2 Solvents and sealants are used in accordance with manufacturer recommendations and Australian Standards
 - 5.3 Excess sealing material is removed and the glass and

			frame are cleaned after fixing
6	Complete work	6.1	Completed installation is checked to ensure compliance with customer requirements, specifications and Australian Standards
		6.2	Work area is cleaned and left in a safe condition and rubbish removed from work area and disposed of in accordance with relevant statutory requirements and workplace requirements
		6.3	Tools, equipment and materials are cleaned and stored following workplace procedures
		6.4	Waste and scrap material are removed for disposal or recycling, as required
		6.5	Workplace documentation is completed in accordance with workplace requirements including calculating the cost of glass, fittings, materials and labour

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion,

	judgement and problem solving
Types of glass include:	<ul style="list-style-type: none">• annealed glass• toughened glass• laminated glass• bandit-resistant glass• bullet-resistant glass• heat-reflective glass
Fabrication and installation of commercial glazing includes:	<ul style="list-style-type: none">• the fabrication, assembly, glazing and installation of framed and/or frameless shopfronts and returns, fixed and operable windows, hinged, pivot, sliding and automatic doors• toughened glass assemblies• watertight glazing techniques, including use of silicone• balustrading
Curved glazing includes:	<ul style="list-style-type: none">• cylindrical and non-cylindrical (or 'J') curves used for:<ul style="list-style-type: none">• revolving doors• shopfronts• lifts and foyers• partitions• pool surrounds

Assessment Requirements for MSFGG3017 Fabricate and install commercial glazing

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Measure for the installation of flat and curved commercial windows, shopfronts and doors and work from product specification data sheets and/or specified software programs
- Identify and select product materials that are fit for purpose and fabricate frame and sash components, including cutting, tooling/milling, routing, drilling and/or crimping
- Identify, select and install component hardware, including weather seals, wheels, stays, hinges and concealed overhead closer (COC) pivots, guides and/or locks
- Select and cut glass to AS 1228:2006 Glass in buildings - Selection and installation, and AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
- Assemble frames, including glass, gaskets, tapes, sealants, adhesives and fasteners in accordance with AS 2047:1999 Windows in buildings - Selection and installation
- Install framed and frameless commercial windows
- Calculate the cost of commercial windows, shopfronts and doors
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, qualities and characteristics of flat and/or curved glass, including hazards and handling requirements

- Techniques, methods, materials and processes of fabricating and installing commercial glazing
- Curved glass characteristics and uses
- Work flow requirements in relation to the fabrication and installation of commercial glazing
- Relevant Australian Standards
- Application and operation of tools and equipment used
- Correct identification of equipment, processes and procedures
- Workplace safety system requirements related to the fabrication and installation of commercial glazing

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to frames, flat and/or curved glass, fixing materials, sealants, workplace operating procedures and work orders, personal protective equipment and an appropriate work area/site.

MSFGG3018 Prepare and install architectural engineered glazing

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing and installing glass in structural and other architectural engineered applications.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify work requirements	1.1	Work requirements in the form of type of glass, frames and the method of fixing are identified from work instructions
		1.2	Work health and safety (WHS) requirements for fabrication and installation of architectural engineered glazing, including personal protective equipment, are identified and observed throughout the work
		1.3	The process for fabricating and installing architectural engineered glazing is identified
2	Prepare for work	2.1	Work sequence is planned in a logical order to suit the job

- and workplace procedures
- 2.2 Tools, equipment and materials, other than glass, acrylic glazing products and frames, are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
 - 2.3 Type of glass and/or acrylic glazing products to be fitted and frames are selected to match the customer order, requirements for security, noise or light control and relevant Australian Standards
 - 2.4 Glass is checked for type, size and imperfections and the appropriate glass fixing method selected to meet specifications
 - 2.5 Ladders and scaffolding to comply with the relevant regulations and standards are identified and erected, where required, for the installation
 - 2.6 Frame or opening is prepared to receive glass
 - 2.7 Fixing and sealing materials are prepared by mixing or cutting to length, as appropriate
- 3 Identify site conditions and constraints
 - 3.1 Site safety hazards are recognised and corrective action taken to reduce injury to self and others
 - 3.2 Any on-site difficulties are identified and addressed in accordance with regulations and enterprise agreements
 - 3.3 Special characteristics of the glass aperture are identified in relation to the effect of the glass fitting process on the finished job
 - 3.4 Covering material is applied, where necessary, to protect existing fixtures and fittings
- 4 Fit glass
 - 4.1 Glass and/or acrylic glazing product is fixed to the frame or opening using the selected method and in accordance with recognised Australian and industry standards
 - 4.2 Solvents and sealants are used in accordance with manufacturer recommendations and Australian Standards
 - 4.3 Excess sealing material is removed and the glass and frame cleaned after fixing
- 5 Inspect final product
 - 5.1 Completed installation is checked to ensure compliance

and clean up work area

with customer requirements, specifications and Australian Standards

- 5.2 Work area is cleaned and left in a safe condition and rubbish removed from work area and disposed of in accordance with relevant statutory requirements and enterprise requirements
- 5.3 Any ladders or scaffolding used in the installation are disassembled and removed
- 5.4 Tools, equipment and materials are cleaned and stored following workplace procedures
- 5.5 Waste and scrap material are removed for disposal or recycling, as required
- 5.6 Workplace documentation is completed in accordance with workplace requirements, including calculating the cost of glass, fittings, materials and labour

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion,

	judgement and problem solving
Types of glass include:	<ul style="list-style-type: none">• annealed glass• toughened glass• laminated glass• wired glass• bandit-resistant glass• bullet-resistant glass• heat-reflective glass• solar controlled glass• spandrel panels
Methods of fixing include:	<ul style="list-style-type: none">• consideration of the specification• type of glass and frame• security requirements• sealing methods• relevant Australian Standards• glazing methods:<ul style="list-style-type: none">• beaded• pocket• flush• channel glazing• structural glazing
Fabricating and installing include:	<ul style="list-style-type: none">• aluminium glazing systems, including planar assemblies, curtain wall systems, spider assemblies and panel wall systems (hung and stacked)• identifying and erecting appropriate ladders and scaffolding
Tools and equipment include:	<ul style="list-style-type: none">• general cutting and glazing tools• electric and pneumatic portable power tools• saws• drills• portable compressors
Materials include:	<ul style="list-style-type: none">• all forms of flat glass and acrylic glazing products• plastic• aluminium• steel• solid timber• gaskets• sealants• adhesives
Preparation includes:	<ul style="list-style-type: none">• cleaning• surface preparation (if required)• checking size against specification

Personal protective equipment includes:

- that prescribed under legislation, regulation and enterprise policies and practices:
 - gauntlets
 - gloves
 - safety glasses
 - hard hats
 - safety footwear
 - aprons and overalls

Information and procedures include:

- workplace procedures relating to the use of tools and equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures
- Australian Standards:
 - AS 1288:2006 Glass in buildings - Selection and installation
 - AS/NZS 2208:1996 Safety glazing materials in buildings
 - AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
 - AS 4285:2007 Skylights
 - AS/NZS 4666:2000 Insulating glass units

Unit Mapping Information

Supersedes and is equivalent to LMFGG3018C Prepare and install architectural engineered glazing.

Links

Assessment Requirements for MSFGG3018 Prepare and install architectural engineered glazing

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Measure glass for curtain walls, balustrades, suspended and/or overhead glazing
- Select glass to comply with AS 1288:2006 Glass in buildings - Selection and installation, and cut and process glass in accordance with AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
- Identify and erect appropriate ladders and scaffolding to comply with the relevant regulations and standards
- Identify and apply glazing, structural sealants and tapes, and install glazing materials and weatherproofing
- Calculate the cost of glass, fittings, materials and labour
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, qualities and characteristics of glass and acrylic glazing products, including hazards and handling requirements
- Techniques, methods, materials and process of preparing and installing structural glazing
- Relevant Australian Standards
- Work flow requirements in relation to the preparation and installation of structural glazing
- Correct application and operation of tools and equipment used

- Identification of equipment, processes and procedures
- Workplace safety system requirements related to the preparation and installation of structural glazing

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to frames, glass and acrylic glazing products, fixing material, sealants, workplace operating procedures and work orders, personal protective equipment and an appropriate work area/site.

MSFGG3019 Conduct commercial and structural re-glazing

Modification History

Release 1 - New unit of competency

Application

This of competency unit covers replacing glass in commercial, structural and/or architectural engineered applications.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify work requirements	1.1	Work requirements in the form of type of glass, frames and the method of fixing are identified from work instructions
		1.2	Work health and safety (WHS) requirements for fabrication and installation of commercial re-glazing, including personal protective equipment, are identified and observed throughout the work
		1.3	The process for fabricating and installing commercial re-glazing is identified
2	Prepare for work	2.1	Work sequence is planned in a logical order to suit the job

- and workplace requirements
- 2.2 Tools, equipment and materials, other than glass and frames, are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
 - 2.3 Type of glass to be fitted and frames are selected to match the customer order, existing glass type, requirements for security, noise or light control and relevant Australian Standards
 - 2.4 Glass fixing method is selected to meet specifications
 - 2.5 Glass is checked for type, size and imperfections
- 3 Identify site conditions and constraints
- 3.1 Site safety hazards are recognised and corrective action taken to reduce injury to self and others including working at heights and on scaffolding
 - 3.2 Other on-site difficulties are recognised and corrective action taken in accordance with regulations and glazing requirements
 - 3.3 Covering material is applied, where necessary, to protect existing fixtures and fittings
 - 3.4 Special characteristics of the window or door which may affect the finished job are identified and corrective action taken
- 4 Prepare frame and materials
- 4.1 Frame condition, if applicable, is assessed to ensure suitability for re-glazing in accordance with customer requirements and Australian Standards
 - 4.2 Defective frames are reported for repair or replacement in accordance with workplace procedures
 - 4.3 Frame is prepared, if required, to receive glass
 - 4.4 Fixing and sealing materials are prepared by mixing or cutting to length, as appropriate
- 5 Fit glass
- 5.1 Glass is fixed to the frame using the selected method and in accordance with recognised industry procedures and Australian Standards
 - 5.2 Solvents and sealants are used in accordance with manufacturer recommendations and Australian Standards

	5.3	Excess sealing material is removed and glass and frame cleaned after fixing
6	Inspect final product and clean up work area	6.1 Completed installation is checked to ensure compliance with customer requirements, specifications and Australian Standards
	6.2	Work area is cleaned and left in a safe condition and rubbish removed from work area and disposed of in accordance with relevant statutory requirements and enterprise requirements
	6.3	Tools, equipment and materials are cleaned and stored following workplace procedures
	6.4	Waste and scrap material are removed for disposal or recycling, as required
	6.5	Workplace documentation is completed in accordance with workplace requirements, including calculating the cost of glass, fittings, materials and labour

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation

Assessment Requirements for MSFGG3019 Conduct commercial and structural re-glazing

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Safely remove glass from commercial and architectural frames and prepare frame and opening, including clean-up
- Measure glass for commercial projects, doors, show and/or food cabinets, including sliding tracks, shopfronts and returns, architectural, curtain wall, structural and/or overhead glazing
- Select glass to comply with AS 1288:2006 Glass in buildings - Selection and installation – Section 9
- Cut and process glass in accordance with AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
- Work at heights and on scaffolding to the relevant regulations and standards
- Apply suitable glazing, structural sealants and tapes
- Calculate the cost of glass, fittings, materials and labour
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, qualities and characteristics of glass, including hazards and handling requirements
- Relevant Australian Standards
- Techniques, methods, materials and process of commercial and structural re-glazing

- Work flow requirements in relation to fitting glass
- Correct application and operation of tools and equipment used
- Identification of equipment, processes and procedures
- Types of silicone products and their use, including structural silicone
- Workplace safety system requirements related to commercial and structural re-glazing
- Regulations and standards for safe working at heights and on scaffolding

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.

MSFGG3020 Use static machines for aluminium and unplasticised polyvinyl chloride (uPVC) fabrication

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using a range of machines for fabrication of aluminium and uPVC extrusions and related materials.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify static machines suitable for aluminium fabrication, their operation and safety requirements	1.1	Types of aluminium and uPVC fabrication static machines are identified, including their purpose and limitations
		1.2	Applicable work health and safety (WHS), legislative and organisational requirements relevant to operation of static machines for aluminium and uPVC materials fabrication are verified and complied with
		1.3	The method of operation for static machines is identified in accordance with manufacturer operating instructions
2	Prepare static machines for use	2.1	Fabrication requirements are determined from drawings and specifications in a logical machining order to suit the job, following workplace procedures

- | | | |
|---|--|--|
| | 2.2 | Necessary tools and equipment, including personal protective equipment, are selected and checked prior to use to ensure that they are appropriate for the fabrication process, serviceable and in a safe condition |
| | 2.3 | Extrusions are measured and marked according to drawings and specifications |
| | 2.4 | Machines are set up for the required operating process with fences and guides locked into position in accordance with manufacturer instructions |
| 3 | Operate machine | |
| | 3.1 | Machine start-up procedure is carried out and checked |
| | 3.2 | Extrusions are handled carefully and masked, where necessary, to protect finishes from damage and fed to the machine in accordance with operating procedures |
| | 3.3 | Extrusion is set up and held in place, where applicable, for mobile machinery and moving table operations |
| | 3.4 | Machine is operated in accordance with its designed capacity, job requirements and manufacturer instructions with excess lubricant and cuttings cleaned from extrusions, tools and equipment regularly |
| | 3.5 | Machine shutdown procedure is carried out in accordance with manufacturer instructions after completion of the job and checked for safety |
| 4 | Check machine and attachments for serviceability | |
| | 4.1 | Machine is monitored to determine operation is to performance standards, and any faults rectified and/or reported for further action |
| | 4.2 | Replacement cutters and attachments are fitted and secured in accordance with manufacturer specifications |
| 5 | Complete machining operations | |
| | 5.1 | Tools, equipment and unused materials are cleaned, removed and stored appropriately |
| | 5.2 | Waste and scrap material are removed for disposal or recycling, as required |
| | 5.3 | Work area is cleaned and rubbish disposed of, as appropriate |
| | 5.4 | Workplace documentation is completed, as required, according to workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving

- Aluminium and uPVC fabrication static machines include:**
- mitre saw:
 - single
 - double
 - v-notch saw
 - router:
 - single head
 - triple drilling
 - semi-automatic
 - variable angle end miller
 - beader
 - crimper
 - digital measuring system
 - groover:
 - transom
 - corner
 - reverse butt
 - drills:

	<ul style="list-style-type: none">• vertical• horizontal• uPVC welder• computer numerically controlled (CNC) machines (operation only)
Aluminium and uPVC materials for fabrication include:	<ul style="list-style-type: none">• extruded aluminium:<ul style="list-style-type: none">• window profile• door profile• custom profile• anodised• powder-coated• extruded uPVC:<ul style="list-style-type: none">• window profile• door profile• custom profile
Manufacturer operating instructions include:	<ul style="list-style-type: none">• set-up procedures• start-up and shutdown procedures• location and use of safety switches• tooling requirements• capacity and throughput• tolerances• travel• speed• operating conditions• handling and feeding of materials• safe operation, including guarding on machinery

Assessment Requirements for MSFGG3020 Use static machines for aluminium and unplasticised polyvinyl chloride (uPVC) fabrication

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify the likely impact of various environmental effects on machining aluminium and uPVC, and machine aluminium and uPVC extrusions on a range of static machines to meet specifications
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for machining aluminium and uPVC to meet specified outcomes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards, codes of practice, organisational and site standards, requirements, and policies and procedures relevant to aluminium and uPVC machining terminology and techniques
- Types of aluminium, uPVC extrusions and other materials, their characteristics, properties, uses and limitations
- Environmental protection requirements relating to the disposal of waste material
- Established communication channels and protocols
- Relevant problem identification and resolution in machining of aluminium and uPVC
- Relevant storage systems and labelling

- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials and equipment relevant to machining aluminium and uPVC, personal protective equipment, specifications and work instructions.

MSFGG3021 Prepare and install mirrors and glass splashbacks

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers measuring, preparing, fabricating and installing mirrors and glass splashbacks in residential and commercial locations.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and plan work requirements	<div><div>1.1</div><div>Work requirements in the form of type, pattern/plan and quantity of mirrors or glass splashbacks to be prepared and installed are identified from work instructions</div></div> <div><div>1.2</div><div>Work health and safety (WHS) requirements for fabrication and installation of mirrors and glass splashbacks, including personal protective equipment, are observed throughout the work</div></div> <div><div>1.3</div><div>Work sequence is planned in a logical order to suit the job and workplace procedures</div></div> <div><div>1.4</div><div>Quantities of materials required are calculated from plans</div></div>

		or work instructions or by measuring the installation site
	1.5	Fixing and joining devices or materials are selected in accordance with specifications or type of materials to be joined and the surface on which the mirror or splashback is to be installed
	1.6	Tools and equipment suitable to the work method are identified
2	Prepare for work	2.1 Compatible materials, fixings, fasteners, tools and equipment needed to complete the work are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
	2.2	Components of the mirror or splashback are checked against specifications or job order for size, quantity, finish and profile
3	Fabricate and install mirrors and glass splashbacks	3.1 Frame, if required, is fabricated in accordance with workplace procedures or industry practice
	3.2	Mirror or splashback glass is cut to size in accordance with workplace procedures and industry practice
	3.3	Mirror or splashback is edge worked, if required, in accordance with workplace procedures or industry practice
	3.4	Holes, where required, are drilled in frame, mirror or splashback in accordance with the plan, workplace procedures and industry practice
	3.5	Glass splashbacks are finished according to customer specifications
	3.6	Mirror or splashback is installed using appropriate fixing method in accordance with workplace procedures and industry practice
4	Complete work	4.1 Installed mirror or splashback is inspected for quality of work and repaired, re-fabricated or reinstalled, as required, in accordance with workplace procedures
	4.2	Waste, unused and scrap material are removed for disposal or recycling, as required
	4.3	Work area is cleaned and rubbish disposed of, as appropriate

- 4.4 Tools, equipment and unused materials are removed and stored appropriately according to workplace requirements
- 4.5 Workplace documentation is completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Mirrors include:

- framed
- frameless
- wall
- return
- safety and security mirrors
- tinted

Glass splashbacks include:

- framed
- frameless
- wall
- return
- toughened (tempered) clear or low iron glass used in:

	<ul style="list-style-type: none">• kitchens• bathrooms• laundries (wet areas)• feature walls
Materials include:	<ul style="list-style-type: none">• timber and metal framing materials• float and vinyl backed mirrors• fixings and fasteners• paint and other finishes for glass splashbacks
Tools and equipment include:	<ul style="list-style-type: none">• tungsten wheel glass cutters• speed cutters• straight edges and squares• plate and running pliers• glass lifting and handling equipment• personal safety equipment• glass edging equipment• diamond drills and saws• water• spirit level• dumpy and laser levels• plumb bobs• chalk lines• tape measures• portable drills• general hand tools• paint and digital print application equipment• light emitting diode (LED) backlighting installation tools
Fixings and fasteners include:	<ul style="list-style-type: none">• adhesive tapes• screws and rosettes• mirror and spring clips• hollow wall fasteners• rawl plugs• cloth and glues• and non-acidic silicones
Hole requirements include:	<ul style="list-style-type: none">• power points• switches• warning lights• other cut-outs in specifications
Splashback finishes include:	<ul style="list-style-type: none">• painted:<ul style="list-style-type: none">• solid• metallic• satin

- sparkle
 - gilded
 - digitally printed images
 - mirrored
 - sandblasted
 - tinted
 - LED back-lit
- Personal protective equipment includes:**
- that prescribed under legislation, regulation and enterprise policies and practices:
 - gauntlets
 - gloves
 - safety glasses
 - hard hats
 - safety footwear
 - aprons and overalls
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment and personal protective equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures
 - Australian Standards:
 - AS 1288:2006 Glass in buildings - Selection and installation
 - AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass
 - AS 2047:1999 Windows in buildings - Selection and installation

Unit Mapping Information

Supersedes and is equivalent to LMFGG3021A Prepare and install mirrors and glass splashbacks.

Assessment Requirements for MSFGG3021 Prepare and install mirrors and glass splashbacks

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Measure for mirror and glass splashback installations and cut mirror and glass up to 8 mm, including vinyl-backed
- Carry out edge working
- Prepare walls for installation of mirrors and glass splashbacks
- Construct and fit mirrors and glass splashbacks, which may include frames
- Cut and drill holes in mirrors and glass splashbacks to cut-out specifications
- Identify and use spirit and/or laser levels to set plumb and level lines
- Fit framed and/or unframed, wall, safety and/or security mirrors, including return mirrors with minimal deflection
- Finish and fit glass splashbacks to specification and clean and present finished mirrors and/or glass splashbacks
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow requirements in relation to the processing and installation of mirrors
- Workplace safety system requirements related to the processing and installation of mirrors and glass splashbacks
- Characteristics of materials used and uses of products produced

- Identification of equipment, processes and procedures related to the fabrication and installation of mirrors and glass splashbacks
- Relevant Australian Standards, including minimum proximity of glass splashbacks to gas cooking appliances

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to mirror and splashback specifications, mirrors, aluminium framing material, toughened glass for splashbacks, splashback finishing materials and equipment, fixing/fasteners, workplace operating procedures and word orders, personal protective equipment and an appropriate work area.

MSFGG4001 Apply standards and codes of practice for the glass industry

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers evaluating glass and glazing requirements for buildings to comply with relevant Australian Standards and codes of practice. It involves determining all aspects of Australian Standards and codes of practice that apply to glass processing and installation. It may be performed in workplaces which are involved in the manufacture, processing and/or installation of glass components and in job roles requiring leadership, judgement and complex problem solving.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Evaluate glass and glazing work requirements	1.1	Work health and safety (WHS) requirements for determining glass and glazing requirements are observed throughout the work
		1.2	Glass and glazing job requirements are identified from workplace documentation, client and specialist specifications, and a technical evaluation conducted
		1.3	Confirmed requirements for compliance with glass and glazing standards in the work are recorded according to

			workplace procedures and requirements
2	Determine application of glass and glazing standards	2.1	Products/types of glass for the job are identified and product supply sources are examined to ascertain current developments, if appropriate
		2.2	Relevant standards are assessed against job requirements
		2.3	Influencing factors are identified and their significance and impact on the end product determined
		2.4	Professional technical advice is sought, if applicable and available, in accordance with workplace procedures
		2.5	Optimal solution to completion of the work is identified and specifications meeting all applicable standards is confirmed
3	Communicate advice	3.1	Solution is converted into detailed work instructions/job specifications in accordance with workplace procedures
		3.2	Other documentation, including any advice/referral to client of other building professionals, is completed in accordance with workplace practices
		3.3	Communication with clients, building professionals and other workers is maintained to ensure all work is carried out to comply with glass and glazing standards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit scope includes:	<ul style="list-style-type: none">• evaluation of all glass and glazing tasks with a formal and documented process of the Australian Standards requirements• application of:<ul style="list-style-type: none">• AS 1288:2006 Glass and glazing in buildings - Selection and installation• AS/NZS 2208:1996 Safety glazing materials in buildings• AS/NZS 1170:2 2002 Structural design actions (wind loads)• AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass• AS/NZS 4668:2000 Glossary of terms used in the glass and glazing industry• National Construction Code (NCC) references to windows and doors in buildings
WHS requirements include:	<ul style="list-style-type: none">• Commonwealth, state or territory legislation and regulations• organisational safety policies and procedures• the use of personal protective equipment and clothing• firefighting equipment• first aid equipment• hazard and risk control and elimination of hazardous materials and substances• manual handling, including lifting and carrying
Procedures include:	<ul style="list-style-type: none">• work instructions• standard operating procedures• written, verbal or computer-based procedures
Organisational requirements include:	<ul style="list-style-type: none">• legal, organisational and site guidelines, policies and procedures relating to own role and responsibility• quality assurance• procedural manuals• quality and continuous improvement processes and standards• ethical standards• recording and reporting• access and equity principles and practices

Unit Mapping Information

No equivalent unit of competency

Assessment Requirements for MSFGG4001 Apply standards and codes of practice for the glass industry

Modification History

Release 1 - New unit of competency

Performance Evidence

- Apply the full requirements of AS 1288:2006 Glass in buildings - Selection and installation, AS/NZS 2208:1996 Safety glazing materials in buildings, AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass, and AS/NZS 4668:2000 Glossary of terms used in the glass and glazing industry, and other industry codes of practice for all aspects of glass processing and installation, including for:
 - stairways
 - suspended balustrading
 - sloped or overhead glass
 - 5-star rated buildings
- Correctly complete measurements, calculate work requirements, optimise glass sizes for application and assembly of required resources
- Use workplace technology, relevant resources and product specifications related to glass and glazing requirements to:
 - determine glass thickness limitations
 - assess the impact of glass shape for determining application
 - identify and calculate aspect ratios
 - understand and apply the principles of wind loadings
 - identify glazing situations affected by human impact, including where activity could generate a high risk of breakage, and where glass could be mistaken for a door
 - determine the appropriate glazing materials, processing and installation methods for various glazing situations, including all types of safety glass
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Workplace operating procedures, AS 1288:2006 Glass in buildings - Selection and installation, AS/NZS 2208:1996 Safety glazing materials in buildings, AS/NZS 1170:2002 Structural design actions (wind loads), AS/NZS 4667:2000 Quality requirements for cut-to-size and processed glass, and AS/NZS 4668:2000 Glossary of terms used in the glass and glazing industry, and NCC references to windows and doors in buildings
- The qualities and characteristics of glass, including types, qualities, applications and limitations
- Products and processes and current trends and developments in glass and glazing techniques/applications
- Workplace safety system requirements related to the handling and installation of glass
- Principles of operation of glass processing plant/equipment
- The architecture and location of glass process/production equipment
- Interactions between glass plant items/processes
- Glass product specifications and tolerances

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work requirements for glass and glazing jobs, Australian Standards, workplace operating procedures and relevant equipment.

MSFGG4002 Use glass industry data systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using glass and glazing industry data systems and the use of computer equipment and company or proprietary software for the glass industry. This competency is typically performed by operators working either independently or as part of a work team in job roles requiring discretion, judgement and problem solving.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Use data system and information for work role	1.1	Applicable specialist software for data and workplace information needs is identified and its application to work role determined
		1.2	Data which needs to be entered in the system is accessed and confirmed as accurate
		1.3	Data system is opened and operator logged on for the work
2	Enter and manipulate data	2.1	Data/information is entered in to the system and the system navigated, as required
		2.2	Entered or edited data is checked for accuracy

		2.3	Features of the system are used effectively in the manipulation, processing and presentation of data
		2.4	Data is transferred between applications, linking and embedding related data files, as required
3	Generate reports	3.1	Processed data is generated in the correct format
		3.2	Generated reports and other documentation are checked for accuracy and completeness of information
		3.3	Any data or processing errors are identified and corrected before completion
4	Save data and exit system	4.1	Data is saved and stored in appropriate directory or folder in accordance with organisational procedures
		4.2	File is closed and application exited without loss of data
		4.3	Reports and other data are backed-up in accordance with organisational procedures
5	Respond to problems with the system	5.1	Faults that occur during data entry, processing and outputting are recognised
		5.2	Causes of data processing faults are identified and appropriate action taken
		5.3	Problems are logged and reported as required and in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

Unit scope includes:

- software applications for:
 - glass and glazing quotations, including:
 - material composition (glass colour and thickness)
 - stock size of the inventory
 - quantity of stock sheets used
 - square footage used and cost
 - application of AS 1288:2006 Glass in buildings - Selection and installation, to glass and glazing jobs
 - modular design for glass and glazing work
 - glass and glazing product stock control
 - delivery scheduling
 - glass production reporting
 - Window Energy Rating Scheme (WERS) applications

Unit context includes:

- work health and safety (WHS) requirements, including legislation, material safety management systems, hazardous substances and dangerous goods codes, and organisational safe operating procedures
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manufacturers documentation and organisation insurance requirements

Procedures include:

- work instructions
- standard operating procedures
- written, verbal or computer-based procedures

Organisational requirements include:

- legal, organisational and site guidelines, policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- ethical standards
- recording and reporting
- access and equity principles and practices
- equipment use, maintenance and storage
- environmental management (waste disposal, recycling and re-use guidelines)

Software features include:

- selecting standard products by code, description or design
- managing complex pricing
- scheduling production of glass products
- scheduling delivery and installation of glass and glazing
- re-cost and 'what-if'

- selecting correct glass based on engineering properties and job specifications
- generating glass designs and geometric shapes, including 3-D, pyramids, barrel vaults, greenhouses, arches and rakes
- estimating environmental efficiency ratings of glass products and installations
- applying Australian Standards for the glass industry
- appointment tracking and reminders
- sales activity
- integration with other applications

Unit Mapping Information

No equivalent unit

Assessment Requirements for MSFGG4002 Use glass industry data systems

Modification History

Release 1 - New unit of competency

Performance Evidence

- Use at least three (3) glass and glazing computer applications employing advanced features and import and export capacities for generating:
 - glass designs, including compliance with AS 1288:2006 Glass in buildings - Selection and installation, and WERS
 - production and delivery schedule reports
 - job estimates and quotations
 - inventory and sales reports
- Use the data system correctly and recognise and resolve problems, including the ability to:
 - input and access data to and from the system
 - evaluate the scope and range of data required from the system, in order to support the solution of problems
 - identify the causes and remedies of common problems
 - follow principles of operation of the equipment and software, hazard policies and procedures and work instructions
- Isolate causes of problems to a component of the data system and distinguish between causes of problems, such as:
 - incorrect or misleading data
 - system software faults
 - system equipment faults
- Complete reports and documents to the standard required
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Glass industry software vendor applications and their features
- Computer equipment features and operation
- Principles of operation of glass processing plant/equipment
- Glass installation processes

- Glass product specifications and tolerances
- Glass industry standards and codes of practice
- Stock control and delivery scheduling techniques
- Glass and glazing design principles

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to computers and software applications currently used in the glass and glazing industry, documents or information containing data suitable to demonstrate advanced features of computer applications, and support resources, including online, manuals and training booklets.

MSFGG4003 Manage glass industry production scheduling

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning, monitoring and adjusting schedules to meet operational requirements in a glass industry production operation. It involves communication of production scheduling plans and issues with key personnel. Production schedules may relate to daily, weekly and/or monthly production and involves job roles requiring discretion, judgement and problem solving.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify production outcomes	1.1	Forecast, sales, stock holding and other relevant information is used to identify production requirements
		1.2	Production priorities are identified and confirmed
2	Confirm resources needed to meet production requirements	2.1	Stock levels of raw materials/ingredients, packaging components and consumables are confirmed against production requirements
		2.2	Equipment capacity and human resources to meet production requirements are determined
3	Develop the	3.1	Production schedule is developed to meet demand and

	production schedule		delivery timelines within production capacity and budget
		3.2	Production schedule establishes the stock levels, storage capacity, equipment capacity and product mix to minimise stock and product holdings and maximise production efficiency
		3.3	Communication with other key production personnel is established and maintained
		3.4	Production schedule is recorded and made available to relevant personnel in a timely manner format
4	Monitor production	4.1	Production is monitored to identify any actual or potential barriers to achieving the schedule
		4.2	Resource usage rates are monitored regularly to identify potential shortages
		4.3	Unplanned events that could affect the schedule are identified, assessed and appropriate action plans in place
5	Adjust production schedules	5.1	Production schedules adjustments are assessed to take account of changed conditions and changes to the production schedule negotiated and communicated to relevant key production personnel in a timely manner
		5.2	Resource implications of amended schedules are identified with resources accessed to meet requirements
		5.3	Any potential failure to meet delivery deadlines is identified and communicated to relevant personnel in a timely manner and schedule documentation amended, as required
6	Review production schedule	6.1	Production scheduling process is reviewed to identify opportunities for improvement with variances in production against schedule identified, investigated and reported
		6.2	Personnel responsible for implementing the schedule are consulted to identify improvement opportunities and the scheduling process revised to reflect improvements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFGG4003 Manage glass industry production scheduling

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect and interpret sales and/or market forecast information, such as liaising with sales departments/functions and/or direct contact with customers, to identify production priorities that meet customer/market expectations
- Produce a glass industry production schedule that:
 - confirms production requirements and resource implications
 - establishes and documents the production schedule
 - coordinates implementation of the schedule with key production personnel
 - ensures production schedule is fully communicated and reported to all appropriate production personnel
 - manages unplanned production issues
 - assesses production outcomes against schedule and make required adjustments
- Identify and confirm resource requirements to meet the schedule, such as stock levels, equipment availability and capacity, personnel, storage capacity, and transport, and where required, identify alternate sources of supply for resources in short supply
- Record and communicate the schedule in appropriate formats, such as use of software and communicating information, to meet workplace and audience requirements
- Monitor actual production and materials usage levels against production plan to identify variances and take appropriate corrective action, including assessing the consequences of any adjustments to the schedule for the customer, the company and resource availability
- Adjust the schedule in response to typical and atypical variables affecting achievement of schedule and respond to unplanned events to minimise disruption and optimise efficiency
- Confirm that resources and personnel are available to meet amended schedule and, if not, take action to secure requirements
- Communicate schedule changes to all production personnel
- Follow review procedures to identify opportunities to improve scheduling process
- Use planning and systems control software according to enterprise procedures
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- The role and scope of the scheduling function, including communication methods and channels, flow of information to and from the scheduling process, and the impact of scheduling for related planning, purchasing, production and despatch processes
- Factors to be taken into account in planning the schedule, including interrelationships between :
 - customer requirements
 - stock levels and supply options
 - glass product specifications, tolerances and applicable Australian Standards
 - glass plant capacity to ensure that production quantities and timelines are achievable
 - competencies required by the work process and competencies held by the work team, where relevant
 - product compatibility
 - specific glass plant process operations and interactions between glass plant items/processes
 - transport capacity
 - hierarchy of control and basis of control for glass plant/s
 - supplier capacity and timeframes
- Consequences of failing to meet delivery timelines
- Principles of operation of glass processing plant/equipment
- Interactions between plant units within the entire plant and the architecture and location of the glass process/production equipment
- The characteristics of glass raw materials/ingredients, packaging components and consumables, and production process to determine the most efficient plan to meet production requirements
- Methods used to monitor actual to planned production, such as use of systems software and key performance indicators, where these are collected on a real time basis
- Relevant personnel and departments to be consulted/notified of production schedule and related amendments, including the information relevant to each group/person and recording systems and requirements
- Conditions that can affect achievement of a production schedule, including conditions that are unusual or unplanned, and related options for response
- Options for maximising resource utilisation and minimising waste, including options for alternate resource allocation in response to unplanned events
- Process improvement procedures
- Communication systems and the interactions between plant units within the entire plant
- The architecture and location of the glass process/production equipment
- Specific glass plant process operations

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a scheduling system and associated information and communication systems, a production area and related functions and resources, relevant standard operating procedures, and workplace information recording systems, requirements and procedures.

MSFGG4004 Perform laser measurement and levelling for glass windows and doors in buildings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using and maintaining laser measuring and levelling devices to check measurements and apply levelling for installation of glass windows and doors in buildings. It involves taking accurate measurements/readings, making calculations for levelling and alignment glass component installation tasks in job roles requiring discretion, judgement and problem solving.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for glass laser measurement and levelling	1.1	Task requirements are determined by inspection of glass window and door components to be installed in a building and following relevant plans, drawings and texts in accordance with the work plan
		1.2	Appropriate laser levelling equipment for the installation job is selected and set up to manufacturer recommendations
		1.3	Levelling is planned in detail including sequencing and prioritising tasks and system requirements

- | | | | |
|---|--|-----|--|
| | | 1.4 | Potential hazards to personnel and other building components at the installation site are identified and prevention and/or control measures are selected in accordance with the work plan |
| | | 1.5 | Individual's roles and responsibilities within the installation team are identified, and where required, assisted with provision of on-the-job training for the tasks |
| 2 | Use laser devices to make measurements | 2.1 | Measurements are taken accurately, interpreted and recorded correctly to standard operating procedures |
| | | 2.2 | Laser levelling devices are operated to manufacturer specifications or standard operating procedures |
| | | 2.3 | Datum point is set up or located |
| | | 2.4 | Readings are taken to datum and at nominated or selected stations, to project specifications |
| 3 | Perform levelling | 3.1 | Levelling realignment calculations are performed using correct and appropriate method for the installation levelling/alignment application |
| | | 3.2 | Glass window and door components are levelled and aligned to specifications using correct and appropriate techniques, and adjustments made to ensure compliance with manufacturer specifications and the work plan |
| | | 3.3 | Glass components are temporarily fixed in the assigned installation positions prior to final measurement |
| | | 3.4 | Final level and alignment inspections are undertaken, any adjustments made and glass components fixed to the building using appropriate fasteners |
| 4 | Complete work | 4.1 | Glass installation rating compliance certificate is completed |
| | | 4.2 | Levelling equipment is closed own and appropriate personnel notified of completed installation in accordance with enterprise requirements |
| | | 4.3 | Work area is cleared of waste, cleaned, restored and secured in accordance with site/enterprise procedures |
| | | 4.4 | Plant, tools and equipment are maintained and stored in accordance with site/enterprise procedures |

- 4.5 Work completion details are finalised in accordance with enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFGG4004 Perform laser measurement and levelling for glass windows and doors in buildings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Accurately select, set and use laser levelling devices to obtain and interpret specified measurements
- Maintain and store laser levelling devices
- Read, interpret and follow information on standard operating procedures, manufacturer recommendations, drawings and other applicable reference documents
- Set up levelling equipment and take levelling measurements and perform necessary calculations
- Confirm accuracy of the readings taken, including set up and movement of laser levelling device in two locations
- Level and align a range of glass window and door components for installation in buildings
- Confirm work requirements and specifications and the report work outcomes and problems and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- AS 2047-1999 Windows in buildings - Selection and Installation
- AS1288-2006 Glass in buildings - Selection and Installation
- Terminology and concepts relating to electrical/electronic measurement
- Specifications of a range of commonly used laser levelling devices and their features for application in the glass industry
- Settings and the correct scale for each setting on laser levelling devices and procedures for obtaining accurate measurements
- Levelling device types, characteristics, technical capabilities and limitations
- Maintenance and storage requirements for a range of laser levelling devices
- Principles of levelling and alignment and numerical operations, geometry and calculations/formulae for levelling
- Effects on installed glass window and door components if not correctly levelled and aligned
- Techniques, tools, equipment and procedures to carry out levelling and installation of glass components in buildings

- Hazards and control measures associated with levelling and alignment and relevant safe work practices and procedures
- Use and application of personal protective equipment
- Relevant environmental, WHS legislation and regulations
- Technical drawings and manufacturers manuals
- Shimming and packing materials
- Glass product specifications and tolerances
- Hierarchy of control and basis of control for glass plant/s
- Communication protocols (e.g. radio, phone, computer and paper, permissions/authorities)

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to laser levelling equipment, glass window and door components, work instructions, manufacturer documentation and organisational guidelines.

MSFGG4005 Set up, configure, upgrade and troubleshoot glass and glazing plant and ancillary equipment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, testing, adjusting, troubleshooting and quality assuring a range of glass and glazing processing plant and equipment. It includes non-numerical control (NC)/computer numerically controlled (CNC) production machines and processes for semi-automatic or automatic operation. Troubleshooting involves using testing equipment to identify problems and take corrective action.

Job roles require discretion, judgement and problem solving with complex technical difficulties resolved in consultation with appropriate technical advisers. Training of plant operators in correct operational procedures and techniques is required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify plant set-up requirements	1.1	Required specifications for glass processing are identified and interpreted for process application
		1.2	Plant machinery and ancillary equipment are identified and checked for safe and effective operation, including emergency stops, gauges, guards and controls

		1.3	Procedures for checking the quality of glass produced, working condition of equipment, and quality requirements for each stage of the process are identified
2	Set machine/s	2.1	Sequence of glass processing operations is determined and plant machine/s set or programmed accordingly
		2.2	Plant machine/s and programs are adjusted to meet glass product specifications and operational requirements.
		2.3	Plant pre-start, start-up and set-up procedures are completed in accordance with manufacturer instructions and workplace procedures
3	Trial program	3.1	Plant is operated to process glass, observing all safety procedures
		3.2	Sample glass product is checked for compliance with specifications
		3.3	Program editing to change operational sequence, speed and tolerance requirements is undertaken as required to ensure processing conforms to specification
4	Identify abnormal plant and/or process performance	4.1	Tests are conducted to determine if plant machines and ancillary equipment is operating to specification and products produced meet quality standards
		4.2	Signs of equipment or product degradation and impending failure are recognised
5	Identify causes of substandard performance	5.1	Maintenance records are examined to ensure that plant machinery and equipment does not require simple maintenance
		5.2	Calibration records are accessed and equipment tested to determine if plant is operating within calibration
		5.3	All plant and testing variables are evaluated to identify possible causes of substandard performance and equipment isolated using appropriate elimination techniques
6	Rectify plant faults	6.1	Adjustments or corrections for plant and ancillary equipment are assessed and made as required
		6.2	Plant is checked to ensure correct operation
7	Instruct machine	7.1	Operator of set-up and programmed plant is instructed on correct operation of the plant ensuring that all safety

operator

procedures and devices are in place

- 7.2 Operator is monitored to ensure plant is operated correctly and remedial instruction provided where necessary

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit scope includes:

- setting up and programming semi-automatic and automatic machines in glass processing plants
- testing machines, ancillary equipment and processed glass products against operational specifications
- quality assurance of products and identifying faults and out of specification operation of glass plant machinery and ancillary equipment
- rectifying common plant faults or referring complex problems to appropriate technicians
- training plant operators on correct procedures

Work health and safety (WHS) requirements include:

- Commonwealth, state or territory legislation and regulations
- organisational safety policies and procedures
- the use of personal protective equipment and clothing
- firefighting equipment
- first aid equipment
- hazard and risk control and elimination of hazardous materials and substances
- manual handling, including lifting and carrying

Procedures include:

- work instructions
- standard operating procedures
- written, verbal or computer-based procedures

Organisational

- legal, organisational and site guidelines, policies and

Assessment Requirements for MSFGG4005 Set up, configure, upgrade and troubleshoot glass and glazing plant and ancillary equipment

Modification History

Release 1 - New unit of competency

Performance Evidence

- Comply with all relevant safety requirements, including isolation or shutdown of machines, use of safety and lockout devices, and attachment of appropriate warning tags
- Interpret glass processing machine and ancillary equipment specifications for machine setting and maintenance
- Set-up and edit programs for at least three (3) different types of glass processing plant
- Conduct sample runs of machines and manage quality assurance by checking products against required standards
- Perform normal testing, setting and maintenance of machines, investigate improper operation, and identify and rectify operating problems, including adjustments/rectifications/modifications
- Document and communicate work-related information, including reporting of non-conforming outcomes and other problems
- Instruct machine operator on the correct sequence of operations and processing specifications
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Principles of operation of glass processing plant/equipment
- Interactions between plant units within the entire plant
- The architecture and location of the glass process/production equipment
- Specific glass plant process operations
- Interactions between glass plant items/processes
- Glass product specifications and quality standards
- Hierarchy of control and basis of control for glass plant/s
- Glass and glass processing plant technical specifications and repair manuals
- Principles and techniques of machine setting and adjustment

- Troubleshooting procedures for testing equipment, typical fault conditions and relevant fault finding procedures
- Maintenance and repair processes and techniques
- Workplace procedures and maintenance planning
- Procedures for attaching ancillary device(s) to non-NC/CNC machines
- Measuring devices/techniques for checking glass products
- Effects of changes to cutting feeds and speeds
- Hazards and control measures associated with computer controlled machines, including housekeeping

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to glass processing plant and ancillary equipment, relevant setting, operating, testing, maintenance and repair manuals for plant, glass products specifications, and quality standards and organisational procedures.

MSFGG4006 Operate complex glass processing plant control systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers operating a complex glass processing plant control panel utilising control loops and a broad range of control algorithms to control plant areas and multiple products/process streams. It will typically be located in a control room and require managing multiple complex tasks.

The technician/central control room operator takes overall responsibility for the operation of all equipment and processes within the plant area and may include optimisation of the area using the control system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------------|-----|--|
| 1 | Use operator interface | 1.1 | Keyboards, track ball and monitor and/or stand-alone controllers are used to access control system/panel |
| | | 1.2 | Glass processing task is monitored using the operator interfaces selecting appropriate controller modes |
| | | 1.3 | Historical data and information are accessed as required |

- | | | |
|---|---|--|
| | 1.4 | Messages and alarms are monitored and acknowledged with appropriate action taken |
| | 1.5 | Advanced control features are accessed and managed as appropriate |
| 2 | Access control information | |
| | 2.1 | Relevant data and information are accessed from the control system by applying systems knowledge |
| | 2.2 | Status of individual pieces of equipment is determine from the control panel readings and the information used to identify potential faults |
| | 2.3 | Fluctuations and variations in process through the interpretation of existing trends and control schematics are minimised |
| | 2.4 | Overall operating effectiveness of the plant area is determine and related to the required targets for the area |
| | 2.5 | Process variations/irregularities to procedures are recoded as necessary |
| 3 | Control process variations and monitor operations | |
| | 3.1 | Historical data on plant operations are used to assist the identification of problems and all available information processed to identify potential faults |
| | 3.2 | Required set point/output changes are undertaken to meet plant area and process requirements |
| | 3.3 | Production is adjusted in response to test results and control panel information |
| | 3.4 | Key process and environmental variables are monitored and appropriate action taken |
| | 3.5 | Controller settings are adjusted in accordance with procedures with advanced control features utilised as appropriate |
| | 3.6 | Plant area is optimised in accordance with guidelines |
| | 3.7 | Calibration operations are made as appropriate |
| | 3.8 | Coordination with stakeholders external to the plant area is undertaken as required |
| | 3.9 | Adjustments and variations to specifications/schedules are recorded and communicated to appropriate personnel |

- | | | | |
|---|--|-----|---|
| 4 | Facilitate planned and unplanned process start-ups and shutdowns | 4.1 | Procedures to planned startup and shutdown processes are selected and applied |
| | | 4.2 | Procedures to unplanned shutdown processes are selected and applied where required |
| | | 4.3 | Required emergency responses are implemented |
| | | 4.4 | Necessary information is communicated to all personnel affected by events |
| | | 4.5 | Required information is logged regularly |
| 5 | Respond to alarms or out of specification conditions and control hazards | 5.1 | System(s) affected by the alarm or condition are identified, prioritised and appropriate action taken |
| | | 5.2 | Alarm or incidents are responded to promptly by following procedures |
| | | 5.3 | Any out of specification material is dealt with in accordance with procedures and the problem/solution communicated to appropriate personnel |
| | | 5.4 | Incident information is recorded as required and details of the alarm and action taken communicated to the next shift at change over |
| | | 5.5 | Incidents are followed up to confirm that appropriate action has been taken |
| | | 5.6 | Hazards in the production/processing work area are identified and the risks arising from those hazards assessed |
| | | 5.7 | Measures to control risks are implemented in line with procedures and duty of care |
| 6 | Resolve other problems within scope of responsibility | 6.1 | Possible problems in equipment, control systems or process are identified to determine problems needing action |
| | | 6.2 | Possible fault causes are established and problems rectified using appropriate solution within area of responsibility |
| | | 6.3 | Initiated control actions are followed through until final resolution has occurred with problems outside area of responsibility reported to designated person |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFGG4006 Operate complex glass processing plant control systems

Modification History

Release 1 - New unit of competency

Performance Evidence

- Consistently:
 - recognise early warning signs of equipment/processes needing attention or with potential problems
 - determine and analyse the range of possible plant problem causes and the most likely cause
 - take appropriate action to ensure a timely return to full performance
 - recognise obvious problems in related plant areas and make an appropriate contribution to their solution
- Distinguish between causes of problems/alarms/fault indications, such as:
 - instrument failure/malfunction
 - electrical failure/malfunction
 - mechanical failure/malfunction
 - equipment design deficiencies
 - product parameters (temperature, flows, pressure and levels)
 - process control system malfunction
 - power/utility failures
 - software problems
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Interactions between control loops
- Interactions between plant units within the entire plant
- The architecture and location of the glass process/production equipment
- Specific glass plant process operations
- Interactions between glass plant items/processes
- Glass product specifications and tolerances
- Systems operating parameters
- System integrity limits

- Process control philosophies and strategies
- Emergency shutdown procedures
- Basic science of upstream and downstream glass processes
- Impact of external factors (e.g. variations in weather and feed)
- Complex process drawings (e.g. piping and instrumentation diagrams (P&ID), probability of failure on demand (PFD) and cause and effect)
- Basis of control for glass processing plant/s
- Instrumentation and control systems, including feed forward, feedback and open control
- Instrumentation and control system components (e.g. relevant primary sensing devices, final control elements, and transducers/transmitters)
- Control loops, including P&ID control, set points, controlled variable and indicated variable
- Interaction between multiple control loops, including cascade control
- Impacts of changing controller settings and the limits within which changes can be made
- Effective communication techniques
- Organisational procedures

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to control systems for glass processing plant and equipment, workplace documentation, procedures and job requirements.

MSFGG4007 Manage glass processing plant shutdown and re-start

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers the coordination of the shutdown and re-starting of a glass production or processing plant in a safe and efficient manner due to a planned or an unplanned shutdown or emergency situation. It does not apply to individual plant operators shutting down individual production units or following directions during a shutdown and would typically be exercised by the leading plant technician on a shift.

This unit requires the exercise of discretion as the plant technician's responses are governed by the cause of the shutdown and the plant's responses to that. It requires the coordination of all personnel involved in the shutdown to ensure it happens in as orderly a fashion as possible and that the plant is left in the best condition possible for a quick re-start.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Manage shutdown sequence

1.1 Glass plant safety systems are checked and verified to ensure that the unit has been made safe

1.2 The reason for, or cause of, the plant shutdown is identified by troubleshooting the system and utilising all available

		data and information systems
	1.3	Confirmation of the identified shutdown is obtained from operators to verify both the nature and the reliability of the shutdown
	1.4	Procedures are initiated to rectify the fault or shutdown cause through either repair of the operational fault or readjustment before returning the system to start-up status
2	Conduct start-up process	2.1 All start-up permissives are satisfied prior to start-up process being commenced 2.2 Start-up is conducted according to procedures and in a safe and efficient manner, ensuring a return to normal operation is achieved
3	Document shutdown and start-up process	3.1 All logs and workplace documentation relating to the shutdown/start-up process are completed ensuring all details, actions and responses are accurately recorded 3.2 Any further ongoing production problems are recorded and reported to appropriate persons or authority

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Reasons for glass processing plant shutdown include:

- planned (e.g. for maintenance or other planned work)
- unplanned (e.g. in response to a plant upset or equipment failure)
- emergency (e.g. in response to an automatic shutdown sequence or plant trip)

Shutdown includes:	<ul style="list-style-type: none">• shutdown 'to cold' (e.g. complete plant shutdown and purging of all process materials from equipment)• short shutdown to allow minor work 'warm shutdown' (e.g. partial shutdown, with retention of some or all of process materials)• managing a plant trip and restart 'hot shutdown' (e.g. short duration shutdown in response to a plant upset or trip)
Shutdown actions include:	<ul style="list-style-type: none">• coordinating the shift team• implementing emergency procedures• using the permit to work system (for repairs required)• performing all operations according to procedures
Relevant personnel include:	<ul style="list-style-type: none">• panel technicians• outside technicians• technicians seconded to a shutdown role• other relevant personnel
Work health and safety (WHS) requirements include:	<ul style="list-style-type: none">• Commonwealth, state or territory legislation and regulations• organisational safety policies and procedures• the use of personal protective equipment and clothing• firefighting equipment• first aid equipment• hazard and risk control and elimination of hazardous materials and substances• manual handling, including lifting and carrying
Appropriate action includes:	<ul style="list-style-type: none">• determining problems needing action• determining possible fault causes• rectifying problem using appropriate solution within area of responsibility• following through items initiated until final resolution has occurred• reporting problems outside area of responsibility to designated person
Procedures include:	<ul style="list-style-type: none">• work instructions• standard operating procedures• formulas/recipes• batch sheets• temporary instructions• any instructions provided for the smooth running of the plant• written, verbal or computer-based procedures
Glass plant/equipment include:	<ul style="list-style-type: none">• glass laminating plant• glass toughening plant• insulated glass plant

Organisational requirements include:

- glass silvering plant
- glass printing plant
- cutting (including water jet), seaming, edge grinding and computer numerically controlled (CNC) milling
- legal, organisational and site guidelines, policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- WHS procedures
- emergency and evacuation
- ethical standards
- recording and reporting
- access and equity principles and practices
- equipment use, maintenance and storage
- environmental management (waste disposal, recycling and re-use guidelines)

Unit Mapping Information

No equivalent unit

- Interactions between plant units within the entire plant
- The architecture and location of the glass process/production equipment
- Specific glass plant process operations
- Interactions between glass plant items/processes
- Glass product specifications and tolerances
- Hierarchy of control and basis of control for glass plant/s
- Communication protocols (e.g. radio, phone, computer, paper and permissions/authorities)
- Routine glass processing plant problems, faults and their resolution
- Relevant alarms and actions
- Complex process drawings (e.g. piping and instrumentation diagrams (P&ID), probability of failure on demand (PFD), and cause and effect)
- Plant process idiosyncrasies
- Correct methods of starting, stopping, operating and controlling glass processing plants
- Corrective action appropriate to the problem cause
- Function and troubleshooting of major glass processing plant components and their problems

- Process control philosophies and strategies
- Emergency shutdown procedures
- Physics, chemistry and mathematics relevant to the process

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to control systems for glass processing plant and equipment, workplace documentation, procedures and job requirements.

MSFGG4008 Undertake planning and coordination for commercial glazing installation operations

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning and scheduling commercial glazing installation resources, coordinating on-site communications and work ensuring compliance with building codes and standards and glass product quality control.

State and territory legislation should be checked for any required licensing or permits and a construction site supervisor’s safety certificate is essential.

Pre-requisite Unit

Competency Field

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Interpret installation contract documentation to identify operational requirements	1.1	Contract documentation is reviewed to identify all aspects of installation requirements, use of plant and equipment or penalties, variations and costs
		1.2	Principal contractors and architects/engineers for the construction project are consulted to confirm glass installation specifications and timing
		1.3	Subcontractors necessary to complete the installation are determined, where necessary
		1.4	Availability of installation plant and equipment is assessed and confirmed from organisational supplies or other suppliers

- | | | | |
|---|--|-----|---|
| | | 1.5 | Site access requirements and limitations are identified, including any necessary permits to facilitate entry |
| | | 1.6 | Documentation for authorities controlling construction work is accessed and glass installation dates confirmed |
| | | 1.7 | Procedures for controlling and recording site deliveries are determined and recorded |
| | | 1.8 | On-site labour requirements are determined and documented |
| 2 | Plan installation operations and prepare a project schedule | 2.1 | Installation glass and on-site plant and equipment are scheduled and confirmed |
| | | 2.2 | Installation operations are sequenced and operational details entered into a manual or computer-based project schedule |
| | | 2.3 | Critical path of the installation is defined and revised, as required |
| | | 2.4 | Project timeframes are adjusted to account for other construction activity scheduling |
| | | 2.5 | Installation site and safety plans are developed for coordinating with other building trades and contractors |
| | | 2.6 | Necessary permits for the installation are obtained |
| 3 | Coordinate delivery of glass, installation plant and on-site human resources | 3.1 | On-site plant delivery and placement is checked and supervised |
| | | 3.2 | On-site human resource requirements are managed |
| | | 3.3 | Construction work supervisor and other trades are identified and engaged in meetings and day-to-day contact to coordinate installation activity |
| 4 | Coordinate on-site installation operations | 4.1 | On-site communication is maintained, including communications with clients, contractors, inspectors and suppliers |
| | | 4.2 | Installation work is coordinated to ensure quality outcomes and a safe working environment |
| | | 4.3 | Subcontracted plant operators are supervised |
| | | 4.4 | Site reports of specific supervisory inspections are prepared with any variation requests or requirements |

			communicated to the appropriate person
		4.5	Administrative processes are conducted with reference to relevant regulatory and organisational requirements
5	Manage compliance with installation quality control procedures	5.1	Site checklists detailing specific items to be inspected at appropriate stages are used and completed
		5.2	Industry and organisational quality manuals and procedures are used in managing the quality process with all quality requirements communicated to on-site personnel
		5.3	Regulatory inspections of the completed installation are arranged
		5.4	Contractual quality standards are met

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit scope includes:

- planning and scheduling commercial glass products, installation plant/equipment and human resources for a commercial glass installation project
- communicating with construction senior personnel, such as architects, engineers and primary contractors
- obtaining necessary plans, specifications, permits and other documentation for the installation process
- variations to contracts in time of construction completion
- supervising commercial glass installation including plant, equipment, subcontractors and installation personnel
- liaising with construction site personnel

	<ul style="list-style-type: none">• ensuring quality installation outcomes and safe working environment
Work health and safety (WHS) requirements include:	<ul style="list-style-type: none">• Commonwealth, state or territory legislation and regulations• organisational safety policies and procedures• material safety data sheets (MSDS)• job safety analysis (JSA) forms• hazardous substances and dangerous goods codes and local safe operating procedures• safe working at heights• licensing of crane, scaffolding, rigging and dogging personnel• the use of personal protective equipment and clothing• firefighting equipment• first aid equipment• hazard and risk control and elimination of hazardous materials and substances• manual handling, including lifting and carrying
Procedures include:	<ul style="list-style-type: none">• work instructions• standard operating• verbal, written or computer-based procedures
Organisational requirements include:	<ul style="list-style-type: none">• legal, organisational and site guidelines, policies and procedures relating to own role and responsibility• quality assurance• procedural manuals• quality and continuous improvement processes and standards• ethical standards• recording and reporting• access and equity principles and practices• equipment use, maintenance and storage• environmental management (waste disposal, recycling and re-use guidelines)
Planning documentation includes:	<ul style="list-style-type: none">• plans and specifications• project schedules• contracts and subcontracting agreements• applications for permits and service connections• copies of plans, drawings and specifications• environmental applications• parking restriction applications
Project scheduling includes:	<ul style="list-style-type: none">• human resource schedules• glass and other materials delivery schedules• project critical path

	<ul style="list-style-type: none">• project timeframes• schedules of installation plant and equipment delivery and use
Regulatory and organisational requirements include:	<ul style="list-style-type: none">• building approval conditions• contract documents• architect and engineer reports• environmental standards• planning and scheduling• plans and specifications• safety management plans• site consultations• wage and taxation requirements
On-site coordination includes:	<ul style="list-style-type: none">• allocating and managing human resources• applying communication and interpersonal skills to facilitate dispute prevention and resolution• communicating with regulatory authorities and ensuring conformity with relevant requirements• dispersal and scheduling of plant and equipment• maintaining environmental controls and obligations• participating in on-site meetings• liaising with other construction personnel
Quality control includes:	<ul style="list-style-type: none">• checking glass supplied to the site• comparing installation processes against specifications• quality checklists and reporting• regular on-site progress and quality checks• reviews of plans and specifications with clients

Assessment Requirements for MSFGG4008 Undertake planning and coordination for commercial glazing installation operations

Modification History

Release 1 - New unit of competency

Performance Evidence

- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Access and accurately interpret all contracts, glass specifications and construction reports for an installation project
- Plan a commercial glass installation project with formal schedules and contingency plans
- Coordinate a commercial glass installation, including ordering and scheduling of glass products, other materials, plant and equipment, and human resources
- Maintain the quality of the glass installation
- Check contracts for variation of term (time)
- Comply with state, territory and local government regulations for the on-site activity
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory building and construction codes, standards and government regulations relevant to the glass installation being undertaken
- Glass industry standards, codes of practice and commercial glass handling and installation techniques
- Certification requirements for glass installation work performed under regulations or local authority requirements and processes and timeframes for regulatory approvals
- Contract variation procedures and associated documentation requirements
- Project management and critical path techniques to the organisation of materials, plant and people
- Protocols for construction industry subcontractor and supervisor coordination
- Types of plant and equipment employed in commercial glass installation
- Safety requirements for construction site operations
- Glass product specifications and tolerances
- Communication protocols (e.g. radio, phone, computer, paper and permissions/authorities)

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to commercial glass installation plans, contractual documentation and standards for commercial glass installation work, construction site access, glass installation plant, equipment and personnel.

MSFGN2001 Make measurements and calculations

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers taking measurements and making calculations for furnishing tasks undertaken in a variety of sites and locations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Generic

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|--|
| 1 | Identify appropriate measurements and equipment | 1.1 | Appropriate measuring equipment for the task is selected |
| | | 1.2 | Measuring units to be used, and the detail required, is identified from work documents |
| | | 1.3 | Measuring equipment condition and calibration is checked to confirm it is fit for purpose |
| 2 | Perform measurements | 2.1 | Range of results that may be obtained is estimated |
| | | 2.2 | Relevant external factors affecting measurement accuracy are identified and taken account of |
| | | 2.3 | Measurements are performed using appropriate techniques |

		2.4	Measurements are compared against the range of expected results
		2.5	Numerical information is checked for accuracy and correctness
3	Perform calculations	3.1	Measurement data to be used for calculations is identified from work instructions
		3.2	Appropriate calculation methods and techniques and tools are determined
		3.3	Calculations are carried out and results checked and confirmed as accurate
		3.4	Material quantities are estimated using relevant standard packaging units
4	Record measurements and calculations as required	4.1	Measuring and calculation results are accurately recorded in the appropriate format
		4.2	Results are recorded to the required level of detail
5	Recognise routine and non-routine problems	5.1	Known faults that can occur during measurement activity are recognised
		5.2	Necessary action on causes of routine faults is identified and taken
		5.3	Any problems are logged as required
		5.4	Non-routine problems are identified and reported to designated person

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential

operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- Work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes, and local safe operating procedures
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Measuring and calculating equipment include:**
- rules
 - tapes measures
 - squares
 - callipers
 - weighing scales
 - calculators
 - computers
 - laser or equivalent technology
- Measurements include:**
- quantities of materials
 - size, weight and volume of materials
 - dimensions of products and components
 - size and volumes of installation spaces
 - plans for cutting, drilling and shaping materials
 - placement of templates and production sizing
 - use of analogue, dial, scale and digital readouts
- Calculations include:**
- area
 - perimeter
 - volume
 - mass
 - scales and ratios (ingredients/elements and triangulation)
 - addition
 - subtraction
 - multiplication
 - division
 - percentages
 - staff and other business costs
- Materials include:**
- furniture (timber and composites)
 - resilient, woven and timber flooring materials
 - soft furnishing items
 - liquids used in furnishing manufacture and installation

Routine and non-routine problems include:	<ul style="list-style-type: none">• glass• components (outputs of production processes)• measuring instrument not fit for use (e.g. not within calibration)• appropriate measuring device not available• deviations from normal range of measurement readings• effect of temperature and humidity on material properties• uneven and irregular shaped surfaces
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• standard unit packaging of furnishing materials• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures• work documents and logs are to include hard copy and computerised versions

Assessment Requirements for MSFGN2001 Make measurements and calculations

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work documents correctly
- Plan and organise activities, including selecting and checking appropriate measuring equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate material quantities and spatial size
- Use a range of measuring, calculating and recording devices
- Record results accurately
- Perform calculations accurately and check results
- Work from specific project plans or briefs, determine and cost the material quantities for a minimum of three (3) different furnishing projects
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Purpose and techniques for using measuring and calculating equipment
- Mathematical principles for making basic calculations
- Work documentation for instructions and recording
- Requirements for minimising damage to materials and completed products while undertaking measurement
- Requirements of working with others in a team

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to relevant measuring, calculating and recording equipment, quality standards and enterprise procedures.

MSFGN2002 Move and store materials and products

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers moving, storing and recording stocks of raw materials, goods and finished products for the furnishing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Generic

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Identify products to be stored and appropriate stock records/inventory systems | 1.1 Materials, goods and products to be stored are identified |
| | 1.2 Potential uses, frequency of use of the materials or frequency of despatch to other work sections or customers are identified |
| | 1.3 Size, shape and special storage requirements are determined |
| | 1.4 Requirements for safe storage are identified and forwarded to appropriate personnel |
| | 1.5 Stock/inventory systems records are maintained |
| | 1.6 Relevant product information, including instructions, care labels and product identification information, are located |

- | | | | |
|---|-------------------------------------|-----|--|
| | | 1.7 | When required, reorder documentation is forwarded to appropriate personnel |
| 2 | Establish storage areas | 2.1 | Storage areas selected meet requirements for storing product type and quantity |
| | | 2.2 | Appropriate workplace clearances for use of storage areas are obtained |
| | | 2.3 | Storage areas are cleared of waste and contaminants and any required safety equipment is installed |
| | | 2.4 | Storage areas are planned to safely and effectively store goods based on frequency of use, safe height, weight and size |
| | | 2.5 | Storage arrangements take into account potential damage to raw materials or finished products from other stored items, handling, rearranging and crushing, scratching or contamination |
| | | 2.6 | Access and working space for safe use by appropriate manual handling equipment, forklifts or safe lifting by personnel is ensured |
| 3 | Move materials | 3.1 | Movement activities are completed as an individual or working directly with others as required by the work tasks |
| | | 3.2 | Roles and related responsibilities for the successful completion of the safe lifting activity are identified and applied |
| | | 3.3 | Materials handling equipment appropriate to the task is selected and used in accordance with regulatory and/or site requirements |
| | | 3.4 | Feedback from others is constructively accepted and acted on to continuously improve team and work performance |
| 4 | Store materials, goods and products | 4.1 | Condition of materials, goods and products is observed on arrival and any product below specification is returned to appropriate work areas |
| | | 4.2 | Workplace health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 4.3 | Materials, goods and products are stored observing any requirements for separation of particular types of |

- hazardous or incompatible materials, goods or products
- 4.4 Materials are stacked appropriately for weight loading, size and crushability of goods or products
- 4.5 Products are located to enable access to frequently required items
- 4.6 Work is undertaken in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
 - WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes, and local safe operating procedures
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Materials include:**
 - perishable and non-perishable inventory required to support production operations
- Materials handling equipment:**
 - is restricted to non-regulated machines and appliances
- Products include:**
 - furniture
 - furnishing items
 - components and other outcomes (outputs of the local production processes)

Tools and equipment include:

- pre-fabricated and fixed shelving
- open and enclosed pallets
- shipping containers
- non-motorised lifting and movement aids

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures includes:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFGN2002B Move and store materials and products.

Assessment Requirements for MSFGN2002 Move and store materials and products

Modification History

Release 1 - New unit of competency

Performance Evidence

- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Plan and organise activities, including the preparation and layout of the storage site to avoid any backtracking or work flow interruptions
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Establish and maintain storage areas for:
 - raw materials
 - production outputs
- Use a range of non-regulated materials handling devices
- Collect, organise and understand information related to the movement and storage of materials and products, work orders, plans and safety procedures
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate storage requirements and material requirements
- Use checking and inspection techniques to anticipate movement and storage problems, avoid re-working and avoid wastage
- Use workplace technology related to movement and storage, including inventory systems, tools, equipment, and measuring and recording devices

Knowledge Evidence

- Work flow in relation to use of goods and materials in store
- Potential hazards, including fire and explosion risk, security issues and operator safety around products to be stored
- Appropriate controls and safety equipment to manage risk
- Requirements for minimising damage to and maintaining contaminant-free unfinished materials goods and completed products
- Requirements of working with others in a team

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to storage area, manual materials handling equipment, products/materials for storage, safety procedures, regulations, quality standards, and enterprise procedures and all necessary facilities and associated equipment.

MSFGN3001 Read and interpret work documents

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers interpreting work documents, including cutting lists, standards, drawings and specifications, to produce or repair furnishings and to install floor coverings, glass and other furnishing items.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Generic

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------------------------|---|
| 1 Identify document type and purpose | 1.1 Key information is identified, such as title, version, scale, legend and keys |
| | 1.2 Any relevant explanatory or additional information needed to interpret the document is located and evaluated |
| | 1.3 Clarification is sought to confirm the intention of information where necessary |
| 2 Read and interpret the document | 2.1 Information, such as symbols, abbreviations, acronyms and technical terms, are identified and interpreted |
| | 2.2 Document information is compared to component or supplier advice for use of the materials and, where relevant, Australian Standards |

		2.3	Design and style features shown in drawings are identified by industry recognised terms
3	Plan own work sequence	3.1	Work sequence, required tools and equipment, and tasks to be performed are identified from the documents
		3.2	Work sequence is planned, identifying stages where checks against specifications must be made
		3.3	Specifications noted in the work plan are checked for accuracy against the drawings and specifications, and any errors are rectified
4	Maintain document files	4.1	Plans and documents are handled carefully and maintained intact
		4.2	Any explanatory documentation, additional information and/or modification information is kept with the work plan and original documentation according to workplace procedures
		4.3	All documentation is replaced in workplace filing or storage system for retrieval by others, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes, and local safe operating procedures
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health

	regulations, manual handling procedures and organisation insurance requirements
	<ul style="list-style-type: none">• work requires individuals to demonstrate some discretion, judgement and problem solving in the reading of work documents and the preparation of work plans• workplaces may be involved in the manufacture or repair of installation of musical instruments; manufacture of domestic or commercial furniture; manufacture and installation of kitchen and bathroom cabinets, furniture components, picture frames, soft furnishings, floor covering and finishing, and glass and glazing
Work documents to be considered include:	<ul style="list-style-type: none">• relevant Australian Standards• the work to be completed• the equipment and tools to be used• the items to be produced or repaired• drawings• cutting lists• job specifications and architect/builder plans or equivalent• manufacturer specifications and/or operating instructions• hard copy or computerised versions
Information and procedures include:	<ul style="list-style-type: none">• workplace plans, drawings and specifications applicable to all sectors of the industry• Australian Standards applicable to the industry sectors• workplace procedures relating to the preparation of own work plans and the maintenance of work documentation• supplier and manufacturer technical data and information• workplace procedures relating to reporting and communication

Unit Mapping Information

Supersedes and is equivalent to LMFGN3001B Read and interpret work documents.

Assessment Requirements for MSFGN3001 Read and interpret work documents

Modification History

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to the range of work documents relevant to the sector
- Communicate ideas and information to enable confirmation of work requirements and specifications
- Plan and organise activities to minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise information management
- Use mathematical ideas and techniques to correctly interpret the content of work documents
- Identify alternative methods of accessing and sources of work information, including using workplace technology related to work documentation, its access and storage
- Recognise and explain the meanings of symbols, technical terms and conventions of specifications and plans
- Check accuracy of copied specifications
- Maintain condition of documentation
- Locate, read and interpret a minimum of ten (10) selected/specified work documents which must include:
 - Australian Standards relevant to the sector
 - manufacturer technical instructions and specifications
 - real or simulated local work documents, including:
 - work plans
 - material safety data sheets (MSDS)
 - relevant building codes
 - job procedures
 - safe work instructions or equivalent

Knowledge Evidence

- Different types of work documents used in the furnishing industry and their function
- Conventions and symbols of plans, drawings and specifications
- Workplace procedures for maintenance of documentation

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a range of drawings, standards, plans, specifications and cutting lists relevant to the work, safety procedures, regulations, quality standards, enterprise procedures, and all necessary facilities and associated equipment.

MSFGN3002 Estimate and cost job

Modification History

Release 2 - Text missing from Assessment Requirements reinstated

Release 1 - New unit of competency

Application

This unit of competency covers estimating materials, labour and time requirements to establish costs for provision of furnishing services or products. Estimation and job costing is that undertaken by a tradesperson in relation to a sector product for a single client or customer.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Generic

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Gather information	1.1	Details of customer requirements are obtained through discussion with customer and information supplied
		1.2	Details of products and/or services to be provided are developed
		1.3	Delivery point and methods of transportation are determined, where necessary
2	Estimate materials, time and labour	2.1	Types and quantities of materials required for product manufacture are estimated
		2.2	Labour requirements to achieve product manufacture and

		perform required services are estimated
	2.3	Time requirements to manufacture and/or install item and perform required services are estimated
3	Calculate costs	3.1 Total materials, labour and overhead costs are calculated in accordance with enterprise procedures
		3.2 Total job cost is calculated, including overheads, government charges and mark-up percentages
		3.3 Final cost to customer is calculated
4	Document details and verify, where necessary	4.1 Details of costs and charges are documented in accordance with enterprise practice
		4.2 Costs, calculations or other details are verified in accordance with enterprise practice
		4.3 Customer quotation is prepared
		4.4 Details are documented for future reference in accordance with enterprise practice

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes, and local safe operating procedures
- work is carried out in accordance with legislative

Workplace context includes:	<p>obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements</p> <ul style="list-style-type: none">• the client or customer may be external or internal• work organisation procedures and practices relating to the provision of information and preparation of quotations• reporting actions which may include verbal and written communication in accordance with enterprise policies and procedures• oral, written or visual communication, including completion of standard forms, interpretation of information and instructions associated with workplace activities, and recording and reporting of work outcomes• use of calculators and/or computers running appropriate software for estimating and calculating necessary details
Information and procedures include:	<ul style="list-style-type: none">• enterprise work orders and instructions• industry codes and symbols• product designs, patterns and prototypes• building/architectural plans• Australian, international and enterprise quality standards and procedures• work scheduling documentation• job procedures

Unit Mapping Information

Supersedes and is equivalent to LMFGN3002B Estimate and cost job.

Assessment Requirements for MSFGN3002 Estimate and cost job

Modification History

Release 2 - Text missing from Assessment Requirements reinstated

Release 1 - New unit of competency

Performance Evidence

- Collect, organise and understand information related to work orders, costs and government charges
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems
- Complete an outline plan of activities, including the preparation and layout of the worksite, the obtaining of equipment and materials, and the avoidance of backtracking, work flow interruptions or wastage
- Estimate and cost three (3) varied jobs, including:
 - estimate quantities of material required
 - determine the types and amount of labour required to complete the work
 - estimate time required to complete the work
 - estimate overheads associated with the job
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use mathematical ideas and techniques to correctly complete measurements, estimate material, labour and overhead requirements and accurately cost the product/service
- Use checking techniques to anticipate and overcome costing problems
- Use workplace technology related to the estimation and validation of job costs

Knowledge Evidence

- Range of products and services offered by the enterprise
- Enterprise or equivalent costing procedures
- Components of overheads costs
- Components of labour costs
- Labour rates and approximate costs of products and materials
- Basic mathematical processes

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to specifications and costs of relevant products, equipment and materials; information on labour costs and availability; safety procedures; regulations; quality standards; enterprise procedures; and all necessary facilities and associated equipment, including calculators, computers and relevant software.

MSFID1001 Plan the decoration of a simple space

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning the decoration of a simple space by selecting the theme, colours, layout and furnishings, resulting in the visual representation of the space through drawings or colour boards.

The unit is suitable for project-related work as part of a VET in Schools program.

It requires the application of employability skills associated with communication and problem solving to develop storyboards, sketches and design concepts, explore decoration concepts with supervisors and document and interpret decoration requirements. Initiative and enterprise and planning and organising skills are required to design space. Learning skills are also required in order to experiment with and develop decoration skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify the decoration requirements

1.1 Applicable work health and safety (WHS) requirements relevant to decorating a simple space are verified and complied with

1.2 Project brief is reviewed and clarified with supervisor to

		identify decoration requirements
	1.3	Resources are selected appropriate to work requirements and checked for operational effectiveness
	1.4	Communication requirements for decoration project are identified
2	Plan the space decoration	
	2.1	Space dimensions and locations of features are measured and recorded
	2.2	Sketches and drawings are prepared to illustrate the space
	2.3	Plan layout is prepared
	2.4	Theme is selected and alternative options provided
	2.5	Colours are selected and confirmed
	2.6	Supplies necessary to complete the project are selected
	2.7	Materials and processes are selected
	2.8	Furnishings and other accessories are selected and placement coordinated
	2.9	Costing and timeline estimates are compiled and developed into a full project proposal
	2.10	Decoration proposal is considered for its environmental qualities
3	Present decoration proposal	
	3.1	Colour board presentation is made
	3.2	Drawings are completed to show layout of decorative components
	3.3	Presentation of the design and decoration plan is made

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Project brief includes:**
- aims
 - objectives
 - any design requirements
 - image requirements
 - function, effect and feel trying to be achieved
 - budget
 - timelines
- Simple spaces include:**
- a room within a domestic residence, such as:
 - bedroom
 - bathroom
 - kitchen
 - laundry
 - living space
 - multi-purpose room
 - storage room
 - study
 - garage
 - rumpus room
 - media room
 - toilet
 - pantry
 - entertainment area
 - hall
 - workstation

Sketches and drawings include:	<ul style="list-style-type: none">• hand drawn images or ideation drawings completed freehand• drafted technical drawings• drawings produced on computer using computer-aided design (CAD) software packages
Layout includes:	<ul style="list-style-type: none">• the plan of how a room will be designed and decorated showing the placement of design elements and decorative features, including plans, section elevations and other projections
Themes include:	<ul style="list-style-type: none">• variations of colour ways• furnishing trends• decoration trends
Supplies include:	<ul style="list-style-type: none">• paints• furnishings• decorations• other internal fit-out products
Materials include:	<ul style="list-style-type: none">• solid timber (native and imported)• manufactured timber products• plastic• metal• alloys• stone• glass• textiles• fibreglass• foam• cardboard• paper products• any other manipulable substance
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices

Unit Mapping Information

Supersedes and is equivalent to LMFID1001A Plan the decoration of a simple space.

Assessment Requirements for MSFID1001 Plan the decoration of a simple space

Modification History

Release 1 - New unit of competency

Performance Evidence

- Locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Plan the decoration of a simple space in the designated timeframe effectively applying design elements and principles
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate decoration ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Elements and principles of design
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Relevant interior decoration problem identification and resolution techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to computers, computer software, design software, CAD software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment, and products and model making equipment.

MSFID3001 Source and specify decoration products

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers sourcing, assessing suitability of, and specifying products used in design and decoration projects in a retail or wholesale sales environment according to client and project brief requirements.

No legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Assess client product need	1.1	Client is engaged and design and decoration needs discussed
		1.2	Budget, time, colour and function parameters for decoration product are identified
		1.3	Client documentation is completed
2	Source and assess suitability of products	2.1	Products are researched and suitable choices made for potential use
		2.2	Performance and characteristics of products are evaluated and recorded
		2.3	Use requirements of the product are analysed for

- appropriateness to the application
- 2.4 Quality and compliance issues are assessed to ensure the products state manufacturer specifications for use
 - 2.5 Environmental issues are considered in sourcing and selecting products
 - 2.6 Sustainability of products is assessed in terms of durability and wear
 - 2.7 Manufacturing standards and equipment are reviewed to comply with the chosen materials
 - 2.8 Sources or suppliers of products are found and recorded
 - 2.9 Costs associated with purchasing and obtaining the products are recorded and reported
- 3 Specify products
 - 3.1 Products are selected according to the style of the space
 - 3.2 Final selection of products and finishes is compiled and verified based on the assessment of suitability
 - 3.3 Presentation of the product and finish information is made to the client

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- work health and safety (WHS) requirements, including legislation, material safety management systems, and local safe operating procedures or equivalent

Products include:

- work is carried out in accordance with legislative obligations, environmental legislation, Australian Standards, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving
- furniture
- soft furnishings
- floor treatments
- curtain treatments
- built-in cabinetry or fittings
- light fittings
- lamps
- picture framing
- tapware
- laundry fittings
- bathroom fittings
- toilet fittings
- kitchen fittings
- finishes:
 - paints
 - waxes
 - lacquers
 - stains
 - pigments
 - oils
 - plastic coatings
 - veneers
 - ceramics
 - stone
 - glass
 - textiles
 - other textures

Research includes:

- computer internet research
- viewing swatches
- studying the Pantone Matching System (PMS)
- journals (directions magazines)
- design shows
- retail and wholesale outlets
- trade fairs

Performance and characteristics include:	<ul style="list-style-type: none">• assessment of products to determine if they meet the requirements of the intended end use application and how well they do it, and the durability and composition of the product
Quality includes:	<ul style="list-style-type: none">• an inspection system for ensuring that pre-determined quality standards are being met, highlighting non-conformances requiring intervention
Compliance includes:	<ul style="list-style-type: none">• ensuring that the product meets with Australian Standards or ISO 9000 series quality standards and state and territory manufacturing specifications (where applicable)
Environmental issues include:	<ul style="list-style-type: none">• how the use of raw materials effects the ecology and environment and how its continued use will affect the area it has been sourced from, and what impact will be felt by reducing or stopping material from the source
Sustainability includes:	<ul style="list-style-type: none">• life of the product• durability• maintenance and repair issues• what protective elements it may possess
Materials include:	<ul style="list-style-type: none">• solid timber (native and imported)• manufactured timber products• plastic• metal• alloys• stone• glass• textiles• fibreglass• foam• cardboard• paper products• any other manipulable substance
Sources include:	<ul style="list-style-type: none">• suppliers• wholesalers• retailers• manufacturers• designers
Costs include:	<ul style="list-style-type: none">• the cost of products and materials together with the cost of obtaining them either locally, interstate or overseas
Spaces include:	<ul style="list-style-type: none">• commercial or domestic spaces• rooms, such as:<ul style="list-style-type: none">• bedrooms• bathrooms

- kitchens
- laundries
- living spaces
- multi-purpose rooms
- storage rooms
- studies
- offices
- garages
- rumpus rooms
- media rooms
- toilets
- pantries
- entertainment areas
- halls
- workstations

Unit Mapping Information

Supersedes and is equivalent to LMFID3002A Source and specify decoration products.

Assessment Requirements for MSFID3001 Source and specify decoration products

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Source and specify decoration products to provide the client with cost-effective options which meet the project brief requirements, and effectively apply design elements and principles
- Maintaining current knowledge of interior decoration and design techniques
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for sourcing and specifying decoration products
- Organisational and site standards, requirements, policies and procedures for sourcing and specifying decoration products
- Applicable Australian Standards
- Basic elements and principles of design
- Ergonomics, anthropometrics, proxemics and aesthetic values of available product range
- Characteristics of materials, products and defects
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

- Environmental protection requirements
- Established communication channels and protocols
- Relevant sourcing and decoration product problem identification and resolution
- Workplace information resources on decoration products

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials and equipment relevant to sourcing and specifying products and finishes, specifications and work instructions.

MSFID3002 Style a retail display

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers styling a display to present and sell concepts and ideas in a retail or wholesale sales environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for display	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to styling a retail display are verified and complied with
		1.2	Project brief is reviewed and confirmed with client to identify display requirements
		1.3	Parameters for the display are assessed and confirmed
		1.4	Resources are selected appropriate to work requirements and checked for operational effectiveness
		1.5	Communication with others is established and maintained
2	Plan and design display	2.1	Market needs are evaluated and a display brief developed that capitalises on current trends

- | | | |
|---|---------------|--|
| | 2.2 | Display dimensions are measured and needs of the display space assessed |
| | 2.3 | Sketches and drawings are prepared to illustrate the display |
| | 2.4 | Plan layout is prepared |
| | 2.5 | Theme is selected and alternative options provided |
| | 2.6 | Supplies, products and finishes necessary to complete the project are sourced and costed |
| | 2.7 | Materials and processes are specified |
| | 2.8 | Costing and timelines are compiled and developed |
| 3 | Style display | |
| | 3.1 | Final selection of products and finishes is coordinated |
| | 3.2 | Arrangement is resolved to meet client needs and display brief |
| | 3.3 | Trims and hardware are selected and coordinated with the products or finishes |
| | 3.4 | Graphics and text style for signage are selected and applied |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management

systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent

- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Scope of brief includes:

- aims
- objectives
- milestones for the project
- organisational or personal profiles
- target audience
- budget
- timeline
- consultation requirements
- colour requirements
- image requirements
- function

Clients include:

- suppliers
- manufacturers
- private clients
- colleagues
- retailers
- the public

Parameters include:

- scope of brief
- approval to make changes (legislative and planning)
- effect or feel trying to be achieved
- functionality (short and long term)
- budget restrictions
- established timelines

Resources include:

- computers
- computer software
- design software
- computer-aided design (CAD) software
- colour boards
- storyboards
- swatches
- Pantone Matching System (PMS)
- journals (directions magazines)
- artistic equipment and products

Displays include:	<ul style="list-style-type: none">• model making equipment• an effective display of a simulated and designed space to sell and promote ideas, concepts, trends, products and decorations associated with the outlet
Sketches and drawings include:	<ul style="list-style-type: none">• hand drawn images or ideation drawings completed freehand• drafted technical drawings• drawings produced on computer using CAD software packages (these usually contain project specifications)
Layout includes:	<ul style="list-style-type: none">• the plan of how a room will be designed and decorated showing the placement of design elements and decorative features
Themes include:	<ul style="list-style-type: none">• variations of colour ways (based on directions media), furnishing trends and decoration trends
Supplies include:	<ul style="list-style-type: none">• paints• furnishings• decorations• other internal fit-out products
Products include:	<ul style="list-style-type: none">• furniture• soft furnishings• floor treatments• curtain treatments• built-in cabinetry or fittings• light fittings• lamps• picture framing• tapware• laundry fittings• bathroom fittings• toilet fittings• kitchen fittings
Finishes include:	<ul style="list-style-type: none">• paints• waxes• lacquers• stains• pigments• oils• plastic coatings• veneers• ceramics• stone• glass

- textiles
- other textures
- Materials include:**
 - solid timber (native and imported)
 - manufactured timber products
 - plastic
 - metal
 - alloys
 - stone
 - glass
 - textiles
 - fibreglass
 - foam
 - cardboard
 - paper products
 - any other manipulable substance
- Costing include:**
 - the cost of products and materials used during completion of the project, labour and overhead expenses
- Timelines include:**
 - the agreed project time span set and agreed for the project
- Trims and hardware include:**
 - haberdashery
 - cabinet hardware, such as knobs and handles
 - light fittings
 - rugs
 - tie backs
 - curtain rods

Unit Mapping Information

Supersedes and is equivalent to LMFID3005A Style a retail display.

Assessment Requirements for MSFID3002 Style a retail display

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Style a retail display with the products, finishes, trims and hardware to promote trends and design concepts to potential clients effectively apply design elements and principles
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Initiating new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for styling a retail display
- Organisational and site standards, requirements, policies and procedures for styling a retail display
- Basic understanding of elements and principles of design
- Concepts of ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Design themes and design development
- Colour, furnishing and decoration options
- Procedures for the recording, reporting and maintenance of workplace records and information

- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant decoration and styling problem identification and resolution techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials and equipment relevant to styling a retail display, specifications and work instructions.

MSFID4001 Research, analyse and apply colour for interior spaces

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching, analysing and applying colour for interior decoration projects, including experimentation and application of colour in interior decoration projects in order to achieve desired effects using design tools, such as colour wheels and formulas.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Assess colour requirements for the project	1.1	Project brief is reviewed and clarified with client to identify colour requirements
		1.2	Parameters for the colour application are assessed and confirmed
		1.3	Resources are selected appropriate to work requirements and checked for operational effectiveness
		1.4	Communication with others is established and maintained
		1.5	Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching,

			analysing and applying colours are verified and complied with
2	Research colour schemes for interior decoration	2.1	Colour psychology is researched and analysed in accordance with the needs of the project
		2.2	Impact of colours upon an interior space are researched and information compiled
		2.3	Additive and subtractive colour mixing is researched for interior decoration applications
		2.4	Cultural and historical influences on colour use are examined
3	Explore colour schemes	3.1	Colour wheels are used to mix and match alternative colour schemes in assisting with suitability of colours to a space
		3.2	Colour systems and colour combinations are explored for interior design application
		3.3	Relationship of colours juxtaposed are assessed for their suitability in the space and proportions
		3.4	Effect of light is assessed against the impact of colours being proposed for use in certain spaces
		3.5	Coordination and visual perception of colours is assessed in accordance with the project brief
		3.6	A range of colour mixing techniques are used to match samples
		3.7	Light sources are used to mix and throw coloured light onto a range of coloured surfaces to evaluate and record colour effect perceptions
		3.8	Contrast and harmony of colours are ascertained through selection of colours in accordance with the project brief
4	Present colour scheme	4.1	Final selection of colours is compiled and verified based on the research and analysis and presented to the client
		4.2	Presentation of the colour information is made to the client and specifications recorded
		4.3	A range of rendering media is used to present colour schemes
		4.4	Colour application is critiqued to assess the effectiveness

of the project brief to meet client needs

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
- work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills

Project brief includes:

- client needs and objectives
- client aims and objectives and criteria for evaluation
- milestones
- organisational or personal profiles and aims
- image requirements and function
- target market
- budget
- timeline
- consultation requirements
- colour requirements

Clients include:

- suppliers
- manufacturers
- private clients

	<ul style="list-style-type: none">• colleagues• retailers• the public
Parameters include:	<ul style="list-style-type: none">• scope of brief• approval to make changes• effect or feel trying to be achieved• functionality (short and long term)• budget restrictions• established timelines
Resources include:	<ul style="list-style-type: none">• computers• computer software• design software• computer-aided design (CAD) software• colour boards• storyboards• swatches• product-based colour systems, such as Munsell or similar• colour matching system, such as Pantone Matching System (PMS)• journals (directions magazines)• artistic equipment and products• model making equipment
Colour psychology influences include:	<ul style="list-style-type: none">• strength• boldness• excitement• determination• desire• courage• enthusiasm• cheerfulness• affordability• stimulation• creativity• attention-grabbing• comfort• liveliness• intellect• happiness• energy• durability• reliability• safety

- honesty
- optimism
- harmony
- freshness
- depth
- stability
- professionalism
- loyalty
- reliability
- honour

- colour principles
- psychology
- fundamentals

Colours include:

- coordination
- perception
- language
- tonal
- translucent
- contrast
- harmony
- effects on space
- formulas
- colour wheels
- hue
- chromaticity
- saturation
- value
- luminance
- tints
- tones
- shades
- complimentary
- primary
- secondary
- tertiary colours
- commercial or domestic spaces
- rooms, such as:
 - bedrooms
 - bathrooms
 - kitchens
 - laundries
 - living spaces
 - multi-purpose rooms
 - storage rooms
 - studies
 - offices
 - garages
 - rumpus rooms
 - media rooms
 - toilets
 - pantries
 - entertainment areas
 - halls
- offices

Interior spaces include:

- cafes
 - shops
 - restaurants
- Additive and subtractive colour mixing includes:**
- two types of colour mixing:
 - the mixing of lights or differently coloured beams projected onto a screen occurs according to the principle of additive colour mixing
 - the mixing of pigments or paints according to the principles of subtractive colour mixing
- Cultural issues include:**
- demography
 - geography (local, regional and national)
 - religious
 - climatic
 - societal
 - cultural
 - lifestyle
 - attitudinal
 - gratification
 - honour
 - living conditions
 - infrastructure
 - status
 - habitude
- Historical includes:**
- colour study of early civilisation, Berlin & Kay, Aristotle, Newton, Hippocrates, Leonardo Da Vinci, the Renaissance, Goethe's theory of colours, Chevreul and Bauhaus School
- Colour wheel includes:**
- that formed by colours in order around a wheel of 12 colours comprising:
 - three primary colours
 - three secondary colour (created by mixing primary colours)
 - six tertiary colours (created by mixing the primary and secondary colours)
 - electronic colour wheels have more colour options
- Effects of light include:**
- naturally occurring light caused by:
 - windows
 - doors
 - changes in space size
 - sky lights
 - artificial light using:
 - fluorescent

	<ul style="list-style-type: none">• halogen or incandescing methods• reflective light
Contrast includes:	<ul style="list-style-type: none">• opposing elements of colour which are suitably different yet work together
Harmony includes:	<ul style="list-style-type: none">• colours that work well together, that produce a colour scheme that looks attractive; the colour wheel can be used as a valuable tool for determining harmonious colours
Research includes:	<ul style="list-style-type: none">• computer internet research• viewing swatches• studying the PMS• journals (directions magazines)• design shows• retail and wholesale outlets• trade fairs
Trends include:	<ul style="list-style-type: none">• new directions resulting from events that are at times subtle and others significant• colour trends where experts gather information from around the world and study changing events and ideas to produce a comprehensive colour story, in the same way that designers seek unique styles and incorporate current philosophies into their work
Rendering media includes:	<ul style="list-style-type: none">• dry media:<ul style="list-style-type: none">• pencils• charcoal• pastels• spirit-based markers• wet media:<ul style="list-style-type: none">• ink• water-based paints• CAD
Critique includes:	<ul style="list-style-type: none">• the process of undertaking a critical analysis of a colour, the process used to decide upon it, and the application methodology and final outcomes

Unit Mapping Information

Supersedes and is equivalent to LMFID4001A Research, analyse and apply colour for interior spaces.

Assessment Requirements for MSFID4001 Research, analyse and apply colour for interior spaces

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Identify materials used in the work process
- Research, analyse and apply colours to provide the client with cost-effective options which meet the project brief requirements for a minimum of two (2) projects, and effectively apply design elements and principles
- Visually present colour schemes to illustrate how ideas meet overall project requirements
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for researching, analysing and applying colours
- Organisational and site standards, requirements, policies and procedures for researching, analysing and applying colours
- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance
- Colour systems and theories
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Colours, furnishings and decorations
- Psychology of colours
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment, specifications and work instructions relevant to researching, analysing and applying colours.

MSFID4002 Decorate residential interiors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers decorating residential interiors for interior decoration projects in accordance with project briefs by analysing the design brief, conducting research and generating decoration ideas and concepts to create a visual experience in a previously defined interior space. It includes selecting materials and finishes for surface decoration and arranging the objects and elements within the space. It does not cover skills required to alter established structural aspects of the building or building services.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---------------------------|-----|---|
| 1 | Analyse the project brief | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to decorating for residential spaces are verified and complied with |
| | | 1.2 | Project brief is reviewed, confirmed and clarified with client |
| | | 1.3 | Parameters for the project are assessed and confirmed |

- | | | |
|---|---------------------------------|---|
| | 1.4 | Resources are selected appropriate to work requirements and checked for operational effectiveness |
| | 1.5 | Communication with others is established and maintained |
| | 1.6 | Problems or underlying factors to be addressed by the project brief are verified |
| 2 | Conduct research for the design | 2.1 Areas for research are identified |
| | 2.2 | Impacts of cultural, social and economic influences and trends are identified and analysed |
| | 2.3 | Ergonomic and anthropometric influences are identified and analysed |
| | 2.4 | Environmental issues are identified and analysed |
| | 2.5 | Other relevant information is assessed and used to guide research |
| | 2.6 | Design influences are prioritised for relevancy to design brief |
| | 2.7 | Collected information is documented |
| 3 | Confirm the design brief | 3.1 Design requirements are translated in a manner which is clear and concise |
| | 3.2 | Factors affecting the outcome of the project are documented |
| | 3.3 | Criteria for assessing and evaluating design concepts are determined |
| | 3.4 | Final design brief outlining all the requirements is compiled, produced and refined with the client |
| 4 | Generate decoration concepts | 4.1 Creative methodologies are used to generate a range of decoration concepts and themes |
| | 4.2 | Concepts are assessed against the project brief to select most viable solution |
| | 4.3 | Concept is presented to client using a range of concept presentation methods |
| | 4.4 | Ideas are discussed with client and concept is modified according to feedback |

- | | | | |
|---|--|-----|--|
| 5 | Translate concepts into 3-D decoration ideas | 5.1 | The elements and principles of design that are derived from the concept are explored |
| | | 5.2 | A range of 3-D decoration ideas are generated from the concept |
| | | 5.3 | Surface materials, finishes, and colours are explored and assessed for their ability to express the concept |
| | | 5.4 | Furniture, fixtures, fittings and accessories are explored and assessed for their ability to express the concept |
| | | 5.5 | The allocation and arrangement of objects within the space are explored |
| | | 5.6 | 2-D and 3-D sketches are developed to document the 3-D space |
| 6 | Revise and refine solution | 6.1 | Planning is revised and refined, and ergonomics considered |
| | | 6.2 | Regulatory requirements relating to decoration are assessed to determine compliance |
| | | 6.3 | Finishes, fittings, fixtures, furniture, materials and accessories are selected |
| | | 6.4 | Colour scheme is selected to complement the space and create the required visual experience |
| | | 6.5 | Environmental aspects of decoration solution are examined and areas for improved sustainability are identified and incorporated where possible |
| | | 6.6 | Preliminary drawings are developed |
| 7 | Present decoration solution to client | 7.1 | Final presentation is prepared for the client |
| | | 7.2 | Final presentation is presented to the client with key features and benefits of the solution explained |
| | | 7.3 | Client is engaged to gain feedback on decoration elements |
| 8 | Reflect on decoration process | 8.1 | Client feedback and response are analysed to determine success in achieving client satisfaction |
| | | 8.2 | Own performance in the design process is examined to |

identify strengths and weaknesses

8.3 Areas for improvement are identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
- work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills

Project brief includes:

- client needs and objectives
- client aims and objectives, and criteria for evaluation
- milestones
- organisational or personal profiles and aims
- image requirements and function
- target market
- budget
- timeline
- consultation requirements
- colour requirements

Clients include:

- suppliers

Assessment Requirements for MSFID4002 Decorate residential interiors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Analyse a project brief to determine client requirements and work through the decoration process collecting the required information
- Establish criteria for the intended solutions to meet the requirements of the project brief and effectively design at least two (2) interior residential spaces applying design elements and principles to provide the client with creative solutions that satisfy the project brief
- Draw using manual and computer based techniques and visually and verbally present decoration solution
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for decorating for residential space
- Organisational and site standards, requirements, policies and procedures for decorating for residential space
- Australian Standards and the Building Code of Australia (BCA)
- Environmental protection requirements
- Established communication channels and protocols

- Relevant decoration and design problem identification and resolution
- Elements and principles of design including liveability and accessibility
- Creativity and artistic relevance
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Historical design styles and movements
- Current ethical issues in society affecting designs
- Current market segments
- Aesthetic aspect of elements and principles in 3-D design
- Ergonomic and anthropometric standards
- Basic construction technologies
- Techniques for the preparation and presentation of research information
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Design themes and design development
- Colours, furnishings and decorations
- Sketching and drawing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment, specifications and work instructions relevant to decorating residential interiors.

MSFID4003 Prepare a materials board for client presentation

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing a materials or sample board for client presentation for interior decoration and design projects. The materials board includes visual demonstration of colour, materials, samples, finishes and textiles used in the decoration and design project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.												
1 Identify presentation requirements from project brief	<table><tr><td>1.1</td><td>Applicable work health and safety (WHS), legislative and organisational requirements relevant to presenting documentation are verified and complied with</td></tr><tr><td>1.2</td><td>Project brief is reviewed to determine presentation requirements</td></tr><tr><td>1.3</td><td>Parameters for the project are confirmed with client</td></tr><tr><td>1.4</td><td>Resources are selected appropriate to work requirements and checked for operational effectiveness</td></tr><tr><td>1.5</td><td>Communication with others is established and maintained</td></tr><tr><td>1.6</td><td>All required information is accessed and interpreted to</td></tr></table>	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to presenting documentation are verified and complied with	1.2	Project brief is reviewed to determine presentation requirements	1.3	Parameters for the project are confirmed with client	1.4	Resources are selected appropriate to work requirements and checked for operational effectiveness	1.5	Communication with others is established and maintained	1.6	All required information is accessed and interpreted to
1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to presenting documentation are verified and complied with												
1.2	Project brief is reviewed to determine presentation requirements												
1.3	Parameters for the project are confirmed with client												
1.4	Resources are selected appropriate to work requirements and checked for operational effectiveness												
1.5	Communication with others is established and maintained												
1.6	All required information is accessed and interpreted to												

			inform the presentation process
2	Prepare materials board	2.1	Substrate for the materials board is obtained in the selected colour and cut to the desired size
		2.2	Fabric and paint swatches are gathered, proportionally arranged with selected fabrics cut to size and paint samples set aside
		2.3	Visual information is gathered and prepared in accordance with the design theme and project brief
		2.4	Products, materials and accessories are gathered and selected items prepared
		2.5	Material and sample board components are composed and arranged before secure fixing to base board
		2.6	Fixtures are labelled or a legend compiled to translate the parts and colours
		2.7	Materials board is finalised in readiness for presentation
		2.8	Sketches and drawings are completed and prepared for positioning of products, materials and accessories
3	Prepare for client presentation	3.1	Presentation methodology is developed and prepared
		3.2	Materials board presentation is made to the client, selling the attributes of the design solution
		3.3	Presentation of materials board information is supported using multimedia and computer based strategies

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
- Project brief includes:**
- client needs and objectives
 - client aims and objectives, and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timeline
 - consultation requirements
 - colour requirements
- Parameters include:**
- scope of brief
 - approval to make changes
 - effect or feel trying to be achieved
 - functionality (short and long term)
 - budget restrictions
 - established timelines
- Clients include:**
- suppliers
 - manufacturers
 - private clients
 - colleagues
 - retailers
 - the public
- Resources include:**
- computers
 - computer software
 - design software
 - computer-aided design (CAD) software
 - colour boards
 - storyboards

- swatches
 - product based colour systems, such as Munsell or similar
 - colour matching system, such as Pantone Matching System (PMS)
 - journals (directions magazines)
 - artistic equipment and products
 - model making equipment
- Substrates include:**
- mat board
 - sponge board
 - frames
 - mounts
 - 3-D relief boards
- Samples include:**
- fabric
 - paint
 - laminate
 - stone
- Colours include:**
- colour principles
 - psychology
 - fundamentals
 - coordination
 - perception
 - language
 - tonal
 - translucent
 - contrast
 - harmony
 - effects on space
 - formulas and colour wheels
 - hue
 - chromaticity
 - saturation
 - value
 - luminance
 - tints
 - tones
 - shades
 - complimentary
 - primary
 - secondary
 - tertiary colours
- Fabric swatches include:**
- small pieces of fabric cut as samples from rolls of fabric, or commercial display fabric swatches used for retail purposes

Paint swatches include:	<ul style="list-style-type: none">• painted cards or commercially available paint cards (available free in paint and hardware shops)
Visual information includes:	<ul style="list-style-type: none">• photographs• magazine clippings• drawings• sketches
Themes include:	<ul style="list-style-type: none">• variations of colour ways (based on directions media), furnishing trends and decoration trends
Materials include:	<ul style="list-style-type: none">• solid timber (native and imported)• manufactured timber products• plastic• metal• alloys• stone• glass• textiles• fibreglass• foam• cardboard• paper products• any other manipulable substance
Accessories include:	<ul style="list-style-type: none">• haberdashery• cabinet hardware, such as knobs and handles• light fittings• rugs• tie backs• curtain rods
Secure fixing includes:	<p>spray glue (in booth with extraction fan)</p> <ul style="list-style-type: none">• double-sided tape• blue tack• Velcro
Drawings include:	<ul style="list-style-type: none">• hand drawn images or ideation drawings completed freehand• drafted technical drawings or drawings produced on computer using CAD software packages (these usually contain project specifications)
Materials board include:	<ul style="list-style-type: none">• a presentation on board displaying the colour usage and coordination with surface finishes, materials and textiles used throughout the project
Presentation methodology includes:	<p>a justification of the selections made for the decoration or design proposal</p>

- a visual presentation and prepared script to accompany the colour board
- Multimedia includes:**
- presentation boards
 - portfolios
 - photography
 - data projectors
 - video
 - other forms of multimedia
- Computer-based strategies include:**
- PowerPoint presentations
 - CAD demonstrations
 - written presentations
 - other scenarios utilising different software applications
- Information and procedures include:**
- work instructions, including plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID4003A Prepare a materials board for client presentation.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFID4003 Prepare a materials board for client presentation

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Prepare a materials board for client presentation to provide the client with cost-effective options which meet the project brief requirements effectively applying design elements and principles
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for preparing a materials board and client presentation
- Organisational and site standards, requirements, policies and procedures for preparing a materials board and client presentation
- Creativity and artistic relevance
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant decoration and design computer programs
- Design themes and design development
- Colour, furnishing and decoration options
- Psychology of colours
- Procedures for the recording, reporting and maintenance of workplace records and information
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment, specifications and work instructions relevant to preparing a colour board for client presentation.

MSFID4004 Research and recommend furniture and accessories

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching and recommending furniture and accessories for various decoration and design solutions to meet client and project brief requirements and applies to a design and decoration, retail, consulting or studio environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.										
1 Interpret decoration requirements from project brief	<table><tr><td>1.1</td><td>Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending furniture and accessories are verified and complied with</td></tr><tr><td>1.2</td><td>Project brief is reviewed and clarified with client to determine requirements for furniture and accessories</td></tr><tr><td>1.3</td><td>Parameters for furniture and accessories are assessed and confirmed</td></tr><tr><td>1.4</td><td>Resources are selected appropriate to work requirements and checked for operational effectiveness</td></tr><tr><td>1.5</td><td>Communication with others is established and maintained</td></tr></table>	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending furniture and accessories are verified and complied with	1.2	Project brief is reviewed and clarified with client to determine requirements for furniture and accessories	1.3	Parameters for furniture and accessories are assessed and confirmed	1.4	Resources are selected appropriate to work requirements and checked for operational effectiveness	1.5	Communication with others is established and maintained
1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending furniture and accessories are verified and complied with										
1.2	Project brief is reviewed and clarified with client to determine requirements for furniture and accessories										
1.3	Parameters for furniture and accessories are assessed and confirmed										
1.4	Resources are selected appropriate to work requirements and checked for operational effectiveness										
1.5	Communication with others is established and maintained										

- | | | |
|---|----------------------|--|
| 2 | Research furniture | 2.1 Aesthetic and style requirements of the furniture are assessed |
| | | 2.2 Intended application for the furniture is analysed and reviewed |
| | | 2.3 New furniture technologies are researched and reported |
| | | 2.4 Tactile requirements of the furniture in relation to the design are researched |
| | | 2.5 Properties of the materials used in the production of furniture are analysed and evaluated |
| | | 2.6 Manufacturing processes and available expertise for the desired furniture are assessed |
| | | 2.7 Costs and availability of furniture are assessed and compared |
| | | 2.8 Environmental impact of furniture materials used are assessed |
| | | 2.9 Longevity and restorability qualities of furniture are researched |
| | | 2.10 Space is measured for furniture requirements, calculating quantities and requirements |
| | | 2.11 Principles of anthropometrics, ergonomics and spatial relationships are applied |
| 3 | Research accessories | 3.1 Aesthetic and colour requirements of the accessories are assessed |
| | | 3.2 Intended application for the accessories is analysed and reviewed |
| | | 3.3 New accessory technologies are researched and reported |
| | | 3.4 Tactile requirements of the accessories in relation to the design are researched |
| | | 3.5 Properties of the materials used in the production of accessories are analysed and evaluated |
| | | 3.6 Manufacturing processes and available expertise for the desired accessories are assessed |
| | | 3.7 Costs and availability of accessories are assessed and |

- compared
- 3.8 Environmental impact of accessory materials used is assessed
 - 3.9 Longevity and restorability qualities of accessories are researched
 - 3.10 Space is measured for accessory requirements, calculating quantities and requirements
 - 3.11 Sketches and drawings are completed and prepared for positioning of products, materials and accessories
- 4 Make recommendations to client
- 4.1 Quantities and qualities of selected furniture and accessories are presented and promoted to the client
 - 4.2 Performance and characteristics of selected furniture and accessories are presented and promoted to the client
 - 4.3 Costs associated with purchasing and obtaining the furniture and accessories are provided in quote form to the client
 - 4.4 Presentation of research information and samples is made, highlighting the findings and rationale for the furniture and accessories chosen
 - 4.5 Feedback and follow up is instigated and maintained with the client

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
- Project brief includes:**
- client needs and objectives
 - client aims and objectives and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timeline
 - consultation requirements
 - colour requirements
- Clients include:**
- suppliers
 - manufacturers
 - private clients
 - colleagues
 - retailers
 - the public
- Parameters may include:**
- scope of brief
 - approval to make changes
 - effect or feel trying to be achieved
 - functionality (short and long term)
 - budget restrictions
 - established timelines
- Resources include:**
- computers
 - computer software
 - design software
 - computer-aided design (CAD) software
 - colour boards
 - storyboards
 - swatches
 - product based colour systems, such as Munsell or similar
 - colour matching system, such as Pantone Matching System

	(PMS)
	<ul style="list-style-type: none">• journals (directions magazines)• artistic equipment and products• model making equipment
Aesthetics include:	<ul style="list-style-type: none">• the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Styles include:	<ul style="list-style-type: none">• furniture designers and key figures, such as Frank Lloyd Wright, Charles Eames and Antonio Gaudi• schools and movements, such as Bauhaus in Germany, Federal style in the United States, and Art Nouveau in Europe• periods and styles, such as the neo-classical Adams style, the simple lines of Art Deco, and the asymmetrical style of Rococo• to decorative details, such as rosettes, foots, hinges and mouldings

Assessment Requirements for MSFID4004 Research and recommend furniture and accessories

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Research and recommend furniture and accessories to assist with informing the design and decoration process and arrive at a solution which meets client requirements, and effectively apply design elements and principles to the research and recommendation
- Research and recommend furniture and accessories in accordance with the project brief
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for researching and recommending furniture and accessories
- Organisational and site standards, requirements, policies and procedures for researching and recommending furniture and accessories
- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs

- Furniture types and styles
- Accessory types and styles
- Design themes and design development
- Colours, furnishings and decorations
- Sketching and drawing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards (NSSC) Council or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to researching and recommending furniture and accessories.

MSFID4005 Research and recommend soft furnishings for interiors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching and recommending soft furnishings for various decoration and design solutions to meet client and project brief requirements in order to achieve integrated decoration and design solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Assess soft furnishing requirements for the project | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending soft furnishings are verified and complied with |
| | 1.2 Project brief is reviewed to determine desired effects for interior space |
| | 1.3 Parameters for the project are assessed and confirmed |
| | 1.4 Resources are selected appropriate to work requirements and checked for operational effectiveness |
| | 1.5 Communication with others is established and maintained |

- | | | |
|---|---|--|
| 2 | Research materials for soft furnishings | 2.1 Aesthetic, visual characteristics and colour requirements of the soft furnishings are assessed |
| | | 2.2 Intended applications for the soft furnishings are analysed and reviewed |
| | | 2.3 New soft furnishing and material technologies are researched and assessed against the project brief |
| | | 2.4 Tactile requirements of the soft furnishings in relation to the design are researched |
| | | 2.5 Properties of the materials used in the production of soft furnishings are analysed and evaluated |
| | | 2.6 Manufacturing processes and available expertise for the materials are assessed |
| | | 2.7 Costs and availability of materials are assessed and compared |
| | | 2.8 Environmental impact and benefits of materials are assessed |
| | | 2.9 Durability, restorability and maintenance care quality of materials are researched and requirements for residential and industrial applications examined |
| 3 | Research and recommend decorative treatments for windows and openings | 3.1 Range of window treatments, their application and fixing technologies are researched |
| | | 3.2 New technologies in window treatments are researched and relevance for decorative project identified |
| | | 3.3 The features, limitations and environmental impact of window treatments are identified |
| | | 3.4 The types of openings and their requirements are identified and a range of possible creative solutions determined |
| | | 3.5 Window or opening is measured and details recorded accurately for a range of window treatments |
| | | 3.6 Fabric requirements are calculated and manufacturing requirements determined for a range of window treatments taking into consideration pattern repeats |
| | | 3.7 Window treatment is selected and specified to meet client requirements and minimise environmental impact |

		3.8	Fixing technology is specified appropriate to selected window treatment
		3.9	Cost estimates are calculated and assessed against project budget
4	Research and recommend soft floor coverings	4.1	Range of floor coverings, their application and installation requirements are researched
		4.2	The features, limitations and environmental impact of floor coverings are identified
		4.3	Floor area is measured and details recorded accurately for flooring solution
		4.4	Flooring solution is selected and details specified to meet client requirements
		4.5	Cost estimates are calculated and assessed against project budget
5	Document and present decorative recommendations	5.1	Soft furnishings are selected to achieve parameters of design brief
		5.2	Specifications are documented for all soft furnishing recommendations
		5.3	Schedule is presented to support decorative solution
		5.4	Sample board is created to enhance and support the decorative intention
		5.5	Feedback and follow up is instigated and maintained with the client

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential

operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
- Project brief includes:**
- client needs and objectives
 - client aims and objectives, and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timelines
 - consultation requirements
 - colour requirements
- Clients include:**
- suppliers
 - manufacturers
 - private clients
 - colleagues
 - retailers
 - the public
- Parameters include:**

- Resources include:**
- computers
 - computer software
 - design software
 - computer-aided design (CAD) software
 - colour boards

- storyboards
 - swatches
 - product based colour systems, such as Munsell or similar
 - colour matching system, such as Pantone Matching System (PMS)
 - journals (directions magazines)
 - artistic equipment and products
 - model making equipment
- Aesthetics include:**
- the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
- Colours include:**
- colour principles
 - psychology
 - fundamentals
 - coordination
 - perception
 - contrast
 - harmony
 - effects on space
 - formulas
 - colour wheels
- Soft furnishings include:**
- window treatments
 - blinds
 - awnings
 - trimmings
 - bedding treatments
 - lampshades
 - carpet
 - rugs
 - cushions
 - upholstery
 - accessories
- Tactile includes:**
- that perceived by the sense of touch and producing the effect of three-dimensional depth
- Properties include:**
- durability
 - level of fire retardancy
 - fibre make up
 - composition
 - textile use
 - quality
 - environmental sustainability
 - level of insulation
 - level of light control

	<ul style="list-style-type: none">• useable width of fabric

Assessment Requirements for MSFID4005 Research and recommend soft furnishings for interiors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Research soft furnishings to assist with informing the decoration process and arrive at a solution which meets client requirements and effectively apply design elements and principles to the recommendation of soft furnishings for a minimum of two (2) integrated decorative solutions
- Correctly calculate quantities and costing required to achieve decorative solutions
- Visually present decorative ideas
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Organisational and site standards, requirements, policies and procedures for researching and recommending soft furnishings
- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs

- Soft material types and textiles
- Design themes and design development
- Colours, furnishings and decoration options
- Sketching and drawing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem-solving techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to researching and recommending soft furnishings.

MSFID4006 Research and recommend hard materials and finishes for interiors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching and recommending hard materials and finishes for various interior decoration and design solutions and applies to a design and decoration retail, consulting or studio environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|--|
| 1 | Identify hard material and finishing requirements for project | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending hard materials and finishes are verified and complied with |
| | | 1.2 | Project brief is reviewed to determine desired effects for interior space |
| | | 1.3 | Parameters for the project are assessed and confirmed with client |
| | | 1.4 | Resources are selected appropriate to work requirements and checked for operational effectiveness |

- | | | | |
|---|--|------|--|
| | | 1.5 | Communication with appropriate personnel is established and maintained |
| 2 | Identify types and features of hard materials and finishes | 2.1 | Types of hard materials and finishes and their suitability to wall, floor, ceiling and stair applications are identified |
| | | 2.2 | Types of hard materials and finishes and their suitability to window and door applications are identified |
| | | 2.3 | Other hard material and finish products and their features and applications are identified |
| | | 2.4 | Hard material and finish requirements for application in a residential environment are analysed |
| | | 2.5 | Hard material and finish requirements for application in a commercial or industrial environment are analysed |
| | | 2.6 | Environmental and sustainability considerations for hard materials and finishes are examined |
| 3 | Research hard materials and finishes | 3.1 | Aesthetic requirements of the space are assessed |
| | | 3.2 | New hard material and finish technologies are researched and reported |
| | | 3.3 | Tactile requirements of the hard materials and finishes in relation to the design are researched |
| | | 3.4 | Application methods and available expertise for the desired effect are assessed |
| | | 3.5 | Manufacturing processes and available expertise for the desired material and finish are assessed |
| | | 3.6 | Costs of hard materials and finishes are assessed and compared |
| | | 3.7 | Environmental impact of hard materials and finishes are assessed |
| | | 3.8 | Longevity and restorability of hard materials and finishes are researched |
| | | 3.9 | Hazards associated with the use and application of hard materials and finishes are researched |
| | | 3.10 | Quality of hard materials and finishes are assessed |
| 4 | Recommend hard | 4.1 | Elements and principles of design, including liveability and |

materials and finishes

accessibility, are used to examine the appropriateness of hard materials and finishes for client brief requirements

- 4.2 Hard materials and finishes are selected to meet client brief requirements
- 4.3 Presentation of research information is made highlighting the findings and rationale for the hard materials and finishes chosen
- 4.4 Presentation includes a range of presentation strategies, including one or more materials boards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
- work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills

Hard materials and finishes include:

- paints
- waxes
- lacquers
- stains

- pigments
- oils
- traditional finishes
- plastic coatings
- UV-protected coatings
- liquid coatings
- synthetic coatings
- synthetics
- paper
- glass
- vinyls
- laminates
- plastics
- stainless steel
- metals
- veneers
- ceramics
- stone-based products
- solid timber (native and imported)
- manufactured timber products
- reconstituted products
- composite materials
- fibreglass
- foam
- cardboard
- paper products
- any other manipulable substance

Project brief includes:

- client needs and objectives
- client aims and objectives, and criteria for evaluation
- milestones
- organisational or personal profiles and aims
- image requirements and function
- target market
- budget
- timeline
- consultation requirements
- colour requirements

Parameters include:

- scope of brief
- approval to make changes
- effect or feel trying to be achieved
- functionality (short and long term)
- budget restrictions

Clients include:	<ul style="list-style-type: none">• established timelines• suppliers• manufacturers• private clients• colleagues• retailers• the public
Resources include:	<ul style="list-style-type: none">• computers• computer software• design software• computer-aided design (CAD) software• colour boards• storyboards• swatches• product based colour systems, such as Munsell or similar• colour matching system, such as Pantone Matching System (PMS)• journals (directions magazines)• artistic equipment and products• model making equipment
Appropriate personnel include:	<ul style="list-style-type: none">• trainers• supervisors• suppliers• clients• colleagues• managers
Aesthetics include:	<ul style="list-style-type: none">• the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Tactile includes:	<ul style="list-style-type: none">• that perceived by the sense of touch and producing the effect of three-dimensional depth
Application methods include:	<ul style="list-style-type: none">• spraying• painting• applicators• gluing• vacuum wrapping• rubbing• bonding
Manufacturing processes include:	<ul style="list-style-type: none">• the methods by which the product will be produced, these steps requires working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques

Environmental impacts include:	<ul style="list-style-type: none">• how the sourcing and use of materials effects the environment and how its continued use will affect the area the material was sourced from• energy consumption in processing the material• greenhouse gases created• waste levels and resource utilisation• what impact will be felt by reducing or stopping use of the material
Longevity and restorability includes:	<ul style="list-style-type: none">• an analysis of how long the material is expected to maintain its structure and colour, while maintaining quality of aesthetic value and how readily the material can be upgraded, repaired or replaced
Hazards include:	<ul style="list-style-type: none">• toxins and gases released by some finishes, glues and materials which may be harmful to people if not used correctly
Elements of design include:	<ul style="list-style-type: none">• line• shape• form (geometric or organic)• texture• colour• function
Principles of design include:	<ul style="list-style-type: none">• balance• proportion (symmetry and asymmetry)• harmony• contrast• pattern• movement• rhythm• unity• style• focus• scale• dominant• sub-dominant• subordinate relationship• emphasis• proximity• alignment• space• anthropometry• ergonomics• arrangement

- workload materials handling capacity
 - skills available
 - equipment capabilities
 - aesthetic relations
 - tension
 - development methods
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- work instructions, including plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID4006A Research and recommend hard materials and finishes for interiors.

Links

Companion Volume implementation guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=0601ab95-583a-4e93-b2d4-cfb27b03ed73>

Assessment Requirements for MSFID4006 Research and recommend hard materials and finishes for interiors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Research and select hard materials and finishes to assist with informing the design process and arrive at a solution which meets client requirements, and effectively apply design elements and principles
- Research and select hard materials and finishes in accordance with the concepts and design brief
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to researching and recommending hard materials and finishes
- Organisational and site standards, requirements, policies and procedures for researching and recommending hard materials
- Elements and principles of design including liveability and accessibility
- Aesthetic values
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects

- Relevant computer programs
- Research techniques
- Effects of finishes and finishing techniques
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to researching and recommending hard materials and finishes.

MSFID4007 Identify materials, construction techniques and methods used in building interiors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching and documenting the materials, construction techniques and methods associated with the construction of residential buildings for work in interior decoration and design businesses of all sizes.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Establish structural components and materials used in residential buildings	1.1	Residential building process is delineated into separate construction stages and expressed chronologically
		1.2	Trades, construction techniques and materials associated with each stage are summarised
		1.3	Individual component members are identified and sorted into structural or non-structural categories
		1.4	Demolition methods for the removal of existing work can be identified

2	Interpret plans and specifications	2.1	Specific components and materials on given building plans are located
		2.2	Construction methods are explained from a given plan
		2.3	Specific component details in a given building specification are located and identified
		2.4	Bill of quantities and other relevant specification documents are interpreted
		2.5	Prime cost items are located and extracted from a given set of documents
3	Specify the materials and methods involved in the refurbishment of wet areas	3.1	Properties of materials used in wet area construction are evaluated
		3.2	Installations of wet area cabinetry are specified
4	Develop and maintain relevant and current reference material	4.1	Relevant Building Services Authority building licensing requirements applicable to interior decoration projects are complied with
		4.2	Evidence of contact with industry suppliers to obtain information relevant to building components and equipment used in residential interiors is presented
		4.3	An index to the portfolio to reflect industry topics and to allow easy access to the information is provided
		4.4	Future additions of reference material are allowed for and details of the information, such as date, source, author and reference to any related information, are included
		4.5	A strategy to ensure that the portfolio remains current and accurate is prepared

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements• work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
Sets of documents include:	<ul style="list-style-type: none">• drawings• plans• schedules• specifications• bill of quantities
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work instructions, including plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Assessment Requirements for MSFID4007 Identify materials, construction techniques and methods used in building interiors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Access and interpret information about building materials and processes and identify key elements and participants in the building process
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Present findings in a creative and convincing format
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for identifying building materials and methods
- Organisational and site standards, requirements, policies and procedures for identifying building materials and methods
- Relevant Australian Standards and the Building Code of Australia (BCA)
- Awareness of different forms of construction
- Local environmental plans and relevant building authorities
- Basic building and architectural terminology
- Common structural and non-structural components of a residential building
- Geographical implications of a building site/location
- Materials and methods involved in the refurbishment of a wet area

- Materials and methods involved in the construction and installation of contemporary built-in cabinetry
- Equipment involved in the installation of home theatre systems
- Climate control devices, including fans, heaters and air conditioners
- Relevant research techniques
- Residential building demolition methods
- Construction trades, techniques and materials associated with each stage
- Residential building process

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

MSFID4008 Assess interior light and recommend light fittings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assessing natural and artificial light sources of an interior space and making recommendations for light fittings as part of an integrated decorative solution.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.								
1 Interpret lighting requirements from project brief	<table><tr><td>1.1</td><td>Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending light fittings are verified and complied with</td></tr><tr><td>1.2</td><td>Project brief is reviewed and clarified with client to determine lighting requirements</td></tr><tr><td>1.3</td><td>Parameters for the project are assessed and confirmed</td></tr><tr><td>1.4</td><td>Resources are selected appropriate to work requirements and checked for operational effectiveness</td></tr></table>	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending light fittings are verified and complied with	1.2	Project brief is reviewed and clarified with client to determine lighting requirements	1.3	Parameters for the project are assessed and confirmed	1.4	Resources are selected appropriate to work requirements and checked for operational effectiveness
1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending light fittings are verified and complied with								
1.2	Project brief is reviewed and clarified with client to determine lighting requirements								
1.3	Parameters for the project are assessed and confirmed								
1.4	Resources are selected appropriate to work requirements and checked for operational effectiveness								

- | | | |
|---|---------------------------------|--|
| | 1.5 | Communication with others is established and maintained |
| | 1.6 | Available budget for lighting is verified |
| 2 | Assess natural light sources | |
| | 2.1 | Site analysis is conducted to assess the natural light and ultraviolet (UV) penetration |
| | 2.2 | Project brief and building plans are acquired to assess aspect and orientation |
| | 2.3 | Window treatments and placement are examined to analyse their efficiency in controlling light |
| | 2.4 | Selection of colours for walls, ceilings, furnishings and wall hangings are reviewed in their effect on raising or lowering the effect of light into the space |
| | 2.5 | Characteristics of natural light are researched and reported in accordance with the project brief goals |
| | 2.6 | Methods of light control and light control devices are assessed for their affect on natural light |
| 3 | Assess artificial light sources | |
| | 3.1 | Artificial light sources and their properties are assessed for adequacy in achieving desired lighting effects |
| | 3.2 | Environmental impact of artificial lighting devices are researched and assessed and current technologies identified |
| | 3.3 | Location of artificial lights are identified and required changes to location to meet desired effects are determined |
| | 3.4 | Affect of artificial lighting on the colour spectrum is analysed |
| | 3.5 | Technical terms associated with artificial lighting are used to communicate lighting requirements |
| | 3.6 | Special effects that can be achieved using artificial lighting are identified |
| | 3.7 | Industry standards and requirements for artificial lighting are researched and identified |
| 4 | Select light fittings | |
| | 4.1 | Research is conducted to determine cost and energy efficient light fittings to meet the requirements of an integrated decoration solution |
| | 4.2 | Required locations of light fittings are identified |

- | | | |
|---|---|--|
| | 4.3 | Light fittings are selected and specifications documented |
| | 4.4 | Electricity board is assessed to determine potential complications with selected light fittings |
| | 4.5 | Electrician is consulted to confirm costing and installation requirements to implement lighting schedule |
| 5 | Draw and present lighting layouts for an interior space | 5.1 |
| | | Lighting layout is documented using industry symbols and conventions |
| | | 5.2 |
| | | Selection of light fittings are related to layout, including furniture, ceiling forms and natural light |
| | | 5.3 |
| | | Formats for schedules of light fittings are researched |
| | | 5.4 |
| | | Lighting schedule is completed |
| | | 5.5 |
| | | Costing are determined and documented |
| | | 5.6 |
| | | Lighting layout is presented to client |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and

	Accessible Housing Design guidelines, and organisation insurance requirements
	<ul style="list-style-type: none">• work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
Light fittings include:	<ul style="list-style-type: none">• lamps• ceiling lights• wall lights• spot lights• flood lights

Resources include:	<ul style="list-style-type: none">• computers• computer software• design software• computer-aided design (CAD) software• colour boards• storyboards• swatches• product based colour systems, such as Munsell or similar• colour matching system, such as Pantone Matching System (PMS)

	<ul style="list-style-type: none">• journals (directions magazines)• artistic equipment and products• model making equipment
Site analysis includes:	<ul style="list-style-type: none">• a visit to the building (home, office or other) to achieve a feel for the intention of the project brief and how natural light may effect it, to assess the level of radiation from the sun into the space and the angles and obstructions caused by other buildings, vegetation or man-made objects. It includes recording information and taking photos
Natural light includes:	<ul style="list-style-type: none">• light emitted directly by the sun or reflected from it
UV light includes:	<ul style="list-style-type: none">• light that is so blue humans cannot see it. A band of the electromagnetic spectrum between the visible and the X-ray. Photons of UV light are more energetic than photons of visible light
Aspect and orientation include:	<ul style="list-style-type: none">• the direction in which a building or space is facing (e.g. north, east, south, west or any variation of this)
Window treatments include:	<ul style="list-style-type: none">• blinds• curtains• awnings• shutters• shades• window tinting
Colours include:	<ul style="list-style-type: none">• colour principles• psychology• fundamentals• coordination• perception• language• tonal• translucent• contrast• harmony• effects on space• formulas• colour wheels
Wall hangings include:	<ul style="list-style-type: none">• mirrors• paintings• etchings• framed memorabilia• certificates
Spaces include:	<ul style="list-style-type: none">• commercial or domestic spaces

- rooms, such as:
 - bedrooms
 - bathrooms
 - kitchens
 - laundries
 - living spaces
 - multi-purpose rooms
 - storage rooms
 - studies
 - offices
 - garages
 - rumpus rooms
 - media rooms
 - toilets
 - pantries
 - entertainment areas
 - halls
 - workstations
- Characteristics include:**
- energy efficiency
 - glare
 - reflection
 - intensity
 - dynamic (not constant value)
- Methods of light control include:**
- window treatments
 - sails
 - building extensions
 - patios
 - motorised or automated devices
- Light control devices include:**
- motorised or automated mechanisms linked to window treatments
- Artificial lighting devices include:**
- dimmers
 - wall lights
 - light-emitting diode (LED)
 - energy efficient globes
 - incandescent
 - halogen
 - fluorescent
 - discharge lamps
- Special effects include:**
- dimming
 - spotlighting

- flooding
 - brightness
 - creating space
 - creating focus
- Electricity board assessment includes:**
- identification of approximate age of board
 - number of circuits
 - safety switches
 - signs of rewiring
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- work instructions, including plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID4008A Assess interior light and recommend light fittings.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFID4008 Assess interior light and recommend light fittings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assess light for its environmental impact and ability to meet decorative requirements, and provide the client with cost-effective and efficient lighting solutions
- Apply design elements and principles in recommending light fittings and provide a documented lighting layout and schedule
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for assessing interior light and recommending light fittings
- Organisational and site standards, requirements, policies and procedures
- Australian lighting standards and drawing conventions
- Research sources for lighting
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Natural light characteristics and controls
- Design themes and design development
- Sketching and drawing techniques

- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to assessing interior light and recommending light fittings.

MSFID4009 Research architectural styles and movements

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching architectural styles and movements and identifying and analysing how they influence interior decoration and design projects. It includes documenting findings and information for use in decoration and design projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Plan research | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching architectural styles are verified and complied with |
| | 1.2 Relevant research sources of information on architectural styles are located |
| | 1.3 Formal and informal research techniques are selected to access the information |
| | 1.4 Scope of research is determined |
| 2 Conduct research and document findings | 2.1 Research is conducted using a range of research techniques |

- 2.2 Geographical research is conducted to detect influences
 - 2.3 Historical, cultural, economic and environmental influences on architectural styles and movements are examined
 - 2.4 Features of architecture are identified
 - 2.5 Significant trends in decorative art and architecture, and the use of materials and techniques are analysed
 - 2.6 The influence and impact of architecture on interior decoration and design, and the relationship of the two disciplines are analysed
 - 2.7 Research information is applied to current architectural design trends, philosophy and surrounding buildings
 - 2.8 Information is documented to develop reference materials to inform decoration and design projects
 - 2.9 Research materials and results of the research are organised and compiled into easy to access facilities for further reference
- 3 Maintain currency with architectural styles and movements
 - 3.1 Research sources and compiled information are regularly checked for usefulness in informing design and decoration projects
 - 3.2 Current cultural, economic and environmental influences on architecture are analysed
 - 3.3 Opportunities to update and expand research of styles and movements are scheduled
 - 3.4 Findings from research are regularly incorporated into design outcomes

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills

- Research sources include:**
- scientific texts
 - historical texts and journals
 - oral histories
 - journals
 - periodicals
 - images
 - objects
 - films
 - videos
 - microfiche
 - internet
 - technical information
 - stories
 - libraries
 - museums
 - universities
 - collections of catalogues

- Information includes:**
- philosophy
 - Australian histories
 - cultural issues
 - spiritual issues
 - religious issues
 - histories of Australian and imported architectural trends
 - linguistics

**Architectural styles
include:**

- aesthetics
- politics
- gender and identity issues
- land and place
- signs and symbols
- criticism
- new technologies
- light
- Colonial
- Georgian
- Colonial Regency
- Greek Revival
- Gothic Revival
- Early Victorian
- Mid Victorian
- Late Victorian

Assessment Requirements for MSFID4009 Research architectural styles and movements

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Use appropriate techniques and research a range of architectural styles and movements to assist with informing current design practices, effectively analysing design elements and principles in architecture
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Sketch and record information visually
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for researching architectural styles and movements
- Organisational and site standards, requirements, policies and procedures for researching architectural styles
- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of research techniques
- Characteristics of materials, products and defects
- Computer programs
- Design themes and design development

- Procedures for the recording and documentation of information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials and equipment relevant to researching architectural styles used in Australia.

MSFID4010 Research interior decoration and design influences

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching significant influences on contemporary and historical interior decoration and design styles to access a range of information sources on historical, 20th Century and contemporary interior decoration and design styles. The information is used to identify how these influences inform current and future decoration and design projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Research and analyse significant influences on interior decoration and design | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching interior decoration and design influences are verified and complied with |
| | 1.2 Relevant research sources of information on interior decoration and design influences are located |
| | 1.3 Significant historical influences on interior decoration and design are investigated |
| | 1.4 Effects of influences on interior decoration and design preferences are identified |

		1.5	Current interior decoration trends are researched to identify influences on their adoption and dissemination
2	Research and analyse historical development of interior decoration	2.1	Research is conducted using a range of research techniques
		2.2	Significant decorators and designers in interior decoration and design history are identified and their styles and practices analysed
		2.3	Key developments and trends affecting interior decoration and design are identified and their impact on styles and practices analysed
		2.4	Changes in decoration and design trends and philosophy are examined and influences on styles and practices analysed
		2.5	Historical influences on the development of contemporary styles and practices, including architectural, cultural, economic and environmental, are examined
		2.6	Information is documented to develop reference materials to inform interior decoration and design projects
		2.7	Research materials and results of the research are organised and compiled into easy to access facilities for further reference
3	Maintain currency with decoration styles and movements	3.1	Research sources and compiled information are regularly checked for usefulness in informing decoration and design projects
		3.2	Impact of environmental considerations on decoration and design is analysed
		3.3	Information sources on design predictions and trends are identified and accessed to maintain currency of industry knowledge

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills

- Research sources include:**
- scientific texts
 - historical texts and journals
 - oral histories
 - journals
 - periodicals
 - images
 - objects
 - films
 - videos
 - microfiche
 - internet
 - technical information
 - stories
 - libraries
 - museums
 - universities
 - collections of catalogues

- Information includes:**
- philosophy
 - Australian histories
 - cultural issues
 - spiritual issues
 - religious issues
 - histories of Australian and imported architectural trends
 - linguistics

	<ul style="list-style-type: none">• aesthetics• politics• gender and identity issues• land and place• signs and symbols• criticism• new technologies• light
Research techniques include:	<ul style="list-style-type: none">• internet searches• interview• discussions• books• journal reviews• films• documentary reviews• on-site visits
Significant decorators and designers include:	<ul style="list-style-type: none">• Florence Broadhurst• Marc Newson• Philippe Starck• Ron Arad• Ettore Sottsass
Documented includes:	<ul style="list-style-type: none">• freehand drawings• sketches• ideation drawings• working drawings• computer-generated documentation• pictures• illustrations• photos• multimedia presentations• materials or theme boards• specifications• measurements
Facilities include:	<ul style="list-style-type: none">• files• computer files• indices• databases• charts• diagrams
Environmental considerations include:	<ul style="list-style-type: none">• sustainability• use of environmentally friendly materials

Information and procedures include:

- energy efficiency
- water efficiency
- work instructions, including plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID4010A Research interior decoration and design influences.

MSFID4011 Determine work health and safety (WHS) implications of interior effects

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying and assessing the WHS implications of effects used in interior decoration and design, including furniture, hard and soft materials and accessories, to determine potential hazards for a range of customer groups.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify principles of WHS	1.1 Duty of care and responsibilities of individuals and organisations are defined
	1.2 Concepts of hierarchy of control are identified and related to the workplace
	1.3 Codes of practice relating to specific workplace risks are identified
	1.4 Importance of a systematic approach to WHS is understood
	1.5 Applicable WHS, legislative and organisational requirements relevant to interior decoration and design are

		identified
2	Assess WHS implications for interior decoration and design	<p>2.1 Hazards associated with materials used in interiors are identified</p> <p>2.2 Hazards associated with effects are identified</p> <p>2.3 Safety measures implemented to control hazards are identified and implications for interior decoration and design evaluated</p> <p>2.4 Information resources on safety aspects of materials, effects and technology used in interior decoration and design are identified and accessed</p> <p>2.5 Furniture and joinery ergonomics are assessed</p>
3	Assess safety implications for customers	<p>3.1 Range of customers for interior decoration and design are identified and potential hazards for customers determined</p> <p>3.2 Safety measures implemented to control hazards to customers are identified and implications for decoration and design are evaluated</p>
4	Assess risk	<p>4.1 Likelihood of hazards causing harm is considered and determined</p> <p>4.2 Consequence if the event should occur is evaluated and determined</p> <p>4.3 Risk level (likelihood and consequence combined) is considered and determined</p>
5	Apply risk control measures to decoration and design solutions	<p>5.1 Project brief is analysed and potential safety issues identified</p> <p>5.2 Solutions are evaluated for WHS implications</p> <p>5.3 Range of options which may eliminate or minimise risks are identified</p> <p>5.4 Most appropriate treatment for addressing risk is selected and applied to solution</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements• work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills |
| Duty of care: | <ul style="list-style-type: none">• requires everything ‘reasonably practicable’ to be done to protect the health and safety of others at the workplace. This duty is placed on:<ul style="list-style-type: none">• all employers• their employees• any others who have an influence on the hazards in a workplace |
| Responsibilities of individuals and organisations include: | <ul style="list-style-type: none">• complying, as far possible, with all activities carried out in accordance with the standard and reporting anything that might affect compliance with the standard |
| Hierarchy of control include: | <ul style="list-style-type: none">• the range of feasible options for managing the risk to health and safety. The hierarchy has the following controls:<ul style="list-style-type: none">• elimination of the hazard• its substitution with a less harmful version• its redesign• engineering controls |

	<ul style="list-style-type: none">• isolation of the hazard from people at the workplace• safe work practices• redesigning work systems• the use of personal protective equipment by people at the workplace
Systematic approach includes:	<ul style="list-style-type: none">• hazard identification• risk assessment• risk control• review
WHS requirements include:	<ul style="list-style-type: none">• Commonwealth, state or territory legislation and regulations• organisational safety policies and procedures• use of personal protective equipment and clothing• firefighting equipment• first aid equipment• hazard and risk control and elimination• control of hazardous materials and substances• manual handling including lifting and carrying
Materials include:	<ul style="list-style-type: none">• adhesives• nails, and staples• paint• treatments and finishes• fixtures• fabrics• animal skin• wood• metal• plastic• foam• oils
Hazards associated with materials include:	<ul style="list-style-type: none">• chemical properties:<ul style="list-style-type: none">• toxicity• fumes• combustibility• physical properties:<ul style="list-style-type: none">• strength• weakness• splintering• breakage• weight• components:<ul style="list-style-type: none">• adhesives

	<ul style="list-style-type: none">• nails and staples• manual handling requirements
Effects include:	<ul style="list-style-type: none">• furniture• fixtures• finishes• accessories• soft furnishings• lighting• special effects
Hazards associated with effects include:	<ul style="list-style-type: none">• location and positioning considerations, such as:<ul style="list-style-type: none">• accessibility and obstruction• fixing and securing• placement of power sources and leads• ergonomics
Range of customers include:	<ul style="list-style-type: none">• aged and the elderly• people with disabilities• children• adults
Potential hazards to customers include:	<ul style="list-style-type: none">• allergies to materials• injury from materials or components• injury due to design faults• lack of stability• breakages• difficult to handle or install effects• electric shock
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work instructions, including plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID4011A Determine occupational health safety (OHS) implications of interior effects.

Assessment Requirements for MSFID4011 Determine work health and safety (WHS) implications of interior effects

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Locate and apply safety information and assess safety aspects of interior decoration and design solutions for a range of customers
- Address risks and hazards in interior decoration and design and complete a minimum of three (3) risk assessments of interior decoration and design solutions, including the determination of required treatments
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to risk management in an interior decoration and design environment
- Organisational and site standards, requirements, policies and procedures for interior decoration and design
- Types of tools and equipment, their operating characteristics and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Common interior decoration and design related hazards and the range of commonly applied treatments
- Environmental protection requirements

- Established communication channels and protocols
- Relevant problem identification and resolution
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to determining WHS implications of interior effects.

MSFID5001 Design residential interiors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying researched information to formulate creative and complex design solutions to a range of residential interior design situations satisfying the physiological, psychological, social, cultural and environmental requirements of the brief. Designs include those which require changes to established structural aspects of the building interior or to building services.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-----------------------------|--|
| 1 Analyse the project brief | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for residential spaces are verified and complied with |
| | 1.2 Project brief is reviewed, confirmed and clarified with client |
| | 1.3 Key requirements for the project are assessed and confirmed and constraints determined |

- 1.4 Resources are selected appropriate to work requirements and checked for operational effectiveness
 - 1.5 Communication with others is established and maintained
 - 1.6 Relevant research is conducted to gain all information which may be used to inform the design process
 - 1.7 All required information is accessed and interpreted to inform the design process
- 2 Conduct project research
 - 2.1 Site analysis is conducted to assess the requirements of the space requiring work
 - 2.2 Intended function of the space is ascertained from the client
 - 2.3 Contextual information relating to the brief is researched and evaluated
 - 2.4 Functional and planning issues are determined specific to the site and client requirements
 - 2.5 Research material is organised and presented in the form of a design proposal
 - 2.6 Project is planned to make effective use of time and available resources
- 3 Develop design concepts
 - 3.1 Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the design brief
 - 3.2 Concepts are presented through appropriate presentation methods
 - 3.3 Viability of concepts are assessed in conjunction with others
 - 3.4 Environmental implications of the project are assessed and design concepts reviewed to ensure maximum energy efficiency achieved in solution
 - 3.5 Access issues relating the project are identified and addressed in design solution
- 4 Design the space
 - 4.1 Ideas are translated into 3-D space satisfying functional criteria
 - 4.2 Evidence of 3-D notions are explored through modelling
 - 4.3 The arrangement and allocation of space is explored to

- express the concept
- 4.4 Idea with the greatest potential for success is presented to promote the design's acceptance using both 2-D and 3-D representations
 - 4.5 Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined
 - 4.6 A colour and materials palette is selected to enhance spatial ideas
 - 4.7 Design is modified in response to critical feedback without losing integrity of the design intention
- 5 Revise and refine solution
- 5.1 Ergonomic and anthropometric principles are assessed in respect to the space and the intended products
 - 5.2 Spatial planning is further revised and resolved in response to client feedback
 - 5.3 Materials, colours, furniture, finishes, fixtures and fittings are selected appropriate to the concept and brief parameters
 - 5.4 Feedback is received through consultation with the client and incorporated into design solution
- 6 Prepare a fully rendered client presentation
- 6.1 Resource requirements are identified for presentation
 - 6.2 Final design solution is communicated effectively and creatively using a range of techniques and media
 - 6.3 Documentation drawings and material selections are prepared that are consistent with, and that best communicate, the design intent
 - 6.4 Work is completed to plan and within brief constraints
 - 6.5 Client feedback and response are analysed to determine success in achieving client satisfaction
 - 6.6 Own performance in the design process is examined to identify strengths and weaknesses
 - 6.7 Areas for improvement are identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
- Project brief includes:**
- client needs and objectives
 - client aims and objectives and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timeline
 - consultation requirements
 - colour requirements
- Clients include:**
- suppliers
 - manufacturers
 - private clients
 - colleagues
 - retailers
 - the public

Resources include:	<ul style="list-style-type: none">• computers• computer software• design software• computer-aided design (CAD) software• colour boards• storyboards• swatches• product based colour systems, such as Munsell or similar• colour matching system, such as Pantone Matching System (PMS)• journals (directions magazines)• artistic equipment and products• model making equipment
Relevant research includes:	<ul style="list-style-type: none">• similar products and typologies• materials• social and cultural influences• site analysis• site conditions• functional requirements
Information includes:	<ul style="list-style-type: none">• philosophy• Australian histories• cultural issues• spiritual issues• religious issues• histories of Australian and imported architectural trends• linguistics• aesthetics• politics• gender and identity issues• land and place• signs and symbols• criticism• new technologies
Site analysis includes:	<ul style="list-style-type: none">• a visit to the site to achieve a feel for the intention of the project brief and how services may be affected by it, identifying constraints of site and recording information and taking photos
Creative methodologies include:	<ul style="list-style-type: none">• brainstorming• word association• imaging• modelling• lateral thinking

Presentation methods include:	<ul style="list-style-type: none">• application of a range of media• mood board• concept board• 3-D models• sketches• photos
Environmental implications include:	<ul style="list-style-type: none">• the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from• energy consumption in achieving the material• greenhouse gases created• waste levels, resource utilisation and transport effects• what impact will be felt by reducing or stopping material from the source
Materials include:	<ul style="list-style-type: none">• solid timber (native and imported)• manufactured timber products• plastic• metal• alloys• stone• glass• textiles• fibreglass• foam• cardboard• paper products• any other manipulable substance
Colours include:	<ul style="list-style-type: none">• colour principles• psychology• fundamentals• coordination• perception• language• tonal• translucent• contrast• harmony• effects on space• formulas• colour wheels
Finishes include:	<ul style="list-style-type: none">• paints• waxes

Fixtures, fittings and accessories include:

- lacquers
- stains
- pigments
- oils
- plastic coatings
- veneers
- ceramics
- stone
- glass
- textiles
- other textures
- furniture
- soft furnishings
- floor treatments
- curtain treatments
- built in cabinetry or fittings
- light fittings
- lamps
- picture framing
- trinkets
- ceramics
- trays
- vases
- carvings
- baskets
- pots
- plants
- candles
- clocks
- silverware
- mirrors
- frames
- screens
- floral displays
- haberdashery
- glassware
- fireplace items
- gifts
- hand crafts
- water features
- photographs
- pottery

- Drawings include:**
- personal items
 - statues
 - book ends
 - bowls
 - bottles
 - hand drawn images or ideation drawings completed freehand
 - drafted technical drawings or drawings produced on computer using CAD software packages (these usually contain project specifications)
 - elevations
 - sections
 - plans
 - perspectives
- Information and procedures include:**
- work instructions, including plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID5001A Design residential interiors.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFID5001 Design residential interiors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Design for at least two (2) residential interiors to provide the client with creative solutions that satisfy the design brief effectively applying design elements and principles
- Draw using manual and computer based techniques
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for residential space
- Organisational and site standards, requirements, policies and procedures for designing for residential space
- Australian Standards and the Building Code of Australia (BCA) relating to interior residential design
- Environmental protection requirements relating to interior residential design
- Established communication channels and protocols
- Relevant design problem identification and resolution
- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance

- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Design themes and design development
- Colours, furnishings and decorations

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to designing for residential interiors.

MSFID5002 Develop a decoration proposal for a complex site

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers developing a complete proposal for a complex site which may include a high-end residential or commercial site with multiple themes and usage areas, that satisfies the requirements of a client brief by specifying the furniture, fixtures, fittings and artworks.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------------------------------|--|
| 1 Analyse the project brief | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for complex sites are verified and complied with |
| | 1.2 Project brief is reviewed, confirmed and clarified with client |
| | 1.3 Key requirements for the project are assessed and confirmed and constraints determined |
| | 1.4 Resources are selected appropriate to work requirements |

- and checked for operational effectiveness
- 1.5 Communication with others involved in the project is established and maintained
 - 1.6 Relevant research is conducted to gain all information which may be used to inform the decoration process
 - 1.7 All required information is accessed and analysed to inform the decoration process
- 2 Conduct project research
- 2.1 Site analysis is conducted to assess the requirements and environmental aspects of the spaces requiring work
 - 2.2 Intended function of the spaces are ascertained from the client
 - 2.3 Contextual information relating to the brief is researched and evaluated
 - 2.4 Functional and planning issues are determined specific to the site and client requirements
 - 2.5 Research material is organised and presented in the form of a decoration proposal
 - 2.6 Project is planned to make effective use of time and available resources
- 3 Generate decorative themes and concepts
- 3.1 Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the project brief
 - 3.2 Ideas are translated into 2-D and 3-D space resolution using a range of techniques and media
 - 3.3 Themes and concepts are presented to the client using support documentation, sketches, mood boards, and concept boards
 - 3.4 Viability of concepts are assessed in conjunction with others
 - 3.5 Client feedback is obtained and ideas revised and refined accordingly
- 4 Select and specify internal finishes, furniture, furnishings, lighting and object
- 4.1 Internal elements and wall and floor finishes are selected and specified according to brief parameters
 - 4.2 Materials board and schedules are developed

d'art	4.3	Lighting effects are designed and detailed	
	4.4	Furniture, accessories and art objects are selected, specified and costed using established workplace system	
	4.5	Furnishings and window treatments are selected to enhance the design scheme within the constraints of the brief and budget	
	4.6	Rendered 2-D and 3-D drawing of the scheme are prepared to represent the desired effect	
5	Present a fully resolved scheme and evaluate client response	5.1	Final decoration solution is presented to the client in a professional manner using a range of digital media
		5.2	Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined without losing design integrity
		5.3	Own performance in the design process is examined to identify strengths and weaknesses
		5.4	Areas for improvement are identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health

- regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
- Project brief includes:**
- client needs and objectives
 - client aims and objectives, and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timelines
 - consultation requirements
 - colour requirements
- Clients include:**
- suppliers
 - manufacturers
 - private clients
 - colleagues
 - retailers
 - the public
- Resources include:**
- computers
 - computer software
 - design software
 - computer-aided design (CAD) software
 - colour boards
 - storyboards
 - swatches
 - product based colour systems, such as Munsell or similar
 - colour matching system, such as Pantone Matching System (PMS)
 - journals (directions magazines)
 - artistic equipment and products
 - model making equipment
- Relevant research includes:**
- similar products and typologies
 - materials
 - social and cultural influences
 - site analysis
 - site conditions
 - functional requirements

Information includes:	<ul style="list-style-type: none">• lifestyle requirements• cultural issues• ergonomics• anthropometrics• proxemics• costs• product performance and characteristics• existing conditions
Site analysis includes:	<ul style="list-style-type: none">• a visit to the site to achieve a feel for the intention of the project brief and how services may be affected by it, identifying constraints of site, and recording information and taking photos
Environmental aspects include:	<ul style="list-style-type: none">• how the use of raw materials affects the ecology and environment and how its continued use will affect the area it has been sourced from• energy consumption in achieving the material• greenhouse gases created• waste levels• resource utilisation and transport effects• what impact will be felt by reducing or stopping material from the source
Drawings include:	<ul style="list-style-type: none">• hand drawn images or ideation drawings completed freehand• drafted technical drawings or drawings produced on computer using CAD software packages (these usually contain project specifications)• elevations• sections• plans• perspectives
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work instructions, including plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Assessment Requirements for MSFID5002 Develop a decoration proposal for a complex site

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Develop an interior design for at least two (2) complex sites to provide the client with creative solutions that satisfy the design brief effectively applying design elements and principles
- Draw using manual and computer based techniques
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for decorating high-end residential and commercial spaces
- Organisational and site standards, requirements, policies and procedures
- Australian Standards and the Building Code of Australia (BCA) relating to decoration projects
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution techniques
- Elements and principles of design including liveability and accessibility
- Ergonomics, anthropometrics, proxemics and aesthetic values

- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Computer programs used for drawings and preparation of decoration documentation
- Design themes and design development
- Colours, furnishings and decorations
- Sketching and drawing to architectural drawing standards
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to developing a decoration proposal for a complex site.

MSFID5003 Evaluate site for interior design brief

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers evaluating materials and construction methods used on a site in order to determine their impact on the interior design brief. It involves identifying the features and implications associated with common structural techniques used for walls, ceilings and floors, and the materials used, plus a simple assessment of main services to determine suitability for design requirements.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for site evaluation	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to conducting site visits are verified and complied with
		1.2	Scope of brief is reviewed and any available drawings accessed
		1.3	Parameters for the project are assessed and confirmed
		1.4	Site visit is arranged with client

- | | | |
|---|--|---|
| | 1.5 | Tools used to assist in site evaluation are prepared |
| 2 | Assess structural aspects of interior space | |
| | 2.1 | Wall construction and features are identified and suitability to design requirements are determined |
| | 2.2 | Flooring construction and features are identified and suitability to design requirements are determined |
| | 2.3 | Roof construction and features are identified and suitability to design requirements are determined |
| | 2.4 | Other structures and their features are analysed to determine requirements to meet design brief |
| | 2.5 | Changes required for structural aspects to meet design brief are identified and implications examined |
| | 2.6 | Measurements are undertaken and recorded to inform budget calculations and design documentation |
| | 2.7 | Costs associated with making structural changes are estimated |
| 3 | Assess materials used in interior space | |
| | 3.1 | Materials used in interior walls are identified and their features, applications and limitations assessed |
| | 3.2 | Materials used in flooring are identified and their features, applications and limitations assessed |
| | 3.3 | Finishes and other materials used are assessed and implications for design brief are identified |
| | 3.4 | Properties of the materials used in structures are analysed and evaluated |
| 4 | Assess services | |
| | 4.1 | Plumbing, water and drainage features that may impact on design brief are identified and assessed |
| | 4.2 | Features of electrical service are assessed to determine suitability for design requirements |
| | 4.3 | Other services are assessed to determine suitability for design requirements |
| 5 | Conduct additional research to support site evaluation | |
| | 5.1 | Specialist professionals are consulted to verify or further determine outcomes relevant to design requirements |
| | 5.2 | Building information, plans, drawings and materials data is accessed to gain additional information relevant to the |

project

- 5.3 New technologies are researched to determine relevance to project
- 5.4 Longevity and restorability quality of structures and materials are researched
- 5.5 Environmental considerations for project are identified and further information accessed to ensure currency of knowledge

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
- work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills

Scope of brief includes:

- aims
- objectives
- milestones for the project
- organisational or personal profiles

	<ul style="list-style-type: none">• target audience• budget• timeline• consultation requirements• colour requirements• image requirements• function
Clients include:	<ul style="list-style-type: none">• suppliers• manufacturers• private clients• colleagues• retailers• the public
Parameters include:	<ul style="list-style-type: none">• scope of brief• approval to make changes (legislative and planning)• effect or feel trying to be achieved• functionality (short and long term)• budget restrictions• established timelines
Tools include:	<ul style="list-style-type: none">• measuring devices• cameras• colour charts• note taking equipment
Wall construction includes:	<ul style="list-style-type: none">• solid masonry• stud frame• load bearing• non-load bearing• bracing

Assessment Requirements for MSFID5003 Evaluate site for interior design brief

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assess structural and non-structural elements of a site to determine implications for interior design and identify the features and implications of construction techniques
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Access and apply the Building Code of Australia (BCA)
- Resource information appropriate to interior construction
- Evaluate a site and establish drawing requirements and document construction details in a range of scales, notation of materials, techniques and finishes
- Initiate new ideas and work techniques from the evaluation as necessary
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for evaluating a site
- Organisational and site standards, requirements, policies and procedures for evaluating a site
- Role of Australian Standards and the BCA
- Elements and principles of design including liveability and accessibility
- Characteristics of materials, products and defects
- Procedures for documenting workplace records and information

- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution techniques
- Basic building and architectural terminology
- Common structural and non-structural components of a residential building
- Materials and methods involved in interior refurbishment
- Local regulations and councils
- Construction techniques/technologies
- Statutory planning regulations affecting interior design
- Subcontractor roles

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.

MSFID5004 Specify structural elements, systems and services for interior spaces

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers specifying structural elements, systems and services for interior spaces in order to achieve design requirements and includes the production of drawings that have layout specifications using computer-aided design (CAD) programs. Interior designs may relate to residential or small to medium scale commercial spaces and may include new or existing buildings.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

MSFID5003 Evaluate site for interior design brief

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------------------------|--|
| 1 Conduct project evaluation | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to conducting site visits and preparing design specifications are verified and complied with |
|------------------------------|--|

- | | | |
|---|-------------------------------------|---|
| | 1.2 | Project brief is reviewed and parameters for the project are assessed and confirmed |
| | 1.3 | Site measurements and drawings are analysed and information on structures and services confirmed |
| | 1.4 | Construction methods used are identified and implications for design determined |
| 2 | Design structural aspects of design | |
| | 2.1 | Location and features of walls are determined and documented |
| | 2.2 | Location and features of flooring are determined and documented |
| | 2.3 | Location and features of ceilings are determined and documented |
| | 2.4 | Location and features of other structures are determined and documented |
| | 2.5 | Implications of structural designs are identified and addressed |
| | 2.6 | Costs associated with making structural changes are calculated |
| | 2.7 | Environmental considerations and access implications for structural ideas are identified and integrated into the design |
| 3 | Design service aspects | |
| | 3.1 | Location and features of plumbing are determined and documented |
| | 3.2 | Location and features of air conditioning, if applicable, are determined and documented |
| | 3.3 | Location and features of electricity outlets are determined and documented |
| | 3.4 | Location and features of other service aspects, if applicable, are determined and documented |
| | 3.5 | Implications of service designs are identified and addressed |
| | 3.6 | Costs associated with making service changes are calculated |

		3.7	Environmental considerations and access implications for service ideas are identified and integrated into the design
4	Liaise with specialist professionals	4.1	Specialist professionals are sought out and contacted to assess viability of design
		4.2	Costs and work requirements are confirmed with specialist professionals
		4.3	Work schedule is developed and tested with industry professionals
5	Prepare design documentation	5.1	Design drawings are completed with layout and specifications for structural, non-structural and service information
		5.2	Budget and project implementation schedule is developed
		5.3	Design documentation is prepared for client
		5.4	Design is presented to client and reviewed for further improvement

Foundation Skills

Assessment Requirements for MSFID5004 Specify structural elements, systems and services for interior spaces

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assess structural and non-structural elements of a site to determine implications for interior design and design structural aspects of interior space
- Identify service aspects of interior space to complete drawings and specifications for interior design incorporating structural elements and services
- Access and apply the Building Code of Australia (BCA) and resource information appropriate to interior construction
- Establish drawing requirements and document construction details in a range of scales using correct notation of materials, techniques and finishes, and draft specifications for interior space structural elements and services
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Initiate new ideas and work techniques in specification as necessary
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing structural and service aspects of an interior space
- Organisational and site standards, requirements, policies and procedures
- Role of Australian Standards and the BCA
- Elements and principles of design, including liveability and accessibility

- Characteristics of materials, products and defects
- Procedures for documenting workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution techniques
- Basic building and architectural terminology
- Common structural and non-structural methods and technologies used in a residential or small to medium commercial building
- Types of services and their structural implications
- Materials and methods involved in interior construction
- Local regulations and councils
- Statutory planning regulations affecting interior design
- Subcontractor roles

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to specifying structural elements, systems and services for interior spaces.

MSFID5005 Explore and apply creative design methodology to interior space

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers manipulating 3-D interior space and form applying the elements and principles of design in response to a brief. It involves observing and analysing a range of complex spatial typologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Research and evaluate a range of complex spaces	1.1	The spatial relationships of objects in a range of interior spaces are observed and evaluated
		1.2	A range of existing spatial typologies are observed and compared
		1.3	A range of existing spatial arrangements and organising systems are observed and evaluated
2	Manipulate 3-D space and form	2.1	The elements and principles of design are applied to organise

	applying design methodologies		elements in 3-D interior space to satisfy brief requirements
		2.2	3-D space is manipulated using colour, texture and light
		2.3	Complex spatial arrangements are explored to satisfy brief requirements
		2.4	Scale, volume and proportion are explored for 3-D space and form to satisfy brief requirements
3	Resolve interior design problems applying design methodologies	3.1	Interior space is resolved applying the elements and principles of design
		3.2	Interior design elements are resolved applying the elements and principles of design
		3.3	Design solution is evaluated and further refined to satisfy brief requirements
		3.4	Interior design solution is communicated through a range of media
		3.5	Feasibility of solution is explored and qualified
		3.6	Design solution and processes used are reviewed to assess own skill and identify areas for improvement or modification

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements• work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
Spatial typology includes:	<ul style="list-style-type: none">• voids• apertures• thresholds• atriums• vertical and horizontal circulation systems• public spaces• multi-level spaces• mezzanines• transitional spaces• staircases• ceiling planes
Spatial arrangements and organising systems include:	<ul style="list-style-type: none">• axis• grids• lineal arrangements• centralised arrangements• nested spaces• modular systems• hierarchical systems• repetition structures
Elements and principles of design, including liveability and accessibility, include:	<ul style="list-style-type: none">• balance• similarity• texture• contrast• size

- ground, volume
- composition
- orientation
- form
- structure
- 2-D space
- position
- proportion
- 3-D space
- repetition
- scale
- line
- rhythm
- pattern
- point
- symmetry
- tone
- plane

Information and procedures include:

- work instructions, including plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID5005A Explore and apply creative design methodology to interior space.

Assessment Requirements for MSFID5005 Explore and apply creative design methodology to interior space

Modification History

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply design elements and principles to complex 3-D form and interior space and manipulate the elements and principles of design
- Use conceptual models and other 3-D and spatial visualisation techniques
- Observe and analyse the way complex spaces are configured and arranged and apply this to resolving interior design problems by exploring, evaluating and refining design solutions
- Observe and compare 3-D spaces to understand and apply the elements and principles of design when organising 3-D space
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for applying creative methodologies
- Organisational and site standards, requirements, policies and procedures for applying creative methodologies
- Elements and principles of design, including liveability and accessibility
- Interrelationship of forms in space
- Concept of space
- Uses of objects and forms
- Interior elements
- Space, volume and proportion and their application to interior design

- Spatial concepts, such as illusion (e.g. Trompe d'l oeil)
- Relationship of objects in space
- Methods of interpreting space
- Design process and progression of ideas
- Environmental protection considerations for interior design
- Established communication channels and protocols
- Relevant problem identification and resolution techniques
- Design communication techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to exploring and applying creative design methodologies to interior space.

MSFID5006 Design interior lighting

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers designing lighting for an interior space to achieve lighting effects required by a design brief.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

MSFID4008 Assess interior light and recommend light fittings

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------------|--|
| 1 Assess project | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending lighting design are verified and complied with |
| | 1.2 Project brief is reviewed, confirmed and clarified with client |
| | 1.3 Parameters for the project are assessed and confirmed |

- | | | |
|---|--------------------------------------|--|
| | 1.4 | Resources are selected appropriate to work requirements and checked for operational effectiveness |
| | 1.5 | Communication with others is established and maintained |
| 2 | Assess current light sources | 2.1 Site analysis is conducted to assess the natural light and artificial light sources |
| | 2.2 | Project plans and drawings and site documents are analysed to determine current and potential influences on light source |
| | 2.3 | Factors for consideration are analysed with regards to their impact on lighting |
| | 2.4 | Environmental sustainability of design is assessed in terms of lighting |
| | 2.5 | Design is analysed to determine requirements for achieving desired lighting effects |
| 3 | Design lighting for interior project | 3.1 Research is conducted to determine cost and energy efficient lighting options to meet the requirements of the integrated design solution |
| | 3.2 | Light fittings and light control devices and their locations are selected and specified on design documentation |
| | 3.3 | Structural design features are reviewed in terms of effect on lighting and specifications determined to support the overall design solution |
| | 3.4 | Non-structural design features are reviewed in terms of effect on lighting and potential improvements identified |
| | 3.5 | Special effects are selected and specified for design |
| | 3.6 | Electrician is consulted to confirm potential complications with changes to lighting design, estimate costing and determine wiring requirements to implement lighting schedule |
| | 3.7 | Lighting design is assessed for conformance to industry standards and regulations |
| 4 | Draw and present lighting design | 4.1 Structural and non-structural design features required to achieve lighting effects are documented on design drawings |

- 4.2 Work and product schedules are developed
- 4.3 Costing is determined and documented
- 4.4 Lighting features are presented to client

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
- Lighting design includes:**
- selection of light fittings
 - determination of window positions and dimensions
 - uses of skylights
 - position of walls
 - balance of artificial and natural light sources
 - inclusion of light control devices
- Project brief includes:**
- client needs and objectives
 - client aims and objectives, and criteria for evaluation
 - milestones

- organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timeline
 - consultation requirements
 - colour requirements
- Clients include:**
- suppliers
 - manufacturers
 - private clients
 - colleagues
 - retailers
 - the public
- Parameters include:**
- scope of brief
 - approval to make changes (legislative and planning)
 - effect or feel trying to be achieved
 - functionality (short and long term)
 - budget restrictions
 - established timelines
- Resources include:**
- computers
 - computer software
 - design software
 - computer-aided design (CAD) software
 - colour boards
 - storyboards
 - swatches
 - product based colour systems, such as Munsell or similar
 - colour matching system, such as Pantone Matching System (PMS)
 - journals (directions magazines)
 - artistic equipment and products
 - model making equipment
- Site analysis includes:**
- a visit to the building (home, office or other) to achieve a feel for the intention of the project brief and how natural light may effect it, to assess the level of radiation from the sun into the space and the angles and obstructions caused by other buildings, vegetation or man-made objects, and recording information and taking photos
- Natural light includes:**
- light emitted directly by the sun or reflected from it
- Artificial light includes:**
- lamps
 - ceiling lights

	<ul style="list-style-type: none">• spotlights• floodlights• dimmers• wall lights• light-emitting diode (LED)• energy efficient globes
Factors for consideration include:	<ul style="list-style-type: none">• ultraviolet (UV) exposure• aspect and orientation• window treatments• light characteristics• colour• space layout• construction methods and materials
Light control devices include:	<ul style="list-style-type: none">• motorised or automated mechanisms linked to window treatments
Structural design features include:	<ul style="list-style-type: none">• placement and dimensions of walls• windows• doors• flooring and ceiling features• poles• posts• columns
Non-structural lighting design features include:	<ul style="list-style-type: none">• use of colour• fixtures• fittings• finishes• soft furnishings• furniture
Special effects include:	<ul style="list-style-type: none">• dimming• spotlight• flooding• brightness• creating space• creating focus
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work instructions, including plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID5006A Design interior lighting.

Assessment Requirements for MSFID5006 Design interior lighting

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assess light for its environmental impact and ability to meet lighting design requirements and provide clients with cost-effective and efficient lighting solutions
- Apply design elements and principles in recommending light design and provide documented lighting layout and schedule
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, and the reporting of work outcomes and problems
- Use computer operations for internet searches and CAD operations
- Analyse light fitting performance characteristics
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for assessing interior light and recommending light design
- Organisational and site standards, requirements, policies and procedures
- Australian lighting standards and drawing conventions
- Research sources for lighting
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Natural light characteristics and controls
- Artificial light characteristics and controls
- Structural influences on lighting

- Design themes and design development
- Sketching and drawing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to designing interior lighting.

MSFID5007 Decorate for events

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers decorating for events in accordance with project briefs in a retail, consulting or design and decoration studio environment and involves application of skills and knowledge at a paraprofessional level.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.								
1 Analyse the project brief	<table><tr><td>1.1</td><td>Applicable work health and safety (WHS), legislative and organisational requirements relevant to decorating for events are verified and complied with</td></tr><tr><td>1.2</td><td>Project brief is reviewed, confirmed and clarified with client</td></tr><tr><td>1.3</td><td>Key requirements and parameters for the event are assessed and confirmed and constraints determined</td></tr><tr><td>1.4</td><td>Resources are selected appropriate to work requirements and checked for operational effectiveness</td></tr></table>	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to decorating for events are verified and complied with	1.2	Project brief is reviewed, confirmed and clarified with client	1.3	Key requirements and parameters for the event are assessed and confirmed and constraints determined	1.4	Resources are selected appropriate to work requirements and checked for operational effectiveness
1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to decorating for events are verified and complied with								
1.2	Project brief is reviewed, confirmed and clarified with client								
1.3	Key requirements and parameters for the event are assessed and confirmed and constraints determined								
1.4	Resources are selected appropriate to work requirements and checked for operational effectiveness								

- | | | |
|---|------------------------------|---|
| | 1.5 | Communication with event organisers is established and maintained |
| 2 | Analyse event information | 2.1 Site analysis is conducted to assess the requirements of the space requiring work |
| | 2.2 | Marketing strategy for the event is analysed and themes and concepts explored and evaluated in accordance with event objectives |
| | 2.3 | Lifestyle requirements and key characteristics of the target market are assessed and confirmed with event organisers |
| | 2.4 | Restrictions and timelines are ascertained from the event organisers |
| | 2.5 | Intended function of the event display is ascertained taking into account movement of people around displays and other displays |
| | 2.6 | Environmental considerations are analysed in respect to the space |
| | 2.7 | Cultural considerations are evaluated in respect to the space |
| | 2.8 | Ergonomic, anthropometric and proxemic principles are assessed in respect to the space and the intended products |
| 3 | Develop decoration ideas | 3.1 Products, materials and finishes are explored in accordance with the marketing strategy and discussed with event organisers |
| | 3.2 | Product quantities and qualities are calculated in accordance with event budget |
| | 3.3 | Performance and characteristics of products are assessed and reviewed in accordance with event requirements |
| | 3.4 | Costs associated with purchasing and obtaining the products are analysed and evaluated |
| | 3.5 | Colour options are explored and discussed for the event |
| | 3.6 | Sketches and drawings are completed and positioning of products and accessories identified |
| 4 | Complete decoration proposal | 4.1 Supplies necessary to complete the project are sourced and costed |

- 4.2 Suitable contractors are sourced and quotes obtained
- 4.3 Specifications for materials and processes are developed
- 4.4 Work plan is developed and evaluated
- 4.5 Costing and timelines are compiled and developed into a full project proposal
- 4.6 Proposal is presented to client
- 4.7 Client feedback and response is analysed to determine success in achieving client satisfaction
- 4.8 Own performance in the design process is examined to identify strengths and weaknesses
- 4.9 Areas for improvement are identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Assessment Requirements for MSFID5007 Decorate for events

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Develop decoration proposal for one (1) event to provide cost-effective options that meet all event objectives effectively applying design elements and principles
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, and the reporting of work outcomes and problems
- Use computer aided design techniques
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for decorating for events
- Organisational and site standards, requirements, policies and procedures
- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Computer programs used to support proposal development
- Event display techniques
- Design themes and design development
- Colours, furnishings and decorations

- Sketching and drawing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to decorating for events.

MSFID5008 Design for people with disabilities and the elderly

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers designing interior residential spaces for people with disabilities and the elderly in residential environments for the solution of interior decoration and design projects and in accordance with project briefs. It applies to a retail, consulting or design and decoration studio environment and involves application of skills and knowledge at a paraprofessional level.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Analyse the project brief	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for residential spaces are verified and complied with
		1.2	Project brief is reviewed, confirmed and clarified with client
		1.3	Parameters for the project are assessed and confirmed
		1.4	Resources are selected appropriate to work requirements

- and checked for operational effectiveness
- 1.5 Communication with others is established and maintained
 - 1.6 Relevant research is conducted to gain all information which may be used to inform the design process
 - 1.7 All required information is accessed and interpreted to inform the design process
- 2 Obtain client information
- 2.1 Site analysis of the residential environment is conducted to assess work requirements
 - 2.2 Nature of the disability or age reducing senses are confirmed
 - 2.3 Clients' health professionals/family members/carers are liaised with to ascertain any further requirements
 - 2.4 Themes and concepts are presented and discussed with the client in accordance with their capacity
 - 2.5 Products, materials and finishes are proposed and discussed with the client
 - 2.6 Colour options are proposed and discussed with the client
 - 2.7 Restrictions and timelines are ascertained from the client
 - 2.8 Lifestyle requirements are assessed and confirmed with the client
 - 2.9 Product quantities and qualities are calculated in accordance with client budget information
- 3 Design space
- 3.1 Intended function of the domestic space is ascertained from the client taking into account the position of doors and windows and any physical requirements
 - 3.2 Performance and characteristics of products are assessed and reviewed in accordance with client requirements
 - 3.3 Existing conditions of the domestic space are analysed for current or previous usage and any special requirements for access or egress
 - 3.4 Environmental considerations are analysed in respect of the space
 - 3.5 Cultural considerations are evaluated in respect of the

- space
- 3.6 Ergonomic, anthropometric and proxemic principles are assessed in respect of the space, the intended products and client special requirements
 - 3.7 Costs associated with purchasing and obtaining the products are analysed and reported
 - 3.8 Sketches and drawings are completed and prepared for use by contractors and for positioning of products and accessories
- 4 Plan space
- 4.1 Supplies necessary to complete the project are sourced and costed
 - 4.2 Suitable contractors are sourced and quotes obtained
 - 4.3 Specifications for materials and processes are developed
 - 4.4 Work plan is developed and evaluated
 - 4.5 Costing and timelines are compiled and developed into a full project proposal
 - 4.6 Proposal terms and conditions are negotiated with the client

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and

	<p>dangerous goods codes, and local safe operating procedures or equivalent</p> <ul style="list-style-type: none">• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements• work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
Project brief includes:	<ul style="list-style-type: none">• client needs and objectives• client aims and objectives, and criteria for evaluation• milestones• organisational or personal profiles and aims• image requirements and function• target market• budget• timeline• consultation requirements• colour requirements
Clients include:	<ul style="list-style-type: none">• residential care providers• private clients
Parameters include:	<ul style="list-style-type: none">• scope of brief• approval to make changes• effect or feel trying to be achieved• functionality (short and long term)• budget restrictions• established timelines
Resources include:	<ul style="list-style-type: none">• computers• computer software• design software• computer-aided design• storyboards• swatches• product based colour systems, such as Munsell or similar• colour matching system, such as Pantone Matching System (PMS)• journals (directions magazines)• artistic equipment and products• model making equipment
Site analysis includes:	<ul style="list-style-type: none">• a visit to the site to achieve a feel for the intention of the project brief and how services may be affected by it, identifying constraints of site and recording information and

- taking photos
- Disabilities include:**
 - physical disabilities which have rendered a person to a wheelchair or walking frame
 - dementia or other intellectual disabilities
- Reducing senses include:**
 - senses reduced by the cause of age, such as:
 - reduced eyesight
 - loss of colour recognition
 - perception of space
 - reduced strength and capacity to move around easily
 - reduced sense of touch to tactile surfaces
 - reduced capacity to hear
- Themes include:**
 - variations of colour ways (based on directions media), furnishing trends and decoration trends
- Concepts include:**
 - ideas generated to respond to the project brief and client requirements through both ideation drawings or sketching and written explanation
- Products include:**
 - furniture
 - soft furnishings
 - floor treatments
 - curtain treatments
 - built-in cabinetry or fittings
 - light fittings
 - lamps
 - picture framing
- Materials include:**
 - solid timber (native and imported)
 - manufactured timber products
 - plastic
 - metal
 - alloys
 - stone
 - glass
 - textiles
 - fibreglass
 - foam
 - cardboard
 - paper products
 - any other manipulable substance
- Finishes include:**
 - paints
 - waxes
 - lacquers
 - stains

- pigments
 - oils
 - plastic coatings
 - veneers
 - ceramics
 - stone
 - glass
 - textiles
 - other textures
- Colours include:**
- colour principles
 - psychology
 - fundamentals
 - coordination
 - perception
 - language
 - tonal
 - translucent
 - contrast
 - harmony
 - effects on space
 - formulas
 - colour wheels
- Restrictions include:**
- laws, regulations or policies which may affect a project or those working on it, such as:
 - local government planning approval
 - worksite entry legislation
 - licensing
 - heritage laws
 - health care requirements
- Timelines include:**
- the agreed project time span set and agreed for the project
- Lifestyle requirements include:**
- influences, such as:
 - physical capacity
 - religious
 - climatic
 - societal
 - lifestyle
 - living conditions
 - infrastructure
 - status
 - habitude

Quality includes:	<ul style="list-style-type: none">• an inspection system for ensuring that pre-determined quality standards are being met, highlighting non-conformances requiring intervention
Spaces include:	<ul style="list-style-type: none">• domestic environments with rooms, such as:<ul style="list-style-type: none">• bedrooms• living spaces• multi-purpose rooms• storage rooms• studies• garages• rumpus rooms• media rooms• entertainment areas• halls• pantries
Physical requirements include:	<ul style="list-style-type: none">• wheelchair turning requirements• height of basins• showers• mirrors• benches• shower space for wheelchair• toilet access• handgrips or rails• lights for hearing impaired• increased lighting• higher magnifying mirrors• non-slip tiles
Performance and characteristics include:	<ul style="list-style-type: none">• assessment of products to determine if they meet the requirements of the intended end use application and how well they do it, and the durability and composition of the product
Existing conditions include:	<ul style="list-style-type: none">• traffic flow• architectural features• style• furniture placement• electrical outlets• features
Access and egress include:	<ul style="list-style-type: none">• ensuring door widths will accept wheelchairs• ramps are established to allow for rise or fall from exits and entrances
Environmental aspects	<ul style="list-style-type: none">• how the use of raw materials affects the ecology and

include:	<p>environment and how its continued use will affect the area it has been sourced from</p> <ul style="list-style-type: none">• energy consumption in achieving the material• greenhouse gases created• waste levels• resource utilisation and transport effects• what impact will be felt by reducing or stopping material from the source
Cultural issues include:	<ul style="list-style-type: none">• demography• geography (local, regional and national)• religious• climatic• societal• cultural• lifestyle• attitudinal• gratification• honour• living conditions• infrastructure• status• habitude
Ergonomics include:	<ul style="list-style-type: none">• the study of the efficiency of persons in their working environment
Anthropometrics include:	<ul style="list-style-type: none">• the scientific study of the measurements of the human body
Proxemics include:	<ul style="list-style-type: none">• the study of socially conditioned spatial factors in ordinary human relations
Costs include:	<ul style="list-style-type: none">• the cost of products and materials together with the cost of obtaining them either locally, interstate or overseas
Drawings include:	<ul style="list-style-type: none">• hand drawn images or ideation drawings completed freehand• drafted technical drawings or drawings produced on computer using CAD software packages (these usually contain project specifications)
Accessories include:	<ul style="list-style-type: none">• trinkets• ceramics• trays• vases• carvings• baskets• pots

	<ul style="list-style-type: none">• plants• candles• clocks• silverware• mirrors• frames• screens• floral displays• haberdashery• glassware• fireplace items• gifts• hand crafts• water features• photographs• pottery• personal items• statues• book ends• bowls• bottles
Supplies include:	<ul style="list-style-type: none">• paints• furnishings• decorations• other internal fit-out products
Contractors include:	<ul style="list-style-type: none">• builders• painters• tilers• carpet/flooring layers and sanders• cabinetmakers• curtain makers• picture framers• electricians• plumbers• plasterers
Quoting includes:	<ul style="list-style-type: none">• a price for a project taking account of the sizes associated with the project, the cost of materials, labour and overheads
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work instructions, including plans, drawings and designs• workplace procedures relating to reporting and

communication

- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID5008A Design for people with disabilities and the elderly.

Assessment Requirements for MSFID5008 Design for people with disabilities and the elderly

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Design for at least two (2) spaces to cater for people with disabilities or the elderly to provide the client with cost-effective options which inform the project brief development effectively apply design elements and principles
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, and the reporting of work outcomes and problems
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for people with disabilities and the elderly
- Organisational and site standards, requirements, policies and procedures for designing for people with disabilities and the elderly
- Australian Standards and the Building Code of Australia (BCA)
- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Design-related computer programs

- Design themes and design development
- Colours, furnishings and decorations
- Disabilities and age considerations
- Sketching and drawing
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to designing for people with disabilities and the elderly in domestic environments.

MSFID5009 Research and recommend colour and applied finishes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching and recommending colour and applied finishes to achieve special effects for interior decoration and design solutions using research methodologies to identify the latest technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Analyse project requirements | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending colour and applied finishes are verified and complied with |
| | 1.2 Project brief is reviewed and analysed to determine desired effects for interior space |
| | 1.3 Aesthetic requirements of the space are assessed |
| | 1.4 Tactile requirements of the desired effect in relation to the design are analysed |
| | 1.5 Client requirements and desired effects are reviewed, confirmed and clarified |

- | | | |
|---|---------------------------------------|--|
| 2 | Research colour and applied finishes | 2.1 Social, psychological, cultural and historical relationships of colour are researched in relation to their interior decoration uses and applications |
| | | 2.2 Colour trends are researched to ascertain the latest colour fashions and influences |
| | | 2.3 New technologies are researched and reported |
| | | 2.4 Application methods and available expertise for the desired effect are assessed |
| | | 2.5 Application processes and techniques, and available expertise for the desired effect are assessed |
| | | 2.6 Costs of materials and application methods are assessed and compared |
| | | 2.7 Environmental impact of materials and application methods are assessed |
| | | 2.8 Longevity and restorability of materials and application methods are researched |
| | | 2.9 Hazards associated with the use and application of materials are researched |
| | | 2.10 Quality of materials and application methods are assessed |
| | | 2.11 Sources or suppliers of coloured products or finishes are found and recorded |
| 3 | Recommend colour and applied finishes | 3.1 Research information is critically analysed in the context of the design brief requirements |
| | | 3.2 Effects are examined in terms of elements and principles of design to determine fit for client requirements |
| | | 3.3 Experimentation with colour and applied finishes is undertaken to refine and test material and application methods |
| | | 3.4 Colour products and finishes are selected according to the style, size, lighting and intended use of the space |
| | | 3.5 Paint finishes are selected to suit surface types, location and spaces |
| | | 3.6 Application methods are selected and specified to meet |

client requirements

- 3.7 Presentation of research information is made highlighting the findings and rationale for the materials and application methods chosen

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
- work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills

Colour and applied finishes include:

- paints
- waxes
- lacquers
- stains
- pigments
- oils
- traditional finishes
- plastic coatings
- UV-protected coatings

- liquid coatings
 - synthetic coatings
 - synthetics
 - paper
 - glass
 - vinyls
 - textiles
 - laminates
 - plastics
 - stainless steel
 - metals
 - veneers
 - ceramics
 - stone-based products
 - application techniques
 - new and emerging technologies
- Project brief includes:**
- client needs and objectives
 - client aims and objectives, and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timeline
 - consultation requirements
 - colour requirements
- Aesthetics include:**
- the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
- Tactile includes:**
- that perceived by the sense of touch and producing the effect of 3-D depth
- Cultural issues include:**
- demography
 - geography (local, regional and national)
 - religious
 - climatic
 - societal
 - cultural
 - lifestyle
 - attitudinal
 - gratification
 - honour
 - living conditions
 - infrastructure

	<ul style="list-style-type: none">• status• habitude
Historical includes:	<ul style="list-style-type: none">• colour study of early civilisation, Berlin & Kay, Aristotle, Newton, Hippocrates, Leonardo Da Vinci, the Renaissance, Goethe's theory of colours, Chevreul and Bauhaus School
Trends may include:	<ul style="list-style-type: none">• new directions resulting from events that are at times subtle and others significant• colour trends where experts gather information from around the world and study changing events and ideas to produce a comprehensive colour story, in the same way that designers seek unique styles and incorporate current philosophies into their work
Application methods include:	<ul style="list-style-type: none">• spraying• painting• applicators• gluing• vacuum wrapping• rubbing• bonding
Costs include:	<ul style="list-style-type: none">• the cost of products and materials together with the cost of obtaining them either locally, interstate or overseas
Environmental impacts include:	<ul style="list-style-type: none">• how the making and use of finishes and materials effects the environment and how its continued use will affect the area it has been sourced from• energy consumption in applying the material• greenhouse gases created• waste levels and resource utilisation• what impact will be felt by reducing or stopping use of the finish or materials
Longevity and restorability include:	<ul style="list-style-type: none">• an analysis of how long the finish or material is expected to last, while maintaining quality of aesthetic value and how readily the finish or material can be upgraded, repaired or replaced
Hazards include:	<ul style="list-style-type: none">• toxins and gases released by some finishes, glues and materials which may be harmful to people if not used correctly
Sources include:	<ul style="list-style-type: none">• paint shops• suppliers• wholesalers• retailers• manufacturers• designers

Products include:	<ul style="list-style-type: none">• furniture• soft furnishings• floor treatments• curtain treatments• built-in cabinetry or fittings• light fittings• lamps• picture framing
Finishes include:	<ul style="list-style-type: none">• paints• waxes• lacquers• stains• pigments• oils• plastic coatings• veneers• ceramics• stone• glass• textiles• other textures
Critical analysis includes:	<ul style="list-style-type: none">• comparing• contrasting• reflecting• critiquing• considering merit• discussion• debate
Elements and principles of design, including liveability and accessibility, include:	<ul style="list-style-type: none">• balance• similarity• texture• contrast• size• ground and volume• composition• orientation• form• structure• 2-D space• position• proportion

- Information and procedures include:**
- 3-D space
 - repetition
 - scale
 - line
 - rhythm
 - pattern
 - point
 - symmetry
 - tone
 - plane
 - work instructions, including plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

MSFID5010 Provide interior styling service

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers providing design styling services for a range of interior spaces, including selecting, sourcing and placing objects and accessories for visual effect. Styling may be for residential, retail, or commercial environments and may be for permanent or temporary application.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Confirm services with client	<p>1.1 The range of services offered as interior stylist are discussed with client</p> <p>1.2 Services typically provided to client target market are discussed with client</p> <p>1.3 Suppliers appropriate to client target market are identified and ability to manage supply for the project discussed with client</p> <p>1.4 Styling service to be provided is negotiated and confirmed with t client</p>
2 Determine client	<p>2.1 Applicable work health and safety (WHS), legislative and</p>

style requirements	organisational requirements relevant to styling a space are verified and complied with
	2.2 Project brief is reviewed, confirmed and clarified with client
	2.3 Parameters for the project are assessed and confirmed
	2.4 Communication with others is established and maintained
	2.5 Styling requirements are identified and confirmed with client
3 Develop style design	3.1 Space dimensions are measured and needs of the space assessed
	3.2 Sketches and drawings are prepared to illustrate the space
	3.3 Plan layout is prepared taking into account artistic relevance and colour balance
	3.4 Entertainment values and the effect on end users are analysed
	3.5 Cultural and historical considerations are evaluated in respect of the space style
	3.6 Styling requirements for the space are determined in order to create a specific style
	3.7 Products, finishes and accessories necessary to complete the project are selected and costed
	3.8 Materials and processes are specified
	3.9 Costing and timelines are compiled and developed
	3.10 Detailed budget is prepared to meet styling requirements
4 Create visual impact by styling a space	4.1 Products, finishes and accessories are sourced and organised to meet brief requirements
	4.2 Visual impact is created by strategically placing objects into the space, taking into consideration design elements and principles
	4.3 Installation of products, finishes and accessories is monitored to ensure the essence of the image or style is maintained

- 4.4 Arrangement is resolved to meet client needs and project brief

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
- Stylists include:**
- interior decorators or designers providing services to create visual effects in interior spaces
- Roles of a stylist include:**
- visual merchandiser in a retail or commercial environment
 - home stylist
 - magazine/TV stylist
 - stylist for trade show displays, display units and car showrooms
- Clients include:**
- real estate agents wanting properties prepared for sale
 - events coordinators requiring themed or decorated venues
 - retailers preparing shop themes or displays
 - suppliers
 - manufacturers

	<ul style="list-style-type: none">• private clients• colleagues• retailers• the public

- gifts
- hand crafts
- water features
- photographs
- pottery
- personal items
- statues
- book ends
- bowls
- bottles

Materials include:

- solid timber (native and imported)
- manufactured timber products
- plastic
- metal
- alloys
- stone
- glass
- textiles
- fibreglass

- foam
 - cardboard
 - paper products
 - any other manipulable substance
- Costing includes:**
- the cost of products and materials used during completion of the project, labour and overhead expenses
- Timelines include:**
- the agreed project time span set and agreed for the project
- Information and procedures include:**
- work instructions, including plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFI5010A Provide interior styling service.

Assessment Requirements for MSFID5010 Provide interior styling service

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Style a space with the products, finishes and accessories to style concepts as part of the final solution to the project brief effectively applying design elements and principles
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Determine requirements of the 'unseen client'
- Source accessories, including furniture, cushions, throws, rugs, vases, flowers, object d'art, pictures, wall hangings, kitchen implements, crockery and cutlery, and prepare specification 'shopping list' and costing
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for styling a space
- Organisational and site standards, requirements, policies and procedures for styling a space
- Elements and principles of design, including liveability and accessibility
- Client target markets, including real estate agents, home owners or vendors, magazines and television, project marketers, display units, project homes and retail outlets/window displays

- Client lifestyle issues, personal taste and budget
- Clients' background, intentions, future plans and current fashions/trends
- Creativity and artistic relevance
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Design themes and design development
- Colours, furnishings and decorations
- Sketching and drawing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to providing interior styling services.

MSFID5011 Specify soft furnishings for complete interior solution

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching, specifying and recommending innovative and cost-effective styles, technologies and decorative solutions to enhance and complement interior design schemes using soft furnishings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Assess project requirements

- 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending decorative solutions are verified and complied with
- 1.2 Project brief is reviewed, confirmed and clarified with client
- 1.3 Parameters for the project are assessed and confirmed
- 1.4 Resources are selected appropriate to work requirements and checked for operational effectiveness
- 1.5 Communication with others is established and maintained

- | | | |
|---|--|---|
| | 1.6 | Intended applications and effects for the windows, furniture and soft furnishings are identified |
| 2 | Determine decorative treatments for windows and openings | 2.1 Window treatments, their application and fixing technologies are researched to determine suitability for client requirements |
| | 2.2 | New technologies in window treatments are researched and relevance for decorative projects identified |
| | 2.3 | The types of openings and their requirements are identified and a range of possible creative solutions determined |
| | 2.4 | Window or opening is measured and details recorded accurately for a range of window treatments |
| | 2.5 | Fabric requirements are calculated and manufacturing requirements determined for a range of window treatments taking into consideration pattern repeats |
| 3 | Specify furniture transformation | 3.1 Methods of transforming a range of furniture and furnishings are researched |
| | 3.2 | Design considerations are investigated and assessed against the project brief |
| | 3.3 | Fabrics and materials are selected for furniture |
| | 3.4 | Furniture transformation ideas are documented and specified |
| | 3.5 | Cost estimates are calculated and assessed against project budget |
| 4 | Specify soft floor coverings | 4.1 Range of floor coverings available for application are identified and analysed to determine most suitable fit |
| | 4.2 | New technologies in flooring are researched and relevance for decorative project identified |
| | 4.3 | The features, limitations and environmental impact of selected floor covering is assessed against performance requirements and environmental standards |
| | 4.4 | Floor area is measured and specifications recorded for flooring solution |
| | 4.5 | Costs are calculated and assessed against project budget |

- | | | | |
|---|---|-----|---|
| 5 | Specify soft furnishings | 5.1 | Soft furnishings are selected to meet the requirements of the brief and the overall design scheme |
| | | 5.2 | Specifications are documented to record colour, sizing, style and fabric details |
| | | 5.3 | Arrangement of soft furnishings is documented in design schedules |
| | | 5.4 | Costs of soft furnishings are calculated and assessed against project budget |
| 6 | Document and present decorative recommendations | 6.1 | Innovative design solution to brief is presented taking into consideration parameters of design brief |
| | | 6.2 | Fabrics, furnishings and fixing technologies are selected taking into consideration parameters of project brief |
| | | 6.3 | Specifications are documented for all treatment recommendations |
| | | 6.4 | Schedule is presented that includes both high and low costing to support design solution |
| | | 6.5 | Solution to brief is visualised graphically and in 3-D form |
| | | 6.6 | Sample board is created to enhance and support the design intention |
| | | 6.7 | Feedback and follow up is instigated and maintained with the client |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
- Project brief includes:**
- client needs and objectives
 - client aims and objectives, and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timeline
 - consultation requirements
 - colour requirements
- Clients include:**
- suppliers
 - manufacturers
 - private clients
 - colleagues
 - retailers
 - the public
- Parameters include:**
- scope of brief
 - approval to make changes
 - effect or feel trying to be achieved
 - functionality (short and long term)
 - budget restrictions
 - established timelines
- Resources include:**
- computers
 - computer software
 - design software
 - computer-aided design (CAD) software
 - colour boards
 - storyboards

	<ul style="list-style-type: none">• swatches• product based colour systems, such as Munsell or similar• colour matching system, such as Pantone Matching System (PMS)• journals (directions magazines)• artistic equipment and products• model making equipment
Research includes:	<ul style="list-style-type: none">• internet• magazines• catalogues• retail or wholesale outlets• books• site visits
Pattern repeats include:	<ul style="list-style-type: none">• textiles or fabrics with a distinctive print and how often that pattern repeats within the applicable square metreage required for a project so as to meet conformity
Environmental impacts include:	<ul style="list-style-type: none">• how the sourcing and use of materials effects the environment and how its continued use will affect the area the material was sourced from• energy consumption in processing the material• greenhouse gases created• waste levels and resource utilisation• what impact will be felt by reducing or stopping use of the material• when applied to window fittings, environmental impact may include:<ul style="list-style-type: none">• the amount of natural light made available from decorative solution in order to reduce requirements for powered light sources
Soft furnishings include:	<ul style="list-style-type: none">• window treatments and curtains• blinds• awnings• trimmings• bedding treatments• lampshades• carpets• rugs• cushions• upholstery• accessories
Information and procedures include:	<ul style="list-style-type: none">• work instructions, including plans, drawings and designs• workplace procedures relating to reporting and communication

- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID5011A Specify soft furnishings for complete interior solution.

MSFID5012 Research and recommend artwork

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching and recommending artwork for various design and decoration solutions to client and project brief requirements in interior decoration and design operations of all sizes. It applies to a retail, consulting or design and decoration studio environment, and involves application of skills and knowledge at a supervisory equivalent level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------------------------------|---|
| 1 Plan for artwork research | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to researching and recommending artwork are verified and complied with |
| | 1.2 Project brief is reviewed, confirmed and clarified with client |
| | 1.3 Parameters for the project are assessed and confirmed |
| | 1.4 Resources are selected appropriate to work requirements and checked for operational effectiveness |
| | 1.5 Communication with others is established and maintained |

- | | | |
|---|-------------------|---|
| 2 | Research artwork | 2.1 Aesthetic requirements of the artwork are assessed and compared with surrounding furniture and colours |
| | | 2.2 Intended application for the artwork is analysed and reviewed in accordance with the available space |
| | | 2.3 Artwork and artists are sourced, researched and reported |
| | | 2.4 Framing types and styles are researched and reported |
| | | 2.5 Properties of the materials used in the production of artwork are analysed and evaluated |
| | | 2.6 Manufacturing processes, art styles and available expertise for the desired artwork are assessed |
| | | 2.7 Costs and availability of artwork are assessed and compared |
| | | 2.8 Environmental impact of artwork materials used are assessed |
| | | 2.9 Longevity and restorability quality of artwork is researched |
| | | 2.10 Project is measured for artwork requirements, calculating quantities and requirements |
| 3 | Recommend artwork | 3.1 Selected or commissioned artwork quantities and qualities are presented and promoted to the client |
| | | 3.2 Performance and characteristics of selected artwork are presented and promoted to the client |
| | | 3.3 Costs associated with purchasing and obtaining the artwork are provided in quote form to the client |
| | | 3.4 Presentation of research information is made highlighting the findings and rationale for the artwork chosen |
| | | 3.5 Artwork is selected and positioned according to client requirements, project brief and nature of the space |
| | | 3.6 Feedback and follow up is instigated and maintained with the client |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
- Project brief includes:**
- client needs and objectives
 - client aims and objectives, and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timeline
 - consultation requirements
 - colour requirements
- Clients include:**
- suppliers
 - manufacturers
 - private clients
 - colleagues
 - retailers
 - the public

Parameters include:	<ul style="list-style-type: none">• scope of brief• approval to make changes• effect or feel trying to be achieved• functionality (short and long term)• budget restrictions• established timelines
Resources include:	<ul style="list-style-type: none">• computers• computer software• design software• computer-aided design (CAD) software• colour boards• storyboards• swatches• product based colour systems, such as Munsell or similar• colour matching system, such as Pantone Matching System (PMS)• journals (directions magazines)• artistic equipment and products• model making equipment
Aesthetics include:	<ul style="list-style-type: none">• the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Artwork includes:	<ul style="list-style-type: none">• gothic• Byzantine• early renaissance• high renaissance• northern renaissance• mannerism• baroque• rococo• neoclassicism• academic• Japanese Ukiyo-e• Romanticism• the Hudson river school• the pre-Raphaelite brotherhood• Victorian classicism• the arts and crafts movement• symbolism• realism• the Barbizon school• impressionism• post-impressionism

- folk art

Framing includes:

- mouldings of solid timber
- composites
- metal
- alloy extrusion
- synthetics

Properties include:	<ul style="list-style-type: none">• durability• level of fire retardancy• composition• textile use• material use• finishes• quality• environmental sustainability• flammability• maintenance requirements• wear and tear• production methods
Materials include:	<ul style="list-style-type: none">• solid timber (native and imported)• manufactured timber products• plastic• metal• alloys• stone• glass• textiles• fibreglass• foam• cardboard• paper products• any other manipulable substance
Manufacturing processes include:	<ul style="list-style-type: none">• the methods by which the product will be produced that require working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Environmental implications include:	<ul style="list-style-type: none">• how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from• energy consumption in achieving the material• greenhouse gases created• waste levels• resource utilisation and transport effects• what impact will be felt by reducing or stopping material from the source
Longevity and restorability include:	<ul style="list-style-type: none">• an analysis of how long the material is expected to maintain its structure and colour, while maintaining quality of aesthetic value and how readily the material can be repaired or replaced

- Commissioned includes:** • the contracting of an artist for the purposes of producing an art piece to specified requirements or a style
- Qualities include:** • an inspection system for ensuring that pre-determined quality standards are being met, highlighting non-conformances requiring intervention
- Performance and characteristics include:** • assessment of products to determine if they meet the requirements of the intended end use application and how well they do it, and the durability and composition of the product
- Costs include:** • the cost of products and materials together with the cost of obtaining them either locally, interstate or overseas
- Quote includes:** • a price for a project taking account of the sizes associated with the project, the cost of materials, labour and overheads
- Information and procedures include:**
 - work instructions, including plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

MSFID5013 Design for small to medium scale commercial or institutional interiors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying researched information to formulate creative and complex design solutions to a range of small to medium scale commercial or institutional interior design situations satisfying the physiological, psychological, social, cultural and environmental requirements of the brief.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.						
1 Analyse the project brief	<table><tr><td>1.1</td><td>Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for commercial or institutional spaces are verified and complied with</td></tr><tr><td>1.2</td><td>Project brief is reviewed, confirmed and clarified with client</td></tr><tr><td>1.3</td><td>Key requirements for the project are assessed and</td></tr></table>	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for commercial or institutional spaces are verified and complied with	1.2	Project brief is reviewed, confirmed and clarified with client	1.3	Key requirements for the project are assessed and
1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for commercial or institutional spaces are verified and complied with						
1.2	Project brief is reviewed, confirmed and clarified with client						
1.3	Key requirements for the project are assessed and						

- confirmed and constraints determined
- 1.4 Resources are selected appropriate to work requirements and checked for operational effectiveness
 - 1.5 Communication with others is established and maintained
 - 1.6 Relevant research is conducted to gain all information which may be used to inform the design process
 - 1.7 All required information is accessed and interpreted to inform the design process
- 2 Conduct project research
 - 2.1 Site analysis is conducted to assess the requirements of the spaces requiring work
 - 2.2 Intended function of the space is ascertained from the client
 - 2.3 Contextual information relating to the brief is researched and evaluated
 - 2.4 Functional and planning issues are determined specific to the site and client requirements
 - 2.5 Research material is organised and presented in the form of a design proposal
 - 2.6 Project is planned to make effective use of time and available resources
 - 3 Develop design concepts
 - 3.1 Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the design brief
 - 3.2 Concepts are presented through sketches, mood boards, concept boards and concept models
 - 3.3 Viability of concepts are assessed in conjunction with others
 - 3.4 Environmental implications of the project are assessed and design concepts reviewed to ensure maximum energy efficiency is achieved in solution
 - 3.5 Access issues relating the project are identified and addressed in design solution
 - 4 Design the space
 - 4.1 Ideas are translated into 3-D space satisfying functional criteria

- 4.2 Evidence of 3-D notions are explored through modelling
 - 4.3 Idea with the greatest potential for success is presented to promote the design's acceptance using both 2-D and 3-D representations
 - 4.4 Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined
 - 4.5 A materials palette is selected to enhance spatial ideas
 - 4.6 Design is modified in response to critical feedback without losing integrity of the design intention
- 5 Revise and refine solution
 - 5.1 Ergonomic and anthropometric principles are assessed in respect to the space and the intended products
 - 5.2 Spatial planning is further revised and resolved in response to client feedback
 - 5.3 Materials, colours, finishes, fixtures and fittings are selected appropriate to the concept and brief parameters
 - 5.4 Feedback is received through consultation with the client and incorporated into design solution
- 6 Prepare a fully rendered client presentation
 - 6.1 Resource requirements are identified for presentation
 - 6.2 Final design solution is communicated effectively and creatively using a range of techniques and media
 - 6.3 Documentation drawings and material selections are prepared that are consistent with, and that best communicate, the design intent
 - 6.4 Work is completed to plan and within brief constraints
 - 6.5 Client feedback and response is analysed to determine success in achieving client satisfaction
 - 6.6 Own performance in the design process is examined to identify strengths and weaknesses
 - 6.7 Areas for improvement are identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
- Project brief includes:**
- client needs and objectives
 - client aims and objectives and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market

 - private clients
 - colleagues
 - retailers
 - the public

Resources include:	<ul style="list-style-type: none">• computers• computer software• design software• computer-aided design (CAD) software• colour boards• storyboards• swatches• product based colour systems, such as Munsell or similar• colour matching system, such as Pantone Matching System (PMS)• journals (directions magazines)• artistic equipment and products• model making equipment
Relevant research includes:	<ul style="list-style-type: none">• similar products and typologies• materials• social and cultural influences• site analysis• site conditions• functional requirements
Information includes:	<ul style="list-style-type: none">• philosophy• Australian histories• cultural issues• spiritual issues• religious issues• histories of Australian and imported architectural trends• linguistics• aesthetics• politics• gender and identity issues• land and place• signs and symbols• criticism• new technologies
Site analysis includes:	<ul style="list-style-type: none">• a visit to the site to achieve a feel for the intention of the project brief and how services may be affected by it, identifying constraints of site, and recording information and taking photos
Creative methodologies include:	<ul style="list-style-type: none">• brainstorming• word association• imaging• modelling• lateral thinking

Presentation methods include:	<ul style="list-style-type: none">• application of a range of media• mood board• concept board• 3-D models• sketches• photos
Environmental implications include:	<ul style="list-style-type: none">• how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from• energy consumption in achieving the material• greenhouse gases created• waste levels• resource utilisation and transport effects• what impact will be felt by reducing or stopping material from the source
Materials include:	<ul style="list-style-type: none">• solid timber (native and imported)• manufactured timber products• plastic• metal• alloys• stone• glass• textiles• fibreglass• foam• cardboard• paper products• any other manipulable substance
Colours include:	<ul style="list-style-type: none">• colour principles• psychology• fundamentals• coordination• perception• language• tonal• translucent• contrast• harmony• effects on space• formulas• colour wheels

Finishes include:

- paints
- waxes
- lacquers
- stains
- pigments
- oils
- plastic coatings
- veneers
- ceramics
- stone
- glass
- textiles
- other textures

Fixtures, fittings and accessories include:

- furniture
- soft furnishings
- floor treatments
- curtain treatments
- built in cabinetry or fittings
- light fittings
- lamps
- picture framing
- trinkets
- ceramics
- trays
- vases
- carvings
- baskets
- pots
- plants
- candles
- clocks
- silverware
- mirrors
- frames
- screens
- floral displays
- haberdashery
- glassware
- fireplace items
- gifts
- hand crafts
- water features

- photographs
 - pottery
 - personal items
 - statues
 - book ends
 - bowls
 - bottles
- Drawings include:**
- hand drawn images or ideation drawings completed freehand
 - drafted technical drawings or drawings produced on computer using CAD software packages
 - elevations
 - sections
 - plans
 - perspectives
- Information and procedures include:**
- work instructions, including plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID5013A Design for small to medium scale commercial or institutional interiors.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFID5013 Design for small to medium scale commercial or institutional interiors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Design for at least (2) two interior small to medium scale commercial or institutional spaces to provide the client with creative solutions that satisfy the design brief and effectively applies design elements and principles in designing for commercial space
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Draw using manual and computer based techniques
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for commercial or institutional space
- Organisational and site standards, requirements, policies and procedures for designing for commercial or institutional space
- Australian Standards and the Building Code of Australia (BCA) relating to commercial or institutional interior design
- Environmental protection requirements relating to commercial or institutional interior design
- Established communication channels and protocols
- Relevant problem identification and resolution

- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Design themes and design development
- Colours, furnishings and decorations
- Sketching and drawing techniques to architectural drawing standards
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to designing for small to medium commercial or institutional spaces.

MSFID5014 Use CAD applications to complete models and documentation for interior design projects

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using computer-aided design (CAD) applications to produce models and documentation for interior decoration and design projects to meet client and project brief requirements. It applies to the development of 2-D and 3-D drawings that incorporate all standard practice notations and drawing protocols.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|----------------------------------|---|
| 1 Determine project requirements | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing with CAD applications are verified and complied with |
| | 1.2 Project brief is reviewed and confirmed |
| | 1.3 Parameters for the project are assessed and confirmed |
| | 1.4 Design concepts and details of design solution are examined to determine drawing requirements |
| | 1.5 Sketches, drawings and materials board are analysed |

- | | | |
|---|---|--|
| | 1.6 | Calculations and measurements are confirmed |
| | 1.7 | Documentation requirements for the design are clarified and confirmed |
| | 1.8 | Computing equipment and suitable software is selected and prepared for use |
| | 1.9 | Customised template created for individual workplace |
| 2 | Use CAD applications to produce 3-D model and documentation | 2.1 Layering strategy for project is designed, created and applied |
| | 2.2 | Architectural library is developed to acquire relevant design components |
| | 2.3 | Custom designed library parts are created |
| | 2.4 | Text, line, font and dimension styles are applied |
| | 2.5 | Pan, zoom and orbit tools are used to navigate in the 2-D and 3-D windows within the model |
| | 2.6 | Text and notations are added to the drawing in accordance with drawing protocols |
| | 2.7 | Dimensions are added to the drawing in accordance with drawing protocols |
| | 2.8 | 3-D detailed suite of rooms, complete with fenestration and doors is produced on appropriate layers |
| | 2.9 | Advanced features of drawing tools are used to generate 3-D form |
| 3 | Edit drawing components | 3.1 Editing tools are used to modify drawing elements and text |
| | 3.2 | Object properties are modified changed or transferred to a different layer |
| 4 | Render surfaces | 4.1 Library is used to assign materials to surfaces and objects of the model |
| | 4.2 | New material creations are explored |
| | 4.3 | Texture, transparency, luminescence and patterns are edited to achieve desired surface effects using shader settings |

- | | | |
|---|--|--|
| | 4.4 | Light fixtures are included in model and parameters adjusted to achieve desired effects |
| 5 | Create 3-D views of the model | 5.1 Isometric, two and three point perspective views are created using a range of camera settings and rendering techniques |
| | 5.2 | Camera or target is repositioned to provide alternate views using a variety of camera techniques |
| | 5.3 | Effect of natural and artificial lighting are created in 3-D space to achieve photo realistic awareness of the 3-D model and the effect of light on surfaces |
| | 5.4 | Rendering time considerations are examined to achieve specific output |
| 6 | Plot and print for final presentations | 6.1 Perspective views are saved and are appropriate for final media presentation |
| | 6.2 | Appropriate views are saved to meet requirements of brief |
| | 6.3 | Page layout is created for plotting and printing |
| | 6.4 | Page layout is prepared using saved views and documentation |
| | 6.5 | 2-D documentation is plotted with appropriate line weights |
| | 6.6 | Slide show presentation is prepared using saved views and documentation |
| 7 | Save and back up files | 7.1 Folders and files are created to store drawing projects |
| | 7.2 | Drawings are saved and filed to allow easy access according to workplace documentation system |
| | 7.3 | Appropriate techniques for reducing file size are identified and compared |
| | 7.4 | Copies of files are backed up |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements• work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills |
| Parameters include: | <ul style="list-style-type: none">• scope of brief• approval to make changes (legislative and planning)• effect or feel trying to be achieved• functionality (short and long term)• budget restrictions• established timelines |
| Details of design solution include: | <ul style="list-style-type: none">• products• materials• fixtures and finishes• dimensions• features• openings• furnishings and accessories• colour• effects and lighting• electrical sources |
| Documentation | <ul style="list-style-type: none">• site plans |

- requirements include:**
- floor plans
 - sections
 - elevations
 - projections
 - general notes
 - construction notes
 - area analysis
 - services
 - structures
 - location
 - neighbouring buildings
 - any other space or area addressed by interior designers
- Layering includes:**
- the use of different overlays to portray a range of applications, including:
 - architectural
 - civil
 - electrical
 - fire protection
 - general
 - landscaping
 - mechanical
 - plumbing
 - equipment or furnishings
 - structural
 - telecommunications
- Architectural library includes:**
- a catalogued reference of interior decoration and design components which can be uploaded into a model
- Pan, zoom and orbit tools include:**
- procedures for moving around the window and the ability to look closer or more broadly at certain components
- Drawing protocols include:**
- commonly used symbols
 - lettering standards
 - standard units of measurement
 - paper size
 - scale
 - numbering
 - legends
 - abbreviations
- Editing tools include:**
- tools which enable changing of:
 - components
 - sections

	<ul style="list-style-type: none">• text• measurements on a model
Rendering time considerations include:	<ul style="list-style-type: none">• global settings• quality settings and impact on rendering times• specific rendering quality issues
Appropriate views include:	<ul style="list-style-type: none">• sectional views• internal and external elevations• removal of wire frames and hidden lines• use of desired output settings
Information and procedures include:	<ul style="list-style-type: none">• work instructions, including plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

MSFID5015 Decorate interiors for restoration projects

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers specifying interior decoration solutions for restoration projects, including analysing the project brief, conducting research and developing solutions for the decoration of interiors, according to the conservation and heritage requirements of the building style and era.

It does not cover skills required for interior designs that require changes to established structural aspects of the building or to building services.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-----------------------------|---|
| 1 Analyse the project brief | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to decorating for residential spaces are verified and complied with |
| | 1.2 Project brief is reviewed, confirmed and clarified with client |

- 1.3 Parameters for the project are assessed and confirmed
 - 1.4 Resources are selected appropriate to work requirements and checked for operational effectiveness
 - 1.5 Communication with others is established and maintained
 - 1.6 Problems or underlying factors to be addressed by the project brief are verified
- 2 Conduct research on decoration requirements
 - 2.1 Site analysis is conducted to assess the requirements of the spaces requiring decoration
 - 2.2 Intended function of the space is ascertained from the client or project brief
 - 2.3 Style, era, theme and feature of the site are identified
 - 2.4 Issues relating to the conservation and heritage environment are identified and their implications for the project determined
 - 2.5 Environmental issues are identified and analysed
 - 2.6 Areas for research are identified to inform the decoration process
 - 2.7 Collected information is documented
- 3 Generate decoration solution
 - 3.1 Decoration concepts are generated and assessed against restoration requirements
 - 3.2 Decoration treatments are selected according to the needs of the restoration style and era
 - 3.3 Regulatory requirements relating to decoration are assessed to determine compliance
 - 3.4 Environmental aspects of decoration solution are examined and areas for improved sustainability are identified and incorporated where possible
 - 3.5 Conceptual approach is developed and clearly defined
 - 3.6 Concept is presented to client using a range of concept presentation methods
 - 3.7 Ideas are discussed with client and feedback received and analysed

- | | | |
|---|-----------------------------|---|
| | 3.8 | Concept is modified according to feedback |
| | 3.9 | Agreement on the concept is gained from the client |
| 4 | Prepare client presentation | <p>4.1 Preliminary drawings are developed with decoration treatment inclusions and positioning</p> <p>4.2 Final decoration solution is communicated effectively and creatively using a range of techniques and media</p> <p>4.3 Work is completed to plan and within restoration brief constraints</p> <p>4.4 Client feedback and response are analysed to determine success in achieving client satisfaction</p> <p>4.5 Own performance in the decoration process is examined to identify strengths and weaknesses</p> <p>4.6 Areas for improvement are identified</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation

- insurance requirements
 - work requires individual to demonstrate discretion, judgement and problem solving, plus self-management and learning skills
- Project brief includes:**
- client needs and objectives
 - client aims and objectives, and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timeline
 - consultation requirements
 - colour requirements
- Clients include:**
- suppliers
 - manufacturers
 - private clients
 - colleagues
 - retailers
 - the public
- Parameters include:**
- scope of brief
 - approval to make changes
 - effect or feel trying to be achieved
 - functionality (short and long term)
 - budget restrictions
 - established timelines
- Resources include:**
- computers
 - computer software
 - design software
 - computer-aided design (CAD) software
 - colour boards
 - storyboards
 - swatches
 - product based colour systems, such as Munsell or similar
 - colour matching system, such as Pantone Matching System (PMS)
 - journals (directions magazines)
 - artistic equipment and products
 - model making equipment
- Site analysis includes:**
- a visit to the site to achieve a feel for the intention of the project brief and how services may be affected by it, identifying constraints of site, and recording information

	and taking photos
Issues relating to the conservation and heritage environment include:	<ul style="list-style-type: none">• building standards• safety standards• guidelines relating to the specific commercial use• size• access• flexibility of structural changes• decision-making processes• electricity supply• services available• building conditions• other occupancy• lease conditions• conservation orders and conditions• compatibility and matching of new and old materials• protection and conservation of features
Areas for research include:	<ul style="list-style-type: none">• products and typologies of the style and era• materials used in architecture of the style and era• social and cultural influences• site conditions• functional requirements
Documentation includes:	<ul style="list-style-type: none">• working notes• hand written records• typed information and reports• diagrams• sketches• tables• matrixes• images• visual essays
Decoration treatments include:	<ul style="list-style-type: none">• furniture• soft furnishings• floor treatments• curtain treatments• bed covers• built in cabinetry or fittings• light fittings• lamps• picture framing• trinkets• ceramics

- trays
- vases
- carvings
- baskets
- pots
- plants
- candles
- clocks
- silverware
- mirrors
- frames
- screens
- floral displays
- haberdashery
- glassware
- fireplace items
- gifts
- hand crafts
- water features
- photographs
- pottery
- personal items
- statues
- book ends
- bowls
- bottles

Materials include:

- solid timber (native and imported)
- manufactured timber products
- plastic
- metal
- alloys
- stone
- glass
- textiles
- fibreglass
- foam
- cardboard
- paper products
- any other manipulable substance

Finishes include:

- paints
- waxes
- lacquers

	<ul style="list-style-type: none">• stains• pigments• oils• plastic coatings• veneers• ceramics• stone• glass• textiles• other textures• colours and effects
Environmental implications include:	<ul style="list-style-type: none">• how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from• energy consumption in achieving the material• greenhouse gases created• waste levels• resource utilisation and transport effects• what impact will be felt by reducing or stopping material from the source
Concept presentation methods include:	<ul style="list-style-type: none">• fully rendered 3-D CAD drawings• mood boards• concept boards• 3-D models• sketches• photos
Drawings include:	<ul style="list-style-type: none">• hand drawn images or ideation drawings completed freehand• drafted technical drawings or drawings produced on computer using CAD software packages (these usually contain project specifications)• elevations• sections• plans• perspectives
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• work instructions, including plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

MSFID6001 Resolve complex spatial design problems through modelling

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers extending, developing and resolving complex spatial design problems to develop and refine a conceptual model and inform design work through experimentation with a range of spatial modelling techniques. It includes managing and organising resource requirements for new work and realising a fully resolved interior scheme through modelling.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Adapt and develop concepts as a result of design research | 1.1 Criteria are established that are most likely to facilitate the achievement of the conceptual vision |
| | 1.2 Consultation is conducted with colleagues to develop conceptual thinking approaches |
| | 1.3 A range of spatial problems are examined to determine suitable approaches |
| | 1.4 Relevant ideas and approaches are researched, adapted and incorporated from other practitioners |

- | | | | |
|---|--|-----|--|
| 2 | Visualise design concepts using a range of modelling techniques | 2.1 | Capabilities of a range of 2-D conceptual notions are extended through 3-D modelling |
| | | 2.2 | The conceptual vision is refined based on ongoing experimentation using sophisticated modelling techniques |
| | | 2.3 | A sophisticated concept model appropriate to the brief is presented to the client and feedback evaluated |
| 3 | Manage and organise resource requirements for new work | 3.1 | Materials, tools, equipment and computer-aided design (CAD) applications are researched for the achievement of different 3-D effects |
| | | 3.2 | Resource requirements that arise from the use of techniques and experimental approaches are determined and organised for new work |
| | | 3.3 | Critical path is determined, projecting completion dates of each stage of the project |
| 4 | Develop extend and resolve spatial ideas through modelling | 4.1 | Experimentation is undertaken with a range of modelling techniques to explore and develop complex 3-D notions |
| | | 4.2 | Design elements and principles are applied and manipulated to assist in design development |
| | | 4.3 | Scale, volume and proportion are explored and manipulated as part of a design development process |
| | | 4.4 | A range of models are developed by hand or using CAD applications to revise and refine spatial ideas |
| 5 | Present a fully resolved interior space using sophisticated modelling techniques | 5.1 | Modelling technique is selected to meet the established criteria |
| | | 5.2 | Appropriate scale is selected to meet brief criteria |
| | | 5.3 | Resolved spatial ideas are accurately represented to scale |
| | | 5.4 | Materials and textures are accurately represented to scale |
| | | 5.5 | Construction, detailing and finishes are resolved and demonstrated through sophisticated modelling |
| | | 5.6 | Detailed model is presented to client and feedback evaluated |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements

- Spatial problems include:**
- voids
 - apertures
 - thresholds
 - atriums
 - vertical and horizontal circulation systems
 - public spaces
 - multi-level spaces
 - mezzanines
 - transitional spaces
 - staircases
 - ceiling planes

- Design elements and principles include:**
- balance
 - similarity
 - texture
 - contrast
 - size
 - ground
 - volume
 - composition
 - orientation

- form
- structure
- 2-D space
- position
- proportion
- 3-D space
- repetition
- scale
- line
- rhythm
- pattern
- point
- symmetry
- tone
- plane

Unit Mapping Information

Supersedes and is equivalent to LMFID6001A Resolve complex spatial design problems through modelling.

Assessment Requirements for MSFID6001 Resolve complex spatial design problems through modelling

Modification History

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Use, apply and experiment with modelling techniques to explore a design solution and apply individual creativity to modelling
- Fully resolve a final design solution using modelling techniques effectively applying design elements and principles to models
- Use mathematical ideas and techniques to correctly complete measurements, make calculations, estimate material requirements and cost work
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems through models
- Establish a personal work methodology
- Visualise 2-D notions into 3-D space and form
- Manipulate a range of relevant computer software programs
- Display critical evaluation skills, creativity, innovation, research skills and independent thinking
- Experiment in both the planning of projects and methods of execution
- Present design ideas
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for modelling
- Organisational and site standards, requirements, policies and procedures for modelling
- Elements and principles of design including liveability and accessibility
- Spatial concepts
- Concept modelling techniques
- Mass modelling techniques

- Detailed modelling techniques
- Model making techniques
- 3-D visualisation techniques, such as computer modelling
- Features and uses of White models
- Features and uses of Maquettes
- Scale for design modelling
- Proportion and proportioning systems
- Structures in design contexts
- Modular systems and repeats
- Advanced 3-D geometry
- Design process and progression of ideas
- Environmental protection considerations for interior design
- Established communication channels and protocols
- Relevant problem identification and resolution techniques
- Design communication techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to resolving complex spatial design problems through modelling.

MSFID6002 Apply 3-D visualisation techniques to represent interior designs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using 3-D computer visualisation techniques to represent designs for interior environments using computer program applications commonly used to create 3-D visualisation representations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------|--|
| 1 Analyse project | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to producing visual representations are verified and complied with |
| | 1.2 Project brief is reviewed, confirmed and clarified with client |
| | 1.3 Parameters for the project are assessed and confirmed |
| | 1.4 Resources are selected appropriate to work requirements and checked for operational effectiveness |
| | 1.5 Communication with relevant personnel is established and maintained as required |

2	Select rendering application	2.1	Features of rendering software packages used in interior design and decoration visualisations are identified and uses determined
		2.2	Rendering requirements are determined from project documentation
		2.3	Rendering software with capability to achieve desired effects within the project timeframe and budget is selected
		2.4	Equipment and media are assessed as suitable for software and the achievement of desired effects
		2.5	Planning tasks are undertaken to prepare for rendering
3	Apply rendering functions	3.1	Image resolutions are selected and applied to meet project requirements
		3.2	Image aspect ratio is selected and applied
		3.3	Pixel ratio is selected and applied
		3.4	Renderer attributes are adjusted to obtain desired visual effects
4	Check render integrity and quality	4.1	Render integrity is tested and refined
		4.2	Missing images and textures are identified and re-linked as required
		4.3	Render times for optimising process are tested
		4.4	Alpha channels and opacity matts are tested
		4.5	Render layers and passes are tested
5	Optimise images for render processes	5.1	All relevant pre-rendering optimisations tasks are completed
		5.2	Renderer attributes are adjusted and refined to optimise render time
		5.3	Appropriate file output format is selected
		5.4	Appropriate file names and output destinations are selected
6	Render image	6.1	Final rendering processes are undertaken and completed

- 6.2 Files are stored and archived
- 6.3 Completed render is reviewed to ensure compliance with system and client requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFID6002 Apply 3-D visualisation techniques to represent interior designs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Design and apply rendering tasks using and refining render components for best performance
- Store rendered components in an organised manner for further use
- Use mathematical ideas and techniques to correctly complete measurements, make calculations, estimate material requirements and cost work
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Establish a personal work methodology
- Build models to scale and create effects, such as lighting, shading, rendering and texturing, using software programs
- Visualise 2-D notions into 3-D space and form
- Manipulate a range of relevant computer software programs
- Display critical evaluation skills, creativity, innovation, research skills and independent thinking
- Experiment in both the planning of projects and methods of execution
- Present design ideas
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for rendering processes
- Organisational and site standards, requirements, policies and procedures for rendering
- Elements and principles of design, including liveability and accessibility
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance

- Design themes and design development
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to producing digital presentations for interior design projects.

MSFID6003 Design for large scale commercial or institutional interiors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying researched information to formulate creative and complex design solutions to large scale commercial or institutional interior design situations satisfying the physiological, psychological, social, cultural, technical and environmental requirements of the brief.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.						
1 Analyse the project brief	<table><tr><td>1.1</td><td>Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for large scale commercial or institutional spaces are verified and complied with</td></tr><tr><td>1.2</td><td>Project brief is reviewed, confirmed and clarified with client</td></tr><tr><td>1.3</td><td>Key requirements for the project are assessed and</td></tr></table>	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for large scale commercial or institutional spaces are verified and complied with	1.2	Project brief is reviewed, confirmed and clarified with client	1.3	Key requirements for the project are assessed and
1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for large scale commercial or institutional spaces are verified and complied with						
1.2	Project brief is reviewed, confirmed and clarified with client						
1.3	Key requirements for the project are assessed and						

- confirmed and constraints determined
- 1.4 Resources are selected appropriate to work requirements and checked for operational effectiveness
 - 1.5 Communication with others in the design project is established and maintained
 - 1.6 Relevant research is conducted to gain all information which may be used to inform the design process
 - 1.7 All required information is accessed and interpreted to inform the design process
- 2 Conduct project research
- 2.1 Site analysis is conducted to assess the requirements of the spaces requiring work
 - 2.2 Intended function of the space is ascertained from the client
 - 2.3 Contextual information relating to the brief is researched and evaluated
 - 2.4 Functional and planning issues are determined specific to the site and client requirements
 - 2.5 Issues relating to the commercial or institutional environment are identified and their implications for the design project determined
 - 2.6 Research material is organised and presented in the form of a design proposal
 - 2.7 Project is planned to make effective use of time and available resources
- 3 Develop design concepts
- 3.1 Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the design brief
 - 3.2 Concepts are presented through sketches, mood boards, concept boards and concept models
 - 3.3 Viability of concepts are assessed in conjunction with others
 - 3.4 Environmental aspects of the project are assessed and design concepts reviewed to ensure maximum energy efficiency achieved in solution
 - 3.5 Access issues relating the project are identified and

		addressed in design solution
4	Design the space	<p>4.1 Ideas are translated into 3-D space satisfying functional criteria</p> <p>4.2 Evidence of 3-D notions are explored through modelling</p> <p>4.3 Idea with the greatest potential for success is presented to promote the design's acceptance using both 2-D and 3-D representations</p> <p>4.4 Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined</p> <p>4.5 A materials palette is selected to enhance spatial ideas</p> <p>4.6 Design is modified in response to critical feedback without losing integrity of the design intention</p>
5	Revise and refine solution	<p>5.1 Ergonomic and anthropometric principles are assessed in respect to the space and the intended products</p> <p>5.2 Spatial planning is further revised and resolved in response to client feedback</p> <p>5.3 Materials, colours, finishes, fixtures and fittings are selected appropriate to the concept and brief parameters</p> <p>5.4 Feedback is received through consultation with the client and incorporated into design solution</p>
6	Prepare a fully rendered client presentation	<p>6.1 Resource requirements are identified for presentation</p> <p>6.2 Final design solution is communicated effectively and creatively using a range of techniques and media</p> <p>6.3 Documentation drawings and material selections are prepared that are consistent with, and that best communicate, the design intent</p> <p>6.4 Work is completed to plan and within brief constraints</p> <p>6.5 Client feedback and response is analysed to determine success in achieving client satisfaction</p> <p>6.6 Own performance in the design process is examined to identify strengths and weaknesses</p> <p>6.7 Areas for improvement are identified</p>

Site analysis includes:	<ul style="list-style-type: none">• a visit to the site to achieve a feel for the intention of the project brief and how services may be affected by it, identifying constraints of site, and recording information and taking photos
Issues relating to the commercial or institutional environment include:	<ul style="list-style-type: none">• building standards• safety standards• guidelines relating to the specific commercial or institutional use• size• access

Environmental implications include:

- flexibility of structural changes
- decision making processes
- electricity supply
- services available
- building conditions
- other occupancy and lease conditions
- how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from
- energy consumption in achieving the material
- greenhouse gases created
- waste levels
- resource utilisation and transport effects
- what impact will be felt by reducing or stopping material from the source

Materials include:

- solid timber (native and imported)
- manufactured timber products
- plastic
- metal
- alloys
- stone
- glass
- textiles
- fibreglass
- foam
- cardboard
- paper products
- any other manipulable substance

Colours include:

- colour principles
- psychology
- fundamentals
- coordination
- perception
- language
- tonal
- translucent
- contrast
- harmony
- effects on space
- formulas
- colour wheels

Finishes include:

- paints
- waxes
- lacquers
- stains
- pigments
- oils
- plastic coatings
- veneers
- ceramics
- stone
- glass
- textiles
- other textures

Fixtures, fittings and accessories include:

- furniture
- soft furnishings
- floor treatments
- curtain treatments
- built in cabinetry or fittings
- light fittings
- lamps
- picture framing
- trinkets
- ceramics
- trays
- vases
- carvings
- baskets
- pots
- plants
- candles
- clocks
- silverware
- mirrors
- frames
- screens
- floral displays
- haberdashery
- glassware
- fireplace items
- gifts
- hand crafts
- water features

- photographs
 - pottery
 - personal items
 - statues
 - book ends
 - bowls
 - bottles
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- work instructions, including plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFID6003A Design for large scale commercial or institutional interiors.

Assessment Requirements for MSFID6003 Design for large scale commercial or institutional interiors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Design for a multi-purpose large scale commercial or institutional space to provide the client with creative solutions that satisfy the design brief effectively applying design elements and principles
- Use mathematical ideas and techniques to correctly complete measurements, make calculations, estimate material requirements and cost work
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Establish a personal work methodology
- Visualise 2-D notions into 3-D space and form
- Manipulate a range of relevant computer software programs
- Display critical evaluation skills, creativity, innovation, research skills and independent thinking
- Experiment in both the planning of projects and methods of execution
- Present design ideas
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for commercial or institutional space
- Organisational and site standards, requirements, policies and procedures for designing for commercial or institutional space
- Australian Standards and the Building Code of Australia (BCA)
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Design themes and design development
- Colours, furnishings and decorations
- Sketching and drawing techniques to architectural drawing standards
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Regulations, conditions and variables relating to the specific commercial context

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to designing for large scale commercial or institutional interiors.

MSFID6004 Design interiors for hospitality environments

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying researched information to formulate creative and complex interior design solutions to hospitality environments, such as commercial kitchens, bars, restaurants, hotels and function centres, satisfying the physiological, psychological, social, cultural and environmental requirements of the brief.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Analyse the project brief	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for hospitality environments are verified and complied with
		1.2	Project brief is reviewed, confirmed and clarified with client
		1.3	Key requirements for the project are assessed and confirmed and constraints determined
		1.4	Resources are selected appropriate to work requirements

- and checked for operational effectiveness
- 1.5 Communication with others in the design project is established and maintained
 - 1.6 Relevant research is conducted to gain all information which may be used to inform the design process
 - 1.7 All required information is accessed and interpreted to inform the design process
- 2 Conduct project research
- 2.1 Site analysis is conducted to assess the requirements of the spaces requiring work
 - 2.2 Intended function of the space is ascertained from the client
 - 2.3 Contextual information relating to the brief is researched and evaluated
 - 2.4 Functional and planning issues are determined specific to the site and client requirements
 - 2.5 Issues relating to the hospitality environment are identified and their implications for the design project determined
 - 2.6 Research material is organised and presented in the form of a design proposal
 - 2.7 Project is planned to make effective use of time and available resources
- 3 Develop design concepts
- 3.1 Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the design brief
 - 3.2 Concepts are presented through sketches, mood boards, concept boards and concept models
 - 3.3 Viability of concepts are assessed in conjunction with others
 - 3.4 Environmental aspects of the project are assessed and design concepts reviewed to ensure maximum energy efficiency is achieved in solution
 - 3.5 Access issues relating the project are identified and addressed in design solution
- 4 Design the space
- 4.1 Ideas are translated into 3-D space satisfying functional

		criteria
	4.2	Evidence of 3-D notions are explored through modelling
	4.3	Idea with the greatest potential for success is presented to promote the design's acceptance using both 2-D and 3-D representations
	4.4	Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined
	4.5	A materials palette is selected to enhance spatial ideas
	4.6	Design is modified in response to critical feedback without losing integrity of the design intention
	4.7	Ideas are translated into 3-D space satisfying functional criteria
5	Revise and refine solution	
	5.1	Ergonomic and anthropometric principles are assessed in respect to the space and the intended products
	5.2	Spatial planning is further revised and resolved in response to client feedback
	5.3	Materials, colours, finishes, fixtures and fittings are selected appropriate to the concept and brief parameters
	5.4	Feedback is received through consultation with the client and incorporated into design solution
6	Prepare a fully rendered client presentation	
	6.1	Resource requirements are identified for presentation
	6.2	Final design solution is communicated effectively and creatively using a range of techniques and media
	6.3	Documentation drawings and material selections are prepared that are consistent with, and that best communicate, the design intent
	6.4	Work is completed to plan and within brief constraints
	6.5	Client feedback and response is analysed to determine success in achieving client satisfaction
	6.6	Own performance in the design process is examined to identify strengths and weaknesses
	6.7	Areas for improvement are identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for MSFID6004 Design interiors for hospitality environments

Modification History

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Design for a multi-purpose hospitality site to provide the client with creative solutions that satisfy the design brief effectively applying design elements and principles
- Use mathematical ideas and techniques to correctly complete measurements, make calculations, estimate material requirements and cost work
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Establish a personal work methodology
- Visualise 2-D notions into 3-D space and form
- Manipulate a range of relevant computer software programs
- Display critical evaluation skills, creativity, innovation, research skills and independent thinking
- Experiment in both the planning of projects and methods of execution
- Present design ideas
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for hospitality spaces
- Organisational and site standards, requirements, policies and procedures for designing for hospitality spaces
- Australian Standards and the Building Code of Australia (BCA)
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution
- Elements and principles of design including liveability and accessibility

- Creativity and artistic relevance
- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Design themes and design development
- Colours, furnishings and decorations
- Sketching and drawing techniques to architectural drawing standards
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Regulations, conditions and variables relating to the specific commercial context

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to designing for hospitality environments.

MSFID6005 Design for retail interiors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying researched information to formulate creative and complex interior design solutions to retail environments, such as large department stores or supermarkets, satisfying the physiological, psychological, social, cultural and environmental requirements of the brief.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.								
1 Analyse the project brief	<table><tr><td>1.1</td><td>Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for retail environments are verified and complied with</td></tr><tr><td>1.2</td><td>Project brief is reviewed, confirmed and clarified with client</td></tr><tr><td>1.3</td><td>Key requirements for the project are assessed and confirmed and constraints determined</td></tr><tr><td>1.4</td><td>Resources are selected appropriate to work requirements</td></tr></table>	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for retail environments are verified and complied with	1.2	Project brief is reviewed, confirmed and clarified with client	1.3	Key requirements for the project are assessed and confirmed and constraints determined	1.4	Resources are selected appropriate to work requirements
1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for retail environments are verified and complied with								
1.2	Project brief is reviewed, confirmed and clarified with client								
1.3	Key requirements for the project are assessed and confirmed and constraints determined								
1.4	Resources are selected appropriate to work requirements								

- and checked for operational effectiveness
- 1.5 Communication with others in the design project is established and maintained
 - 1.6 Relevant research is conducted to gain all information which may be used to inform the design process
 - 1.7 All required information is accessed and interpreted to inform the design process
- 2 Conduct project research
- 2.1 Site analysis is conducted to assess the requirements of the spaces requiring work
 - 2.2 Intended function of the space is ascertained from the client
 - 2.3 Contextual information relating to the brief is researched and evaluated
 - 2.4 Functional and planning issues are determined specific to the site and client requirements
 - 2.5 Issues relating to the retail environment are identified and their implications for the design project determined
 - 2.6 Research material is organised and presented in the form of a design proposal
 - 2.7 Project is planned to make effective use of time and available resources
- 3 Develop design concepts
- 3.1 Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the design brief
 - 3.2 Concepts are presented through sketches, mood boards, concept boards and concept models
 - 3.3 Viability of concepts are assessed in conjunction with others
 - 3.4 Environmental aspects of the project are assessed and design concepts reviewed to ensure maximum energy efficiency is achieved in solution
 - 3.5 Access issues relating the project are identified and addressed in design solution
- 4 Design the space
- 4.1 Ideas are translated into 3-D space satisfying functional criteria

- 4.2 Evidence of 3-D notions are explored through modelling
 - 4.3 Idea with the greatest potential for success is presented to promote the design's acceptance using both 2-D and 3-D representations
 - 4.4 Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined
 - 4.5 A materials palette is selected to enhance spatial ideas
 - 4.6 Design is modified in response to critical feedback without losing integrity of the design intention
- 5 Revise and refine solution
 - 5.1 Ergonomic and anthropometric principles are assessed in respect to the space and the intended products
 - 5.2 Spatial planning is further revised and resolved in response to client feedback
 - 5.3 Materials, colours, finishes, fixtures and fittings are selected appropriate to the concept and brief parameters
 - 5.4 Feedback is received through consultation with the client and incorporated into design solution
- 6 Prepare a fully rendered client presentation
 - 6.1 Resource requirements are identified for presentation
 - 6.2 Final design solution is communicated effectively and creatively using a range of techniques and media
 - 6.3 Documentation drawings and material selections are prepared that are consistent with, and that best communicate, the design intent
 - 6.4 Work is completed to plan and within brief constraints
 - 6.5 Client feedback and response is analysed to determine success in achieving client satisfaction
 - 6.6 Own performance in the design process is examined to identify strengths and weaknesses
 - 6.7 Areas for improvement are identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

MSFID6006 Design for conservation and restoration projects

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying researched information to formulate creative and complex design solutions to conservation and restoration projects satisfying the physiological, psychological, social, cultural and environmental requirements of the brief and in accordance with heritage style and conservation conditions.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking interior decoration and design work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Analyse the project brief	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to designing for conservation and heritage projects are verified and complied with
		1.2	Project brief is reviewed, confirmed and clarified with client
		1.3	Key requirements for the project are assessed and confirmed and constraints determined

- 1.4 Resources are selected appropriate to work requirements and checked for operational effectiveness
 - 1.5 Communication with others in the design project is established and maintained
 - 1.6 Relevant research is conducted to gain all information which may be used to inform the design process
 - 1.7 All required information is accessed and interpreted to inform the design process
- 2 Conduct project research
 - 2.1 Site analysis is conducted to assess the requirements of the spaces requiring work
 - 2.2 Intended function of the space is ascertained from the client
 - 2.3 Contextual information relating to the brief is researched and evaluated
 - 2.4 Functional and planning issues are determined specific to the site and client requirements
 - 2.5 Issues relating to the conservation and heritage environment are identified and their implications for the design project determined
 - 2.6 Research material is organised and presented in the form of a design proposal
 - 2.7 Project is planned to make effective use of time and available resources
- 3 Develop design concepts
 - 3.1 Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the design brief
 - 3.2 Concepts are presented through sketches, mood boards, concept boards and concept models
 - 3.3 Viability of concepts are assessed in conjunction with others
 - 3.4 Environmental aspects of the project are assessed and design concepts reviewed to ensure maximum energy efficiency is achieved in solution
 - 3.5 Access issues relating the project are identified and addressed in design solution

- | | | | |
|---|--|-----|--|
| 4 | Design the space | 4.1 | Ideas are translated into 3-D space satisfying functional criteria |
| | | 4.2 | Evidence of 3-D notions are explored through modelling |

Assessment Requirements for MSFID6006 Design for conservation and restoration projects

Modification History

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Design for a conservation and restoration project to provide the client with creative solutions that satisfy the design brief effectively applying design elements and principles in designing for conservation and restoration
- Use mathematical ideas and techniques to correctly complete measurements, make calculations, estimate material requirements and cost work
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Establish a personal work methodology
- Visualise 2-D notions into 3-D space and form
- Manipulate a range of relevant computer software programs
- Display critical evaluation skills, creativity, innovation, research skills and independent thinking
- Experiment in both the planning of projects and methods of execution
- Present design ideas
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for conservation and restoration
- Organisational and site standards, requirements, policies and procedures for designing for conservation and restoration
- Australian Standards and the Building Code of Australia (BCA)
- Heritage and conservations regulations and conditions
- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance

- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Conservation and restoration design themes and design development
- Conservation and restoration of furnishings, soft furnishings and decorations
- Sketching and drawing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to designing for conservation and restoration projects.

MSFID6007 Select and instruct consultants and contractors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting and instructing consultants and contractors for all aspects of the project in the solution of interior design projects and in accordance with project briefs that apply to a retail, consulting or design and decoration studio environment and involves application of skills and knowledge at a managerial level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------------------------------|--|
| 1 Analyse the project brief | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to selecting and instructing consultants and contractors are verified and complied with |
| | 1.2 Project brief is reviewed, confirmed and clarified with client |
| | 1.3 Key requirements for the project are assessed and confirmed and parameters determined |
| | 1.4 Resources are selected appropriate to work requirements and checked for operational effectiveness |

- | | | | |
|---|--------------------------------------|-----|--|
| | | 1.5 | Communication with others in the design project is established and maintained |
| | | 1.6 | Relevant research is conducted to gain all information which may be used to inform the selection process |
| | | 1.7 | All required information is accessed and interpreted to inform the selection process |
| 2 | Select consultants and contractors | 2.1 | Consultants are selected to assist with project design information |
| | | 2.2 | Contractors are selected to undertake decorating, building or services work |
| | | 2.3 | Consultants and contractors are contracted to undertake the negotiated work |
| | | 2.4 | Insurances necessary in the engaging of contractors and consultants are obtained |
| 3 | Instruct consultants and contractors | 3.1 | Consultants and contractors are communicated with to specify the requirements of the project brief, costing, quotes and the schedule |
| | | 3.2 | Timelines and restrictions are agreed with consultants and contractors |
| | | 3.3 | Budget constraints for consultants and contractors are set and adhered to in accordance with the project schedule |
| | | 3.4 | Design specifications and constraints for consultants and contractors are set and adhered to in accordance with the project brief |
| | | 3.5 | WHS policies and procedures are transmitted to consultants and contractors and adhered to |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
- Project brief includes:**
- client needs and objectives
 - client aims and objectives, and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timeline
 - consultation requirements
 - colour requirements
- Clients include:**
- suppliers
 - manufacturers
 - private clients
 - retailers
- Parameters include:**
- scope of brief
 - approval to make changes (legislative and planning)
 - effect or feel trying to be achieved
 - functionality (short and long term)
 - budget restrictions
 - established timelines
- Resources include:**
- computers
 - computer software
 - design software
 - computer-aided design (CAD) software
 - colour boards
 - storyboards
 - swatches

	<ul style="list-style-type: none">• product based colour systems, such as Munsell or similar• colour matching system, such as Pantone Matching System (PMS)• journals (directions magazines)• artistic equipment and products• model making equipment
Relevant research includes:	<ul style="list-style-type: none">• internet searches• phone/personal liaison• interviews• applications
Information includes:	<ul style="list-style-type: none">• contractor and consultant reputations and outcomes• contractor and consultant prices• required insurances• work schedules• budget and payments• required skills• available skills
Consultants include:	<ul style="list-style-type: none">• builders• architects• engineers• decorators• designers
Contractors include:	<ul style="list-style-type: none">• builders• painters• tilers• carpet/flooring layers and sanders• cabinetmakers• curtain and soft furnishing makers• picture framers• electricians• plumbers• plasterers
Contracts include:	<ul style="list-style-type: none">• methods of securing agreement between parties
Insurances include:	<ul style="list-style-type: none">• professional indemnity• public liability• income protection• third-party, comprehensive, building and contents insurance• workers compensation• any other legally prescribed insurance
Engaging includes:	<ul style="list-style-type: none">• hire or appointment of the contractors by direct engagement or for engagement by the client

- Schedules include:**
 - detailed descriptions of which materials, products, finishes and accessories will be selected, and how they will be applied
- Timelines include:**
 - the agreed project time span set and agreed for the project
- Restrictions include:**
 - laws, regulations or policies which may affect a project or those working on it, such as:
 - local government planning approval
 - work site entry legislation
 - licensing
 - heritage laws
- Budgets include:**
 - the amount of funds the client has available to complete the project
- Specifications include:**
 - the measurements, procedures by which a product is constructed and materials to be utilised

Assessment Requirements for MSFID6007 Select and instruct consultants and contractors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Select and instruct consultants and contractors to complete a project in accordance with the project brief and schedule effectively applying quality and authorised procedures
- Use mathematical ideas and techniques to correctly complete measurements, make calculations, estimate material requirements and cost work
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Establish a personal work methodology
- Display critical evaluation skills, creativity, innovation, research skills and independent thinking
- Present design ideas
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for selecting and instructing consultants and contractors
- Organisational and site standards, requirements, policies and procedures for selecting and instructing consultants and contractors
- Australian Standards and the Building Code of Australia (BCA)
- Contract management
- Contractor and consultant types and management
- Types of equipment and procedures for their safe use, operation and maintenance
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements

- Established communication channels and protocols
- Relevant problem identification and resolution techniques
- Project management techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.

MSFID6008 Evaluate design project outcomes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers evaluating design project outcomes, including all aspects of the project against the requirements of the project brief, to make comparative judgements against evaluation criteria.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify evaluation criteria	1.1	Project brief is analysed to determine key design requirements
	1.2	Problems or underlying factors to be addressed by the project brief are verified
	1.3	Communication requirements are identified for the project
	1.4	Current industry design trends relating to project brief are researched and identified
	1.5	Workplace and industry standards in relation to design presentation are researched and identified
	1.6	Quality criteria that apply to design processes are

		researched and identified																
	1.7	Evaluation criteria are identified																
2	Apply evaluation criteria	<table><tr><td>2.1</td><td>Drawings, mood boards and all associated documentation are examined to identify all features of the finished design</td></tr><tr><td>2.2</td><td>Finished design is evaluated against original design concept</td></tr><tr><td>2.3</td><td>The design and all specifications are evaluated against project brief to check consistency</td></tr><tr><td>2.4</td><td>The design is evaluated to identify how well elements and principles of design have been applied</td></tr><tr><td>2.5</td><td>The design is evaluated for consistency with current industry trends and influences</td></tr><tr><td>2.6</td><td>The design is evaluated to ensure client suitability, including adherence to time and budget requirements</td></tr><tr><td>2.7</td><td>The design is evaluated for quality and innovative elements</td></tr><tr><td>2.8</td><td>Processes engaged to develop finished design are evaluated for effectiveness in achieving final outcomes</td></tr></table>	2.1	Drawings, mood boards and all associated documentation are examined to identify all features of the finished design	2.2	Finished design is evaluated against original design concept	2.3	The design and all specifications are evaluated against project brief to check consistency	2.4	The design is evaluated to identify how well elements and principles of design have been applied	2.5	The design is evaluated for consistency with current industry trends and influences	2.6	The design is evaluated to ensure client suitability, including adherence to time and budget requirements	2.7	The design is evaluated for quality and innovative elements	2.8	Processes engaged to develop finished design are evaluated for effectiveness in achieving final outcomes

Assessment Requirements for MSFID6008 Evaluate design project outcomes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Evaluate three (3) design project outcomes, including one (1) residential and one (1) commercial design, against project brief and additional evaluation criteria effectively applying design elements and principles
- Use mathematical ideas and techniques to correctly complete measurements, make calculations, estimate material requirements and cost work
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Establish a personal work methodology
- Visualise 2-D notions into 3-D space and form
- Manipulate a range of relevant computer software programs
- Display critical evaluation skills, creativity, innovation, research skills and independent thinking
- Experiment in both the planning of projects and methods of execution
- Present design ideas
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for evaluating design project outcomes
- Organisational and site standards, requirements, policies and procedures for evaluating design project outcomes
- Australian Standards and the Building Code of Australia (BCA) applying to interior design
- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance

- Ergonomics, anthropometrics, proxemics and aesthetic values
- Characteristics of materials, products and defects
- Design themes and design development
- Colours, furnishings and decorations
- Product, material and finish types and descriptions
- Evaluation and reflective practice techniques
- Sketching and drawing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to evaluating design project outcomes.

MSFID6009 Produce digital presentations for commercial projects

Modification History

Release 2 - Prerequisite for MSFID6009 reinstated due to transfer error. No change in outcomes.

Release 1 - New unit of competency

Application

This unit of competency covers preparing, producing and presenting commercial project digital presentations for the promotion and marketing of design services, for the solution of interior decoration and design projects and in accordance with project briefs. It applies to a retail, consulting or design and decoration studio environment and involves application of skills and knowledge at a managerial level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSFID5014	Use CAD applications to complete models and documentation for interior design projects
-----------	--

Competency Field

Unit Sector

Interior Decoration and Design

Elements and Performance Criteria

Elements describe the essential outcomes.

1	Assess project presentation requirements
---	--

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to producing digital presentations for commercial projects are verified and complied with
-----	---

- 1.2 Project brief is reviewed and clarified with client to determine presentation requirements
 - 1.3 Parameters for the project are assessed and confirmed
 - 1.4 Resources are selected appropriate to work requirements and checked for operational effectiveness
 - 1.5 Communication with others is established and maintained
- 2 Prepare for digital presentation
 - 2.1 Space is measured to obtain all dimensions and specifications
 - 2.2 Placement of products and accessories are examined and planned together with application of finishes
 - 2.3 Spatial organisation of the area is assessed and planned in accordance with intended use
 - 2.4 Options for digital presentation solutions are explored
 - 2.5 Concept presentation is prepared and discussion of ideas and themes negotiated with client and other stakeholders
- 3 Produce digital presentation
 - 3.1 Digital presentation options are assessed and compared
 - 3.2 Project-specific digital methodologies are developed
 - 3.3 Personal or business promotional strategies are developed
 - 3.4 Electronic business files and financial tools are managed and used to assist in the development of the presentation
 - 3.5 Final digital presentation is produced and finalised in readiness for the client demonstration
- 4 Present digital demonstration
 - 4.1 Presentation methodology is developed and prepared
 - 4.2 Digital strategies are presented to the client, selling the attributes of the design solution
 - 4.3 Sketches, perspective drawings, axonometrics and schedules are electronically presented to support the presentation
 - 4.4 Materials and product schedules are produced and included in the developed design statement and digital presentation

- 4.5 Floor plan and elevations are produced to portray placement of products and specify finishes using rendering techniques and portrayed digitally
- 4.6 Presentation of digital information is supported using colour boards and working drawings

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures, Liveable and Accessible Housing Design guidelines, and organisation insurance requirements
- Project brief includes:**
- client needs and objectives
 - client aims and objectives, and criteria for evaluation
 - milestones
 - organisational or personal profiles and aims
 - image requirements and function
 - target market
 - budget
 - timeline
 - consultation requirements
 - colour requirements

Clients include:	<ul style="list-style-type: none">• suppliers• manufacturers• private clients• colleagues• retailers• the public
Parameters include:	<ul style="list-style-type: none">• scope of brief• approval to make changes (legislative and planning)• effect or feel trying to be achieved• functionality (short and long term)• budget restrictions• established timelines
Resources include:	<ul style="list-style-type: none">• computers• computer software• design software• computer-aided design (CAD) software• colour boards• storyboards• swatches• product based colour systems, such as Munsell or similar• colour matching system, such as Pantone Matching System (PMS)• journals (directions magazines)• artistic equipment and products• model making equipment
Spaces include:	<ul style="list-style-type: none">• commercial spaces• rooms, such as:<ul style="list-style-type: none">• meeting rooms• offices• work areas• media rooms• entertainment areas• halls• foyers• lunch or break areas• workstations• ancillary areas
Specifications include:	<ul style="list-style-type: none">• the measurements and procedures by which a product is constructed, and materials to be utilised
Products include:	<ul style="list-style-type: none">• furniture• soft furnishings

- floor treatments
- curtain treatments
- built-in cabinetry or fittings
- light fittings
- lamps
- picture framing
- tapware
- kitchen fittings, such as stoves, sinks, hotplates, extractors, scales, fridges, dishwashers and coffee machines
- hand basins
- shower parts
- toilets
- bidets
- toilet fittings

- connection points
- switches
- circuits
- hot water systems
- residual current detectors (safety switches)
- lights
- fans
- down lights
- halogen lights
- power outlets
- power boards
- television points
- phone points
- internet connections
- automated systems
- standard wiring systems
- personal computer-integrated bases (data and power)

Accessories include:

- trinkets
- ceramics
- trays
- vases
- carvings
- baskets
- pots
- plants
- candles
- clocks

	<ul style="list-style-type: none">• silverware• mirrors• frames• screens• floral displays• haberdashery• glassware• fireplace items• gifts• hand crafts• water features• photographs• pottery• personal items• statues• book ends• bowls• bottles
Finishes include:	<ul style="list-style-type: none">• paints• waxes• lacquers• stains• pigments• oils• plastic coatings• veneers• ceramics• stone• glass• textiles• other textures
Spatial organisation includes:	<ul style="list-style-type: none">• studying the positioning of elements, traffic flow and suitability of layout for the intended use of the area
Digital presentations include:	<ul style="list-style-type: none">• presentation boards• portfolios• photography• data projectors• video and other forms of multimedia• PowerPoint presentations• CAD demonstrations• written presentations

Themes include:	<ul style="list-style-type: none">• other scenarios utilising different software applications• variations of colour ways (based on directions media), furnishing trends and decoration trends
Project-specific digital methodologies include:	<ul style="list-style-type: none">• electronic walk throughs• product or technique slide shows• virtual galleries for the presentation of ideas and concepts• project-specific details and specifications presented digitally
Personal or business promotional strategies include:	<ul style="list-style-type: none">• websites• blogs• virtual galleries• e-portfolios• other profile raising techniques
Electronic business files and financial tools include:	<ul style="list-style-type: none">• conventional computer-based software (word processing, databases and spreadsheets)• desktop publishing applications• electronic pricing and quoting systems
Presentation methodology includes:	<ul style="list-style-type: none">• a strategic business case for selecting the digital strategy presented• a visual presentation and prepared script to accompany the presentation
Sketches include:	<ul style="list-style-type: none">• hand drawn images or ideation drawings completed freehand
Perspective includes:	<ul style="list-style-type: none">• perspective drawing techniques, including one, two and three point perspective, to demonstrate eye lines and balance
Axonometrics for revealing the construction and the interiors of buildings include:	<ul style="list-style-type: none">• a method of drawing in which vertical lines are drawn to scale from an accurate plan which has usually been turned through 45°
Materials include:	<ul style="list-style-type: none">• solid timber (native and imported)• manufactured timber products• plastic• metal• alloys• stone• glass• textiles• fibreglass• foam• cardboard• paper products

Schedules include:	<ul style="list-style-type: none">• any other manipulable substance• detailed descriptions of which materials, products, finishes and accessories will be selected and how they will be applied
Design statements include:	<ul style="list-style-type: none">• a statement which should demonstrate how good design has been taken into account in drawing up the development proposals. Its purpose is to improve the design of all new development. It should include a site analysis, set out the design principles and produce design solutions
Floor plans include:	<ul style="list-style-type: none">• a graphical representation in drawing form of the plans that represent how rooms or spaces are linked together in building plans
Elevations include:	<ul style="list-style-type: none">• the various views of a design, including front view, rear view, side views, plan view and cut through views
Rendering includes:	<ul style="list-style-type: none">• the pictorial representation of plans and elevations using colours, highlighting and shading to provide depth and photo-like drawings
Colour boards include:	<ul style="list-style-type: none">• a presentation on board displaying the colour usage and coordination with surface finishes, materials and textiles used throughout the project
Working drawings include:	<ul style="list-style-type: none">• drafted technical drawings or drawings produced on computer using CAD software packages

Unit Mapping Information

Supersedes and is equivalent to LMFID6009A Produce digital presentations for commercial projects.

Assessment Requirements for MSFID6009 Produce digital presentations for commercial projects

Modification History

Release 2 - Prerequisite for MSFID6009 reinstated due to transfer error. No change in outcomes.

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Produce a digital presentation for a commercial property, planning at least two (2) spaces, to digitally provide the client with cost-effective options which inform the project brief development effectively applying design elements and principles
- Use mathematical ideas and techniques to correctly complete measurements, make calculations, estimate material requirements and cost work
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Establish a personal work methodology
- Visualise 2-D notions into 3-D space and form
- Manipulate a range of relevant computer software programs
- Display critical evaluation skills, creativity, innovation, research skills and independent thinking
- Experiment in both the planning of projects and methods of execution
- Present design ideas
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for producing digital presentations for commercial projects
- Organisational and site standards, requirements, policies and procedures for producing digital presentations for commercial projects
- Elements and principles of design, including liveability and accessibility
- Creativity and artistic relevance

- Ergonomics, anthropometrics, proxemics and aesthetic values
- Types of equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Relevant computer programs
- Design themes and design development
- Colours, furnishings and decorations
- Digital presentation development and use
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to producing digital presentations for commercial projects.

MSFKB2001 Prepare for cabinet installation

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing a site and confirming completeness of cabinets and components required for installation. It requires checking of job information and identifying quality issues.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Follow work health and safety (WHS) procedures for on-site work	1.1	WHS responsibilities for on-site work are identified
		1.2	All legislative requirements are adhered to in work activity
		1.3	Personal protective equipment is used according to workplace practices
2	Prepare workplace	2.1	Installation plan is checked to identify requirements relevant to own work

- | | | |
|---|---|--|
| | 2.2 | Tools and equipment required for installation are located and checked for operational readiness |
| | 2.3 | Area is cleared and prepared for operations |
| | 2.4 | Power source is identified and accessed for power tools |
| 3 | Confirm cabinet readiness for assembly and installation | |
| | 3.1 | Cabinet components are identified and checked against delivery documentation and installation plan to confirm completeness |
| | 3.2 | Cabinet components are transported from delivery vehicle to site in a manner that prevents injury to self and others or damage to cabinets |
| | 3.3 | Cabinets and components are assessed for quality |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individual to demonstrate some discretion, judgement and problem solving
- work is conducted to assist in the installation of cabinets in

	new or renovated kitchens and bathrooms
Installation plans include:	<ul style="list-style-type: none">• cabinets include flat pack pre-cut cabinets, made to measure manufactured board, or solid timber cabinets within a kitchen, bathroom or other domestic environment• drawings and specifications• component lists• cabinet layout and design information• installation instructions
Tools and equipment include:	<ul style="list-style-type: none">• screws, nails, bolts and wall plugs• cabinets• components• glues and finishes• hand and power tools• measuring devices
Cabinet components include:	<ul style="list-style-type: none">• hinges, runners and latches• locks• handles• drawer runners and slides• legs, plinths and kickboards• door and drawer systems• cabinet sections
Quality assessment of components includes:	<ul style="list-style-type: none">• checks for completeness• scratches• chips and markings• colour and texture variations
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFKB2001A Prepare for cabinet installation.

Assessment Requirements for MSFKB2001 Prepare for cabinet installation

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare the installation site for cabinet installation and use mathematical ideas and techniques to correctly complete measurements and calculate areas for cabinetry
- Assemble all necessary tools, equipment and cabinetry components for the installation
- Conduct quality checks on components prior to installation and report readiness of the site for the installation work
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Safe work practices
- Documentation procedures
- Quality checking procedures
- Symbols and terminology on plans and drawings
- Features of cabinets and components

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to cabinet installation.

MSFKB2002 Provide assistance in cabinet installation

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assisting in the on-site installation of cabinets for kitchens or bathrooms. It includes assembling cabinets, fitting components, and fixing cabinets to wall and floor surfaces, and making a limited range of adjustments in the installation of new or renovated kitchens and bathrooms.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Lay out components and materials according to installation plan	1.1	Work health and safety (WHS) requirements, including personal protective equipment are identified
		1.2	Floor layout and individual cabinet construction requirements are determined from the installation plan or through checking with supervisor or tradesperson
		1.3	Components are laid out to match sequence of assembly
		1.4	Product codes and labels are checked for any special

			installation requirements
2	Assemble carcass	2.1	Joining methods are applied according to the installation plan or instructions from supervisor or tradesperson
		2.2	Facings are completed
		2.3	Carcass levels are checked
		2.4	Components are attached
		2.5	Minor adjustments are made according to instruction from supervisor or tradesperson
		2.6	Carcasses are completed and checked for quality against instructions
		2.7	Hand and power tools are used safely and according to operating instructions
3	Fix cabinets as specified by site supervisor or tradesperson	3.1	Cabinet fixing techniques are confirmed with supervisor or tradesperson according to site requirements
		3.2	Cabinets are fixed to walls and floors according to the installation plan and instruction of supervisor or tradesperson
		3.3	Components are fixed according to installation instructions
4	Finish work	4.1	Cabinets are cleaned and checked for quality
		4.2	Site is cleaned and all tools put away
		4.3	Project documentation is completed
		4.4	Waste is disposed of according to environmental standards
		4.5	Property is secured

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individual to demonstrate some discretion, judgement and problem solving
 - cabinets include flat pack, pre-cut, made to measure manufactured board or solid timber cabinets within a kitchen, bathroom or other domestic environment
 - on-site installation work covered by this unit is undertaken under direction of a qualified tradesperson or supervisor
- Components include:**
- hinges, runners and latches
 - locks
 - handles
 - drawer runners and slides
 - legs, plinths and kickboards
 - door and drawer systems
 - cabinet sections
- Joining methods include:**
- screws and hinges
 - adhesives
 - patented devices
 - connectors
- Hand and power tools include:**
- drills
 - jigs
 - hammers
 - screwdrivers
 - power saws
 - drop saws
- Cabinet fixing techniques include:**
- glue
 - staples
 - bolts
 - screws

MSFKB3001 Identify processes in kitchen and bathroom projects

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying the processes used in new and renovated kitchen and bathroom projects. Identification includes key stages, service providers and quality elements that typically characterise a project concerned with the development of kitchens and bathrooms.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify key stages of a kitchen and bathroom renovation project	1.1	Processes engaged in a site assessment for kitchen and bathroom renovation projects are identified and relevance for work determined
		1.2	Elements of a project design brief for renovation work are identified
		1.3	Project plan and contracting and legislative requirements for renovation work are identified
		1.4	Sequence of work for renovations is determined
2	Identify key stages of a new kitchen and bathroom project	2.1	Processes for engaging in a site assessment for new kitchen and bathroom projects are identified and the relevance for work determined

- | | | |
|---|---|--|
| | 2.2 | Elements of a project design brief for new work are identified |
| | 2.3 | Project plan and contracting and legislative requirements for new work are identified |
| | 2.4 | Sequence for new work is determined |
| 3 | Identify the services to be provided by other personnel and companies for kitchen and bathroom projects | 3.1 Services to be provided by tradespeople in kitchen and bathroom projects are identified
3.2 Other services involved in kitchen and bathroom projects are identified |
| 4 | Examine quality elements for kitchen and bathroom projects | 4.1 Key information resources for kitchen and bathroom projects are determined and accessed
4.2 Manufacturing processes used for cabinet construction are identified and features and benefits of techniques are explained
4.3 Sources for supply of materials, fixtures and fittings are identified
4.4 Market standards for finish quality and relate to own work environment and requirements are determined |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individual to demonstrate some discretion, judgement and problem solving
 - work situations are where a person must have the skill and knowledge to properly identify the stages and processes used in installing or renovating kitchen and bathrooms. Examples would be tradespeople engaged in kitchen and bathroom work, sales advisers and designers who advise clients in kitchen and bathroom projects
- Processes engaged in a site assessment include:**
- assessing structural aspects, including flooring, walls, ceiling, roof construction, other structural features, windows and doors, which may impact on design or installation work
 - identifying architectural styles or features
 - determining material use, including use of asbestos
 - gaining access
 - services, such as ventilation, plumbing, drainage, power and lighting
 - waterproofing
 - demolition requirements
 - assessing building information, plans, drawings and materials data
 - assessing levels and squareness of walls and floors
 - conducting measurements
- Design brief includes:**
- client needs and objectives
 - client aims and objectives, and criteria for evaluation
 - milestones
 - functional requirements
 - budget
 - timeline
 - consultation requirements
 - colour requirements
- Project plan requirements include:**
- sequence of operations
 - budget
 - timelines
 - allocation and delivery of resources
 - contingencies

Tradespeople in kitchen projects include:

- plumbers
- tilers
- cabinetmakers
- flooring specialists
- builders
- electricians

Tradespeople in bathroom projects include:

- builders
- plumbers
- tilers
- waterproofing specialists
- glaziers
- electricians

Other services include:

- designers
- architects
- material and component suppliers
- contractors
- colour consultants
- stone workers

Key information resources include:

- trade magazines
- brochures
- building organisations
- design organisations
- internet
- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Manufacturing processes include:

- hand manufacture
- computer numerically controlled (CNC) machining
- mass production
- solid wood production
- flat panel construction
- custom design
- importation

Finish quality includes:

- materials
- design
- costs
- new technologies
- components

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Unit Mapping Information

Supersedes and is equivalent to LMFKB3001A Identify processes in kitchen and bathroom projects.

Assessment Requirements for MSFKB3001 Identify processes in kitchen and bathroom projects

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret new and renovation kitchen and bathroom project design project briefs, including establishing the correct sequence of manufacture and installation operations
- Determine the processes involved in kitchen and bathroom renovation or new manufacture and installation, including the services required from relevant key trades in the kitchen and bathroom industry
- Determine quality cabinet and other component requirements to meet project design brief outcomes and establish sources of suitable components and services to undertake the work
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Roles of trades in the kitchen and bathroom industry
- Roles of other service providers to the kitchen and bathroom industries
- Planning processes relevant to the kitchen and bathroom industries
- Processes used for the construction of cabinets
- Features of cabinets and components used in kitchen and bathroom projects
- Supply chains for kitchen and bathroom components and materials
- Market and industry standards
- Qualities of renovation and new work projects

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts. Evidence should be demonstrated in identifying processes for meeting at least one (1) new kitchen or bathroom design brief and at least one (1) kitchen or bathroom renovation project.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, supervisor's reports, completed kitchen and bathroom projects and related work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to information resources on kitchen and bathroom projects.

MSFKB3002 Determine requirements for installation of cabinets

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assessing a site, including walls, floors, appliances, services and other structural components, to determine implications and modifications required for location and installation of cabinets.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Access the site	1.1	Project brief and plans are reviewed to guide site assessment
		1.2	Site access is arranged with client
		1.3	Required access for materials and equipment is determined
		1.4	On-site work health and safety (WHS) procedures are followed
		1.5	Other work procedures being undertaken at the site for

			impact on installation work are evaluated
2	Identify construction features that impact on cabinet installation	2.1	Wall construction and features are examined to determine implications for cabinet installation
		2.2	Flooring construction and features are examined to determine implications for cabinet installation
		2.3	Other structural features are analysed to determine implications for cabinet installation
3	Identify installation requirements of appliances	3.1	Appliances are examined to confirm location and placement in cabinets
		3.2	Installation requirements for appliances are examined using manuals to determine implications for cabinet installation
4	Determine implications for layout or design	4.1	Services and appliances are accessed to identify any compliance issues for layout or design
		4.2	Development plan and site assessment is used to determine implications for design and cabinet construction
		4.3	Sequence for cabinet installation is determined according to site findings
5	Document installation requirements	5.1	Findings from site assessment are documented to inform adjustments that are required to the design layout and cabinet construction
		5.2	Information is recorded using industry standards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individual to demonstrate some discretion, judgement and problem solving
 - work is conducted by on-site cabinet installers to determine any modifications required to cabinets, design or positioning before installation is conducted
 - cabinets include custom-made or mass manufactured and include complete components, such as doors, shelves and drawers
- Site assessment includes:**
- assessing structural aspects, including flooring, walls, ceiling, roof construction, other structural features, windows and doors, which may impact on design or installation work
 - determining material use, including use of asbestos
 - access
 - services, such as ventilation, plumbing, drainage, power and lighting
 - waterproofing
 - demolition requirements
 - assessing building information, plans, drawings and materials data
 - assessing levels and squareness of walls and floors
 - conducting measurements
- Wall construction includes:**
- solid masonry
 - stud frame
 - load bearing members
 - non-load bearing members
 - bracing
 - squareness
 - level
 - skirting boards
- Flooring construction includes:**
- concrete slab
 - timber
 - steel

	<ul style="list-style-type: none">• under floor access• squareness• levels• skirting boards
Other structural features include:	<ul style="list-style-type: none">• beams• columns• structural damage• finish• ledges

Assessment Requirements for MSFKB3002 Determine requirements for installation of cabinets

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Conduct a site assessment and identify all issues that will impact on the installation of cabinets and appliances including floor and wall construction and other structural elements of the site and availability and location of required services
- Identify limitations of cabinet construction and implications for design, including compliance issues for work and levelling required
- Complete detailed documentation to inform installation, including site conditions, sequence of component installation and quality standards that apply
- Apply quality standards, Australian Standards and resource information appropriate to cabinet construction and installation on site, including accessing and apply appropriate requirements set out in the Building Code of Australia (BCA)
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Roles of trades in the kitchen and bathroom industry
- Planning processes
- Processes used for the construction of cabinets
- Features of cabinets and components used in kitchen and bathroom projects
- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for assessing a site

- Organisational and site standards, requirements, policies and procedures for assessing a site
- The role of Australian Standards and the BCA
- Characteristics of materials, products and defects
- Procedures for documenting workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution techniques
- Basic building and architectural terminology
- Common structural and non-structural components of a residential building
- Materials and methods involved in interior refurbishment
- Local regulations/councils
- Construction techniques/technologies
- Statutory planning regulations affecting kitchens and bathrooms

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts. Evidence is required of effectively planning cabinet installation in at least two different sites.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, supervisor's reports, completed projects or work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to tools required for site assessment and plans, drawings and manuals relating to project.

MSFKB3003 Check and measure fit of cabinets

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers taking measurements on-site and checking cabinetry to ensure accurate fit. It requires assessment of levels and squareness of walls and floors and other structural components to determine adjustments required on cabinets to ensure exact fit.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Conduct site measurements	1.1	Access to site is obtained according to project guidelines and work health and safety (WHS) procedures
		1.2	Measuring devices are selected and prepared for use
		1.3	Site measurements are made and recorded according to industry standards
		1.4	Levels and squareness of walls and floor are established
		1.5	Other structural aspects of site that impact on installation are measured and recorded

- | | | | |
|---|--|-----|--|
| 2 | Assess measurements against cabinet dimensions | 2.1 | Cabinet dimensions are determined from cabinet or construction plans |
| | | 2.2 | Site measurements are checked to identify any discrepancies from cabinet installation requirements |
| 3 | Identify required adjustments | 3.1 | Adjustments are calculated to ensure proper installation |
| | | 3.2 | Cabinets and walls or floor are marked up to inform required adjustments |
| | | 3.3 | Workplace documentation is completed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individual to demonstrate some discretion, judgement and problem solving
- work is conducted by on-site installers of cabinets in kitchens, bathrooms and other ancillary areas in residential situations
- cabinets include custom-made or mass manufactured and include complete components, such as doors, shelves and drawers

Measuring devices include:	<ul style="list-style-type: none">• tape measures• laser beams• angle readers• rulers
Other structural aspects include:	<ul style="list-style-type: none">• structural damage• finish• ledges• skirting boards• service outlets• vents• gas, data, communications, air extraction and conditioning vents
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFKB3003A Check and measure fit of cabinets.

Assessment Requirements for MSFKB3003 Check and measure fit of cabinets

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and accurately measure and record structural aspects that impact on cabinet construction and installation identifying any inconsistencies in measurements
- Mark up the installation site according to confirmed measurements to correctly inform installers on cabinet location and fit
- Complete detailed documentation on measurements, cabinet location and installation sequence to inform installation
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Processes used for the construction of cabinets
- Features of cabinets and components used in kitchen and bathroom projects
- State or territory WHS legislation, regulations, standards and codes of practice relevant to on-site work
- The role of Australian standards and the Building Code of Australia (BCA)
- Characteristics of materials, products and defects
- Procedures for documenting workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Relevant problem identification and resolution techniques

- Basic building and architectural terminology
- Common structural and non-structural components of a residential building

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts. Evidence must be obtained of cabinet measure and fit operations in at least two different installation sites.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, supervisor's reports, completed measure and fit for projects and relevant work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to tools required for measurement, and plans, drawings and manuals relating to project.

MSFKB3004 Conduct on-site adjustments to cabinets and components

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers determining required cabinet adjustments, selecting appropriate techniques, and making and checking the adjustments to pre-made cabinets in order to achieve accurate fit at site of installation.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine required adjustment techniques	1.1 Access to site is obtained according to project guidelines and work health and safety (WHS) procedures
	1.2 Measurements and required adjustments are examined
	1.3 Problem-solving skills are applied and techniques selected to conduct adjustments with minimal disruption to cabinet construction
	1.4 Cabinet design is checked to ensure design and industry

			standards will be maintained with completion of cabinet adjustments
2	Make adjustments	2.1	Cabinet markings are inspected and confirmed to ensure accurate adjustments
		2.2	Adjustments are conducted using appropriate techniques and tools
		2.3	Area is cleaned and rubbish disposed of according to environmental standards
3	Confirm accurate fit	3.1	Measurements are made to ensure cabinet readiness for installation
		3.2	Edges and lines are measured to ensure fit is straight and flush
		3.3	Doors, drawers, runners, handles and latches are checked for correct alignment
		3.4	Tolerances are checked to ensure standards are achieved
		3.5	Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative

	<p>obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements</p> <ul style="list-style-type: none">• work requires individual to demonstrate some discretion, judgement and problem solving• work is conducted by installers of cabinets in residential situations and is based on measurements taken at the site of installation• cabinets include custom-made or mass manufactured and include complete components, such as doors, shelves and drawers
Problem-solving skills include:	<ul style="list-style-type: none">• re-examining plans and drawings• comparing measurements• determining root cause• applying product knowledge to situation• discussing issue with colleagues• comparing alternative techniques• assessing pros and cons of options• applying principles of construction to situation• identifying associated hazards
Adjustments include:	<ul style="list-style-type: none">• planing• sanding• drilling• screwing• aligning• gluing• fixing

MSFKB3005 Fabricate cabinets for the built-in environment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning production processes, and constructing and assembling components to fabricate cabinets that meet predetermined specifications in a manufacturing workshop environment. It includes operating computer numerically controlled (CNC) and static machines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------------------------------|---|
| 1 Plan cabinet construction | <ul style="list-style-type: none">1.1 Workplace health and safety (WHS) requirements, including personal protection needs, are observed throughout the work1.2 Drawings, specifications and customer instructions are completed or interpreted, including design, tolerances, process, materials, finish and quantity1.3 Construction techniques to be used in cabinet manufacture are identified and selected1.4 Industry standards for cabinet construction are determined1.5 Construction and assembly sequence is planned |
|------------------------------------|---|

- | | | |
|---|---|---|
| | 1.6 | A cutting list is developed from the plan |
| | 1.7 | Tools, machines and equipment suitable for construction are identified and checked for safe and effective operation |
| | 1.8 | Procedures for checking quality at each stage of the process are determined |
| | 1.9 | Work area is cleared and prepared for production |
| 2 | Select and prepare materials for cabinet construction | 2.1 Features, benefits and limitations of materials and components used for cabinet construction are identified |
| | 2.2 | Surface treatments used for cabinets in a range of applications are identified |
| | 2.3 | Industry standards for materials used in cabinets are identified |
| | 2.4 | Materials to meet the customer requirements are selected and prepared for use |
| 3 | Select and prepare cabinet components | 3.1 Features, benefits and limitations of components used for cabinets in a range of applications are identified |
| | 3.2 | Components to meet the customer requirements are selected and prepared for use |
| 4 | Construct cabinets | 4.1 Observe WHS requirements, including personal protection needs, throughout the work |
| | 4.2 | Use tools, machines and equipment in accordance with safety requirements and manufacturer specifications |
| | 4.3 | Cut and form materials in accordance with the plan |
| | 4.4 | Cabinets are manufactured and checked against set-outs for tolerances, fit and accuracy |
| | 4.5 | Product is checked against plans at identified checkpoints |
| 5 | Assemble cabinets | 5.1 Cabinets are assembled using components identified in construction plan |
| | 5.2 | Components are attached and checked against set-outs for accuracy, fit, twist and distortion |
| | 5.3 | Doors, drawers and shelves are assembled and fitted |

- 5.4 Product is prepared for final finish, including the removal of bruises, scratches, dents and marks
- 5.5 Work area is cleaned and rubbish disposed of according to environmental standards
- 5.6 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Assessment Requirements for MSFKB3005 Fabricate cabinets for the built-in environment

Modification History

Release 1 - New unit of competency

Performance Evidence

- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Interpret and apply information from plans and drawings to inform the materials required, sequence of operations and assembly techniques for fabrication of cabinets
- Identify and source materials and components used in cabinets for kitchens, bathrooms and other residential settings specified in the design plan and specifications
- Plan fabrication process for cutting, forming and finishing cabinet components and construct and assemble cabinets using hand and power tools safely and efficiently to meet the design specifications
- Determine that fabricated cabinets meet specified quality outcomes, complete housekeeping and reporting requirements
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Processes used for the construction of cabinets
- Features of cabinets and components used in kitchen and bathroom and other residential projects
- State or territory WHS legislation, regulations, standards and codes of practice relevant to work
- Characteristics of materials, products and defects
- Procedures for documenting workplace records and information
- Appropriate mathematical procedures for measurement

- Relevant problem identification and resolution techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts. Evidence must be provided of fabrication of at least two different cabinet fabrication projects
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, completed cabinet fabrication projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines required for constructing and assembling cabinets.
- Access is required to tools and equipment required for constructing and assembling cabinets; and plans, drawings and manuals relating to work.

MSFKB3006 Install fitted cabinets and components

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing cabinets in residential and commercial environments according to specifications and design plans, including the application of selected components to achieve a quality finish. It includes accessing and applying information and instructions for the use of components and cabinet products.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Determine requirements for cabinet components	1.1	Workplace health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.2	Information resources for cabinet components is identified and accessed to inform the installation
		1.3	Features of components are identified and verified as suitable for the application
		1.4	Tools and equipment required for applying components are

- identified and prepared
- 1.5 Cabinets are checked to ensure markings and holes required for components are correctly located
- 2 Install cabinets
 - 2.1 Designs or plans are interpreted to determine cabinet installation requirements
 - 2.2 Cabinet markings are confirmed to ensure accurate installation
 - 2.3 Measurements are made to confirm fit
 - 2.4 Cabinets are installed according to plans and specifications
 - 2.5 Appliance installation requirements and service features are accommodated in installation
 - 2.6 Components are fixed according to cabinet requirements
 - 2.7 Hand and power tools are used safely and efficiently
 - 2.8 Work area is cleaned and rubbish disposed of according to environmental standards
 - 3 Check quality finish
 - 3.1 Measurements are made to ensure cabinet is square and level
 - 3.2 Edges and lines are checked to ensure fit is level, straight and flush
 - 3.3 Doors, drawers, runners, handles and latches are checked for correct alignment
 - 3.4 Tolerances are checked to ensure they meet standard requirements
 - 3.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFKB3006 Install fitted cabinets and components

Modification History

Release 1 - New unit of competency

Performance Evidence

- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Access and apply information on installation requirements of cabinet components including component specifications, materials to be used and site conditions
- Determine correct installation techniques to be applied and any or issues that would impact on the installation process
- Complete all operations to install cabinets using hand and power tools safely and efficiently and install cabinets in at least (1) one kitchen, one (1) bathroom and laundry, including one (1) residential and one (1) commercial environment
- Conduct quality checks on all installed components to ensure they meet specifications and complete housekeeping and required records of the work conducted
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Processes used for the installation of cabinets
- Features of cabinets and components
- State or territory WHS legislation, regulations, standards and codes of practice relevant to on site work
- Characteristics of materials, products and defects
- Cabinet installation processes
- Procedures for documenting workplace records and information
- Appropriate mathematical procedures for estimation and measurement

- Relevant problem identification and resolution techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, completed projects and work examples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines required for constructing, assembling and installing cabinets.
- Access is required to tools and equipment required for constructing, assembling and installing cabinets; and plans, drawings and manuals relating to work.

MSFKB3007 Provide advice on cabinet design features

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers providing customers with information relating to the features and benefits of cabinet designs and components, and advising on best fit to meet customer needs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Confirm customer requirements	<p>1.1 Customer requirements for cabinet design features are obtained and accurately documented</p> <p>1.2 Design requirements for cabinet with the customer are identified</p> <p>1.3 Plans, drawings and any design details relevant to the customer enquiry are located and accessed</p> <p>1.4 Services available and appropriate to the customer's needs with the customer are confirmed</p>
2 Provide technical information on design options	<p>2.1 Cabinet design options are explained to the customer noting specific features and benefits of the layout and inclusions</p>

- | | | |
|---|---|--|
| | 2.2 | Technical information on all cabinet designs available is accessed and researched to ensure advice to customers is fully informed |
| | 2.3 | Design brochures, drawings and other advisory materials are provided to the customer |
| | 2.4 | Construction, installation and ordering details of the designs are explained to the customer |
| 3 | Provide technical information on cabinet components | |
| | 3.1 | Technical and product information on all cabinet fixtures are accessed and researched |
| | 3.2 | Relevant information brochures are located and provided to the customer and features of the components communicated effectively |
| | 3.3 | Cabinet application methods are discussed with the customer |
| 4 | Suggest best design package to meet customer needs | |
| | 4.1 | Elements and principles of design are applied to examine the appropriateness of cabinet products for customer requirements |
| | 4.2 | Options are discussed with the customer to ascertain responses and preferences |
| | 4.3 | Advice is provided on best option to meet customer requirements and preferences confirmed |
| | 4.4 | Determine required quantities based on manufacturer specifications, plans and customer needs |
| | 4.5 | Costs are calculated according to work policy and procedures |
| 5 | Complete cabinet design documentation | |
| | 5.1 | Customer details are recorded and checked for accuracy |
| | 5.2 | Details of design, fixtures, fittings and finishes for customer are documented according to workplace practice noting any special requirements or conditions |
| | 5.3 | Formal order is placed and documentation provided to the customer |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|---|
| Unit context includes: | <ul style="list-style-type: none">• work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individual to demonstrate some discretion, judgement and problem solving in a kitchen or bathroom showroom or similar environment where a set range of cabinet designs and components are available and basic technical and design information relevant to cabinets is used |
| Customer requirements may include: | <ul style="list-style-type: none">• client aims and objectives, and criteria for evaluation• function• budget• timelines• consultation requirements• brand preferences |
| Design requirements may include: | <ul style="list-style-type: none">• storage• appliances• colour• materials• finish• vanity, toilet, shower and bath requirements• components, such as hinges, runners, handles, latches, taps, splashbacks, bench tops, spas, basins and bath• doors, drawers and cabinet styles• dimensions |

**Technical information
may include:**

- usage patterns
- quality
- cabinet standards for application in kitchens, bathrooms and other domestic settings
- product codes
- dimensions
- characteristics and qualities
- environmental specifications
- installation requirements
- ergonomic specifications
- quality
- operation
- warranties
- available colour range
- price
- construction of products
- care and maintenance requirements
- stain and dirt resistance
- product performance
- colour fastness, colour fading properties
- availability

**Elements and principles
of design may include:**

- line
- shape
- form
- texture and colour
- balance
- proportion (symmetry and asymmetry)
- harmony
- contrast
- pattern
- movement
- rhythm
- unity
- style
- focus
- scale
- emphasis
- proximity
- alignment
- space
- ergonomics
- arrangement

- aesthetic relations
 - tension
 - development methods
 - that prescribed under legislation, regulations and enterprise policies and practices
- Personal protective equipment includes:**
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFKB3007A Provide advice on cabinet design features.

Assessment Requirements for MSFKB3007 Provide advice on cabinet design features

Modification History

Release 1 - New unit of competency

Performance Evidence

- Engage customers to confirm cabinet requirements, including identifying all features required
- Advise customers on the characteristics, benefits and limitations of various cabinet design features that suit their needs
- Using customer feedback develop design solutions to meet their cabinet requirements
- Use technical information to inform and cost a cabinet design to suit customer needs, document the final design, confirm with the customer and complete an order
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Construction processes for cabinet designs
- Safe work practices
- Documentation procedures
- Quality checking procedures
- Symbols and terminology on plans and drawings
- Features of cabinet components
- Principles and elements of design
- Characteristics of materials, products and defects
- Effects of finishes and finishing techniques
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to range of cabinet designs, products and specifications.

MSFKB3008 Identify cabinet construction and installation methods

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying and evaluating production processes and construction features used in the manufacture of cabinets, installation methods used and the implications for designs. It does not include skills to perform installation tasks or to plan a particular installation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Identify common production processes for the manufacture of cabinets | <div style="display: flex; flex-direction: column; gap: 10px;"><div>1.1 The range of cabinets on the market are identified and the quality features evaluated</div><div>1.2 Industry standards for cabinets are identified and accessed</div><div>1.3 The role of computer numerically controlled (CNC) processes, computer-aided manufacture (CAM) processes and custom manufacture principles and processes are evaluated in terms of cabinet manufacture</div><div>1.4 Common techniques used for joining, assembling and finishing cabinets are established</div></div> |
|---|---|

- | | | | |
|---|---|-----|--|
| 2 | Identify features and limitations of construction methods | 2.1 | Features and limitations of mass manufactured cabinets and custom-made cabinets are identified and evaluated |
| | | 2.2 | The range of variations able to be achieved with cabinet construction methods are established |
| 3 | Identify installation methods used | 3.1 | Methods used to install cabinets are identified and evaluated |
| | | 3.2 | The importance of site analysis is determined and common impacts on designs recognised |
| | | 3.3 | Expertise and skills engaged in installation and other considerations are recognised |
| 4 | Determine implications for kitchen and bathroom design | 4.1 | Implications of appliances on cabinet construction and installation are evaluated |
| | | 4.2 | Implications of services on cabinet construction and installation are recognised |
| | | 4.3 | Implications of cabinet construction methods and installation requirements for designs are evaluated |
| 5 | Identify sourcing requirements for cabinets | 5.1 | Information sources on suppliers for cabinets and components are accessed and utilised |
| | | 5.2 | Requirements for ordering cabinets and components are determined |
| | | 5.3 | Supplier timelines and delivery requirements are determined |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

Unit context includes:	<ul style="list-style-type: none">• work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving that involves interpretation of information on cabinet construction and installation methods by those working in design and technical advisory roles in the kitchen and bathroom industry• information may be used to provide advice to customers, confirm orders or inform design or product selection
Methods used to install cabinets may include:	<ul style="list-style-type: none">• use of screws, fixtures and patented devices• use of adhesives, clips and fasteners• use of sealants• use of installation sequences
Site analysis may include:	<ul style="list-style-type: none">• location of services• measurements and dimensions• flooring and wall construction• materials and finishes impacting on installation• structural features that impact on installation• data cabling
Expertise and skills engaged in installation may include:	<ul style="list-style-type: none">• measurement• quality checking• assembly• use of hand and power tools• modifying and adjusting cabinets• working with other tradespeople
Other considerations in cabinet installation may include:	<ul style="list-style-type: none">• installation requirements of appliances• waterproofing considerations• sequence of installation• design modifications• translation of design details into technical specifications
Implications of appliances may include:	<ul style="list-style-type: none">• requirements for changes to cabinet or design due to sizing or placement requirements• compliance issues• location and access
Implications of services	<ul style="list-style-type: none">• requirements for changes to cabinet or design due to placement

may include:

- compliance issues
- location and access

Requirements for ordering cabinets may include:

- measurements and dimensions
- colour
- product codes and specifications
- timelines
- delivery details
- drawings
- special conditions
- customer authorisation

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication

Assessment Requirements for MSFKB3008 Identify cabinet construction and installation methods

Modification History

Release 1 - New unit of competency

Performance Evidence

- Access and interpret product information to determine limitations and benefits of different methods used in the construction and installation of cabinets and the implications for design
- Determine the impact of site conditions and limitations on cabinet design and features
- Identify cabinet construction and assembly techniques and installation methods for a range of fabrication and installation jobs
- Identify requirements for sourcing and ordering cabinets and components to meet design specifications and installation methods to be used including timelines for completion and delivery processes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Techniques used for the construction and installation of cabinets, including CNC, CAM and custom manufacture principles and processes
- Features of cabinets and components used in kitchen and bathroom projects
- State or territory WHS legislation, regulations, standards and codes of practice relevant to kitchen and bathroom cabinets and components
- Characteristics of materials, products and defects
- Information resources

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

MSFKB4001 Determine spatial planning considerations for kitchen design

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers examining space requirements and usage patterns for kitchens and determining planning considerations for designs.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|--|
| 1 | Determine kitchen work and traffic flow patterns | 1.1 | Key work zones for kitchens are identified and prime activities and associated appliances determined |
| | | 1.2 | Traffic flow patterns and considerations for kitchen space are identified |
| | | 1.3 | Work triangle concepts are identified and applied to modern kitchen design |
| 2 | Examine layout options | 2.1 | Location of services is identified and implications for relocation determined |

- | | | |
|---|--|--|
| | 2.2 | Range of layout options and work and traffic flow implications are examined |
| | 2.3 | Suitability of layout options for kitchen space are analysed and limitations and benefits determined |
| 3 | Determine storage options | 3.1 Storage requirements of kitchen work zones are identified |
| | 3.2 | Storage options are examined for suitability to kitchen spaces and implications for design determined |
| | 3.3 | Dimensions and space requirements of standard storage options are identified for design |
| 4 | Assess kitchen ergonomic considerations | 4.1 Basic principles of ergonomics are used to determine space planning implications |
| | 4.2 | Requirements for working height are identified |
| | 4.3 | Manual handling considerations for kitchen design are identified |
| | 4.4 | Storage principles are considered to determine implications for design |
| | 4.5 | Special considerations for children, older people and/or disabled people are taken into account, where applicable |
| 5 | Examine requirements for kitchen appliances | 5.1 Key appliances used in kitchens are identified and standard dimensions, clearances and required services determined |
| | 5.2 | Manufacturer guidelines and statutory regulations regarding the placement and installation of appliances are identified and implications for design examined |
| | 5.3 | Work space implications for appliances are analysed and implications for design determined |
| 6 | Determine planning considerations for services | 6.1 Regulations regarding the location of power outlets, lighting and electrical work undertaken are identified |
| | 6.2 | Regulations regarding the location of plumbing outlets and plumbing work undertaken are identified |
| | 6.3 | Regulations regarding the location of gas outlets and gas plumbing work undertaken are identified |

- 6.4 Implications of service requirements on kitchen design are determined
- 6.5 Lighting sources are examined and requirements for kitchen design determined

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|--|
| Unit context includes: | <ul style="list-style-type: none">• Work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individual to demonstrate some discretion, judgement and problem solving in the analysis of design requirements. It includes analysis of appliances, services, regulatory requirements, storage requirements and applications to determine implications for kitchen design |
| Key work zones for kitchens may include: | <ul style="list-style-type: none">• food storage zone• food preparation zone• clean-up zone• bench top clearances• landing space |
| Considerations may include: | <ul style="list-style-type: none">• floor clearances• traffic clearances• space requirements for reaching, bending and crouching |

	<ul style="list-style-type: none">• eating space requirements• additional space requirements for areas such as computers, entertaining and laundry• number and types of users of kitchen
Range of layout options may include:	<ul style="list-style-type: none">• single wall set out• galley• L-shape• U-shape• island
Storage requirements may include:	<ul style="list-style-type: none">• food storage (perishable and non-perishable)• food preparation (utensils, appliances, cookware, condiments, ovenware and cookbooks)• clean-up (garbage bin, storage containers, cleaning items and products)• additional storage (crockery, glassware, serving platters and small appliances)
Storage options may include:	<ul style="list-style-type: none">• cupboards and drawers• wire shelving• baskets• mobile storage unit• railing• shelves• pantry• swing out cupboards• extension worktops• base cupboards• overhead cupboards
Basic principles of ergonomics include:	<ul style="list-style-type: none">• clearance (minimum spatial tolerances for access)• reach (maximum spatial tolerances and workspace envelope)
Storage principles may include:	<ul style="list-style-type: none">• importance of items• frequency of use• function• sequence of use
Key appliances may include:	<ul style="list-style-type: none">• cook top• oven• freestanding stove• microwave and convection oven• exhaust system• refrigerator• coffee machine• sink

Lighting sources may include:

- dishwasher
- incandescent
- fluorescent
- halogen or dichroic
- natural light

Unit Mapping Information

Supersedes and is equivalent to LMFKB4001A Determine spatial planning considerations for kitchen design.

Assessment Requirements for MSFKB4001 Determine spatial planning considerations for kitchen design

Modification History

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Access and interpret kitchen information to determine limitations and benefits of different spatial planning options used in kitchen design to meet Liveable Housing Design Guidelines
- Identify and apply ergonomic considerations and regulatory considerations for kitchen designs
- Determine the implications of appliances, storage options and work patterns on kitchen designs, including intended use, features, manufacturers guidelines and installation requirements
- Identify the range of services needed for a kitchen and relevant regulations and construction that impact on the design process
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Features of kitchen components
- Liveable Housing Design Guidelines
- State or territory WHS legislation, regulations, standards and codes of practice relevant to kitchen designs
- Characteristics of storage, appliance, lighting and service options
- Relevant information resources

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work-related information resources.

MSFKB4002 Research and recommend materials, components and finishes for kitchen designs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching and analysing materials, components and finishes, and making recommendations to meet the requirements of a kitchen design brief. It includes evaluation of options and presentation of design information to clients.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify requirements of kitchen design brief	1.1	Design brief is reviewed to determine required outcomes for kitchen design
		1.2	Parameters for the project are assessed and confirmed
		1.3	Resources are selected appropriate to work requirements and checked for operational effectiveness
2	Identify types and features of kitchen materials, components and finishes	2.1	Materials used in kitchen applications are examined and suitability to meet design brief determined
		2.2	Components used in kitchen applications are examined and suitability to meet design brief determined

- | | | | |
|---|--|-----|---|
| | | 2.3 | Finishes used in kitchen applications are examined and suitability to meet design brief determined |
| | | 2.4 | New material technologies are researched and suitability to meet design brief determined |
| 3 | Identify suitable options to meet design brief | 3.1 | Materials, components and finishes that meet client brief requirements are identified |
| | | 3.2 | Options are selected for further analysis and design development |
| 4 | Evaluate the functional and aesthetic characteristics of selection | 4.1 | Elements and principles of design are used to examine the appropriateness of materials, components and finishes for client brief requirements |
| | | 4.2 | Application methods and available expertise for the desired effect are assessed |
| | | 4.3 | Costs of materials, components and finishes are assessed and compared |
| | | 4.4 | Environmental and sustainability considerations for materials, components and finishes are examined |
| | | 4.5 | Aesthetic qualities are assessed with regard to desired effect |
| | | 4.6 | Longevity and restorability of materials, components and finishes are researched |
| | | 4.7 | Hazards associated with the use and application of materials, components and finishes are researched |
| | | 4.8 | Quality of materials, components and finishes are assessed |
| 5 | Select and recommend materials, components and finishes | 5.1 | Materials, components and finishes are selected to meet client brief requirements |
| | | 5.2 | Presentation of research information is made highlighting the findings and rationale for selection |
| | | 5.3 | A range of presentation strategies is included in presentation |
| 6 | Document recommendations | 6.1 | Specifications of selection are documented |
| | | 6.2 | Samples are stored for further use |

6.3 Selection is integrated into design drawings and plans

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------|---|
| Unit context includes: | <ul style="list-style-type: none">• work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving by kitchen designers in the specification of materials, components and finishes as part of the design process |
| Design brief includes: | <ul style="list-style-type: none">• client needs and objectives• milestones• functional requirements• budget• timelines• consultation requirements• colour requirements |
| Parameters include: | <ul style="list-style-type: none">• budget range• colour range• timelines• space dimensions• structural characteristics |

Resources include:	<ul style="list-style-type: none">• services• computers• computer software• design software• computer-aided design (CAD) software• colour boards• storyboards• swatches• pantone matching system (PMS)• journals (directions magazines)• artistic equipment• products and model making equipment
Materials include:	<ul style="list-style-type: none">• particleboard• high moisture resistant particleboard• plywood• high pressure laminate• low pressure laminate• vinyl/foil wrap• resin-based solid surfaces• solid stone• reconstituted stone• timber• timber veneer• paint• glass• stainless steel• tiles
Kitchen applications include:	<ul style="list-style-type: none">• bench tops• splashbacks• drawers• cabinets• kickboards/plinths/legs• floors• walls• shelving
Components include:	<ul style="list-style-type: none">• taps• handles• runners• hinges• rails• sinks

Finishes include:

- baskets
- edging and edge profiles
- paints
- waxes
- lacquers
- stains
- pigments
- oils
- plastic coatings
- veneers
- ceramics
- stone
- glass
- textiles
- other textures

Elements and principles of design include:

- line
- shape
- form
- texture and colour
- balance
- proportion (symmetry and asymmetry)

Assessment Requirements for MSFKB4002 Research and recommend materials, components and finishes for kitchen designs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret and analyse kitchen design briefs, including liveability design requirements
- Research relevant manufacturer and supplier information in order to select and specify kitchen materials, components and finishes that meet a design brief including features, quality, costs, sustainability and aesthetic requirements
- Present advice on kitchen materials, components and finishes to meet client requirements including samples and documented costing
- Use mathematical ideas and techniques to correctly complete measurements and estimate and cost material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Features of kitchen materials and components
- State or territory WHS legislation, regulations, standards and codes of practice relevant to kitchen designs
- Liveable Housing Design Guidelines
- Information resources
- Elements and principles of design
- Research techniques
- Effects of finishes and finishing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work-related information resources.

MSFKB4003 Identify and document services required to support fitted furniture designs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assessing available services and determining service requirements to achieve new fitted furniture design proposals, such as those for a kitchen or bathroom application.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify and document available services	1.1	Access to work area is arranged with client
		1.2	On-site work health and safety (WHS) procedures are followed
		1.3	Plumbing, water outlets and drainage features are located and documented on site diagrams or plans
		1.4	Electrical and data outlets are located and documented on site diagrams or plans

- | | | |
|---|--|--|
| | 1.5 | Location and type of lighting sources are located and documented on site diagrams or plans |
| | 1.6 | Type and capacity of services are identified and details documented |
| | 1.7 | Measurements are taken to inform layout documentation |
| | 1.8 | Industry symbols and protocols are used to document information about services |
| 2 | Examine implications of services on design | 2.1 Design brief, drawings and plans are examined to determine intentions or options for services |
| | 2.2 | Details obtained from site are assessed against design information |
| | 2.3 | Appliances identified in the design brief are identified and implications on services examined |
| | 2.4 | Compliance issues relating to the location of services are identified |
| | 2.5 | Implications of current services on design are determined |
| 3 | Determine and document lighting and electrical system layout | 3.1 Requirements of the lighting and electrical system layout are ascertained from the design brief |
| | 3.2 | Lighting is assessed for effect and suitability to functional and ambience requirements |
| | 3.3 | Performance and characteristics required of electrical products are assessed and reviewed |
| | 3.4 | Environmental considerations are analysed in respect of the lighting and electrical system layout |
| | 3.5 | Ergonomic, anthropometric and proxemic principles are assessed in respect of the lighting and electrical system layout and the intended products |
| | 3.6 | Costs associated with purchasing and obtaining the products are analysed and documented |
| | 3.7 | Electrical contractors are consulted as required to confirm implications on design |
| | 3.8 | Lighting and electrical system layout is determined to meet |

		the design brief
4	Determine and document plumbing system layout	<ul style="list-style-type: none">4.1 Requirements of the plumbing system are ascertained from the design brief4.2 Performance and characteristics required of plumbing products are assessed and reviewed4.3 Gas requirements are determined and included in system layout4.4 Environmental considerations are analysed in respect of the plumbing system layout4.5 Ergonomic, anthropometric and proxemic principles are assessed in respect of the plumbing system layout and the intended products4.6 Costs associated with purchasing and obtaining the products are analysed and documented4.7 Plumbing contractors are consulted as required to confirm implications on design4.8 Plumbing layout is determined to meet the design brief
5	Complete layout documentation	<ul style="list-style-type: none">5.1 Sketches and drawings are completed to identify the layout of electrical and lighting system and products5.2 Sketches and drawings are completed to identify the layout of plumbing system and products5.3 Sketches and drawings are completed to industry standards5.4 Specifications are documented according to industry standards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individual to demonstrate some discretion, judgement and problem solving in the determination of service requirements for fitted furniture applications, such as kitchens and bathrooms. It applies to the assessment of services, such as plumbing, gas and electricity supply, air conditioning, ventilation, lighting and data to determine implications for new designs• work is limited to determining the service requirements for a design, including location, number and types of taps, power outlets and exhausts for a kitchen or bathroom space. It does not include layout of service pipes, wiring, conduits or installation of services |
| Lighting sources include: | <ul style="list-style-type: none">• incandescent• fluorescent• halogen or dichroic• natural light |
| Type and capacity of services include: | <ul style="list-style-type: none">• number of outlets, controls and switches• capacity to service kitchen appliances and products• capacity to service bathroom appliances and products• capacity of household electrical load• adequacy of lighting |
| Implications of current services on design include: | <ul style="list-style-type: none">• requirements for relocation• relative costs associated with relocation• requirements for capacity increase• relative costs associated with increasing capacity• changes required for fixtures and fittings |
| Performance and characteristics include: | <ul style="list-style-type: none">• assessment of products to determine if they meet the requirements of the intended end use application and how well they do it |

Electrical products include:	<ul style="list-style-type: none">• the durability and composition of the product• refrigerator• stove• appliances• air conditioners• ventilation systems• hot water systems
Environmental considerations include:	<ul style="list-style-type: none">• how the use of raw materials effects the ecology and environment and how its continued use will affect the area it has been sourced from• energy consumption in achieving the material• greenhouse gases created• waste levels• resource utilisation and transport effects• what impact will be felt by reducing or stopping material from the source
Costs include:	<ul style="list-style-type: none">• contractors• products and materials together with the cost of obtaining them either locally, interstate or overseas
Plumbing products include:	<ul style="list-style-type: none">• water filters• tap ware and sinks• drainage• dishwasher• shower recesses• baths and spas• toilet and bidet• washing machines
Sketches and drawings include:	<ul style="list-style-type: none">• hand drawn images or ideation drawings completed freehand• drafted technical drawings• drawings produced on computer using computer-aided design (CAD) software packages
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices

Unit Mapping Information

Supersedes and is equivalent to LMFKB4003A Identify and document services required to support fitted furniture designs.

Assessment Requirements for MSFKB4003 Identify and document services required to support fitted furniture designs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Assess a site and identify available services, including electrical, gas, plumbing and data, and determine supply and layout issues that will impact on a fitted furniture design and installation
- Establish the fittings and appliances to be included in a fitted furniture design and the services required for their installation and use
- Determine all services that are required to meet a design brief and complete industry standard drawings and specifications to identify their layout on the installation site
- Use mathematical ideas and techniques to correctly complete measurements, estimate service supply and draw layouts to scale
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Ergonomic, anthropometric and proxemic principles
- Industry symbols and protocols
- Planning processes
- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of determining layout for kitchen and bathroom services
- Procedures for documenting workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Basic building and architectural terminology
- Range of kitchen products and service requirements
- Range of bathroom products and service requirements
- Statutory planning regulations affecting services in kitchens and bathrooms

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, supervisor's reports and completed services layout design projects.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to tools and equipment to determine and document layout requirements; and plans, drawings and manuals relating to the project.

MSFKB4004 Determine spatial planning considerations for bathroom design

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers examining space requirements and usage patterns for bathrooms and determining planning considerations for designs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Determine bathroom usage and traffic flow patterns | 1.1 | Key use zones for bathrooms are identified and prime activities and associated appliances, fixtures and fittings determined |
| | | 1.2 | Traffic flow patterns and considerations for space are identified |
| 2 | Examine layout options | 2.1 | Location of services is identified and implications for relocation determined |
| | | 2.2 | Range of layout options and traffic flow implications are examined |
| | | 2.3 | Suitability of layout options for space is analysed and limitations and benefits determined |

- | | | | |
|---|---|-----|--|
| 3 | Determine storage options | 3.1 | Storage requirements of bathrooms are identified |
| | | 3.2 | Storage options are examined for suitability to bathroom spaces and implications for design determined |
| | | 3.3 | Dimensions and space requirements of standard storage options are identified for design |
| 4 | Assess bathroom ergonomic considerations | 4.1 | Basic principles of ergonomics are examined and used to determine space planning implications |
| | | 4.2 | Requirements for working height are identified |
| | | 4.3 | Manual handling considerations for design are identified |
| | | 4.4 | Storage principles are considered to determine implications for design |
| | | 4.5 | Special considerations for children, older people and/or disabled people are taken into account, where applicable |
| 5 | Examine requirements for bathroom appliances, fixtures and fittings | 5.1 | Manufacturer guidelines and statutory regulations regarding the placement and installation of appliances is determined |
| | | 5.2 | Space implications for appliances are established |
| 6 | Determine planning considerations for services | 6.1 | Regulations regarding the location of power outlets, lighting and electrical work undertaken are identified |
| | | 6.2 | Regulations regarding the location of plumbing outlets and plumbing work undertaken are identified |
| | | 6.3 | Regulations regarding the location of gas outlets and gas plumbing work undertaken are identified |
| | | 6.4 | Implications of service requirements on bathroom design are determined |
| | | 6.5 | Lighting sources are examined and requirements for bathroom design determined |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFKB4004 Determine spatial planning considerations for bathroom design

Modification History

Release 1 - New unit of competency

Performance Evidence

- Access and interpret bathroom information to determine limitations and benefits of different spatial planning options used in bathroom design to meet Liveable Housing Design Guidelines
- Identify and apply ergonomic considerations and regulatory considerations for bathroom designs
- Determine the implications of appliances, storage options and use patterns on bathroom designs, including features, manufacturers guidelines and installation requirements
- Identify the range of services needed for a bathroom and relevant regulations and construction that impact on the design process
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Features of bathroom components
- Liveable Housing Design Guidelines
- State or territory WHS legislation, regulations, standards and codes of practice relevant to bathroom and laundry designs
- Characteristics of storage, appliance, fittings and fixtures, lighting and service options
- Relevant information resources

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, supervisor's reports, completed bathroom design projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work-related information resources.

MSFKB4005 Research and recommend materials, components and finishes for bathroom designs

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching and analysing materials, components and finishes, and making recommendations to meet the requirements of a bathroom design brief. It includes evaluation of options and presentation of the design information to clients.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify requirements of bathroom design brief	1.1	Design brief is reviewed to determine required outcomes for bathroom design
		1.2	Parameters for the project are assessed and confirmed
		1.3	Resources are selected appropriate to work requirements and checked for operational effectiveness
2	Identify types and features of bathroom materials, components and finishes	2.1	Materials used in bathroom applications are examined and suitability to meet design brief determined
		2.2	Components used in bathrooms are examined and suitability to meet design brief determined

		2.3	Finishes used in bathroom applications are examined and suitability to meet design brief determined
		2.4	New material technologies are researched and suitability to meet design brief determined
3	Identify suitable options to meet design brief	3.1	Materials, components and finishes that meet client brief requirements are identified
		3.2	Options are selected for further analysis and design development
4	Evaluate the functional and aesthetic characteristics of selection	4.1	Elements and principles of design are used to examine the appropriateness of materials, components and finishes for client brief requirements
		4.2	Application methods and available expertise for the desired effect are assessed
		4.3	Costs of materials, components and finishes are assessed and compared
		4.4	Environmental and sustainability considerations for materials, components and finishes are examined
		4.5	Waterproof quality of bathroom materials, components and finishes are examined
		4.6	Aesthetic qualities are assessed with regard to desired effect
		4.7	Longevity and restorability of materials, components and finishes are researched
		4.8	Hazards associated with the use and application of materials, components and finishes are researched
		4.9	Quality of materials, components and finishes are assessed
5	Select and recommend materials, components and finishes	5.1	Materials, components and finishes are selected to meet client brief requirements
		5.2	Presentation of research information is made, highlighting the findings and rationale for selection
		5.3	A range of presentation strategies is included in presentation
6	Document	6.1	Specifications of selection are documented

recommendations

6.2 Samples are stored for further use

6.3 Selection is integrated into design drawings and plans

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individual to demonstrate some discretion, judgement and problem solving in the specification of materials, components and finishes as part of the design process

Design brief includes:

- client needs and objectives
- milestones
- functional requirements
- budget
- timelines
- consultation requirements
- colour requirements

Parameters include:

- budget range
- colour range

	<ul style="list-style-type: none">• timelines• space dimensions• structural characteristics• services
Resources include:	<ul style="list-style-type: none">• computers• computer software• design software• computer-aided design (CAD) software• colour boards• storyboards• swatches• pantone matching system (PMS)• journals (directions magazines)• artistic equipment and products• model making equipment
Materials include:	<ul style="list-style-type: none">• particleboard• high moisture resistant particleboard• plywood• high pressure laminate• low pressure laminate• vinyl/foil wrap• resin-based solid surfaces• solid stone• reconstituted stone• timber• timber veneer• paint• glass• stainless steel• tiles
Bathrooms applications include:	<ul style="list-style-type: none">• bench tops• splashbacks• drawers• cabinets• kickboards/plinths/legs• floors• walls• shelving• showers• baths/spas
Components include:	<ul style="list-style-type: none">• handles

- Finishes include:**
- runners
 - hinges
 - rails
 - sinks
 - baskets
 - toilets
 - bidets
 - edging and edge profiles
 - paints
 - waxes
 - lacquers
 - stains
 - pigments
 - oils
 - plastic coatings
 - veneers
 - ceramics
 - stone
 - glass
 - textiles and other textures
 - waterproofing finishes
- Elements and principles of design include:**
- line
 - shape
 - form
 - texture and colour
 - balance
 - proportion (symmetry and asymmetry)
 - harmony
 - contrast
 - pattern
 - movement
 - rhythm
 - unity
 - style
 - focus
 - scale
 - emphasis
 - proximity
 - alignment
 - space
 - ergonomics
 - arrangement

- aesthetic relations
 - tension
 - development methods
- Hazards include:**
- toxins and gases released by some finishes
 - glues and materials which may be harmful to people if not used correctly
- Presentation strategies include:**
- materials and concept boards
 - swatches and samples
 - quotes
 - drawings
 - models
 - plans

Unit Mapping Information

Supersedes and is equivalent to LMFKB4005A Research and recommend materials, components and finishes for bathroom designs.

Assessment Requirements for MSFKB4005 Research and recommend materials, components and finishes for bathroom designs

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret and analyse bathroom design briefs, including liveability design requirements
- Research relevant manufacturer and supplier information in order to select and specify bathroom materials, components and finishes that meet a design brief, including features, quality, costs, sustainability and aesthetic requirements
- Present advice on bathroom materials, components and finishes to meet client requirements, including samples and documented costing
- Use mathematical ideas and techniques to correctly complete measurements and estimate and cost material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Features of bathroom materials and components
- State or territory WHS legislation, regulations, standards and codes of practice relevant to bathrooms designs
- Information resources
- Elements and principles of design
- Research techniques
- Effects of finishes and finishing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Relevant problem identification and resolution techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, supervisor's reports and completed bathroom design projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work-related information resources.

MSFKB4006 Prepare quotation and contract documentation for design project

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers calculating costs for a design project and preparing formal quotation and contract documentation for client agreement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Identify costs involved in producing design | 1.1 Design brief is reviewed to confirm required outcomes and inclusions and any other client requirements |
| | 1.2 Measurements and quantities are confirmed |
| | 1.3 Specification schedule is developed to itemise all inclusions |
| | 1.4 Labour resources and suppliers are identified and role in design implementation confirmed |
| 2 Calculate project costs | 2.1 Costs of materials, components and finishes are calculated |
| | 2.2 Labour costs, including design fees, are calculated |

- | | | |
|---|--|--|
| | 2.3 | Overheads and hidden costs are calculated |
| | 2.4 | Costs of required plant and equipment are calculated |
| | 2.5 | Supplier prices are compared to ensure most cost-effective solutions |
| | 2.6 | Options for reducing costs are identified |
| 3 | Prepare and present cost quotation | |
| | 3.1 | Costs are itemised and detailed on documentation according to industry standards |
| | 3.2 | Additional information and samples are prepared, as required, to support quotation |
| | 3.3 | Quote is presented to the client and details and costing options discussed to confirm all items documented |
| | 3.4 | Quote is modified and finalised according to client response |
| | 3.5 | Client agreement to the quote is obtained and documented |
| 4 | Prepare and present contract documentation | |
| | 4.1 | Inclusions, costs and parameters of the design are noted in the contract documents |
| | 4.2 | Contract is prepared according to industry standards and presented and explained to client |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Assessment Requirements for MSFKB4006 Prepare quotation and contract documentation for design project

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret and analyse design brief and confirm measurements, itemised inclusions and resources required for the design implementation
- Research information on prices and suppliers and use mathematical ideas and techniques to correctly calculate costs for all components and services, including sourcing the required quality components for the best available price
- Calculate trade and associated labour costs such as plant/equipment and overheads for completing the design brief work to specifications
- Produce and present to the client a quote that documents material, trades and design costs, including samples of materials in a manner that informs the client of their choices and the details of the inclusions
- Present and conform client agreement to the fully itemised and costed contract documentation for the work
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to design contracts
- Information resources
- Research techniques
- Market rate for design fees, labour costs and material costs
- Appropriate mathematical procedures for estimation, costing and measurement
- Established communication channels and protocols
- Relevant problem identification and resolution techniques
- Types of labour available

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, supervisor's reports and completed documentation for design quotes and contracts.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work-related information resources.

MSFKB4007 Design ancillary residential cabinetry

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying client requirements for residential cabinetry outside of kitchen, bathroom and laundry applications, including developing and documenting designs to inform production and installation processes.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Determine design requirements	1.1	Client requirements for ancillary cabinetry are identified and verified with the client
		1.2	Design parameters are determined
		1.3	Site measurements are taken and recorded
		1.4	Design requirements and client information are documented
2	Develop design options	2.1	Drawings are completed to visually represent cabinet design ideas

- | | | |
|---|-------------------------|--|
| | 2.2 | Cabinet design ideas and options are discussed with client |
| | 2.3 | Client preferences are determined and design option selected with the client |
| 3 | Develop design proposal | 3.1 Measurements and dimensions are documented
3.2 Structural features and components are identified
3.3 Construction and installation requirements are determined
3.4 Labour requirements are determined
3.5 Costs involved to implement design are calculated
3.6 Design proposal is developed and specifications documented
3.7 Design documentation and quote is provided for client consideration |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

	<ul style="list-style-type: none">• work requires individual to demonstrate some discretion, judgement and problem solving by cabinetmakers and designers who provide designs for custom built cabinets for installation in residential situations
Client requirements include:	<ul style="list-style-type: none">• location and fit• measurements and dimensions• purpose• materials and finishes• structural features• budget• timing
Ancillary cabinetry includes:	<ul style="list-style-type: none">• built-in entertainment units• built-in cupboards• shelving• external kitchen components• bathroom cabinets
Design parameters include:	<ul style="list-style-type: none">• quality finish• relationship with other features of the room• structural and functional requirements and limitations• colour, style and tone
Drawings include:	<ul style="list-style-type: none">• computer-aided drawings• manual drawings• sketches
Options include:	<ul style="list-style-type: none">• materials• structural features• options to reduce costs• variety of ways to achieve client requirements
Structural features include:	<ul style="list-style-type: none">• doors, shelving, drawers and rails• openings• legs, plinths and kickboards
Components include:	<ul style="list-style-type: none">• handles, knobs and drawers• hinges and runners
Construction and installation requirements include:	<ul style="list-style-type: none">• use of screws, fixtures and patented devices• use of adhesives, clips and fasteners• use of sealants• material requirements• manufacturing processes• on-site production requirements• special production requirements, such as use of specialised equipment• removal of furnishings

Design documentation includes:

- waste removal
- drawings
- specifications
- construction information
- timelines
- product codes and specifications
- delivery details
- special conditions
- measurements and dimensions

Unit Mapping Information

Supersedes and is equivalent to LMFKB4007A Design ancillary residential cabinetry.

Assessment Requirements for MSFKB4007 Design ancillary residential cabinetry

Modification History

Release 1 - New unit of competency

Performance Evidence

- Liaise with client to establish design requirements for ancillary residential cabinetry
- Inspect the installation site to take measurements, identify available services and structural features and develop cabinetry design options to discuss with the client
- Calculate trade and associated labour costs such as plant/equipment and overheads for completing the design brief work to specifications
- Produce and present to the client a quote that documents cabinetry fabrication, installation and design costs in a manner that informs the client of their choices and the details of the inclusions
- Confirm client choices for the cabinetry and complete design documentation, including drawings, costing and specifications for client approval
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Processes used for the construction and installation of cabinets
- Features and limitations of cabinets and components
- State or territory WHS legislation, regulations, standards and codes of practice relevant to cabinets and components
- Relevant information resources
- Costing techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, supervisor's reports and completed design and quotation documentation for residential cabinetry.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work-related information resources.

MSFKB4008 Determine layout for laundry components

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers designing and documenting the layout for a laundry, including placement of components, such as cabinets, appliances and required laundry facilities applying design principles to spatial considerations for a laundry. It does not include designing any changes to plumbing, electrical or waterproofing, other than the location of required service.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|--|
| 1 | Confirm and analyse the laundry design requirements | 1.1 | Communication is established with the client and information regarding the client needs and expectations is obtained |
| | | 1.2 | Key requirements for laundry are assessed and confirmed and constraints determined |
| | | 1.3 | Project parameters are confirmed |
| | | 1.4 | Site analysis is conducted to assess laundry design |

		requirements and limitations
	1.5	Spatial considerations are determined specific to the site and client requirements
2	Examine layout options	2.1 Location of current services are identified
	2.2	Components for inclusion in laundry are identified
	2.3	Range of layout options and traffic flow implications are examined
	2.4	Suitability of layout options for space is analysed and limitations and benefits determined
	2.5	Environmental implications of the layout are assessed and options reviewed to ensure maximum energy efficiency is achieved
	2.6	Access issues relating the laundry are identified and addressed in layout options
3	Select and specify laundry layout	3.1 Layout options are discussed with client and preferences selected
	3.2	Required changes to service outlets and waterproofing are identified
	3.3	Regulatory requirements relating to laundries are assessed to determine compliance
	3.4	Laundry layout and components are documented with specifications detailed
	3.5	Cost estimate is calculated and provided for client
	3.6	Proposal is communicated effectively to the client and alterations negotiated and confirmed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individual to demonstrate some discretion, judgement and problem solving to residential laundry design and may include the positioning of services and appliances and desired locations for plumbing and electrical outlets
Key requirements include:	<ul style="list-style-type: none">• functional requirements• colour, style and form preferences• inclusions• budget• timelines• desired effects• materials, component and finishes• quality• specific conditions
Project parameters include:	<ul style="list-style-type: none">• upper and lower budget limits• range of options• specific conditions• scope of brief• approval to make changes• design effect required by client• functionality (short and long term)• established timelines
Site analysis includes:	<ul style="list-style-type: none">• identifying current laundry features and services• measuring laundry dimensions and features• identifying structural conditions and features of current laundry layout or which require building or engineering advice in a new laundry design• observing general house style• observing current inclusions and appliances

- Spatial considerations include:**
- location and capacity of services
 - requirements of laundry appliances
 - usage and traffic flows typical to a laundry
 - laundry storage requirements
 - specific ergonomic or access requirements
- Components include:**
- washing machine, dryer, ironing facilities, laundry sink and hanging facilities
 - storage areas, cabinets and shelving
 - tiling, fixtures and fittings
 - shower, shower screen, toilet and basin
- Access issues include:**
- access for wheelchair and walking support devices
 - railing and supports
 - ergonomics required for specific disability, aging, and/or health issues
- Documentation includes:**
- product information
 - client information
 - sketches and drawings (elevations, sections, plans and perspectives)
 - photos
 - brochures
 - computer-aided design (CAD) presentations
- Specifications include:**
- measurements and dimensions
 - fixtures and fittings
 - product codes
 - materials
 - components
 - appliances

Unit Mapping Information

Supersedes and is equivalent to LMFKB4008A Determine layout for laundry components.

Assessment Requirements for MSFKB4008 Determine layout for laundry components

Modification History

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Liaise with client to determine required laundry features and requirements and access and interpret laundry design and component information to determine limitations and benefits of different spatial planning options and layout
- Identify and apply ergonomic and regulatory considerations for laundry designs, including appliance use and location, storage options use patterns and installation requirements to determine suitable layout
- Identify the range of services needed for a laundry design and relevant regulations and construction that impact on the design process and apply spatial considerations to develop a laundry layout to meet client brief
- Use mathematical ideas and techniques to correctly complete measurements, estimate material requirements and cost a laundry design, including drawings and specifications for client consideration and approval
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures

Knowledge Evidence

- Features of laundry designs and components
- State or territory WHS legislation, regulations, standards and codes of practice relevant to laundry designs
- Characteristics of storage, appliance and service options
- Spatial planning considerations for laundry designs
- Relevant information resources
- Drawing protocols and symbols

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, supervisor's reports and completed laundry layout design projects.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work tools and equipment and work-related information resources.

MSFMB2001 Prepare and assemble base unit

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assembling components to construct bases for mattresses, including timber platforms, webbing, coil springs, grid wires, foam and padding.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Mattress and Base Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-----------------------------|--|
| 1 Prepare for base assembly | 1.1 Specifications are used to determine job requirements, including design, tolerances, process, materials, finish and quantity |
| | 1.2 Assembly sequence is planned |
| | 1.3 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.4 Procedures are determined for checking quality at each stage of the process |
| | 1.5 Fixing devices are selected in line with work instructions and type of materials to be joined |

- | | | |
|---|--|--|
| | 1.6 | Components, hardware, fittings and attachments are collected |
| | 1.7 | Tools and equipment suitable to the fixing method are selected and checked for safe operation |
| | 1.8 | Appropriate jigs are selected |
| 2 | Assemble base components | |
| | 2.1 | Components are laid out and assembled using jigs and appropriate fastenings |
| | 2.2 | Hand and/or power tools, equipment are used as required |
| | 2.3 | Assembled base is checked for compliance with specifications |
| | 2.4 | Spring grid/unit is attached to base |
| | 2.5 | Fabric is upholstered to base according to specifications |
| | 2.6 | Base is finished to eliminate all excess materials |
| | 2.7 | Bases which do not meet quality specifications are repaired or tagged for further processing or recycling/disposal |
| 3 | Identify quality requirements | |
| | 3.1 | Process is monitored and conditions which may affect quality standards are noted |
| | 3.2 | Variations to normal activities are reported in accordance with workplace procedures |
| | 3.3 | Authorised changes in standard operating procedures and work order or instructions are implemented |
| | 3.4 | Workplace required documentation is completed and stored following appropriate procedures |
| 4 | Clean work area/s and maintain equipment | |
| | 4.1 | Faulty and/or defective equipment is tagged and reported in accordance with WHS procedures |
| | 4.2 | Waste and scrap is removed following workplace procedures |
| | 4.3 | Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures |
| | 4.4 | Equipment and work area clean-up is maintained in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Tools and equipment include:

- measuring tapes or rules
- scissors
- staple gun
- pincers
- long-nose pliers
- hammers
- mallets
- squares
- bevels
- chisels
- plane
- hand saws
- power saws
- power drills/screwdrivers
- clamps and screwdrivers

Materials include:

- timber

	<ul style="list-style-type: none">• manufactured board• fabrics• grid wires• glues• screws• nails• dowels• coil springs• foam• padding• stabilising springs• border wire
Assembled base specification checks include:	<ul style="list-style-type: none">• alignment and squareness• correct number and fitting of fasteners• hardware• fittings and attachments and conformity to work instruction and quality requirements
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Assessment Requirements for MSFMB2001 Prepare and assemble base unit

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assemble base components to construct at least one (1) sprung base unit
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Interpretation of plan representation of base design
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to base production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, hand and/or power tools, equipment, jigs and appropriate machinery.

MSFMB2002 Assemble mattress components

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assembling specified mattresses, including planning the work, selecting fabrics and components, and assembling the components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Mattress and Base Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|---|
| 1 | Plan work operations | 1.1 | Specifications concerning design, fabrics and finish are confirmed with designer/client, as required |
| | | 1.2 | Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | | 1.3 | Suitable work area is selected, tidied and cleaned of any contaminants |
| | | 1.4 | Appropriate equipment and tools are selected and checked for the required fitting and assembly process |
| 2 | Select and inspect fabrics and components | 2.1 | Fabric panels are checked in terms of quantity, quality, contaminants, size, pattern and consistency |

- | | | | |
|---|--|-----|--|
| | | 2.2 | Grade of foam is selected and checked in accordance with work order |
| | | 2.3 | Appropriate padding and springs are selected and checked |
| 3 | Assemble components and fit fabric cover | 3.1 | Work pieces are laid out in sequence according to specifications, construction process and workplace procedures |
| | | 3.2 | Padding and underlay materials are attached to spring unit using appropriate enterprise techniques and equipment |
| | | 3.3 | Covering fabrics are applied to mattress ensuring patterns, naps, sheens, direction of pattern, pattern repeat and finished side of the materials are positioned appropriate to the design |
| | | 3.4 | Fabric finish over the spring unit is smooth and consistent |
| | | 3.5 | Weaving lines are straight |
| | | 3.6 | Finish of applied fabric is checked against quality standards |
| 4 | Clean work areas and maintain equipment | 4.1 | Faulty and/or defective equipment is tagged and reported in accordance with workplace WHS procedures |
| | | 4.2 | Waste and scrap is removed following workplace procedures |
| | | 4.3 | Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures |
| | | 4.4 | Equipment and work area clean-up is maintained in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for MSFMB2002 Assemble mattress components

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and select materials used and any special handling requirements and assemble mattress components to construct the following:
 - one (1) pillow top mattress
 - one (1) standard sprung mattress
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work requirements, including workplace standards
- Fabric types and characteristics, common faults and inspection procedures
- Padding/underlay materials and spring units
- Risks to health from repetitive actions and prevention strategies
- Design features of the finished furnishing items

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate tools, plain and patterned fabrics, padding materials, spring units, fixing materials and tools, work procedures and equipment instructions.

MSFMB2003 Cut mattress and base fabrics

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers laying out patterns and cutting fabrics ready for construction of mattresses and bases. It includes cutting single or multi-layer fabrics by hand or an automatic method according to specifications and pattern, and applies to fabrics where matching involves naps, direction of pattern and pattern repeats.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Mattress and Base Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|---|
| 1 | Plan work operations | 1.1 | Specification sizes are read and interpreted to identify required fabrics, number of items to be cut and required equipment |
| | | 1.2 | Cutting requirements or other instructions are noted and required guides on the cutting table are identified |
| | | 1.3 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.4 | Suitable work area is selected, tidied and cleaned of any contaminants |

- 1.5 Appropriate equipment and tools are selected for the fabrics and type of materials
 - 1.6 Scissors and any other cutting equipment appropriate for the fabric are selected and checked prior to use for sharpness, set operation and safe condition
- 2 Prepare materials for cutting
 - 2.1 Fabrics are selected to suit application, and inspected for flaws and appropriate finish
 - 2.2 Naps, direction of pattern, pattern repeat and finished side of the materials are identified
 - 2.3 Fabrics are laid out smooth and square ready for cutting
 - 2.4 Patterns are laid out following work procedures and instructions using location marks on the pattern and other instructions to match specifications
 - 2.5 Measurements are made and appropriate adjustments made
 - 2.6 Tools and equipment are checked for operation
- 3 Complete cutting operations
 - 3.1 Required cutting operations are completed to cut out materials following work instructions
 - 3.2 Cut fabrics are folded, protected and despatched to next process following workplace procedures
 - 3.3 Unused materials are stored as required
 - 3.4 Workplace required documentation is completed and stored following appropriate procedures
 - 3.5 Work area is cleaned and damaged tools tagged as required
 - 3.6 Waste is collected and bundled for recycling/re-use as required
 - 3.7 Tools and equipment are cleaned, maintained and returned to storage area

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Tools and equipment include: | <ul style="list-style-type: none">• scissors• cutting blades• fabric cutter |
| Materials to be cut include: | <ul style="list-style-type: none">• plain fabric• patterned fabric |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices |
| Information and procedures include: | <ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures |

Unit Mapping Information

Supersedes and is equivalent to LMFMB2004B Cut mattress and base fabrics.

Assessment Requirements for MSFMB2003 Cut mattress and base fabrics

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify materials used and any special cutting requirements, and measure accurately and cut fabrics to required size and accuracy covering at least three (3) different fabric types or pattern styles
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Fabric types, common faults and inspection procedures
- Design features of finished mattress and/or base items related to laying out patterns and cutting fabrics
- Work requirements, including workplace standards
- Risks to health from repetitive actions and prevention strategies

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate fabric cutters, scissors and tools, fabrics, work procedures and equipment instructions.

MSFMB2004 Assemble springs for mattresses

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assembling springs for mattresses and bases. It involves determining the number of springs for size of mattress, type of springs for the application, layout of springs and appropriate assembly procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Mattress and Base Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|--|
| 1 | Plan work operations | 1.1 | Specifications for assembly of springs are confirmed, including the number of springs for size of mattress, type of springs for the application, layout of springs and assembly procedures |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Suitable work area is selected, tidied and cleared of any contaminants |
| | | 1.4 | Appropriate equipment and tools are selected and checked for the required fitting and assembly process |

- | | | |
|---|--|---|
| | 1.5 | Specifications for assembly of springs are confirmed |
| 2 | Operate machinery to assemble spring units | |
| | 2.1 | Machine is checked for safe and effective operation |
| | 2.2 | Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions |
| | 2.3 | Machine start-up procedures are carried out in accordance with manufacturer instructions |
| | 2.4 | Machine is operated in accordance with its designated capacity and purpose, tooling requirements and to manufacturer recommendations |
| | 2.5 | Springs are machine joined in accordance with manufacturer instructions, safe handling procedures and standard workplace operating procedures |
| | 2.6 | Machine operation is monitored to ensure springs are assembled to job specifications and quality requirements |
| | 2.7 | Problems with the required work and/or operation of the machine are identified and reported to the appropriate person |
| 3 | Clean up work area and maintain equipment | |
| | 3.1 | Items that do not meet quality requirements are recycled or discarded according to workplace procedures |
| | 3.2 | Materials that can be re-used are collected and stored |
| | 3.3 | Waste and scrap are removed following workplace procedures |
| | 3.4 | Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures |
| | 3.5 | Unserviceable equipment is tagged and faults identified in accordance with workplace procedures |
| | 3.6 | Equipment and tooling is maintained in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

MSFMB2005 Make springs for mattresses and bases

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using coiling machines and related tools and materials to produce springs for mattresses and bases and includes determining the type of spring required, spring tension, positioning, wire type and diameter, and coil count.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Mattress and Base Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Plan work operations	1.1	Specifications for springs are confirmed, including the type of spring required, spring tension, positioning, wire type and diameter and coil count
		1.2	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work
		1.3	Suitable work area is selected, tidied and cleaned of any contaminants
		1.4	Appropriate equipment and tools are

			selected and checked for the required spring coiling process
2	Operate machinery to make springs	2.1	Machine is checked for safe and effective operation
		2.2	Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions
		2.3	Machine start-up procedure is carried out in accordance with manufacturer instructions
		2.4	Machine is operated in accordance with its designed capacity and purpose, tooling requirements and to manufacturer recommendations
		2.5	Material is fed into machine in accordance with manufacturer instructions, safe handling procedures and standard workplace operating procedures
		2.6	Machine operation is monitored to ensure springs are produced to job specifications and quality requirements
		2.7	Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons
3	Clean up work area and maintain equipment	3.1	Items that do not meet quality requirements are recycled or discarded according to workplace procedures
		3.2	Material that can be re-used is collected and stored
		3.3	Waste and scrap are removed following workplace procedures
		3.4	Equipment and work area are cleaned and inspected for serviceable

- | | |
|-----|---|
| | condition in accordance with workplace procedures |
| 3.5 | Unserviceable equipment is tagged and faults identified in accordance with workplace procedures |
| 3.6 | Equipment and tooling is maintained in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none"> • WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving |
| Tools and equipment include: | <ul style="list-style-type: none"> • spring coiling machine • related tools |
| Materials include: | <ul style="list-style-type: none"> • helical wire |
| Personal protective equipment includes: | <ul style="list-style-type: none"> • that prescribed under legislation, regulations and enterprise policies and practices |

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFMB3002B Make springs for mattresses and bases.

MSFMB2006 Set up, operate and maintain a tape edging machine

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating and maintaining a tape edging machine which uses automated processes to apply and finish edge on mattresses and bases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Mattress and Base Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|--|
| 1 | Plan work operations | 1.1 | Work instructions are used to determine job requirements, including quality, materials, equipment and quantities |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed through the work |
| | | 1.3 | Material for processing is selected and inspected for quality |
| | | 1.4 | Machine and the tape holder unit are identified and checked for safe and effective operation |
| | | 1.5 | Procedures are determined for minimising waste material |
| | | 1.6 | Procedures are identified for maximising energy efficiency while completing the job |

- | | | | |
|---|---|-----|---|
| 2 | Set up machines | 2.1 | Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions |
| | | 2.2 | Trial runs are conducted to check machine operation, accuracy and quality of finished work |
| | | 2.3 | Necessary adjustments are made to machine settings |
| 3 | Complete tape edging | 3.1 | Machine start-up procedure is carried out in accordance with manufacturer instructions |
| | | 3.2 | Material is fed into machine in accordance with manufacturer instructions, tooling requirements, safe handling procedures and standard workplace operating procedures |
| | | 3.3 | Machine is operated in accordance with its designed capacity and purpose, and to manufacturer recommendations |
| | | 3.4 | Machine operation, including inputs and outcomes, is monitored to ensure product quality and output |
| | | 3.5 | Waste quantities are checked and minimised |
| | | 3.6 | Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures |
| | | 3.7 | Problems with the required work or the operation of the machine are identified and reported to appropriate persons |
| 4 | Clean up work area and maintain equipment | 4.1 | Material that can be re-used is collected and stored |
| | | 4.2 | Waste and scrap are removed following workplace procedures |
| | | 4.3 | Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures |
| | | 4.4 | Unserviceable equipment is tagged and faults identified in accordance with workplace procedures |
| | | 4.5 | Operator maintenance is completed in accordance with manufacturer specifications and site procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|

Assessment Requirements for MSFMB2006 Set up, operate and maintain a tape edging machine

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up and operate a semi-automated or automated tape edging machine and complete:
 - set up and application of at least one(1) edge treatment material
 - identification and correction of at least two (2) real or simulated machining faults
- Conduct operator maintenance on the machine and equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of the machines
- Characteristics, uses and limitations of fabric and edging tape
- Workplace guidelines regarding acceptable tolerance levels
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a semi-automated or automated tape edging machine, including tooling equipment and accuracy devices.

MSFMB2007 Set up, operate and maintain a quilting machine

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating and maintaining a quilting machine which uses automated processes to apply padding/foam to plain or patterned fabric.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Mattress and Base Making

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|--|
| 1 | Plan work operations | 1.1 | Work instructions are used to determine job requirements, including quality, materials, equipment and quantities |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed through the work |
| | | 1.3 | Material for processing is selected and inspected for quality |
| | | 1.4 | Machine, the thread guides and needles are identified and checked for safe and effective operation |
| | | 1.5 | Procedures are determined for minimising waste material |
| | | 1.6 | Procedures are identified for maximising energy efficiency while completing the job |

- | | | | |
|---|---|-----|---|
| 2 | Set up machines | 2.1 | Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions |
| | | 2.2 | Trial runs are conducted to check machine operation, accuracy and quality of finished work |
| | | 2.3 | Necessary adjustments are made to machine settings |
| 3 | Complete the quilting process | 3.1 | Machine start-up procedure is carried out in accordance with manufacturer instructions |
| | | 3.2 | Materials are fed into machine in accordance with manufacturer instructions, tooling requirements, safe handling procedures and standard workplace operating procedures |
| | | 3.3 | Machine is operated in accordance with its designed capacity and purpose, and to manufacturer recommendations |
| | | 3.4 | Machine operation, including inputs and outcomes, is monitored to ensure product quality and output |
| | | 3.5 | Waste quantities are checked and minimised |
| | | 3.6 | Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedure |
| | | 3.7 | Problems with the required work or the operation of the machine are identified and reported to appropriate persons |
| 4 | Clean up work area and maintain equipment | 4.1 | Material that can be re-used is collected and stored |
| | | 4.2 | Waste and scrap is removed following workplace procedures |
| | | 4.3 | Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures |
| | | 4.4 | Unserviceable equipment is tagged and faults identified in accordance with workplace procedures |
| | | 4.5 | Operator maintenance is completed in accordance with manufacturer specifications and site procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Quilting machines include:	<ul style="list-style-type: none">• semi-automated quilting machines• fully automated quilting machines
Material to be processed include:	<ul style="list-style-type: none">• plain or patterned fabrics• padding materials and foam
Operator maintenance includes:	<ul style="list-style-type: none">• cleaning and refurbishing of the quilting needle unit, thread guides, shuttles and loopers
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices

Assessment Requirements for MSFMB2007 Set up, operate and maintain a quilting machine

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up and operate a semi-automated or automated quilting machine to complete:
 - setting up and applying at least two (2) different fabrics and padding/foam
 - identifying and correcting at least two (2) real or simulated machining faults
 - one cam change
- Conduct operator maintenance on the machines and equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of the machines
- Characteristics, uses and limitations of thread, fabric, padding and foam
- Workplace guidelines regarding acceptable tolerance levels
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a semi-automated or automated quilting machine, including tooling equipment and accuracy devices.

MSFPPF1001 Frame a simple artwork

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers designing, fabricating components and assembling a simple artwork package. It applies to a VET in Schools or pre-vocational program for new entrants to the furnishing industry. Tools and equipment should be used under supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------------|-----|--|
| 1 | Design artwork package | 1.1 | Artwork to be framed is identified and its qualities and framing requirements assessed |
| | | 1.2 | A provisional design package is developed |
| | | 1.3 | Design is modified as required and approved in accordance with workplace procedures |
| | | 1.4 | Work sequence is planned to suit the job |
| 2 | Cut and join mouldings | 2.1 | Work health safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 2.2 | Tools, equipment and materials required for cutting and joining of mouldings are selected and checked prior to use |

- to ensure that they are appropriate for the work in terms of quality, serviceability and safety
- 2.3 Material is set out for cutting to length according to work instructions and workplace procedures
 - 2.4 Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications
 - 2.5 Mouldings are cut to length and checked for quality and fit in accordance with workplace practices
 - 2.6 Components are laid out and fixed in preparation for joining according to work instructions and workplace procedures
 - 2.7 Components are joined and checked for quality, alignment and finish according to workplace practices
- 3 Cut mat board
- 3.1 Tools, equipment and materials required for cutting mat board are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety
 - 3.2 Mat board material is set out for cutting according to work instructions and workplace procedures
 - 3.3 Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications
 - 3.4 Mat boards are cut and checked for quality in accordance with workplace practices
- 4 Cut glass for framing
- 4.1 Tools, equipment and materials required for cutting glass are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety
 - 4.2 Glass is set out for cutting according to work instructions and workplace procedures
 - 4.3 Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications
 - 4.3 Glass is cut and checked for quality in accordance with workplace practices
- 5 Mount artwork
- 5.1 Method of mounting is determined
 - 5.2 Mounting equipment is set up according to operating

		procedures and workplace practice
	5.3	Artwork is positioned on substrate according to job requirements and placed in mounting equipment
	5.4	Mounting equipment is operated in accordance with manufacturer instructions and workplace procedures
	5.5	Assembled artwork is removed from equipment, inspected for quality in accordance with workplace procedures
6	Assemble artwork package	6.1 Fabricated components are cleaned and laid out for assembly in accordance with workplace procedures
	6.2	Artwork is attached to backing material using the selected method
	6.3	Frame components are assembled and adjusted, as required, to fit and fixed in place
	6.4	Frame is fitted over package and the backing is fixed in accordance with workplace procedures
	6.5	Fittings, attachments and hanging aids are attached in accordance with workplace procedures
	6.6	Package is inspected for quality and processed in accordance with workplace procedures
7	Complete work	7.1 Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
	7.2	Off-cuts and unused materials are collected and stored for re-use or disposed following workplace procedures
	7.3	Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work involves reading and interpreting plans, developing set-outs, using hand and power tools, operating basic machinery, applying quality requirements, applying product finishing techniques and materials, and is conducted under supervision and guidance
- Simple artwork includes:**
- flat paper-based artwork not requiring any conservation measures
- Tools and equipment include:**
- guillotines
 - static mounted circular saws
 - drop saws
 - docking saws
 - mitre saws
 - underpinners (V-nailers)
 - screwdrivers
 - hand-operated tools:
 - cutting blades
 - clamps
 - marking out tools
 - mat cutters
 - appropriate mounting tools and equipment
 - flat felt-covered cutting table
 - glass cutters
 - squares
 - tape measures
 - marking pens/pencils
- Materials include:**
- timber
 - touch-up materials
 - glues

Personal protective equipment includes:	<ul style="list-style-type: none">• sandpaper• standard mat board material• appropriate mounting materials• glass• that prescribed under legislation, regulations and enterprise policies:<ul style="list-style-type: none">• gloves• safety glasses• gauntlets• footwear• earmuffs• aprons and overalls
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFPF1001B Frame a simple artwork.

Assessment Requirements for MSFPF1001 Frame a simple artwork

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Adapt or vary glass and glazing designs
- As a minimum, design, prepare, fabricate and assemble one (1) item of simple artwork
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Design requirements for simple artwork
- Preparation of plans/drawings/set-outs
- Work flow and steps in relation to framing simple artwork
- Identification of hand and basic picture framing processing tools, materials, equipment, processes and procedures

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans/designs, picture framing hand tools and/or basic processing machines, equipment, materials and a specified project.

MSFPPF2001 Use picture framing sector hand and power tools

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using hand and power tools in applications relating to the picture framing sector of the furnishing industry in small, medium and large businesses.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---------------------------------------|-----|--|
| 1 | Identify hand and power tools | 1.1 | Types of hand and power tools and their functions are identified |
| | | 1.2 | Sources of, and access to, power supply are recognised |
| | | 1.3 | Work health and safety (WHS) requirements for using hand and power tools are recognised and implemented |
| 2 | Select and use appropriate hand tools | 2.1 | Hand tools are selected consistent with needs of the job |
| | | 2.2 | Hand tools are checked for serviceability and safety, and any faults reported to supervisor in accordance with enterprise procedures |

- 2.3 Equipment is selected to hold, position or support material for hand tools application, where applicable
 - 2.4 Material is located and held in position for hand tool application
 - 2.5 Hand tools are safely and effectively used according to their intended purpose
 - 2.6 Hand tools are safely located when not in immediate use
- 3 Select and use appropriate power tools
 - 3.1 Appropriate personal protective equipment is selected, correctly fitted and used
 - 3.2 Power tools are selected consistent with needs of job in accordance with conventional work practice
 - 3.3 Power tools are visually checked for serviceability and safety in accordance with WHS requirements, and any faults reported to supervisor in accordance with enterprise procedures
 - 3.4 Equipment is selected to hold, position or support materials for power tool application, where applicable
 - 3.5 Material is located and held in position for power tool application, where applicable
 - 3.6 Power tools are safely and effectively used in application processes
 - 3.7 Power tools are safely switched and located when not in use
- 4 Clean up work area and tools
 - 4.1 All tools are cleaned, maintained and stored
 - 4.2 Equipment is cleaned, maintained and stored
 - 4.3 Documentation is completed in accordance with enterprise procedures
 - 4.4 Work area is cleaned and waste removed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Hand tools include:

- hand saws
- chisels
- underpinners
- screwdrivers
- marking out tools
- pincers
- pliers (including stretching pliers)
- files
- glass cutters
- squares
- measures
- hammers
- spirit level
- guillotine
- cutting blades
- clamps
- needles
- knives
- scissors

	<ul style="list-style-type: none">• plane• glass pliers• scoring tool• framer's points gun• pressure sensitive adhesive tape dispenser• nail punch• hand-operated mechanical tools, such as the pneumatic V-nailer
Power tools include:	<ul style="list-style-type: none">• power saws (circular)• drop saw• docking and mitre• power drills• guillotine• V-nailers• compressor and air guns, including tackers• staplers• flexi point• hand power saw• power screwdriver
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies:<ul style="list-style-type: none">• gloves• safety glasses• gauntlets• footwear• earmuffs• aprons and overalls

MSFPP2002 Cut mouldings to length

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting frame mouldings to the required length with guillotines, saws or other equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare for work | 1.1 Patterns, work instructions and/or plans are read and interpreted |
| | 1.2 Work health safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.3 The process for obtaining materials/components and moving completed work to the next process is identified |
| | 1.4 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety |
| | 1.5 Cutting equipment components and controls, including emergency stops and guards, are identified |

- | | | | |
|---|---------------------------|-----|---|
| | | 1.6 | Work sequence is planned to suit the job |
| 2 | Conduct cutting operation | 2.1 | Equipment is operated and monitored to ensure correct cut quality, output and that wastage is within allowable limits |
| | | 2.2 | Problems occurring during work operations are identified and reported to appropriate persons |
| | | 2.3 | Authorised changes in working procedures are followed |
| | | 2.4 | Routine lubrication and adjustments for the equipment are completed |
| | | 2.5 | Items which do not meet quality requirements are repaired or discarded |
| | | 2.6 | Finished work is inspected for compliance with work order, workplace requirements and finish |
| 3 | Complete work | 3.1 | Scraps and off-cuts are removed for disposal/recycling as required by workplace procedures |
| | | 3.2 | Work area is cleaned and rubbish disposed of as appropriate |
| | | 3.3 | Workplace documentation is completed as required |
| | | 3.4 | Tools, equipment and unused materials are cleaned and stored following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Assessment Requirements for MSFPF2002 Cut mouldings to length

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Cut mouldings for a picture frame (up to 100 mm wide) of each of the following materials:
 - timber (multi-angle and 45 degrees)
 - aluminium (45 degrees)
 - synthetic (45 degrees)
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Type, characteristics, uses and limitations of moulding materials
- Types, characteristics and applications of cutting machines and devices
- Types, uses and operation of tools
- Techniques for cutting frame mouldings
- Workplace safety system requirements related to cutting frame mouldings
- Work flow in relation to cutting frame mouldings

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to guillotines, static mounted circular saws, docking saws and mitre saws fitted with appropriate blades, standard operating procedures and unprocessed materials.

MSFPPF2003 Join mouldings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers joining mouldings to form artwork frames.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Patterns, work instructions and/or plans are read and interpreted
		1.2	Work health safety (WHS) requirements relevant to the operation of joining mouldings, including personal protection needs, are observed throughout the work
		1.3	The process for obtaining materials/components and moving completed work to the next process is identified
		1.4	Required components, attachments, tools and equipment are identified
		1.5	Work sequence is planned to suit the job
2	Prepare for frame assembly	2.1	Components of the frame are selected and checked against work instructions for size, number, pattern and finish

- profile
- 2.2 Fixing and joining devices are selected in accordance with work instructions and type of moulding to be joined
 - 2.3 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety
 - 2.4 Shortages/defective items are notified in accordance with workplace practices
- 3 Assemble frame
- 3.1 Components are laid out and joined using a jig (if required) and appropriate fastenings
 - 3.2 Assembled frame is checked for alignment, pattern matching (if appropriate), correct number and fitting of fasteners and other attachments and conformity to work instruction and quality requirements
 - 3.3 Corners are finished in accordance with workplace requirements
 - 3.4 Joined frames are stored according to workplace requirements
- 4 Complete work
- 4.1 Completed frames are inspected for quality, with those not meeting specification being repaired or tagged for further processing or recycling/disposal
 - 4.2 Tools, equipment and unused materials are cleaned and stored following workplace procedures
 - 4.3 Equipment faults are identified, tagged and reported to appropriate personnel
 - 4.4 Work area is cleaned and rubbish disposed of as appropriate
 - 4.5 Workplace documentation is completed as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFPF2003 Join mouldings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Join each of the following frames (at least one of them being a multi-angle frame) up to a width of 100 mm:
 - synthetic
 - timber
 - aluminium
 - and each in the following profiles:
 - flat
 - traditional
 - reverse
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Type, characteristics, uses and limitations of moulding materials
- Workplace safety system requirements related to joining picture frame mouldings
- Work flow in relation to frame production
- Operation of tools and equipment used in the assembly process
- Identification of equipment, processes and procedures

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to timber, metal or synthetic mouldings, frame components, consumables and workplace procedures.

MSFPP2004 Mount artwork

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers mounting artwork to substrates prior to framing. It includes dry and wet mounting, pressure rolling, laminating and hinging of artwork.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|---|
| 1 Prepare for work | 1.1 Artwork is assessed to determine the most appropriate mounting process, including the composition of substrate and fixing materials |
| | 1.2 Work requirements are identified from drawings/specifications/instructions and/or workplace practices |
| | 1.3 Quality assurance requirements are identified and observed throughout the process in accordance with industry standards and workplace practices |
| | 1.4 Work health safety (WHS) requirements, including personal protection needs, are observed throughout the work |

- 1.5 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety
 - 1.6 Materials required are cut to size and assembled to industry standard and workplace procedures
 - 1.7 Fixing agents are positioned in accordance with workplace procedures
- 2 Dry mount artwork
 - 2.1 Mounting equipment is set up according to operating procedures and workplace practices
 - 2.2 Artwork is positioned on substrate according to job requirements and placed in mounting press
 - 2.3 Mounting press is operated in accordance with manufacturer instructions, ensuring correct mounting temperature and/or pressing period
 - 2.4 Assembled artwork is removed from press, inspected for quality and stored in accordance with workplace procedures
- 3 Wet mount artwork
 - 3.1 Mounting equipment is set up according to operating procedures and workplace practices
 - 3.2 Selected adhesive is prepared and applied to the substrate with regard for the type and composition of artwork to be mounted
 - 3.3 Artwork is wet mounted to substrate according to job requirements and placed in vacuum press
 - 3.4 Mounting press is operated in accordance with manufacturer instructions, ensuring correct pressing period
 - 3.5 Assembled artwork is removed from press, inspected for quality and stored in accordance with workplace procedures
- 4 Pressure roller mount artwork
 - 4.1 Rolling equipment is set up according to manufacturer instructions and workplace practices
 - 4.2 Artwork is laminated using cold film in accordance with job requirements and workplace practices
 - 4.3 Assembled artwork is inspected for quality and stored in accordance with workplace procedures

- | | | | |
|---|----------------------------|-----|---|
| 5 | Laminate artwork | 5.1 | Laminating equipment is set up according to manufacturer instructions and workplace practices |
| | | 5.2 | Artwork is laminated in accordance with job requirements and workplace practices |
| | | 5.3 | Laminated artwork is inspected for quality and stored in accordance with workplace procedures |
| 6 | Hinge artwork to substrate | 6.1 | Hinging paper/pre-made hinging tape is assessed for compliance with job requirements |
| | | 6.2 | Starch paste is mixed to correct consistency and applied in conformance with workplace practices |
| | | 6.3 | Hinging paper is torn and fixed to artwork and substrate in accordance with workplace procedures |
| | | 6.4 | Hinged artwork is inspected for quality and positioned for further processing in accordance with workplace procedures |
| 7 | Complete work | 7.1 | Defective work is reported in accordance with workplace procedures |
| | | 7.2 | Scraps and off-cuts are removed for disposal/recycling as required by workplace procedures |
| | | 7.3 | Equipment and work area are cleaned in accordance with workplace procedures |
| | | 7.4 | Workplace documentation is completed as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Framing items includes:**
- dry mounting original paper-based artwork
 - reproduction artwork
 - photographs
 - photographic reproductions
 - documents
 - posters
 - wet mounting/laminating reproduction artwork and promotional materials
- Mounting artwork includes:**
- dry mounting paper-based artwork using heat press and cold press
 - wet mounting paper and canvas-based artwork using adhesives and vacuum press
 - laminating paper-based artwork using pressure roller or laminating equipment
 - hinging, prefabricated or custom made
- Tools and equipment include:**
- for dry mounting:
 - hard bed heat press
 - soft bed heat press
 - tacking iron
 - piercing tool
 - cutting blades
 - measuring tapes and marking out tools
 - overlay effect sheets
 - silicone release paper
 - Teflon and foam plastic blankets
 - for wet mounting:
 - vacuum press
 - cutting blades
 - measuring tapes and marking out tools
 - scrapers

	<ul style="list-style-type: none"> • glue/adhesive applicators (rollers and spray guns) • for pressure mounting: <ul style="list-style-type: none"> • pressure rolling equipment • cold film • for laminating: <ul style="list-style-type: none"> • cold roller laminator • laminating equipment • cutting blades • measuring tapes and marking out tools • for hinging: <ul style="list-style-type: none"> • straight edge • thin brush • weight bags • mixing vessel and swizzle • steam generator • microwave oven
Dry mounting materials include:	<ul style="list-style-type: none"> • medium density fibreboard (MDF) • foam core • screen board • mat board • heat and pressure sensitive films and tissues

Assessment Requirements for MSFPF2004 Mount artwork

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Mount at least one (1) item of artwork in each form of mounting:
 - wet
 - dry
 - laminating
 - pressure roller
 - hinging
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Type, characteristics, uses and limitations of the various methods of mounting artwork
- Techniques, method, equipment and materials used to mount artwork
- Types of artwork suitable for the various techniques of mounting artwork and the characteristics and interactions between the materials used
- Quality and aesthetic requirements in mounting artwork
- Workplace safety system requirements related to mounting artwork
- Work flow in relation to mounting artwork
- Awareness of the effect of the mounting process on the artwork

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate mounting and/or laminating equipment for the technique being assessed, artwork and consumables.

MSFPPF2005 Cut mat boards

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting out simple mat boards by hand and manual or computerised cutting machines for the mounting of artwork.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---------------------|-----|---|
| 1 | Prepare for cutting | 1.1 | Patterns, dimensions, materials and quantities are identified from work/job instructions |
| | | 1.2 | Work health safety (WHS) requirements relevant to the operation of cutting basic mat boards, including personal protection needs, are observed throughout the work |
| | | 1.3 | The process for obtaining materials/components and moving completed work to the next process is identified |
| | | 1.4 | Work area, tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety |
| | | 1.5 | Appropriate mat cutting machines are selected for the required cut and suitable blades are selected, fitted and |

- adjusted for angled, circular or oval cuts
- 1.6 Cutting equipment components, controls and clamping systems are set
 - 1.7 Board material is selected following work order or specification and laid out to meet requirements and minimise waste
 - 1.8 Work sequence is planned to suit the job
- 2 Conduct cutting operation
- 2.1 Mat board is located on machine and clamped
 - 2.2 Equipment is operated and monitored to ensure correct cut quality, output and that wastage is within allowable limits
 - 2.3 Problems occurring during work operations are identified and reported to appropriate persons
 - 2.4 Routine equipment adjustments are completed
 - 2.5 Items which do not meet quality requirements are repaired or discarded
 - 2.6 Finished work is inspected for compliance against specification or work order, workplace requirements and finish
- 3 Complete work
- 3.1 Mat boards are marked for identification and stored following workplace procedures
 - 3.2 Scraps and off-cuts are removed for disposal/recycling as required by workplace procedures
 - 3.3 Work area is cleaned and rubbish disposed of as appropriate
 - 3.4 Workplace documentation is completed as required
 - 3.5 Tools, equipment and unused materials are cleaned, stored and stock levels reported following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. MSFPPF2006 Cut and handle glazing materials for framing

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting and handling glazing materials, including acrylic sheet, for picture and mirror frames.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------------------------|---|
| 1 Identify work requirements | <div style="margin-left: 20px;">1.1 Work requirements, including materials, types of cuts and quantities required, are identified from work instructions or job order in accordance with workplace procedures</div> <div style="margin-left: 20px;">1.2 Work health safety (WHS) requirements, including personal protection needs, are observed throughout the work</div> <div style="margin-left: 20px;">1.3 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</div> <div style="margin-left: 20px;">1.4 Cutting list and quality standards are determined and procedures identified in accordance with workplace requirements</div> |
|-------------------------------------|---|

- 1.5 Glazing material to be cut is selected using information from the work order, including type, thickness, colour and dimensions
 - 1.6 Machines, equipment and settings required to perform the work are identified
- 2 Prepare for work
 - 2.1 Sequence of work is planned to ensure cutting is conducted in a logical order
 - 2.2 Suitable cutting and lubrication methods are selected
 - 2.3 Cutting table is selected and work surface is cleared of debris and dust
 - 2.4 Work area is cleared of obstructions and potential hazards
 - 2.5 Glazing material is checked for imperfections and damage prior to handling
 - 2.6 Glazing material to be processed is located in the work area using correct manual handling procedures and any specialised handling techniques and precautions, observing any labelling instructions
 - 2.7 Glazing material is measured accurately to minimise waste and within specified tolerances according to workplace standards
 - 2.8 Components and controls of machines, including emergency stops and guards, are identified and tested for working order
- 3 Cut glazing materials
 - 3.1 Tools and equipment are operated and monitored in accordance with manufacturer instructions and workplace procedures to ensure correct product quality and output
 - 3.2 Glazing material is processed to required standard in accordance with job order, work instructions and procedures, including the performance of routine lubrication and adjustments of machines/equipment
 - 3.3 Problems occurring during work operations are identified and reported to appropriate persons
 - 3.4 Authorised changes in working procedures are followed
- 4 Complete work
 - 4.1 Completed product is inspected for quality of work and repaired, reprocessed or discarded in accordance with

- workplace procedures
- 4.2 Cut glazing material is labelled and stored following workplace procedures
 - 4.3 Scraps and off-cuts are removed for disposal/recycling as required
 - 4.4 Work area is cleaned and rubbish disposed of as appropriate
 - 4.5 Workplace documentation is completed as required
 - 4.6 Tools, equipment and unused materials are removed and stored appropriately

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Assessment Requirements for MSFPF2006 Cut and handle glazing materials for framing

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Set up, prepare for and cut glazing materials:
 - cut three (3) pieces of glass to within .05 mm tolerance
 - cut three (3) pieces of acrylic to within .05 mm tolerance
 - cut two (2) pieces of oval glass to within 1.5 mm tolerance
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Qualities and characteristics of glazing materials, including the hazards and handling requirements
- Identification of glazing material cutting equipment, functions and procedures
- Set-up and operation of glazing material cutting equipment, including procedures for reporting product defects or equipment faults
- Workplace safety system requirements related to the cutting of glazing materials
- Work flow in relation to the cutting of glazing materials

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

MSFPF2007 Assemble a basic artwork package

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying, gathering and assembling all picture frame components required to complete the basic framing of artwork.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for assembly	1.1	Packages to be assembled are identified from work orders/instructions/customer requirements
		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	Safe and suitable work areas are selected to assemble package
		1.4	Specifications of artwork to be framed are identified, including any special requirements
		1.5	Components, fittings and attachments required for the package, and their source, are identified

- | | | | |
|---|------------------|-----|--|
| | | 1.6 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety |
| | | 1.7 | Work sequence is planned to suit the job |
| 2 | Assemble package | 2.1 | Components of the package are inspected for flaws/faults and, if located, repaired or returned in accordance with industry standards and workplace procedures |
| | | 2.2 | Components are cleaned and laid out for assembly in accordance with workplace procedures |
| | | 2.3 | Artwork is attached to backing material using the selected method |
| | | 2.4 | Frame components are assembled and adjusted, as required, to fit and fixed in place |
| | | 2.5 | Frame is fitted over package and the backing is fixed in accordance with workplace procedures |
| | | 2.6 | Fittings, attachments and hanging aids are attached in accordance with workplace procedures |
| | | 2.7 | Package is inspected for quality and either labelled and stored or returned for re-assembly in accordance with workplace procedures |
| 3 | Complete work | 3.1 | Work area is cleaned and rubbish disposed of as appropriate |
| | | 3.2 | Workplace documentation is completed as required |
| | | 3.3 | Tools, equipment and unused materials are cleaned and stored following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Assessment Requirements for MSFPP2007 Assemble a basic artwork package

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assemble three (3) artwork packages given a range of components and specifications
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow in relation to assembly of artwork package
- Identification of materials, components, equipment, processes and procedures appropriate for assembling artwork packages
- Construction techniques and processes for the components of the artwork packages
- Industry standards and workplace practices in the assembly of simple artwork packages
- Effects of assembly process on the artwork

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials and deadlines.
- Access is required to artwork, components of artwork package and work instructions.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	The composition and finish of damaged framing materials is identified and viability/feasibility of effecting repair determined
		1.2	Repairs to be effected are identified from work/job instructions or as a result of inspection of framing materials
		1.3	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.4	Repair requirements and procedures are identified from drawings/specifications and workplace procedures
		1.5	Work sequence is planned to suit the job

		1.6	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety
2	Repair framing materials	2.1	Fillers and abrasive agents are used to remove/fill holes and other blemishes in materials
		2.2	Other defects are repaired in accordance with workplace procedures
		2.3	Colours are matched to suit existing finish of materials
		2.4	Finishes are applied to materials in accordance with workplace procedures
		2.5	Problems occurring during repairs are identified and reported to appropriate persons
		2.6	Repaired material is inspected to ensure best possible match to existing finish and either stored, returned for further repair or scrapped in accordance with workplace procedures
3	Complete work	3.1	Work area is cleaned and rubbish disposed of as appropriate
		3.2	Workplace documentation is completed as required
		3.3	Tools, equipment and unused materials are cleaned and stored following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Framing materials include:	<ul style="list-style-type: none">• picture frame mouldings• mat boards• perspex• glass• mirrors
Mouldings include:	<ul style="list-style-type: none">• solid timber• composites• metal and alloy extrusions• synthetics
Defects in framing materials include:	<ul style="list-style-type: none">• nail/pin holes• splits and cracks• worn finishes and dents/bruises <p>(defects may occur in mouldings or existing frames)</p>
Finishes include:	<ul style="list-style-type: none">• painted surfaces• schalag metal• gesso• gold leaf gilding• shellac and stained finish
Repair processes include:	<ul style="list-style-type: none">• filling• rectification of dents and bruises• replacement of damaged components and touch-up colour/finish <p>(repairs may be effected in new materials or existing frames)</p>
Tools and equipment include:	<ul style="list-style-type: none">• hammers• planes• chisels• filler blades• brushes and clamps• sanders
Personal protective	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise

equipment includes:

policies:

- safety glasses
- safety footwear
- ear protection
- dust mask/respirator

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFPF2008B Recognise and repair finishes of framing materials.

Assessment Requirements for MSFPF2008 Recognise and repair finishes of framing materials

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify the finish and effect the repair of at least five (5) different damaged items of picture framing materials
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Type, characteristics, uses and limitations of framing materials
- The nature of defects in the finish of framing materials and their method of repair
- Types, uses and operation of tools and equipment
- Finishes to framing materials and colour matching
- Workplace safety system requirements related to repairing finishes to framing materials
- Work flow in relation to repair of framing material finishes

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to framing materials requiring repair and consumables for filling and finishing.

MSFPPF3001 De-frame artwork

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers dismantling and removing the frame from artwork, including memorabilia, and analysing its documentation and taking client instructions before undertaking the work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Work instructions and discussion with the client are used to identify the reasons for de-framing the item, and parts of the framed item or the original framing materials that are to be retained |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Frame is examined to identify its composition, condition and type of construction, production techniques, fixing and fasteners used and de-framing and restoration procedures |
| | | 1.4 | Tools and equipment are selected to match construction and fastener type and checked prior to use to ensure that |

- they are appropriate for the work in terms of quality, serviceability and safety
- 1.5 Safe and suitable work area is selected/prepared to de-frame, sort and protect the items
 - 1.6 Dismantling sequence and handling techniques are determined
- 2 De-frame artwork
- 2.1 Original frame assembly is dismantled to the extent required in the work instructions using appropriate tools and procedures
 - 2.2 Labels, fasteners and attachments are removed and stored
 - 2.3 Components are separated, protected, tagged and stored following workplace procedures
 - 2.4 Condition of de-framed object is examined and noted for the work order
 - 2.5 Relevant historical information is collated and filed
- 3 Clean work area and complete operations
- 3.1 Equipment is cleaned, inspected for serviceable condition and stored appropriately
 - 3.2 Equipment faults are identified, tagged and reported to appropriate personnel
 - 3.3 Work area is cleaned and rubbish disposed of as appropriate
 - 3.4 Workplace documentation is completed as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Artwork for de-framing includes:	<ul style="list-style-type: none">• original artwork• reproductions• photographs• documents• three-dimensional items• textiles• paper-based artwork• canvas artwork
De-framing artwork includes:	<ul style="list-style-type: none">• removing the frame from artwork for the purposes of repair, restoration or re-framing
Mounting methods include:	<ul style="list-style-type: none">• hinging• lacing and direct mounting
Frame construction includes:	<ul style="list-style-type: none">• timber• metal/alloys extrusion• composite construction and other frame material• paper• cardboard• fabric• mat board• backing material• glass/acrylic
Documentation includes:	<ul style="list-style-type: none">• clearly recording for reference as frame is disassembled all relevant materials and their positioning
Tools and equipment include:	<ul style="list-style-type: none">• hand-operated tools• cutting blades• screwdrivers• pincers• pliers and marking out tools

Materials include:

- timber
- metal/alloys
- paper
- cardboard
- laminates
- composites
- adhesives
- artwork

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFPF3001B Deframe artwork.

Assessment Requirements for MSFPF3001 De-frame artwork

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- De-frame and document five (5) items of two and/or three-dimensional framed artwork of various media and ages
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow in relation to dismantling frames
- Artwork conservation techniques
- Identification of materials, equipment, processes and procedures appropriate for de-framing artwork
- Frame construction techniques and processes for constructing frame packages
- Types, uses and operation of tools used to de-frame artwork
- Workplace safety system requirements related to de-framing artwork
- Effects of the de-framing process on the artwork

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

MSFPP3002 Decorate mat boards

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers decorating mat boards by hand, including use of specialty cutting, line inking, colour washing and marble papers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|---|
| 1 Prepare for work | 1.1 Required work is identified from work order/instructions |
| | 1.2 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.3 Tools and equipment are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety |
| | 1.4 Appropriate mat cutting machines are selected for specialty decorative cutting |
| | 1.5 Decorative inks, paints and application equipment are selected to match work order |

- | | | | |
|---|---------------------|-----|---|
| | | 1.6 | Safe and suitable work area is selected/prepared |
| | | 1.7 | Board material is selected and laid out to meet work requirements and minimise waste |
| 2 | Decorate mat boards | 2.1 | Mat board is decorated following the requirements of the work order and to maximise the presentation of the artwork |
| | | 2.2 | Decoration is checked against specification or work order |
| | | 2.3 | Decorated boards are marked for identification and stored following workplace procedures |
| 3 | Complete work | 3.1 | Unused materials are stored or recycled as required |
| | | 3.2 | Tools and equipment are cleaned and stored following workplace procedures |
| | | 3.3 | Work area is cleaned and rubbish disposed of as appropriate |
| | | 3.4 | Workplace documentation is completed as required |
| | | 3.5 | Stock level of materials are reported or maintained following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Assessment Requirements for MSFPF3002 Decorate mat boards

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- On any size mat boards:
 - cut V groove
 - cut mat with decorative corners
 - apply wash panels/lines
 - apply decorative transfers
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics and applications of cutting machines and mat board decorating techniques
- Operation of mat cutters, lettering and line drawing guides and colouring application
- Identification of equipment, processes and procedures
- Work flow in relation to the decoration and storing of mat boards
- Workplace safety system requirements related to decorating mat boards

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to mat cutting equipment, inks, paints and application equipment, mat boards and work orders.

MSFPPF3003 Set up and operate computer numerically controlled (CNC) machines for picture framing work

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up and operating CNC machines used in the production of picture frame components, such as mat boards and frame mouldings, and the joining of frames.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for work	<div><div>1.1</div><div>Work instructions are used to determine job requirements, including design, quality, materials, equipment and quantities</div></div> <div><div>1.2</div><div>Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work</div></div> <div><div>1.3</div><div>Determine appropriate CNC program and settings</div></div> <div><div>1.4</div><div>Material for machining is selected and inspected for appropriate quality</div></div> <div><div>1.5</div><div>Machines, cutting tools and jigs are checked for safe and</div></div>

		effective operation
	1.6	Procedures are determined for minimising waste material and for maximising energy efficiency while completing the job
	1.7	Safety equipment, including emergency stops, gauges, guards and controls, are checked
	1.8	Personal protective equipment is selected and used according to WHS procedures
2	Set up machines	
	2.1	CNC program is set to job requirements
	2.2	Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions
	2.3	Trial runs are conducted to check machine operation and quality of finished work
	2.4	Final adjustments are made to CNC programs and equipment according to workplace procedures
3	Operate machine	
	3.1	Machines are operated and monitored to ensure product quality and output
	3.2	Waste quantities are checked and minimised
	3.3	Problems with the required work are identified and reported to appropriate persons
	3.4	Any authorised changes in working procedures are followed
	3.5	Daily routine lubrication and adjustments for the equipment are completed
4	Complete work and maintain equipment	
	4.1	Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures
	4.2	Material that can be reused is collected and stored
	4.3	Waste and scrap are removed following workplace procedures
	4.4	Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures

- 4.5 Unserviceable equipment is tagged and faults identified in accordance with workplace
- 4.6 Equipment and tooling are maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Assessment Requirements for MSFPF3003 Set up and operate computer numerically controlled (CNC) machines for picture framing work

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Set up and operate in flat, traditional and reverse profiles (all 3), either:
 - a CNC mat board cutter in cutting the following patterns:
 - single and double
 - regular, oval, custom/regular
 - multi-holed

OR

CNC mitre saws and CNC V-nailers to cut and join the following frames (at least one of them being a multi-angle frame) up to a width of 100 mm

- synthetic
- timber
- aluminium
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow in relation to the operation of CNC machines

- Identification of machines, processes and procedures
- Procedures for reporting materials, product or equipment faults
- Characteristics of materials used and uses of products produced
- Workplace safety system requirements related to the operation of CNC machines

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to CNC machines, standard operating procedures and unprocessed materials.

MSFPP3004 Prepare textiles for framing

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing and mounting textiles for framing and includes lacing, couching, blocking, stretching and straining of textiles and stitching to backing of textiles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Type of fabric used in textile is identified and work requirements established |
| | | 1.2 | Quality assurance requirements are identified and observed throughout the process in accordance with industry standards and workplace practice |
| | | 1.3 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.4 | Textile is analysed to ensure its compatibility with the mounting process, including the type of mounting and the composition of the substrate material |

- | | | |
|---|-------------------------|---|
| | 1.5 | Work requirements are confirmed from drawing/specifications/instructions and workplace procedures to ensure they are within workplace capability |
| | 1.6 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety |
| 2 | Lace textiles | |
| | 2.1 | Textile is laced into position on compatible backing according to industry practice and workplace procedures to be free of creases and overstretching marks and showing correct proportioning of images |
| | 2.2 | Laced textile is inspected for quality and either stored or, if faulty, is reprocessed in accordance with work procedures |
| 3 | Couch textiles | |
| | 3.1 | Textile is couched into position on compatible backing/mounting fabric according to industry practice and workplace procedures to be free of creases and overstretching marks and showing correct proportioning of images |
| | 3.2 | Couched textile is inspected for quality and either stored or reprocessed in accordance with work procedures |
| 4 | Stretch/strain textiles | |
| | 4.1 | Stretching or straining frame selected appropriate for material being prepared |
| | 4.2 | Textile is stretched/strained into position according to industry practice and workplace procedures to be free of creases and overstretching marks and showing correct proportioning of images |
| | 4.3 | Stretched/strained textile is inspected for quality and either stored or reprocessed in accordance with work procedures |
| 5 | Stitch textiles | |
| | 5.1 | Textile is stitched into specified position onto compatible backing/mounting board according to workplace procedures |
| | 5.2 | Stitched textile is padded if required in accordance with workplace procedures |
| | 5.3 | Stitched textile is inspected for quality and either stored or reprocessed in accordance with work procedures |
| 6 | Block textiles | |
| | 6.1 | Blocking process is identified according to type, composition and condition of textile according to workplace procedures |

- | | | |
|---|---------------|--|
| | 6.2 | Blocking process is used to return textile back into required position prior to lacing, couching or stretching/straining |
| | 6.3 | Textile is inspected for quality and either stored or reprocessed in accordance with work procedures |
| 7 | Complete work | |
| | 7.1 | Defective work is reported in accordance with workplace procedures |
| | 7.2 | Scraps and off-cuts are removed for disposal/recycling as required by workplace procedures |
| | 7.3 | Equipment and work area are cleaned in accordance with workplace procedures |
| | 7.4 | Workplace documentation is completed as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFPF3004 Prepare textiles for framing

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Using the five (5) preparation techniques, prepare representative items from each of the following textiles for framing:
 - canvas works, including paintings and tapestries
 - needle art, including cross-stitch, applique, long stitch and embroidery
 - items of clothing
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Type, characteristics, uses and limitations of the various methods of preparing textiles for framing
- Techniques, method, equipment and materials used to prepare textiles for framing
- Quality and aesthetic requirements in preparing textiles for framing
- Workplace safety system requirements related to preparing textiles for framing
- Work flow in relation to preparing textiles for framing
- Understand the effect of this process on the artwork

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate textile mounting equipment for the technique being assessed and textiles for framing.

MSFPP3005 Recognise and handle artwork for framing

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers recognising and appropriately handling various types of artwork and frame design to determine appropriate conservation and framing techniques to ensure its artistic/historic significance is maintained/enhanced. It includes determining suitable storage requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|-------------------|-----|--|
| 1 | Recognise artwork | 1.1 | Customer requirements relating to the artwork are determined |
| | | 1.2 | Work area is cleaned and prepared to handle artwork in accordance with workplace standards |
| | | 1.3 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.4 | Workplace quality assurance requirements are recognised and adhered to throughout the work |
| | | 1.5 | Tools, equipment and materials are selected and checked |

		prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety
	1.6	Artwork is handled in accordance with industry recognised handling methods and workplace procedures
	1.7	Artwork is examined to identify the period of artwork, its composition and any historic, monetary or sentimental value
	1.8	Category of artwork is recognised to inform the selection of appropriate framing techniques
2	Identify restoration/conservation requirements	2.1 Customer requirements relating to the artwork are confirmed and framing liabilities and obligations assessed
		2.2 Artwork is examined to identify the quality, value and appropriate handling techniques and requirements
		2.3 Artwork composition and production techniques and any restoration or conservation required are determined
		2.4 Compatibility of mounting processes, including type of mounting and composition of substrate material, is assessed
		2.5 Method of restoration/conservation, including techniques and materials, is identified, including the need for any specialised expertise
		2.6 Artwork for restoration/conservation is stored to prevent loss or damage in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Recognise artwork includes: | <ul style="list-style-type: none">• identification of all forms of artwork in order to determine appropriate presentation and/or restoration and conservation techniques |
| Artworks include: | <ul style="list-style-type: none">• original works of art (oil and watercolour)• original prints• reproductions• needlework• textiles• photographs• certificates• memorabilia (including 3-D objects) |
| Damage to artwork includes: | <ul style="list-style-type: none">• light• temperature• humidity• physical damage• insects• pollution |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies |

Assessment Requirements for MSFPF3005 Recognise and handle artwork for framing

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Recognise from five (5) items of artwork representing various media, including:
 - era
 - artwork medium and material
 - any historical/monetary/sentimental significance
 - handling and storage requirements
 - impact on techniques
 - materials to be used for framing
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Liabilities and obligations relating to framing artwork
- Framing materials and techniques
- Materials used in artworks
- Chemical reactions between artworks and framing materials
- Restoration/conservation techniques for artwork and frames
- Operation requirements of equipment and work systems in work area
- Assess effects of this process on the artwork

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

MSFPP3006 Prepare design requirements for framing

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying the elements and principles of design to select the correct framing of artwork to maintain/enhance its historic, sentimental or monetary value.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------------------|--|
| 1 Identify design requirements | 1.1 Customer requirements relating to the artwork are determined |
| | 1.2 Work area is cleaned and prepared to handle artwork in accordance with workplace standards |
| | 1.3 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.4 Workplace quality assurance requirements are recognised and adhered to throughout the work |
| | 1.5 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety |

- | | | |
|---|----------------------|---|
| | 1.6 | Artwork is handled in accordance with industry recognised handling methods and workplace procedures |
| | 1.7 | Artwork is assessed for colour qualities to identify primary, secondary, tertiary, harmonic and contrasting colours by colour wheel and the aesthetic/mood evoking nature |
| | 1.8 | Artwork is assessed against the elements and principles of design and their impact on preservation/restoration and framing selection determined |
| 2 | Develop frame design | |
| | 2.1 | Customer requirements for framing are identified and framing liabilities and obligations assessed |
| | 2.2 | Historical, sentimental or monetary value of artwork ascertained through examination, research and/or consultation with customer |
| | 2.3 | Artwork is assessed to identify any preservation/restoration work required and impact on frame design |
| | 2.4 | Compatibility of framing materials with the artwork is determined from manufacturer and industry information |
| | 2.5 | Principles of colour design are applied to select mat and framing materials to complement artwork |
| | 2.6 | Design package is developed for presentation and discussion with customer |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Framing design includes:	<ul style="list-style-type: none">• the requirement to consider the elements and principles of design to maintain/enhance the aesthetic and historical significance of artwork• consideration of customer requirements
Elements of design include:	<ul style="list-style-type: none">• line• direction• shape• size• texture• value• colour
Principles of design include:	<ul style="list-style-type: none">• repetition• alteration• harmony• graduation• contrast (or opposition or conflict)• dominance• unity• balance
Influences on compatibility of frame design include:	<ul style="list-style-type: none">• frame package design to suit required level of preservation• framing style to match image quality and aesthetic value• mouldings, fittings and attachments to suit framing and hanging requirements
Artwork includes:	<ul style="list-style-type: none">• original works of art• original prints• reproductions• needlework• textiles• photographs• certificates and memorabilia (including 3-D objects)
Damage to artwork	<ul style="list-style-type: none">• light• temperature

includes:	<ul style="list-style-type: none">• humidity• physical damage• insects• pollution
Mounting methods include:	<ul style="list-style-type: none">• hinging• supports• lacing• stretching and direct mounting
Frame constructions include:	<ul style="list-style-type: none">• timber• metal/alloy extrusion• composite construction and other framing material, such as paper/cardboard/fabric mat board• backing materials• acrylic and glass

MSFPPF3007 Apply frame finishes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying surface coatings to picture frames.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Work to be completed is identified from work order/instruction
		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	The process for obtaining materials/components and moving completed work to the next process is identified
		1.4	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the finishing task in terms of quality, serviceability and safety
		1.5	Appropriately ventilated area, including fume extraction system (if appropriate) is prepared for use

- 1.6 Finishing materials are identified and prepared for the finishing task
 - 1.7 Workplace information relating to the safe application of finishes is used to inform work practices
 - 1.8 Processing and application techniques, time and safety requirements are identified and used to plan process
- 2 Prepare for finishing
 - 2.1 Frame surfaces are checked for contamination and correct preparation according to workplace procedures and standards
 - 2.2 Frames with surface or other faults are identified and faults reported or repaired, as appropriate
 - 2.3 Techniques for application of materials identified and used according to workplace practices
 - 2.4 Colour match and trial applications of finish are made to check equipment operation, materials consistency and required surface finish
 - 2.5 Faults are identified and workplace procedures for rectification are followed
- 3 Apply surface finish
 - 3.1 Surface finish is applied according to job instructions and workplace procedures
 - 3.2 Surface finish is checked in accordance with workplace requirements
 - 3.3 Rectification of surface faults is made as necessary
 - 3.4 Products are inspected and approved for suitability for further processing
 - 3.5 Defects are dealt with and/or reported in accordance with workplace procedures
- 4 Complete work
 - 4.1 Tools and equipment are cleaned and inspected for serviceable condition and stored appropriately
 - 4.2 Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed
 - 4.3 Work area is cleaned and returned to approved condition
 - 4.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Finishing techniques include: | <ul style="list-style-type: none">• hand staining• hand finishing• washed finishing• mechanical finishing• faux finishing |
| Finishes include: | <ul style="list-style-type: none">• paint• stain• powder• foil• lacquer• synthetic• faux |
| Picture frames include: | <ul style="list-style-type: none">• timber• metal/alloy• synthetic material |
| Tools and equipment | <ul style="list-style-type: none">• air spray gun |

include:

- airless spray gun
- air compressor and hoses
- paint and brushes
- finish containers
- scrapers
- a custom spray booth
- fume extraction/ventilation system

Materials include:

- wood fillers
- stains
- waxes
- oils
- French polishes
- varnish
- paints
- liming
- cutting compounds
- acrylics
- enamels
- polyurethane
- methylated spirits
- sand papers
- cotton rags
- hessian rags
- steel wool
- sandpaper
- abrasive papers
- rubbers

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies:
 - safety glasses/goggles
 - hair nets
 - ear muffs/plugs
 - footwear
 - gloves
 - respiratory masks
 - protective clothing

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication

- manufacturer specifications and operational procedures

Assessment Requirements for MSFPF3007 Apply frame finishes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply the following finishing techniques to timber, timber/compound, plain and ornamental frames:
 - hand staining
 - hand finishing
 - washed finishing
 - mechanical finishing
 - faux finishing
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types and features of picture frame finishes
- Methods, characteristics and problems of application
- Work flow in relation to spraying operations
- Identification of equipment, processes and procedures

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to finishing equipment, finishes and frames to be finished.

MSFPP3008 Assemble a complex artwork package

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying, gathering and assembling all picture frame components required to complete complex, custom framing of artwork.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|---|
| 1 | Prepare for assembly | 1.1 | Packages to be assembled are identified from work orders/instructions/customer requirements |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Safe and suitable work areas are selected to assemble package |
| | | 1.4 | Specifications of artwork to be framed are identified, including any special requirements with liabilities and obligations assessed |
| | | 1.5 | Components, fittings and attachments required for the package, and their source, are identified |

- | | | |
|---|------------------|---|
| | 1.6 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety |
| | 1.7 | Work sequence is planned to suit the job |
| 2 | Assemble package | |
| | 2.1 | Components of the package are selected, inspected for flaws/faults and, if located, repaired or returned in accordance with industry standards and workplace procedures |
| | 2.2 | Components are cleaned and laid out for assembly in accordance with workplace procedures |
| | 2.3 | Artwork is mounted using the appropriate method |
| | 2.4 | Frame components are assembled and adjusted, as required, to fit and fixed in place |
| | 2.5 | Frame is fitted over package and the backing is fixed in accordance with workplace procedures |
| | 2.6 | Fittings, attachments and hanging aids are attached in accordance with workplace procedures |
| | 2.7 | Package is inspected for quality and either labelled and stored or returned for re-assembly in accordance with workplace procedures |
| 3 | Complete work | |
| | 3.1 | Work area is cleaned and rubbish disposed of as appropriate |
| | 3.2 | Workplace documentation is completed as required |
| | 3.3 | Tools, equipment and unused materials are cleaned and stored following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Assembling a complex artwork package includes:	<ul style="list-style-type: none">• identifying artwork to be framed• gathering and preparing the package components• assembly and fixing of fittings and attachments• forming a framed artwork package
Complex artwork includes:	<ul style="list-style-type: none">• 3-D items• items requiring specialised framing using:<ul style="list-style-type: none">• mat boards• spacers and fillets• items that require preservation• items with artistic/historic significance requiring specialist handling
Artwork package includes:	<ul style="list-style-type: none">• art• mount• mat board• frame• glass/acrylic• backing• fittings and attachments (including hanging attachments)
Tools and equipment include:	<ul style="list-style-type: none">• cutting blades• hammers• screwdrivers• drills• clamps• marking out tools• air stapler

	<ul style="list-style-type: none">• tacker• flexi-point gun• staplers

Assessment Requirements for MSFPF3008 Assemble a complex artwork package

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assemble:
 - an item of matted artwork
 - a multi-frame (and/or fillets) item of artwork
 - a memorabilia box frame at least 50 mm deep
 - a full conservation framed artwork
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow in relation to assembly of artwork package
- Identification of materials, components, equipment, processes and procedures appropriate for assembling artwork packages
- Construction techniques and processes for the components of the artwork packages
- Industry standards and workplace practices in the assembly of complex artwork packages
- Liabilities and obligations relating to framing artwork
- Chemical reactions between artworks and framing materials
- Preservation techniques for artwork and frames
- Impacts of this process on the artwork

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to components of artwork package and customer requirements.

MSFPP3009 Install artwork

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing framed artwork in domestic or commercial situations, positioned singly or grouped in conjunction with other pieces of artwork, or in an adjustable gallery system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---------------------|--|
| 1 Plan installation | 1.1 Work to be undertaken is identified from work/job/customer order |
| | 1.2 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.3 Artwork to be installed is weighed and viewed to determine artistic and design characteristics and physical dimensions and shape |
| | 1.4 Site for installation is visited and location, wall and ceiling composition, load bearing ability and method of construction fittings, attachments, hanging/fixing devices and any display features determined |

- 1.5 If necessary, a plan for installation is developed and necessary regulatory approvals for installation sought
 - 1.6 Customer approval of plan is gained
- 2 Prepare for installation
 - 2.1 Specifications and/or plans are read and interpreted
 - 2.2 Attachments, fittings, hanging/fixing devices and display features are identified and ordered
 - 2.3 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
 - 2.4 Artwork to be installed is prepared for safe and secure transit to worksite
 - 2.5 Sequence of work is planned
- 3 Install artwork
 - 3.1 Instructions and sequence for installation are followed
 - 3.2 Attachments, fittings, hanging/fixing devices and display features are organised and installed in accordance with relevant industry and workplace requirements
 - 3.3 Artwork is positioned in accordance with work requirement
 - 3.4 Completed installation is checked to ensure it meets required specifications
 - 3.5 Customer approval of installation is gained
- 4 Complete housekeeping
 - 4.1 Unused materials are stored or recycled as required
 - 4.2 Tools and equipment are cleaned and stored appropriately
 - 4.3 Work area is cleaned and rubbish disposed of appropriately
 - 4.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Tools and equipment include: | <ul style="list-style-type: none">• ladders• work platform/trestles• power drill and fittings• hammer• pliers• screwdrivers• caulking gun• square• tape measure• plumb bob• spirit level |
| Materials include: | <ul style="list-style-type: none">• attachments• fittings• hanging/fixing devices and display features• nails• tacks• screws• staples• filler |

- adhesive
 - tapes
 - that prescribed under legislation, regulations and enterprise policies
- Personal protective equipment includes:**
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures
 - customer requirements
 - insurance cover for artwork

Unit Mapping Information

Supersedes and is equivalent to LMFPF3009B Install artwork.

Assessment Requirements for MSFPF3009 Install artwork

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Determine the requirements to securely fix artwork to be displayed for each installation
- Install an item of artwork of up to 20 kg on brick, plaster sheet, lath and plaster walls
- Install one (1) grouped set of artwork
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Elements and principles of design
- Types and features of framed artwork, the composition and characteristics of frames
- The composition, load bearing ability and method of construction of walls and ceilings
- Workplace safety system requirements related to the installation of artwork
- Work flow in relation to the installation of artwork
- Impact of this process on the artwork

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to framed artwork, attachments, fittings, hanging/fixing devices and display features, and an area suitable for installation.

MSFPPF4001 Design and construct ornamental frames

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers designing and constructing ornamental frames considering elements and principles of design to maintain/enhance the historic, sentimental or monetary value of artwork.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Identify design requirements | 1.1 Customer requirements relating to the display of the artwork and frame features are determined |
| | 1.2 Work area is cleaned and prepared to handle artwork in accordance with workplace standards |
| | 1.3 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.4 Workplace quality assurance requirements are recognised and adhered to throughout the work |
| | 1.5 Artwork is handled in accordance with industry recognised handling methods and workplace procedures |

- 1.6 Artwork is assessed for colour qualities to identify primary, secondary, tertiary, harmonic and contrasting colours by colour wheel, and the aesthetic/mood evoking nature
 - 1.7 Artwork is assessed against the elements and principles of design and their impact on preservation/restoration and framing selection determined
 - 1.8 Design concept is developed and confirmed with the customer
- 2 Develop frame design
 - 2.1 Historic, sentimental or monetary value of artwork ascertained through examination, research and/or consultation with customer
 - 2.2 Artwork is assessed to identify any impact preservation or restoration will have on frame design
 - 2.3 Compatibility of framing materials with the artwork is determined from manufacturer and industry information
 - 2.4 Principles of colour design are applied to select mat and framing materials to complement artwork
 - 2.5 A provisional design package is developed for presentation and discussion with customer
 - 2.6 Design package is revised to reflect customer requirements
- 3 Construct ornamental frame
 - 3.1 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety
 - 3.2 Machinery is used in accordance with workplace procedures throughout the work, including use of personal protective equipment
 - 3.3 Material is cut to size and laid out in the required design
 - 3.4 Specialised/ornamental components are moulded/turned/carved/manufactured in accordance with workplace procedures
 - 3.5 Frame components are finished in compliance with the design specifications and assessed for fit and aesthetic appearance
 - 3.6 Frame is joined to comply with design in accordance with workplace procedures

- | | | |
|---|---------------|---|
| | 3.7 | Finish to the frame and its fittings is applied to comply with design in accordance with workplace procedures |
| | 3.8 | Work is checked against required quality standards with any non-conformity being rectified |
| | 3.9 | Customer endorsement of finished frame is sought and any modifications identified and implemented |
| 4 | Complete work | |
| | 4.1 | Scraps and off-cuts are removed for disposal/recycling as required by workplace procedures |
| | 4.2 | Work area is cleaned and rubbish disposed of as appropriate |
| | 4.3 | Workplace documentation is completed as required |
| | 4.4 | Tools, equipment and unused materials are cleaned and stored following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion,

	judgement and problem solving
Frame design includes:	<ul style="list-style-type: none">• considering elements and principles of design to maintain/enhance the historic, sentimental or monetary value of artwork
Elements of design include:	<ul style="list-style-type: none">• line• direction• shape• size• texture• value• colour
Principles of design include:	<ul style="list-style-type: none">• repetition• alteration• harmony• graduation• contrast (or opposition or conflict)• dominance• unity and balance
Influences on compatibility of frame design include:	<ul style="list-style-type: none">• frame package design to suit required level of preservation• framing style to match image quality and aesthetic value• mouldings, fittings and attachments to suit framing and hanging requirements
Ornamental frames include:	<ul style="list-style-type: none">• those required for artwork where its aesthetics and/or value deem it necessary• frames fitted with ornate/elaborate embellishment for 2-D or 3-D artwork
Construction techniques include:	<ul style="list-style-type: none">• moulding of composite• creating moulds• frame preparation• application of composite to frame and carving/ornamentation/decoration as required
Tools and equipment include:	<ul style="list-style-type: none">• saws (circular, drop, docking and mitre)• chisels• underpinners• screwdrivers• marking out tools• pincers• pliers• touch-up material• glues• finishing tools, including files and sandpaper

- Frame materials include:**
- timber
 - metal/alloy extrusion
 - synthetic and composite construction
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies
- Information and procedures include:**
- customer requirements
 - industry preservation standards and requirements, including legal implications
 - work instructions, including job sheets, plans, drawings and designs
 - literature relating to the history and preservation of artwork
 - workplace procedures relating to reporting and communication

Unit Mapping Information

Supersedes and is equivalent to LMFPF4001B Design and construct ornamental frames.

Assessment Requirements for MSFPPF4001 Design and construct ornamental frames

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Design and construct three (3) frames using timber, metal/alloy extrusion and synthetic and composite construction, displaying techniques of moulded and carved finishes and including at least one (1) alternate joining technique
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Major categories of art media
- Liabilities and obligations relating to framing artwork
- Framing materials and techniques of frame building
- Elements and principles of design and the qualities/influence of colour
- Materials used in artworks
- Chemical reactions between artworks and framing materials
- Restoration/preservation techniques
- Operation requirements of equipment and work systems in work area
- The effect of this process on the artwork

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to customer/work requirements, design facilities, joining tools and equipment, frame assembly and finishing requirements.

MSFPPF4002 Determine and apply gilding techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers determining the requirements, preparing for and applying gilding techniques to new picture frames and those requiring repair or restoration.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Picture Framing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Work to be completed is identified from work instruction, customer request or artwork is assessed as requiring a gilded frame |
| | | 1.2 | Frame requiring gilding is examined to identify whether new gilding, preservation or restoration techniques are required |
| | | 1.3 | Gilding technique or techniques to be applied is determined |
| | | 1.4 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the |

- finishing task in terms of quality, serviceability and safety
- 1.6 Gilding materials and any associated finishes required are identified and assembled for the gilding task
 - 1.7 Work sequence is planned to suit the job
- 2 Prepare for gilding
 - 2.1 Frame surfaces are checked for contamination and correct preparation including maintenance of original finishes on historic pieces that require the removal of over painting according to workplace procedures and standards
 - 2.2 Frames with surface or other faults are identified and faults reported or repaired as appropriate
 - 2.3 Techniques for application of materials identified and used according to industry standards and workplace practices
 - 2.4 Faults are identified and workplace procedures for rectification are followed
 - 2.5 Composition work is completed, as required, to meet specifications in accordance with workplace procedures
- 3 Apply gilding
 - 3.1 Gilding is applied according to job instructions and workplace procedures
 - 3.2 Final finish is checked in accordance with workplace requirements
 - 3.3 Rectification of surface faults are made as required
 - 3.4 Ornamentation is applied, as required, in accordance with job instructions and workplace procedures
 - 3.5 Products are inspected and approved for suitability for further processing with defective frames being handled in accordance with workplace procedures
- 4 Complete work
 - 4.1 Tools and equipment are cleaned and inspected for serviceable condition and stored appropriately
 - 4.2 Unused material is returned to store in accordance with workplace procedures
 - 4.3 Work area is cleaned and returned to approved condition
 - 4.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Gilding techniques involve:

- the application of metallic leaf to picture frames which may be new work or existing frame (for either restoration/preservation needs)
- leaf includes:
 - gold
 - silver
 - platinum in varying alloys
 - shlagmetal (brass) in varying alloys
 - copper
 - aluminium

Techniques for application include:

- oil
- size
- quick size (acrylic)
- water gilding based on the reactivation of the glue in the bole layer
- new techniques, such as Kolnar gilding

Composition work involves:

- concern for the ornamentation of frames for gilding involving:

- its manufacture
 - taking of moulds from existing frames
 - repair of broken/missing ornamentation
- Gilding includes:**
- silver gilt
 - distemper
 - japanning
 - bronze
 - aluminium and other powders (as in wax and flash gilding)
 - use of aniline dyes and pigments and casein and verre eglomise (gilding and black lacquer on glass)
 - patination of finishes:
 - chemical
 - stained
 - painted
 - varnished
 - distempered
- Frames include:**
- new
 - old
 - requiring repair and/or restoration
- Tools and equipment include:**
- gilder's cushion
 - gilder's knife
 - gilder's tip
 - brushes
 - agate burnishing stones
- Materials include:**
- size (parchment or rabbit skin)
 - whiting (chalk)
 - bole (wet or dry)
 - ethanol and brandy
 - gilding oil
 - gold leaf
 - shlagmetal (Dutchmetal)
 - alloy and aluminium leaf
 - glue
 - rosin
 - turpentine
 - shellac
 - varnish colours and chemicals for patination, such as potassium sulphide
- Instructions and workplace procedures include:**
- choice of substrate
 - surface preparation
 - selection of bole or poliment

- selection and application of size
 - selection and application of leaf, patination and sealing of leaf
 - that prescribed under legislation, regulations and enterprise policies, and as many of the materials used in gilding are toxic, gloves, eye protection and protective clothing should be worn
- Personal protective equipment includes:**
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFPF4002B Determine and apply gilding techniques.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFPF4002 Determine and apply gilding techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Determine gilding technique and refurbish an existing gilded frame
- Use differing techniques/materials to prepare and gild two (2) new frames
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Techniques and application of gilding
- Methods, characteristics and problems of application
- Work flow in relation to gilding operations
- Identification of equipment, processes and procedures
- Impact of gilding process on artwork

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to gilding equipment, metallic leaf, other finishing materials and items to be gild finished.

MSFPT3001 Apply piano industry knowledge and work techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers researching the origins of the piano industry and how the different innovations in piano building have impacted on the piano technology sector of the furnishing industry and applying them to the workplace. It includes changes in design, construction and materials that have led to the evolution of the modern piano in order to correctly interpret work functions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Research historical development of keyboards to modern pianos	1.1	Original keyboard instruments are researched and identified
		1.2	Evolutionary development of upright pianos is investigated
		1.3	Materials selected for use in pianos are investigated, with reasons for changes occurring examined
2	Identify changes in design of pianos	2.1	Changes to design of pianos are investigated and applied to work
		2.1	Difference in playing mechanisms is known and applied to

			work
3	Identify types of pianos	3.1	Modern piano types are identified
		3.2	Differences between pianos are identified and appropriate work practices used
4	Identify basic piano components	4.1	Construction of piano infrastructure is identified to determine work required
		4.2	Major systems are identified, with all parts and functions listed before commencing work
5	Research the role of a piano technician	5.1	Role of technician is researched and identified and applied to own work
		5.2	Changes to role are identified as required and adapted to
		5.3	

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods, codes and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion,

	judgement and problem solving
Original keyboard instruments include:	<ul style="list-style-type: none">• zither• clavichord• harpsichord• forte piano• piano
Periods include:	<ul style="list-style-type: none">• antique (1700-1850)• Victorian (1850-1900)• modern (1900-2000)• current (2000 onwards)
Types of pianos include:	<ul style="list-style-type: none">• vertical:<ul style="list-style-type: none">• upright• spinet• console• player• grand:<ul style="list-style-type: none">• baby (4'6"-6')• professional (6'-7'6")• concert (7'6"-9'+)• square
Piano infrastructure includes:	<ul style="list-style-type: none">• the case• timing pins• soundboard and bridges• strings• pinblock and tuning pins• keys and actions
Systems include:	<ul style="list-style-type: none">• actions• soundboard/bridges• strings• structural
Role of technicians include:	<ul style="list-style-type: none">• quotations• tuning• repairs• rebuilding• restoration• polishing• piano moving• selling• advice on purchases
Changes to technician's	<ul style="list-style-type: none">• restriction to tuning or repairs only• less or more restoration

role include:

- less or more major repairs
- increased use of technology in tuning process

Information and procedures include:

- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFP3001A Develop knowledge of piano industry.

Assessment Requirements for MSFPT3001 Apply piano industry knowledge and work techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Locate, interpret and apply information relevant to piano tuning and repair industry by identifying different pianos and their construction
- Identify and observe the role of a piano technician
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage

Knowledge Evidence

- Types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning and repair
- Origin and types of pianos
- Piano infrastructure, including systems
- Terms used to describe piano components and systems
- Role of piano technicians
- Established lines of communication and protocols

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to upright and grand pianos.

MSFPT3002 Select materials for piano repair and manufacture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting materials used in the manufacture, repair or rebuilding of upright, grand and player pianos. It applies in workplaces and on-site environments for small to large scale enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---------------------------------|-----|---|
| 1 | Determine material requirements | 1.1 | Characteristics of timber, metal and synthetic materials used in piano construction are analysed according to structural and aesthetic requirements |
| | | 1.2 | Client requirements and desires are reviewed, confirmed and clarified |
| 2 | Select and use fasteners | 2.1 | Work instructions are used to determine job requirements for fasteners, including design, colour, finish process and quality |
| | | 2.2 | Fasteners are applied according to workplace requirements |
| | | 2.3 | Worksite is set up according to the task, including preparation of required material and selection of holding |

- and supporting equipment
- 2.4 Work is placed and held or supported in position for fastener application
 - 2.5 Tools are selected and used to attach fasteners according to their safety and effecting intended purposes
 - 2.6 Personal protective equipment is selected, correctly fitted and used
- 3 Select and use adhesives
- 3.1 Adhesives are selected according to workplace requirement
 - 3.2 Worksite is set up according to the task, including preparation of required materials and selection of holding and supporting equipment
 - 3.3 Work is placed and held or supported in position for adhesive application
 - 3.4 Personal protective equipment is selected, correctly fitted and used
 - 3.5 Work health and safety (WHS) requirements that apply to the safe application of adhesives are identified and followed
 - 3.6 Adhesives are applied using clamping techniques, as required
- 4 Identify surface coatings and finishes for pianos and identify hardware needs
- 4.1 Surface coatings used for both interior and exterior finishing on piano components are identified, with preparation, application and durability
 - 4.2 Furniture finishes used are investigated for requirements
 - 4.3 Work requirements are used to determine hardware needs for piano construction and repair
- 5 Clean up work area
- 5.1 All tools, materials and other equipment are checked, cleaned and returned to their appropriate location
 - 5.2 Work area is cleared and waste removed
 - 5.3 Workplace documentation is completed and filed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Timbers include: | <ul style="list-style-type: none">• spruce• ebony• beech• birch• hardwood• softwood• veneers• chipboard• medium density fibreboard (MDF) |
| Metals include: | <ul style="list-style-type: none">• aluminium• steel• solders• cast iron• brass |
| Felts include: | <ul style="list-style-type: none">• wool• synthetic |
| Synthetics include: | <ul style="list-style-type: none">• plastic (keys, bushings, damper head, damper flanges, hammer butt, jack, jack flange and capstone) |

- Other materials include:**
 - ivory
 - leather
- Characteristics of timber include:**
 - density
 - moisture content
 - grain
 - shrinkage
 - knots
- Structural requirements include:**
 - hardness
 - density
- Aesthetic requirements include:**
 - growth rings
 - veneers
 - medullary rays
 - colour
 - grain patterns
- Fasteners include:**
 - screws (head, slot, machine and thread types)
 - nails (panel pins)
- Adhesives include:**
 - animal (horse and fish)
 - polyvinyl chloride (PVC)
 - contact
 - epoxy
 - casein
 - latex
- Worksites include:**
 - workshop or factory location or onsite at client's premises
- Holding and supporting equipment includes:**
 - portable workbench
 - clamps
 - vices
 - gripper mats
- Clamping techniques include:**
 - sash
 - 'G' clamp
 - spring
 - pipe
- Surface coatings include:**
 - shellack
 - single pack
 - polyurethane (two pack)
 - nitro-cellulose and pre-catalysed lacquers
 - woodgrain fillers
 - stains
 - oils
 - enamels
 - acrylics

- Finishes include:**
- high gloss
 - gloss
 - satin
 - matt
 - limed
 - pigmented
- Hardware includes:**
- locks
 - hinges (butt and escutcheon inserts)
 - sliding rollers/runners
 - knobs
 - handles
 - finger guards
 - castors
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFP3002A Select materials for piano repair and manufacture.

Assessment Requirements for MSFPT3002 Select materials for piano repair and manufacture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Locate, interpret and apply information relevant to selection and use of materials, fasteners, hardware and adhesives for piano repair and manufacture, including:
 - identifying, selecting and applying at least three (3) types of fasteners and adhesives to appropriate materials
 - identify surface coatings and finishes used in piano repair and manufacture
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for selecting materials for piano repair and manufacture
- Organisational and site standards, requirements, policies and procedures for selecting materials for piano repair and manufacture
- Reading and interpreting workplace documents including work orders, work instructions and operator instructions
- Environmental protection requirements relating to the disposal of waste material
- Established lines of communication and protocols
- Types, characteristics, uses, limitations and preparation of materials and equipment used in piano repair and manufacture

- Types of tools and equipment used to repair and manufacture pianos and procedures for their safe use, operation and maintenance
- Characteristics of hardware and materials and their use
- Relevant problem identification and resolution
- Set-up and operation of tools and equipment used to repair and manufacture pianos
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to hand and power tools used in the repair and manufacture of pianos, materials used in the repair and manufacture of pianos, safety and personal protective equipment, and holding and supporting equipment.

MSFPT3003 Repair upright and grand piano actions, keys and pedals

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers repairing upright and grand piano actions, keys and pedals, and applies in a workplace and on-site environment conducted for small to large scale enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|--|
| 1 | Plan for repairing actions, keys and pedals | 1.1 | Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to repairing pianos are verified and complied with |
| | | 1.2 | Customer requirements are received, analysed and confirmed with appropriate personnel with written instructions followed |
| | | 1.3 | Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety |
| 2 | Prepare for repair | 2.1 | Tools and equipment are selected consistent with the needs of the job |

- | | | |
|---|---------------------------------------|---|
| | 2.2 | Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices |
| | 2.3 | Personal protective equipment is correctly fitted and used |
| | 2.4 | Materials required for the repair of piano actions, keys and pedals are selected |
| 3 | Repair piano actions, keys and pedals | |
| | 3.1 | Correct posture for repairing is demonstrated which minimises fatigue and promotes muscular control |
| | 3.2 | Tools and equipment are applied in the repair process |
| | 3.3 | Actions and keys are removed or dismantled, as required by the repairing process |
| | 3.4 | Faulty or damaged parts are removed from actions, keys and pedals |
| | 3.5 | Action parts are re-centred, as required |
| | 3.6 | Materials for replacement felts and leathers are selected, cut and glued to action parts |
| | 3.7 | Faulty or damaged parts are replaced in accordance with manufacturer recommendations and workplace practices |
| | 3.8 | Quality of the repair process is continuously monitored in accordance with workplace practice and quality procedures |
| | 3.9 | Correct posture for repairing is demonstrated which minimises fatigue and promotes muscular control |
| 4 | Clean up work area | |
| | 4.1 | All tools, materials and other equipment are checked, cleaned and returned to their appropriate location |
| | 4.2 | Work area is cleared and waste removed |
| | 4.3 | Workplace documentation is completed and filed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Assessment Requirements for MSFPT3003 Repair upright and grand piano actions, keys and pedals

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Repair a minimum of two (2) actions, keys and pedals in both upright and grand pianos
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for repairing upright and grand piano actions, keys and pedals
- organisational and site standards, requirements, policies and procedures for repairing upright and grand piano actions, keys and pedals
- Reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- Environmental protection requirements relating to the disposal of waste material
- Established lines of communication and protocols
- Types, characteristics, uses, limitations and preparation of materials and equipment used in piano repair and manufacture
- Types of tools and equipment used to repair actions, keys and pedals and procedures for their safe use, operation and maintenance
- Relevant problem identification and resolution
- Set-up and operation of tools and equipment used for repairing actions, keys and pedals

- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to hand and power tools used in the repair and manufacture of pianos, safety and personal protective equipment, holding and supporting equipment, and upright and grand pianos.

MSFPT3004 Rebuild upright and grand piano actions, keys and pedals

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers rebuilding upright and grand piano actions, keys and pedals. It includes removing and rebuilding of keys and key leads; damaged or worn felts, leathers and action springs; and broken hammerheads. It applies in workplace and on-site environments for small to large scale enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan for rebuilding actions, keys and pedals	1.1	Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to rebuilding pianos are verified and complied with
		1.2	Customer requirements are received, analysed and confirmed with appropriate personnel
		1.3	Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety
		1.4	Written instructions are followed

- | | | | |
|---|----------------------------|-----|--|
| 2 | Prepare to rebuild | 2.1 | Tools and equipment are selected consistent with the needs of the job |
| | | 2.2 | Selected tools and equipment are checked for service ability and safety, and any faults repaired and reported according to workplace practices |
| | | 2.3 | Personal protective equipment is correctly fitted and used |
| | | 2.4 | Materials required for the repair of piano actions, keys and pedals are selected |
| 3 | Dismantle actions and keys | 3.1 | Correct posture for rebuilding is demonstrated which minimises fatigue and promotes muscular control |
| | | 3.2 | Actions are dismantled and all parts are named and numbered |
| | | 3.3 | Keys are removed from keyboard and named and numbered |
| | | 3.4 | Pedals are removed |
| 4 | Rebuild parts | 4.1 | Parts to be rebuilt or reconditioned are identified |
| | | 4.2 | Parts are measured and stripped of old materials in preparation for reconditioning |
| | | 4.3 | Parts are measured and reconfigured in preparation for rebuilding |
| | | 4.4 | Rebuilding or reconditioning of actions, key and pedals is carried out as required |
| | | 4.5 | Quality of the rebuilding process is continuously monitored in accordance with workplace practice and quality procedures |
| | | 4.6 | Piano actions, keys and pedals are re-assembled according to workplace practices |
| 5 | Clean up work area | 5.1 | All tools, materials and other equipment are checked, cleaned and returned to their appropriate location |
| | | 5.2 | Work area is cleared and waste removed |
| | | 5.3 | Workplace documentation is completed and filed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Tools and equipment include: | <ul style="list-style-type: none">• knives• guillotine• measuring equipment• centering equipment• glue brushes and sticks• glue pots |
| Correct posture includes: | <ul style="list-style-type: none">• standing or seated according to type of piano and height of individual• evenly distributing body weight between both feet while standing to reduce fatigue• resting arm where available to aid control during tuning and reduce tiredness |
| Materials include: | <ul style="list-style-type: none">• action felts and leathers• key bushings• key frame materials• springs and action components• key tops• pedal caps• pedal trap bushings |

- centre pins
 - hammer heads
 - bridle tapes
- Rebuilding includes:**
- replacing the following with new components:
 - hammer heads and assembly
 - wippen assembly
 - keys
 - action rails
 - pedals and trappings
 - springs
 - action brackets
- Reconditioning includes:**
- repairing action components to an as new condition
 - replacing existing parts with new materials
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Assessment Requirements for MSFPT3004 Rebuild upright and grand piano actions, keys and pedals

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Rebuild a minimum of two (2) actions, keys and pedals in both upright and grand pianos
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for rebuilding actions, keys and pedals on upright and grand pianos
- Organisational and site standards, requirements, policies and procedures for rebuilding actions, keys and pedals on upright and grand pianos
- Reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- Environmental protection requirements relating to the disposal of waste material
- Established lines of communication and protocols
- Terms used to describe components of an upright and grand piano
- Types, characteristics, uses, limitations and preparation of materials and equipment used in rebuilding actions, keys and pedals on upright and grand pianos
- Types of tools and equipment used to rebuild actions, keys and pedals, and procedures for their safe use, operation and maintenance

- Relevant problem identification and resolution
- Set-up and operation of tools and equipment used for rebuilding actions, keys and pedals on upright and grand pianos
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to hand and power tools used in the rebuilding of actions, keys and pedals of upright and grand pianos, safety and personal protective equipment, holding and supporting equipment, and upright and grand pianos.

MSFPT3005 Re-string and re-pin a piano

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers removing existing strings and pins from upright and grand pianos and replace them with new strings and pins, including disassembling and re-assembling the piano, assessing piano suitability for restringing, de-tuning piano, chipping up and measuring strings and pin positions for replacement. It applies in workplace and on-site environments for small to medium scale enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|---|--------------------------------|--|
| 2 | Prepare for repair | 2.1 Tools and equipment are selected consistent with the needs of the job |
| | | 2.2 Selected tools and equipment are checked for service ability and safety, and any faults repaired and reported according to workplace practices |
| | | 2.3 Personal protective equipment is correctly fitted and used |
| | | 2.4 Materials required for the re-stringing and re-pinning of piano are selected |
| 3 | Assess piano | 3.1 Correct posture for repairing is demonstrated which minimises fatigue and promotes muscular control |
| | | 3.2 Case parts are removed and stored |
| | | 3.3 Measurements of all string sizes are taken throughout piano |
| | | 3.4 Position of all pressure bars, duplex bars and under-stringing felts are noted |
| | | 3.5 Base strings are inspected for tone and quality, noting those needing replacement |
| 4 | Prepare piano for re-stringing | 4.1 Length of strings are measured and recorded |
| | | 4.2 Piano is de-tuned |
| | | 4.3 Pressure bars/agraffes are removed |
| | | 4.4 Strings are removed by unwinding in order |
| | | 4.5 Bass strings are tagged for identification purposes using a wire guide to store until needed |
| | | 4.6 Tuning pins are removed and assessed for re-usability |
| | | 4.7 Samples of tuning pins, felts and eye strings are retained |
| | | 4.8 Size of new pins and drill holes are calculated for appropriate tension requirements |
| 5 | Re-pin and re-string piano | 5.1 Stringing scale is re-calculated |
| | | 5.2 Agraffes are replaced in accurate position, as required |
| | | 5.3 Pins and treble strings are replaced in required order, with |

		under-stringing felt inserted
	5.4	Pins and base strings are replaced in required order
	5.5	Pressure bars are replaced in accurate position
6	Chip up piano	6.1 Pitch standard is established
	6.2	Strings are plucked and tuned individually against pitch standard
	6.3	Strings are rubbed down and process repeated until strings stabilised
7	Re-assemble piano	7.1 Piano is re-assembled
	7.2	Tools and equipment are maintained, cleaned and stored safely in designated location
	7.3	Records are maintained in accordance with enterprise requirements or industry practice
8	Clean up work area	8.1 All tools, materials and other equipment are checked, cleaned and returned to their appropriate location
	8.2	Work area is cleared and waste removed
	8.3	Workplace documentation is completed and filed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and

	dangerous goods codes, and local safe operating procedures or equivalent
	<ul style="list-style-type: none">• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Tools and equipment include:	<ul style="list-style-type: none">• micrometre• tuning hammer• tuning fork• pitch standard• T hammer• string lifter• drills and bits• tension wrench• hammers and punches• wire cutters• pliers• vice grips• stringing tools• measuring equipment• re-scaling tools• knives• glue• plectrum• glove
Materials include:	<ul style="list-style-type: none">• treble and bass strings• tuning pins• understringing felt• agraffes
Identification purposes include:	<ul style="list-style-type: none">• name and address• brand name, style, size or serial number of piano• strings per note
Eye strings include:	<ul style="list-style-type: none">• single wound German• double wound German• French eye
Under-stringing felt includes:	<ul style="list-style-type: none">• string pillows• bearing felt• listing felt• pressure bar felt

- Pitch standards include:**
- piano
 - electronic keyboard
 - electronic tuning device (ETD)
 - tuning fork
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFPPT3005A Re-string and re-pin a piano.

Assessment Requirements for MSFPT3005 Re-string and re-pin a piano

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices and re-string and re-pin a minimum of two (2) pianos, one (1) upright and one (1) grand
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for re-stringing and re-pinning upright and grand pianos
- Organisational and site standards, requirements, policies and procedures for re-stringing and re-pinning upright and grand piano
- Reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- Environmental protection requirements relating to the disposal of waste material
- Established lines of communication and protocols
- Types, characteristics, uses, limitations and preparation of materials and equipment used in piano re-stringing and re-pinning
- Types of tools and equipment used to re-string and re-pin pianos and procedures for their safe use, operation and maintenance

- Relevant problem identification and resolution
- Set-up and operation of tools and equipment used for re-stringing and re-pinning pianos
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to hand and power tools used to re-string and re-pin upright and grand pianos, safety and personal protective equipment, holding and supporting equipment, and upright and grand pianos.

MSFPT3006 Regulate actions, keys and pedals of upright pianos

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers regulating upright piano actions, keys and pedals, including adjusting action rail, striking distance, hammer running alignment, key depth, lost motion and set off; checking distance, damper spoon bending, damper stop rail, jack stop rail and sustain, soft, mute and sostenuto pedals. It applies in workplace and on-site environments for small to large scale enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Plan for regulating actions, keys and pedals | 1.1 | Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to regulating pianos are verified and complied with |
| | | 1.2 | Customer requirements are received, analysed and confirmed with appropriate personnel |
| | | 1.3 | Communication with others involved with the work is established and maintained to ensure efficient workflow, coordination, personnel cooperation and safety |
| | | 1.4 | Written instructions are followed |

- | | | | |
|---|---------------------------------|-----|--|
| 2 | Prepare to regulate | 2.1 | Correct posture for regulating is demonstrated which minimises fatigue and promotes muscular control |
| | | 2.2 | Tools and equipment are selected consistent with the needs of the job |
| | | 2.3 | Selected tools and equipment are checked for service ability and safety, and any faults repaired and reported according to workplace practices |
| | | 2.4 | Personal protective equipment is correctly fitted and used |
| 3 | Align action components | 3.1 | Alignment of action rail is checked and adjusted |
| | | 3.2 | Striking distance is adjusted to industry specifications |
| | | 3.3 | Hammer running alignment and angling is adjusted |
| | | 3.4 | Wippen alignment procedures are performed |
| 4 | Regulate keyboard | 4.1 | Lost motion is adjusted |
| | | 4.2 | Set off is adjusted |
| | | 4.3 | Checking distance is adjusted |
| | | 4.4 | Dampers are regulated to industry specifications |
| | | 4.5 | Damper spoon bending is adjusted to half striking distance |
| | | 4.6 | Damper stop rail and jack stop rail are adjusted to industry specifications |
| 5 | Adjust pedals | 5.1 | Sustain pedal is adjusted to lift when the pedal is one third through its motion |
| | | 5.2 | Soft pedal is adjusted to an acceptable lost motion |
| | | 5.3 | Mute pedal is adjusted for hammers to clear felt in rest position but strike felt in lockdown position |
| | | 5.4 | Sostenuto pedal is adjusted so relevant dampers are locked in position when note is played |
| 6 | Make final check and inspection | 6.1 | Upright piano is inspected for playability and performance |
| | | 6.2 | Adjustments to actions and pedals are made as required |

- | | | | |
|---|--------------------|-----|--|
| 7 | Clean up work area | 7.1 | All tools, materials and other equipment are checked, cleaned and returned to their appropriate location |
| | | 7.2 | Work area is cleared and waste removed |
| | | 7.3 | Workplace documentation is completed and filed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none"> • WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving |
| Correct posture includes: | <ul style="list-style-type: none"> • standing or seated according to type of piano and height of individual • evenly distributing body weight between both feet while standing to reduce fatigue • resting arm where available to aid control during tuning and reduce tiredness |
| Tools and equipment include: | <ul style="list-style-type: none"> • capstan regulator • set off regulator • touch/dip block • rule |

	<ul style="list-style-type: none">• regulating buttons• damper regulator• key easing pliers• wire bender• screwdriver
Acceptable lost motion includes:	<ul style="list-style-type: none">• 2 mm movement of pedal rod before hammer rest is activated
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFP3006A Regulate actions, keys and pedals of upright pianos.

Application

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|-----------------------------|-----|--|
| 1 | Plan and prepare for work | 1.1 | Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to regulating actions, keys and pedals of grand pianos are verified and complied with |
| | | 1.2 | Customer requirements are received, analysed and confirmed with appropriate personnel |
| | | 1.3 | Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety |
| 2 | Prepare, measure and assess | 2.1 | Correct posture for regulating is demonstrated which minimises fatigue and promotes muscular control |
| | | 2.2 | Tools and equipment are selected consistent with the needs of the job |
| | | 2.3 | Selected tools and equipment are checked for service ability and safety, and any faults repaired and reported according to workplace practices |
| | | 2.4 | Personal protective equipment is correctly fitted and used |

- | | | |
|---|---------------------------------|--|
| | 2.5 | Trial regulation standards are set to determine correct action operation |
| | 2.6 | Checking and re-adjusting are carried out, as required |
| 3 | Align action components | |
| | 3.1 | Alignment of action rail is checked and adjusted |
| | 3.2 | Hammer running alignment and angling is adjusted |
| | 3.3 | Wippen alignment procedures are performed |
| | 3.4 | Action is bedded to key frame and the key frame bedded to the key bed |
| 4 | Regulate keys | |
| | 4.1 | Keys are levelled, squared and spaced according to industry specifications |
| | 4.2 | Key depth is adjusted |
| 5 | Regulate actions | |
| | 5.1 | Jack to roller alignment and repetition lever height is adjusted |
| | 5.2 | Striking distance is adjusted to industry specifications |
| | 5.3 | Let off is adjusted |
| | 5.4 | Checking distance is adjusted |
| | 5.5 | Repetition spring is adjusted |
| | 5.6 | Hammer drop is adjusted |
| | 5.7 | Dampers are regulated to industry specifications |
| 6 | Make final check and inspection | |
| | 6.1 | Grand piano is inspected for playability and performance |
| | 6.2 | Adjustments to action and pedals as required |
| 7 | Clean up work area | |
| | 7.1 | All tools, materials and other equipment are checked, cleaned and returned to their appropriate location |
| | 7.2 | Work area is cleared and waste removed |
| | 7.3 | Workplace documentation is completed and filed |

MSFPT3008 Apply piano tuning theory and basic acoustics

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying piano tuning theory and basic acoustics and identifying the important relationship between them when a piano is tuned.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Apply knowledge of basic acoustics	1.1	Elements of basic acoustics are applied to piano tuning, as required
		1.2	Acoustical laws of sounding strings are applied to piano tuning, as required
2	Apply knowledge of piano tuning	2.1	Elements of piano tuning theory are applied to piano tuning, as required
		2.2	Effect of inharmonicity on piano tuning is applied to piano tuning, as required
3	Apply knowledge of musical scales	3.1	Elements of musical scale theory are applied to piano tuning, as required
		3.2	The behaviour of piano strings and their proper dimensions

are applied to piano tuning, as required

3.3 The laws of strings are applied to piano tuning, as required

3.4 Musical scales are applied to piano tuning, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods, codes and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Basic acoustics include:

- sound waves
- beats
- frequencies
- harmonics
- cycles
- partials
- overtones
- nodes
- fundamentals
- sine waves
- intonation

- transients
 - cents
 - commas
 - compound tones
 - inharmonicity
- Piano tuning theory includes:**
- how wire vibrates
 - what happens when two or more wires vibrate simultaneously
 - how vibrations are organised into a tuning scale
 - how vibrations are related mathematically
 - pitch, beat rates, intervals and octave stretching
- Musical scale theory includes:**
- diatonic scale
 - equal temperament
 - mean-tone
- Laws of strings include:**
- First law
 - Third law
 - Combined law
 - Taylor's Formula
 - need for wrapped strings

Unit Mapping Information

Supersedes and is equivalent to LMFPPT3008A Understand piano tuning theory and basic acoustics.

MSFPT3009 Develop control of tuning hammers

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers controlling tuning hammers by moving the tuning pins in very small increments accurately. It applies in workplace and on-site environments for small to large scale enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for using tuning hammers	1.1 Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to tuning pianos are verified and complied with
	1.2 Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety
	1.3 Written instructions are followed
2 Select tools and equipment	2.1 Tools and equipment are selected consistent with the needs of the job
	2.2 Selected tools and equipment are checked for service ability and safety, and any faults repaired and reported

			according to workplace practices
		2.3	Personal protective equipment is correctly fitted and used
3	Set pin in specified position	3.1	Correct posture for tuning is demonstrated which minimises fatigue and promotes muscular control
		3.2	Pin is set at desired pitch utilising a pitch standard, within accuracy constraints to + or – 0.5 cents
		3.3	Key is struck using stabilising blows
		3.4	Coordinated motor and auditory reflexes are demonstrated throughout tuning
		3.5	Strings are tuned and stabilised using appropriate techniques
4	Clean up work area	4.1	All tools, materials and other equipment are checked, cleaned and returned to their appropriate location
		4.2	Work area is cleared and waste removed
		4.3	Workplace documentation is completed and filed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative

	obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
	<ul style="list-style-type: none">• work requires individuals to demonstrate some discretion, judgement and problem solving
Tools and equipment include:	<ul style="list-style-type: none">• pitch standard• tuning lever/hammer• temperament strip• mutes and wedges• tip wrench• tuning tips and heads
Correct posture includes:	<ul style="list-style-type: none">• standing or seated according to type of piano and height of individual• evenly distributing body weight between both feet while standing to reduce fatigue• resting arm where available to aid control during tuning and reduce tiredness
Pitch standards include:	<ul style="list-style-type: none">• piano• electronic keyboard• electronic tuning device (ETD)• tuning fork
Hammer techniques include:	<ul style="list-style-type: none">• selection of tuning tip and angle• jerking movements• positioning hammer on pin at correct angle to avoid bending of tuning pin
Stabilisation techniques include:	<ul style="list-style-type: none">• use of firm key blows in conjunction with placement of pin• calculation of string stretch

Assessment Requirements for MSFPT3009 Develop control of tuning hammers

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Set pin and tune and stabilise strings on both upright and grand pianos a minimum of three (3) times using tuning hammers
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for tuning pianos
- Organisational and site standards, requirements, policies and procedures for tuning pianos
- Reading and interpreting workplace documents including work orders, work instructions and operator instructions
- Piano tuning process
- Environmental protection requirements relating to the disposal of waste material
- Established lines of communication and protocols
- Types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning
- Types of tools and equipment used to tune pianos and procedures for their safe use, operation and maintenance
- Relevant problem identification and resolution

- Set-up and operation of tools and equipment used for tuning pianos
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials used in the tuning and repair of pianos, safety and personal protective equipment, holding and supporting equipment, and upright and grand pianos.

MSFPT3010 Pitch raise a piano

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers pitch raising a piano prior to the tuning process by calculating and assessing the ability of an upright, grand and player piano to achieve the desired pitch, including assessment of overpull or stretch of strings. It applies in workplace and on-site environments for small to large scale enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.								
1 Plan for pitch raising	<table><tr><td>1.1</td><td>Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to tuning pianos are verified and complied with</td></tr><tr><td>1.2</td><td>Customer requirements are received, analysed and confirmed with appropriate personnel</td></tr><tr><td>1.3</td><td>Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety</td></tr><tr><td>1.4</td><td>Written instructions are followed</td></tr></table>	1.1	Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to tuning pianos are verified and complied with	1.2	Customer requirements are received, analysed and confirmed with appropriate personnel	1.3	Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety	1.4	Written instructions are followed
1.1	Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to tuning pianos are verified and complied with								
1.2	Customer requirements are received, analysed and confirmed with appropriate personnel								
1.3	Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety								
1.4	Written instructions are followed								
2 Prepare to tune	<table><tr><td>2.1</td><td>Tools and equipment are selected consistent with the needs</td></tr></table>	2.1	Tools and equipment are selected consistent with the needs						
2.1	Tools and equipment are selected consistent with the needs								

unisons		of the job	
		2.2	Selected tools and equipment are checked for service ability and safety, and any faults repaired and reported according to workplace practices
		2.3	Personal protective equipment is correctly fitted and used
3	Assess suitability of piano for pitch raise	3.1	Components used in pitch raising are assessed for suitability
		3.2	Distance from target pitch is determined
		3.3	Overpull/stretch required to achieve target pitch is calculated
		3.4	Pitch standard is established
4	Pitch raise piano	4.1	Correct posture for tuning is used which minimises fatigue and promotes muscular control
		4.2	Strings are tuned according to required process
		4.3	Pitch raise to achieve an accuracy of ± 5 cent per note
		4.4	Correct tuning hammer technique is used
5	Clean up work area	5.1	All tools, materials and other equipment are checked, cleaned and returned to their appropriate location
		5.2	Work area is cleared and waste removed
		5.3	Workplace documentation is completed and filed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Tools and equipment include:	<ul style="list-style-type: none">• tuning fork• tuning lever/hammer• temperament strip• mutes and wedges• tip wrench• tuning tips and heads• pitch standard
Components include:	<ul style="list-style-type: none">• strings• wrest plank/tuning plank• frame• soundboard• bridges
Pitch standards include:	<ul style="list-style-type: none">• piano• electronic keyboard• electronic tuning device (ETD)• tuning fork
Correct posture includes:	<ul style="list-style-type: none">• standing or seated according to type of piano and height of individual• evenly distributing body weight between both feet while standing to reduce fatigue• resting arm where available to aid control during tuning and reduce tiredness
Pitch raising occurs:	<ul style="list-style-type: none">• when a piano is more than one cycle flat or sharp from desired standard
Tuning process includes:	<ul style="list-style-type: none">• for a small pitch raise, normal tuning sequence is followed• for a significant pitch raise, chromatic tuning from note #1 could be required
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and

procedures include:

- equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFP3010A Pitch raise.

MSFPT3011 Tune unisons aurally to a beatless condition

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers tuning unisons aurally so they achieve an even and accurate pitch that may include the use of hammers and stabilisation techniques. It applies in workplace and on-site environments for small to large scale enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-----------------------------------|--|
| 1 Plan for tuning unisons aurally | 1.1 Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to tuning unisons are verified and complied with |
| | 1.2 Customer requirements are received, analysed and confirmed with appropriate personnel |
| | 1.3 Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety |
| | 1.4 Written instructions are followed |
| 2 Prepare to tune unisons | 2.1 Tools and equipment are selected consistent with the needs of the job |

- | | | |
|---|---|--|
| | 2.2 | Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices |
| | 2.3 | Personal protective equipment is correctly fitted and used |
| 3 | Set a string | <p>3.1 Correct posture for tuning is demonstrated which minimises fatigue and promotes muscular control.</p> <p>3.2 The fundamental string is tuned aurally to a pitch standard</p> <p>3.3 Given an external pitch standard, frequency of one string is matched to that pitch to within $\pm .5$ cent</p> <p>3.4 Tuned string is stabilised using correct hammer techniques</p> |
| 4 | Tune an adjacent string in unison to the fundamental string | <p>4.1 Pitch of unison string is adjusted to fundamental string, employing stabilisation techniques, to a beatless condition</p> <p>4.2 Remaining strings are tuned according to above process</p> |
| 5 | Clean up work area | <p>5.1 All tools, materials and other equipment are checked, cleaned and returned to their appropriate location</p> <p>5.2 Work area is cleared and waste removed</p> <p>5.3 Workplace documentation is completed and filed</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. MSFPT3012 Tune octaves aurally to appropriate stretch

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers tuning octaves aurally so they achieve an even and accurate pitch and then continuing to tune strings while using hammer and stabilisation techniques. It applies in workplace and on-site environments for small to large scale enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-----------------------------------|--|
| 1 Plan for tuning octaves aurally | 1.1 Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to tuning octaves are verified and complied with |
| | 1.2 Customer requirements are received, analysed and confirmed with appropriate personnel |
| | 1.3 Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety |

MSFPT3013 Tune a temperament octave to produce an equally tempered scale

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers tuning temperaments on both upright and grand pianos to produce an equally tempered scale and may involve the use of a pitch standard to establish the start note. It applies in workplace and on-site environments for small to large scale enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Plan for tuning temperaments | 1.1 Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to repairing pianos are verified and complied with |
| | 1.2 Customer requirements are received, analysed and confirmed with appropriate personnel |
| | 1.3 Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety |
| | 1.4 Written instructions are followed |

2	Prepare to tune temperaments	2.1	Tools and equipment are selected consistent with the needs of the job
		2.2	Selected tools and equipment are checked for service ability and safety, and any faults repaired and reported according to workplace practices
		2.3	Personal protective equipment is correctly fitted and used
3	Tune temperament	3.1	Correct posture for tuning is used which minimises fatigue and promotes muscular control
		3.2	Start note in temperament octave is tuned from established pitch reference
		3.3	Temperament octave is tuned using the 4th and 5th cycle, following a set order of notes
		3.4	Correct positions are confirmed using the 3rd and 6th checks individually and chromatically
4	Clean up work area	4.1	All tools, materials and other equipment are checked, cleaned and returned to their appropriate location
		4.2	Work area is cleared and waste removed
		4.3	Workplace documentation is completed and filed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and

	<p>dangerous goods codes, and local safe operating procedures or equivalent</p> <ul style="list-style-type: none"> work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements work requires individuals to demonstrate some discretion, judgement and problem solving
Tools and equipment include	<ul style="list-style-type: none"> pitch standard tuning lever/hammer temperament strip mutes and wedges tip wrench tuning tips and heads
Correct posture includes:	<ul style="list-style-type: none"> standing or seated according to type of piano and height of individual evenly distributing body weight between both feet while standing to reduce fatigue resting arm where available to aid control during tuning and reduce tiredness
Start note includes:	<ul style="list-style-type: none"> the note in the temperament octave that corresponds to the note tuned from the pitch standard
Pitch reference refers to:	<ul style="list-style-type: none"> the first note tuned on piano from pitch standard generally accepted as being A49/C52 or corresponding notes one octave below, which are A37/C40
Temperament octave includes:	<ul style="list-style-type: none"> notes F 33 through to F 45, with some temperaments spread over 1 ½ octaves
Personal protective equipment includes:	<ul style="list-style-type: none"> that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none"> workplace procedures relating to the use of tools and equipment work instructions, including job sheets, cutting lists, plans, drawings and designs workplace procedures relating to reporting and communication manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFPPT3013A Tune a temperament octave to produce an equally tempered scale.

Assessment Requirements for MSFPT3013 Tune a temperament octave to produce an equally tempered scale

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Tune a minimum of two (2) temperament octaves to produce an equally tempered scale on both one (1) upright and one (1) grand piano
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for tuning pianos
- Organisational and site standards, requirements, policies and procedures for tuning pianos
- Reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- Environmental protection requirements relating to the disposal of waste material
- Established lines of communication and protocols
- Types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning
- Types of tools and equipment used to regulate actions, keys and pedals and procedures for their safe use, operation and maintenance
- Relevant problem identification and resolution
- Set-up and operation of tools and equipment used for tuning pianos

- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to hand tools used in the tuning of pianos, safety and personal protective equipment, and upright and grand pianos.

MSFPT3014 Tune a piano aurally and electronically within time and accuracy constraints

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers tuning an upright and grand piano to a set level of accuracy within a specified timeframe and to an appropriate level of accuracy using aural or electronic tuning devices (ETD) that may include computer software or a hardware device. It applies in workplace and on-site environments for small to large scale enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSFPT3007	Regulate actions, keys and pedals of grand pianos
MSFPT3008	Apply piano tuning theory and basic acoustics
MSFPT3009	Develop control of tuning hammers
MSFPT3010	Pitch raise a piano

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Plan for tuning a upright or grand	1.1	Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to repairing

	piano		pianos are verified and complied with
		1.2	Customer requirements are received, analysed and confirmed with appropriate personnel
		1.3	Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety
		1.4	Written instructions are followed
2	Prepare to tune a upright or grand piano	2.1	Tools and equipment are selected consistent with the needs of the job
		2.2	Selected tools and equipment are checked for service ability and safety, and any faults repaired and reported according to workplace practices
		2.3	Personal protective equipment is correctly fitted and used
3	Dismantle piano	3.1	Procedure for dismantling piano is determined
		3.2	Piano is dismantled to allow access to internal components during the tuning process
		3.3	Correct WHS procedures are followed throughout dismantling process
		3.4	Safe storage of all piano parts while tuning is demonstrated
4	Tune piano	4.1	Correct posture for tuning is demonstrated which minimises fatigue and promotes muscular control
		4.2	Start note is tuned accurately to a pitch standard
		4.3	Temperament octave F33-F45 is tuned to desired standard
		4.4	Octaves and unisons are tuned to desired standard in accordance with customer specifications
		4.5	Interval checks are used to assess accuracy throughout tuning process
		4.6	Stable tuning is achieved in an industry acceptable timeframe without damage to the piano components
5	Re-assemble piano	5.1	Case parts are identified and placed for re-assembly
		5.2	Case parts are re-assembled according to workplace

		practices
	5.3	Correct WHS practices are followed throughout assembly process
6	Clean up work area	6.1 All tools, materials and other equipment are checked, cleaned and returned to their appropriate location
		6.2 Work area is cleared and waste removed
		6.3 Workplace documentation is completed and filed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none"> WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements work requires individuals to demonstrate some discretion, judgement and problem solving
Customer requirements include:	<ul style="list-style-type: none"> level of playing required: <ul style="list-style-type: none"> standard of pianist time piano is used environment location of piano pitch requirements

Tools and equipment include:	<ul style="list-style-type: none">• budget• pitch standard• tuning lever/hammer• temperament strip• mutes and wedges• tip wrench• tuning tips and heads
Procedures for dismantling piano include:	<ul style="list-style-type: none">• upright piano:<ul style="list-style-type: none">• removal of top front board and fall board• lift lid• grand piano:<ul style="list-style-type: none">• removal of fall board and music disk• lift lid
Correct posture includes:	<ul style="list-style-type: none">• standing or seated according to type of piano and height of individual• evenly distributing body weight between both feet while standing to reduce fatigue• resting arm where available to aid control during tuning and reduce tiredness
Start notes include:	<ul style="list-style-type: none">• the note in the temperament octave that corresponds to the note tuned from the pitch standard• the first note tuned on piano from pitch standard generally accepted as being A49/C52 or corresponding notes one octave below, which are A37/C40
Pitch standards include:	<ul style="list-style-type: none">• piano• electronic keyboard• ETD• tuning fork
Interval checks include:	<ul style="list-style-type: none">• thirds, fourths, fifths, sixths, sevenths and tenths
Industry acceptable timeframe is:	<ul style="list-style-type: none">• up to 2 hours
Damages to the piano components include:	<ul style="list-style-type: none">• bent tuning pins• broken strings• elongated tuning pin holes• damaged bearings
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans,

- drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFP3014A Tune a piano aurally and/or electronically within time and accuracy constraints.

Assessment Requirements for MSFPT3014 Tune a piano aurally and electronically within time and accuracy constraints

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Tune a minimum of two (2) pianos aurally and electronically within industry specified time and accuracy constraints, on both upright and grand pianos
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for tuning pianos
- Organisational and site standards, requirements, policies and procedures for tuning pianos
- Reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- Environmental protection requirements relating to the disposal of waste material
- Established lines of communication and protocols
- Types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning
- Types of tools and equipment used to tune pianos and procedures for their safe use, operation and maintenance
- Relevant problem identification and resolution
- Set-up and operation of tools and equipment used for tuning pianos

- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to hand tools and equipment used in the tuning of pianos, safety and personal protective equipment, holding and supporting equipment, and upright and grand pianos.

MSFPT3015 Voice a piano

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers voicing a piano to change the tone from harsh to soft or soft to harsh, and making the tone even after tuning and may include needling, reshaping and hardening hammers to change the tone. It applies in workplace and on-site environments for small to large scale enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for voicing a piano	<p>1.1 Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to voicing pianos are verified and complied with</p> <p>1.2 Customer requirements are received, analysed and confirmed with appropriate personnel</p> <p>1.3 Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety</p>
2 Prepare for voicing a piano	<p>2.1 Tools, equipment and materials are selected consistent with the needs of the job</p>

- | | | |
|---|--------------------|---|
| | 2.2 | Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices |
| | 2.3 | Personal protective equipment is correctly fitted and used |
| | 2.4 | Piano is tuned and regulated to industry standards and customer requirements before voicing is commenced |
| 3 | Voice a piano | |
| | 3.1 | Correct posture for tuning is demonstrated which minimises fatigue and promotes muscular control |
| | 3.2 | Undesirable tonal qualities are identified using customer requirements |
| | 3.3 | Surface felt is reshaped to ensure a clean and square striking surface |
| | 3.4 | Hammers are needled, as required, to achieve particular tonal effects and to balance tonal response |
| | 3.5 | Hammers are reshaped after needling to ensure correct shape and surface texture |
| | 3.6 | Hammers are ironed or hardened, as necessary |
| | 3.7 | Final tonal quality is assessed against customer requirements and any adjustments made |
| 4 | Clean up work area | |
| | 4.1 | All tools, materials and other equipment are checked, cleaned and returned to their appropriate location. |
| | 4.2 | Work area is cleared and waste removed |
| | 4.3 | Workplace documentation is completed and filed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Tools, equipment and materials include:	<ul style="list-style-type: none">• screwdrivers• voicing needles• voicing tools and blocks• hammer iron• lacquer and brush• sandpaper• hammer lifting tool• tuning wedge• string level tool• string lifting tool
Correct posture includes:	<ul style="list-style-type: none">• standing or seated according to type of piano and height of individual• evenly distributing body weight between both feet while standing to reduce fatigue• resting arm where available to aid control during tuning and reduce tiredness
Undesirable tonal qualities include:	<ul style="list-style-type: none">• harsh/soft noise which may occur when there is a loose hammer head, loose centre pins or uneven level strings• string noises• false strings – string has its own beat• nasal or metallic sound due to hard hammers
Needling techniques include:	<ul style="list-style-type: none">• correct method of supporting the hammers to avoid damage to action centres• selecting the appropriate needling zones to achieve particular tonal effects
Hardening processes	<ul style="list-style-type: none">• lacquers

include:

- irons
- collodian

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFPPT3015A Voice a piano.

MSFPT3016 Provide advice to customers on piano tuning and repair

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers providing advice to customers regarding the repair and tuning of pianos, including identifying any faults and repairs required, and calculating all costs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Piano Technology

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|-------------------|-----|--|
| 1 | Plan for work | 1.1 | Work health and safety (WHS) requirements, legislative requirements and workplace practices relevant to tuning and repairing pianos are verified and complied with |
| | | 1.2 | Customer requirements regarding suitable time and date for appointment are received and confirmed with appropriate personnel |
| | | 1.3 | Communication with others involved with the work is established and maintained to ensure efficient work flow, coordination, personnel cooperation and safety |
| | | 1.4 | Written instructions are followed |
| 2 | Identify customer | 2.1 | Questioning and active listening techniques are used to |

	requirements	clarify customer requirements
		2.2 Feedback is provided to customer to ensure correct interpretation of requirements
3	Assess piano for faults and relevant repairs	<p>3.1 Piano case parts are removed and stored safely away from the instrument</p> <p>3.2 Faults are identified and recorded according to workplace practices</p> <p>3.3 Appropriate repairs required to rectify faults are determined</p> <p>3.4 Piano case parts are re-assembled according to workplace practices</p> <p>3.5 Work area is cleared and waste removed</p> <p>3.6 Workplace documentation is completed</p>
4	Assess piano tuning requirements	<p>4.1 Frequency of tuning is determined, based on industry recommendations</p> <p>4.2 Customer is advised on environmental conditions which may affect tuning stability</p>
5	Provide customer with recommendations	<p>5.1 Customer is advised both verbally and in writing of recommendations regarding tuning and repair of piano</p> <p>5.2 Customer is given options regarding priority of repairs so they can give an informed decision</p> <p>5.3 Options regarding materials used in repairs are explained to and discussed with the customer to facilitate customer understanding of available products and services</p>
6	Present quotation to customer	<p>6.1 Quotation is prepared for the tuning and repair of piano, including all costs</p> <p>6.2 Customer is presented with quotation, which includes a breakdown of costs for all options for tuning and repair</p> <p>6.3 Benefits of each option are explained to the customer to facilitate informed decision making</p> <p>6.4 Customer commitment to agreed repairs and tuning is gained in accordance with workplace practices</p>

	6.5	Customer is informed of rights and obligations regarding product or service
7	Finalise process	7.1 Documentation is completed and submitted to appropriate personnel following workplace practices
	7.2	Contact is maintained with customer throughout the tuning and repair process

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Active listening includes:**
- maintaining eye contact
 - asking questions to clarify meaning
- Feedback includes:**
- verbal or written response
- Faults include:**
- worn, loose or broken action parts or keyboards
 - worn or broken pedal systems
 - tuning instability
 - cracks or delamination of bridges, ribs and soundboards
 - case faults

Frequency of piano tuning varies according to:	<ul style="list-style-type: none">• condition and age of piano• amount of use of the piano• quality of the piano• internal and external humidity changes
Environmental conditions include:	<ul style="list-style-type: none">• piano position in home or other location• air conditioning and heating• seasonal temperature and humidity changes
Quotations include:	<ul style="list-style-type: none">• progressive listing of repair points in an orderly format• all costs• statement of warranty terms• statement of payment terms, including deposit• estimation of the time the instrument will be out of service
Costs include:	<ul style="list-style-type: none">• material used in repair• labour• travel expenses (if applicable)• shipping of parts or piano
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Assessment Requirements for MSFPT3016 Provide advice to customers on piano tuning and repair

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Conduct meetings with customer to determine piano requirements and assess and report on customer satisfaction
- Analyse sales and product development data to complete workplace documentation
- Advise customers and prepare a quotation on at least three (3) occasions involving tuning, repair and rebuilding options for an upright and a grand piano
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to providing advice to customers on piano tuning and repair
- Organisational and site standards, requirements, policies and procedures for providing advice to customers
- Options available to customers for tuning and repairing pianos
- Types, characteristics, uses, limitations and preparation of materials and equipment used in piano repair and manufacture
- Relevant problem identification and resolution
- Strategies for planning and monitoring activities
- Consultation methods, techniques and protocols

- Terms used to describe components of pianos
- Terms used to describe the processes involved in tuning and repair
- Procedures for the recording, reporting and maintenance of workplace records and information
- Mathematical techniques for estimation and measurement of materials

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required relevant workplace documentation required to provide advice to customers on piano tuning and repair.

MSFSF1001 Produce basic soft furnishing accessories

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers producing basic soft furnishing accessories, such as basic cushions and other decorative items, following the requirements of patterns.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------------------------|---|
| 1 Identify work requirements | 1.1 Job requirements are identified from work instructions and patterns |
| | 1.2 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | 1.3 Pattern is interpreted to determine tool, equipment and material requirements |
| | 1.4 Instructions for sequencing of work and particular measurements or adjustments are interpreted |
| | 1.5 Work sequence is planned, including quality checkpoints |
| 2 Prepare for work | 2.1 Suitable work area is selected for the tasks |

- | | | |
|---|---------------------|---|
| | 2.2 | Materials are selected to match customer requirements, suitability for the purpose and work instructions |
| | 2.3 | Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material |
| | 2.4 | Required tools, equipment and materials are collected in the work area |
| 3 | Complete production | 3.1 Soft furnishing accessories are produced following work instructions |
| | | 3.2 Work is checked against patterns and worksheets at the identified checkpoints |
| | | 3.3 Non-conformity with the required quality standards is rectified |
| 4 | Finalise operations | 4.1 Completed work is checked against required quality standards |
| | | 4.2 Documentation is completed following workplace procedures |
| | | 4.3 Work area is cleaned, and tools and equipment are returned to storage |
| | | 4.4 Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Soft furnishing accessories include:	<ul style="list-style-type: none">• basic cushions• bolsters• soft tableware and slip-on covers
Tools and equipment include:	<ul style="list-style-type: none">• measuring and calculating equipment:<ul style="list-style-type: none">• tapes• rulers• calculators• computers• fabric and general cutting and sewing tools:<ul style="list-style-type: none">• scissors• saws• drills• staplers• sewing machines• hemming machines• overlockers• glue guns
Materials include:	<ul style="list-style-type: none">• plain and patterned fabric• velvet• vinyl• piping cords• wadding• foam• zips and fasteners
Pattern interpretation includes:	<ul style="list-style-type: none">• the determination of type of material specified, required tools and equipment for the task, number and type of soft furnishing accessories to be produced, and quality requirements
Personal protective	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices

equipment includes:**Information and procedures include:**

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF1001B Produce basic soft furnishing accessories.

Assessment Requirements for MSFSF1001 Produce basic soft furnishing accessories

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Interpret patterns and produce at least one (1) type of soft furniture accessory
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of basic soft furnishing materials
- Interpretation of patterns
- Identification of equipment, processes and procedures
- Work flow in relation to soft furnishing accessory production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to soft furnishing accessory patterns and materials.

MSFSF2001 Cut single layer fabrics

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers measuring out and cutting single layer fabrics for manufacture of curtains and soft furnishing accessories. It does not apply to cutting from patterns.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Plan work operations	1.1	Required fabrics, number of items to be cut and required equipment are identified
		1.2	Fabric sizes to be cut are identified from work order plus any required allowances
		1.3	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work.
		1.4	Suitable work area is selected, tidied and cleaned of any contaminants
		1.5	Suitable scissors and/or blades are selected and checked prior to use for appropriate sharpness, set, operation and safe condition

- | | | | |
|---|-------------------------------|-----|--|
| | | 1.6 | Fabrics are selected in accordance with work order and laid out smooth and square |
| 2 | Prepare materials for cutting | 2.1 | Fabrics are inspected for flaws and appropriate finish |
| | | 2.2 | Naps, direction, pattern matches and face of the materials are identified |
| | | 2.3 | Tools and equipment are checked for operation |
| 3 | Complete cutting operations | 3.1 | Cutting is completed with cut out materials identified/labelled where required |
| | | 3.2 | Any measurements for pleat lines, hems, headings and any special seam allowances are marked out using workplace approved methods |
| | | 3.3 | Where required, fabrics are hung using appropriate protective covers and care label information is attached |
| | | 3.4 | Cut lengths are despatched to next process following workplace procedures |
| | | 3.5 | Unused materials are stored as required |
| | | 3.6 | Workplace required documentation is completed following appropriate procedures |
| | | 3.7 | Work area is cleaned and damaged tools tagged as required |
| | | 3.8 | Waste is collected and bundled for recycling/re-use as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Tools and equipment include:	<ul style="list-style-type: none">• cutting equipment, including scissors and cutting machines• measuring and calculating equipment:<ul style="list-style-type: none">• tapes• rulers• calculators and computers
Products to be constructed include:	<ul style="list-style-type: none">• curtains• drapes• swags• cushions• upholstered furniture components
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF2001B Cut single layer fabrics.

Assessment Requirements for MSFSF2001 Cut single layer fabrics

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify materials used and any special marking out requirements
- Measure accurately and cut fabric quantities to minimise waste and produce consistent quality items for at least five (5) different types of material or product
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work requirements, including workplace standards
- Fabric types, common faults and inspection procedures
- Design features of the finished items in relation to attractive use of fabric patterns
- Cutting equipment and techniques
- Effect of cutting on fabrics

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to fabrics, including linings and interlinings, calculator and other workplace calculating and cutting equipment.

MSFSF2002 Machine sew materials

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using sewing machines for production of soft furnishings, mattresses and bases, and upholstered furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Identify sewing machine equipment controls and procedures | 1.1 Job requirements are identified from work instructions |
| | 1.2 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | 1.3 Equipment components, equipment condition and controls are identified |
| | 1.4 Operating procedures are checked to identify any approved adjustments |
| | 1.5 Equipment operations and production procedures are identified |
| | 1.6 The process for obtaining materials and moving products |

- to the next process is identified
- | | | | |
|---|--|-----|---|
| 2 | Prepare for work | 2.1 | Work order or sample is checked to identify sewing specifications |
| | | 2.2 | Required materials, tools and equipment are assembled |
| | | 2.3 | Materials and equipment are inspected and any faults are identified and reported |
| | | 2.4 | Work sequence is planned to suit job, and materials are laid out |
| | | 2.5 | If required, naps, pattern direction and face side of materials are identified |
| | | 2.6 | Components are matched and secured with tacking, pins or adhesives as required |
| | | 2.7 | Any required supplementary equipment is identified for routine lubrication and adjustments |
| 3 | Set up and control sewing machine operations | 3.1 | Sewing machine is set up and adjusted |
| | | 3.2 | Sewing operation is according to workplace procedures and material characteristics |
| | | 3.3 | Required product quality and outputs are maintained |
| 4 | Maintain quality requirements | 4.1 | Machining process is monitored and conditions which may affect work quality are reported |
| | | 4.2 | Authorised changes in operating procedures are implemented |
| 5 | Finish and despatch work | 5.1 | Completed work is checked for required quality, finished as required, and repaired, where applicable, before moving to the next process |
| | | 5.2 | Material which is able to be re-used is collected and stored |
| | | 5.3 | Equipment and work area clean up and waste management are completed following workplace procedures |
| | | 5.4 | Workplace records are completed as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Sewing specifications include: | <ul style="list-style-type: none">• required materials• threads and additional work features• seam and stitch specifications• any special stitch requirements and allowances• shape characteristics and special requirements• needles• attachments and ancillary equipment• quality requirements |
| Sewing products include: | <ul style="list-style-type: none">• top stitching• gathering• piping• braid• fringe• flange cords• straight fabric lengths• padded material• loose covers |
| Sewing processes | <ul style="list-style-type: none">• hemming |

- include:**
- seams
 - machine tacking
 - gathering
 - multiple-layer sewing
 - straight or zig zag sewing
- Machines include:**
- single or multi-needle flat bed
 - overlocker
 - blind hemming
 - gathering
 - flange
 - bar tacking
 - tape edging
- Sewing machine set-up and adjustment includes:**
- thread machine and wind bobbin as required
 - set required tensions
 - select required machine settings
 - test operations for work order requirements
- Materials to be machined include:**
- plain fabrics
 - patterned fabrics
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF2002B Machine sew materials.

Assessment Requirements for MSFSF2002 Machine sew materials

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and operate three (3) types of industrial sewing machines, including set up of the sewing machine for operation and monitoring the quality of output
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of sewing machines
- Characteristics of materials used and finished products
- Safety and environmental aspects of sewing machine operations
- Quality systems and standards for soft furnishings
- Work flow requirements for sewing process
- Operation of work systems and industrial sewing equipment
- Causes of faults and repair methods in soft furnishing machining
- Procedure for reporting damaged or imperfect products or interruptions to work flow

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate industrial sewing machines, operating procedures, materials and threads.

MSFSF2003 Machine sew specialised sewn products

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using specific sewing machine techniques, with attachments, as required, to produce specialised sewn products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Identify sewing machine equipment controls and procedures | 1.1 Job requirements are identified from work instructions |
| | 1.2 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | 1.3 Equipment operations, components and controls are identified |
| | 1.4 Operating procedures are checked to identify approved procedures and adjustments |
| | 1.5 Inspection procedure for materials quality and equipment condition is identified |
| | 1.6 The process for obtaining materials and moving products |

- to the next process is identified
- | | | | |
|---|--|-----|---|
| 2 | Prepare for work | 2.1 | Work order or sample is checked to identify exact sewing specification |
| | | 2.2 | Materials are inspected before use and problems, including any materials or part constructed products which do not meet the job order requirements, are identified and reported |
| | | 2.3 | Work pieces are laid out in sequence in accordance with specifications and workplace procedures |
| | | 2.4 | Any required supplementary equipment is identified for routine lubrication and adjustments |
| 3 | Adjust and control sewing machine operations | 3.1 | Sewing machine (including attachments as required) set-up requirements and adjustments are identified and followed |
| | | 3.2 | Machine sewing maintains required product quality and outputs |
| | | 3.3 | Material which is able to be re-used is collected and stored, and waste and scrap is removed in accordance with workplace procedures |
| | | 3.4 | Equipment and work area clean-up are completed following workplace procedures |
| 4 | Maintain quality requirements | 4.1 | Sewing machine operations and fabrics are monitored and anything which may affect quality is reported |
| | | 4.2 | Finished products are checked for required quality and repaired, where applicable, before moving to the next process |
| | | 4.3 | Authorised changes in operating procedures and work requirements are implemented |
| 5 | Despatch completed work | 5.1 | Production records and/or packing slips are completed in accordance with workplace procedures |
| | | 5.2 | Completed work is directed to the next operation in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

MSFSF2004 Hand sew soft furnishings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers hand sewing hems and shaped components, and hand finishing work for soft furnishings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|---|
| 1 | Identify materials and sewing requirements | 1.1 | Required materials are identified from work order |
| | | 1.2 | Special requirements for the stitching, including stitch type, length and end finishing requirements, are identified from work order |
| 2 | Assemble and organise materials to be sewn | 2.1 | Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | | 2.2 | Materials to be sewn are collected and inspected for appropriate quality |
| | | 2.3 | Naps, direction of pattern and face side of the materials are |

		identified
	2.4	Required shape or form of the finished item is made and secured using tacking stitches, pins, adhesives or fixtures to assist in sewing operations
	2.5	Appropriate needle types are selected and threaded
3	Sew by hand	3.1 Materials are held to allow for sewing in the required direction
		3.2 Hand sewing operations are completed to ensure finished components match work requirements
4	Finish work	4.1 Finished stitching, including sewn area, seam width, stitch length, end finishing, allowances, shape and finish, are checked
		4.2 Top stitching or other decorative features are checked for required finish
		4.3 Where required, stitching or seams are eased and work is pressed for the next stage
		4.4 Raw edges are trimmed and any loose or untrimmed threads are removed
		4.5 Any part of the work which does not comply with work order is repaired
		4.6 Problems are notified following workplace procedures
5	Complete work for next process	5.1 Finished work is folded, protected and despatched to the next process following workplace procedures
		5.2 Any required documentation is completed and stored following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements including, legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Purposes of hand sewing include:	<ul style="list-style-type: none">• sewing and manipulation requirements for hand sewing a range of upholstery and other furnishing fabrics• the joining of all types of fabrics, single or multi-thickness, partly constructed materials and heavy materials, including leather• hemming, seams, tacking, button attachment, and hand finishing of trims and decorations
Tools and equipment include:	<ul style="list-style-type: none">• needles• threads
Materials to be sewn include:	<ul style="list-style-type: none">• plain and patterned fabrics for a variety of curtains• drapes and cushions• attachments• lining• interlining• webbings or padding
Sewing direction is determined by:	<ul style="list-style-type: none">• stitch type and location• personal right or left-hand preference of the sewer• manipulation requirements for the bulk and slipperiness of the materials
Hand sewing work quality requirements include:	<ul style="list-style-type: none">• beginning and end of stitching are secure• appropriate allowances (or hem and/or other allowance), stitch type, length and visibility are used• sewn area or hems are flat and/or appropriately shaped• finished components match work requirements
Personal protective	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices

equipment includes:**Information and procedures include:**

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF2004B Hand sew soft furnishings.

Assessment Requirements for MSFSF2004 Hand sew soft furnishings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify materials used and any special sewing requirements for the materials to be sewn and hand sew at least five (5) different soft furnishing products or use five (5) different techniques
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Soft furnishing work requirements, including workplace standards
- Identification of techniques and procedures for hand sewing processes
- Fabric types, common faults and inspection procedures
- Sewing methods to be used with different fabric types
- Risks to health from repetitive actions and prevention strategies
- Design features of the articles sewn in relation to the methods and stitches to be used

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate sewing equipment, fabrics and work orders.

MSFSF2005 Operate a steam press

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying knowledge of materials, product purpose and processes to the correct and efficient operation of steam pressing equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|----------------------------------|---|
| 1 Identify work requirements | 1.1 Work orders, care labels and equipment instructions are used to identify work requirements |
| | 1.2 Equipment, components and processes used for materials preparation and pressing process are identified |
| | 1.3 Operating requirements for the steam pressing equipment are identified |
| | 1.4 Workplace quality requirements for the final product are identified |
| 2 Plan steam pressing operations | 2.1 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |

- 2.2 Temperatures and any particular precautions are identified from care labels and workplace instructions
 - 2.3 Work sequence is planned to suit job
 - 2.4 Equipment emergency stops, gauges, guards and controls are identified
 - 2.5 Task sequences are planned
- 3 Set up steam pressing equipment
 - 3.1 Equipment information, required specifications and operating instructions are identified
 - 3.2 Temperatures are set and equipment adjustments are checked against work plan
 - 3.3 Fabric panels are checked for quality prior to pressing
 - 3.4 Damaged or incomplete items are reported
- 4 Press fabrics
 - 4.1 Materials are lifted and held onto the press using appropriate techniques
 - 4.2 Pressing operations are conducted following the planned sequence
 - 4.3 Adjustments are made to press settings to improve quality of work
 - 4.4 Required quantity and quality of work is maintained
 - 4.5 Pressed items are protected from dust and other contaminants and placed in workplace approved holding areas
 - 4.6 Equipment is cleaned up and lubrications, adjustments and waste management processes are completed in accordance with workplace procedures
- 5 Maintain work quality
 - 5.1 Pressing process is monitored and materials and equipment operating conditions which may affect product quality are reported
 - 5.2 Authorised changes in operating procedures and temperatures are implemented

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Task planning includes: | <ul style="list-style-type: none">• required temperatures and warm up/cool down times• key parts of the materials to be pressed which require checks for quality of work• work area housekeeping requirements• safe and suitable work area |
| Materials to be pressed include: | <ul style="list-style-type: none">• plain and patterned fabrics• lining materials and leather used in the manufacture of soft furnishing items |
| Material lifting and holding will be impacted on by: | <ul style="list-style-type: none">• machine type• personal right or left-hand preference of the operator• manipulation requirements for the materials• special pressing requirements for different parts of the pressed panels |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices |
| Information and procedures include: | <ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, |

- drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Assessment Requirements for MSFSF2005 Operate a steam press

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Press at least five (5) different types of materials to quality standards
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of steam presses
- Operating controls and principles which effect the steam pressing equipment
- Effects of steam on the range of materials which may be pressed
- Requirements for minimising damage to and maintaining contaminant-free pressed fabrics

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

MSFSF2006 Calculate fabric quantities for window coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers calculating and documenting fabric quantities for a variety of window coverings, including curtains and blinds.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for calculations	1.1	Measuring and calculating equipment are collected
		1.2	Mathematical processes and guide charts required are identified
		1.3	Drape requirements, fabric types and lining/interlining requirements are noted from work order
2	Calculate drape fabric requirements	2.1	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work

		2.2	Fabric repeats are measured for customer selected fabrics and recorded
		2.3	Fabric width is checked taking note of any wider than usual selvages
		2.4	Finished length of window covering is identified from order
		2.5	Heading type is identified from order and fullness ratio is identified
		2.6	Number of fabric drops per curtain is calculated
		2.7	Length of each fabric drop is calculated based on finished length plus hem and heading allowances and pattern repeats
		2.8	Allowances for seams, hems, headings, drape fullness or heading type are noted on the work order
3	Calculate lining and interlining quantities	3.1	Width of lining and, where required, interlining fabrics, is noted
		3.2	Number of lining/interlining widths is calculated based on required number of drape drops
		3.3	Length of lining/interlining drops is calculated, including hem allowances
		3.4	Amount of lining/interlining fabric is calculated and marked on work order
		3.5	Procedures for minimising waste fabric are identified and used
4	Complete documentation	4.1	Work orders for cutting and machining are completed following workplace procedures
		4.2	Documentation is forwarded to appropriate work areas and filed as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFSF2006 Calculate fabric quantities for window coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Interpret work order and locate and apply relevant information and measure and accurately calculate fabric quantities to minimise waste and produce consistent quality drapes for at least five (5) different types of window coverings
- Identify materials used and any special marking out requirements and document calculations accurately
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Fabric types, common faults and inspection procedures
- Design features of the fabrics and finished curtains in relation to attractive draping requirements
- Work requirements, including workplace standards
- Measurement and calculation techniques for soft furnishing materials

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work orders, fabrics, including linings and interlinings, calculator and, where available, workplace pleat calculating charts.

Assessment Requirements for MSFSF2007 Construct unlined curtains and drapes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Interpret work order to manufacture the required curtains and identify materials used and any special sewing requirements for those materials
- Measure accurately and construct at least four (4) different types of pleated or gathered curtains/drapes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Identification of equipment, processes and procedures for the sewing operations
- Fabric types, common faults and inspection procedures
- Risks to health from repetitive actions and prevention strategies
- Design features of the heading styles sewn in relation to work requirements
- Soft furnishing work requirements, including workplace standards

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate sewing machine, fabrics, work order, work procedures and/or equipment instructions.

MSFSF2008 Construct lined curtains and drapes

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers constructing and machine sewing lined curtains and drapes, including detached and sewn-in linings, and may include interlined loose-lined and bag-lined products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Establish work requirements and prepare for work | 1.1 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | 1.2 Work order requirements are checked and confirmed |
| | 1.3 Heading type is recognised to identify personal work requirements for measuring, calculating, sewing, folding and finishing |
| | 1.4 Correct side of fabric, naps, direction of pattern and pattern matches are identified |
| | 1.5 Lining attachment method is recognised to identify any attachments and fasteners, trims and sewing requirements |

- | | | | |
|---|-------------------------------|-----|--|
| | | 1.6 | Drapery panels are checked for faults |
| | | 1.7 | Appropriate needle types for the fabric are selected and threaded |
| 2 | Lay out work to be sewn | 2.1 | Top fabric is folded bringing edges to be seamed together to match any pattern and to maintain an appropriate finished length following workplace quality requirements |
| | | 2.2 | Linings and any interlining materials are laid out and folded ready for sewing |
| | | 2.3 | Fabric is held together and, where required, supported with pins or other workplace approved methods |
| 3 | Stitch seams and form corners | 3.1 | Curtain fabrics are held to allow for personal right-hand or left-hand preference of the sewer, and manipulation requirements for the bulk and slipperiness of the materials |
| | | 3.2 | Linings to be bagged are sewn in place |
| | | 3.3 | Machine sewing operations are completed correctly |
| | | 3.4 | Corners are folded and formed to match work order requirements, inserting any required weight bags |
| | | 3.5 | Hems are completed using any required weights, stitch type and appropriate sewing method |
| | | 3.6 | Corners are stitched and finished, and any loose threads trimmed |
| 4 | Construct curtain headings | 4.1 | Curtain heading tape is attached according to workplace approved method and job instructions |
| | | 4.2 | Attached lining and interlinings are sewn into heading |
| | | 4.3 | Sewn pleat spaces are kept uniform within drops |
| | | 4.4 | Linings and interlinings are attached to curtain backs by sewing or using appropriate fasteners |
| | | 4.5 | Care labels are fixed to heading or hem of curtain according to workplace standards |
| | | 4.6 | Separate linings are sewn using appropriate heading tape and attached to curtain |
| 5 | Finish work | 5.1 | Finished curtain panels, including stitch length, end finishing and final length of finished curtain panels are |

		checked against work requirements
	5.2	Work is pressed for the next work stage
	5.3	Any parts of the work which do not comply with work order are repaired
6	Complete work for next process	6.1 Workplace required documentation is completed and stored following appropriate procedures
		6.2 Finished work is folded, protected and despatched to next process following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Assessment Requirements for MSFSF2008 Construct lined curtains and drapes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Interpret work order to manufacture the required lined curtains and identify materials used and any special sewing requirements for those materials
- Measure accurately and construct at least two (2) different types of lined curtains/drapes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Identification of workplace standards, equipment and procedures for the sewing operations
- Fabric types, lining and interlining materials, including common faults and inspection procedures
- Prevention strategies for risks to health from lifting, stretching and repetitive actions
- How the design features of the curtains effect constructing the lined curtains

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate sewing machine, fabrics, work

MSFSF2009 Construct padded pelmets

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting, preparing and assembling timber components, attaching padding, fabric and trims to pelmets and where necessary, packaging, labelling and storing products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify pelmet and padding materials to be used	1.1 Type of pelmet to be padded is identified
	1.2 Components of the pelmet requiring padding and specifications for the work are identified from work instructions
	1.3 Quality and quantity requirements are identified
2 Prepare for work	2.1 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work
	2.2 Required tools and materials to complete the work are

- sourced, collected and checked for suitability
- 2.3 Fixing devices or adhesives are selected in accordance with specifications or type of padding and headboard
 - 2.4 Required personal protection equipment is located
 - 2.5 Work is planned to conform to quality requirements, minimise time, and economically use materials
 - 2.6 Procedures are identified for checking the quality of the work
- 3 Cut timber and pad pelmet
- 3.1 Timber components are measured and cut to required specifications
 - 3.2 Padding and other materials are laid out, and components are assembled and attached using appropriate fastenings, tools and equipment
 - 3.3 Tools and equipment are operated in compliance with workplace procedures and WHS requirements
 - 3.4 Work is monitored to ensure quality of product, including correct finish, operation of any moving parts, and number and fitting of fasteners/brackets
 - 3.5 Problems occurring during work operations are identified and reported following workplace procedures
 - 3.6 Waste quantities are minimised, and re-usable materials are collected and stored following workplace procedures
 - 3.7 Routine maintenance of tools and equipment is carried out according to workplace and manufacturer instructions
 - 3.8 Waste is removed and work area is cleaned following workplace procedures
- 4 Prepare pelmet for next process
- 4.1 Completed pelmets are packaged following work requirements
 - 4.2 The package is secured, labelled and stored according to workplace procedures
 - 4.3 Appropriate documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Tools and equipment include:	<ul style="list-style-type: none">• tapes• rulers• calculators• computers• scissors• staplers• sewing machines• hammers• staple guns• jig saws• drop saws
Materials to be used include:	<ul style="list-style-type: none">• curtain fabric• timber• adhesives and padding material
Padding materials include:	<ul style="list-style-type: none">• padding• fabric• linings and trims

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF2009B Construct padded pelmets.

MSFSF2010 Make up tracks for window coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers cutting, assembling and packaging tracking components and curtain hardware in preparation for on-site fitting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Identify products, fittings and attachments to be used | 1.1 Type of tracks to be fitted and work order requirements are identified |
| | 1.2 Attachments, required components and tools are identified from work instructions |
| | 1.3 Quality and quantity requirements are identified |
| 2 Prepare for work | 2.1 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | 2.2 Required tools and materials to complete the work are sourced, collected and checked for suitability |
| | 2.3 Cutting equipment is checked for correct setting and |

- operation of safety cut-out and guards
- 2.4 Work is planned to conform to quality requirements, minimise time, and economically use materials
- 2.5 Procedures are identified for checking the quality of the work
- 3 Cut tracking to required length
 - 3.1 Cutting equipment is operated in compliance with workplace procedures and WHS requirements
 - 3.2 Cutting is monitored to ensure quality of product
 - 3.3 Problems occurring during work operations are identified and reported following workplace procedures
 - 3.4 Waste quantities are minimised, and re-usable materials are collected and stored following workplace procedures
 - 3.5 Routine maintenance of the cutting equipment is carried out according to workplace and manufacturer instructions
 - 3.6 Waste is removed and work area is cleaned following workplace procedures
- 4 Assemble and package tracking components
 - 4.1 Components required to complete the tracking are collected, assembled and checked for quality and quantity
 - 4.2 Components are packaged following work requirements
 - 4.3 The completed package is secured, labelled and stored according to workplace procedures
 - 4.4 Appropriate documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for MSFSF2010 Make up tracks for window coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Interpret work order, locate and apply relevant information and make up at least three (3) different types of tracks to specifications and quality requirements
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of tracks
- Identification of equipment, materials, processes and procedures
- Workplace standards and procedures related to the making up of tracks

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to tracks and components, and appropriate specifications.

MSFSF2011 Fit and adjust curtain hardware

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers fitting and adjusting tracking, rods, poles and other curtain hardware.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking curtain fitting work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.						
1 Identify products, fittings and attachments to be used	<table><tr><td>1.1</td><td>Type of tracks, rods or poles to be fitted and work order requirements are identified</td></tr><tr><td>1.2</td><td>Attachments, required materials and tools are identified from work instructions and, where necessary, site inspection</td></tr><tr><td>1.3</td><td>The effect of the fitting process on overall finished window is identified</td></tr></table>	1.1	Type of tracks, rods or poles to be fitted and work order requirements are identified	1.2	Attachments, required materials and tools are identified from work instructions and, where necessary, site inspection	1.3	The effect of the fitting process on overall finished window is identified
1.1	Type of tracks, rods or poles to be fitted and work order requirements are identified						
1.2	Attachments, required materials and tools are identified from work instructions and, where necessary, site inspection						
1.3	The effect of the fitting process on overall finished window is identified						
2 Plan process for fitting attachments to products	<table><tr><td>2.1</td><td>Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work</td></tr></table>	2.1	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work				
2.1	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work						

- 2.2 Appropriate equipment is identified to minimise risks of damage to customers' premises or injuries to self
- 2.3 Manufacturer information on products used is located and used to plan work
- 2.4 Attachment process is planned to conform to quality requirements, minimise time, economically use materials and maximise appearance of the finished work
- 2.5 Materials, tools and equipment are assembled and checked for suitability for purpose
- 2.6 Track/pole/rod width and projection is set up to provide for stacking space, overlap, projection, return, and number of rings/hooks, guides/runners and other fittings in order to correctly match work order requirements
- 3 Complete fitting operations
 - 3.1 Work plan is followed ensuring compliance with workplace procedures and WHS requirements
 - 3.2 Ceiling and face-fitted tracks/rods/poles are installed and tested for correct operation
- 4 Clean work area and prepare products for the next process
 - 4.1 Worksite and any equipment used is cleaned and stored appropriately
 - 4.2 Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed
 - 4.3 Completed work is inspected and compared to workplace quality requirements
 - 4.4 Fittings which do not meet quality specifications are repaired on-site or returned to the workroom for repair
 - 4.5 Appropriate documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

MSFSF2013 Dress windows

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers decoratively installing and adjusting window finishings.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking window dressing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify window finishings to be installed	1.1	Type of window finishings to be fitted and work order requirements are identified
		1.2	Materials and tools are identified from work instructions and, where necessary, site inspection
		1.3	The effect of the fitting process on overall finished window is identified
2	Plan process for dressing window	2.1	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work
		2.2	Appropriate equipment is identified to minimise risks of

- damage to customers' premises or injuries to self
- 2.3 Manufacturer information on products used is located and used to plan work
- 2.4 Decorator's specifications, if any, are used to plan work
- 2.5 Attachment process is planned to conform to quality requirements, minimise time, economically use materials and maximise appearance of the finished work
- 2.6 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
- 3 Complete fitting operations
 - 3.1 Backing is attached, where appropriate, to the curtain using appropriate fittings
 - 3.2 Required number of glides are identified, matched between window finishing, and tracks added or removed as required
 - 3.3 Curtains are attached to tracks and checked for smooth and even operation and hanging
 - 3.4 Curtain height and floor clearance is checked and compared to work order requirement
 - 3.5 Pelmet, valance, swag, pull-backs or tie-back holders are fitted using appropriate hardware and adjusted for fall, neatness and appearance
 - 3.6 Where required, pleats are folded and tied to maintain required pleating
- 4 Clean work area
 - 4.1 Worksite and any equipment used is cleaned and stored appropriately
 - 4.2 Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed
 - 4.3 Completed work is inspected and compared to workplace quality requirements
 - 4.4 Fittings and curtains which do not meet quality specifications are repaired on-site or returned to the workroom for repair
 - 4.5 Appropriate documentation or reporting is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFSF2013 Dress windows

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Install at least four (4) different types of window dressings, which must include curtains and tie-backs
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Window dressing and fitting materials and techniques
- Identification of equipment, processes and procedures
- Work flow in relation to fitting curtains, valances, swags and other window treatments

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to curtains, tracks, decorative window finishings, appropriate quality specifications and instructions.

MSFSF2014 Use soft furnishing sector hand and power tools

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting and using hand and power tools in applications relating to the soft furnishing sector of the furnishing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---------------------------------|--|
| 1 Identify hand and power tools | 1.1 Types of hand and power tools and their functions are identified |
| | 1.2 Sources of power supply are recognised |
| | 1.3 Work health and safety (WHS) requirements for using hand and power tools are recognised and adhered to |
| 2 Select and use hand tools | 2.1 Hand tools are selected consistent with the needs of the job |
| | 2.2 Tools are checked for serviceability and safety and any faults are corrected or processed for repair |
| | 2.3 Equipment is selected to hold or support material for hand tool application, where applicable |

- | | | |
|---|------------------------------|--|
| | 2.4 | Material is located and held in position for hand tool application |
| | 2.5 | Hand tools are safely and effectively used according to their intended use |
| | 2.6 | Hand tools are safely located when not in immediate use |
| 3 | Select and use power tools | <p>3.1 Appropriate personal protective equipment is selected, correctly fitted and used</p> <p>3.2 Power tools are selected consistent with the needs of the job in accordance with conventional work practice</p> <p>3.3 Power tools are visually checked for serviceability/safety in accordance with WHS requirements and any faults are corrected or processed for repair</p> <p>3.4 Equipment is selected to hold or support materials for power tool application, where applicable</p> <p>3.5 Material is located and held in position for power tool application where applicable</p> <p>3.6 Power tools are safely and effectively used in application processes</p> <p>3.7 Power tools are safely located when not in use</p> |
| 4 | Clean up work area and tools | <p>4.1 All tools are cleaned, maintained and stored</p> <p>4.2 Equipment is cleaned, maintained and stored</p> <p>4.3 Work area is cleared and waste removed</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFSF2014 Use soft furnishing sector hand and power tools

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- On at least three (3) occasions adopt and carry out correct procedures prior to and during use of hand and power tools for soft furnishing operations
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Function, purpose and operator maintenance requirements of hand tools used in the workplace
- Function, purpose and operator maintenance requirements of power tools used in the workplace
- Workplace safety requirements and WHS legislation

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.

MSFSF3001 Operate drop cutting machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using drop cutting machines to machine synthetic or natural fabrics used for curtains, internal or external blinds, awnings and shade wings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify drop cutting machine controls, adjustments and work procedures	1.1	Job requirements are identified from workplace approved operating procedures
		1.2	Equipment components, adjustment points and controls are identified
		1.3	Operating procedures are checked to identify approved operating range and adjustments
		1.4	Equipment operations and production procedures are identified
		1.5	The process for obtaining materials and moving products to the next process is identified
2	Plan and prepare for	2.1	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the

	work		work, serviceable and in a safe condition
		2.2	Inspection procedure for material quality and equipment condition is identified
		2.3	Work sequence is planned to suit job
		2.4	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work
		2.5	Equipment emergency stops and guards are identified
		2.6	Machine checking procedures are identified
		2.7	Any required supplementary equipment is identified for routine lubrication and adjustments of the equipment
3	Set and operate drop cutting machine	3.1	Fabric length and angle of cut are set on the drop cutting machine following work order
		3.2	Fabric is fixed to the machine using appropriate hooks or other fasteners
		3.3	Fabric is checked for flaws prior to cutting
		3.4	Fabric use minimises waste materials
		3.5	Cutting operations provide the required product quality standards, work outputs and minimisation of waste
		3.6	Problems are identified and reported following workplace procedures
		3.7	Cut lengths are checked for required quality and moved to the next process
		3.8	Waste and scrap are dealt with following workplace procedures
		3.9	Equipment and work area clean-up are completed following workplace procedures
4	Confirm quality requirements are met	4.1	Process is monitored and conditions which may affect quality standards are reported
		4.2	Observed requirements for repairs or maintenance are identified and reported to appropriate personnel

- 4.3 Authorised changes to settings or operating procedures are implemented

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Machine checking procedures include: | <ul style="list-style-type: none">• materials inputs and outputs• cutting blade condition• attachments and ancillary equipment• quality requirements for the process stage |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices |
| Information and procedures include: | <ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures |

Unit Mapping Information

Supersedes and is equivalent to LMFSF3001B Operate drop cutting machines.

Assessment Requirements for MSFSF3001 Operate drop cutting machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and operate machine controls and guards and set depth and angle of cut to specification
- Operate drop cutting machine to cut at least five (5) different types of material or fabric
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of drop cutting machines
- Characteristics of materials used and products produced
- Identification of equipment adjustment points, processes and procedures
- Procedure for reporting faulty products or interruptions to work flow
- Work flow requirements for process

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to drop cutting machines, equipment operating procedures and fabric for cutting.

MSFSF3002 Use automated curtain pleating equipment

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using automated pleating equipment to construct curtain headings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify automated curtain pleating equipment controls and work procedures	1.1	Location and function of the equipment, including, equipment condition, components and controls, are identified
		1.2	Work procedures and documentation are checked to identify that settings are within approved operating range
		1.3	Inspection procedure for quality requirements for hemmed and seamed curtain drops is identified
		1.4	Heading type is recognised to identify personal work requirements for measuring, calculating, folding and finishing
		1.5	The process for obtaining materials and moving products to the next process is identified

- | | | | |
|---|--|-----|--|
| 2 | Prepare for work | 2.1 | Work order requirements are identified |
| | | 2.2 | Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | | 2.3 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 2.4 | Work sequence is planned to suit job |
| | | 2.5 | Equipment on/off switches and guards are identified |
| | | 2.6 | Pleated width for the curtain order is calculated |
| | | 2.7 | Adjustments to equipment settings to match work order heading requirements and finished curtain width are made following workplace approved procedures |
| | | 2.8 | Any required supplementary equipment is identified for routine cleaning, lubrication and adjustments |
| 3 | Operate automated curtain pleating equipment | 3.1 | Lubrications and adjustments are made to the machine |
| | | 3.2 | Curtains are spread on work area and clamped in the automated equipment ensuring a smooth and square alignment with the machine guides |
| | | 3.3 | Curtain pleating is completed, monitoring equipment conditions and drape quality |
| | | 3.4 | Finished width of each curtain drop is measured and checked against work order and pleat size is adjusted, where required |
| | | 3.5 | Curtain headings are stapled or clipped within required heading area |
| | | 3.6 | Problems are identified and reported following workplace procedures |
| 4 | Complete work | 4.1 | Finished work is despatched to next process following workplace procedures |
| | | 4.2 | Equipment and work area clean up are completed following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

MSFSF3003 Follow patterns to produce window toppings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers producing window toppings following the requirements of patterns.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------------------------|---|
| 1 Identify work requirements | 1.1 Job requirements are identified from work instructions and patterns |
| | 1.2 Pattern is interpreted to determine detail or work requirements |
| | 1.3 Instructions for sequencing of work and particular measurements or adjustments are interpreted |
| | 1.4 Work sequence is planned, including quality checkpoints |
| 2 Prepare for work | 2.1 Suitable work area is selected for the tasks |
| | 2.2 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |

- | | | |
|---|-----------------------|--|
| | 2.3 | Materials are selected to match customer requirements, suitability for the purpose and work instructions |
| | 2.4 | Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material |
| | 2.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| 3 | Complete construction | <p>3.1 Window toppings are constructed following work instructions</p> <p>3.2 Work is checked against patterns and worksheets at the identified checkpoints</p> <p>3.3 Non-conformity with enterprise quality standards is rectified</p> |
| 4 | Finalise operations | <p>4.1 Completed work is checked against required quality standards</p> <p>4.2 Documentation or reporting is completed following workplace procedures</p> <p>4.3 Work area is cleaned, and tools and equipment are returned to storage</p> <p>4.4 Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving skills
- Window toppings include:**
- swags
 - jabots
 - falls/tails and accessories
 - soft padded pelmets
 - bonded pelmets
- Tools and equipment include:**
- measuring and calculating equipment:
 - tapes
 - rulers
 - calculators
 - computers
 - fabric and general cutting and sewing tools:
 - scissors
 - saws
 - drills
 - staplers
 - sewing machines
 - hemming machines
 - overlockers
 - glue guns
 - swag templates
- Materials include:**
- plain and patterned fabric
 - velvet and vinyl
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication

- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF3003B Follow patterns to produce window toppings.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFSF3003 Follow patterns to produce window toppings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and patterns to locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Interpret patterns correctly to identify the type of material specified, required tools and equipment for the task, number and type of window toppings to be produced, and quality requirements
- Interpret patterns and identify materials used and any special sewing or handling requirements to produce at least one (1) each of jabots, swags, tails, soft padded pelmets and bonded pelmets
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Type, characteristics, uses and limitations of window toppings
- Process for interpretation of patterns
- Identification of equipment, processes and procedures
- Work flow in relation to window topping production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to patterns, materials and specifications.

MSFSF3004 Construct Roman-style blinds

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers constructing and sewing Roman-style blinds to workplace requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Establish work requirements and prepare for work	1.1	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work
		1.2	Work order requirements are checked are confirmed
		1.3	Correct side of fabric, naps, direction of pattern and pattern matches are identified
		1.4	Fabric is checked for flaws
		1.5	Appropriate needle types for the fabric are selected and threaded
2	Lay out work to be sewn	2.1	Linings and interlining materials are laid out and folded ready for sewing

- 2.2 Lining materials patterns are matched and secured
 - 2.3 Face fabric is folded bringing edges to be seamed together to check any pattern matching and to maintain an appropriate finished length
 - 2.4 Pattern matches are kept uniform within drops and across matching sets of blinds
 - 2.5 Measuring and marking out of fold or stitching lines for batten placement is even and matches the work order or workplace requirements
 - 2.6 Fabric is held together and, where required, supported with pins or other workplace approved methods
- 3 Stitch seams and form corners
 - 3.1 Fabrics are held to allow for the personal right-hand or left-hand preference of the sewer, and manipulation requirements for the bulk and slipperiness of the materials
 - 3.2 Machine sewing operations are completed correctly
 - 3.3 Linings and interlinings are attached to the back of blind
 - 3.4 Finished length and width of each panel are measured and checked against work order and adjusted where required
 - 3.5 Batten pockets are inserted and fixed following workplace procedures
 - 3.6 Hems are completed using any required weights, stitch type and appropriate sewing method
 - 3.7 Corners are stitched and finished and threads trimmed
- 4 Apply quality checks
 - 4.1 Finished blinds are checked ensuring stitch length, end finishing and final length of finished blinds match work requirements
 - 4.2 Work is pressed for the next work stage
 - 4.3 Rings are attached correctly
 - 4.4 Parts of the work which do not comply with work order are repaired
- 5 Install blinds
 - 5.1 Headboard is painted, stained or covered with fabric fixed along the board length, corners are mitred and fixed, reducing bulk and ensuring a neat finish

	5.2	Blinds are fitted to headboard or track, threading completed and blind folded using appropriate methods	
6	Complete work	6.1	Finished work is protected and despatched to next process following workplace procedures
		6.2	Workplace documentation or reporting is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none"> WHS requirements including legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements work requires individuals to demonstrate some discretion, judgement and problem solving skills
Roman-style blind types include:	<ul style="list-style-type: none"> straight or relaxed bonded oriental cascade staggered koopd
Machine sewing operations include:	<ul style="list-style-type: none"> straight stitching along seam lines from the top to the lower edge of the material or vice versa securing of beginning and end of threads of the stitching

	with even and appropriate seam stitch type, length and visibility
Machines include:	<ul style="list-style-type: none">• seams are flat• finished components match work requirements• industrial sewing machines• pressing equipment• staplers• drills• saws
Materials to be machined include:	<ul style="list-style-type: none">• lining• interlining and curtain fabrics• fasteners• threads• headboard or track
Work order requirements include:	<ul style="list-style-type: none">• widths and numbers of finished blinds• seam allowances and types• number and widths of panels• mounting style• headboard or track requirements• lining and any interlining• required fasteners
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF3004B Construct Roman style blinds.

Assessment Requirements for MSFSF3004 Construct Roman-style blinds

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify materials used and any special sewing requirements for the Roman-style blinds and measure accurately and construct at least two (2) different types of Roman-style blinds to required size and accuracy
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of Roman-style blinds
- Design features of the Roman-style blinds
- Fabric types, common faults and inspection procedures
- Identification of equipment, processes and procedures for making Roman-style blinds
- Work requirements, including workplace standards
- Risks to health from repetitive actions and prevention strategies

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate sewing machine, fabrics, work order, work procedures and/or equipment instructions.

MSFSF3005 Construct Austrian festoon-style blinds

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers constructing and sewing Austrian festoon-style blinds.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Establish work requirements and prepare for work	1.1	Work order requirements are checked and confirmed
		1.2	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.3	Correct side of fabric, naps, direction of pattern and pattern matches are identified
		1.4	Fabric is checked for flaws
		1.5	Appropriate needle types for the fabric are selected and threaded
2	Lay out work to be sewn	2.1	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work

- | | | |
|---|-------------------------------|--|
| | 2.2 | Linings and any interlining materials are laid out and folded ready for sewing |
| | 2.3 | Lining materials are matched and secured |
| | 2.4 | Face fabric is folded, bringing edges to be seamed together to match any pattern and to maintain an appropriate finished length |
| | 2.5 | Pattern matches are kept uniform within drops and across matching sets of blinds |
| | 2.6 | Fabric is held together and, where required, supported with pins or other workplace approved methods |
| 3 | Stitch seams and form corners | |
| | 3.1 | Curtain fabrics are held to allow for the personal right-hand or left-hand preference of the sewer, and manipulation requirements for the bulk and slipperiness of the materials |
| | 3.2 | Machine sewing operations are completed correctly |
| | 3.3 | Finished length and width of each panel are measured and checked against work order and adjusted, where required |
| | 3.4 | Linings and interlinings are attached to back of blind |
| | 3.5 | Corners are folded and formed to match work order or workplace requirements |
| | 3.6 | Hems are completed using the appropriate stitch type and sewing method |
| | 3.7 | Corners are stitched and finished and threads trimmed |
| | 3.8 | Ring placement positions are measured and marked |
| 4 | Sew gathering materials | |
| | 4.1 | Headings and any stitching or slit along vertical gather lines are completed according to the work order |
| | 4.2 | Ends of stitching are secured and any required weights are attached |
| 5 | Finish work | |
| | 5.1 | Finished blinds are checked ensuring stitch length, end finishing and size blinds match work requirements |
| | 5.2 | Work is pressed |
| | 5.3 | Parts of the work which do not comply with work order are repaired |

		5.4	Rings are attached
		5.5	Gather tapes and gathering lines are pulled up maintaining even fullness in gather and even tension in gathering lines
		5.6	Headboard is painted, stained or covered with fabric fixed along the board length, corners are mitred and fixed, reducing bulk and ensuring a neat finish
		5.7	Blinds are fitted to headboard or track and threading completed
6	Complete work for next process	6.1	Workplace required documentation or reporting is completed
		6.2	Finished work is folded, protected and despatched following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

MSFSF3006 Chemically join textiles

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using specialised equipment and processes to bond or glue textiles for the manufacture of items, including bonded blinds and padded pelmets.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify the materials and process for joining	1.1	The process and materials to be used are identified
		1.2	The effect of the joining process on the materials is determined
		1.3	The effect of the chemical reactions on the materials is determined
		1.4	Allowances for joining overlaps are checked in workplace documentation and manufacturer instructions
		1.5	Curing times are identified for the materials and the process
2	Plan the joining process	2.1	Manufacturer instructions and workplace procedures for the joining task are used in the planning process

- | | | | |
|---|---|-----|--|
| | | 2.2 | Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | | 2.3 | Work sequence is planned noting appropriate curing/cooling times, efficient work sequence and quality requirements |
| 3 | Set up equipment and materials for the process | 3.1 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| | | 3.2 | Site is checked for appropriate ventilation, fume extraction and protection of other surfaces from contamination with screens and or covers |
| | | 3.3 | Adjustments and settings are made to suit materials, manufacturer instructions and workplace procedures |
| | | 3.4 | Appropriate personal protection equipment is selected and used |
| 4 | Follow workplace procedures to complete the joining process | 4.1 | Joining procedures are completed following the planned work sequence |
| | | 4.2 | Checks and tests of the process and the finished product are made |
| | | 4.3 | Appropriate adjustments are made to the process to maintain the quality of the finished product |
| | | 4.4 | Workplace documentation and records are completed as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Chemical joining includes: | <ul style="list-style-type: none">• the use of solvent and water-based chemicals to join or repair textiles |
| Fabric types include: | <ul style="list-style-type: none">• plain and patterned fabric• vinyl• velvet |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices |
| Information and procedures include: | <ul style="list-style-type: none">• chemical manufacturer specifications and operational procedures• workplace procedures relating to the setting and operation of chemicals and machinery• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures |

Unit Mapping Information

Supersedes and is equivalent to LMFSF3006B Chemically join textiles.

Assessment Requirements for MSFSF3006 Chemically join textiles

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Locate, interpret and apply information relevant to the chemicals and textiles involved and apply safe handling practices for equipment, products and materials
- Select appropriate materials and joining process to match work requirements and conduct the joining process within workplace quality parameters to chemically join at least three (3) textiles, including plain and patterned fabric, vinyl and velvet
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, strengths and limitations of chemical joining processes and techniques
- Changes in materials during the chemical repair and joining of materials
- Testing for potential damage, including dye fastness for the adhesive and materials
- Requirements for ventilation and personal protection equipment for the adhesives
- Personal health effects of fumes, heat and other radiations

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to textiles, joining materials and job sheets.

MSFSF3007 Lay out patterns and cut fabrics

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers laying out patterns and cutting fabrics for construction of soft furnishings, upholstery products, and mattresses and bases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------------------|--|
| 1 Plan work operations | 1.1 Specifications, patterns and/or plans are read and interpreted to identify required fabrics, number of items to be cut and required equipment |
| | 1.2 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | 1.3 Cutting requirements, including bias or other instructions, are noted and required guides on the cutting table are identified |
| | 1.4 Suitable work area is selected, tidied and cleaned of any contaminants |
| | 1.5 Appropriate equipment and tools are selected for the |

- fabrics and type of materials
- 1.6 Suitable scissors and/or blades are selected for the fabrics to be cut
 - 1.7 Scissors and any other cutting equipment are checked prior to use for appropriate sharpness, set operation and safe condition
 - 1.8 Fabrics are selected in accordance with work order and laid out smooth and square
- 2 Prepare materials for cutting
- 2.1 Fabrics are inspected for flaws and appropriate finish
 - 2.2 Naps, direction of pattern, pattern repeat and finished side of the materials are identified
 - 2.3 Fabrics are squared up to the edges or guide markings on the cutting table
 - 2.4 Patterns are laid out following work procedures and instructions using registration points on the pattern and other instructions to match required fabric pattern
 - 2.5 Measurements are made and appropriate adjustments are made
 - 2.6 Tools and equipment are checked for operation
- 3 Complete cutting operations
- 3.1 Required cutting operations are completed to cut out materials following work instructions
 - 3.2 Fabrics are wrapped using appropriate protective covers and care label information is attached
 - 3.3 Unused materials are stored as required
 - 3.4 Workplace required documentation is completed and stored following appropriate procedures
 - 3.5 Cut fabrics are folded, protected and despatched to next process following workplace procedures
 - 3.6 Stock usage is reported as required by workplace procedures
 - 3.7 Work area is cleaned and damaged tools tagged as required

- 3.8 Waste is collected and bundled for recycling/re-use as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |

Assessment Requirements for MSFSF3007 Lay out patterns and cut fabrics

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Lay out patterns, measure accurately and cut out at least five (5) different fabric types or pattern styles identifying the materials used and any special cutting requirements
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Fabric types, common faults and inspection procedures
- Design features of the finished furnishing items in relation to laying out the pattern and cutting the fabrics
- Work requirements, including workplace standards
- Risks to health from repetitive actions and prevention strategies

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to fabrics, work procedures and/or equipment instructions.

MSFSF3008 Measure up and calculate fabric quantities for window coverings

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers measuring up and calculating fabric and tracking quantities for window coverings during a site visit for subsequent use in job specifications and quotes/tenders.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking windows coverings work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for calculations	1.1 Measuring and calculating equipment are collected
	1.2 Mathematical processes and guide charts required are identified
	1.3 Drape requirements, fabric types and lining/interlining requirements are noted from work order
2 Measure windows and calculate drape	2.1 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are

fabric requirements		observed throughout the work
	2.2	Fabric repeats are noted from samples of customer selected fabrics and recorded
	2.3	Fabric width and pattern repeat are noted for work order
	2.4	Finished length of window covering is identified for order
	2.5	Heading type is identified for order and fullness ratio is identified
	2.6	Loose or attached lining preference is noted on work order
	2.7	Finished width of tracking and window covering is measured and noted
	2.8	Number of fabric drops per curtain is calculated
	2.9	Length of each fabric drop is calculated based on finished length plus hem and heading allowances and pattern repeats
	2.10	Allowances for seams, hems, headings, drape fullness or heading type are noted for the work order
3	Calculate lining and interlining quantities	3.1 Width of lining and interlining fabrics is noted
		3.2 Number of lining/interlining widths or quantity of continuous lining is calculated based on required number of drape drops or continuous fabric
		3.3 Length of lining/interlining drops is calculated, including hem allowances
		3.4 Amount of lining/interlining fabric is calculated and noted for work order
		3.5 Procedures for minimising waste fabric are identified
4	Complete documentation	4.1 Quotation is prepared for client according to workplace procedures
		4.2 Documentation is forwarded to appropriate work area

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Window coverings include:	<ul style="list-style-type: none">• curtains and drapes• blinds
Measuring and calculating equipment includes:	<ul style="list-style-type: none">• tapes• rulers• calculators• computers
The number of fabric drops per curtain is based on:	<ul style="list-style-type: none">• useable drapery fabric width• fullness requirements for heading type• size of returns and overlaps• track width identified for customer order
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and

communication

- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF3008B Measure up and calculate fabric quantities for window coverings.

Assessment Requirements for MSFSF3008 Measure up and calculate fabric quantities for window coverings

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Measure up and accurately calculate fabric quantities for at least three (3) different window covering types
- Prepare quotation and/or work order and locate and apply relevant information
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Design features of the fabrics and finished curtains in relation to attractive draping requirements
- Fabric types, common faults and inspection procedures
- Work requirements, including workplace standards

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work orders, measuring equipment, fabrics, including linings and interlinings, calculator and other relevant equipment.

MSFSF3009 Manufacture bedspreads, bed linen and table cloths

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers producing bedspreads, bed linen and table cloths in a range of styles to specifications using industrial sewing machines and equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|------------------------------|---|
| 1 Identify work requirements | 1.1 Job requirements are identified from work instructions and patterns |
| | 1.2 Pattern is interpreted to determine work specifications |
| | 1.3 Instructions for sequencing of work and particular measurements or adjustments are interpreted |
| | 1.4 Work sequence is planned, including quality checkpoints |
| 2 Prepare for work | 2.1 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | 2.2 Suitable work area is selected for the tasks |

- | | | |
|---|----------------------|--|
| | 2.3 | Materials are selected to match customer requirements, suitability for the purpose and the work instructions |
| | 2.4 | Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material |
| | 2.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| 3 | Complete manufacture | |
| | 3.1 | Fabric quantities are calculated, allowing for seams, joining pleats and gathers |
| | 3.2 | Fabric is marked out and cut to size |
| | 3.3 | Bedspreads, bed linen and table cloths are manufactured following work instructions |
| | 3.4 | Work is checked against patterns and worksheets at the identified checkpoints |
| | 3.5 | Non-conformity with the required quality standards is rectified |
| 4 | Finalise operations | |
| | 4.1 | Completed work is checked against required quality standard |
| | 4.2 | Documentation or reporting is completed following workplace procedures |
| | 4.3 | Work area is cleaned, tools and equipment are returned to storage |
| | 4.4 | Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFSF3009 Manufacture bedspreads, bed linen and table cloths

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify materials used in bedspread, bed linen and table cloths manufacture, and any special sewing or handling requirements, and produce at least three (3) different types of bed linen or table cloths which must include one (1) duvet cover and one (1) bed valance
- Manufacture at least one (1) quilted, one (1) lined, and one (1) unlined bedspread
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Interpretation of patterns
- Standard range of bedspread and basic bed linen sizes, styles and variations
- Range of fabrics and decorative finishes used in the making of bedspreads, bed linen and table cloths
- Identification of equipment, processes and procedures
- Work flow in relation to bedspread, bed linen and table cloth production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.

MSFSF3010 Advise customers on interior decoration

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers advising customers on colour coordination, fabric selection and styles in relation to soft furnishings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------------|-----|--|
| 1 | Identify work requirements | 1.1 | Job requirements are identified from customer's initial instructions or enquiries and work instructions |
| | | 1.2 | Potential site problems or site-specific requirements are identified |
| | | 1.3 | Work sequence is planned, including quality checkpoints |
| 2 | Prepare for work | 2.1 | A range of materials and products are selected to match customer requirements, suitability for the purpose and work instructions |
| | | 2.2 | Sample materials, products and visual aids are collected |
| | | 2.3 | An appointment is arranged with the customer and an appropriate time plan is agreed |

- | | | |
|---|---|--|
| 3 | Confirm customer requirements | 3.1 Questioning and active listening techniques are used to clarify customer needs |
| | | 3.2 Customer requirements are identified professionally, courteously, with tact and without presumptions |
| | | 3.3 Customer requirements are fed back accurately using language that can be understood by the customer and enterprise staff |
| | | 3.4 Customer requirements are documented in accordance with relevant industry, legal and/or enterprise standards and procedures |
| 4 | Provide advice on interior decoration options | 4.1 Viable options for colour, fabric and design that are relevant to the customer's requirements are generated |
| | | 4.2 Relevant suppliers are contacted to research alternative options, if required |
| | | 4.3 Options for colour, fabric and design are explained to and discussed with the customer to facilitate customer understanding |
| | | 4.4 Fabric or product samples and/or visual aids are made available to the customer, where appropriate, to facilitate customer understanding |
| | | 4.5 Benefits and approximate costs of each option are explained to the customer to facilitate informed decision making |
| 5 | Confirm selection with customer | 5.1 Customer preferred option, including agreed delivery timeframe, is determined |
| | | 5.2 Customer commitment to agreed option is gained in accordance with workplace requirements |
| | | 5.3 Documentation is completed following workplace procedures, including any required specification sheets for products selected |
| | | 5.4 Assistance with any paperwork requiring completion by customer is provided, where appropriate |
| 6 | Finalise process | 6.1 Sample products are returned to storage, as required |
| | | 6.2 Contact is maintained with customer throughout |

manufacture and installation process, if required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Tools and equipment include:

- measuring and calculating equipment:
 - tapes
 - rulers
 - calculators
 - computers

Materials include:

- product and fabric samples
- visual aids (photographs)
- magazines
- trade brochures
- sketches

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices

Information and

- workplace procedures relating to the use of tools and equipment

procedures include:

- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

MSFSF3011 Install motorised curtains and blinds

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing motorised curtains and blinds in residential and commercial locations.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking motorised curtains and blinds installation work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify products, fittings and attachments to be used	<p>1.1 Type of motorised curtain or blind to be installed is identified from work order</p> <p>1.2 Required materials and tools are identified from work instructions and, where necessary, site inspection</p> <p>1.3 Location of available power point is checked for suitability</p> <p>1.4 Installation of power point in suitable location is arranged, if required</p>
2 Plan process for fitting	<p>2.1 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are</p>

- observed throughout the work
- 2.2 Appropriate equipment is identified to minimise risks of damage to customers' premises or injuries to self
 - 2.3 Manufacturer information on products used is located and used to plan work
 - 2.4 Attachment process is planned to conform to quality requirements, minimise time, economically use materials and maximise appearance of the finished work
 - 2.5 Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
- 3 Complete fitting operations
- 3.1 Work plan is followed ensuring compliance with workplace procedures and WHS requirements
 - 3.2 Tracks or blinds are installed and tested for correct operation
 - 3.3 Curtains are attached to tracks and checked for smooth and even operation and hanging, including limits
 - 3.4 Curtain or blind height and floor clearance is checked and compared to work order requirement
- 4 Clean work area
- 4.1 Worksite and any equipment used is cleaned and stored appropriately
 - 4.2 Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed
 - 4.3 Completed work is inspected and compared to workplace quality requirements
 - 4.4 Fittings, curtains and blinds which do not meet quality specifications are repaired on-site or returned to the workroom for repair

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Motorised curtains and blinds include:	<ul style="list-style-type: none">• battery• plug-in mains power
Tools and equipment include:	<ul style="list-style-type: none">• hand or power operated tools• drills• hammers• screwdrivers
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF3012B Install motorised curtains and blinds.

MSFSF3012 Follow patterns to produce soft furnishing accessories

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers producing soft furnishing accessories following the requirements of patterns.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify work requirements	1.1	Job requirements are identified from work instructions and patterns
		1.2	Pattern is interpreted to determine work specifications
		1.3	Instructions for sequencing of work and particular measurements or adjustments are interpreted
		1.4	Work sequence is planned, including quality checkpoints
2	Prepare for work	2.1	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work
		2.2	Suitable work area is selected for the tasks

- | | | |
|---|---------------------|--|
| | 2.3 | Materials are selected to match customer requirements, suitability for the purpose and the work instructions |
| | 2.4 | Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material |
| | 2.5 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| 3 | Complete production | 3.1 Soft furnishing accessories are produced following work instructions |
| | | 3.2 Work is checked against patterns and worksheets at the identified checkpoints |
| | | 3.3 Non-conformity with enterprise quality standards is rectified |
| 4 | Finalise operations | 4.1 Completed work is checked against required quality standard |
| | | 4.2 Documentation or reporting is completed following workplace procedures |
| | | 4.3 Work area is cleaned, tools and equipment are returned to storage |
| | | 4.4 Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Soft furnishings include:**
- cushions
 - tie-backs
 - bolsters
 - soft tableware
 - slip-on covers
- Tools and equipment include:**
- measuring and calculating equipment:
 - tapes
 - rulers
 - calculators
 - computers
 - fabric and general cutting and sewing tools:
 - scissors
 - saws
 - drills
 - staplers
 - sewing machines
 - hemming machines
 - overlockers
 - glue guns
- Materials include:**
- plain and patterned fabric
 - velvet
 - vinyl
 - piping cords
 - wadding
 - foam
 - zips and fasteners
- Pattern interpretation is to identify or determine:**
- type of material specified
 - required tools and equipment for the task
 - number and type of soft furnishing accessories to be produced

- Personal protective equipment includes:**
- quality requirements
 - that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF3013B Follow patterns to produce soft furnishing accessories.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFSF3012 Follow patterns to produce soft furnishing accessories

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Produce at least three (3) different types of soft furniture accessories, which are to include one (1) padded, piped and shaped tie back, one (1) piped cushion and one (1) bolster
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics and production requirements for soft furnishing accessories
- Process for the interpretation of patterns
- Features and use of relevant equipment, processes and procedures
- Work flow in relation to soft furnishing accessory production

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to patterns, materials and work orders.

MSFSF3013 Provide technical advice to customers

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers providing advice to customers on a range of technical issues that impact on soft furnishing types, uses and installation issues, including wall structures, interior design principles, motorisation, energy conservation and interpretation of architectural drawings.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking technical advisory work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify customer requirements	1.1	Questioning techniques are applied to determine the nature of customer requirements
		1.2	Potential site problems or site-specific requirements are identified
2	Access and interpret information	2.1	All available information relating to customer-specific requirements is gathered, recorded and confirmed with the customer
		2.2	Information on options that potentially meet the customer's

		requirements is accessed and interpreted
3	Provide advice to customer	<p>3.1 Viable options relating to products, techniques or solutions that are relevant to the customer's requirements are generated</p> <p>3.2 Information on available options relating to products, techniques or solutions is provided to the customer</p> <p>3.3 Features, benefits, limitations and safety implications relating to available options are explained to the customer</p> <p>3.4 The customer is advised to seek specialist advice, where warranted</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none"> work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements work requires individuals to demonstrate some discretion, judgement and problem solving
Tools and equipment include:	<ul style="list-style-type: none"> measuring and calculating equipment: <ul style="list-style-type: none"> tapes rulers

- calculators
- computers
- Materials include:**
 - product and fabric samples
 - visual aids:
 - photographs
 - magazines
 - trade brochures
 - sketches
 - technical drawings
- Personal protective equipment includes:**
 - that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
 - workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF3014B Provide technical advice to customers.

Assessment Requirements for MSFSF3013 Provide technical advice to customers

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Provide advice to customers on three (3) occasions with each involving a different central subject
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Interpretation of plans, drawings and worksheets
- Interior design principles
- Types of motorisation
- Energy conservation methods
- Types of wall and ceiling construction

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to sample products, visual aids and customer specifications.

MSFSL2001 Assemble leadlight and stained glass components

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assembling leadlight and stained glass components using a range of fixing and joining components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Leadlight and Stained Glass

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---------------------------|-----|---|
| 1 | Plan and prepare for work | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to the assembly of leadlight and stained glass components are verified and complied with |
| | | 1.2 | Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability, and any faults rectified or reported prior to commencement |
| | | 1.3 | Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use |
| | | 1.4 | Workplace environment considerations are identified and measures to reduce noise, dust and obstacles are applied |

- | | | | |
|---|--|-----|--|
| | | 1.5 | Assembly sequence is planned |
| | | 1.6 | Fixing and joining devices are selected in accordance with work instructions and type of materials to be joined |
| | | 1.7 | Jigs are selected and checked for suitability of purpose |
| 2 | Assemble components | 2.1 | Components are laid out and assembled using jigs and appropriate fastenings |
| | | 2.2 | Hand and/or power tools, and equipment are used, as required |
| | | 2.3 | Assembled work is checked for compliance with specifications |
| | | 2.4 | Components are prepared, assembled and fitted in accordance with specifications |
| | | 2.5 | Work which does not meet quality specifications is repaired or tagged for further processing or recycling/disposal |
| | | 2.6 | Finished products are organised and stored in holding area |
| 3 | Clean work area and maintain equipment | 3.1 | Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures |
| | | 3.2 | Waste and scrap are removed following workplace procedures |
| | | 3.3 | Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures |
| | | 3.4 | Equipment and work area clean-up is maintained in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFSL2001 Assemble leadlight and stained glass components

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assemble leadlight and stained glass components, including one (1) each from a panel, door insert and frame, to industry standards
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for assembling leadlight and stained glass components
- Organisational and site standards, requirements, policies and procedures for component assembly
- Environmental protection requirements relating to the disposal of waste material
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of leadlight and stained glass components and materials used in assembly
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to assembly of leadlight and stained glass components.

MSFSL3001 Apply product and material knowledge to leadlight and stained glass operations

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying product and material knowledge to leadlight and stained glass operations by identifying types of glass and other materials used in the leadlight and stained glass industry, their characteristics, properties, uses and limitations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Leadlight and Stained Glass

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify and respond to glass and material properties	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to leadlight and stained glass operations are verified and complied with
		1.2	The types of glass and inherent characteristics are analysed to select the optimum glass for the product
		1.3	The characteristics and properties of leadlight and stained glass are identified and considered
		1.4	The properties and impacts of metals are identified and considered
2	Apply visual	2.1	Correct visual procedures using natural and artificial light

	evaluation techniques to glass products	are followed
		2.2 Characteristics of glass styles are explained
		2.3 Glass is identified according to style
		2.4 The quality and style of glass are evaluated ensuring conditions for evaluation are as favourable as possible
3	Respond to the impact of glass properties	3.1 The cause and effects on the age of glass is considered and responded to
		3.2 The cause and effects on the glass of structural insecurity is considered and responded to
		3.3 The cause and effect of weather extremes are considered and responded to
		3.4 Records are maintained according to workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation

	insurance requirements
	<ul style="list-style-type: none">• work requires individuals to demonstrate some discretion, judgement and problem solving
Types of glass include:	<ul style="list-style-type: none">• clear, translucent and opaque• coloured• stained• textured
Metals used in leadlight and stained glass include:	<ul style="list-style-type: none">• lead• copper
Glass faults include:	<ul style="list-style-type: none">• venting• cracking• fading• slumping
Other faults include:	<ul style="list-style-type: none">• oxidation• breakage• structural insecurity
Records and reports include:	<ul style="list-style-type: none">• product type• size• inspection• inspection outcomes• quality outcomes• storage locations
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear• aprons and overalls
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSL3001B Apply product and material knowledge to leadlight and stained glass operations.

Assessment Requirements for MSFSL3001 Apply product and material knowledge to leadlight and stained glass operations

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify leadlight and stained glass types, and apply their properties, uses and limitations to work tasks
- Determine the likely effects of a range of faults on leadlight and stained glass products
- Determine the likely impact of various environmental effects on leadlight and stained glass products
- Apply product and material knowledge in two (2) differing leadlight and stained glass operations
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for leadlight and stained glass operations
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for leadlight and stained glass operations
- Leadlight and stained glass construction and repair terminology and techniques
- Leadlight and stained glass types, characteristics, production methods and faults
- Organisational and site standards, requirements, policies and procedures for leadlight and stained glass operations

- Types of glass and other materials used in the leadlight and stained glass industry, their characteristics, properties, uses and limitations
- Environmental protection requirements relating to the disposal of waste material
- Established communication channels and protocols
- Relevant problem identification and resolution in the leadlight and stained glass environment
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to examples of leadlight and stained glass, and samples of metals.

MSFSL3002 Protect stained glass and leadlighting

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers protecting stained glass and leadlighting for security, environmental and heritage purposes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Leadlight and Stained Glass

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify protection requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to leadlight and stained glass operations are verified and complied with
		1.2	The process for achieving protection of stained glass and leadlighting is identified
		1.3	Types and quantities of materials required for the protection of stained glass and leadlighting are identified from plans or work instructions
2	Prepare to protect stained glass and leadlighting	2.1	Work sequence is determined in a logical order to suit the job
		2.2	Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work,

			serviceable and in a safe condition
3	Install protection	3.1	Protection materials are cut, shaped and formed to ensure correct size and application
		3.2	Protection materials are installed or fitted
		3.3	Problems occurring during the operation are identified and rectified
4	Finalise the protection process	4.1	Protected glass is inspected for quality of work and repaired, as required
		4.2	Waste and scrap material are removed for disposal or recycling, as required
		4.3	Work area is cleaned and rubbish disposed of, as appropriate
		4.4	Tools, equipment and unused materials are cleaned, removed and stored appropriately
		4.5	Workplace records are maintained according to workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative

	obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Protection includes:	<ul style="list-style-type: none">• work requires individuals to demonstrate some discretion, judgement and problem solving• the requirement for security, protection from vandalism, protection for environmental reasons and protection for heritage reasons• use of protective films, wire barriers, synthetic (plastic) sheets, double glazing and other glass panelling• limitations due to aesthetic reasons
Materials include:	<ul style="list-style-type: none">• protective film• wire meshing• synthetic (plastic) sheet• double glazed panels• armoured glass• materials required to apply or install these
Tools and equipment include:	<ul style="list-style-type: none">• work benches• squeegees and holsters• cutting and glazing tools• electric and pneumatic portable power tools• saws• drills• portable compressors• general hand tools
Records include:	<ul style="list-style-type: none">• the product type• size• inspection• inspection outcomes• quality outcomes• storage locations
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear• aprons and overalls
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans,

- drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

MSFSL3003 Fabricate and install residential leadlight and stained glass windows and doors

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning, fabricating and installing residential leadlight and stained glass windows and doors.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Leadlight and Stained Glass

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify work requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to leadlight and stained glass operations are verified and complied with
		1.2	The process for fabricating and installing leadlight and stained glass windows and doors is identified
		1.3	Types and quantities of materials required are calculated from plans or work instructions or by measuring the fixture opening
		1.4	Cutting lists are prepared from plans, work instructions or

			measurements of opening to suit the window or door to be installed
		1.5	Fittings, fixings and joining devices or materials are selected
		1.6	Tools and equipment appropriate to the fixing method are identified
2	Prepare for work	2.1	Work sequence is determined in a logical order to suit the job
		2.2	Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition
		2.3	Components of the leadlight and stained glass window or door are checked against specifications or job order
3	Fabricate and install leadlight and stained glass windows and doors	3.1	Materials are cut to cutting list requirements
		3.2	Components of leadlight and stained glass window or door are assembled
		3.3	Fittings are installed to window or door in accordance with workplace procedures or industry practice
		3.4	Window or door is installed
4	Finalise the installation	4.1	Installed window or door is inspected for quality of work and repaired, re-fabricated or reinstalled, as required
		4.2	Waste and scrap material are removed for disposal or recycling, as required
		4.3	Work area is cleaned and rubbish disposed of, as appropriate
		4.4	Tools, equipment and unused materials are cleaned and removed and stored appropriately
		4.5	Workplace records are maintained according to workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |

Assessment Requirements for MSFSL3003 Fabricate and install residential leadlight and stained glass windows and doors

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify leadlight and stained glass windows and doors, their properties, uses and limitations
- Assess the likely impact of various environmental effects on leadlight and stained glass windows and doors
- Fabricate and install at least one (1) residential leadlight and stained glass window and one (1) residential leadlight and stained glass door
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the fabrication and installation of leadlight and stained glass windows and doors
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for leadlight and stained glass operations
- leadlight and stained glass windows and doors construction terminology and techniques
- Organisational and site standards, requirements, policies and procedures for fabrication and installation of leadlight and stained glass windows and doors

- Types of glass and other materials used in the leadlight and stained glass industry, their characteristics, properties, uses and limitations
- Environmental protection requirements relating to the disposal of waste material
- Established communication channels and protocols
- Relevant problem identification and resolution in the leadlight and stained glass environment
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate calculation methods for stained glass operations

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to fabricating and installing leadlight and stained glass windows or doors.

MSFSL3004 Prepare and install architectural engineered leadlight and stained glass

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing and installing leadlight and stained glass in structural and other architecturally engineered applications.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Leadlight and Stained Glass

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------------------------|--|
| <p>1 Identify work requirements</p> | <p>1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to leadlight and stained glass operations are verified and complied with</p> <p>1.2 Work requirements in the form of type of leadlight and stained glass, frames and the method of fixing are identified, confirmed and clarified with appropriate personnel</p> <p>1.3 The process for preparing and installing architecturally engineered leadlight and stained glass is identified</p> |
|-------------------------------------|--|

- | | | | |
|---|--|-----|---|
| 2 | Prepare for installation | 2.1 | Work sequence is determined in a logical order to suit the job |
| | | 2.2 | Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for the work, serviceable and in a safe condition |
| | | 2.3 | Components of the leadlight and stained glass are checked against specifications or job order |
| | | 2.4 | Leadlight and stained glass fixing method is selected |
| | | 2.5 | Frame or opening is prepared to receive leadlight and stained glass |
| | | 2.6 | Fixing and sealing materials are prepared by mixing or cutting to length, as appropriate |
| 3 | Identify site conditions and constraints | 3.1 | Site safety hazards are recognised and corrective action taken to reduce risk of injury to self and others |
| | | 3.2 | On-site difficulties are identified and addressed in accordance with regulations and enterprise agreements |
| | | 3.3 | Special characteristics of the leadlight and stained glass aperture are identified in relation to the effect of the fitting process on the finished job |
| | | 3.4 | Covering material is applied, where necessary, to protect existing fixtures and fittings |
| 4 | Fit leadlight and stained glass | 4.1 | Leadlight and stained glass is fixed to the frame or opening using the selected method |
| | | 4.2 | Solvents and sealants are applied |
| | | 4.3 | Leadlight and stained glass and/or frame are cleaned after fixing |
| 5 | Finalise the installation | 5.1 | Completed installation is checked to ensure compliance |
| | | 5.2 | Waste and scrap material are removed for disposal or recycling, as required |
| | | 5.3 | Work area is cleaned and rubbish disposed of, as appropriate |
| | | 5.4 | Tools, equipment and unused materials are cleaned, |

removed and stored appropriately

- 5.5 Workplace records are maintained according to workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving

- Appropriate personnel include:**
- architects
 - engineers
 - supervisors
 - suppliers
 - clients
 - colleagues
 - managers

- Architecturally engineered leadlight and stained glass includes:**
- curtain walls
 - infill and structural balustrade
 - suspended and overhead glass
 - toughened glass assemblies
 - aluminium systems, including planar assemblies

	<ul style="list-style-type: none">• curtain wall systems• spider assemblies• panel wall systems (hung and stacked)• watertight glazing techniques, including the use of silicone
Tools and equipment include:	<ul style="list-style-type: none">• assembly benches• drop and up-cut saws• pneumatic, hydraulic and manual presses• lifting equipment• frame tooling• copy routers• end millers• crimpers• electric and pneumatic powered drills and screwdrivers• pop rivet guns• glue guns• general hand tools
Materials include:	<ul style="list-style-type: none">• leadlight or stained glass panels• annealed glass• safety glass• patterned glass• tinted• heat-reflective• insulated glass units• steel• fasteners• plastics• sealants• tapes• vinyls• gaskets• timber reveals• flashings
Fixing method includes:	<ul style="list-style-type: none">• consideration of the technical specification, type of glass and frame, security requirements, sealing methods and relevant Australian Standards
Preparation include:	<ul style="list-style-type: none">• cleaning• surface preparation, if required• checking size against specification
Records include:	<ul style="list-style-type: none">• the product type• size• inspection• inspection outcomes

- | | |
|--|---|
| Personal protective equipment includes: | <ul style="list-style-type: none">• quality outcomes• storage locations• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear• aprons and overalls |
| Information and procedures include: | <ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures |

MSFSL3005 Paint and fire glass

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying patterns and/or designs to glass with vitreous paints to achieve specific outcomes through the firing of glass.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Leadlight and Stained Glass

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Identify painting and firing requirements | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to leadlight and stained glass operations are verified and complied with |
| | 1.2 Types and quantities of patterns, designs and materials required are identified from plans or work instructions |
| | 1.3 The processes for painting patterns and designs onto glass and achieving specific outcomes through the firing of glass are identified |
| 2 Prepare to paint and fire glass | 2.1 Painting sequence is determined in a logical order to suit the job |
| | 2.2 Tools, equipment and materials are selected and checked prior to use to ensure they are appropriate for painting and |

- firing, serviceable and in a safe condition
- 2.3 Patterns and design templates are checked against specifications or job order
 - 2.4 Paint colours are matched against the plan or work order and glass prepared for painting
- 3 Apply vitreous paint
- 3.1 Paint is applied to the glass surface in accordance with the pattern or design template
 - 3.2 Any problems occurring during the painting operation are identified and rectified
- 4 Conduct firing operations
- 4.1 Firing sequence is determined in a logical order to suit the job
 - 4.2 Kiln is checked prior to use to ensure it is appropriate for the firing, serviceable and in a safe condition
 - 4.3 Kiln components and controls, including emergency stops and guards, are identified and checked for correct operation
 - 4.4 Glass is prepared for firing and kiln equipment is operated, adjusted and monitored to ensure correct product quality and output
 - 4.5 Any problems occurring during the firing operation are identified and rectified
- 5 Finalise the work
- 5.1 Painted and fired glass is inspected for quality of work and repaired or discarded, as required
 - 5.2 Waste and scrap material are removed for disposal or recycling, as required
 - 5.3 Work area is cleaned and rubbish disposed of, as appropriate
 - 5.4 Tools, equipment and unused materials are cleaned and removed and stored appropriately
 - 5.5 Workplace records are maintained according to workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Patterns and designs include:	<ul style="list-style-type: none">• freehand or computer-drawn templates• artwork to be transferred to glass• designs to be transferred to glass• other patterns
Materials include:	<ul style="list-style-type: none">• clear, coloured or painted glass• vitreous paints• bedding sand• marking and masking materials
Specific outcomes include:	painting <ul style="list-style-type: none">• staining• forming
Tools and equipment include:	<ul style="list-style-type: none">• work benches• light tables• paint brushes and other applicators• general hand tools• firing kiln
Preparation includes:	<ul style="list-style-type: none">• cleaning• marking

- masking
- applying templates
- Records include:**
 - product type
 - size
 - inspection
 - inspection outcomes
 - quality outcomes
 - storage locations
- Personal protective equipment includes:**
 - that prescribed under legislation, regulation and enterprise policies and practices:
 - gauntlets
 - gloves
 - safety glasses
 - hard hats
 - safety footwear
 - aprons and overalls
- Information and procedures include:**
 - workplace procedures relating to the use of tools and equipment and personal protective equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSL3007A Paint and fire glass.

Assessment Requirements for MSFSL3005 Paint and fire glass

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify glass suitable for painting and firing, their properties, uses and limitations
- Identify the properties and limitations of glass when heat is applied and the likely impact of various environmental effects on painted and fired glass
- Paint and fire glass on at least one occasion using freehand process and on at least one other occasion using a template process to achieve required outcomes
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the painting of glass with vitreous paints and firing glass to meet specified outcomes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards, codes of practice, organisational and site standards, requirements, policies and procedures relevant to the painting and firing of glass for leadlight and stained glass operations
- Glass painting and firing terminology and techniques
- Types of glass and other materials used in the leadlight and stained glass industry, their characteristics, properties, uses and limitations
- Types of vitreous paints, their characteristics, properties, uses and limitations
- Operation of glass firing kiln

- Characteristics and properties of glass when heat is applied
- Environmental protection requirements relating to the disposal of waste material
- Established communication channels and protocols
- Relevant problem identification and resolution
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to painting glass with vitreous paints.

MSFSL5001 Assess conservation requirements

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assessing leadlight and stained glass panels in order to identify and document their conservation requirements.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Leadlight and Stained Glass

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify conservation assessment requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to leadlight and stained glass operations are verified and complied with
		1.2	Purpose of the assessment is established, confirmed and clarified with appropriate personnel
		1.3	Assessment outcomes are identified and confirmed
2	Plan assessment processes	2.1	Location of the leadlight and stained glass panels to be assessed is identified and observed

- | | | | |
|---|---------------------------------------|-----|---|
| | | 2.2 | Assessment sequence is identified and a work plan is developed |
| | | 2.3 | Tools and equipment required for the assessment are identified |
| | | 2.4 | Approval of assessment plan is obtained as required by agreed procedures |
| 3 | Prepare for the assessment | 3.1 | Tools and equipment are assembled, positioned and checked prior to use to ensure they are appropriate for the assessment, serviceable and in a safe condition |
| | | 3.2 | Plans and other documents are assembled and positioned to allow for confirmation of the panel structure and placement |
| | | 3.3 | Photographs are taken of the panel for documentation of condition and for later reference |
| 4 | Assess the panel | 4.1 | Glass faults are identified and noted |
| | | 4.2 | Structural faults or problems are identified and noted |
| | | 4.3 | Environmental effects are identified and noted |
| | | 4.4 | Other problems are identified and noted |
| 5 | Finalise and report on the assessment | 5.1 | Tools and equipment are removed, cleaned and stored appropriately |
| | | 5.2 | Assessment area is cleaned and rubbish disposed of, as appropriate |
| | | 5.3 | Conservation requirements resulting from the assessment are determined and confirmed with appropriate personnel |
| | | 5.4 | Condition report is prepared and provided, as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate discretion and apply judgement and problem solving to complex issues
Appropriate personnel include:	<ul style="list-style-type: none">• clients• architects• engineers• construction supervisors• members of heritage committees• government agencies• other specialist artisans, such as stonemasons, where appropriate
Assessment outcomes include:	<ul style="list-style-type: none">• the requirement to conserve the leadlight or stained glass panels• the cost of conservation• recommendations on future tasks
Tools and equipment include:	<ul style="list-style-type: none">• work benches• ladders and scaffolding• cameras• magnifying glasses• lights• general hand tools
Plans and other documents include:	<ul style="list-style-type: none">• original architectural plans• original drawings, cartoons and cut lines for glass panel• historical documentation and photographs• charcoal rubbings• sketches
Glass faults include:	<ul style="list-style-type: none">• cracking• crazing and missing sections• deterioration of glass paint

	<ul style="list-style-type: none">• loose or flaking paint• corroding glass through water or chemical action
Structural faults include:	<ul style="list-style-type: none">• oxidation and rusting supports• panel frame deterioration• buckled and bowing panels• cracked comes and defective putty• faulty frames or frame settings• broken tie wires and support bars
Environmental effects include:	<ul style="list-style-type: none">• colour changes• surface etching• lead oxidation
Other problems include:	<ul style="list-style-type: none">• building, wall and roof problems requiring specific remedial action, not directly related to the panel
Conservation includes:	<ul style="list-style-type: none">• advice in the Australia International Council on Monuments and Sites (ICOMOS) Burra Charter as meaning all of the processes of looking after a place needed to retain cultural significance• preservation, restoration, reconstruction and adaptation dependent upon specific circumstances (or a combination of more than one of these) respecting and understanding the requirements of other specialist crafts and the role of other specialist artisans
Preservation includes:	<ul style="list-style-type: none">• maintaining the leadlight and stained glass panel in its existing state and of retarding deterioration
Restoration includes:	<ul style="list-style-type: none">• returning the leadlight and stained glass panel to a known earlier state by removing accretions or by re-assembling existing components without the introduction of new material
Reconstruction includes:	<ul style="list-style-type: none">• returning the leadlight and stained glass panel to a known earlier state and is distinguished by the introduction of new materials
Condition report includes:	<ul style="list-style-type: none">• detailing the extent of the problems• recommended solutions, including methodologies• photographic evidence of current condition and location• legislative requirements related to heritage leadlight and stained glass and their effect on the recommendations and probable costing
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats

Information and procedures include:

- safety footwear
- aprons and overalls
- workplace procedures relating to the use of tools and equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSL5001B Assess conservation requirements.

Assessment Requirements for MSFSL5001 Assess conservation requirements

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and interpret heritage legislation as it applies to leadlight and stained glass panels
- Identify historical leadlight and stained glass panel construction methods
- Identify framing, structural and construction techniques relevant to leadlight and stained glass panels
- Identify the outcomes of various environmental effects on leadlight and stained glass panels
- Identify faults and problems with leadlight and stained glass panels, and their remedial methods
- Inspect a minimum of two (2) separate and differing leadlight and stained glass installations, assess the conservation requirements and draft a report of findings with recommendations
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the assessment of conservation requirements of leadlight and stained glass panels
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for leadlight and stained glass operations
- Leadlight and stained glass panels construction and repair terminology and techniques
- The principles and guidelines of the Australia International Council on Monuments and Sites (ICOMOS) Burra Charter
- Organisational and site standards, requirements, policies and procedures for the assessment of leadlight and stained glass panels
- Types of glass and other materials, historically used in the leadlight and stained glass industry, their characteristics, properties, uses and limitations
- Environmental effects on leadlight and stained glass panels
- Heritage requirements specific to leadlight and stained glass
- Established communication channels and protocols
- Relevant problem identification and resolution in the heritage leadlight and stained glass environment
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to the assessment of leadlight and stained glass panels to meet conservation requirements.

MSFSL5002 Remove heritage leadlight and stained glass

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers removing heritage leadlight and stained glass panels in order to conserve them.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Leadlight and Stained Glass

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1 Identify panel removal requirements | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to heritage leadlight and stained glass operations are verified and complied with |
| | 1.2 Purpose of the removal is established confirmed and clarified with appropriate personnel |
| | 1.3 Removal outcomes are identified and confirmed |
| 2 Plan removal processes | 2.1 Location of the leadlight and stained glass panel to be removed is identified and observed |

- | | | |
|---|------------------------------------|--|
| | 2.2 | Removal sequence is identified and a work plan is developed |
| | 2.3 | Tools and equipment required for the removal are identified |
| | 2.4 | Approval of removal plan is obtained as required by agreed procedures |
| 3 | Prepare for removal | 3.1 Tools and equipment are assembled, positioned and checked prior to use to ensure they are appropriate for the removal, serviceable and in a safe condition |
| | 3.2 | Supporting frames and storage materials are prepared and positioned |
| | 3.3 | Plans and other documents are assembled and positioned to allow for confirmation of the panel structure and placement |
| | 3.4 | Photographs are taken of the panel for later reference |
| 4 | Remove the panel | 4.1 Supporting frames are secured to the panel |
| | 4.2 | Panel structural supports are removed and stored |
| | 4.3 | Panel is removed and placed in the storage area or crated for transport |
| | 4.4 | Any structural damage is identified and noted |
| 5 | Finalise and report on the removal | 5.1 Removed panel is inspected |
| | 5.2 | Tools and equipment are removed |
| | 5.3 | Removal area is cleaned and rubbish disposed of |
| | 5.4 | Removal report is prepared and provided |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate discretion and apply judgement and problem solving to complex issues
Appropriate personnel include:	<ul style="list-style-type: none">• clients• architects• engineers• construction supervisors• members of heritage committees• government agencies• other specialist artisans, such as stonemasons
Removal outcomes include:	<ul style="list-style-type: none">• the requirement to dismantle, move and store leadlight or stained glass panels prior to any conservation work being undertaken <p>dismantling the panel without further damage as it is being removed</p>
Tools and equipment include:	<ul style="list-style-type: none">• work benches• ladders and scaffolding• cameras• magnifying glasses• lights• cranes• forklifts• general hand tools
Supporting frames include:	<ul style="list-style-type: none">• wooden or metal frames that support the leadlight and stained glass panels during the removal process
Storage materials include:	<ul style="list-style-type: none">• boxes <p>frames, crates and other materials used to store and protect the leadlight and stained glass panel following removal and while</p>

	being transported
Plans and other documents include:	<ul style="list-style-type: none">• original architectural plans• original drawings, cartoons and cut lines of the glass panel• historical photographs, charcoal rubbings and sketches
Removal report includes:	<ul style="list-style-type: none">• the extent of any damage to the surrounding building or fixture• any damage to the panel• any recommendations as to future requirements
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear• aprons and overalls
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSL5002B Remove heritage leadlight and stained glass.

Assessment Requirements for MSFSL5002 Remove heritage leadlight and stained glass

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and interpret heritage legislation as it applies to leadlight and stained glass panels
- Identify historical leadlight and stained glass panel construction methods
- Identify framing, structural and construction techniques relevant to leadlight and stained glass panels
- Identify appropriate panel removal methodologies
- Remove a heritage leadlight and stained glass installation and store it to meet conservation requirements on at least two (2) occasions
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the removal of heritage leadlight and stained glass panels
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for leadlight and stained glass operations
- Leadlight and stained glass panels construction and repair terminology and techniques
- The principles and guidelines of the Australia International Council on Monuments and Sites (ICOMOS) Burra Charter

- Organisational and site standards, requirements, policies and procedures for the removal of heritage leadlight and stained glass panels
- Types of glass and other materials historically used in the leadlight and stained glass industry, their characteristics, properties, uses and limitations
- Heritage requirements specific to leadlight and stained glass
- Engineering aspects of supporting leadlight and stained glass panels during the removal process
- Established communication channels and protocols
- Relevant problem identification and resolution for heritage leadlight and stained glass
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a panel, materials, equipment and specifications relevant to the removal of heritage leadlight and stained glass panels to meet conservation requirements.

MSFSL5003 Conserve heritage leadlight and stained glass

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers conserving heritage leadlight and stained glass by preservation, restoration or reconstruction under the principles determined by the Australia International Council on Monuments and Sites (ICOMOS) Burra Charter.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Leadlight and Stained Glass

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify conservation requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to leadlight and stained glass operations are verified and complied with
		1.2	Detailed inspections of the heritage leadlight and stained glass are conducted to verify conservation requirements
		1.3	Conservation requirements are identified, confirmed and clarified with appropriate personnel
2	Plan conservation processes	2.1	Conservation sequence is identified and a work plan is developed

- | | | | |
|---|---|-----|--|
| | | 2.2 | Tools and equipment required for the conservation are identified |
| | | 2.3 | Approval of conservation plan is obtained as required by agreed procedures |
| 3 | Prepare for the conservation process | 3.1 | Tools and equipment are positioned and checked prior to use to ensure they are appropriate for the task, serviceable and in a safe condition |
| | | 3.2 | Plans and other documents are positioned to allow for confirmation of the panel structure |
| | | 3.3 | Outline charcoal rubbings are made to confirm design during the process |
| | | 3.4 | Photographs are taken of the panel for later reference |
| 4 | Conduct the conservation process | 4.1 | Components requiring conservation are cleaned or disposed of |
| | | 4.2 | Decisions on conservation methods are confirmed |
| | | 4.3 | Replacement materials are selected and prepared |
| | | 4.4 | Measurements and tests are conducted to confirm conservation plan |
| | | 4.5 | Panel is assembled and checked against original data |
| 5 | Finalise and report on the conservation process | 5.1 | Conserved leadlight and stained glass panel is inspected for quality of work and problems rectified |
| | | 5.2 | Tools and equipment are removed, cleaned and stored appropriately |
| | | 5.3 | Conservation area is cleaned and rubbish disposed of, as appropriate |
| | | 5.4 | Panel is packaged and stored prior to movement and installation |
| | | 5.5 | Conservation report is prepared and provided, as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate discretion and apply judgement and problem solving to complex issues |
| Conservation includes: | <ul style="list-style-type: none">• advice in the Australia ICOMOS Burra Charter as meaning all of the processes of looking after a place needed to retain cultural significance• preservation, restoration, reconstruction and adaptation dependent upon specific circumstances (it commonly involves a combination of more than one of these). It also requires that the stained glass conservator respects and understands the requirements of other specialist crafts and the role of other specialist artisans |
| Preservation includes: | <ul style="list-style-type: none">• maintaining the leadlight and stained glass panel in its existing state and of retarding deterioration |
| Restoration includes: | <ul style="list-style-type: none">• returning the leadlight and stained glass panel to a known earlier state by removing accretions or by re-assembling existing components without the introduction of new material |
| Reconstruction includes: | <ul style="list-style-type: none">• returning the leadlight and stained glass panel to a known earlier state and is distinguished by the introduction of new materials |
| Appropriate personnel | <ul style="list-style-type: none">• clients• architects |

include:	<ul style="list-style-type: none">• engineers• construction supervisors• members of heritage committees• government agencies• other specialist artisans, such as stonemasons
Tools and equipment include:	<ul style="list-style-type: none">• work benches• light tables• glass grinders• lead knives• lead vice• lathekins• farriers nails• glass cutters• grozing and small running pliers• soldering irons and bits• suede• cleaning and polishing brushers and pickers• general hand tools
Plans and other documents include:	<ul style="list-style-type: none">• original architectural plans• original drawings, cartoons and cut lines for glass panels• historical documents and photographs• charcoal rubbings• sketches
Replacement materials include:	<ul style="list-style-type: none">• glass• came• solder• putty
Preparation includes:	<ul style="list-style-type: none">• painting• cutting• rolling• soldering
Measurements include:	<ul style="list-style-type: none">• comparisons with the original plans or other available data
Tests include:	<ul style="list-style-type: none">• structural soundness testing and colour matching
Assembly includes:	<ul style="list-style-type: none">• the requirement to assemble sections in order to facilitate later installation
Conservation report includes:	<ul style="list-style-type: none">• detailing the extent of the conservation methods applied• problems encountered• methods of dealing with them• photographic records of process and assembly• details required by government bodies

Personal protective equipment includes:

- that prescribed under legislation, regulation and enterprise policies and practices:
 - gauntlets
 - gloves
 - safety glasses
 - hard hats
 - safety footwear
 - aprons and overalls

Information and procedures include:

- workplace procedures relating to the use of tools and equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSL5003B Conserve heritage leadlight and stained glass.

Assessment Requirements for MSFSL5003 Conserve heritage leadlight and stained glass

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and interpret heritage legislation as it applies to leadlight and stained glass panels
- Identify historical leadlight and stained glass panel construction methods
- Assess and make decisions on conservation methods
- Identify faults and problems with leadlight and stained glass panels, and their remedial methods
- Conserve at least two (2) different heritage leadlight and stained glass panels in accordance with industry best practice
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the assessment of conservation requirements of leadlight and stained glass panels
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for leadlight and stained glass operations
- The principles of the Australia International Council on Monuments and Sites (ICOMOS) Burra Charter
- Leadlight and stained glass panels construction and repair terminology and techniques

- Organisational and site standards, requirements, policies and procedures for the assessment of leadlight and stained glass panels
- Types of glass and other materials, historically used in the leadlight and stained glass industry, their characteristics, properties, uses and limitations
- Preservation, restoration or reconstruction techniques and when to use them
- Heritage requirements specific to leadlight and stained glass
- Established communication channels and protocols
- Relevant problem identification and resolution in conservation of heritage leadlight and stained glass
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a panel, materials, equipment and specifications relevant to the conservation of heritage leadlight and stained glass panels.

MSFSL5004 Install heritage leadlight and stained glass

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers installing heritage leadlight and stained glass panels following their conservation.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Leadlight and Stained Glass

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|--|
| 1 | Identify and plan installation requirements | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to leadlight and stained glass operations are verified and complied with |
| | | 1.2 | Location of the leadlight and stained glass panel to be installed is established, confirmed and clarified with appropriate personnel |
| | | 1.3 | Installation sequence is identified and a work plan is developed |
| | | 1.4 | Tools and equipment required for the installation are identified |

- | | | | |
|---|---|-----|--|
| | | 1.5 | Approval of installation plan is obtained as required by agreed procedures |
| 2 | Prepare for installation | 2.1 | Tools and equipment are positioned and checked prior to use to ensure they are appropriate for the installation, serviceable and in a safe condition |
| | | 2.2 | Inspection of the opening where the panel is to be installed is conducted |
| | | 2.3 | Leadlight and stained glass panel is inspected to ensure its integrity while being installed |
| | | 2.4 | Plans and other documents are positioned to allow for confirmation of the panel structure and placement |
| | | 2.5 | Photographs are taken of the panel for later reference |
| 3 | Install the panel | 3.1 | Panel is installed and placed in position |
| | | 3.2 | Supporting frames are removed from the panel |
| | | 3.3 | Panel structural supports are installed and checked |
| | | 3.4 | Structural damage is identified and noted |
| | | 3.5 | Photographs of process of installation are taken for later reference |
| 4 | Finalise and report on the installation | 4.1 | Installed panel is inspected and damage resulting from the installation is identified and rectified |
| | | 4.2 | Tools and equipment are removed cleaned and stored appropriately |
| | | 4.3 | Removal area is cleaned and rubbish disposed of, as appropriate |
| | | 4.4 | Installation report is prepared and provided, as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate discretion and apply judgement and problem solving to complex issues
Appropriate personnel include:	<ul style="list-style-type: none">• clients• architects• engineers• construction supervisors• members of heritage committees• government agencies• other specialist artisans, such as stonemasons
Tools and equipment include:	<ul style="list-style-type: none">• work benches• ladders and scaffolding• cameras• magnifying glasses• lights• cranes• forklifts• general hand tools
Inspection includes:	<ul style="list-style-type: none">• measuring to determine if the panel is the correct size and ensuring that the supporting infrastructure required for the panel is in place
Plans and other documents include:	<ul style="list-style-type: none">• original architectural plans• original drawings, cartoons and cut lines of the panel• historical documents and photographs• contemporary photographs• charcoal rubbings• sketches
Installation includes:	the requirement to dismantle the panel prior to installation to stop further damage, and assembling the panel in place

Supporting frames include:	<ul style="list-style-type: none">• wooden or metal frames that support the leadlight and stained glass panels during its transportation and installation
Installation report includes:	<ul style="list-style-type: none">• detailing the extent of any damage to the surrounding building or fixture• any damage to the panel• any recommendations as to future requirements
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices:<ul style="list-style-type: none">• gauntlets• gloves• safety glasses• hard hats• safety footwear• aprons and overalls
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment and personal protective equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSL5004B Install heritage leadlight and stained glass.

Assessment Requirements for MSFSL5004 Install heritage leadlight and stained glass

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and interpret heritage legislation as it applies to leadlight and stained glass panels
- Identify historical leadlight and stained glass panel construction methods
- Identify framing, structural and construction techniques relevant to leadlight and stained glass panels
- Identify appropriate installation methodologies
- Install at least two (2) heritage leadlight and stained glass panels in different locations
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the removal of heritage leadlight and stained glass panels
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for leadlight and stained glass operations
- Lead light and stained glass panels construction and repair terminology and techniques
- The principles of the Australia International Council on Monuments and Sites (ICOMOS) Burra Charter
- Organisational and site standards, requirements, policies and procedures for the installation of heritage leadlight and stained glass panels

- Types of glass and other materials historically used in the leadlight and stained glass industry, their characteristics, properties, uses and limitations
- Heritage requirements specific to leadlight and stained glass
- Engineering aspects of supporting leadlight and stained glass panels during the installation process
- Established communication channels and protocols
- Relevant problem identification and resolution for heritage leadlight and stained glass
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a panel, materials, equipment and specifications relevant to the installation of heritage leadlight and stained glass panels following conservation work.

MSFSL5005 Apply innovation in contemporary leadlight and stained glass

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying innovative techniques in the development of leadlight or stained glass works. It includes the adaptation of traditional techniques, such as leadlight and stained glass or other techniques, such as kiln-formed and laminated glass, and involves research and analysis of ideas with glassworks produced through experimentation and subsequent refinement of new ideas and techniques.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Leadlight and Stained Glass

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Identify the potential or need for innovation | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to leadlight and stained glass operations are verified and complied with |
| | 1.2 Design or production elements are analysed to determine areas where research and experimentation may be appropriate |
| | 1.3 The potential for the use of new techniques and media are assessed to maximise the effectiveness of leadlight and stained glass |

- | | | | |
|---|--------------------------------------|-----|--|
| 2 | Conduct research | 2.1 | Relevant research is undertaken to identify historical, cultural and other factors that might influence techniques or media |
| | | 2.2 | Relevant ideas and approaches from other practitioners are researched, adapted and used with consideration of intellectual property, moral rights and copyright requirements |
| | | 2.3 | Appropriate specialists who may be able to contribute to the overall realisation of innovative leadlight and stained glass are identified |
| | | 2.4 | References are maintained in an accessible form to allow for use by other colleagues, as required |
| | | 2.5 | Research material is used to adapt styles for integration into leadlight and stained glass production |
| 3 | Experiment with techniques and media | 3.1 | Trials are conducted to establish the best ways in which the desired scenic art effect can be achieved |
| | | 3.2 | Results of experimentation are assessed, balancing the need for creative effectiveness and cost practicality |
| | | 3.3 | New materials, tools, equipment or technology are selected, adapted or introduced for the achievement of different effects |
| | | 3.4 | Colleagues are consulted to provide information on the results of experimentation and to make appropriate decisions on new techniques and media |
| | | 3.5 | Specific resource requirements which arise from the use of different techniques are set up or coordinated in accordance with workplace requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Research includes: | <ul style="list-style-type: none">• seeking out information in books, journals and newspapers• visiting exhibitions and museums• conducting material and technical experiments and tests• approaching individuals with relevant expertise• reviewing approaches of other practitioners |
| New techniques include: | <ul style="list-style-type: none">• screen printing• using computer design software• use of non-traditional materials and media• fusing different glass• sandwiching materials• applying different painting and firing techniques |
| New media includes: | <ul style="list-style-type: none">• fabrics• silks• metals• glass• canvas• gauze• wool• velour• paper• wood• film• computer-generated imagery |
| Intellectual property, moral rights and copyright requirements | <ul style="list-style-type: none">• the protocols for the adaptation of work by others• extent to which the work may be used• procedures for seeking permission to use the work of others, |

include:	including systems for the administration of copyright

Assessment Requirements for MSFSL5005 Apply innovation in contemporary leadlight and stained glass

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Read and interpret design specifications and identify the properties of leadlight and stained glass
- Conduct research into new and innovative applications of leadlight and stained glass and apply in-depth knowledge of a wide range of techniques and media that may be used and adapted for leadlight and stained glass
- Create at least two (2) panels using differing innovative leadlight and stained glass effects
- Assess the likely impact of various environmental effects on leadlight and stained glass
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for leadlight and stained glass
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for leadlight and stained glass operations
- Contemporary leadlight and stained glass construction terminology and techniques
- Organisational and site standards, requirements, policies and procedures for preparation of leadlight and stained glass operations

- Types of glass and other materials used in the leadlight and stained glass industry, their characteristics, properties, uses and limitations
- Appropriate innovative and experimental leadlight and stained glass production techniques in 2-D and 3-D formats
- Colour theory, line, dimension, chiaroscuro, depth and their application to leadlight and stained glass
- Glass painting and firing techniques
- Use and properties of a range of paints and media for glass work
- Testing finished and unfinished materials used in innovative and contemporary leadlight and stained glass
- Research skills and sources of information to inform research and experimentation on leadlight and stained glass
- Costs and costing processes for leadlight and stained glass elements
- Environmental protection requirements relating to the disposal of waste material
- Established communication channels and protocols
- Relevant problem identification and resolution for innovative and contemporary leadlight and stained glass
- Storage systems and labelling
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials and equipment relevant to the production of innovative leadlight and stained glass.

MSFSS2001 Rectify faults in product

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers identifying and rectifying faults in security screen and grille materials and products.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking security screens and grilles work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Security Screens and Grilles

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Plan and prepare | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to rectifying faults in the manufacturing and installation of security screens and grilles are verified and complied with |
| | | 1.2 | Tools and equipment are selected to carry out tasks, are consistent with the requirements of the job, checked for serviceability, and any faults are rectified or reported prior to commencement |
| | | 1.3 | Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use |

		1.4	Workplace environment considerations are identified and measures to reduce noise, dust and obstacles are applied
2	Assess the fault to identify rectification issues	2.1	Faults are identified and inspected to confirm the extent and nature of the fault
		2.2	Faults are assessed to determine whether it is a defect in workmanship, process or material
		2.3	Verbal and/or written report on the nature of the defect and probable cause is provided
		2.4	Faults found are assessed for remedial solutions
		2.5	Solution to repair the fault is selected and planned
3	Rectify faults	3.1	Damage or defective area is prepared for repair
		3.2	Specialist instruments and repair tools are applied to rectify the fault
		3.3	Damage or defective area is finished to specification
		3.4	Documentation is completed outlining the nature of the fault, work conducted and outcome, in accordance with enterprise requirements
		3.5	Rectified parts are processed for inspection and returned to the production/installation sequence
4	Clean up work area	4.1	Work area is cleared and materials disposed of
		4.2	Tools and equipment are cleaned

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential

operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Faults include:**
- defects in workmanship or materials that affect the look or functional quality of the finished security screen or grille product
- Personal protective equipment includes:**
- that prescribed under legislation, regulation and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment and personal protective equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSS2002A Rectify faults in product.

MSFSS2002 Prepare product for Australian Standards testing

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing security screens and grilles for compliance testing against relevant Australian Standards. It does not cover the testing of the sample.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Security Screens and Grilles

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Identify sample for testing	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to the certification process are verified and complied with
		1.2	A sample is identified in accordance with Australian Standard requirements
2	Prepare documentation	2.1	Documentation is prepared in accordance with Australian Standards and organisational requirements
		2.1	Sample is packaged for transportation to a recognised testing facility in accordance with Australian Standard requirements
3	Complete report	3.1	Reports of tests are actioned in accordance with Australian Standards and organisational requirements

- 3.2 Where samples fail a test element, reports are presented to management for remedial action
- 3.3 Where samples pass, management ensures that product Certification of Compliance is prepared and an appropriate notice affixed to the product in accordance with Australian Standards and organisational requirements
- 3.4 Records of all processes and actions are included in the organisation's quality system

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

MSFSS2003 Undertake surface preparation

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing surfaces, by hand or machine, for protective coatings, under-coatings and finishes using solvents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Security Screens and Grilles

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Establish work requirements	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to surface preparation are verified and complied with
		1.2	Instructions, plans and/or work instructions are read and interpreted to identify processes and materials to complete work tasks
		1.3	Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
		1.4	Where required, appropriate solvent and application method is selected to meet job specification
2	Prepare worksite	2.1	Worksite is prepared in accordance with surface cleaning

	and set up equipment	activity
		2.2 Appropriate equipment and any required consumables are assembled, set up and prepared in accordance with manufacturer specifications and organisational procedures
		2.3 Hazards are recognised and steps adopted to ensure safety
3	Prepare surfaces using solvents as required	3.1 Surfaces are prepared for procedures
		3.2 Safe working environment for solvent use is established according to regulatory requirements and organisational procedures
		3.3 Solvents are applied
		3.4 Treated surface is neutralised and made safe to handle
		3.5 The area is made safe in accordance with organisational procedures
4	Prepare surfaces using mechanical means	4.1 Safe working environment for mechanical surface preparation is established according to regulatory requirements and organisational procedures
		4.2 Surfaces are prepared to specifications using mechanical means
		4.3 Adjustments are made, as required, to meet specifications
		4.4 Surface preparation faults are rectified as necessary
		4.5 Equipment used is cleaned and checked for damage and operational faults in accordance with organisational procedures
5	Ensure surfaces are adequately prepared and clean up	5.1 Surface preparation is assessed for cleanliness and conformance with specification
		5.2 Any faults in the surface preparation are identified and action taken to remedy them in accordance with procedures
		5.3 Problems are reported to a designated person
		5.4 Records and documentation are completed in accordance with organisational procedures

- 5.5 Work area is restored and waste disposed of in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

MSFSS3001 Install security screens and grilles

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers planning, preparing and installing security screens and grilles in residential and commercial locations.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking security screens and grilles work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Security Screens and Grilles

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.								
1 Plan and prepare for installation	<table><tr><td>1.1</td><td>Applicable work health and safety (WHS), legislative and organisational requirements relevant to security screens and grilles installation are verified and complied with</td></tr><tr><td>1.2</td><td>Work order is reviewed, confirmed and clarified with appropriate personnel</td></tr><tr><td>1.3</td><td>Security screens and grilles are identified and checked against the work order and located ready for installation</td></tr><tr><td>1.4</td><td>Tools and equipment are selected appropriate to work requirements and checked for operational effectiveness</td></tr></table>	1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to security screens and grilles installation are verified and complied with	1.2	Work order is reviewed, confirmed and clarified with appropriate personnel	1.3	Security screens and grilles are identified and checked against the work order and located ready for installation	1.4	Tools and equipment are selected appropriate to work requirements and checked for operational effectiveness
1.1	Applicable work health and safety (WHS), legislative and organisational requirements relevant to security screens and grilles installation are verified and complied with								
1.2	Work order is reviewed, confirmed and clarified with appropriate personnel								
1.3	Security screens and grilles are identified and checked against the work order and located ready for installation								
1.4	Tools and equipment are selected appropriate to work requirements and checked for operational effectiveness								

- in accordance with manufacturer recommendations
- | | | | |
|---|---|-----|--|
| 2 | Prepare installation position for security screen or grille | 2.1 | Any existing screens and grilles are removed, where necessary, to make way for the security screens and grilles |
| | | 2.2 | Jamb stiles are assessed for the installation of the security screen/grilles frame and adjustments made as necessary |
| | | 2.3 | Frame is positioned and secured in place so that the head/sill is level and stiles plumb |
| | | 2.4 | Additional preparation for the locking mechanism is made where necessary |
| 3 | Install security screens and grilles | 3.1 | Security screen/grille is inserted in the frame and tested for operation of open and shut |
| | | 3.2 | Locking mechanism is installed and tested |
| | | 3.3 | Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures |
| | | 3.4 | Installation completion and equipment faults are recorded and reported to the appropriate personnel |
| 4 | Clean work area | 4.1 | Waste and scrap is removed following workplace procedures |
| | | 4.2 | Tools used are cleaned; inspected for serviceable condition and stored appropriately in accordance with workplace procedures |
| | | 4.3 | Records and reports are completed to workplace requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving

Assessment Requirements for MSFSS3001 Install security screens and grilles

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Install security screens and grilles in at least two (2) locations
- Conduct operator maintenance on tools and equipment and report faults
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperat

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for the installation of security screens and grilles
- Environmental protection requirements relating to the disposal of waste material
- Established communication channels and protocols
- Relevant problem identification and resolution
- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Procedures for the recording, reporting and maintenance of workplace records and information

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to an installation location, materials, equipment and specifications relevant to the installation of security screens and grilles.

MSFSS3002 Apply patterns and designs to security screens and grilles

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers producing repeatable designs to security screens and grilles through the use of patterns. It does not involve the formulation of the design but may require design adjustment to fit the particular job task.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Security Screens and Grilles

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------------------------|---|
| 1 Identify work requirements | 1.1 Applicable work health and safety (WHS), legislative and organisational requirements relevant to machine material are verified and complied with |
| | 1.2 Work order is reviewed, confirmed and clarified with appropriate personnel |
| | 1.3 Design is interpreted to determine work specifications |
| | 1.4 Instructions for sequencing of work, particular measurements or adjustments are interpreted |
| | 1.5 Work sequence is planned, including quality checkpoints |

- | | | | |
|---|-----------------------|-----|--|
| 2 | Prepare for work | 2.1 | Suitable work area is selected for the tasks |
| | | 2.2 | Materials are selected to match customer requirements, suitability for purpose and the work instructions |
| | | 2.3 | Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material |
| | | 2.4 | Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition |
| 3 | Complete construction | 3.1 | Patterns (where not already held of the design) are constructed following work instructions |
| | | 3.2 | Patterns are adjusted where specific variation to the work design is required |
| | | 3.3 | Work is checked against patterns and work sheets at the identified checkpoints |
| | | 3.4 | Any non-conformity with the required quality standards is rectified |
| 4 | Finalise work | 4.1 | Completed work is checked against required quality standard |
| | | 4.2 | Documentation or reporting is completed following workplace procedures |
| | | 4.3 | Work area is cleaned, tools and equipment are returned to storage |
| | | 4.4 | Unused materials are returned to storage and waste and scrap is dealt with following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Work orders include: | <ul style="list-style-type: none">• instructions for the design, materials and security rating from the worksite and includes:<ul style="list-style-type: none">• pattern• type• size• length• angle• quantity |
| Appropriate personnel include: | <ul style="list-style-type: none">• supervisors• suppliers• clients• colleagues• managers |
| Design includes: | <ul style="list-style-type: none">• the outline, sketch or plan to be constructed and includes:<ul style="list-style-type: none">• specifications of security rating• shape• length• width• height• material composition of the project |
| Pattern includes: | <ul style="list-style-type: none">• a model or form that can be used to guide the shape of the screen |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulation and enterprise policies and practices |

Information and procedures include:

- workplace procedures relating to the use of tools and equipment and personal protective equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSS3002A Apply patterns and designs to security screens and grilles.

MSFSS3003 Resolve quality and compliance issues

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers resolving routine quality and compliance issues in the fabrication, assembly and installation of security screens and grilles.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking security screens and grilles work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work (ASCC 2007)*.

Pre-requisite Unit

Competency Field

Unit Sector

Security Screens and Grilles

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---------------------------|-----|--|
| 1 | Plan and prepare for work | 1.1 | Applicable work health and safety (WHS), legislative and organisational requirements relevant to quality or compliance issues in the manufacturing and installation of security screens and grilles are verified and complied with |
| | | 1.2 | Instructions and/or plans are read and interpreted to identify the process required to complete work tasks |
| | | 1.3 | Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability, and any faults are rectified or reported prior to commencement |

- | | | | |
|---|--|-----|---|
| | | 1.4 | Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use |
| | | 1.5 | Workplace environment considerations are identified and measures to reduce noise, dust and obstacles are applied |
| 2 | Identify quality and/or compliance issues | 2.1 | Issues to be investigated are defined and determined |
| | | 2.2 | Issues are assessed to determine whether it is a defect in workmanship, process or material |
| | | 2.3 | Current conditions of hardware, software, user or procedure are objectively identified and documented |
| | | 2.4 | Verbal and/or written report is provided in accordance with organisation policy on the nature of the problem and probable cause |
| 3 | Recommend solutions to resolve issues identified | 3.1 | Hardware, software, user or procedural quality and/or compliance areas are reported to appropriate person in the organisation |
| | | 3.2 | Potential solutions to resolve the issue are identified and ranked |
| | | 3.3 | A determination is made in accordance with organisational policy whether the issue can be resolved at current or higher level |
| | | 3.4 | Solution to fix the issue or refer is selected and provided to an appropriate person for decision |
| | | 3.5 | Implementation of the recommended solution is planned together with an evaluations strategy to assess the solutions' effectiveness |
| | | 3.6 | Verbal and/or written report is submitted in accordance with organisational requirements recommending action to be taken and/or advising action taken and outcome |
| 4 | Complete work and clean up | 4.1 | Work area is cleared and materials disposed of, re-used or recycled in accordance with organisational requirements |
| | | 4.2 | Tools and equipment are cleaned, checked, maintained and stored in accordance with organisational requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

MSFUP1001 Complete a basic upholstery project

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers preparing, fitting and finishing a basic upholstery product.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare for work | 1.1 Work instructions are used to determine job requirements, including design variations, tolerances, process, materials, finish and quantity |
| | 1.2 Work sequence is planned |
| | 1.3 Procedures are determined for checking quality at each stage of the process |
| | 1.4 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.5 Suitable work area is selected for the task |
| | 1.6 Preparatory drawings/templates for tasks are confirmed |

- | | | |
|---|---|---|
| | 1.7 | Materials are selected following work instructions |
| | 1.8 | Tools and equipment suitable for the work are selected and checked for safe and effective operation |
| 2 | Fit and finish product | |
| | 2.1 | Material is prepared and set out according to work instructions and components are marked according to workplace procedures |
| | 2.2 | Tools and equipment are used in accordance with safety requirements and manufacturer specifications |
| | 2.3 | Components are prepared, including any specified shapes, angles or curves, and checked against set-out and job requirements |
| | 2.4 | Components are fitted to job requirements |
| | 2.5 | Assembly process is undertaken according to workplace procedures |
| | 2.6 | Product is checked for compliance with specifications |
| | 2.7 | Product is finished in accordance with work instructions |
| 3 | Finalise operation and maintain equipment | |
| | 3.1 | Work area is cleaned and hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures |
| | 3.2 | Unused materials are collected and stored for re-use |
| | 3.3 | Waste and scrap materials are disposed of/recycled following workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Assessment Requirements for MSFUP1001 Complete a basic upholstery project

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Adapt or vary upholstery product designs
- Prepare, fit and finish at least one (1) basic upholstery product which:
 - requires the fitting of fabric/leather cover to a base
 - requires assembly and attachment of appropriate trim/fittings
 - requires the use of furniture upholstery hand and power tools
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Interpretation of plan representation of product design
- Preparation of drawings/templates
- Work flow in relation to upholstery projects
- Identification of upholstery hand and/or power tools, materials, equipment, processes and procedures

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, hand and/or power/pneumatic tools, equipment, materials and a specified outcome.

MSFUP2001 Use upholstery sector hand and power tools

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using hand and power tools in applications relating to the upholstery sector of the furnishing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---------------------------------|--|
| 1 Identify hand and power tools | 1.1 Types of hand and power tools and their functions are identified |
| | 1.2 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.3 Sources of, and access to, power supply are recognised |
| 2 Select and use hand tools | 2.1 Hand tools selected are consistent with needs of the job |
| | 2.2 Selected hand tools are checked for serviceability and safety and any faults reported to supervisor in accordance with enterprise procedures |

- | | | |
|---|------------------------------|---|
| | 2.3 | Equipment is selected to hold or support material for hand tools application where applicable |
| | 2.4 | Material is located and held in position for hand tool application |
| | 2.5 | Hand tools are safely and effectively used according to their intended use |
| | 2.6 | Hand tools are safely located when not in immediate use |
| 3 | Select and use power tools | 3.1 Power tools are selected consistent with needs of the job in accordance with conventional work practice |
| | | 3.2 Power tools are visually checked for serviceability/safety in accordance with WHS requirements and any faults reported to supervisor in accordance with enterprise procedures |
| | | 3.3 Equipment is selected to hold or support materials for power tool application as applicable |
| | | 3.4 Material is located and held in position for power tool application as applicable |
| | | 3.5 Power tools are safely and effectively used in application processes |
| | | 3.6 Power tools are switched off and positioned safely when not in use |
| 4 | Clean up work area and tools | 4.1 All tools are cleaned, maintained and stored |
| | | 4.2 Equipment is cleaned, maintained and stored |
| | | 4.3 Documentation is completed in accordance with enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate skill, accuracy and dexterity in the application of tools to work tasks

Hand tools for furniture upholstery include:

- shears/scissors
- tape measure
- rulers
- staple remover
- pincers
- side cutters
- pliers
- hammer
- screwdrivers and magnetic tack hammer
- button press and cutters
- knife (retractable blade)
- needles (bag)
- buttoning
- regulator
- drills
- web strainer
- ripping chisel
- web pliers
- bolt cutters
- rotating hole punch
- saws
- hand planes
- files and rasps
- sockets
- adjustable spanners
- vices

	<ul style="list-style-type: none">• clamps• wood chisels• nail punch• wire bender• seam stretcher• pipe/tube bender• stud press• pop rivet gun• no-sag spring benders (for shapes and ends)• hand ventilation setter• foam slicer• white rubber mallet• no-sag guillotine• soft tipped mallet• stuffing iron tack remover• cross pane hammer and tin snips
Power and pneumatic tools include:	<ul style="list-style-type: none">• spray adhesive system• staple gun• drills and screwdrivers• fabric cutter• nail gun• hot melt glue gun• buttoning machine• circular saw• drop saw• band saw• silicone cartridge gun• drill press• grinder• hot knife• electric iron• lacquer spray gun• knife fabric cutters (circular and straight)• electric/pneumatic foam cutter• planers and sanders
Fault reporting includes:	<ul style="list-style-type: none">• verbal or written reporting in conformance with workplace procedures

Assessment Requirements for MSFUP2001 Use upholstery sector hand and power tools

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify each of the upholstery sector hand and power tools in the Range of Conditions and indicate their applications and limitations
- Effectively and safely use the tools in their appropriate role in the workplace environment and maintain and safely store them
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses, limitations and maintenance requirements of hand tools commonly used in furniture upholstery production
- Types, characteristics, uses, limitations and maintenance requirements of power tools commonly used in furniture upholstery production
- Workplace safety requirements and WHS legislation
- Work flow within the workplace

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to furniture upholstery sector hand and power tools and materials.

MSFUP2002 Fit upholstery components

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers fitting upholstery components ready to assemble upholstered furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Prepare for component application | 1.1 Work instructions are used determine job requirements including design variations, tolerances, process, materials, finish and quality |
| | 1.2 Components to be fitted are identified |
| | 1.3 Fitting sequence is determined |
| | 1.4 Procedures are determined for checking the quality at each stage of the process |
| | 1.5 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.6 Fixing devices are selected in accordance with work |

- instructions and the type of materials to be used
- 1.7 Suitable work area is selected for the task
 - 1.8 Components, materials, fittings and attachments are collected
 - 1.9 Tools and equipment suitable to the applicable fitting methods are selected and checked for safe operation
- 2 Fit components
- 2.1 Components are laid out and attached using appropriate fastenings
 - 2.1 Hand and power tools and equipment are used, as required
 - 2.3 Attached components are checked for compliance with specifications
 - 2.4 Products which do not meet quality specifications are repaired or tagged for further processing or recycling/disposal in accordance with workplace practices
 - 2.5 Finished products are organised and stored in holding area to enterprise requirements
- 3 Complete work
- 3.1 Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures
 - 3.2 Waste and scrap are removed in accordance with workplace procedures
 - 3.3 Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures
 - 3.4 Equipment is maintained and work area cleaned in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Upholstery components include:	<ul style="list-style-type: none">• actions• arms• seats• backs• legs• facings• prefabricated polished timber components• metal components• plinths• glides• ceramic and plastic fittings
Tools and equipment include:	<ul style="list-style-type: none">• measuring tapes or rulers• staple gun• air driver• air drill and accessories• scissors and mallets• air wrench• nail gun• clip gun• tack hammer• ripping chisels and staple removers
Materials include:	<ul style="list-style-type: none">• finished upholstery components• frames• glues• screws• nails and staples and other fixing devices
Component checking	<ul style="list-style-type: none">• alignment and squareness• correct fastening

- includes:**
 - materials and attachment according to work instruction
 - conformity to work instructions and quality requirements
- Storage area organisation includes:**
 - ensuring that there is no obstruction to traffic
 - products are not damaged in storage
 - incompatible items are not stored together
 - products are arranged to match the sequence of work
- Personal protective equipment includes:**
 - that prescribed under legislation, regulations and enterprise policies and practices:
 - safety glasses/goggles
 - hair nets
 - ear muffs/plugs
 - gloves
 - footwear
 - protective clothing
- Information and procedures include:**
 - workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFUP2002B Fit upholstery components.

Assessment Requirements for MSFUP2002 Fit upholstery components

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Fit upholstery components for a minimum of three (3) different items of upholstered furniture requiring assembly
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Interpretation of plan representation for upholstered furniture items
- Identification of hand and/or power tools, materials, components, equipment, processes and procedures
- Work flow in relation to the assembly of upholstered furniture
- Workplace procedures for problem and quality reporting

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work instruction/job sheets, hand and/or power tools, equipment, materials and basic machinery.

MSFUP2003 Apply contemporary foundations to upholstered furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying contemporary upholstery foundations to upholstered furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Work order or instructions are used to confirm type of contemporary furniture foundations to be applied |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Attaching methods are identified and fitting sequence is determined |
| | | 1.4 | Suitable work area is selected and prepared |
| | | 1.5 | Tools and hardware for the application of the foundation are selected and checked for safe operation |

		1.6	Contemporary foundation components are selected, as required
2	Attach contemporary foundation	2.1	Mounting points are measured and marked on the frame, as required
		2.2	Contemporary foundation is positioned and appropriate fasteners are used to secure it to the item
		2.3	The applied foundation is inspected for fit, finish and quality with those requiring reworking/refitting being tagged for further reprocessing or recycling/disposal in accordance with workplace practices
		2.4	Process is monitored and conditions which may affect quality standards are noted
		2.5	Variations to normal activities are reported in accordance with workplace procedures
		2.6	Authorised changes in standard operating procedures and work order or instructions are implemented
3	Complete work	3.1	Workplace documentation, including stock usage, is completed in accordance with workplace procedures
		3.2	Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures
		3.3	Waste and scrap are removed in accordance with workplace procedures
		3.4	Tools and equipment used are cleaned, inspected for serviceable condition and stored in accordance with workplace procedures
		3.5	Equipment is maintained and work area is cleaned in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Contemporary foundations include:	<ul style="list-style-type: none">• elastic webbing• nylon webbing• no-sag springs• conical springs• pulma flex• plastic and styrene edging• foam and polyester fibre
Tools and equipment include:	<ul style="list-style-type: none">• scissors• upholstery hammer• nail gun• staple gun• pincers• long-nose pliers and tape measures
Materials include:	<ul style="list-style-type: none">• elastic webbing• nylon webbing• coil springs• spiral springs• no-sag springs• pulma flex• plastic and styrene edging• foam• hessian and polyester fibre
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices:<ul style="list-style-type: none">• safety glasses/goggle• hair nets• ear muffs/plugs

Information and procedures include:

- gloves
- footwear and protective clothing
- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Assessment Requirements for MSFUP2003 Apply contemporary foundations to upholstered furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Use contemporary foundation items to assemble contemporary foundations for a minimum of three (3) items of furniture, one (1) being a chair, requiring seat, back and arms
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow in relation to furniture production
- Features of range of contemporary foundation types and fittings
- Materials used in the application of contemporary foundations
- Identification of equipment, processes and procedures

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to furniture frames and contemporary fittings, tools and equipment, work order and procedures.

MSFUP2004 Machine sew basic upholstery final cover materials

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers sewing upholstery final cover materials using simple sewing machines and techniques.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare for work | 1.1 Job requirements are identified from work instructions |
| | 1.2 Work health and safety (WHS) requirements, including personal protection needs, are observed |
| | 1.3 Machines, materials, work method and sequence are determined |
| | 1.4 Equipment, including any supplementary equipment, is identified and checked for safe operation, components and controls |
| | 1.5 Materials are identified and inspected and problems, including any materials or part constructed products which do not meet the job order requirements, are identified and reported in accordance with workplace |

		procedures
	1.6	Work pieces are laid out in sequence in accordance with specifications and workplace procedures
2	Control sewing operation	2.1 Sewing machine, including attachments, is set up and adjusted for the work requirements
	2.2	Machine is operated to maintain required product quality and outputs
	2.3	Finished products are checked for required quality, repaired, and moved to the next process
3	Complete work	3.1 Completed work is directed to the next operation in accordance with workplace procedures
	3.2	Documentation, including production and/or stock records and/or packing slips, are completed in accordance with workplace procedures
	3.3	Material which is able to be re-used is collected and stored, and waste and scrap are removed in accordance with workplace procedures
	3.4	Equipment is maintained and work area is cleaned following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and

	<ul style="list-style-type: none">dangerous goods codes, and local safe operating procedures or equivalent
	<ul style="list-style-type: none">work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirementswork requires individuals to demonstrate discretion, judgement and problem solving
Basic sewing includes:	<ul style="list-style-type: none">operating and adjusting a simple sewing machine (straight and walking foot sewing machines) to join two or more pieces of upholstery fabric together
Job requirements include:	<ul style="list-style-type: none">materialsthreadsadditional work featuresshape and any special requirements for the itemand any required workplace documentation to be completed

Assessment Requirements for MSFUP2004 Machine sew basic upholstery final cover materials

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum:
 - join final cover materials for fitting to two (2) items of upholstered furniture
 - sew piping for an item of upholstered furniture
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Procedure for reporting damaged or imperfect products or interruption to work flow
- Work flow requirements for sewing process
- Operation of work systems and sewing equipment
- Characteristics of materials used and finished products
- Causes of faults and repair methods
- Identification of equipment, processes and procedures
- Quality systems and standards
- Workplace procedures

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate sewing machines, work orders, operating procedures, materials and threads.

MSFUP2005 Develop cutting plan and cut single layer upholstery fabric

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers developing a cutting plan, measuring out and cutting single layer upholstery fabrics.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Develop cutting plan	1.1	Required fabrics, number of items to be cut and required equipment are identified
		1.2	Fabric sizes to be cut are identified from work order plus any required allowances
		1.3	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.4	Suitable work area is selected, prepared and cleaned of any contaminants
		1.5	Work sequence is planned

- | | | |
|---|-------------------------------|---|
| 2 | Prepare materials for cutting | <ul style="list-style-type: none">2.1 Suitable scissors, cutting machines, knives and/or blades are selected and checked prior to use for appropriate sharpness, set, operation and safe condition2.2 Fabrics are selected in accordance with work order and laid out smooth and square2.3 Fabrics are inspected for flaws and appropriate finish2.4 Nap/pile direction, pattern matches and face of the materials are identified2.5 Tools and equipment are checked for operation2.6 Fabric is measured and marked, including registration points, in accordance with workplace practices2.7 Cutting plan is developed in accordance with workplace procedures |
| 3 | Cut fabric | <ul style="list-style-type: none">3.1 Fabric is cut in accordance with manufacturer instructions and/or workplace procedures3.2 Problems are notified following workplace procedures3.3 Cut item is inspected against work requirement with unsatisfactory items being reprocessed in accordance with workplace procedures |
| 4 | Complete work | <ul style="list-style-type: none">4.1 Cutting is completed with cut out materials top edge marked, wrapped, identified/labelled, handled and stored as required by workplace procedures4.2 Workplace required documentation is completed in accordance with workplace procedures4.3 Unused fabric and waste are collected for recycling/re-use in accordance with workplace procedures4.4 Tools and equipment are maintained and work area is cleaned in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Upholstery fabrics include:	<ul style="list-style-type: none">• plain or patterned fabrics:<ul style="list-style-type: none">• velour• velvet• tapestry• damask• linen• cotton
Tools and equipment include:	<ul style="list-style-type: none">• cutting equipment, including scissors, cutting machines, knives and/or blades• hot knife (for acrylics)• measuring and calculating equipment, including tapes, rulers and calculators• computers and cutting table
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices:<ul style="list-style-type: none">• safety glasses/goggle• hair nets• ear muffs/plugs• gloves• footwear and protective clothing

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFUP2005B Develop cutting plan and cut single layer upholstery fabric.

Assessment Requirements for MSFUP2005 Develop cutting plan and cut single layer upholstery fabric

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Develop cutting plan, measure accurately, mark out and cut upholstery fabric quantities, minimising waste and producing consistent quality items for at least five (5) different types of material or products (at least one (1) of which should be patterned)
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work requirements, including workplace standards
- Work flow in relation to planning and cutting upholstery fabric
- Fabric types, common faults and inspection procedures
- Design features of the finished items in relation to attractive use of fabric patterns

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work orders, fabrics, tape measure, cutting table, cutting machines, cutting knives, and blades and scissors.

MSFUP2006 Dismantle and re-assemble furniture for upholstery

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers dismantling and re-assembling furniture and/or fittings for the purposes of fitting and/or refurbishing upholstery.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Item to be dismantled is inspected and components identified
		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	Work required, including the process/order for dismantling according to the workplace procedures, is identified
		1.4	Tools and equipment are selected and checked for safe and effective operation for the task
2	Dismantle furniture	2.1	Items to be dismantled are identified

- | | | |
|---|-----------------------|---|
| | 2.2 | Items are dismantled to the extent required in the work instructions using appropriate tools and procedures |
| | 2.3 | Any previous upholstery is noted for wear, condition and application techniques |
| | 2.4 | Fasteners and attachments are removed and stored |
| | 2.5 | Component parts are separated, tagged and stored following workplace procedures |
| | 2.6 | Component parts are despatched to the next process according to workplace procedures |
| 3 | Re-assemble furniture | |
| | 3.1 | Items to be re-assembled are identified |
| | 3.2 | Items are re-assembled to the extent required in the work instructions using appropriate tools and procedures |
| | 3.3 | Upholstered components are noted for the security and condition of the upholstered fittings |
| | 3.4 | Fasteners and attachments are selected and used according to workplace procedures |
| | 3.5 | Assembled piece is despatched to the next process according to workplace procedures |
| 4 | Complete work | |
| | 4.1 | Equipment used is cleaned, inspected for serviceable condition and stored in accordance with workplace procedures |
| | 4.2 | Equipment faults are identified, tagged and reported to appropriate personnel |
| | 4.3 | Work area is cleaned and returned to operational condition |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving
Furniture and/or furnishings include:	<ul style="list-style-type: none">• chairs• sofas• settees• footstools• beds and their components
Tools and equipment include:	<ul style="list-style-type: none">• measuring tapes or rulers• hammers• rubber mallet• pincers• screwdrivers• shifting spanner• spanners• socket set• hacksaw and blades• clamps• timber wedges• wood chisels• dowel drill• long-nose pliers• floor board lifter• bricklayer's bolster• power drill/screwdriver• air compressor and hoses
Materials include:	<ul style="list-style-type: none">• timber• manufactured board• veneer

- brass
 - adhesive
 - laminate
 - perspex
 - upholstered fittings and foundations
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices:
 - safety glasses/goggle
 - hair nets
 - ear muffs/plugs
 - gloves
 - footwear and protective clothing
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFUP2006B Dismantle/reassemble furniture for upholstery.

Links

Assessment Requirements for MSFUP2006 Dismantle and re-assemble furniture for upholstery

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Dismantle and re-assemble at least four (4) different items, including one (1) armchair and one (1) sofa
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types and characteristics of materials used in furniture/furnishings construction
- Construction techniques and processes
- Upholstery materials and processes
- Identification of equipment, processes and procedures
- Work flow in relation to dismantling and re-assembling furniture

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to upholstered furniture for dismantling/re-assembling, work instructions and tools.

MSFUP3001 Apply traditional foundations to upholstered furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying traditional upholstery foundations to upholstered furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------|-----|--|
| 1 | Plan operation | 1.1 | Work order or instructions are used to confirm type of traditional furniture foundations to be applied |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Attaching methods are identified and fitting sequence is determined |
| | | 1.4 | Suitable work area is selected and prepared |
| | | 1.5 | Tools and hardware for the application of the foundation are selected and checked for safe operation |

- | | | |
|---|---|---|
| | 1.6 | Traditional foundation components are selected as required |
| 2 | Prepare and attach traditional foundation | 2.1 Mounting points are measured and marked on the frame, as required |
| | 2.2 | Traditional foundation is positioned and appropriate fasteners are used to secure it to the item |
| | 2.3 | Appropriate fasteners are used to secure the traditional foundation, as required |
| | 2.4 | The applied foundation is inspected for fit, finish and quality with those requiring reworking/refitting being tagged for further reprocessing or recycling/disposal in accordance with workplace practices |
| | 2.5 | Process is monitored and conditions which may affect quality standards are noted |
| | 2.6 | Variations to normal activities are reported in accordance workplace procedures |
| | 2.7 | Authorised changes in standard operating procedures and work order or instructions are implemented |
| 3 | Complete work | 3.1 Workplace documentation, including stock usage, is completed in accordance with workplace procedures |
| | 3.2 | Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures |
| | 3.3 | Waste and scrap are removed in accordance with workplace procedures |
| | 3.4 | Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures |
| | 3.5 | Equipment is maintained and work area is cleaned in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Tools and equipment include: | <ul style="list-style-type: none">• tape measure• web strainer• scissors• upholstery hammer• tack lifter• staple gun• pincers• long-nose pliers |
| Materials include: | <ul style="list-style-type: none">• webbing• coil springs• flock• wadding• coconut fibre• bridle• bridle ties• solid timber base• padded frames• hard edge• hessian |

- Personal protective equipment includes:**
- calico
 - lacing twine
 - mattress twine
 - that prescribed under legislation, regulations and enterprise policies and practices:
 - safety glasses/goggle
 - hair nets
 - ear muffs/plugs
 - gloves
 - footwear and protective clothing
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Assessment Requirements for MSFUP3001 Apply traditional foundations to upholstered furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Interlace and turn back jute webbing, tie off and lace up coil springs, fit hessian bridles (loose and/or deep), coconut fibre, wadding and a stitched edge (one blind, one top) in a minimum of two (2) items of traditional upholstered furniture
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow in relation to furniture production and refurbishment
- Features of range of traditional foundation types and fittings
- Materials and techniques used in the application of traditional foundations to upholstered furniture
- Materials used in the application of traditional foundations
- Identification of equipment, processes and procedures required for the application of traditional foundations to upholstered furniture

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

MSFUP3002 Fit and apply final cover materials to furniture using basic techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers fitting and applying plain and patterned materials as the final covering to upholstered furniture using basic techniques.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare for work | 1.1 Specifications concerning design, fabrics, accessories and finish are confirmed with designer/customer/client, as required |
| | 1.2 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.3 Materials, work method and sequence are determined |
| | 1.4 Suitable work area is selected, prepared and cleaned of any contaminants |
| | 1.5 Appropriate equipment and tools are selected and checked for safe operation |

- | | | |
|---|-------------------------------|--|
| | 1.6 | Furniture frames/foundations are checked for quality of construction, contaminants and appropriateness to specifications, and modified and/or repaired in accordance with workplace procedures |
| | 1.7 | Material panels are checked in terms of quantity, quality, contaminants, size, pattern and consistency |
| | 1.8 | Trims are selected and checked in terms of quantity, quality, contaminants, size, pattern and consistency |
| 2 | Fit and apply fabric | 2.1 Work pieces are laid out in sequence according to specifications, construction process and workplace procedures |
| | 2.2 | Materials are applied to furniture in accordance with enterprise and industry standards |
| | 2.3 | Material is secured to the foundation, using appropriate fixing processes |
| | 2.4 | Finish of applied material is checked against quality standards |
| 3 | Fit and apply fabric and trim | 3.1 Trims are applied consistent with specifications and workplace procedures |
| | 3.2 | Trims are checked against quality standards and reprocessed, if required, in accordance with workplace procedures |
| | 3.3 | Final adjustments are made to ensure finish meets required quality standards |
| 4 | Complete work | 4.1 Finished product is packaged, protected and stored, as required, consistent with workplace procedures |
| | 4.2 | Workplace documentation is completed in accordance with procedures |
| | 4.3 | Waste and scrap are collected for disposal/recycling in accordance with workplace procedures |
| | 4.4 | Tools and equipment used are cleaned, inspected for serviceability and stored in accordance with workplace procedures |
| | 4.5 | Equipment is maintained and work area is cleaned in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---------------------------------------|--|

Assessment Requirements for MSFUP3003 Fit and apply final cover materials to furniture using decorative techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, fit and apply a final material cover for:
 - a bedhead using diamond buttoning
 - a chair using other decorative finishes
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work requirements, including workplace standards
- Work flow in relation to applying final material covers to upholstered furniture using decorative techniques
- Cover material types and characteristics, common faults and inspection procedures
- Types of decorative techniques and their application
- Design features of the finished furnishing items

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to relevant process equipment and materials.

MSFUP3004 Lay out patterns and cut leather

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting leather hides, laying out patterns and cutting out leather by hand to the required shape or pattern.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|---|
| 1 Prepare for work | 1.1 Specifications, patterns and/or plans are read and interpreted to identify required colour and quality of materials, number of items to be cut and tools and equipment required |
| | 1.2 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.3 Suitable work area is selected, prepared and cleaned of any contaminants |
| | 1.4 Pattern pieces are identified to match shapes to final wear characteristics of the furnishing component |
| | 1.5 Suitable scissors and/or blades are selected for the leather |

- to be cut
- 1.6 Scissors and any other tools and equipment are checked prior to use for appropriate sharpness, operation and safe condition
 - 1.7 Hide is selected, spread out and inspected to identify flaws and harder and softer wearing parts
 - 1.8 Direction of natural markings and finished side of the leather are identified
- 2 Lay out pattern
- 2.1 Patterns are laid out following workplace procedures and instructions using low wear parts of the hide on the less heavily used furniture components
 - 2.2 Patterns are laid out to maximise use of the hide for the furniture design
 - 2.3 Any registration points on the pattern and other instructions to match required pattern components are marked
 - 2.4 Any required measurements are made and appropriate adjustments made
- 3 Cut leather
- 3.1 Required cutting operations are completed with cut-out leather components identified in accordance with work instructions and procedures
 - 3.2 Cut work is inspected, any faults identified and appropriate action taken in accordance with workplace procedures to ensure cut pieces meet the required quality standards
 - 3.3 The performance of the cutting equipment is regularly checked for signs of faulty operation, including evidence from the inspection of cut pieces
 - 3.4 Where required, cut out components are wrapped using appropriate protective covers and care label information is attached
- 4 Complete work
- 4.1 Unused materials are stored as required
 - 4.2 Cut components are folded, protected and despatched to next process following workplace procedures
 - 4.3 Work area is cleaned and damaged tools tagged, as required

- 4.4 Waste is collected and bundled for recycling/reuse, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Leather hide characteristics/qualities include: | <ul style="list-style-type: none">• suitable thickness and quality (may be a full hide or partial)• natural markings• finished and unfinished sides• high and low wear• direction of markings• flaws and blemishes• colour variation between hides• flexibility |
| Tools and equipment include: | <ul style="list-style-type: none">• scissors• cutting blades and electric shears |
| Personal protective equipment includes: | <ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices:<ul style="list-style-type: none">• safety glasses/goggle |

Information and procedures include:

- hair nets
- ear muffs/plugs
- gloves
- footwear and protective clothing
- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFUP3004B Lay out patterns and cut leather.

Assessment Requirements for MSFUP3004 Lay out patterns and cut leather

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum:
 - identify and select leather for a leather armchair
 - measure and cut selected leather to match patterns
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work requirements, including workplace standards and inspection procedures
- Leather types, common faults, and wear capability of different parts of the hide
- Work flow in relation to cutting leather
- Design features of the finished furnishing items in relation to laying out the pattern and cutting the leather

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate scissors and cutting blades, leather, patterns and a work order.

MSFUP3005 Machine sew complex upholstery final cover materials

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using specific sewing machine techniques, with attachments, as required, to sew upholstery final cover materials.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Prepare for work	1.1	Job requirements are identified from work instructions
		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	Machines, attachments, materials, work method and sequence are determined
		1.4	Equipment, including any supplementary equipment, is identified and checked for safe operation, components and controls
		1.5	Materials are identified and inspected and problems, including any materials or part-constructed products which

		do not meet the job order requirements, are identified and reported in accordance with workplace procedures
	1.6	Work pieces are laid out in sequence in accordance with specifications and workplace procedures
2	Conduct sewing operation	2.1 Sewing machine, including attachments, is set up and adjusted for the work requirements 2.2 Machine is operated to maintain required product quality and outputs 2.3 Finished products are checked for required quality, repaired and moved to the next process
3	Complete work	3.1 Completed work is directed to the next operation in accordance with workplace procedures 3.2 Documentation, including production and/or stock records and/or packing slips, are completed in accordance with workplace procedures 3.3 Material which is able to be re-used is collected and stored, and waste and scrap removed in accordance with workplace procedures 3.4 Equipment maintenance and work area clean-up are completed following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes,

	material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
Complex sewing includes:	<ul style="list-style-type: none">• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving• the operation of industrial sewing machines to produce specialised products in the application of upholstery to furniture, and embraces a range of decorative methods and finishes• specific and specialised techniques and products:<ul style="list-style-type: none">• sewing twin needle decorative finishes, including single and double piping, blind hemming, balloon seam and gathering• sewing with specialised attachments, including gathering• sewing fasteners and attachments, including sewing of zips and velcro
Job requirements include:	<ul style="list-style-type: none">• required materials• threads• additional work features• shape and special requirements for the finished item• any required workplace documentation to be completed
Machines include:	<ul style="list-style-type: none">• flat bed• walking foot• overlocker• post and/or flatbed twin needle
Sewing machine set-up and adjustments include:	<ul style="list-style-type: none">• threading machine and winding bobbin• setting required tensions• selecting required machine settings• lubricating and adjusting the machine• testing operations for work order requirements
Materials to be machined include:	<ul style="list-style-type: none">• fabrics• vinyl• canvas• acrylics and leather
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices:<ul style="list-style-type: none">• safety glasses/goggle• hair nets

Information and procedures include:

- ear muffs/plugs
- gloves
- footwear and protective clothing
- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFUP3005B Machine sew upholstery final cover materials (complex).

Assessment Requirements for MSFUP3005 Machine sew complex upholstery final cover materials

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, complete a double sided square stool top with double stitched quartering of different materials
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Procedure for reporting damaged or imperfect products or interruption to work flow
- Work flow requirements for sewing process
- Operation of work systems and sewing equipment
- Characteristics of materials used and finished products
- Causes of faults and repair methods
- Identification of equipment, processes and procedures
- Quality systems and standards
- Workplace procedures

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

MSFUP3006 Fit and apply leather to furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers the fitting and application of leather, pre-cut to pattern, to an upholstered item of furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|--|
| 1 Prepare for work | 1.1 Specifications concerning design, leather coverings, accessories and finish are confirmed with designer/customer/client, as required |
| | 1.2 Work health and safety (WHS) requirements, including personal protective needs, are observed throughout the work |
| | 1.3 Materials, work method and sequence are determined |
| | 1.4 Suitable work area is selected, prepared and cleaned of any contaminants |
| | 1.5 Appropriate equipment and tools are selected and checked for safe operation |

- 1.6 Furniture frames/foundations are checked for quality of construction, contaminants and appropriateness to specifications, and modified and/or repaired in accordance with workplace practices
 - 1.7 Leather panels are checked in terms of quantity, quality, grain, contaminants, size and wear stress
 - 1.8 Trims are selected and checked in terms of quantity, quality, contaminants, size, pattern and consistency
- 2 Fit and apply leather
 - 2.1 Work pieces are laid out in sequence according to specifications, construction process and workplace procedures
 - 2.2 Leather pieces are applied to furniture ensuring that appropriate leather is fitted to high wear areas and a smooth and consistent finish of the leather over the furniture foundation
 - 2.3 Decorative features, including pleats, are applied to the leather before fitting, as required
 - 2.4 Leather is secured to the foundation using appropriate fixing processes
 - 2.5 Finish of applied leather is checked against quality standards
- 3 Apply trim
 - 3.1 Work pieces are laid out in sequence according to specifications and workplace procedures
 - 3.2 Trims and decorative finishes are applied to the item consistent with specifications and workplace procedures
 - 3.3 Trims and decorative finishes are checked against quality standards and modified and or repaired, as required
 - 3.4 Final adjustments are made, as required, to ensure finish of completed item meets required quality standards
- 4 Complete work
 - 4.1 Finished product is packaged, protected and stored in accordance with workplace procedures
 - 4.2 Workplace documentation is completed in accordance with procedures
 - 4.3 Waste and scrap are collected for disposal/recycling in accordance with workplace procedures

- 4.4 Tools and equipment used are cleaned, inspected for serviceability and stored in accordance with workplace procedures
- 4.5 Equipment is maintained and work area is cleaned in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|---|--|
| Unit context includes: | <ul style="list-style-type: none"> • WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving |
| Leather characteristics/qualities include: | <ul style="list-style-type: none"> • natural markings • finished and unfinished sides • high and low wear • direction of markings • flaws and blemishes • colour variation between hides • flexibility |
| Tools and equipment include: | <ul style="list-style-type: none"> • scissors • single or multi-needle flatbed sewing machine • heat gun |

	<ul style="list-style-type: none">• hammer• staple gun• skivring machine and hand sewing needles
Materials include:	<ul style="list-style-type: none">• glues• staples• buttons• tacks• piping• cords• banding• hidem binding and pleats
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices:<ul style="list-style-type: none">• safety glasses/goggle• hair nets• ear muffs/plugs• gloves• footwear and protective clothing
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures• customer/client requirements

Unit Mapping Information

Supersedes and is equivalent to LMFUP3006B Fit and apply leather to furniture.

MSFUP3007 Manufacture and fit loose covers

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers developing a pattern to meet a loose cover requirement, cutting from that pattern, and making and fitting loose covers to items of upholstered furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Specifications concerning design, fabrics, accessories and finish are confirmed with designer/customer/client, as required |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Materials, work method and sequence are determined |
| | | 1.4 | Suitable work area is selected, prepared and cleaned of any contaminants |
| | | 1.5 | Appropriate equipment and tools are selected and checked for safe operation |

- | | | | |
|---|-----------------------|-----|---|
| 2 | Develop patterns | 2.1 | 3-D templates are developed from the surface of the existing furniture without undue distortion |
| | | 2.2 | Component shapes are marked out and/or cut out using appropriate technique |
| | | 2.3 | Standard 2-D patterns are produced in accordance with specifications and to accepted standards and construction tolerances |
| | | 2.4 | Patterns are reviewed against client specifications and production requirements |
| | | 2.5 | Consultation and clarification with client is undertaken, as required |
| 3 | Select and cut fabric | 3.1 | Fabrics are selected and inspected in accordance with work order and laid out smooth and square |
| | | 3.2 | Nap/pile, direction of pattern, pattern repeat and finished side of the materials are identified |
| | | 3.3 | Fabrics are squared up to the edges or guide markings on the cutting table |
| | | 3.4 | Patterns are laid out using registration points on the pattern and other instructions to match required fabric pattern ensuring maximum use of the fabric |
| | | 3.5 | Fabric is cut and cut components are inspected in accordance with workplace procedures |
| 4 | Sew panels | 4.1 | Sewing machine set-up requirements and adjustments are identified and followed |
| | | 4.2 | Machine sewing maintains required product quality and outputs |
| | | 4.3 | Finished loose covers are checked for required quality and reprocessed in accordance with workplace procedures |
| 5 | Fit and finish cover | 5.1 | Loose cover is applied to the upholstered furniture and checked for fit |
| | | 5.2 | Decorative accessories are applied, as required |
| | | 5.3 | Adjustments are made, as required, to ensure fit meets required quality standards and specifications |

- | | | | |
|---|---------------|-----|---|
| 6 | Complete work | 6.1 | Workplace documentation is completed in accordance with procedures |
| | | 6.2 | Waste and scrap are collected and disposed of/recycled in accordance with workplace procedures |
| | | 6.3 | Tools and equipment used are cleaned, inspected for serviceability and stored in accordance with workplace procedures |
| | | 6.4 | Equipment is maintained and work area is cleaned in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|-------------------------------|--|
| Unit context includes: | <ul style="list-style-type: none">• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements• work requires individuals to demonstrate some discretion, judgement and problem solving |
| Machines include: | <ul style="list-style-type: none">• single or multi-needle flatbed sewing machine• walking foot• overlocker and gatherer |
| Sewing machine set-up | <ul style="list-style-type: none">• threading machine and winding bobbin• setting required tensions |

- and adjustments include:**
- selecting required machine settings
 - lubricating and adjusting the machine
 - testing operations for work order requirements
- Materials include:**
- plain and patterned fabric
 - velvet
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices:
 - safety glasses/goggle
 - hair nets
 - ear muffs/plugs
 - gloves
 - footwear and protective clothing
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures
 - customer requirements

Unit Mapping Information

MSFUP3008 Apply finishing techniques to upholstered furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers hand finishing upholstered furniture by the application of concealed and decorative finishing techniques.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Job requirement is identified from work order or other instructions, including any special requirements for finishing |
| | | 1.2 | Required materials, upholstered components to be finished, and appropriate tools and equipment are identified from work order |
| | | 1.3 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.4 | Items to be finished are assembled in an appropriate work area and inspected for appropriate quality |
| | | 1.5 | Appropriate tools, equipment and finishing materials and |

			hardware are selected
2	Apply finishing techniques	2.1	Finishing techniques are applied in accordance with workplace procedures
		2.2	Problems are notified following workplace procedures
		2.3	Finished upholstered item is inspected against work requirement with unsatisfactory finish being redirected for re-working
3	Complete work	3.1	Finished work is package/stored/tagged and despatched to the next process following workplace procedures
		3.2	Any required documentation is completed and processed following workplace procedures
		3.3	Tools and equipment used are cleaned, maintained as required and stored in accordance with workplace procedures
		3.4	Work area is cleaned with waste and scrap being removed/recycled in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative

	obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Finishing techniques include:	<ul style="list-style-type: none">• work requires individuals to demonstrate some discretion, judgement and problem solving• decorative techniques:<ul style="list-style-type: none">• braiding• gimping• close and open studding• single and double piping and banding• concealed techniques:<ul style="list-style-type: none">• straight edge• shark's teeth• hand sewing techniques, which may be used in both decorative and concealed finishing:<ul style="list-style-type: none">• flange cord• cord and ruching• the closure of items, such as cushions• external backs of upholstered furnishings
Tools and equipment include:	<ul style="list-style-type: none">• a range of needles and threads• tack hammers• hammers and hot melt glue gun
Materials include:	<ul style="list-style-type: none">• fabrics• leather• upholstery nails• gimping• metal trim• piping and vinyl
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices:<ul style="list-style-type: none">• safety glasses/goggle• hair nets• ear muffs/plugs• gloves• footwear and protective clothing
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication

- manufacturer specifications and operational procedures

Assessment Requirements for MSFUP3008 Apply finishing techniques to upholstered furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Hand sew at least two (2) different items of upholstered furniture using differing sewing techniques, such as cushion mouth and outback
- Apply two (2) other finishing techniques to items of upholstered furniture, one (1) concealed and one (1) decorative
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work requirements including workplace standards
- Identification of techniques and procedures for the finishing processes
- Fabric types, common faults and inspection procedures
- Methods to be used with different fabric types
- Design features of upholstered items in relation to the finishing techniques to be used

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate sewing equipment, hardware, fabrics and a work order.

MSFUP3009 Develop cutting plan and cut multiple layer upholstery fabric

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers developing a cutting plan and cutting multiple layer upholstery fabrics by hand or automatic method for upholstered furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|--|
| 1 | Prepare for work | 1.1 | Specifications, patterns and/or plans are read and interpreted to identify required fabrics, number and nature of items to be cut and required equipment |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Fabrics, work method and sequence are determined |
| | | 1.4 | Suitable work area is selected, prepared and cleaned of any contaminants |
| | | 1.5 | Appropriate equipment and tools are selected for the fabrics to be cut and checked for safe operation |

- | | | |
|---|---------------------------------------|--|
| | 1.6 | Fabric is selected and checked in terms of quantity, quality, contaminants, size, pattern and consistency in accordance with workplace procedures |
| | 1.7 | Scissors and any other cutting equipment are checked prior to use for appropriate sharpness, set operation and safe condition |
| 2 | Develop cutting list and cutting plan | |
| | 2.1 | Cutting requirements, including bias or other instructions, are noted |
| | 2.2 | Measurements for upholstered items are taken and listed |
| | 2.3 | Cutting list is developed using appropriate format, abbreviations and terminology for cut sizes, names and number of pieces in accordance with workplace procedures |
| | 2.4 | Cutting plan to ensure fabric is laid correctly to indicate run for each panel, the dimensions for each component part and to minimise fabric waste is developed in accordance with workplace procedures, noting if fabric is railroaded |
| 3 | Prepare materials for cutting | |
| | 3.1 | Fabrics are selected in accordance with work order and laid out and inspected for flaws and appropriate finish |
| | 3.2 | Nap/pile direction, direction of pattern, pattern repeat and finished side of the materials are identified |
| | 3.3 | Fabrics are squared up to the edges or guide markings on the cutting table |
| | 3.4 | Patterns are laid out following work procedures and instructions using registration points on the pattern and other instructions to match required fabric pattern |
| 4 | Cut material | |
| | 4.1 | Measurements are confirmed and appropriate adjustments to the positioning of fabric are made |
| | 4.2 | Tools and equipment are checked for correct operation |
| | 4.3 | Required cutting operations are completed to cut out fabrics following work instructions |
| | 4.4 | Cut fabric is inspected for quality and unsatisfactory items are processed in accordance with workplace instructions |
| | 4.5 | Fabrics are folded, wrapped using appropriate protective covers and care label information attached prior to |

		despatch to next process following workplace procedures
5	Complete work	<p>5.1 Unused materials are stored, as required</p> <p>5.2 Workplace required documentation, including stock usage, is completed and processed following procedures</p> <p>5.3 Work area is cleaned and damaged tools and equipment tagged, as required</p> <p>5.4 Waste is collected for recycling/re-use as required by workplace procedures</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	<ul style="list-style-type: none"> • WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving
Tools and equipment include:	<ul style="list-style-type: none"> • cutting table • tape measures • scissors • cutting blades • round knife cutter

Materials to be cut include:	<ul style="list-style-type: none">• straight knife• automatic cutting machines and cloth cutting machine• velvet• vinyl• plain and patterned fabric
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices:<ul style="list-style-type: none">• safety glasses/goggle• hair nets• ear muffs/plugs• gloves• footwear and protective clothing
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFUP3009B Develop cutting plan and cut multiple layer upholstery fabric.

Assessment Requirements for MSFUP3009 Develop cutting plan and cut multiple layer upholstery fabric

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, measure, develop cutting plan, lay out and cut out at least five (5) layers of fabric for an item of upholstered furniture
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Fabric types, common faults and inspection procedures
- Design features of the finished furnishing items in relation to developing the cutting plan, laying out and cutting fabrics
- Work requirements, including workplace standards

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate scissors and tools, fabrics and a work order.

MSFUP3010 Cut, sew and fit skirts to upholstered furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers measuring, marking out, cutting and sewing skirts for items of upholstered furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|---|
| 1 | Plan work operations | 1.1 | Specifications concerning design, fabrics, accessories and finish for the skirts are confirmed with designer/customer/client, as required |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Fabrics, work method and sequence are determined |
| | | 1.4 | Suitable work area is selected, prepared and cleaned of any contaminants |
| | | 1.5 | Appropriate equipment and tools are selected and checked for safe operation |

- | | | | |
|---|---------------------------------------|-----|---|
| | | 1.6 | Fabric is selected and checked in terms of quantity, quality, contaminants, size, pattern and consistency |
| 2 | Measure and mark out pattern/template | 2.1 | Measurements are taken from furniture item to be fitted or from job sheet/specifications |
| | | 2.2 | Pattern/template is developed from measurements |
| | | 2.3 | Fabric is laid out and pattern/template located to conform with pattern/nap/direction of the fabric and to minimise wastage |
| | | 2.4 | Any registration points on the pattern and other instructions to match required pattern components are marked |
| | | 2.5 | Fabric is marked in accordance with workplace procedures |
| 3 | Cut and sew skirts | 3.1 | Fabric is squared up to the edges or guide markings on the cutting table |
| | | 3.2 | Fabric is cut and work inspected to ensure accuracy/tolerance in accordance with workplace procedures |
| | | 3.3 | Sewing machine set-up requirements and adjustments are identified and followed |
| | | 3.4 | Machine maintains required product quality and output |
| | | 3.5 | Finished skirts are checked for required quality and reprocessed, if required |
| 4 | Complete work | 4.1 | Workplace documentation is completed in accordance with procedures |
| | | 4.2 | Waste and scrap are removed in accordance with workplace procedures |
| | | 4.3 | Machines and tools used are cleaned, inspected for serviceability and stored in accordance with workplace procedures |
| | | 4.4 | Equipment is maintained and work area is cleaned in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

MSFUP3011 Cut, sew and fit or fill cushions

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers measuring, cutting, sewing, fitting and filling loose and fitted cushions for upholstered furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|---|
| 1 | Plan work operations | 1.1 | Specifications concerning design, fabrics, accessories and finish for the cushions are confirmed with designer/customer/client, as required |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Fabrics, filling medium, work method and sequence are determined |
| | | 1.4 | Suitable work area is selected, prepared and cleaned of any contaminants |
| | | 1.5 | Appropriate equipment and tools are selected and checked for safe operation |

- | | | | |
|---|----------------------------|-----|--|
| | | 1.6 | Material and filling medium is selected and checked in terms of quantity, quality, contaminants, size, pattern and consistency in accordance with workplace procedures |
| 2 | Cut and sew cushion covers | 2.1 | Material is laid out on cutting table and nap/pile, direction of pattern, pattern repeat and finished side of fabric are identified |
| | | 2.2 | Patterns are laid out using registration points on the pattern and other instructions to match required fabric pattern, ensuring maximum use of the fabric |
| | | 2.3 | Fabric is cut and work inspected to ensure accuracy/tolerance in accordance with workplace procedures |
| | | 2.4 | Sewing machine set-up requirements and adjustments are identified and followed |
| | | 2.5 | Machine maintains required product quality and output |
| | | 2.6 | Finished cushion covers are checked for required quality and reprocessed, if required |
| 3 | Fit and fill cushions | 3.1 | Cushion covers are checked for fit and amount of filling determined for each application |
| | | 3.2 | Cushions are filled to the appropriate size using appropriate methods |
| | | 3.3 | Final sewing of cushion is performed in accordance with workplace procedures |
| | | 3.4 | procedures |
| 4 | Complete work | 4.1 | Workplace documentation is completed in accordance with procedures |
| | | 4.2 | Waste and scrap are collected for disposal/recycling in accordance with workplace procedures |
| | | 4.3 | Machines and tools used are cleaned, inspected for serviceability and stored in accordance with workplace procedures |
| | | 4.4 | Equipment is maintained and work area is cleaned in accordance with workplace procedures |

Foundation Skills

MSFUP3012 Apply marine sewing and installation techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using marine sewing techniques in the completion of upholstery products/items used in marine applications, such as covers, and fitting the required attachments and fixing devices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Job requirements are identified from work instructions |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Machines, attachments, materials, work method and sequence are determined |
| | | 1.4 | Equipment, including any supplementary equipment, is identified and checked for safe operation, components and controls |
| | | 1.5 | Materials are identified and inspected and problems, including any materials or part-constructed products which |

		do not meet the job order requirements, are identified and reported in accordance with workplace procedures
	1.6	Work pieces are laid out in sequence in accordance with specifications and workplace procedures
2	Conduct sewing operation	<p>2.1 Sewing machine, including attachments, as required, set-up requirements and adjustments are observed in accordance with workplace procedures</p> <p>2.2 Appropriate thread type and size is fitted to machine</p> <p>2.3 Machine is operated to maintain required product quality and outputs</p> <p>2.4 Reinforcing/protective measures, fittings/attachments and fixing devices are attached in accordance with workplace procedures</p> <p>2.5 Finished products, including covers, are inspected for quality with unacceptable items being reprocessed in accordance with workplace instructions</p>
3	Complete work	<p>3.1 Unused materials are stored, as required</p> <p>3.2 Workplace required documentation, including stock usage, is completed and processed following workplace procedures</p> <p>3.3 Work area is cleaned and damaged tools and equipment tagged, as required</p> <p>3.4 Waste is collected and bundled for recycling/reuse as required by workplace procedures</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential

operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Fittings/attachments and fixing devices include:**
- clips
 - press studs
 - buckles
 - eyelets
 - shackles
 - zips
 - reinforcing patches
 - straps
- Job requirements include:**
- required materials
 - threads
 - additional work features
 - shape and special requirements for the item
 - any required workplace documentation to be completed
- Machines include:**
- overlocker
 - flat bed
 - twin needle and walking foot
- Tools and equipment include:**
- measuring tape
 - scissors
 - cutting blades
 - knives and thread
- Materials include:**
- canvas
 - sail materials
 - leather
 - foam-backed vinyl and upholstery fabrics

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices:
 - safety glasses/goggle
 - hair nets
 - ear muffs/plugs
 - gloves
 - footwear and protective clothing

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFUP3012B Apply marine sewing and installation techniques.

Assessment Requirements for MSFUP3012 Apply marine sewing and installation techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare and install a minimum of three (3) square metres of cover to at least three (3) vertical or horizontal surfaces
- Sew at least three (3) covers and sew appropriate fasteners and attachments to covers sewn
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Procedure for reporting damaged or imperfect products or interruption to work flow
- Work flow requirements for sewing process
- Operation of work systems and sewing equipment
- Characteristics of materials used and application and requirements of the finished products
- Causes of faults and repair methods
- Identification of equipment, processes and procedures
- Quality systems and standards
- Workplace procedures

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate sewing machine, work orders, materials, fittings and threads.

MSFUP3013 Cut and sew canvas and acrylics

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers measuring, cutting and sewing canvas and acrylic materials, and applying fixtures and fittings for upholstery applications and for other uses, such as automotive and marine applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------|---|
| 1 Prepare for work | 1.1 Specifications, patterns and/or plans are read and interpreted to identify required material, number and nature of items to be cut and the equipment to be used |
| | 1.2 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | 1.3 Machines, attachments, tools, materials, work method and sequence are determined |
| | 1.4 Suitable work area is selected, prepared and cleaned of any contaminants |
| | 1.5 Equipment, including any supplementary equipment, is |

		identified and checked for safe operation, components and controls
	1.6	Scissors and any other cutting equipment are selected for the material to be cut and checked for appropriate sharpness, operation and safe condition
	1.7	Materials to be cut and sewn are identified and inspected and problems, including any materials which do not meet the job order requirements, are identified and reported in accordance with workplace procedures
2	Develop cutting plan	2.1 Cutting requirements are identified
		2.2 Measurements for item are confirmed, noting locations of high wear/chafing, fittings/attachments and fixing devices
		2.3 If appropriate, cutting list is developed using appropriate format, abbreviations and terminology for cut sizes, and number of pieces in accordance with workplace procedures
		2.4 Cutting plan is developed in accordance with workplace procedures
3	Prepare materials for cutting	3.1 Material is selected in accordance with work order and laid out and inspected for flaws
		3.2 Finished side of the materials are identified and positioned on cutting table for marking/pattern lay out
		3.3 Material is marked out/patterns are laid out following work procedures and instructions
4	Cut material	4.1 Measurements are confirmed and appropriate adjustments to the positioning of fabric are made
		4.2 Tools and equipment are checked for operation
		4.3 Required cutting operations are completed to cut material following work instructions
		4.4 Cut material is inspected for quality and unsatisfactory items are processed in accordance with workplace instructions
		4.5 Cut materials are labelled and despatched to next process in accordance with workplace procedures
5	Conduct sewing operation	5.1 Items to be sewn are inspected for quality and dimensions

- | | | |
|---|---------------|---|
| | 5.2 | Sewing machine, including attachments, as required, is set up in accordance with workplace instructions |
| | 5.3 | Machine is operated in accordance with manufacturer instructions and workplace procedures to maintain required product quality and output |
| | 5.4 | Reinforcing/protective measures, fittings/attachments and fixing devices are attached in accordance with workplace procedures |
| | 5.5 | Finished items are inspected for quality with unacceptable items being reprocessed in accordance with workplace procedures |
| 6 | Complete work | |
| | 6.1 | Workplace documentation, including stock usage, is completed and processed following workplace procedures |
| | 6.2 | Equipment maintenance and work area clean-up are completed following workplace procedures |
| | 6.3 | Waste is collected and bundled for recycling/re-use as required by workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health

	regulations, manual handling procedures and organisation insurance requirements
	<ul style="list-style-type: none">• work requires individuals to demonstrate some discretion, judgement and problem solving
Fittings/attachments and fixing devices include:	<ul style="list-style-type: none">• clips• press studs• buckles• eyelets• shackles• zips• reinforcing patches• straps
Tools and equipment include:	<ul style="list-style-type: none">• measuring tape• scissors• cutting blades• knives and thread
Machines include:	<ul style="list-style-type: none">• overlocker• flatbed• walking foot
Materials may include:	<ul style="list-style-type: none">• cloths• canvases• acrylics• carpets• foam-backed fusion bonded• needle punched materials• thread
Personal protective equipment includes:	<ul style="list-style-type: none">• that prescribed under legislation, regulations and enterprise policies and practices:<ul style="list-style-type: none">• safety glasses/goggle• hair nets• ear muffs/plugs• gloves• footwear and protective clothing
Information and procedures include:	<ul style="list-style-type: none">• workplace procedures relating to the use of tools and equipment• work instructions, including job sheets, cutting lists, plans, drawings and designs• workplace procedures relating to reporting and communication• manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFUP3013B Cut and sew canvas and acrylics.

Assessment Requirements for MSFUP3013 Cut and sew canvas and acrylics

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Measure, cut and sew one (1) canvas product and one (1) acrylic product applying binding as an edge finish to a curve and three (3) corners, two metres in length
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Procedure for reporting damaged or imperfect products or interruption to work flow
- Work flow requirements for cutting and sewing process
- Operation of work systems and cutting and sewing equipment
- Characteristics of the materials used and the application of the finished products
- Causes of faults and repair methods
- Identification of equipment, processes and procedures
- Quality systems and standards
- Workplace procedures

Assessment Conditions

- Assessors must:

- hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to a cutting table, scissors, blades and cutting machines, sewing machine and a work order.

MSFUP3014 Set up, operate and maintain computer numerically controlled (CNC) cutting machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers setting up, operating, adjusting, monitoring and maintaining CNC machines used in the cutting of upholstery materials.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for work	<div><div>1.1</div><div>Work instructions are used to determine job requirements including design, quality, materials, equipment and quantities</div></div> <div><div>1.2</div><div>Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work</div></div> <div><div>1.3</div><div>Appropriate CNC cutting program and settings are determined</div></div> <div><div>1.4</div><div>Material for cutting is selected and inspected for appropriate quality</div></div> <div><div>1.5</div><div>Machines, cutting tools and jigs are checked for safe and</div></div>

		effective operation
	1.6	Procedures are determined for minimising waste material and for maximising energy efficiency while completing the job
	1.7	Safety equipment, including emergency stops, gauges, guards and controls are checked
2	Set up machines	2.1 CNC cutting program is set to job requirements
	2.2	Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions
	2.3	Trial runs are conducted to check machine operation and quality of finished work
	2.4	Final adjustments are made to CNC programs and equipment according to workplace procedures
3	Operate CNC cutting machine	3.1 Machines are operated and monitored to ensure product quality and output
	3.2	Waste quantities are checked and minimised
	3.3	Problems with the required work, including machine operation/production, are identified and reported in accordance with workplace procedures
	3.4	Any authorised changes in working procedures are followed
	3.5	Daily routine lubrication and adjustments for the equipment are completed
4	Complete work and maintain equipment	4.1 Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures
	4.2	Material that can be re-used is collected and stored
	4.3	Waste and scrap are removed following workplace procedures
	4.4	Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures
	4.5	Unserviceable equipment is tagged and faults identified in accordance with workplace procedures

- 4.6 Operator maintenance is performed on equipment and tooling is maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFUP3014 Set up, operate and maintain computer numerically controlled (CNC) cutting machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Set up and program a CNC machine for the cutting task, load fabric and operate machine to accurately cut components for an upholstered furnishing item
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow in relation to the operation of CNC machines
- Identification of machines, processes and procedures, including maintenance requirements
- Procedures for reporting materials, product or equipment faults
- Quality requirements of components produced
- Characteristics of materials used and uses of products produced
- Workplace safety system requirements related to the operation of CNC machines

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to CNC cutting machines, standard operating procedures, unprocessed materials and work orders.

MSS015002A Develop strategies for more sustainable use of resources

Modification History

Not applicable.

Unit Descriptor

This unit of competency covers identifying strategies for more sustainable uses of resources. The unit includes the identification of waste as defined in lean manufacturing (muda) as part of a strategy for achieving better sustainability outcomes in a process as well as quantifying theoretical and actual resource (including energy) consumption.

Application of the Unit

This unit applies inside organisations and their value chains and specifically applies to the use of resources as part of an overall response to improving sustainability. The unit has been developed with manufacturing operations as a focus. However, because of the range of organisations in a typical manufacturing value chain it may also be applied to other types of organisations.

The unit assumes that a decision to attempt to achieve more sustainable use of resources has already been made. The unit covers the skills needed for developing a strategic approach to resource use at the organisation or value chain level.

The unit does not cover the technical skills required to implement specific initiatives that may be identified as part of the strategic plan. However, there is a requirement to present and organise data. The complexity of this requirement will vary according to the type and scale of the organisation's processes. Where required, appropriate mathematics and statistics units should be selected from the MEM05 Metal and Engineering Training Package or other appropriate Training Package.

Where the carbon footprint (or water footprint or similar) of an enterprise or value chain is known, the unit can be applied to developing strategies for the reduction of that footprint.

It would typically be undertaken by a manager or technical specialist who had a major responsibility for sustainability as part of a broader work role, or sustainability may be their primary work responsibility.

For specific techniques covering the auditing of water, energy, emissions and transport, refer to relevant sustainability audit units.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

- | | |
|---|---|
| 1 Quantify resource consumption | 1.1 Identify all significant resources used by process |
| | 1.2 Identify consumption measurements available for each resource |
| | 1.3 Determine consumption for each resource |
| 2 Quantify resource loss | 2.1 Determine theoretical consumption of each resource |
| | 2.2 Compare theoretical consumption with actual consumption |
| | 2.3 Determine loss (emission) for each resource |
| 3 Recommend strategies for reducing waste | 3.1 Short-list high emission process steps |
| | 3.2 Analyse process to identify emission steps or locations |
| | 3.3 Determine root cause of emission |
| | 3.4 Investigate methods for reducing emission |
| | 3.5 Develop strategies and recommendations for improvement |
| 4 Prepare resources use audit report | 4.1 Identify purpose of report and key stakeholders |
| | 4.2 Compile data, implications and recommendations |
| | 4.3 Consult with stakeholders as appropriate |
| | 4.4 Draft and present report |

Required Skills and Knowledge

Required knowledge includes:

- the concept of muda. Muda is usually summarised under the headings of the ‘seven wastes’ which include:
 - overproduction
 - delay/waiting
 - transportation
 - over processing
 - excess inventory
 - unnecessary motion
 - defects and rework
- methods of material balancing
- methods of energy balancing
- methods of comparing theoretical with actual resource consumption
- methods for mapping manufacturing processes and resources consumed
- methods of measuring actual resource usage
- concept of muda and muda categories
- muda reduction methods and strategies
- AS/NZS ISO 14000 Environmental Management Standards

Required skills include:

- calculating, manipulating and interpreting numerical data, including establishing series, means and averages, absolute and proportional material and energy usage per product or process, correlations and rates of change
- analysing and conducting root cause analysis
- calculating theoretical consumption of resources as the minimum amount of resources per product or process step as defined by the customer multiplied by the rate of production or process
- calculating actual consumption of resources per unit (e.g. per product, operation, site or value chain)
- writing technical reports
- consulting with technical experts and internal and external stakeholders

Evidence Guide

Overview of assessment	A person who demonstrates competency in this unit must be able to identify and quantify resources and waste in a process, recommend strategies to reduce waste and prepare a report with recommendations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> quantifying significant resource consumption and emission using materials balancing identifying and consulting with stakeholders developing strategies for reducing emissions preparing and presenting a resources use report.
Context of and specific resources for assessment	<ul style="list-style-type: none"> This unit of competency is to be assessed in the workplace or a simulated workplace environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace. This unit of competency may be assessed with other relevant units addressing sustainability at the enterprise level or other units requiring the exercise of the skills and knowledge covered by this unit. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
Method of assessment	<ul style="list-style-type: none"> In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work-like environment.
Guidance information for assessment	

Range Statement

Waste	Waste in this unit is used in the broader sense of ‘muda’ as used in lean manufacturing and the competitive manufacturing units of competency developed by Manufacturing Skills Australia (MSA)
Emissions	<p>Emissions means all materials which enter the process/site but which do not leave as part of the product and so includes:</p> <ul style="list-style-type: none"> known or able to be physically measured emissions of: <ul style="list-style-type: none"> gases, vapours and fumes liquids solids assumed emissions through material balancing assumed emissions through energy loss, including heat, friction and other energy conversion yield losses
Theoretical consumption	Theoretical consumption of resources is the minimum amount of resources per product as defined by the customer multiplied by the rate of production
Actual consumption	Actual consumption is the amount of a resource entering the value chain
Significant resources	<p>Significant resources includes resources which are deemed to be significant because they are:</p> <ul style="list-style-type: none"> high volume high value high environmental significance important to the product or process covered by legislation or regulation important to the enterprise <p>It need not include resources which are incidental to the activity and which are not otherwise significant</p>

Unit Sector(s)

Sustainability

MSS402001A Apply competitive systems and practices

Modification History

New unit, superceding MSACMS200A Apply competitive manufacturing practices - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to implement basic improvement practices within an organisation using competitive systems and practices. The unit focuses on bringing together the basic concepts and the holistic application of these basic concepts and processes to operations. It would typically be carried out working as part of a team.

Application of the Unit

This unit applies to an individual in an organisation that has embarked on competitive systems and practices. The unit covers the skills and knowledge required to contribute to the competitive systems and practices processes and assumes that they are to be used within the scope of the individual's job and authority.

This unit requires the application of skills associated with planning and organising an individual's own role within the competitive systems and practices framework.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify own place in the value chain	1.1	Identify customers relevant to own work and their needs/requirements
		1.2	Identify suppliers for own work
		1.3	Identify value contributions along the chain
		1.4	Identify and recommend methods of increasing own contribution to the value chain
2	Improve the product and process value	2.1	Identify customer features/benefits in the product and process
		2.2	Identify aspects of product and process which contribute to customer features/benefits
		2.3	Identify aspects of product and process which do not contribute to customer benefits/features
		2.4	Recommend methods of reducing waste and increasing features/benefits
3	Use competitive systems and practices	3.1	Identify competitive systems and practices used in organisation and own work area
		3.2	Apply practices appropriate for the job or process
		3.3	Monitor the job/process and make adjustments to improve it in accordance with procedures
		3.4	Identify own skill requirements and seek skill development, if required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify scope of competitive systems and practices implementation and contributing suggestions for improvement
- visualising normal operational procedures in terms of flow and contribution to customer outcomes
- planning own tasks to support competitive systems and practices implementation
- implementing competitive systems and practices in own work area according to instructions
- identifying waste (muda)

Required knowledge

Required knowledge includes:

- internal and external customers and the value they derive from operations
- suppliers, their capabilities and contribution to value (this may be obtained from an existing value stream map or other enterprise documentation)
- waste (muda)
- relevant competitive systems and practices for own job and how to apply them
- factors impacting on product, operations and waste, particularly those wholly or partially under their control (and how to control them)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person being assessed against this unit will work effectively in a competitive systems and practices environment, making continual positive contributions to the improvement of the business within the scope of their job.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: <ul style="list-style-type: none">• identify the scope of competitive systems and

	<p>practices implemented in their work area</p> <ul style="list-style-type: none"> • identify services and/or functions supplied by suppliers and to customers • identify own tasks and responsibilities and relate them to organisation and customer requirements • identify aspects of products and process which add to or detract from customer benefit • contribute suggestions for improvement.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads, and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
-------------------------------------	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control And Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted</p>
--	--

	<p>so as to take into account:</p> <ul style="list-style-type: none"> the stage of implementation of competitive systems and practices the size of the enterprise the work organisation, culture, regulatory environment and the industry sector
Customers	<p>Customers may include:</p> <ul style="list-style-type: none"> internal or external customers and should be sufficiently close to the individual's work as to be easily identifiable final customers used as the basis for the identification of value and waste <p>The individual does not need to interface directly with the external customer, but should be provided with sufficient information to enable them to identify customer benefits and customer features</p>
Suppliers	<p>Suppliers may be:</p> <ul style="list-style-type: none"> internal or external suppliers and should be sufficiently close to the individual's work as to be easily identifiable <p>The operator does not need to interface directly with external suppliers, but should be provided with sufficient information to enable them to identify supplier contribution to their own work and to customer benefit</p>
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> work instructions standard operating procedures formulas/recipes batch sheets temporary instructions and similar instructions provided for the smooth running of the organisation good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> written, verbal, computer-based or in some other format

MSS402002A Sustain process improvements

Modification History

New unit, superseding MSACMS201A Sustain process improvements - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to prevent process improvements in their own work from slipping back to former practices or digressing to less efficient practices.

Application of the Unit

This unit applies to organisations implementing competitive systems and practices and continuous improvement. It covers the skills needed to ensure that process improvements are sustained and opportunities taken to suggest further improvements.

Improvement initiatives can be made by any of a number of methods and by teams or individuals. The unit assumes that desired levels of performance or quality are known to employees.

The unit can be applied to all areas of an organisation, including production, maintenance, logistics and office functions.

This unit requires the application of skills associated with problem solving, initiative and enterprise and self-management in order to understand implement and monitor improvement practices. It also requires the ability to identify and address personal skill gaps in order to manage own ability to implement change.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the Performance criteria describe the performance needed to

essential outcomes of a unit of competency.

demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Examine previous improvements	1.1	Identify impact of previous process improvements to equipment, operations, services or products in own work area
		1.2	Identify improvements where objectives have not been met
2	Implement corrective actions	2.1	Identify corrective actions that can be taken by self on process improvements that have not met objectives
		2.2	Obtain any required approvals
		2.3	Identify any additional, personal skill gaps and seek skill development
		2.4	Adopt improved processes
3	Check changes	3.1	Identify claimed improvements
		3.2	Identify methods of observing and measuring claimed improvements in own work area
		3.3	Check if claimed improvements are occurring and report problems in accordance with procedures
4	Check for further improvements	4.1	Look for areas of possible further improvement
		4.2	Discuss further improvements with peers and supervisors
		4.3	Take action to implement improvements in accordance with procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify scope and stage of implementation of competitive systems and practices and contribute suggestions for further improvements in implementation
- visualising normal operational procedures in terms of flow and contribution to customer outcomes
- planning own tasks to support competitive systems and practices implementation
- implementing competitive systems and practices in own work area according to instructions
- identifying waste (muda)
- monitoring competitive systems and practices performance indicators in own work and work area

Required knowledge

Required knowledge includes:

- internal and external customers and the value they derive from own work area operations
- suppliers to own work area, their capabilities and contribution to customer benefit
- waste (muda)
- relevant competitive systems and practices for own job and how to apply and monitor the outcomes
- factors impacting on product, operations and waste, particularly those wholly or partially under their control (and how to control them)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person being assessed against this unit will be able to demonstrate their willing adoption of new equipment, processes, procedures and practices as well as their
------------------------	---

	expertise at implementing them and making critical reviews of their performance in line with their level of competence and authority.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • implement and monitor process improvements in own work area against objectives • contribute suggestions for further improvement/s • apply procedures for seeking approvals and reporting non-conformances.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made</p>

	to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts
--	--

	<ul style="list-style-type: none"> • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and industry sector
Customers	<p>Customers may be:</p> <ul style="list-style-type: none"> • internal or external customers and should be sufficiently close to the individual's work as to be easily identifiable • final customers used as the basis for the identification of value and waste <p>The individual does not need to interface directly with the external customer, but should be provided with sufficient information to enable them to identify customer benefits and customer features</p>
Suppliers	<p>Suppliers may be:</p> <ul style="list-style-type: none"> • internal or external suppliers and should be sufficiently close to the individual's work as to be easily identifiable <p>The operator does not need to interface directly with external suppliers, but should be provided with sufficient information to enable them to identify supplier contribution to their own work and to customer benefit</p>
Measuring improvements	<p>Measuring improvements may include:</p> <ul style="list-style-type: none"> • personally taking measurements • arranging for measurements to be taken/made by appropriate personnel
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/recipe • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing

	<p>practice (GMP) and responsible care) and government regulations</p> <p>Procedures may be:</p> <ul style="list-style-type: none">written, verbal, computer-based or in some other format
Improvements	<p>Improvements include:</p> <ul style="list-style-type: none">techniques for preventing mistakes by designing the operations process, equipment and tools so that an operation literally cannot be performed incorrectly (e.g. baka-yoke)techniques that generate warning signals were a mistake is about to be performed (poka-yoke)

MSS402010A Manage the impact of change on own work

Modification History

New unit, superseding MSACMC210A Manage the impact of change on own work - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an employee to effectively manage the changes in their own work resulting from their organisation's implementation of competitive systems and practices.

Application of the Unit

This unit applies to an employee in an organisation implementing competitive systems and practices that affect the employee's own work. The unit includes the skills required to positively participate in ongoing and continuous change as it affects their work. The employee will be expected to deal with these changes as part of a team and to give feedback from their own perspective.

This unit requires the application of skills associated with problem solving, planning and organising and self-management for assessing and managing the impact of change on own work. This unit also requires the ability to seek information and feedback from team members on the impact of changes and suggested improvements.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Examine the impact of change on own work practices	1.1	Identify competitive systems and practices relevant to changes in own work
		1.2	Examine changes to work flow
		1.3	Examine changes to equipment/process/physical environment
		1.4	Examine changes to work relationship with team members and other teams
		1.5	Examine changes to data collection needs
		1.6	Examine changed work for impacts on health, safety and environment (HSE)
		1.7	Examine changes to quality requirements
		1.8	Identify any additional individual skill needs
		1.9	Identify other areas requiring assistance
2	Implement change	2.1	Review changes which may have an adverse impact with team leader
		2.2	Adopt changes to individual work practice
		2.3	Seek assistance in gathering/processing data, as required
		2.4	Implement the data collection/processing and take actions on resulting information in accordance with procedures
		2.5	Seek assistance/training to meet needs caused by change
3	Implement continuous	3.1	Critically examine all changes
		3.2	Identify impacts of changes both up and down the

improvement

immediate value stream

3.3 Identify areas for improvement

3.4 Make recommendations for improvement in accordance with procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying the competitive systems and practices being implemented in the organisation that are relevant to own work, including, if implemented:
 - Just in Time (JIT) and kanban systems
 - preventative maintenance
 - 5S housekeeping
 - continuous improvement processes (e.g. kaizen)
 - waste (muda) elimination
 - formal problem solving procedures (e.g. root cause analysis (RCA))
- analysing own work procedures
- communicating with others in work area, team leaders and other employees relevant to changes in own work
- solving problems relevant to changes in own work
- identifying sources of assistance in organisation if difficulty is experienced with changes
- interpreting relevant procedures and instructions
- working as part of a team

Required knowledge

Required knowledge includes:

- features of common competitive systems and practices sufficient for identification, including:
 - JIT and kanban systems
 - preventative maintenance
 - 5S housekeeping
 - continuous improvement processes (e.g. kaizen)

- waste (muda) elimination
- formal problem solving procedures (e.g. RCA)
- current processes and principles of operation
- sources of data on the process/plant and possible applications to information
- methods of determining own skill needs and developing skills, if required
- HSE principles as relevant to own job
- change implementation contacts and procedures relevant to work area
- employee assistance mechanisms in the organisation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify the competitive systems and practices used in their own work • identify changes to their own work flowing from the implementation of the relevant competitive systems and practices • implement changes • know when and how to seek assistance with work changes • make suggestions for improvements.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess response to

	contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on. • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems such as Systems Control and Data Acquisition (SCADA)
--	---

	<p>software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</p> <ul style="list-style-type: none"> • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Managing impact of change	<p>Managing impact of change may include:</p> <ul style="list-style-type: none"> • elements being undertaken individually or as part of a team • seeking assistance from team leaders for areas outside the employee's range of responsibility and authority
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • all work instructions • standard operating procedures • formulas/recipes • batch sheet • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing

	<p>practice (GMP) and responsible care) and government regulations</p> <p>Procedures may be:</p> <ul style="list-style-type: none"> written, verbal, computer-based or in some other format
Gathering and monitoring performance data	<p>The gathering and monitoring of performance data may be:</p> <ul style="list-style-type: none"> undertaken manually by individual employees through charts, tally sheets or keypad/board entry collected automatically through software, such as SCADA software, ERP systems, MRP and proprietary systems
Continuous improvement	<p>Continuous improvement in competitive systems and practices (often referred to as kaizen) includes:</p> <ul style="list-style-type: none"> the continual evaluation and improvement of all process in terms of time required, resources used, resultant quality, and other aspects relevant to the process
Value stream	<p>The value stream begins with the customer and includes all actions (both value adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> sales outlet/representative information gathering, data analysis and research product design raw material sourcing intermediate processing final assembler/collation/preparation support services (e.g. accounting, finance and legal) storage and delivery to customer after market support

MSS402020A Apply quick changeover procedures

Modification History

New unit, superseding MSACMT220A Apply quick changeover procedures - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply quick changeover procedures in an organisation implementing competitive systems and practices.

Application of the Unit

This unit applies to individuals in an organisation which is implementing competitive systems and practices and is pursuing quick changeover as one of its competitive operations tools. The unit can apply to quick changeovers of equipment, processes, batches or product type.

This unit covers the carrying out of these quick changeovers and also recommending improvements within the scope and authority of the individual's job.

Particular technical skills may also be required in some operations sectors and for some jobs. These skills should be gained from the Training Package relevant to the individual's industry and occupation.

This unit requires the application of skills associated with applying quick changeover procedures, including the planning and organising of own work, identifying problems and making suggestions for improvement of procedures.

This unit may not be applicable to a totally continuous operation producing only the one product, or simultaneous range of products. The unit is also not applicable to a maintenance/PVI shutdown as experienced by the continuous process manufacturers. However, where there is continuous operation on a campaign basis, it may be applied to the changeover between campaigns or similar changeovers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Prepare for changeover	1.1	Determine when changeover will be required
		1.2	Review plans and instructions for quick changeover
		1.3	Identify role of others in quick changeover
		1.4	Obtain all required tools/parts/materials for changeover
		1.5	Organise process and tools/parts/materials ready for changeover
2	Make quick changeover	2.1	Plan changeover according to quick changeover principles
		2.2	Liaise and work with relevant people in quick changeover
		2.3	Complete changeover according to procedures
		2.4	Check output meets specification
		2.5	Debrief with all relevant stakeholders
		2.6	Note any steps which cause a problem
		2.7	Recommend changes to problematic steps
3	Improve occupational health and safety	3.1	Identify hazards to self or others in all steps/actions
		3.2	Determine risks from each hazard

- (OHS)
- 3.3 Identify actions which may be performed in a more ergonomic manner
 - 3.4 Recommend changes to improve OHS

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining/predicting when a changeover will occur through knowledge of products and processes in own work area
- communicating with others to clarify scope and procedures for quick changeover and contributing suggestions for improvement
- planning own tasks in quick changeover
- identifying and working to target changeover time
- working as part of a team
- setting up quick changeover using appropriate tools, process skills and procedures
- following OHS procedures and regulatory requirements and notifying risks

Required knowledge

Required knowledge includes:

- principles of quick changeover, including:
 - setting of target time for changeover
 - conversion of internal set-up time to external set-up time, where appropriate
 - simplification of changeover steps
 - monitoring and continuous improvement of changeovers
- relevant operational procedures
- target time for changeover
- relevant OHS regulations and requirements
- purposes/requirements of changeover
- methods of recommending changes
- quality requirements for products and processes
- minimisation of changeover waste (e.g. scrap and energy)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• identify the scope and equipment to be used in a quick changeover implemented in their work area• identify the target time• understand the difference between internal and external changeover steps• identify own tasks and responsibilities in a quick changeover• identify problems in quick changeovers• contribute suggestions for improvement.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none">• workplace procedures and plans relevant to work area• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee• documentation and information in relation to production, waste, overheads and hazard control/management• reports from supervisors/managers• case studies and scenarios to assess response to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none">• demonstration in the workplace• workplace projects• suitable simulation• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)

	<ul style="list-style-type: none"> targeted questioning reports from supervisors, peers and colleagues (third-party reports) portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> lean operations agile operations preventative and predictive maintenance approaches monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems statistical process control systems, including six sigma and three sigma Just in Time (JIT), kanban and other pull-related operations control systems supply, value, and demand chain monitoring and analysis 5S
--	---

	<ul style="list-style-type: none"> • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Changeover	<p>Changeover may refer to:</p> <ul style="list-style-type: none"> • an exchange of equipment (often dies or tools (traditional)) • a change between products/batches or between campaigns or processes. It may be any quantum change to produce a different product or undertake a different process <p>In competitive systems and practices equipment-based quick changeover techniques in manufacturing can often be referred to under different names, for example:</p> <ul style="list-style-type: none"> • single minute exchange of die (SMED) – The term originated with die changeovers but now often refers to the ability to perform any set-up activity in a minute or less of machine or process downtime • single-digit set-up – performing a set-up activity in a single-digit number of minutes (i.e. fewer than ten) • one touch exchange of die (OTED) – literally, changing a die with one physical motion, such as pushing a button; broadly, an extremely simple procedure for performing a set-up activity
Set-up	<p>Set-up can be divided into two types:</p> <ul style="list-style-type: none"> • internal set-up (work that can be done only when the machine or process is not actively engaged in production) • external set-up (work that can be done concurrently

	<p>with the machine or process performing production duties)</p> <p>The same distinction can be applied to non-production equipment-based work areas where changeovers of processes or operations can be:</p> <ul style="list-style-type: none"> • internal (requires work to stop, be reset, computers restarted, and so on) • external (where work can continue during the changeover)
Set-up time	<p>Set-up time includes:</p> <ul style="list-style-type: none"> • the work time required to change over a machine or process from one item or operation to the next item or operation
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of operations, processes, plant and equipment • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> • written, verbal, computer-based or in some other format

MSS402021A Apply Just in Time procedures

Modification History

New unit, superseding MSACMT221A Apply Just in Time (JIT) procedures - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to work in an organisation implementing Just in Time (JIT) procedures.

Application of the Unit

This unit applies to an individual working in an organisation following JIT who will need to follow procedures which are specific to JIT, such as the controlled flow of material (e.g. the use of kanban and elimination of waste). This will involve the individual in the application of the pull system to their job and the authorisation of product/material flows in accordance with procedures and their level of authority.

This unit requires the application of skills associated with planning and organising and self-management to deliver product on demand using necessary tools, equipment and processes to meet production requirements. The unit also requires an ability to recognise and act on problems that may interfere with meeting production demands.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Respond to indicator of demand	1.1	Identify pull of product through work role
		1.2	Recognise indicator of flow authorisation
		1.3	Identify production or service required
2	Make products or deliver service to demand	2.1	Make product or deliver service as required by ticket
		2.2	Identify any factors likely to prevent demand being satisfied in own work or work of the team
		2.3	Take action in accordance with procedures
3	Update demand information as required	3.1	Record information on ticket to procedures, as required
		3.2	Facilitate operation of flow authorisation as part of work
4	Recommend improvements	4.1	Examine the operation of the JIT system as it relates to own work
		4.2	Identify areas for improvement
		4.3	Identify any additional personal skill requirements to implement JIT procedures
		4.4	Recommend improvements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- receiving ticket, kanban, order or other indicator of demand and interpreting correctly for own work function, including quantity, quality, time and delivery requirements
- ensuring that all production and movement of parts/material or delivery of a service for which the individual is responsible for takes place only as required by a downstream operation
- recognising and taking appropriate action on faults and other issues that may threaten the JIT delivery of own product or service
- reading and recording information on tickets or other indicators of demand
- suggest improvements to JIT system, as appropriate
- performing technical functions to meet indicators of demand from downstream and to issue indicators of demand upstream

Required knowledge

Required knowledge includes:

- relevant indicator of demands for own job
- own role in flow authorisation
- JIT methods relevant to job
- procedures for recommending improvements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• identify the indicators of demand and the flow authorisation system in their work area• relate products and services supplied by suppliers and customers to the flow authorisation system• identify own tasks and responsibilities and relate them to the flow authorisation system• interpret received indicators of demand correctly for quantity, quality and time of delivery• contribute suggestions for improvement.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p>

	<p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess response to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using some combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work

environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive systems and practices</p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
<p>JIT</p>	<p>JIT is a scheduling concept that calls for any item or service needed for an operation, whether a service, raw material, finished item, or anything in between to be available:</p>

	<ul style="list-style-type: none"> precisely when the service, product or operation is to be produced or undertaken in the right quantity and at the right quality
Product	<p>Product may include:</p> <ul style="list-style-type: none"> a physical product a supporting utility service, such as water, gas, power some other service (e.g. cranes and forklifts)
Flow authorisation	<p>Flow authorisation refers to:</p> <ul style="list-style-type: none"> a system which authorises the worker to make a product without reference to another authority
Indicator of demand	<p>An indicator of demand may include:</p> <ul style="list-style-type: none"> kanban bin, ticket or similar some other indicator of demand pull which authorises production or movement of an item (in some plants, this may also include authorisation using SCADA software) <p>In continuous operations organisations, production is measured in terms of production rate (e.g. kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (e.g. ticket, order from a supplier) or may be a SCADA signal from a remote facility (e.g. customer tank) saying that resupply is required or similar</p>
Ticket	<p>A ticket may include:</p> <ul style="list-style-type: none"> kanban or some other record, paper or electronic, which constitutes the whole or part of the flow authorising system (where kanban bins are used, there may be no other record)
Kanban	<p>Kanban refers to:</p> <ul style="list-style-type: none"> a card or sheet used to authorise production or movement of an item and may vary in format or content between organisations and departments
SCADA	<p>SCADA refers to:</p> <ul style="list-style-type: none"> a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action
Pull system	<p>A pull system refers to:</p>

	<ul style="list-style-type: none">• an operations planning system based on making on demand, as opposed to a push system based on making for stock using a sales forecast
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none">• work instructions• standard operating procedures• formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations <p>Procedures may be:</p> <ul style="list-style-type: none">• written, verbal, computer-based or in some other format

MSS402030A Apply cost factors to work practices

Modification History

New unit, superseding MSACMT230A Apply cost factors to work practices - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an individual to identify cost components in their work and to be able to determine, in general terms, the cost impacts of alternative actions.

Application of the Unit

This unit applies to an individual who is required to contribute to, and be involved in, the assessment of cost factors in their work. This may be done individually or in a team environment.

The unit covers the skills to be able to assess the relative costs of the alternatives and use this as one of the key factors in making decisions. Decisions are made within the scope of the employee's authority and according to procedures. Typical decisions include those that contribute to the efficient organisation of own work and the improvement of production time and cycle times.

This unit requires the application of skills associated with problem solving to identify cost factors and cost implications of own work and self-management to apply cost-effective practices.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised

unit of competency. text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify the major cost components of product or process in own work area	1.1	Identify cost components in the product or process in own work area
		1.2	Recognise the impact of current or alternative actions on costs
2	Identify constraints to cost-efficiency	2.1	Identify required production/process rate and major costs
		2.2	Identify costs factors under individual or team control
		2.3	Relate identified costs factors to impact on overall cost of production/process
		2.4	Identify cost factors that are a constraint to cost-efficiency in own work area
3	Apply cost-efficient work practices	3.1	Identify and explain to relevant people the implications of possible actions/changes to improve cost-efficiency in simple financial terms
		3.2	Identify non-financial implications of proposed changes in discussion with relevant people
		3.3	Select actions which minimise overall costs
		3.4	Monitor actions to ensure cost-efficiency in own work area is maintained

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify cost factors and contribute suggestions for improvement
- visualising normal operational procedures in terms of flow
- distinguishing between fixed and variable costs
- identifying fixed and variable cost components relevant to own work, including where applicable:
 - power/energy
 - materials, plant and equipment
 - production or process time, including impact on salary and wages
 - office expenses
 - government taxes and charges

Required knowledge

Required knowledge includes:

- cost components of products made
- costs concepts, such as expense and income
- major cost contributors to product (e.g. energy)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• identify the scope of their own and their teams work and relate it to the overall flow of work in the organisation• express cost factors in specific terms (e.g. cost per
--	---

	<p>item, process and task) and not just in a general manner</p> <ul style="list-style-type: none"> • identify and express costs factors in simple financial terms • use cost factors to select lower cost alternatives when making decisions.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and</p>

	literacy capacity of the candidate and the work being performed.
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems

MSS402031A Interpret product costs in terms of customer requirements

Modification History

New unit, superseding MSACMT231A Interpret product costs in terms of customer requirements - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an individual to be able to identify the major cost components of either products or processes, the basic relationship of these to customer benefit, and use this to help minimise waste (defined as anything not delivering value as defined by the customer). It has a different focus to MSS402030A Apply cost factors to work practices, which focuses on costs in isolation, whereas this unit regards all costs not directly leading to customer benefit as waste.

Application of the Unit

This unit applies to an individual who uses their understanding of the customer's requirements of the product or process being undertaken as the basis for investigating work processes to identify waste sources and then takes action relevant to their level of competency and authority to reduce this waste. It requires an understanding of both the cost factors in the products they make and also the benefits which the customer derives from the product.

This competency may be performed individually or in a team-based environment.

This unit requires the application of skills associated with analysis and problem solving to identify waste and determine ways to minimise waste. This unit requires initiative and enterprise and application of learning in concepts of waste and waste minimisation.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify cost components deriving from customer benefit and other costs	1.1	Identify customer features/benefits in product or process being undertaken
		1.2	Identify cost components which deliver customer features/benefits and those which do not
2	Compare required performance of product or process steps with actual performance	2.1	Identify performance required to meet customer needs in own work and that of team
		2.2	Identify actual performance
		2.3	Compare cost components of products or process with current customer-related targets
		2.4	Separate costs components into those that contribute to customer features/benefits and those that do not
		2.5	Determine non-contributing cost components which are under control of the individual or team
3	Minimise waste	3.1	Recommend changes to eliminate or reduce waste
		3.2	Adopt changes which minimises waste
		3.3	Monitor effect of changes to ensure gains are made against customer features/benefits

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying customer benefit in own work and that of the individual's team
- identifying financial and other performance indicators for own work and of team, including where appropriate, takt time
- communicating with others to clarify cost factors and contribute suggestions for improvement
- visualising normal operational procedures in terms of flow
- distinguishing between fixed and variable costs
- classifying fixed and variable cost components in terms of relevancy to customer benefit, including where applicable:
 - power/energy
 - materials, plant and equipment
 - production or process time, including impact on salary and wages
 - required and unnecessary downtime
 - office expenses
 - government taxes and charges

Required knowledge

Required knowledge includes:

- value as defined by the customer and the relevancy to own and team's work
- ability to access company information about:
 - customer features/benefits
 - cost components of products made
 - costs concepts, such as expense and income
 - major cost contributors to product (e.g. energy)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• identify customer benefit from own and team's work• express cost factors (financial and other factors) in specific terms (e.g. cost per item, process and task), and not just in a general manner• identify and express costs factors in simple financial terms• contribute suggestions for improvement to minimise waste and overall costs.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none">• workplace procedures and plans relevant to work area• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee• documentation and information in relation to production, waste, overheads and hazard control/management• reports from supervisors/managers• case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none">• demonstration in the workplace• workplace projects• suitable simulation• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on• targeted questioning• reports from supervisors, peers and colleagues (third-party reports)• portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p>

	Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none">• lean operations• agile operations• preventative and predictive maintenance approaches• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems• statistical process control systems, including six sigma and three sigma• Just In Time (JIT), kanban and other pull-related operations control systems• supply, value, and demand chain monitoring and analysis• 5S• continuous improvement (kaizen)• breakthrough improvement (kaizen blitz)• cause/effect diagrams• overall equipment effectiveness (OEE)• takt time• process mapping• problem solving

MSS402040A Apply 5S procedures

Modification History

New unit, superseding MSACMT240A Apply 5S procedures in a manufacturing environment
- Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an employee to apply 5S procedures to their own job and work area. The unit assumes the employee has a particular job and an allocated work area and that processes in the work area are known by the individual.

Application of the Unit

This unit applies to an individual in an organisation who works in an operational position as part of production, maintenance, logistics, and so on. The unit can also apply to individuals in other organisations who have a discrete role and responsibility for individually managed processes. For employees in an office, the specific office-related unit *MSS402041A Apply 5S* in an office should be selected.

This unit applies where an organisation has decided to embark on a competitive systems and practices strategy and as part of this has adopted the philosophy of 5S as one of the tools to improve performance. The employee needs to apply 5S to their job and work area and maintain the housekeeping and other standards set by 5S.

This unit requires the application of skills associated with planning and organising, problem solving and self-management, in order to identify and implement 5S housekeeping practices.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Sort needed items from unneeded	1.1	Identify all items in the work area
		1.2	Sort items to achieve deliverables and value expected by downstream and final customers
		1.3	Sort items required for regulatory or other required purposes
		1.4	Place any non-essential item in a appropriate place other than the workplace
		1.5	Regularly check that only essential items are in the work area
2	Set the workplace in order	2.1	Identify the best location for each essential item
		2.2	Place each essential item in its assigned location
		2.3	After use immediately return each essential item to its assigned location
		2.4	Regularly check that each essential item is in its assigned location
3	Shine the work area	3.1	Keep the work area clean and tidy at all times
		3.2	Conduct regular housekeeping activities during shift
		3.3	Ensure the work area is neat, clean and tidy at both beginning and end of shift

4	Standardise activities	4.1	Follow procedures
		4.2	Follow checklists for activities, where available
		4.3	Keep the work area to specified standard
5	Sustain the 5S system	5.1	Clean up after completion of job and before commencing next job or end of shift
		5.2	Identify situations where compliance to standards is unlikely and take actions specified in procedures
		5.3	Inspect work area regularly for compliance to specified standard
		5.4	Recommend improvements to lift the level of compliance in the workplace

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify issues during 5S implementation, communicate results and contribute suggestions for improvement
- visualising operations in terms of flow and contribution to customer outcomes
- planning own tasks in implementation of 5S
- implementing 5S in own work area according to instructions
- identifying waste (muda)
- prioritising activities and items
- reading and interpreting documents describing procedures
- recording activities and results against templates and other prescribed formats
- working with others
- solving problems

Required knowledge

Required knowledge includes:

- operations and processes relevant to own job
- meaning and application of 5S steps to own job and work area
- principles of efficient workplace organisation
- purposes of 5S
- methods of making/recommending improvements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • identify own tasks and responsibilities and relate them to organisation and customer requirements • identify and explain the stages of 5S • implement 5S in own work area • identify waste (muda) in the work area.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects

	<ul style="list-style-type: none"> • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems

MSS402050A Monitor process capability

Modification History

New unit, MSACMT250A Monitor process capability - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required for gathering of data and the interpretation of simple information to determine the compliance of the process and the taking of action as defined by the procedures where the information reveals the process is out of control parameters.

Application of the Unit

This unit applies to an individual in an organisation adopting specific competitive systems and practices, usually either six sigma or statistical process control/three sigma, as a means of determining and improving the capability of their process to customer requirements. The individual is involved in collecting specified data and performing specified manipulations to the data (typically by plotting on a chart or by entering into a nominated computer program). The information is typically presented to team members in terms of graphs/charts which they are expected to interpret at a basic level and then take action in accordance with procedures to restore the process to being under control parameters.

This unit requires the application of skills associated with entering and monitoring operational data and information and requires initiative, enterprise and problem solving in identifying production variations and making improvement recommendations.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

1	Collect and process data	1.1	Take specified measurements/readings, as required
		1.2	Enter data in log, computer or other record
		1.3	Manipulate and/or chart data as required by procedures
2	Identify variations that are not random and take action	2.1	Examine chart and/or reliability information
		2.2	Distinguish between random variations and those with an identifiable cause
		2.3	Take action specified in procedures when a variation with an identifiable cause occurs
3	Assist in process improvement	3.1	Collect data for process capability improvement trials
		3.2	Make recommendations for improvement
		3.3	Implement revised capability monitoring procedures

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting electronic and hard copy operating instructions and documents, including where used:
 - work instructions

- standard operating procedures
- formulas/recipes
- production and batch sheets
- temporary instructions
- other provided operating instructions
- monitoring performance data against specifications and control parameters
- examining equipment procedures, products and processes for possible causes of variations
- identifying when corrective action is required by reference to procedures

Required knowledge

Required knowledge includes:

- data collection methods for operations in work area
- data processing techniques required
- basic variability and normal distribution
- recognition of identifiable causes in accordance with procedures
- causes of different types of identifiable causes as defined by procedures
- actions to be taken for the different causes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	
	<p>Evidence should be available of data collected and processed. There may also be evidence of assignable causes recognised and action taken. There should not be evidence of assignable causes being ignored.</p> <p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• identify the scope of operations, including required performance parameters in their work area• collect, enter and process data, including normal performance and variations• read and interpret data, including identifying variation to set parameters• determine where assignable causes can be allocated to variations and take appropriate action• participate in data collection, when required, for

	<p>process capability trials</p> <ul style="list-style-type: none"> • contribute suggestions for improvement.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems. • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
--	--

Six sigma	<p>Six sigma is a process improvement methodology based on statistical process control with six sigma limits which equates to 3.4 defects per million opportunities for each product or service transaction</p> <p>Six sigma is also often used as a general term covering a competitive systems and practices approach. Six sigma training typically covers several units of competency in this Training Package</p>
Three sigma	<p>Three sigma includes:</p> <ul style="list-style-type: none">• statistical process control with three sigma limits which equates to 3 defects per thousand opportunities for each product or service transaction
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none">• work instructions• standard operating procedures• formulas/recipes• batch sheets• temporary instructions and similar instructions provided for the smooth running of the plant• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)• government regulations <p>Procedures may be:</p> <ul style="list-style-type: none">• written, verbal, computer-based or in some other form
Random variation	<p>Random variation is the term used in statistical control to refer to those variations for which no cause can be found</p>
Identifiable cause	<p>Identifiable cause (also referred to as assignable cause or special cause) refers to:</p> <ul style="list-style-type: none">• those variations for which a cause can be found and so the cause of the variation eliminated
Process capability	<p>Process capability means the capability of the process to deliver to customer defined requirements. Process capability includes process stability against standardised practices and documentation to eliminate variation against customer requirements</p>

MSS402051A Apply quality standards

Modification History

New unit, superseding MSACMT251A Apply quality standards - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply quality standards to work operations in an organisation. The unit is designed to complement competitive systems and practices units.

Application of the Unit

This unit applies to an individual who is expected to take responsibility for the quality of their own work, and to take actions specified in the procedures and within the scope of their job and authority to ensure that quality standards are met.

This unit requires the application of skills associated with interpreting and applying workplace standards and identifying and addressing problems that interfere with quality outcomes. The unit requires initiative, enterprise and self-management to ensure quality standards are achieved.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Assess own work	1.1	Continuously check completed work against workplace standards relevant to the operation being undertaken
		1.2	Demonstrate an understanding of how the work activities and completed work relate to the next production process or processes and to the final products or services concerned
		1.3	Identify and isolate faulty components, products or processes
		1.4	Record and/or report faults and any identified causes to the supervisor concerned, where required, in accordance with workplace procedures
2	Assess quality of received components, parts or materials	2.1	Continuously check received components, parts, materials, information, service or final products against workplace standards and specifications for conformance
		2.2	Demonstrate an understanding of how the received components, parts or materials, information or service relate to the current operation and how they contribute to the final quality of the product or service
		2.3	Identify and isolate faulty components, parts, materials or information that relate to the operator's work
		2.4	Record and/or report faults and any identified causes in accordance with workplace procedures
		2.5	Identify causes of any identified faults and take corrective action as specified in workplace procedures
3	Measure components, parts or materials	3.1	Measure materials, component parts, information, service or products, as required, using the appropriate measuring instruments in accordance with workplace procedures

4	Record information on production indicator	4.1	Record basic information on quality and other indicators of process performance in accordance with workplace procedures
5	Investigate causes of quality deviations	5.1	Investigate and report causes of deviations from specified quality standards for components
		5.2	Recommend suitable preventative action based on workplace quality standards and the identified causes of deviations from specified quality standards of materials

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting work instructions, specifications, standards and patterns appropriate to own work
- carrying out relevant visual inspections of materials, component parts and final products
- carrying out relevant physical/chemical measurements or tests
- maintaining accurate work records in accordance with procedures
- carrying out work in accordance with occupational health and safety (OHS) policies and procedures
- meeting work specifications
- communicating effectively within defined workplace procedures
- interpreting and applying defined procedures

Required knowledge

Required knowledge includes:

- relevant quality standards, policies and procedures
- relevant production processes, materials and products
- basic characteristics of materials used in the relevant production processes
- safety and environmental aspects of relevant production processes
- relevant measurement techniques and quality checking procedures
- workplace procedures
- reporting procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• interpret, relevant work instructions, standards and specifications appropriate to own work• check and measure relevant quality parameters• interpret results of quality checks in terms of specifications, patterns and work standards• take required action where standards of materials, component parts, final product or work processes are found to be unacceptable• maintain accurate records.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none">• workplace procedures and plans relevant to work area• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee• documentation and information in relation to production, waste, overheads and hazard control/management• reports from supervisors/managers• case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none">• demonstration in the workplace• workplace projects• suitable simulation• case studies/scenarios (particularly for assessment of

	<p>contingencies, improvement scenarios, and so on)</p> <ul style="list-style-type: none"> • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis
--	---

	<ul style="list-style-type: none"> • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Quality parameters	<p>Quality parameters may include:</p> <ul style="list-style-type: none"> • finish • size • durability • product or process variations • materials • alignment • colour • damage and imperfections • time
Quality checks	<p>Quality checks are against set parameters for the process or product. Examples include:</p> <ul style="list-style-type: none"> • visual inspection • physical measurements • chemical tests • checks against patterns, templates and guides • processing time
Materials	<p>Materials may include:</p> <ul style="list-style-type: none"> • physical raw materials • orders, forms and other documentation • services required for undertaking an operation (e.g. power, water, compressed air and fuel)

Measure	<p>Measure includes:</p> <ul style="list-style-type: none"> those measurements which may be taken by the employee in the workplace/at their work station
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> work instructions standard operating procedures formulas/recipes batch sheets temporary instructions and similar instructions provided for the operation of the plant good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> written, verbal, computer-based or in some other format
Indicators of production performance	<p>Indicators of production performance may include:</p> <ul style="list-style-type: none"> number of items/production rate delays and causes of delays (where known) other information as specified in the procedures
Data entry/recording	<p>Data entry/recording may include:</p> <ul style="list-style-type: none"> keyboard written (including ticks or signs) verbal
Sources of information/ documents	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> quality and Australian standards and procedures work instructions, patterns, designs and recipes organisation work procedures manufacturer instructions for materials and equipment organisational or external personnel customer requirements
Investigate and report	<p>Investigate and report includes:</p> <ul style="list-style-type: none"> following set procedures defined for such investigations <p>Set procedures may include:</p> <ul style="list-style-type: none"> verbal instructions

	<ul style="list-style-type: none"> documented procedures other quality procedures as implemented within an organisation or work environment
Workplace context	<p>Workplace context includes:</p> <ul style="list-style-type: none"> work organisation procedures and practices relating to the manufacture and quality outcomes for products conditions of service, legislation and industrial agreements, including: <ul style="list-style-type: none"> workplace agreements and awards federal or state/territory legislation standard work practice
Reporting/communication	<p>Reporting/communication may include:</p> <ul style="list-style-type: none"> verbal and written communication in accordance with organisational policies and procedures oral, written or visual communication and may include simple data
Being responsible for the maintenance of own work quality	<p>Being responsible for the maintenance of own work quality may include:</p> <ul style="list-style-type: none"> contributing to the quality improvement of team or section output, where necessary, in accordance with workplace procedures following safety, environmental, housekeeping and quality procedures as specified by materials/machine/equipment manufacturers, regulatory authorities and the organisation
Applicable regulations and legislation	<p>Applicable regulations and legislation may include:</p> <ul style="list-style-type: none"> OHS legislation relevant to workplace activities workers compensation legislation

MSS402060A Use planning software systems in operations

Modification History

New unit, superseding MSACMT260A Use planning software systems in manufacturing -
Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to access planning software (often known as Enterprise resource Planning (ERP), Materials Resource Planning (MRP and MRPII), and often by a proprietary name, to make routine business decisions required of the person as a regular part of their job.

Application of the Unit

This unit applies to an individual in an organisation using a planning software system and who must interface with that system. The unit applies to both accessing information from the planning software system and using it as an aid to decision making. This unit requires the application of communication, planning, and problem solving associated with using planning software in own work.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Use interface	1.1	Identify terminals relevant to own work station and functions
		1.2	Use keyboards, track ball/mouse and monitor and/or other peripherals to access system
		1.3	Navigate through system and screens to find program menu and data relevant to own work
		1.4	Identify and input information on own work processes at required frequency and to required detail
		1.5	Access message section and acknowledge messages
		1.6	Identify problems and make suggestions for improvements to relevance of planning software to own work
2	Access information	2.1	Identify work processes that require information from planning software system
		2.2	Obtain relevant data and information on current operations from the planning software system
		2.3	Identify the status of items in the value stream
		2.4	Access historical data and information
		2.5	Interpret information and identify and prioritise any actions required in response to information
3	Take appropriate actions in accordance with procedures	3.1	Take actions in response to information obtained from planning software
		3.2	Follow up as appropriate to ensure anticipated results have occurred
		3.3	Record adjustments and variations according to procedures

3.4 Identify any learning needs to use planning software and seek appropriate support

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting electronic and hard copy operating instructions and documents, including where used:
 - work instructions
 - standard operating procedures
 - formulas/recipes
 - production and batch sheets
 - temporary instructions
 - other provided operating instructions
- working within access control requirements of the planning software system
- identifying modules, screens, files, and so on, of software relevant to own work
- logging in and using terminals and planning software at a level of access appropriate to own work
- accurately inputting data
- searching and retrieving data
- accessing nominated assistance with planning software

Required knowledge

Required knowledge includes:

- technical knowledge needed to operate own work processes
- planning software system and operation, including:
 - terminal locations and types
 - security and access arrangements
 - range of information held in planning software relevant to own work
 - data collection methods for operations in work area
 - assistance arrangements for users of planning software
 - business activities exercised by/through the planning software system
- value created by operations for customers

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• identify the scope and relevance of planning software system to their own work• enter and retrieve data, including normal performance and variations• use planning software system to assist in own work• contribute suggestions for improvement to performance and relevance of planning software to own work area.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none">• workplace procedures and plans relevant to work area• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee• documentation and information in relation to production, waste, overheads and hazard control/management• reports from supervisors/managers• case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none">• demonstration in the workplace• workplace projects• suitable simulation• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)• targeted questioning• reports from supervisors, peers and colleagues

	<p>(third-party reports)</p> <ul style="list-style-type: none"> • portfolio of evidence <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz)

MSS402061A Use SCADA systems in operations

Modification History

New unit, superseding MSACMT261A Use SCADA systems in manufacturing - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an individual to interact with a System Control and Data Acquisition (SCADA) system as part of their job.

Application of the Unit

This unit applies to an individual in an organisation using a SCADA system and the individual must interface with that system. The individual will need to access this system as part of their routine and take actions based on the information they obtain from the SCADA system in accordance with procedures.

This unit requires the application of skills associated with using communication tools and technology for management of own work, planning and problem solving.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Use operator interface	1.1	Identify SCADA terminals relevant to own work station and functions
		1.2	Use keyboards, track ball, monitor and/or stand alone controllers to access/interrogate system
		1.3	Use correct level of access and find all relevant screens and information
		1.4	Access message section and acknowledge messages
		1.5	Input and output information correctly according to program and organisation requirements
2	Use information	2.1	Obtain data and information from SCADA, as required, including process, supply and product chain data
		2.2	Interpret data and information as required by own job
		2.3	Find and use relevant historical data and information
		2.4	Use manufacturer manuals or specifications, as required, to expand knowledge of SCADA system relevant to own work
		2.5	Determine and prioritise required actions
3	Make required changes in accordance with procedures	3.1	Adjust production/process in response to SCADA information
		3.2	Record adjustments and variations to specifications/schedules and report to appropriate personnel
		3.3	Seek feedback and information on adjustments to further improve procedures, where required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using SCADA terminals and other input devices
- reading and interpreting electronic and hard copy SCADA operating instructions and documents, including where used:
 - work instructions
 - standard operating procedures
 - temporary instructions
 - other provided operating instructions
- working within security and access control requirements of the SCADA system
- identifying modules, screens, and so on, of SCADA system relevant to own work
- accurately inputting and outputting data
- searching and retrieving data
- accessing SCADA system nominated assistance, when required

Required knowledge

Required knowledge includes:

- technical knowledge needed to operate own work processes
- hierarchy of SCADA system and operation
- information available from and controls exercised by/through the SCADA system

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• identify the scope and relevance of the SCADA system to their own work• access correct levels of the SCADA system• enter and retrieve data, including normal performance and variations
---	--

	<ul style="list-style-type: none"> • use SCADA system to assist in own work.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented ,or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as SCADA software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
SCADA	<p>SCADA refers to:</p> <ul style="list-style-type: none"> • a number of systems which automatically collect

	<p>critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action</p> <p>In some industry sectors, the SCADA system is sometimes integrated into other sophisticated computer control systems, such as Distributed Control System (DCS). These sectors may simply refer to their SCADA as the DCS or other similar term (such as the proprietary name of the computer system).</p> <p>SCADA systems may provide information from outside of the process, such as stock/material levels in a customer plant and/or available supply, supply rates and pricing from a supplier plant. This information may all be accessed by the SCADA system and the employee using it in order to make production rate and other control decisions (either automatically or human assisted) about their own operations and work processes</p>
Supply and product chains	<p>The supply chain Includes:</p> <ul style="list-style-type: none"> all suppliers in the chain from the initial raw material up to the current step in the operations process <p>The product chain includes:</p> <ul style="list-style-type: none"> all steps after the current step up to the final customer <p>Competitive systems and practices organisations encompass the entire production system, beginning with the customer, and includes:</p> <ul style="list-style-type: none"> the product sale outlet the final assembler product design raw material mining and processing all tiers of the value stream (sometimes called the supply chain) <p>Any truly 'competitive' system is highly dependent on the demands of its customers and the reliability of its suppliers. No implementation of competitive systems and practices can reach its full potential without including the entire 'organisation' in its planning</p>
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> work instructions standard operating procedures

	<ul style="list-style-type: none">• formulas/recipes• batch sheets• temporary instructions and similar instructions provided for the smooth running of the plant• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)• government regulations <p>Procedures may be:</p> <ul style="list-style-type: none">• written, verbal, computer-based or in some other format

MSS402080A Undertake root cause analysis

Modification History

New unit, superseding MSACMT280A Undertake root cause analysis - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to undertake root cause analysis (RCA) by any person. This will often be undertaken by people working in a team. This unit also covers the competencies needed by operators to contribute to an advanced maintenance strategy using RCA coupled with diagrams and charts.

Application of the Unit

This unit applies to individuals working in an organisation which is applying competitive systems and practices strategies. The unit applies to the formal problem solving to root cause that the individual must undertake in their own work area or where the individual contributes to problem solving to root cause as part of a team.

This unit requires an ability to seek and apply information from a variety of sources in order to inform RCAs. Initiative and enterprise is also required to identify quick fix and permanent solutions to problems.

Where training in a wider range of problem solving techniques and tools is required the unit MSAPMSUP390A Use structured problem solving tools should be selected.

essential outcomes of a unit of competency.

demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Recognise problems	1.1	Identify features or occurrences indicative of a problem
		1.2	Use appropriate tools, techniques and charts to define the problem
2	Implement quick fix	2.1	Recommend a quick fix within the scope of competency and authority
		2.2	Use technology or processes relevant to the problem to implement quick fix
3	Determine root cause	3.1	Identify a range of possible causes
		3.2	Gather data and other information to eliminate or confirm possible causes
		3.3	Use available data and information to link causes and effects
		3.4	Seek assistance, as required
		3.5	Identify root cause
4	Develop permanent solution	4.1	Identify a range of methods to eliminate the root cause or break the cause tree
		4.2	Select the most appropriate solution
		4.3	Liaise with relevant people
		4.4	Recommend or implement solution within the limits of competency and authority

4.5 Monitor impact of solution and make further recommendations, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- cooperating and working with others on problem solving
- assessing and recording information from a variety of sources
- defining potential problems factually, including:
 - location and extent of problem or incident
 - sequence of events where relevant
 - extent of deviation from normal operation or performance
- analysing potential problems across a range of varied activities and knowledge applications
- reading and constructing simple charts, such as cause and effect diagrams

Required knowledge

Required knowledge includes:

- RCA methodology, including difference between quick fixes and root cause elimination or breaking of causal tree
- principles and normal operation of equipment, plant and processes in own work area sufficient to undertake a RCA and propose solutions
- common variances to normal performance that are indicators of a problem
- use of relevant analysis tools (e.g. cause/effect diagrams, Pareto charts and 5 Whys)
- operations in own work area

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and	A person who demonstrates competency in this unit must
--	--

evidence required to demonstrate competency in this unit	<p>be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • undertake problem identification • use appropriate processes to achieve root cause identification • prioritise solutions • recommend solutions and implementation procedures to problems within own area and range of technical skills and knowledge • evaluate implementation of solutions.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess response to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and</p>

	disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree
--	---

	<p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> the stage of implementation of competitive systems and practices the size of the enterprise the work organisation, culture, regulatory environment and the industry sector
Features or occurrences indicative of a problem	<p>Examples of features or occurrences indicating problems include:</p> <ul style="list-style-type: none"> variation to normal plant or equipment operation unplanned or non-conforming process or operations outcomes out of specification products excess scrap accidents and emergencies regulatory breaches customer returns and complaints reduction or loss of sales
Root cause	<p>There are many possible causes of any problem. The root cause contrasts with other possible causes of a problem which when eliminated have no impact or only ameliorate the problem. Elimination of the root cause permanently eliminates the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found.</p>
Cause tree	<p>The series of causes is referred to as the cause tree. Not all root causes are accessible and able to be eliminated. Breaking the cause tree is such a way that the problem cannot recur is an acceptable alternative.</p> <p>Not all situations can wait for the RCA and eventual elimination of the root cause as there may be serious current impacts. The quick fix will control these immediate impacts, but does not eliminate the root cause.</p>
Quick fix	<p>A quick fix is not a short cut or side step for a permanent solution to the root cause. It is a necessary step designed to control the immediate impacts of a problem, for example, to prevent ongoing errors or to ameliorate damage.</p>
Appropriate techniques/charts	<p>Appropriate techniques/charts may include:</p> <ul style="list-style-type: none"> control charts Pareto charts

	<ul style="list-style-type: none">• run charts• flow charts• cause and effect diagrams• tree diagrams• 5 Whys analysis

MSS402081A Contribute to the application of a proactive maintenance strategy

Modification History

New unit, superseding MSACMT281A Contribute to the application of a proactive maintenance strategy - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to make a positive contribution to proactive maintenance strategies, including actions that contribute to equipment uptime and overall equipment effectiveness (OEE).

Application of the Unit

This unit applies to an individual in an organisation which is following a predictive, preventative or reliability-centred maintenance strategy and which requires commitment from all employees. The employee should 'own' their equipment/plant and take an active part in the implementation of the strategy within the scope of their authority.

This unit requires the application of skills associated with accessing and maintaining equipment/plant documentation, It also requires problem solving, initiative and enterprise to continually monitor and maintain operational performance of equipment/plant used in work role.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

unit of competency.

text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Maintain equipment/plant	1.1	Keep equipment/plant within area of responsibility clean
		1.2	Ensure equipment/plant is serviced and adjusted, as required, in accordance with procedures and own level of responsibility
		1.3	Access manufacturer manuals and specifications, where required, to expand knowledge on the maintenance of equipment/plant
		1.4	Access and update documentation on equipment/plant operation and maintenance as appropriate to workplace procedures
2	Monitor operation of equipment/plant	2.1	Regularly check key conditions of the equipment/plant as defined in workplace procedures
		2.2	Regularly check equipment/plant OEE
		2.3	Note any deviation from conditions specified in procedures
		2.4	Identify any previous occurrences of this deviation
3	Identify deviations and patterns	3.1	Identify any previous occurrences of a deviation
		3.2	Identify any related deviations which have occurred
		3.3	Identify any unusual occurrence which may be related to a deviation
4	Take action appropriate to	4.1	Liaise with relevant people regarding the deviation and the solution

competency and
authority on
deviation

4.2

Implement solution and/or assist with the
implementation of the solution, as appropriate

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting electronic and hard copy plant, equipment, and process instructions and documents, including where used:
 - work instructions
 - standard operating procedures
 - workshop manuals and instructions from equipment manufacturers in regards to plant or equipment operation, regular maintenance, troubleshooting, and record of use or production
 - production and batch sheets
 - temporary instructions
 - other provided operating instructions
- examining equipment procedures, products and processes for possible causes of deviations from patterns of normal use
- interpreting OEE rates
- servicing and maintaining plant and equipment consistent with area of responsibility and own technical skills

Required knowledge

Required knowledge includes:

- normal behaviour of the equipment/plant
- indicators of abnormal performance
- principles of operation of plant and equipment sufficient to recognise problems and propose solutions
- appropriate cleaning and adjusting for the equipment/plant/area as required by procedures
- concept of OEE as: $availability \times performance \times quality\ rate$

where:

- availability takes into account losses due to breakdown, set up and adjustments
- performance takes into account losses due to minor stoppages, reduced speed and idling

- quality rate takes into account losses due to rejects, re-works and start-up waste

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • recognise deviations from normal performance patterns and deal with them appropriately • undertake operational service and maintenance on plant and equipment according to instructions.

MSS403021A Facilitate a Just in Time system

Modification History

New unit, superseding MSACMT421A Facilitate a Just in Time (JIT) system - Equivalent

Unit Descriptor

This unit of competency covers skills and knowledge required to facilitate the implementation/operation of a Just in Time (JIT)/kanban system in a team or work area.

Application of the Unit

This unit applies to a person who needs to monitor the operation of a JIT system and facilitate its working in a team or work area. This will involve liaison with stakeholders as well as examining the data generated. They will need to be alert to potential problems and areas for improvement.

This unit requires the application of skills associated with gathering, analysing and communicating information to facilitate implementation of the JIT system. It requires planning and organising skills and has a strong emphasis on communication and teamwork skills to ensure the JIT system is being effectively implemented. This unit also requires the ability to problem solve and take the initiative to consider performance issues and learn from experience to improve future performance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills

unit of competency. and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Monitor the operation of the JIT system	1.1	Track value of key measures
		1.2	Recognise indicators of poor performance
		1.3	Take appropriate quick fix action
2	Liaise with relevant stakeholders	2.1	Regularly communicate with team or work group members regarding the operation of the JIT system
		2.2	Review JIT key performance indicators (KPIs) with team or work group members
		2.3	Communicate with relevant personnel up and down the value stream regarding the operation of the JIT system
		2.4	Identify issues with stakeholders and take appropriate quick fix action
3	Improve the JIT system	3.1	Identify areas requiring improvement in the JIT system
		3.2	Identify root cause of JIT-related problems
		3.3	Review value of key measures
		3.4	Recognise skill gaps in team members and other stakeholders
		3.5	Determine any other issues in team or work group, other stakeholders and JIT system leading to poor performance indicators
		3.6	Develop appropriate improvement solutions
		3.7	Liaise with relevant people regarding improvement solutions

3.8 Implement and/or assist with the implementation of the solutions

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying KPIs for JIT system in team or area of responsibility
- analysing the JIT/kanban implementation in the team or area and the relevant sections of the internal and external value stream, including identifying people-related needs and issues
- identifying and implementing quick fix to JIT problems
- using formal problem solving procedures (e.g. root cause analysis (RCA))
- developing formal and informal communication procedures with others in work area, team leaders, other employees and value stream members relevant to JIT implementation
- establishing sources of assistance in the organisation for people experiencing difficulty with competitive systems and practices changes
- interpreting procedures and instructions relevant to own expertise for others
- establishing KPIs for own work

Required knowledge

Required knowledge includes:

- JIT principles relevant to operations and processes in own area or team and in the organisation generally
- procedures for making/recommending improvements
- typical reasons for delays/storages/inventories in the team or area of responsibility and methods of reducing/eliminating them
- skill gap analysis and methods of filling skill gaps
- principles of the operations process relevant to the section/team
- production data generated by the process and its application to JIT

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Evidence should be available of the person's facilitation of the operation of the JIT system and their making of recommendations for/making improvements.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• identify the JIT system and practices used in their team or area of responsibility• identify and monitor JIT key measures• solve JIT-related problems to root cause• implement and monitor JIT-related changes to operations and practices.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none">• workplace procedures and plans relevant to work area• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee• documentation and information in relation to production, waste, overheads and hazard control/management• reports from supervisors/managers• case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none">• demonstration in the workplace• workplace projects• suitable simulation• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)• targeted questioning• reports from supervisors, peers and colleagues (third-party reports)• portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p>

	Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none">• lean operations• agile operations• preventative and predictive maintenance approaches• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems• statistical process control systems, including six sigma and three sigma• JIT, kanban and other pull-related operations control systems• supply, value, and demand chain monitoring and analysis• 5S• continuous improvement (kaizen)• breakthrough improvement (kaizen blitz)• cause/effect diagrams• overall equipment effectiveness (OEE)• takt time• process mapping• problem solving
--	---

	<ul style="list-style-type: none"> • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
JIT	<p>JIT refers to:</p> <ul style="list-style-type: none"> • a production scheduling concept that calls for any item needed at a production operation (whether raw material, finished item, or anything in between) to be produced and available precisely when needed, neither a moment earlier nor a moment later
Kanban	<p>Kanban is a card or sheet used to authorise production or movement of an item; when fully implemented, kanban operates according to the following rules:</p> <ul style="list-style-type: none"> • all production and movement of parts and material take place only as required by a downstream operation (i.e. all operations and procurement are ultimately driven by the requirements of final assembly or the equivalent) • the specific tool which authorises production or movement is called a kanban. The word literally means card or sign, but it can legitimately refer to a container or other authorising device. Kanban have various formats and content as appropriate for their usage (e.g. a kanban for a vendor is different than a kanban for an internal machining operation) <p>Kanban is typically applied to batch type operation and the production is measured in units produced. In continuous processing organisations, production is measured in terms of production rate (e.g. kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (e.g. ticket, order from a supplier) or may be a SCADA signal from a remote facility (e.g. customer tank) saying that resupply is required or similar</p>
SCADA	<p>SCADA refers to:</p> <ul style="list-style-type: none"> • a number of systems which automatically collect critical process data, perform required mathematical

	manipulations on it and then make control decisions and/or give required information to personnel for action
Key measures	<p>Key measures may include:</p> <ul style="list-style-type: none"> • inventory levels • lead time • In Full, On Time and In Specification (IFOTIS) delivery • productivity/production rate • other measures of pull through the value stream • quality
Quick fix	<p>Quick fix refers to:</p> <ul style="list-style-type: none"> • action taken to immediately and cheaply control a problem, prevent it getting worse and/or ameliorate its impact, but which does not necessarily solve it long term
Pull system	<p>Pull refers to:</p> <ul style="list-style-type: none"> • a system of making to demand rather than for stock or to a forecast
Value stream	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement, stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

MSS403030A Improve cost factors in work practices

Modification History

New unit, superseding MSACMT430A Improve cost factors in work practices - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to evaluate the product or process outcomes of a team in terms of their cost components and to be able to determine, in general terms, the cost impacts of alternative actions.

Application of the Unit

This unit applies to a person who is required to assess the relative costs of alternatives and use this as one of the key factors in decision making. Typical decisions include the efficient organisation of own work and that of others in a work area or within a team and the improvement of throughput and cycle times.

Decisions are made within the scope of the authority of the individual and other employees in the area or team and according to procedures.

This unit primarily requires the application of skills associated with communication and information gathering, teamwork and problem solving to analyse the cost components of work processes. Initiative and enterprise, and planning and organising are also required to identify opportunities for improved cost-efficiency. This unit also requires a degree of self-management and learning to effectively operate and maintain skills and performance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse cost components of work area or team function	1.1	Identify cost components in the product or process
		1.2	Identify costs factors under control of area or employees in the team
		1.3	Identify causes of variability in costs
		1.4	Analyse impact of costs on production or process activities undertaken
2	Improve cost-efficiency of processes and procedures	2.1	Identify methods of improving productivity and/or reducing costs within area or team's responsibility
		2.2	Determine cost/benefit ratio of alternative methods of improving productivity and/or reducing costs
		2.3	Consult with all relevant stakeholders regarding possible changes
		2.4	Recommend changes which will increase productivity and reduce cost and variability
		2.5	Implement recommended changes in consultation with relevant stakeholders

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying fixed and variable costs in products or processes
- analysing costs and determining those that can be controlled by the individuals in an area or team
- analysing costs over time and identifying variability in cost components
- determining cost/benefit ratios
- communicating and negotiating with others on changes using a variety of mediums

Required knowledge

Required knowledge includes:

- cost components of products made
- costs concepts, such as expense, income and cost/benefit
- major cost contributors to product (e.g. energy, materials, labour and distribution, and so on) depending on the product and process)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• identify the scope of their own work and the team or area work and relate it to the overall flow of work in the organisation• express cost factors in specific terms (e.g. cost per item, process and task)• identify and express cost factors in basic financial terms• analyse variability in costs and recommend improvements• use cost/benefit to select preferred improvement strategies.
Context of and specific resources	Assessment of performance must be undertaken in a

for assessment	<p>workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none">• workplace procedures and plans relevant to work area• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee• documentation and information in relation to production, waste, overheads and hazard control/management• reports from supervisors/managers• case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none">• demonstration in the workplace• workplace project(• suitable simulation• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)• targeted questioning• reports from supervisors, peers and colleagues (third-party reports)• portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices, • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector

New unit, superseding MSACMT451A Mistake proof a production process - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to make changes to own and others work in a work area which prevents errors and/or backsliding to a pre-improvement level of practice.

Application of the Unit

This unit applies to a person who needs to analyse a process that a team is responsible for and determine methods of mistake proofing it (e.g. ensuring it only produces product within an acceptable range or error-free transport and storage of goods). The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to mistake proof the production process in their area. After improvement activities have been undertaken these improvements need to be sustained.

This unit requires the application of skills associated information gathering and analysis. Initiative, enterprise and problem solving are also required to identify mistakes and determine strategies for eliminating them. This unit also requires communication and teamwork skills to ensure mistake proofing strategies are implemented and self-management and learning skills to continually reflect on and integrate feedback about the effectiveness of strategies.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse process	1.1	Identify sources of variability/non-conformance in the process
		1.2	Identify critical control points in process
		1.3	Analyse causes of variability/non-conformance
2	Develop preventative techniques/systems	2.1	Liaise with team members and other people to develop mistake proof options for performing operation
		2.2	Test and validate mistake proofing options
3	Implement permanent fix	3.1	Liaise with relevant people to have systems/procedures changed to implement solution
		3.2	Liaise with relevant people to implement the solution
		3.3	Liaise with relevant people to ensure self and others in the team or work area have an appropriate skills set
		3.4	Follow through to ensure implementation occurs
4	Monitor implementation	4.1	Critically observe the implementation
		4.2	Compare the results of the implementation against the expected outcomes
		4.3	Modify solution to improve outcomes

		4.4	Ensure procedures reflect change
		4.5	Ensure training/assessment reflects change
		4.6	Audit change at agreed period/cycle
		4.7	Take action on any observed deviation
5	Seek improvements	5.1	Observe changes
		5.2	Analyse process again, if required, to ensure improvements are sustained

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with team or work group members, technical support personnel and other relevant staff
- explaining mistake proofing and related concepts
- facilitating input of others and encouraging acceptance of changes
- analysing and visualising operations in terms of flow and contribution to customer outcomes
- solving problems to determine root cause of errors and possible solutions
- analysing and interpreting information about errors and mistake proofing options in terms of cost, feasibility, regulations and value to the customer
- suggesting design changes to operations and products that eliminate the potential for errors
- suggesting mechanisms or procedures that warn of errors where operations cannot be designed to eliminate errors,

Required knowledge

Required knowledge includes:

- mistake proofing concepts, including, in priority order:
 - eliminate the possibility of the error via changes to the process
 - prevent the error from occurring via physical or virtual barriers
 - reduce likelihood of the error by encouraging correct action

- mitigate the impact of the error if it does occur
- understanding of processes undertaken by team
- factors in the processes which may cause variability
- methods of controlling the variability in the process
- mistake proofing methods relevant to the process/product

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse variability and non-conformances • identify, analyse and evaluate information from a variety of sources to identify errors and options for mistake proofing • facilitate implementation of mistake proofing activities that reduce waste • facilitate sustaining the mistake proofing activities.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace

	<ul style="list-style-type: none"> • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related
--	---

	<p>operations control systems</p> <ul style="list-style-type: none"> • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Mistake proofing	<p>Mistake proofing is based on the concept of zero defects. The first priority is to eliminate the possibility of an error occurring. However, where this is not feasible mistake proofing can be used to reduce the occurrence of errors and/or to minimise their impact.</p> <p>Mistake proofing should target an error in the following priority order:</p> <ul style="list-style-type: none"> • eliminate the possibility of the error via changes to the process • prevent the error from occurring via physical or virtual barriers, • reduce likelihood of the error by encouraging correct action (e.g. through warning systems) • mitigate the impact of the error if it does occur <p>Mistake proofing is also called error proofing or baka-yoke or poka-yoke</p>
Options for mistake proofing	<p>Factors to consider when prioritising options for mistake proofing will vary according to the process and may include:</p> <ul style="list-style-type: none"> • success rate in eliminating errors

	<ul style="list-style-type: none">• feasibility• skills required by employees• cost• capacity to reduce waste
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none">• all work instructions• standard operating procedures• formulas/recipes• batch sheet• temporary instructions and similar instructions provided for the operation of the plant• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)• government regulations <p>Procedures may be:</p> <ul style="list-style-type: none">• written, verbal, computer-based or in some other format

MSS404050A Undertake process capability improvements

Modification History

New unit, superseding MSACMT450A Undertake process capability improvements* - Equivalent

* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

Unit Descriptor

This unit of competency covers the skills and knowledge required to make process capability improvements, including analysing data from the process, developing improvements to eliminate variation due to assignable causes, and then implementing actions.

Application of the Unit

This unit applies to a person who reviews a range of process capability data and information, makes/arranges for changes to be made to procedures, equipment or process and then recalculates the process capability and monitors resulting improvement actions. The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to suggest and justify process capability improvements.

Process capability may have been determined using either a six sigma or three sigma processes. This unit applies to the application of statistical methods and the determination of capability based on those methods. Other related units may be *MSS404052A Apply statistics to operational processes* and *MSS404053A Use six sigma techniques*

This unit primarily requires the application of skills associated with communication, information gathering and analysis. Initiative, enterprise and problem solving are also required to identify opportunities to improve process capacity. This unit also requires aspects of self-management and learning to validate own analysis.

For a qualitative approach to improvement (one not using statistics) see *MSS403051A Mistake proof an operational process*.

Licensing/Regulatory Information

Pre-Requisites

MSS404052A Apply statistics to operational processes

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Obtain required data	1.1	Identify process for study
		1.2	Obtain/organise process to obtain required data/information
2	Analyse information	2.1	Analyse data and determine assignable causes
		2.2	Develop possible improvements to eliminate assignable causes
		2.3	Incorporate own experience and learning into proposed process improvement proposals
		2.4	Develop process improvement proposals
3	Improve process capability	3.1	Obtain required authorities to implement improvements
		3.2	Liaise with relevant people to implement improvements
		3.3	Obtain/organise required data for improved process

- 3.4 Recalculate process capability
- 3.5 Implement revised data collection/processing and new capability information
- 3.6 Monitor improvement actions and make adjustments, as necessary

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- performing relevant mathematical operations
- identifying and using relevant statistical methods
- communicating and explaining data- related changes and procedures to individuals and groups
- negotiating with other employees and managers on proposed improvement actions
- analysing procedures and data to establish variation
- solving problems to root cause where assignable cause of variation is not obvious
- working in a team
- using computer software relevant to required analyses and process

Required knowledge

Required knowledge includes:

- data collection methods
- data processing techniques required
- variability and normal distribution
- three sigma or six sigma processes, as relevant
- random and non-random results (recognition of assignable causes)
- causes of different types of non-random results
- causes of random variation
- process understanding sufficient to translate the data into variations in the process and determine methods of controlling them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse process information • calculate process capability/trial limits • improve process capability (or organise for it to be improved) • analyse revised process information and recalculate process capability.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence <p>In all cases it is expected that practical assessment will</p>

	<p>be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time
--	--

	<ul style="list-style-type: none"> • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Process capability	<p>Process capability is:</p> <ul style="list-style-type: none"> • the measurable ability of a process to reliably produce within calculated limits (the limits depend on the variation of the process)
Variation	<p>All processes have variation. The approach in this unit is to separate random variation (no assignable cause) from non-random variation (which has an assignable cause). By finding and eliminating assignable causes, total variation is reduced and process capability will be improved</p>
Six sigma	<p>Six sigma refers to:</p> <ul style="list-style-type: none"> • a statistical tool for recording defects and determining capability. Six sigma limits equate to 3.4 defects per million opportunities for each product or service transaction. Six sigma is also used as a general term covering a competitive systems and practices approach. Six sigma training typically covers several units of competency in this Training Package
Three sigma	<p>Three sigma refers to:</p> <ul style="list-style-type: none"> • a traditional statistical process control. Three sigma limits equate to 3 defects per thousand opportunities for each product or service transaction
Required data	<p>The calculation of three sigma or six sigma limits requires process data. The data required depends on the nature of the limits being calculated</p>
Assignable cause	<p>Any non-random variation is said to have an ‘assignable cause’. The methods of data analysis common to statistical capability analysis as well as other methods of</p>

	root cause analysis should be used to determine the cause of this non-random variation
Improved process capability	<p>Improvements to process capability result from eliminating the causes of non-random variation. The improvements made may be:</p> <ul style="list-style-type: none"> • as a result of continuous improvement with the process capability being recalculated periodically • as a result of an improvement project with the process capability recalculated as part of that project
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> • written, verbal, computer-based or in some other format

MSS404052A Apply statistics to operational processes

Modification History

New unit, superseding MSACMT452A Apply statistics to processes in manufacturing - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply statistical theory and principles to the analysis and control of processes and operations.

Application of the Unit

This unit applies to a person working in an organisation applying statistical process control on processes or operations. The statistical process control will usually be used to monitor the processes or operations and determine when action needs to be taken. The appropriate action will then be taken in accordance with standard procedures.

The unit includes applying knowledge of frequency distribution and variation to the data/chart to distinguish between random and non-random variation and assumes understanding of the process and/or equipment to help interpret those results.

This unit primarily requires the application of skills associated with gathering and analysing data and communicating statistical information to others. This unit also has a strong emphasis on problem solving, initiative and enterprise, planning and organising, and self-management to solve problems and manage processes.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Collect process data	1.1	Interpret sampling scheme
		1.2	Obtain measurements in accordance with standard procedures
		1.3	Handle data, as required
2	Interpret data	2.1	Plot data on appropriate control chart
		2.2	Distinguish between random and non-random patterns of results
		2.3	Identify results outside the control limits
		2.4	Recognise situations requiring action
		2.5	Take appropriate action in accordance with standard procedures
		2.6	Determine cost of non-conformance
3	Calculate control limits	3.1	Consult relevant stakeholders to determine appropriate limits
		3.2	Use relevant methods to calculate/revise control limits
		3.3	Plot limits on control chart
		3.4	Explain impact of limit to relevant stakeholders

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- applying a range of sampling procedures
- analysing samples and data for variation, relevance, reliability and representativeness
- problem solving the causes of variation in a process
- communicating with other employees to obtain samples/data and to explain results and limits
- plotting or documenting results
- undertaking calculations, including:
 - basic arithmetic functions
 - mean, range, mean of means, standard deviation (using appropriate calculation aids)
- using statistics to support process and operations control

Required knowledge

Required knowledge includes:

- sampling techniques
- purpose of sampling and measurement
- random, systematic and stratified sampling
- purpose of replication of data for statistical control
- samples, populations, finite and infinite populations and the differences
- methods of calculating means, standard deviations and the like and their purpose in statistical control
- the meaning of broad/narrow frequency distributions/range/standard deviations and skewed distributions in process terms
- concept of limits, including:
 - 1 sigma warning limits
 - 2 sigma warning limits
 - 3 sigma control limits
 - 6 sigma limits
- types of control charts and their applications to different types of process/product and for different purposes
- process causes of variation and typical cause types of non-random variation
- non-process (e.g. measurement) causes of variation
- recognition of stable and unstable processes
- causes of stability/instability in the process

- calculation of control limits/process capability and the applications of different control limits
- the standard distribution curve and confidence limits

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • follow sampling procedures • apply basic statistical processes • analyse data to identify variations and non-conformances • plot or document results.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning

	<ul style="list-style-type: none"> • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen)
--	--

	<ul style="list-style-type: none"> • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Sampling scheme	<p>Sampling scheme may include:</p> <ul style="list-style-type: none"> • sampling for attributes or sampling for variables • batch, continuous or custom made products • number of items/samples • size of sample • timing of sampling • location of sampling points • type of sample • number/type of measurements to be done on each sample • sampling equipment • measurement/testing equipment/methods
Procedures	<p>Procedures may include:</p> <ul style="list-style-type: none"> • work instructions • standard operating procedures • formulas/ recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations <p>Procedures may be:</p> <ul style="list-style-type: none"> • written, verbal, computer-based or in some other

	format
Handle data	<p>Handle data may include:</p> <ul style="list-style-type: none"> • calculating means, ranges, mean of means and standard deviations (using appropriate calculation aids) • entering data into a software package • recording data either in writing or electronically • other required manipulations of the data
Control chart	<p>Control charts may include:</p> <ul style="list-style-type: none"> • run • tally • mean/range • attributes • other relevant charts
Random	Random variation is the term used in statistical control to refer to those variations for which no cause can be found
Non-random	Non-random (also called identifiable cause, assignable cause or special cause) are those variations for which a cause can be found and so the cause of the variation eliminated. Non-random variation may also be used to predict possible breaches of the control limits
Control limits	Control limits (also referred to as process capability) are those limits within which the process will operate if it is 'under control'
Cost of non-conformance	<p>Cost of non-conformance includes:</p> <ul style="list-style-type: none"> • reprocessing/rework • expediting • unplanned service • excess inventory • complaint handline • downtime • returns • scrap • labour costs • material costs • infrastructure costs/overhead • utility costs
Appropriate limits	Appropriate limits may include:

	<ul style="list-style-type: none">• 1 sigma warning limits• 2 sigma warning limits• 3 sigma control limits• 6 sigma limits

MSS405031A Undertake value analysis of product or process costs in terms of customer requirements

Modification History

New unit, superseding MSACMT631A Undertake value analysis of product costs in terms of customer requirements* - Not equivalent

* Prerequisite *MSACMT230A Apply cost factors to work practices* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required by an employee who is required to analyse products and processes to determine the value-adding factors, including design and processing costs that most impact on meeting customer requirements and which may also include competitor benchmarking. The unit also includes implementing identified changes that increase cost-efficiency. The unit may be applied individually or in a team environment.

In this unit an employee uses an analysis of the benefits/features which a customer perceives to be in a product or service as a basis for determining appropriate or unnecessary cost and so identifying and reducing waste.

Application of the Unit

This unit applies to an individual who undertakes the value analysis of a product or service, establishing the features/benefits obtained by customers from the cost components relating to those benefits. From this appropriate or waste cost will be determined and actions taken to either reduce waste or improve saleability.

This unit differs from *MSS405030A Optimise cost of a product or service*, in that it requires costs to be measured against customer features/benefits and is designed to contribute to value stream costing. *MSS405030A Optimise cost of a product or service* complements this unit by allowing detailed analysis of all costs, including overheads.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information. Problem solving, initiative and enterprise, and planning and organising are required to determine cost-efficiencies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into costing methods.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse customer benefits to determine appropriate or waste costs	1.1	Analyse product or service to determine features/benefits perceived by customer in product
		1.2	Analyse cost components of product or service and determine those which deliver customer features/benefits and those which are either appropriate or waste
		1.3	Determine any additional features that may be added to improve saleability
		1.4	Analyse waste cost components and allocate to direct and indirect cost categories
		1.5	Determine options for reducing direct and indirect waste costs
		1.6	Select cost-related actions which maximise customer benefits and minimise costs
		1.7	Where required, undertake competitor benchmarking to provide reference points

2	Analyse performance variance	2.1	Identify waste processing or operational steps for product or service following completion of customer benefit analysis
		2.2	Analyse all costs and determine methods of reducing costs/waste
		2.3	Develop plan and recommendations for actions required to achieve cost improvement or added customer benefits to improve saleability
		2.4	Submit plan and recommendations to stakeholders

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- communicating at all levels in the organisation and value chain and to audiences of different levels of literacy and numeracy
- determining customer features/benefits added to products at each operational step
- relating cost components to customer features/benefits
- distinguishing between direct and indirect costs
- identifying relevant cost component categories for product
- determining application scope of cost reduction plan, including products, areas, employees and suppliers included in plan
- undertaking competitor benchmarking for reference in cost analysis

Required knowledge

Required knowledge includes:

- customer features/benefits from products
- impact of customer features/benefits on sales, market share and firms profitability
- performance and cycle times for products made or service provided
- major costs which are controllable (and how to control them)
- types of waste (muda)
- methods of reducing waste

- methods of reducing cycle time
- desirability of improving performance and methods of reducing cycle time

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> • identify customer features/benefits for a product and their impact on market share or saleability of the product • determine direct/indirect costs in a product • determine which costs are waste • analyse cycle times and make suggestions for reduction in cycle time • develop a cost/waste reduction plan.
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> • demonstration in the workplace • workplace projects • suitable simulation

	<ul style="list-style-type: none"> • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and
--	--

	<p>analysis</p> <ul style="list-style-type: none"> • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Waste	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product.</p> <p>Within operations, categories of waste include:</p> <ul style="list-style-type: none"> • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers
Cost	<p>Cost includes:</p> <ul style="list-style-type: none"> • the monetary value of expenditures able to be directly identified for supplies, services, direct labour, components, cost of inventory, faults and reworks, rejects/scrap, equipment and other items used in the production of the product • allocations and estimates for indirect costs (e.g. indirect labour, rent, power and water) where a direct

	monetary value cannot be identified
Determine customer feature/benefits	This unit does not require that customer features/benefits must be obtained by the person undertaking the unit directly contacting customers. The features/benefits may have already been determined by sales and marketing personnel and passed on to operations. However, the unit requires that the product or process must be analysed to determine how the product or process supplies the features/benefits and by which step/feature of the product or process
Performance	Performance is may be thought of as the rate of output or delivery of the performance or service compared to the rate required to meet demand for the product or service
Cycle time	Cycle time includes: <ul style="list-style-type: none"> the normal time to complete an operation on a product
Pull	Pull is the concept of producing to demand, rather than for stock or some forecast

Unit Descriptor

This unit covers the competency required by people whose primary role is contract management to implement strategies that ensure effective contract performance. It includes managing the business relationship, performance of the contract, and contract issues; and implementing a communication strategy.

In practice, managing contract performance may overlap with other public sector and local government generalist and specialist work activities, such as promoting the values and ethos of public service or local government, undertaking negotiations, promoting compliance with legislation in the public sector, finalising contracts, managing procurement risk, planning to manage a contract, planning for procurement outcomes and making procurement decisions.

PSPPROC414A Manage contracts is the appropriate unit for people undertaking contract management as a minor part of their work role.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit

This unit applies to those who may or may not have had involvement in the procurement process preceding execution of the contract.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Manage the business relationship

- 1.1. ***Probity*** is managed in accordance with organisational requirements, ***legislation, policy and public sector standards***.
- 1.2. Obligations to the contractor are met according to contractual arrangements.
- 1.3. Consideration of conflicts of interest and their resolution are recorded according to public sector standards and organisational requirements.
- 1.4. Business relationship with contractor is managed in the public interest through ***formal and informal mechanisms*** according to public sector standards and organisational policy and procedures.

2. Manage performance of the contract

- 2.1. Start-up or transition arrangements are implemented according to contract requirements and organisational procedures.
- 2.2. ***Contract management plan*** is monitored for effectiveness on a regular basis and adapted as necessary during the life of the contract.
- 2.3. Performance of ***contract*** is monitored against key performance indicators and tracking milestones to ensure obligations under the agreement are being met.
- 2.4. E-procurement, financial and other resources are managed as necessary according to contract

- requirements and organisational procedures.
- 2.5. Emerging and potential **risks** are identified and managed according to organisational risk management procedures.
- 3. Manage contract issues**
- 3.1. Contract **variations** are managed according to contract management plan, organisational policy and procedures, and probity requirements.
- 3.2. **Early signs of under-performance** are identified, and **action is taken to improve performance** to the agreed level and documented according to contract's communication and information policy.
- 3.3. **Disputes** and complaints are investigated and **resolved** or referred according to contract's management plan and contractual arrangements.
- 3.4. **Negotiation of issues** relating to the contract is conducted and approvals are obtained according to stipulations in the contract.
- 3.5. Conflict is addressed and resolved where possible or other **actions** are taken according to contractual arrangements.
- 3.6. Non-compliance with codes of conduct, codes of practice and standards of behaviour is dealt with in a timely manner.
- 4. Implement communication and information strategy**
- 4.1. **Communication** on the performance of the contract is maintained with all stakeholders according to organisational protocols and public sector standards.
- 4.2. Management reporting is carried out according to tracking milestones and organisational requirements.
- 4.3. **Contract information** is maintained for **organisational purposes** according to organisational policy and procedures.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - consult and negotiate with contractors and stakeholders, involving complex oral and written exchanges of information
 - network, within probity boundaries, with contractors and stakeholders
 - read complex documents, such as contracts, legislation and guidelines

- write management reports and keep records of meetings, liaison, notes and follow-up actions
- provide feedback
- teamwork skills to:
 - build effective working relationships with contractors and stakeholders, within probity boundaries
 - model effective team management approaches
 - respond to diversity
 - refer issues to the correct person
- problem-solving skills to:
 - resolve disputes, conflict and complaints
 - make judgements about when to refer disputes, conflict and complaints to others
 - apply understanding of supplier issues/supply chain management in the context of contract management
- initiative and enterprise skills to:
 - apply the content of complex documents, such as contracts, legislation and guidelines
 - apply OHS, environmental, sustainability and corporate social responsibility practices in the context of contract management
- planning and organising skills to:
 - manage contract documentation
 - plan and organise contract meetings, reports and reviews
- learning skills to keep up-to-date with:
 - best practice examples in procurement practice
 - relevant procurement legislation, policies and procedures
- technology skills to:
 - operate organisational IT systems
 - use electronic procurement templates

Required knowledge

- commonwealth, state or territory, and local government legislation, policies, practices and guidelines:
 - relating to contract management, including environmental purchasing and corporate social responsibility guidance
 - such as OHS and equity and diversity
- organisational procurement policies, practices and approval processes
- contract management for a range of contractual situations
- privacy and confidentiality issues
- probity principles and issues
- codes of conduct, codes of practice and standards of individual behaviour

relating to management of contracts and relationships with contractors

- whole-of-life considerations
- financial and accounting issues relevant to the contract
- legal aspects of negotiation
- aspects of law of contracts, trade practices law and commercial law relevant to the management of contracts relating to complex procurement
- equal employment opportunity relevant to the management of contracts
- OHS requirements relevant to the management of contracts
- environmental, sustainability and corporate social responsibility principles relevant to the management of contracts

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment Competency must be demonstrated in managing contract performance consistently in accordance with legislative and organisational requirements.

Critical aspects for assessment and evidence required to demonstrate competency in this unit Assessment must confirm the ability to:

- develop and implement an appropriate contract management plan, using templates where available
- develop and implement an appropriate transition plan, using templates where available
- develop and maintain a sound business relationship with contractors within probity guidelines, upholding probity standards in all dealings with them
- manage contractor performance so that goods and services are delivered according to the contract
- provide the contractor with performance feedback
- deal promptly and proactively with contract issues and disputes and refer to higher authority when this is not possible
- communicate effectively with internal and external stakeholders about the operation of the contract.

Consistency in performance

Competency should be demonstrated by providing evidence of undertaking a range of relevant work tasks in an actual or simulated procurement environment on at least two separate

occasions.

Context of and specific resources for assessment

The unit of competency is to be assessed in the workplace or a simulated workplace environment.

Access may be required to:

- legislation, policy, procedures and protocols relating to procuring goods and services and managing contracts
- codes of conduct and codes of practice
- workplace scenarios and case studies relating to a range of procurement activities associated with managing contract performance
- case studies that incorporate dilemmas and probity requirements relating to managing contract performance.

Method of assessment

The following assessment methods are suggested:

- questions to assess understanding of relevant legislation and procedures
- review of strategies and approaches adopted for managing contract performance
- review of contract management plans, contracts, contract variations, contractor performance reports, communication strategy and other documentation prepared by the candidate in a range of contexts
- review of stakeholder engagement approaches adopted by the candidate.

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.

Guidance information for assessment

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the competency in different situations or environments.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- PSPETHC501B Promote the values and ethos of public service
- PSPGOV507A Undertake negotiations
- PSPLEGN501B Promote compliance with legislation in the public sector
- PSPPROC504B Finalise contracts
- PSPPROC505A Manage procurement risk
- PSPPROC506A Plan to manage a contract

- PSPPROC507A Plan for procurement outcomes
- PSPPROC508A Make procurement decisions.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Probity principles:

- may include:
 - accountability
 - transparency
 - confidentiality
 - managing conflict of interest
 - impartiality
- are maintained to:
 - ensure conformity to processes
 - facilitate accountability
 - ensure proponents are treated in a fair and equitable manner
 - encourage commercial completion
 - preserve public and private sector confidence in government processes.

Legislation, policy and public sector standards may include:

- financial management legislation
- government procurement, purchasing and contracting legislation, policy and guidelines
- council rules and by-laws
- public sector standards
- codes of conduct, codes of practice and standards of individual behaviour
- cross-cultural and social justice issues
- environmental and sustainability policies
- corporate social responsibility policies.

Formal and informal mechanisms may include:

- non-confrontational interaction
- hospitality
- formal contract variations
- formal negotiations

- formal and informal meetings
 - regular and *ad hoc* reporting
 - review processes.
- Contract management plan*** may include:
- risk management plan
 - contingency plan
 - communication and public relations plan
 - human resource management plan
 - disposal plan
 - contract review plan
 - setting up routines
 - quality assurance systems
 - arrangements for transfer of legal responsibility
 - insurances
 - strategies to avoid implied acceptance of varied conditions through non-enforcement of contractual obligations
 - environmental/green procurement, sustainability and corporate social responsibility principles.
- Contracts*** may include:
- formal written contracts
 - standing offers (panels)
 - multi-use lists and similar arrangements
 - inter and intra-government agreements
 - letters of intent
 - memoranda of understanding and memoranda of agreement
 - licensing agreements
 - in-house option directives.
- Risks*** may include:
- supplier inability to meet obligations
 - end user or buyer inability to meet obligations
 - scope creep
 - client requirements not fully understood
 - becoming too dependent on a single supplier
 - disruption to continuity and consistency of service if too many suppliers are selected
 - other environmental influences
 - corruption risks
 - probity risks.
- Variation*** to agreements may arise from:
- change of scope
 - negotiation of new terms and conditions
 - dissolution of contracts

Early signs of under-performance may be detected through:

- inability to deliver.
- tracking milestones
- regular meetings
- meeting records and follow-up
- file management and audit trail
- stakeholder surveys on performance
- ongoing review of deliverables.

Actions taken to improve performance may include:

- discussion with contractor
- regular interaction
- ongoing performance feedback
- provision of support
- expert advice.

Disputes may include:

- disputes over:
 - requirements
 - delivery schedules
 - price changes
 - additional tasking
 - payment schedules
- complaints from third parties
- formal and informal.

Techniques available to **resolve** disputes include:

- conference
- negotiation
- mediation
- arbitration
- resort to contractual conditions
- litigation.

Negotiation of issues may include:

- contract variations
- continuous improvement
- innovations
- non-compliance
- consequences.

Actions as a result of unresolved conflict may include:

- mediation
- court action
- termination of contract.

Communication strategies may include:

- clear communication
- understanding the needs of the service provider and the client
- setting regular times to talk, meet or check on progress

- protocols for dealing with other stakeholders
 - emergency contact arrangements
 - diary system to monitor milestones, timeframes, receipt of deliverables, etc.
 - strategies for ensuring information flow at critical stages of the contract.
- Contract information***
may include:
- contract and variations
 - contract management plan
 - financial records, including funding submissions, budgets, delegations, invoices and payments
 - contractor performance information
 - contract reports
 - information about disputes and other issues
 - complaints and compliments.
- Organisational purposes***
may include:
- probity and accountability
 - budget reporting
 - feeding into future procurement processes
 - performance management of suppliers
 - internal and external reviews and audits
 - governance requirements
 - legal compliance.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm contract requirements	<p>1.1. <i>Legislation, public sector standards and organisational requirements</i> relating to <i>probity</i>, financial management, approvals and <i>other considerations</i> are identified for inclusion in the <i>contract</i> management plan.</p> <p>1.2. <i>Contract requirements</i> are re-confirmed with all parties.</p> <p>1.3. Obligations to the contractor, limits of authority and <i>delegations</i> relating to contract are determined according to contractual arrangements and organisational policy and procedures.</p> <p>1.4. Start-up or transition arrangements are confirmed.</p>
2. Prepare contract management plan	<p>2.1. <i>Contract risks</i> are identified and risk management plan is developed in line with contract requirements and organisational policy and procedures.</p> <p>2.2. Procedures to identify, receive and address contract <i>variations</i> are determined according to contract requirements and organisational policy and procedures.</p> <p>2.3. <i>Procedures</i> to investigate, resolve or refer <i>disputes</i> or complaints are determined according to contract requirements and organisational policy and procedures.</p> <p>2.4. Key performance indicators are developed and negotiated, and <i>administrative processes</i> are identified and approved for the life of the contract according to organisational policy procedures.</p> <p>2.5. <i>Contract management plan</i> that addresses key elements is documented, approved and maintained according to organisational requirements.</p> <p>2.6. Expected standards of behaviour, probity and privacy principles are applied to all elements of contract management plan.</p> <p>2.7. Environmental, sustainability and corporate social</p>

responsibility principles are applied to all elements of contract management plan.

3. Develop stakeholder relationships

- 3.1. **Stakeholder** networks and relationships are identified.
- 3.2. Networking strategies are used, within probity boundaries, to establish, develop and maintain working relationships to promote benefits to the contract requirements.
- 3.3. Confidence of stakeholders is developed and maintained through high standards of behaviour and ethical conduct.
- 3.4. Negotiation strategies are used to achieve positive outcomes when difficult situations arise.
- 3.5. Communication requirements are identified and confirmed in line with contractual obligations and stakeholder needs.

4. Implement contract strategies

- 4.1. Requirements of confidentiality and freedom of information are identified for the contract.
- 4.2. **Communication/information strategy** is developed that matches needs of the organisation, the contract and the contractor's business environment.
- 4.3. Contract review requirements are established with stakeholders.
- 4.4. **Contract review strategy** is developed to review management of the contract, contractor performance and user satisfaction.

5. Implement contractual arrangements

- 5.1. Business relationship with contractor is established and managed according to organisational policy and procedures and probity requirements.
- 5.2. Start-up or transition arrangements are implemented.
- 5.3. Financial, administrative and information management processes are established.
- 5.4. Contractual arrangements are implemented according to contract management plan.
- 5.5. Appropriate **contract records** are maintained for the life of the contract.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - consult and negotiate with contractors and stakeholders
 - network, within probity boundaries, with contractors and stakeholders
 - develop a written contract management plan and sub-plans
 - read complex documents, such as contracts, legislation and guidelines
 - provide feedback
- teamwork skills to:
 - model effective team management approaches
 - respond to diversity
 - refer issues to the correct person
- problem-solving skills to:
 - apply OHS requirements in the context of contract management
 - apply understanding of supplier issues and supply chain management in the context of procurement risk management
- initiative and enterprise skills to:
 - apply the content of complex documents, such as contracts, legislation and guidelines
 - apply OHS, environmental, sustainability and corporate social responsibility practices in the context of planning for contract management
- planning and organising skills to manage and update the contract management plan and sub-plans
- learning skills to keep up-to-date with:
 - best practice examples in procurement practice
 - relevant procurement legislation, policies and procedures
- technology skills to:
 - operate organisational IT systems
 - use electronic procurement templates

Required knowledge

- commonwealth, state or territory, and local government legislation, policies, practices and guidelines:
 - relating to contract management, including environmental purchasing, sustainability and corporate social responsibility guidance relevant to the contract
 - such as OHS and equity and diversity
- organisational procurement policies, practices and approval processes
- contract management planning for a range of contractual situations
- privacy and confidentiality issues
- probity principles and issues
- codes of conduct, codes of practice and standards of individual behaviour relating to management of contracts and relationships with contractors
- whole-of-life considerations

- financial and accounting issues relevant to the contract
- equal employment opportunity relevant to the contract
- OHS requirements relevant to the contract

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment Competency must be demonstrated in the ability to plan to manage a contract consistently in accordance with legislative and organisational requirements.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessment must confirm the ability to:

- develop a contract management strategy in consultation with key stakeholders
- develop a contract management plan suited to more complex contracts, using templates if available, which may include sub-plans such as risk, transition and probity
- implement the contract management strategy and the contract management plan
- develop and maintain a sound business relationship with internal and external stakeholders
- manage the performance of contractors to ensure the effective delivery of value for money outcomes under the contract
- manage more complex contract disputes to achieve prompt resolution and refer to higher authority when necessary
- review contract throughout to identify opportunities for continuous improvement
- act within own delegations and refer issues to higher authority when necessary.

Consistency in performance

Competency should be demonstrated by providing evidence of undertaking a range of relevant work tasks in an actual or simulated procurement environment on at least two separate occasions.

Context of and specific resources for assessment

The unit of competency is to be assessed in the workplace or a simulated workplace environment.

Access may be required to:

- legislation, policy, procedures and protocols relating to procuring goods and services and managing contracts

- codes of conduct and codes of practice
- workplace scenarios and case studies relating to a range of procurement activities associated with planning to manage a contract
- case studies that incorporate dilemmas, and probity requirements relating to planning to manage a contract.

Method of assessment

The following assessment methods are suggested:

- questions to assess understanding of relevant legislation and procedures
- review of strategies and approaches adopted for planning to manage a contract
- review of contract management plans, contracts, probity plans, budgets, transition plans, approvals and sign-offs, and other documentation prepared by the candidate in a range of contexts
- review of stakeholder engagement approaches adopted by the candidate.

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.

Guidance information for assessment

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the competency in different situations or environments.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- PSPETHC501B Promote the values and ethos of public service
- PSPGOV507A Undertake negotiations
- PSPLEGN501B Promote compliance with legislation in the public sector
- PSPPROC503B Manage contract performance
- PSPPROC504B Finalise contracts
- PSPPROC505A Manage procurement risk
- PSPPROC507A Plan for procurement outcomes
- PSPPROC508A Make procurement decisions.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislation, public sector standards and organisational requirements may include:

- financial management legislation
- government procurement, purchasing and contracting legislation, policy and guidelines
- ethics standards
- codes of conduct and codes of practice
- environmental purchasing

Probity principles:

- may include:
 - accountability
 - transparency
 - confidentiality
 - managing conflict of interest
 - impartiality
- are maintained to:
 - ensure conformity to processes
 - facilitate accountability
 - ensure proponents are treated in a fair and equitable manner
 - encourage commercial completion
 - preserve public and private sector confidence in government processes

Other considerations may include:

- corporate governance
- intellectual property
- privacy
- freedom of information requirements
- public liability insurance considerations

Contracts may include:

- formal written contracts
- standing offers (panels)
- multi-use lists and similar arrangements
- inter and intra-government agreements
- letters of intent
- memoranda of understanding and memoranda of agreement
- licensing agreements
- in-house option directives

Contract requirements may include:

- terms and conditions
- specifications
- risk
- managing hospitality
- clauses dealing with:

- variations
 - insurances
 - notices
 - disputes
 - intellectual property
 - privacy
 - confidentiality
 - milestones
 - payments
 - breaches
- Delegations** may include:
- financial delegations
 - procurement delegations
 - compliance with instructions or finance circulars
 - special consideration if they concern travel, computers or software, leasing arrangements or issuing indemnities, or other special categories of goods and services
 - other delegations, such as disposals and human resources
 - confirmation by chief financial officer
 - ministerial authorisation
- Contract risks** may include:
- contextual/environmental factors
 - supplier inability to meet obligations
 - end user or buyer inability to meet obligations
 - unclear contract terms and conditions
 - contractual disputes
 - factors outside the control of either party, such as global health pandemic, failure of third-party businesses, and natural disasters
 - implications if dependence on one supplier, versus risks in lack of continuity and consistency of services provided
- Variation** to agreements may arise from:
- change of scope
 - negotiation of new terms and conditions
 - dissolution of contracts
- Procedures** to resolve disputes may include:
- conference
 - negotiation
 - mediation
 - arbitration
 - resort to contractual conditions
 - litigation
- Disputes** may include:
- disputes over:
 - requirements
 - delivery schedules

Administrative

processes may include:

- price changes
- additional tasking
- payment schedules
- complaints from third parties
- file and records management
- audit trail
- methodology for recording meetings
- notes and follow-ups of meetings and actions agreed
- management reporting

Contract management plan may include:

- risk management plan
- contingency plan
- communication and public relations plan
- human resource management plan
- disposal plan
- contract review plan
- setting up routines
- quality assurance systems
- arrangements for transfer of legal responsibility
- insurances
- strategies to avoid implied acceptance of varied conditions through non-enforcement of contractual obligations
- environmental/green procurement, sustainability and corporate social responsibility principles

Stakeholders may include:

- contractor
- buying organisation
- board of management
- steering committee
- advisory panel
- staff
- union
- industry
- client
- end user
- parliamentarian
- the public

Communication/ information strategies may include:

- setting regular times to talk, meet or check on progress
- protocols for dealing with other stakeholders
- appeals mechanisms for resolving conflict between clients and service providers
- clear communication
- reliability

- emergency contact arrangements
 - diary system to monitor milestones, timeframes, receipt of deliverables, etc.
 - strategies for ensuring information flow at critical stages of the contract
- Contract review strategy*** may include:
- planning process
 - evaluation considerations at each stage of the contract
 - sources and methods of gathering data
 - role of audit trails
 - measuring outputs
 - meeting client needs
 - innovation
 - strategies for continuous improvement
- Contract records*** may include:
- contract and variations
 - contract management plan
 - financial records, such as funding submissions, budgets, delegations, invoices and payments
 - contractor performance information
 - contract reports
 - information about disputes and other issues
 - complaints and compliments

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Assess the specific design requirements of exhibitions.	1.1 Interpret and negotiate the <i>client</i> brief. 1.2 Assess the requirements of the exhibition according to the final brief and develop an <i>event checklist</i> .
2 Produce sketches and rendered concept drawings.	2.1 Produce and refine sketches drawings, including rendered perspectives, elevations and in situ illustrations of the exhibition. 2.2 Develop finished plans providing solutions to given briefs via a series of design variations. 2.3 Develop the exhibition proposal, including a detailed report and recommendations. 2.4 Negotiate and adjust the final exhibition design to the satisfaction of the client. 2.5 Develop working construction and detail drawings to match job specifications.

ELEMENT	PERFORMANCE CRITERIA
	2.6 Incorporate <i>safety and risk assessments</i> into all planning.
3 Source audio and lighting suppliers and products.	3.1 Research suppliers and contractors required to fulfil the exhibition design. 3.2 Brief contractors and suppliers on precise requirements. 3.3 Coordinate supply of products and services to ensure timely and successful completion of the exhibit.
4 Design, install and bump out display.	4.1 Assess and arrange staffing requirements for each phase according to the designated event checklist. 4.2 Determine <i>specific operations for installation</i> from construction, packing, transportation, on-site and installation services. 4.3 Identify strategic objectives and time schedules, and delegate display installation and bump out according to the display plan and designated event checklist. 4.4 Coordinate bump out of display according to the designated event checklist.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- interpersonal communication skills to:
 - negotiate client brief and final design
 - brief contractors and suppliers through clear and direct communication
 - ask questions to identify and confirm requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- creative thinking skills
- planning skills
- team skills
- collaboration and negotiation skills
- design application

REQUIRED SKILLS AND KNOWLEDGE

- illustrative and model making skills
- verbal presentation skills.

The following knowledge must be assessed as part of this unit:

- merchandising styles and layouts
- the differences between retail and exhibition merchandising
- venue regulations regarding exhibition merchandising
- national and global trends in exhibition design, product presentation and promotional techniques
- relevant support services and suppliers
- design personnel roles
- space planning, colour and lighting
- the impact of exhibition traffic flow patterns
- presentation standards
- OHS issues and safe handling requirements
- site storage arrangements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- demonstrated ability to negotiate with an exhibitor and develop alternative designs for exhibition merchandising
- demonstrated ability to work in a team and install and bump out an exhibition display
- consistent application of relevant OHS requirements
- answers to questions on exhibition merchandising.

Context of and specific resources for assessment

Assessment must ensure access to:

- a real or simulated work environment
- relevant documentation, such as:

EVIDENCE GUIDE

- legislation and statutory requirements
- OHS requirements
- industry codes of practice
- information and performance data on existing business model and IT infrastructure
- information on:
 - client requirements
 - organisation or product image
 - products and services
 - retail design trends
 - materials.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- a simulated exhibition design project
- third-party reports from a supervisor
- a folio of personally developed designs
- client feedback
- answers to questions about specific skills and knowledge
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Assessing employability skills

Employability skills are integral to effective performance in the workplace and are broadly consistent across industry sectors. How these skills are applied varies between occupations and qualifications due to the different work functions and contexts.

Employability skills embedded in this unit should be assessed holistically in the context of the job role and with other relevant units that make up the skill set or qualification.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Clients may include:

- internal managers
- external organisations.

Event checklist may include:

- exhibitor brief
- venue information
- venue regulations
- merchandise design.
- customer and exhibition profiles
- handling
- loading and transport logistics
- height, weight and other imposed restrictions
- audiovisual, electrics and other services.
- health and safety issues
- safety equipment
- site storage arrangements.

Safety and risk assessments may include:

- different venue safety regulations
- compliance with occupational health and safety regulations/legislation
- industry safety codes of practice
- traffic flow patterns
- size, type ,location, weight and stability of exhibit
- manual/mechanical handling requirements.

Specific operations for installation may include:

- construction
- packing
- transportation
- on-site installation services.

SIRRMER512 Produce perspective drawings, plans and elevations

Modification History

The version details of this endorsed unit are in the table below. The latest information is at the top.

Release	Comments
First Release	This is a revised unit, based on and equivalent to SIRRMER009A Produce perspective drawings, plans and elevations.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to consult with clients and use electronic or manual drafting techniques to develop and present a folio of perspective drawings, plans and elevations in response to a client brief.

Application of the Unit

This unit applies to frontline visual merchandisers and visual merchandiser supervisors and managers in retail or exhibition environments.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Ensure client requirements are met.	1.1. Interpret and confirm clients' visual merchandising design concepts. 1.2. Plan and manage drawing production to meet client timelines. 1.3. Present and explain drawings to clients and encourage feedback. 1.4. Modify drawings to incorporate changes negotiated with clients.
2. Produce one-point perspective visuals from a given plan and elevation.	2.1. Interpret plan and elevation and determine suitable scale. 2.2. Construct one-point grid of interior space delineating scale representations of floor, walls and ceiling using appropriate <i>drafting tools and equipment</i> . 2.3. Position objects correctly in given space according to the given plan. 2.4. Determine correct heights of objects within the space from provided elevations.
3. Produce two-point perspective visuals from a given plan and elevation.	3.1. Construct two-point grid of interior space, indicating scale representations of floor, walls and ceiling. 3.2. Produce visuals of walls and ceiling to specified proportions according to given plans and elevations. 3.3. Draw accurate scale heights of objects and architectural details according to specifications in elevations. 3.4. Position objects to match plans. 3.5. Render interiors in colour finish scheme appropriate to organisation and product.
4. Produce multi point perspective from given industry briefs.	4.1. Determine view of plan and elevation for <i>client</i> presentation to best represent requirements of the brief. 4.2. Draft perspective and rendered interior views, according to given plans and elevations. 4.3. Produce alternative design solutions to meet client needs. 4.4. Present progress solutions to client for feedback. 4.5. Draft design modifications and present portfolio of finished visuals for client sign-off.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and interpersonal skills to:
 - present verbally to client through clear and direct communication
 - share information
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- literacy and numeracy skills to:
 - apply scales to drawings
 - develop written reports
- technical skills to:
 - compile a portfolio
 - use drafting and drawing skills
 - use and maintain visual merchandising drafting tools and equipment
- technology skills to apply computer software as an aid in the production of finished visuals

Required knowledge

- elements and principles of design and trends in retail visual merchandising design
- organisation merchandising policy
- perspective in visual merchandising design applications
- relevant organisational and industry standards applicable to the production of drawings

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- uses relevant research on visual merchandising and architectural design trends
- negotiates and confirms client requirements for a range of visual merchandising design briefs
- selects and applies appropriate drafting and drawing tools
- compiles portfolios, including alternative solutions offered via written reports and finished visuals

- makes verbal presentations to support the presentation of concept visuals
- plans, coordinates and implements activities associated with the brief in order to meet client timelines
- evaluates client feedback and makes modifications as required
- produces documentary evidence of consultative and liaison processes with business partners.

Context of and specific resources for assessment

Assessment must ensure access to:

- a real or simulated retail visual merchandising work environment
- drafting equipment and facilities
- relevant documentation, such as:
 - real or simulated client briefs
 - texts and visual merchandising and architectural periodicals.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- review of a portfolio of perspective drawings, plans and elevations developed in response to a brief
- client feedback
- answers to questions about specific skills and knowledge
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Drafting tools and equipment may include:

- electronic drafting equipment and materials, such as:
 - two-dimensional (2-D) computer aided design (CAD) software

- 2-D CAD user manuals
- Design CAD products
- Illustrator
- information and communications technology (ICT) hardware
- manual drafting tools and equipment, such as:
 - blades
 - coloured pencils
 - copy markers
 - dry pastels
 - fine-line pens
 - HB and harder pencils
 - scale rule
 - set squares
 - T-square.

Client may include:

- external business
- retail manager within the organisation.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Research store product range.	<p>1.1. Develop <i>product knowledge</i> by accessing <i>relevant sources of information</i>.</p> <p>1.2. Identify <i>store product range</i>, according to relevant product information.</p>
2. Recommend home and home improvement products.	<p>2.1. Identify relevant products to meet expressed <i>customer requirements</i> to assist their buying decisions.</p> <p>2.2. Demonstrate <i>features and benefits of products</i> to <i>customers</i> to create a buying environment.</p> <p>2.3. Convey technical features and benefits as outlined in manufacturer specifications.</p>
3. Advise on product warranties.	<p>3.1. Clearly explain comparisons between product and manufacturer warranty terms to customers.</p> <p>3.2. Confirm individual product warranty terms and by accessing relevant sources of information and accurately conveying to customers.</p> <p>3.3. Provide customers with written information regarding individual product warranty terms and conditions, especially extended or promotional warranties, according to store policy and procedures.</p>
4. Estimate quantities and order product.	<p>4.1. <i>Estimate area and product quantities</i>, where required, based on manufacturer specifications, plan provided or customer needs.</p> <p>4.2. Arrange for area measurement where indicated by product type and according to store procedures.</p> <p>4.3. Calculate cost to customers and prepare quotes <i>according to store policy and procedures</i>.</p> <p>4.4. Order product and arrange customer pick up and delivery or installation where required.</p> <p>4.5. Provide customers with accurate information regarding product availability, delivery and installation procedures as required, including date and time of delivery.</p> <p>4.6. Notify customers promptly of any undue delays regarding completion, supply or installation of products.</p>
5. Negotiate price and	5.1. Convey store recommended retail pricing for various brand options accurately conveyed to customers according to legislative

- | | |
|--|---|
| payment options. | requirements. |
| | 5.2.Negotiate individual product prices according to store policy where necessary to achieve sales. |
| | 5.3.Convey store payment options to customers and negotiate preferred option following store procedures. |
| 6. Advise on and arrange product service and repair. | 6.1.Diagnose problem in terms of operator and equipment faults by observation, customer questioning and accessing manufacturer information. |
| | 6.2.Offer solutions according to nature of problem, available product information and store policy. |
| | 6.3.Identify and accurately describe service and repair process to customers, as required, according to store policy. |
| | 6.4.Prepare and supply quotations and timelines to customers for basic service and repairs. |
| | 6.5.Identify and accurately transcribe customer details to repair form according to store procedures. |
| | 6.6.Label and securely store items for repair according to store policy. |
| | 6.7.Notify customers without undue delay on completion of service and repair. |

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills

- interpersonal skills to:
 - apply product knowledge by providing information and advice to customers and staff, including advice on warranties and product service and repair
 - make recommendations and advise on services through clear and direct communication
 - ask questions to identify and confirm requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - handle customers with special needs, including difficult or abusive customers
 - demonstrate product features and operation
 - negotiate price and payment options
- using and applying technology required to demonstrate operation of store product range
- literacy skills to:
 - interpret product information
 - interpret product warranties and guarantees

- numeracy skills to:
 - advise and negotiate price and payment options
 - measure and estimate accurately
 - use metric and imperial measuring scales
 - estimate measurements from architects or builders plans
- technical skills to take measurements from surface areas

Required knowledge

- store policy and procedures in regard to:
 - sales and customer service
 - methods of dealing with special needs and requests of customers
 - customer complaints
 - store pricing and payment and warranty terms and conditions, including GST requirements
 - store product service and repair policy and procedures
- store home and home improvement product range
- design and technical information and features and function and operation of store product range
- quality, energy efficiency and environmental considerations of products
- relevant industry codes of practice

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- continually updates and applies product knowledge to provide comprehensive advice to customers and other sales team members
- understands and applies available product information when providing advice to customers
- consistently applies store policy and procedures and industry codes of practice in regard to sales and customer service procedures
- advises customers and informs other sales team members on store home and home improvement products in the store merchandise range. Advises customers and other sales team members on store merchandise range warranties and store pricing and payment options.

Context of and specific resources for assessment

Assessment must ensure access to:

- a retail work environment
- relevant sources of product information
- relevant documentation, such as:
 - store policy and procedures manuals
 - industry codes of practice and relevant legislation
 - WHS legislation and codes of practice
- an appropriate range of home and home improvement products
- a range of customers with different requirements.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- third-party reports from a supervisor
- customer feedback
- answers to questions about specific skills and knowledge
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Product knowledge may include:

- function
- brand and product options
- warranties
- quality
- accessories
- component parts
- storage and operation
- design features
- style
- available colour range
- manufacturing process

- price
- partner or complementary products
- country of manufacture
- energy efficiency
- safety features, including flammability
- environmental considerations
- materials and fibre types
- construction of products
- care and maintenance requirements
- stain and dirt resistance
- product performance
- colour fastness, colour fading properties
- availability.

Relevant sources of information may include:

- supplier product leaflets
- store product manuals
- energy rating information
- warranty information
- internet
- trade shows
- customer feedback
- consulting store information
- designated staff members
- contacting suppliers direct.

Store product range may include:

- home and home improvement products
- furniture products
- floor covering products and services
- kitchen and bathroom renovation products
- hardware products
- home gardening products
- soft furnishings
- manchester
- haberdashery.

Customer requirements may include:

- usage requirements
- lifestyle
- price range.

Features and benefits of products may include:

- product type
- product performance features
- product durability
- function
- warranties
- quality

Customers may include:

- design aspects of colour and texture feel
- thickness and weight of furnishing fabrics
- acoustic and thermal insulation properties of materials
- manufacturing process
- price
- country of manufacture
- energy efficiency
- environmental considerations.
- new and existing customers
- people from a range of social, cultural and ethnic backgrounds and with varying physical and mental abilities
- customers with routine or special needs.

Estimating area and product quantities may include:

- using measuring tools
- using a calculator
- estimating from builders' and architects' plans
- on-site measuring
- estimating based on measurements provided by customer
- making allowances for pattern matching
- estimating linear or volume-based quantities.

Store policy and procedures may include:

- policy and procedures relating to sales, payment and credit options, store reward schemes and customer service.

Allocate team members to ensure effective use of staff resources to complete task.</p> <p>3.6. Produce accurate reports on stocktake data, including discrepancies, for management.</p>

- | | |
|---------------------------|---|
| 4. Identify stock losses. | 4.1. Identify, record and assess losses against potential loss forecast on a regular basis.
4.2. Identify avoidable losses and establish reasons.
4.3. Recommend and implement possible solutions. |
| 5. Process orders. | 5.1. Process and raise orders for stock as requested, according to store policy and procedures.
5.2. Maintain <i>ordering and recording system</i> .
5.3. Ensure availability of sample range, according to buying plan.
5.4. Order pricing materials as required.
5.5. Record negotiated purchase and supply agreements and file for retrieval. |
| 6. Follow up orders. | 6.1. Monitor delivery process to meet agreed deadlines.
6.2. Handle routine supply problems or refer to management as required by store policy.
6.3. Maintain ongoing liaison with buyers, store or departments, warehouse and <i>suppliers</i> to ensure continuity of supply.
6.4. Distribute stock, according to store or department allocation. |

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills

- technical skills to:
 - use store stocktaking systems
 - use electronic recording equipment
- interpersonal skills to:
 - inform team members of their responsibilities and give instructions
 - explain policies and procedures to staff
 - allocate tasks and provide directions for performance of tasks
 - liaise with buyers, store and departments, warehouse and suppliers through clear and direct communication
 - ask questions to identify and confirm requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- management skills to coordinate stock takes
- negotiation skills to handle supply problems
- literacy and numeracy skills to:
 - prepare and present stock control reports and documentation

- process orders
- maintain delivery and supply records
- maintain stock distribution records
- maintain stock ordering and recording systems

Required knowledge

- store policy and procedures in regard to:
 - stock control
 - store merchandising system
 - current and future stock levels
 - bar codes, labels and price tags
 - store stock recording system
 - stock replenishment and reorder procedures
 - inter- and intra-store and department transfers
 - reporting of stock discrepancies and damage
 - identifying and recording stock losses
 - identifying and recording discrepancies
 - existing suppliers
 - quality control procedures and requirements
 - receipt and dispatch of goods, including inspection for quality and quantity
- relevant licensing requirements for moving stock mechanically
- relevant legislation and statutory requirements
- relevant industry codes of practice
- relevant Work Health and Safety (WHS) legislation and codes of practice

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Develop and apply product knowledge.	1.1. Develop <i>product knowledge</i> by accessing <i>relevant sources of information</i> and confirm with relevant staff. 1.2. Apply knowledge of the use and application of relevant products and services in interactions with customers according to store policy and <i>legislative requirements</i> . 1.3. Identify gaps in product knowledge and resolve by accessing relevant sources of information.
2. Approach customer.	2.1. Identify <i>customers</i> by name where possible. 2.2. Develop knowledge of customer buying behaviour by accessing relevant sources of information. 2.3. Determine and apply appropriate timing of customer approach according to store policy and customer behaviour. 2.4. Initiate customer contact according to store policy. 2.5. Convey a positive impression to encourage customer interest according to store policy.
3. Gather and respond to information.	3.1. Apply questioning techniques and listening skills to determine customer buying motives and requirements. 3.2. Interpret and clarify non verbal communication cues. 3.3. Direct customer to specific merchandise according to customer requirements and store policy.
4. Sell benefits.	4.1. Match customer needs to appropriate products and services. 4.2. Communicate knowledge of product features and benefits clearly to customers. 4.3. Describe product use and safety requirements to customers. 4.4. Refer customers to appropriate product specialist as required. 4.5. Answer <i>routine customer questions</i> about merchandise accurately and honestly or refer to senior sales staff.

- | | |
|----------------------------------|--|
| 5. Overcome objections. | 5.1. Identify and acknowledge customer objections according to store policy.
5.2. Categorise objections into price, time and merchandise characteristics and consider solutions.
5.3. Offer solutions to customer objections according to store policy.
5.4. Apply problem solving within personal scope of responsibilities to overcome customer objections or refer to senior staff. |
| 6. Close sale. | 6.1. Monitor, identify and respond appropriately to customer buying signals.
6.2. Encourage customer to make purchase decisions.
6.3. Select and apply appropriate method of closing sale. |
| 7. Maximise sales opportunities. | 7.1. Recognise and apply opportunities for making additional sales according to store policy.
7.2. Advise customer of complementary products or services according to customer's identified need.
7.3. Review personal sales outcomes and consider strategies to maximise future sales in consultation with relevant staff. |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and interpersonal skills to:
 - handle difficult customers
 - verbal and non-verbal communication skills to:
 - question, listen and observe
 - overcome objections and close sale
- literacy and numeracy skills to:
 - handle payments for goods
 - read product information
 - read store policies and procedures
 - record information
 - weigh and measure goods
- selling skills to use a range of selling techniques

Required knowledge

- customer types and needs, including:
 - customer behaviour and cues

- customer buying motives
- demographics, lifestyle and income
- individual and cultural differences
- types of customer needs, such as:
 - functional
 - psychological
- relevant industry codes of practice, legislation and statutory requirements relating to the sale of products and services
- selling techniques, including:
 - add-ons and complementary sales
 - closing techniques
 - opening techniques
 - overcoming customer objections
 - recognising buying signals
 - using strategies to focus customer on specific merchandise
- specific product knowledge for area or section
- store merchandise and service range
- store policies and procedures in regard to:
 - allocated duties and responsibilities
 - selling products and services and sales performance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- applies product knowledge and uses appropriate sales approach to sell the benefits of products and services, overcome objections and close sales
- uses questioning, listening and observation skills to determine customer requirements
- applies store policies and procedures in regard to selling products and services
- maximises sales opportunities according to store policies and procedures
- applies industry codes of practice, relevant legislation and statutory requirements in regard to selling products and services
- evaluates personal sales performance to maximise future

sales.

Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • a real or simulated retail work environment • relevant documentation, such as policy and procedures manuals • a range of customers with different requirements • a range of merchandise and products appropriate to the retail workplace • product labels and sources of product information.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • observation of the candidate in the workplace • customer feedback • answers to questions about specific skills and knowledge • review of portfolios of evidence and third-party workplace reports of on-the-job performance.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the individual, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Product knowledge</i> may include:	<ul style="list-style-type: none"> • features and benefits • handling and storage requirements • price • safety features • stock availability • use-by dates • warranties.
<i>Relevant sources of information</i> may include:	<ul style="list-style-type: none"> • demonstrations • internet • labels • product profiles

- staff members
 - store or supplier product manuals
 - store tours
 - videos.
- Legislative requirements** may include:
- industry codes of practice
 - liquor laws
 - lottery legislation
 - work health and safety (WHS)
 - sale of second-hand goods
 - sale of X and R-rated products
 - tobacco laws
 - Australian consumer law and fair trading Acts
 - trading hours
 - transport, storage and handling of goods.
- Customers** may include:
- customers with routine or special requests
 - internal and external contacts
 - new or repeat contacts
 - people from a range of social, cultural and ethnic backgrounds
 - people with varying physical and mental abilities.
- Routine customer questions** may relate to:
- availability
 - features and benefits
 - price and price reductions
 - quality.
- Problem solving** may be affected by:
- resource implications
 - store policies and procedures.
- Sales transactions** may be completed:
- face-to-face
 - online
 - over the telephone.

SIRXSL303 Build relationships with customers

Modification History

The version details of this endorsed unit are in the table below. The latest information is at the top.

Release	Comments
First Release	This is a revised unit, based on and equivalent to SIRXSL004A Build relationships with customers.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop and maintain expert knowledge to provide accurate product information to customers, including post-sales support.

It also covers communication, analysis and sales techniques to plan and implement sales presentations, build positive relationships with customers, and resolve customer complaints to ensure positive business outcomes.

Application of the Unit

This unit applies to senior sales personnel.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Develop relationships with customers.	<p>1.1.Establish rapport with <i>customers</i> and express genuine interest to <i>clarify customer requirements</i> and enhance <i>outcomes</i>.</p> <p>1.2.Maintain <i>professional ethics</i> with the customer to promote store image and credibility.</p> <p>1.3.Identify <i>customer needs and preferences</i> to maximise sales opportunities.</p> <p>1.4.Maximise sales opportunities by use of add-on and complementary <i>sales techniques</i>.</p> <p>1.5.Give customer space and time to evaluate purchase decision, while using time to maximum advantage for customer and store.</p> <p>1.6.Use effective methods to close sales.</p>
2. Apply expert knowledge.	<p>2.1.Provide customer with accurate information regarding product and service appraisals, correct statements and warranties according to <i>legislative requirements</i>.</p> <p>2.2.Provide detailed knowledge of supplier or manufacturer information according to customer needs and commercial confidentiality guidelines.</p> <p>2.3.Provide evaluation of product range, demonstrate features and benefits of products or services where appropriate, and make recommendations to the customer to maximise sales potential.</p> <p>2.4.Maximise customer interest in product or service through price negotiation where applicable and offer payment and credit options according to <i>store policy</i>.</p> <p>2.5.Calculate prices and discounts according to pricing determinants and store policy.</p>
3. Provide post-sales support.	<p>3.1.Provide evidence of ongoing support as sale is concluded.</p> <p>3.2.Explain <i>back-up service</i> and reassure customer according to legislative requirements and store policy.</p> <p>3.3.Provide customer with store or salesperson's contact details to ensure customer follow-up according to store policy.</p> <p>3.4.Enter customer and transaction details into <i>customer database</i> according to store policy.</p>

4. Plan sales presentations.
 - 4.1. Plan presentation to complement *product characteristics*.
 - 4.2. Select client group according to product characteristics and store merchandising policy.
 - 4.3. Access *promotional materials* where required and distribute to client group.
 - 4.4. Select and prepare a range of products or services for presentation to reflect store image, demographics and merchandising plan.
5. Implement sales presentations.
 - 5.1. Ensure sufficient numbers of adequately briefed support staff, where required, for presentation.
 - 5.2. Apply communication skills to effectively create interest, focus attention, and encourage customer interaction with individuals or groups.
 - 5.3. Demonstrate products or services to create a buying environment.
 - 5.4. Measure results of sales presentation according to predetermined criteria, review overall performance and results, and apply information to enhance future *sales presentations*, according to store sales policy.
6. Maintain and use a customer database.
 - 6.1. Maintain customer confidentiality as required by store policy and legislative requirements.
 - 6.2. Develop and maintain accurate *customer records* and store securely according to store policy and procedures.
 - 6.3. Identify and follow up regular customers according to store marketing policy.
 - 6.4. Use customer records to advise customers on products and services of possible interest.
 - 6.5. Implement *customer loyalty schemes* where required according to store promotional activities.
7. Deal with difficult customers.
 - 7.1. Acknowledge customer complaints and problems and reassuringly support difficult customers to produce positive outcome.
 - 7.2. Use questioning and active listening to encourage customer to verbalise issue and minimise customer frustration.
 - 7.3. Develop customer's confidence in the candidate and product or service to promote long-term trust and commitment to store.
 - 7.4. Establish mutually acceptable resolution of complaint.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and interpersonal skills to resolve conflict
- literacy and numeracy skills to:
 - access and read relevant product information
 - calculate prices and discounts
 - read store policies and procedures
 - record client and sales information
- sales skills to apply selling techniques, including:
 - add-ons and complementary sales
 - identifying buying signals
 - opening and closing techniques
 - overcoming customer objections
 - presenting product information
 - promoting enhanced sustainability features of selected products and services
 - using strategies to focus customer on specific merchandise

Required knowledge

- customer types and needs, including:
 - customer buying motives, customer behaviour and cues
 - functional and psychological needs
 - individual and cultural differences, demographics, lifestyle and income
- work health and safety (WHS) requirements relating to:
 - manual handling
 - plant and equipment
 - hazardous substances and dangerous goods
 - workers compensation
- relevant industry codes of practice, legislation and statutory requirements relating to building relationships with clients
- store policies and procedures in regard to:
 - efficient use of resources
 - establishing, maintaining and using customer records
 - methods of maintaining customer confidentiality and secure storage of customer details
 - price negotiation and payment and credit options
 - pricing, including GST requirements
 - resolving customer complaints
 - updating and maintaining customer mailing lists
- store and area merchandise and service range

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- applies:
 - detailed knowledge of manufacturer and supplier supply, back-up service and warranty information to enhance customer support
 - industry codes of practice, relevant legislation and statutory requirements in regard to selling products and services
 - store policies and procedures in regard to selling products and services, dealing with customers, planning and implementing sales presentations, and providing after-sales support
- develops customer commitment to store and builds return customer base by establishing rapport and relationship with customer, maintaining professional ethics, and discerning customer buying motives, requirements and preferences
- establishes, records and maintains customer records and details, maintaining customer confidentiality, ensuring secure storage of data, and using customer records to maximise customer interest and create a buying atmosphere
- evaluates personal or team sales performance to maximise future sales
- maximises sales opportunities by using effective selling techniques, applying detailed product knowledge, and using an appropriate sales approach to sell the benefits of products, overcome objections and close sales
- plans, prepares and conducts sales presentations and briefs
- supports staff where required, to create a buying environment and maximise sales performance
- resolves customer complaints by acknowledging problems and supporting customer to produce positive outcomes and obtain mutually acceptable complaint resolution
- uses effective questioning, listening and observation skills to determine customer requirements.

Context of and specific resources for assessment

Assessment must ensure access to:

- a retail work environment
- relevant sources of product information
- relevant documentation, such as:

- policy and procedures manuals
- industry codes of practice and relevant legislation
- WHS legislation and codes of practice
- a range of customers with different requirements
- an appropriate range of products and equipment
- a customer database system.

Method of assessment A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of the candidate in the workplace
- customer feedback
- written or verbal questioning to assess knowledge and understanding
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Guidance information for assessment Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the individual, accessibility of the item, and local industry and regional contexts) may also be included.

Customers may include:

- a single customer, couples, families or groups
- customers with routine or special requests
- internal and external contacts
- new or repeat contacts
- people from a range of social, cultural and ethnic backgrounds
- people with varying physical and mental abilities.

Clarification of customer requirements may be achieved by:

- active listening
- appropriate questioning
- empathy
- observation
- reassurance and confirmation.

Outcomes may include:

- credibility of store
- customer commitment

Maintaining <i>professional ethics</i> with the customer may include:	<ul style="list-style-type: none">• customers' trust• increased return customer base.• confirmed appraisals of products and services• honesty• positive statements.
<i>Customer needs and preferences</i> may include:	<ul style="list-style-type: none">• brand• customer physical needs• price• product characteristics• product type• size.
<i>Sales techniques</i> will include:	<ul style="list-style-type: none">• add-on and complementary products and services• selling up or down• suggestive selling• variety of methods of closing sales.
<i>Legislative requirements</i> may include:	<ul style="list-style-type: none">• environmental protection legislation• health and welfare law specific to local government, state and federal legislation• liquor laws• WHS• pricing procedures, including GST requirements• privacy laws• sale of second-hand goods• tobacco laws• Australian Consumer Law and fair trading Acts• transport, storage and handling of goods.
<i>Store policy</i> and procedures in regard to:	<ul style="list-style-type: none">• dealing with difficult customers• maintaining and using client records• promotional, marketing, discounting and reward programs• resolving customer complaints• selling products and services.
<i>Back-up service</i> may include:	<ul style="list-style-type: none">• delivery specifications• financial products and services• installation• returns policies• technical support• warranties and guarantees.
<i>Customer database</i> may be:	<ul style="list-style-type: none">• computer-based• manual.

- Product characteristics*** may include:
- features and benefits
 - price range
 - supplier or manufacturer information
 - target group.
- Promotional materials*** may include:
- brochures
 - business cards
 - pamphlets
 - posters
 - promotional merchandise
 - vouchers.
- Sales presentations*** may be:
- at client site
 - in-house
 - verbal
 - visual.
- Customer records*** may include:
- anniversaries and special dates
 - details of items bought or returned
 - name and contact details
 - personal preferences
 - transaction records.
- Customer loyalty schemes*** may include:
- credit or discount facilities
 - customer clubs
 - customer reward schemes
 - special offers.

SITXMPR403 Plan and implement sales activities

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.2	Correction to mapping to show non equivalence.
1.0	N Replaces and is not equivalent to SITXMPR003A Plan and implement sales activities. Minor adjustments to expression of content to streamline and improve unit. Added innovation, legal, ethical and sustainability to Performance Criteria. Added more on new technologies and media.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan and implement sales activities. It requires the ability to identify and analyse market and customer needs, proactively target current and new customers, plan the operation of sales calls, make calls and prepare sales reports.

Application of the Unit

This unit applies to all industry sectors, and to individuals taking responsibility for coordinating sales activities within the parameters of an established sales strategy. People working independently with limited supervision undertake this role. This could include sales and marketing personnel or managers and owner-operators of small businesses.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

- | | |
|-----------------------------|--|
| 1. Plan sales activities. | 1.1 Plan sales activities for existing and potential customers according to marketing plan or other organisation systems.
1.2 Identify, analyse and incorporate organisation, customer and market <i>information</i> into sales planning process.
1.3 Source prospects and create profiles.
1.4 Proactively seek and evaluate innovative sales opportunities and take advantage of new technologies and media.
1.5 Estimate potential revenue, based on analysis of information and in consultation with appropriate colleagues.
1.6 Plan activities and <i>practical sales call patterns</i> that maximise opportunities to meet individual and team targets.
1.7 Consider <i>legal, ethical and sustainability issues</i> . |
| 2. Prepare for sales calls. | 2.1 Make sales call appointments in advance where appropriate.
2.2 Develop <i>sales call strategies and tactics</i> based on market knowledge, current sales focus and consultation with colleagues.
2.3 Gather <i>information and support materials</i> to support sales calls. |
| 3. Make sales calls. | 3.1 Make sales calls according to agreed call patterns.
3.2 Build relationships with customers through use of effective interpersonal communication styles.
3.3 Develop customer trust and confidence through demonstration of personal and professional integrity.
3.4 Proactively identify and resolve customer issues and problems.
3.5 Use selling techniques to maximise opportunities to meet and exceed sales targets.
3.6 Provide current, accurate and relevant information on product |

- features and benefits according to current marketing focus.
- 3.7 Encourage feedback from customers and proactively seek market intelligence.
4. Review and report on sales activities.
- 4.1 Review activities according to agreed evaluation methods and incorporate results into future sales planning.
- 4.2 Prepare sales reports according to organisational policy and required timeframes.
- 4.3 Present current and clear market intelligence to those responsible for sales and marketing planning.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - use effective selling techniques
 - establish and conduct positive business relationships
- critical thinking skills to evaluate market and customer information for sales opportunities
- initiative and enterprise skills to proactively identify and respond to new opportunities
- literacy skills to:
 - interpret customer and market trend information
 - develop sales reports
- numeracy skills to:
 - calculate potential sales revenues
 - create and interpret sales statistics
- planning and organising skills to plan for and manage sales call patterns
- problem-solving skills to proactively identify and respond to operational and more systemic customer problems
- self-management skills to take responsibility for sales outcomes
- technology skills to use current sales management systems.

Required knowledge

- principles of selling, sales communication and relationship building
- industry structures and interrelationships, industry networks and information sources
- industry and market knowledge appropriate to the sector and organisation, including:
 - distribution and marketing networks, especially those that support the product or service being promoted
 - commission structures
 - current customer and market trends

- links between sales and other areas of organisational operations
- structure and content of marketing plans and the role of sales in the overall marketing mix
- legal issues that impact on sales personnel, including consumer protection provisions
- ethical considerations for sales personnel, including:
 - truth and honesty in sales
 - targeting of particular groups in the community
- sustainability considerations for sales activities, including:
 - reducing waste of printed materials
 - sustainability as a sales tool.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- plan and implement a range of sales activities for an operation, product or service including the preparation of sales reports
- use effective communication skills during sales calls
- demonstrate knowledge of the industry, including structure and interrelationships, industry networks, information sources and distribution and marketing networks.

Context of and specific resources for assessment

Assessment must ensure use of:

- real or simulated products or services for which the individual can conduct sales activities
- current information and communications technology used by industry to manage sales activities
- marketing plans and operational sales documents, such as sales reports and sales support materials
- other people with whom the individual can interact.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- evaluation of sales activities undertaken by the individual including sales planning and associated implementation
- sales reporting, incorporating analysis of performance

- use of case studies to assess knowledge of how sales activities can be used in specific industry contexts
- written or oral questioning to assess knowledge, such as, structure of the industry, industry interrelationships, distribution networks and legal compliance issues
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

In the workplace, people always combine the skills described in different units to do their jobs. For effective assessment of this unit, the assessor should use integrated activities that also provide evidence of skills in other units, for example:

- SITXMGT501 Establish and conduct business relationships
- SITXMPR404 Coordinate marketing activities.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information to be incorporated into the sales planning process may include:

- competitive activity
- financial statistics
- market trends
- sales and marketing reports.

Practical sales call patterns may be affected by:

- call intensity required
- current organisational priorities
- geographic considerations and restraints
- need for administration and reporting time
- specific sales and revenue targets
- technology capabilities.

Legal, ethical and sustainability issues may relate to:

- consumer law and trade practices
- work health and safety obligations
- resource conservation
- targeting of particular groups
- ways of presenting information.

Sales call strategies and tactics may include or be

- current sales figures for nominated

based on:

periods

- focus on specific products or offers
- individual customer history
- response to competitive activity.

Information and support materials may include:

- brochures
- display material
- electronic updates
- giveaways
- incentive material
- Internet and web pages
- other handouts
- tariff sheets.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise instruction and demonstration	1.1. Gather information about <i>learner characteristics</i> and learning needs 1.2. Confirm a <i>safe learning environment</i> 1.3. Gather and check <i>instruction and demonstration objectives</i> and seek assistance if required 1.4. Access and review relevant <i>learning resources</i> and <i>learning materials</i> for suitability and relevance, and seek assistance to interpret the contextual application 1.5. Organise access to necessary equipment or physical resources required for instruction and demonstration 1.6. Notify learners of <i>details</i> regarding the implementation of the learning program and/or delivery plan
2. Conduct instruction and demonstration	2.1. Use interpersonal skills with learners to establish a safe and comfortable learning environment 2.2. Follow the learning program and/or delivery plan to cover all learning objectives 2.3. Brief learners on any <i>OHS procedures</i> and requirements prior to and during training 2.4. Use <i>delivery techniques</i> to structure, pace and enhance learning 2.5. Apply <i>coaching</i> techniques to assist learning 2.6. Use communication skills to provide information,

ELEMENT	PERFORMANCE CRITERIA
	<p>instruct learners and demonstrate relevant work skills</p> <p>2.7. Provide opportunities for practice during instruction and through work activities</p> <p>2.8. Provide and discuss feedback on learner performance to support learning</p>
3. Check training performance	<p>3.1. Use <i>measures</i> to ensure learners are acquiring and can use new technical and generic skills and knowledge</p> <p>3.2. Monitor learner progress and outcomes in consultation with learner</p> <p>3.3. Review relationship between the trainer/coach and the learner and adjust to suit learner needs</p>
4. Review personal training performance and finalise documentation	<p>4.1. Reflect upon personal performance in providing instruction and demonstration, and document strategies for improvement</p> <p>4.2. Maintain, store and secure learner records according to organisational and legal requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- verbal and non-verbal communication techniques, such as:
 - asking relevant and appropriate questions
 - providing explanations
 - demonstrating
 - using listening skills
 - providing information clearly
- safety skills to implement OHS requirements, by acting and responding safely in order to:
 - identify hazards
 - conduct prestart-up checks if required
 - observe and interpret learner behaviour that may put people at risk
- time-management, skills to:

REQUIRED SKILLS AND KNOWLEDGE

- ensure all learning objectives are covered
- pace learning
- reflection skills in order to:
 - identify areas for improvement
 - maintain personal skill development
- literacy skills to:
 - complete and maintain documentation
 - read and follow learning programs and plans
 - read and analyse learner information
- technology skills to operate audio-visual and technical equipment
- interpersonal skills to:
 - engage, motivate and connect with learners
 - provide constructive feedback
 - maintain appropriate relationships
 - establish trust
 - use appropriate body language
 - maintain humour
 - demonstrate tolerance
 - manage a group
 - recognise and be sensitive to individual difference and diversity
- observation skills to:
 - monitor learner acquisition of new skills, knowledge and competency requirements
 - assess learner communication and skills in interacting with others
 - identify learner concerns
 - recognise learner readiness to take on new skills and tasks

Required knowledge

- learner characteristics and needs
- content and requirements of the relevant learning program and/or delivery plan
- sources and availability of relevant learning resources and learning materials
- content of learning resources and learning materials
- training techniques that enhance learning and when to use them
- introductory knowledge of learning principles and learning styles
- key OHS issues in the learning environment, including:
 - roles and responsibilities of key personnel
 - responsibilities of learners
 - relevant policies and procedures, including hazard identification, risk assessment, reporting requirements, safe use of equipment and emergency

REQUIRED SKILLS AND KNOWLEDGE

- procedures
- risk controls for the specific learning environment

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must address the scope of this unit and reflect all components of the unit. A range of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- carry out a minimum of three training sessions, involving demonstrating and instructing particular work skills for different groups; with each session addressing:
 - different learning objectives
 - a range of techniques and effective communication skills appropriate to the audience.

Context of and specific resources for assessment

Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.

Method of assessment**Guidance information for assessment**

For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement**RANGE STATEMENT**

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Learner characteristics</i> may include:	<ul style="list-style-type: none"> • language, literacy and numeracy levels • learning styles • past learning and work experiences • specific needs • workplace culture.
<i>Safe learning environment</i> may include:	<ul style="list-style-type: none"> • exit requirements • personal protective equipment • safe access • safe use of equipment.
<i>Instruction and demonstration objectives</i> may include:	<ul style="list-style-type: none"> • competencies to be achieved • generic and technical skills, which may be: <ul style="list-style-type: none"> • provided by the organisation • developed by a colleague • individual or group objectives • learning outcomes.
<i>Learning resources</i> may include:	<ul style="list-style-type: none"> • any material used to support learning, such as: <ul style="list-style-type: none"> • learner and user guides • trainer and facilitator guides • example training programs • specific case studies • professional development materials • assessment materials • a variety of formats • those produced locally • those acquired from other sources.
<i>Learning materials</i> may include:	<ul style="list-style-type: none"> • handouts for learners • materials sourced from the workplace, e.g. workplace documentation, operating procedures, and specifications.
<i>Details</i> may include:	<ul style="list-style-type: none"> • location and time • outcomes of instruction or demonstration • reason for instruction or demonstration • who will be attending instruction session.

RANGE STATEMENT	
<i>OHS procedures</i> may include:	<ul style="list-style-type: none"> • emergency procedures • hazards and their means of control • incident reporting • use of personal protective equipment • safe work practices • safety briefings • site-specific safety rules.
<i>Delivery techniques</i> may include:	<ul style="list-style-type: none"> • coaching • demonstration • explanation • group or pair work • providing opportunities to practise skills and solve problems • questions and answers.
<i>Coaching</i> may include:	<ul style="list-style-type: none"> • learning arrangements requiring immediate interaction and feedback • on-the-job instruction and 'buddy' systems • relationships targeting enhanced performance • short-term learning arrangements • working on a one-to-one basis.
<i>Measures</i> may include:	<ul style="list-style-type: none"> • informal review or discussion • learner survey • on-the-job observation • review of peer coaching arrangements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish effective work environment for learning	1.1. Establish and agree upon objectives and scope of the work-based learning 1.2. Analyse work practices and routines to determine their effectiveness in meeting established learning objectives 1.3. Identify and address <i>OHS implications</i> of using work as the basis for learning
2. Develop a work-based learning pathway	2.1. Address <i>contractual requirements</i> and responsibilities for learning at work 2.2. Arrange for integration and monitoring of external learning activities with the <i>work-based learning pathway</i> 2.3. Obtain agreement from relevant personnel to implement the work-based learning pathway
3. Establish the learning-facilitation relationship	3.1. Identify context for learning and individual's learning style 3.2. Select appropriate technique or process to facilitate learning and explain the basis of the technique to learner 3.3. Develop, document and discuss <i>individualised learning plan</i> with learner 3.4. Access, read and interpret documentation outlining the OHS responsibilities of the various parties in the

ELEMENT	PERFORMANCE CRITERIA
	<p>learning environment</p> <p>3.5. Monitor supervisory arrangements appropriate to learner's levels of knowledge, skill and experience to provide support and encouragement and ensure learner's health and safety</p>
4. Implement work-based learning pathway	<p>4.1. Sequence introduction of workplace tasks, activities and processes to reflect the agreed work-based learning pathway</p> <p>4.2. Explain objectives of work-based learning and the processes involved to learner</p> <p>4.3. Encourage learner to take responsibility for learning and to self-reflect</p> <p>4.4. Develop techniques that facilitate learner's transfer of skills and knowledge</p>
5. Maintain and develop the learning/facilitation relationship	<p>5.1. Prepare for each session</p> <p>5.2. Structure learning activities to support and reinforce new learning, build on strengths, and identify areas for further development</p> <p>5.3. Observe learner cues and change approaches where necessary to maintain momentum</p> <p>5.4. Practise <i>ethical behaviour</i> at all times</p> <p>5.5. Monitor effectiveness of the learning/facilitation relationship through regular meetings between the parties</p>
6. Close and evaluate the learning/facilitation relationship	<p>6.1. Carry out the closure smoothly, using appropriate interpersonal and communication skills</p> <p>6.2. Seek feedback from learner on the outcomes achieved and value of the relationship</p> <p>6.3. Evaluate and document process, including <i>impact, self evaluation and reflection</i>, and file according to legal and organisational requirements</p>
7. Monitor and review the effectiveness of the work-based learning pathway	<p>7.1. Document work performance and learning achievement and keep records according to organisational requirements</p> <p>7.2. Evaluate effectiveness of the work-based pathway against the objectives, processes and techniques used</p> <p>7.3. Recommend improvements to work-based practice in light of the review process</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- oral communication and language skills to:
 - motivate the learner
 - transfer skills and knowledge
- interpersonal skills to maintain appropriate relationships
- observation skills to monitor individual progress
- literacy skills to:
 - read and interpret organisational documents, legal documents and contracts
 - complete and maintain documentation
- organisational skills to provide guidance and feedback to individuals
- communication skills, including:
 - using effective verbal and non-verbal language
 - using critical listening and questioning techniques
 - giving constructive and supportive feedback
 - assisting learners to paraphrase advice or instructions back to the trainer/facilitator
 - providing clear and concrete options and advice
 - using appropriate industry/profession terminology and language
 - ensuring language, literacy and numeracy used is appropriate to learners

Required knowledge

- systems, processes and practices within the organisation where work-based learning is taking place
- operational demands of the work and impact of changes on work roles
- organisational work culture, including industrial relations environment
- systems for identifying skill needs
- introductory knowledge of different learning styles and how to encourage learning in each, for example:
 - visual learners
 - audio learners
 - kinaesthetic learners
 - theoretical learners
- relevant policy, legislation, codes of practice and national standards that may affect training and assessment in the vocational education and training sector
- OHS relating to the work role, including:
 - hazards relating to the industry and specific workplace

REQUIRED SKILLS AND KNOWLEDGE

- reporting requirements for hazards and incidents
- specific procedures for work tasks
- safe use and maintenance of relevant equipment
- emergency procedures
- sources of OHS information

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must address the scope of this unit and reflect all components of the unit. Arrange of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- prepare and facilitate work-based learning
- provide evidence of a minimum of two examples of developing work-based learning pathways, that include:
 - identifying needs for learning
 - analysing work practices, work environment and work activities
 - organising and allocating work in a way that reflects learning needs and provides effective learning opportunities through work processes
- provide a minimum of two examples of a learning facilitation relationship being conducted:
 - with different individuals
 - demonstrating communication skills and flexibility
 - demonstrating one or more of the processes or techniques identified.

Context of and specific resources for assessment

Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be

EVIDENCE GUIDE	
	provided. Assessment must ensure access to information about work activities.
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<i>OHS implications</i> may include:	<ul style="list-style-type: none"> • OHS obligations • workplace OHS policies and procedures • ensuring work practices, routines and proposed changes do not pose a risk to learners and others.
<i>Contractual requirements</i> may include:	<ul style="list-style-type: none"> • training plans under apprenticeships/traineeships • requirements of government-funded training programs, such as Workplace English Language and Literacy (WELL).
<i>Work-based learning pathway</i> may include:	<ul style="list-style-type: none"> • identifying specific goals for work-based learning • identifying job tasks or activities to be included in learning process • appropriate sequencing of job tasks/activities to reflect learner incremental development • direct guidance and modelling from experienced co-workers and experts • opportunities for practice.
<i>Individualised learning plan</i> may include:	<ul style="list-style-type: none"> • information about individual's learning style, learner characteristics, and the context for learning • clear boundaries and expectations of the learning/facilitation relationship • documented equity or additional support needs for the

RANGE STATEMENT	
	learner <ul style="list-style-type: none"> • performance benchmarks to be achieved • activities and processes which together will achieve the benchmarks.
<i>Ethical behaviour</i> includes:	<ul style="list-style-type: none"> • trust • integrity • privacy and confidentiality of the session • following organisational policies • knowing own limitations • having a range of other intervention referrals ready when needed • honesty • fairness to others.
<i>Impact</i> may be:	<ul style="list-style-type: none"> • successful achievement, rate of achievement, or lack of achievement of identified goals • achievement of other outcomes as a result of the relationship • development of new goals • new or increased motivation to learn • greater capacity to learn • increase in learner's self-confidence.
<i>Self-evaluation and reflection</i> may include:	<ul style="list-style-type: none"> • asking critical questions about: <ul style="list-style-type: none"> • own ability • what worked or didn't work • how the relationship building process could be improved • reviewing records and journals on sessions and critically evaluating own performance • reviewing feedback from learner and identifying critical aspects and areas for improvement.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop a mentoring plan	1.1. Identify scope and boundaries of the <i>mentoring</i> relationship according to organisational procedures 1.2. Establish <i>ground rules</i> and negotiate realistic expectations 1.3. Establish and maintain confidentiality of the relationship in accordance with <i>legislation, policy and procedures</i>
2. Facilitate mentoring relationship	2.1. Develop learner's confidence, self-esteem, respect and trust in the mentoring relationship 2.2. Share personal experiences and knowledge with the person being mentored according to agreed objectives 2.3. Support the person being mentored to develop and use skills in problem solving and decision making 2.4. Use personal and professional networks to assist the person being mentored 2.5. Provide information, guidance and constructive guidance to enhance engagement in the workplace 2.6. Use <i>techniques for resolving differences</i> without damaging the relationship, and obtain assistance according to organisational policy and procedures
3. Monitor mentoring relationship	3.1. Provide planning assistance and guidance as requested by the person being mentored in a form

ELEMENT	PERFORMANCE CRITERIA
	<p>and style to suit their requirements</p> <p>3.2. Provide feedback to the person being mentored on progress towards achieving the expectations and goals of the mentoring process</p> <p>3.3. Recognise and discuss changes in the <i>mentoring relationship</i> with appropriate <i>stakeholders</i></p> <p>3.4. Negotiate and manage closure of the mentoring arrangement once objectives have been met</p>
4. Evaluate effectiveness of mentoring	<p>4.1. Establish and discuss <i>benefits</i> gained from the mentoring process</p> <p>4.2. Reflect on and articulate the personal benefits gained from providing mentoring</p> <p>4.3. Identify and report the outcomes of the mentoring arrangement and the <i>benefits to the organisation</i> according to organisational policy and procedures to improve the mentoring system or program</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- planning and time-management skills to mentor in a workplace
- oral communication and language skills to motivate learners
- organisational skills to provide guidance and feedback to individuals
- interpersonal skills to:
 - engage in relationship building, including building trust and maintaining confidentiality
 - respond to diversity, including gender and disability
- communication skills to use a range of communication strategies, including listening, questioning, and giving and receiving feedback
- initiative and enterprise skills to apply procedures relating to OHS and environmental legislation in the context of workplace mentoring

Required knowledge

- relevant policy, legislation, codes of practice and national standards likely to impact on the provision of workplace mentoring
- training contracts and responsibilities of employer, registered training organisation

REQUIRED SKILLS AND KNOWLEDGE

- (RTO) and funding body
- training plans and responsibilities
 - training products and strategies for learning
 - mentoring methodologies and strategies
 - acceptable behaviour in the mentoring relationship
 - equal employment opportunity, equity and diversity principles
 - OHS relating to the work role, including:
 - hazards relating to the industry and specific workplace
 - reporting requirements for hazards and incidents
 - specific procedures for work tasks
 - safe use and maintenance of relevant equipment
 - emergency procedures
 - sources of OHS information

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must address the scope of this unit and reflect all components of the unit. Arrange of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- prepare a mentoring plan between the mentor and learner that reflects the scope and substance expected within a plan prepared for a learner undertaking a contracted apprenticeship or traineeship
- facilitate at least three mentoring sessions
- provide information on sessions, including comments and notes from both mentor and learner.

Context of and specific resources for assessment

Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be

TLIA2011A Package goods

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to package goods in accordance with regulatory and workplace requirements including selecting materials, packing and unwrapping products, and labelling packaged products/loads to the required labelling standards. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the packaging of goods.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the packaging of goods as part of work activities in the warehousing, distribution and/or storage industries.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Select materials and pack and unwrap products

- 1.1 Packaging specifications and order packaging documentation are correctly interpreted
- 1.2 Appropriate packaging technology suitable for the goods to be packed is selected
- 1.3 Packaging materials are identified and matched to specifications
- 1.4 Work plan ensures materials are used economically and that appropriate packaging is used that minimises loss and damage in transit or storage
- 1.5 Work is planned in accordance with OH&S requirements
- 1.6 Completed packed goods are stacked to minimise damage from within and outside

2 Label packaged products/loads

- 2.1 Workplace labelling standards are identified
- 2.2 Appropriate goods handling, labelling and other identification symbols are utilised
- 2.3 Invoices and picking slips are attached (where required)
- 2.4 Workplace documentation is completed

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to the packaging of goods including the Australian Dangerous Goods Code (ADG Code)

REQUIRED KNOWLEDGE AND SKILLS

- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the packaging of goods
- Focus of operation of work systems, equipment, management and site operating systems for the packaging of goods
- Problems that may occur when packaging goods and appropriate action that can be taken to resolve the problems
- Documentation requirements for the packaging of goods
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when packaging goods
- Read and interpret instructions, procedures and labels relevant to the packaging of goods
- Complete documentation related to work activities when packaging goods
- Work collaboratively with others when packaging goods
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when packaging goods in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when packaging goods
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment when packaging goods
- Check operation of packaging equipment in terms of service schedule and standard operating procedures
- Select and use relevant communications, computing equipment and materials when packaging goods
- Estimate the size, shape and special requirements of goods and loads

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:	<ul style="list-style-type: none">• in a range of work environments• by day or night
Customers may be:	<ul style="list-style-type: none">• internal or external
Workplaces may comprise:	<ul style="list-style-type: none">• large, medium or small worksites
Work may be conducted in:	<ul style="list-style-type: none">• restricted spaces• exposed conditions• controlled or open environments
Goods may involve:	<ul style="list-style-type: none">• special handling, storage and/or packaging requirements, including temperature controlled goods and dangerous goods
Hazards in the work area may include exposure to:	<ul style="list-style-type: none">• chemicals• dangerous or hazardous substances• movements of equipment, goods and materials• oil or water on floor• a fire or explosion• damaged packaging or pallets• debris on floor• faulty racking• poorly stacked pallets• faulty equipment
Consultative processes may involve:	<ul style="list-style-type: none">• other employees and supervisors• suppliers, customers and clients• relevant authorities and institutions• management and union representatives• industrial relations and OH&S specialists• other maintenance, professional or technical staff
Communication in the work area may include:	<ul style="list-style-type: none">• phone• electronic data interchange (EDI)• fax• email• internet• radio• oral, aural or signed communications
Depending on the type of organisation concerned and the	<ul style="list-style-type: none">• company procedures• enterprise procedures

RANGE STATEMENT

local terminology used, workplace procedures may include:

- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- codes of practice and regulations relevant to the packaging of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for the packaging of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
 - Australian and International Dangerous Goods Codes
 - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations

RANGE STATEMENT

- workers compensation regulations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Identify workplace procedures and documentation requirements for the receipt of goods

- 1.1 Workplace procedures for receipt of goods are identified
- 1.2 Purpose of documents associated with the receipt of goods is interpreted
- 1.3 Workplace documentation requirements for the receipt of goods and reporting of damage are identified

2 Check and inspect goods on arrival and complete workplace documentation

- 2.1 Procedures for checking of goods in comparison with orders or manifests are identified and followed
- 2.2 Discrepancies and/or damaged goods are reported
- 2.3 Non-conforming goods are appropriately documented and despatched or stored in accordance with company procedures

3 Unload, unpack and store stock

- 3.1 Appropriate manual handling techniques and equipment are identified
- 3.2 Safe work procedures are used when unloading, unpacking and storing stock
- 3.3 Advice on appropriate storage locations and requirements for particular products is sought
- 3.4 Goods are unloaded and unpacked in accordance with workplace procedures
- 3.5 Assistance from others is sought when required to maintain safe and effective work
- 3.6 Directions are followed to store stock in appropriate areas

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to the receiving of goods including the ADG Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the receiving of goods
- Focus of operation of work systems, equipment, management and site operating systems for the receiving of goods
- Problems that may occur when receiving goods and appropriate action that can be taken to resolve the problems
- Specifications and standards for the checking and inspection of received goods
- Documentation requirements for the receiving of goods
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when receiving goods
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures, information, labels and signs relevant to receiving goods
- Complete documentation related to the receipt of goods
- Identify containers and goods coding, ADG and IMDG markings and where applicable emergency information panels
- Work collaboratively with others when receiving goods
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems when receiving goods in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events when receiving goods
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when receiving goods
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or

Required skills:

damage to goods or equipment

- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use relevant load handling equipment when receiving goods
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Estimate the size, shape and special requirements of goods and loads

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:	<ul style="list-style-type: none">• in a range of work environments• by day or night
Customers may be:	<ul style="list-style-type: none">• internal or external
Workplaces may comprise:	<ul style="list-style-type: none">• large, medium or small worksites
Work may be conducted in:	<ul style="list-style-type: none">• limited or restricted spaces• exposed conditions• controlled or open environments
Received goods may involve:	<ul style="list-style-type: none">• special handling and storage requirements, including temperature controlled goods and dangerous goods
Problems that may occur when receiving goods may include:	<ul style="list-style-type: none">• damaged stock• damaged pallets or packaging• wrong stock• error in paperwork• poorly stacked stock• incorrect quantity
Aspect s of goods to be checked when receiving goods may include:	<ul style="list-style-type: none">• correct type• number• condition• quality• packaging• labelling• dangerous goods declarations and markings (where applicable)

RANGE STATEMENT

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- oil or water on floor
- fire or explosion
- damaged packaging or pallets
- debris on floor
- poorly stacked pallets
- faulty equipment

Consultative processes may involve:

- other employees and supervisors
- suppliers, customers and clients
- drivers and agents
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- codes of practice and regulations relevant to the receiving of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances

RANGE STATEMENT

Applicable regulations and legislation may include:

- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
- relevant codes and regulations for the receiving of goods
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
 - Australian and International Dangerous Goods Codes
 - Australian Marine Orders and the International Maritime Dangerous Goods Code
 - IATA Dangerous Goods by Air Regulations
 - Australian and international explosives codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to despatch stock in accordance with workplace requirements including analysing orders to identify work requirements, following workplace order picking processes to prepare goods for despatch, and completing despatch tasks in accordance with workplace procedures and schedules. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the despatch of goods.

Work is performed under some supervision generally within a team environment. It involves the application of regulatory requirements and workplace procedures to despatch operations in the warehousing, distribution and/or storage industries.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Analyse order to identify work requirements

- 1.1 Order request and consignment note documentation is interpreted
- 1.2 Required schedules for despatch are identified
- 1.3 Product(s) in order are identified
- 1.4 Workplace and product knowledge is used to plan sequence of work
- 1.5 Appropriate materials handling equipment is selected within required OH&S regulations and timeframe for the despatch

2 Follow workplace order picking processes to prepare goods for despatch

- 2.1 Goods for despatch are selected, checking against product knowledge, labels and other identification systems
- 2.2 Products are sorted, assembled and consolidated
- 2.3 Orders are secured and placed in storage/despatch zones, in accordance with schedule
- 2.4 Order is checked against despatch schedule and order form

3 Complete despatch following workplace procedures and schedules

- 3.1 Workplace records are completed, and labels and appropriate documentation attached
- 3.2 Load labels and documentation are checked and loading is organised in accordance with workplace procedures and ADG Code (where applicable)
- 3.3 Final check of load labels and documentation is completed in accordance with requirements
- 3.4 Transportation requirements are described to driver where appropriate

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to despatch operations, including the ADG Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the organising of despatch operations
- Focus of operation of work systems, equipment, management and site operating systems for despatching goods
- Problems that may occur when despatching goods and appropriate action that can be taken to resolve the problems
- Documentation and record requirements for despatch operations
- Equipment used during despatch operations and the precautions and procedures that should be followed in its use
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when organising despatch operations
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures and labels relevant to the organising of despatch operations
- Complete documentation related to the organising of despatch operations
- Work collaboratively with others when organising despatch operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when organising despatch operations in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in goods and equipment in accordance with standard

Required skills:

operating procedures

- Select and use relevant equipment and communications technology when organising despatch operations
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Estimate the size, shape and special requirements of goods and loads

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be

EVIDENCE GUIDE

- conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:	<ul style="list-style-type: none"> • in a range of work environments • by day or night
Customers may be:	<ul style="list-style-type: none"> • internal or external
Workplaces may comprise:	<ul style="list-style-type: none"> • large, medium or small worksites
Work may be conducted in:	<ul style="list-style-type: none"> • limited or restricted spaces • exposed conditions • controlled or open environments
Goods to be despatched may involve:	<ul style="list-style-type: none"> • special handling, location, storage and/or packaging requirements, including temperature controlled goods, dangerous goods or hazardous substances
Problems that may occur when despatching an order include:	<ul style="list-style-type: none"> • wrong stock is despatched • wrong carton for order • incorrect location • damaged stock • no stock at location • incorrect quantity • failing to meet a special order requirement • failing to meet customers delivery requirements
Special order requirements may include:	<ul style="list-style-type: none"> • pricing • special packing • specific size of carton • special categories of stock
Hazards in the work area may	<ul style="list-style-type: none"> • chemicals • dangerous or hazardous substances

RANGE STATEMENT

include:

- movements of equipment, goods and materials
- oil or water on floor
- a fire or explosion
- damaged packaging or pallets
- debris on floor
- faulty racking
- poorly stacked pallets
- faulty equipment

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- customers/clients
- drivers and agents
- contractors
- official representatives

Information/documents may include:

- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- manufacturers specifications for equipment/tools
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- codes of practice including the National Standards for

RANGE STATEMENT

Applicable regulations and legislation may include:

- Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures
- relevant codes and regulations pertaining to the organising of despatch operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
 - Australian and International Dangerous Goods Codes
 - Australian Marine Orders and the International Maritime Dangerous Goods Code
 - IATA Dangerous Goods by Air regulations
 - Australian and International Explosives Codes
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations
- workers compensation regulations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Identify inventory and stock control systems in use in the workplace | 1.1 Workplace inventory and stock control equipment, software and systems are identified
1.2 Reasons for common database approach to inventory records and documentation in the warehouse are explained
1.3 Procedures for identification and reporting of discrepancies or variances are identified |
| 2 Use re-order procedures to maintain stock levels | 2.1 Stock level maintenance checking is conducted
2.2 Stock is re-ordered to meet stock level maintenance requirements in accordance with workplace policies and procedures
2.3 Data is accurately entered and extracted from the inventory/records system using appropriate workplace procedures |
| 3 Organise cyclical stock counts and report discrepancies or variances | 3.1 Process for cyclical stock count is planned and work allocated to team members
3.2 Clear directions on tasks to be performed are given
3.3 Stocktake activities are conducted in accordance with workplace procedures
3.4 Types and causes of records discrepancies are identified
3.5 Procedures for noting and correcting minor discrepancies are used
3.6 Major discrepancies are reported in accordance with workplace procedures
3.7 Workplace documentation is completed |
| 4 Produce reports on | 4.1 Types of reports to be produced from inventory records systems |

ELEMENT	PERFORMANCE CRITERIA
record keeping and inventory functions	are identified 4.2 Reports are produced in accordance with workplace procedures and relevant regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian codes and regulations relevant to the organisation of stock control
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the use of inventory systems to organise stock control
- Focus of operation of inventory systems, equipment, management and site operating systems for the control of stock
- Principles of operation and functions of inventory systems
- Applications of different types of inventory systems and stock management approaches
- Workplace processes for records management and the production of inventory reports
- Principles of operation and functions of inventory systems
- Computer records and documentation requirements for stock control, including forms, checklists and inventory reports
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when using inventory systems to organise stock control
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures and labels relevant to the use of inventory systems for the organisation of stock control
- Complete documentation related to the use of inventory systems to organise stock control
- Work collaboratively with others when using inventory systems to organise stock control
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems when using inventory systems to organise stock control in accordance with regulatory requirements and workplace procedures

Required skills:

- Implement contingency plans for unplanned events
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select and use relevant communications, computing and office equipment when using inventory systems to organise stock control

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to assess and monitor optimum stock levels in accordance with workplace requirements including assessing projected demand, assessing variables that impact upon optimum stock levels, determining optimum inventory levels, and monitoring optimum inventory levels. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulations and workplace requirements concerning stock control operations.

Work is performed under general guidance on progress and outcomes of work. It requires the exercise of discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within organisational policy and procedures. A range of opportunities may be used to develop the work area and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisation's goals and key performance objectives.

Work involves the application of product knowledge and an understanding of relevant workplace procedures and regulatory requirements when assessing and monitoring optimum stock levels as part of work activities in the warehousing, distribution and/or storage industries.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Assess projected demand

- 1.1 Information/data from sales plan or stock movement is analysed
- 1.2 Projected high and low volume periods are determined from the analysis of sales plan and/or stock movement data
- 1.3 Seasonal nature of stock demand is determined from the analysis of sales plan and/or stock movement data
- 1.4 Required inventory levels at different production and sales cycle stages are determined from the analysis of sales plan and/or stock movement data

2 Assess variables that impact upon optimum stock levels

- 2.1 Stock manufacturing/supply and consignment delivery lead times are determined
- 2.2 Internal processing and distribution times are determined
- 2.3 Spoilage and obsolescence times are calculated (where applicable)
- 2.4 Maximum stock carrying capacity is assessed
- 2.5 Physical and human resources are assessed in relation to projected required stock levels
- 2.6 Contingencies are developed for abnormal distribution

ELEMENT	PERFORMANCE CRITERIA
	stoppages/slow-downs to supply chain
3 Determine optimum inventory levels	3.1 Production and sales cycle stages are correlated to stock manufacturing supply and distribution lead times 3.2 Safety stock levels are calculated 3.3 Optimum inventory levels are identified
4 Monitor optimum inventory levels	4.1 Inventory benchmarks are continually compared to current and known future sales turnover/production requirements 4.2 Adjustments to inventory levels are undertaken in accordance with reassessed sales turnover/production requirements, workplace procurement processes and within scope of authority 4.3 Changes and/or requests for adjustments to inventory levels are documented in accordance with workplace policies 4.4 Resources are assembled in accordance with identified optimum inventory levels

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian codes and regulations relevant to the optimisation of stock levels
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the assessment and monitoring of optimum stock levels
- Focus of operation of supply arrangements, resources, management and workplace operating systems
- Purpose and use of key information required when optimising stock levels, including supply requirements, supplier information, enterprise contract procedures, sales plan, and distribution times
- Workplace business policies and plans including procedures for maintenance of confidentiality
- Computer records/documentation requirements when assessing and monitoring optimum stock levels
- Problems that may occur when assessing and monitoring optimum stock levels and appropriate action that can be taken to resolve the problems
- Worksite layout and organisational structure

Required skills:

- Communicate effectively with others when assessing and monitoring optimum stock levels
- Read and interpret instructions, procedures, policies, procedures and instructions relevant to the assessment and monitoring of optimum stock levels
- Complete documentation related to the assessment and monitoring of optimum stock levels
- Work collaboratively with others when assessing and monitoring optimum stock levels
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when assessing and monitoring optimum stock levels in accordance with regulatory requirements and workplace procedures
- Plan and organise resource availability including the competencies of individuals in a team or group
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and apply relevant technology, information systems and procedures when assessing and monitoring optimum stock levels

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment,

EVIDENCE GUIDE

and/or

- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Plan transport operations

- 1.1 Knowledge of product to be freighted and workplace procedures are applied to the analysis of the transportation process
- 1.2 Domestic and international regulations, codes and procedures for the transport of freight are identified
- 1.3 Resources including manual handling equipment, employees competencies, storage areas, goods management equipment and transportation equipment are identified to match the task
- 1.4 Work processes are planned to meet agreed timelines
- 1.5 Types of transportation required for the freight or goods is identified to match customer requirements, freight type and delivery time
- 1.6 Multiple transport modes are identified where applicable
- 1.7 Goods transfer methods between modes of transport are selected where appropriate

2 Organise the transport of freight

- 2.1 Employees, equipment and temporary storage areas (if required) are allocated and supervised
- 2.2 Freight is secured ensuring no damage to contents
- 2.3 Handling methods suitable to the goods and transport method are selected
- 2.4 Individuals are informed of work requirements and timelines
- 2.5 Work processes are monitored to ensure that resources, both human and equipment, are maintained at productive levels and according to workplace and OH&S requirements
- 2.6 Discrepancies in freight are noted and action undertaken in accordance with workplace procedures

3 Complete organisational process

- 3.1 Monitoring processes to track the movement of freight are implemented
- 3.2 Reporting requirements are communicated to appropriate personnel

ELEMENT**PERFORMANCE CRITERIA**

3.3 Workplace documents and records are checked for completion and are filed/stored in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Codes of practice and legislative requirements relevant to the organisation of the transport of freight and goods
- Relevant OH&S and environmental procedures and regulations
- Procedures for the calculation/estimation of weight, volumes and dimensions
- Procedures for the identification and evaluation of information needed to facilitate the transport of freight
- Procedures for assessing storage and transport requirements and options
- Procedures for electing transport/storage equipment and systems
- Procedures for organising any required permits
- Procedures for coordinating the transfer and storage of goods including multi-modal transport
- Procedures for the completion of transport documentation
- Problems that may occur when organising the transport of freight and goods and appropriate action that can be taken
- Sources of information and documentation needed when organising the transport of freight and goods
- Customer service policies and procedures

Required skills:

- Communicate effectively with others when organising the transport of freight and goods
- Read and interpret instructions, procedures and labels relevant to the organisation of the transport of freight and goods
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the organisation of the transport of freight and goods
- Work collaboratively with others when organising the transport of freight and goods
- Establish effective working relationships with colleagues and clients
- Plan own work including prioritisation of work activities, predicting consequences and

Required skills:

identifying improvements

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise during the organisation of the transport of freight and goods in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use communication, computers and systems required for the organisation of the transport of freight and goods
- Operate and adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational

EVIDENCE GUIDE

	<p>situations in the workplace</p> <ul style="list-style-type: none"> • In both real and simulated environments, access is required to: <ul style="list-style-type: none"> • relevant and appropriate materials and equipment, and • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment	<ul style="list-style-type: none"> • Assessment of this unit must be undertaken by a registered training organisation • As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests • Practical assessment must occur: <ul style="list-style-type: none"> • through activities in an appropriately simulated environment at the registered training organisation, and/or • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisation of the transport of freight/goods may include movement of:	<ul style="list-style-type: none"> • goods • equipment • materials • vehicular traffic
Customers may be:	<ul style="list-style-type: none"> • internal or external
Operations may be conducted:	<ul style="list-style-type: none"> • by day or night
Freight/goods to be transported may include:	<ul style="list-style-type: none"> • dangerous, hazardous, perishable, fragile, packaged goods • in liquid or solid form
Storage areas may be:	<ul style="list-style-type: none"> • existing, temporary or permanent
Transport modes may include:	<ul style="list-style-type: none"> • road, air, rail, sea or combinations
Information needed to facilitate	<ul style="list-style-type: none"> • type, capacity and compatibility of freight/goods

RANGE STATEMENT

the organisation of the transport of freight/goods may include:

- agreed delivery times and routing schedules
- pick-up and drop-off points
- specified mode of transport
- agreed cost structure

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident/accident breakdown procedures
- authorities and permits
- hours of operations
- noise restrictions
- additional gear and equipment
- Australian standards and guidelines for manual handling

Hazards may include:

- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- dust/vapours
- spills, leakages, ruptures
- service lines

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- Australian and international codes of practice and regulations relevant to the transport of freight
- operations manuals, job specifications and procedures and induction documentation
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- competency standards and training materials
- manufacturers/client specifications, instructions

RANGE STATEMENT

Applicable procedures and codes may include:

- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and International standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance procedures
- emergency procedures
- relevant regulations for the import and export of cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
 - Australian and International Dangerous Goods Codes
 - Australian Marine Orders and the International Maritime Dangerous Goods Code
 - IATA Dangerous Goods by Air regulations
 - Australian and International Explosives Codes
- Australian and international standards and certification requirements
- international transport regulations, codes and procedures
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Not Applicable

Competency Field

Competency Field A - Handling Cargo/Stock

TLID1002A Shift a load using manually-operated equipment

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to shift loads using manually-operated mechanical equipment. It includes assessing the risks associated with relocating the load, planning the relocation process, carrying out the relocation with the aid of the equipment in accordance with the plan, and refurbishing equipment and worksite. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant OH&S regulations concerning the shifting and movement of loads using manually-operated equipment.

Work is performed under some supervision generally within a team environment. It involves the application of the basic principles for the safe shifting of loads using manually-operated equipment.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Assess risks associated with the relocation of the load

- 1.1 Products, goods or materials to be relocated are identified and assessed for the appropriate method of relocation
- 1.2 Location for storage is determined
- 1.3 Routes to be followed are identified
- 1.4 Points of balance are estimated
- 1.5 Effect of moving contents which may be loose, liquid, dangerous or hazardous are considered
- 1.6 Potential risks in route(s) which may be followed are considered
- 1.7 Lifting equipment to minimise potential risks is identified
- 1.8 Appropriate personal protective equipment is worn
- 1.9 Tools, load shifting equipment and other materials are selected, checked for serviceability and any defects are reported to the supervisor

2 Plan load relocation

- 2.1 Load is examined to determine condition, length, bulk, weight
- 2.2 Load shifting equipment is selected in accordance with workplace procedures
- 2.3 Safe procedures for using lifting equipment are identified, including the calculation of Safe Working Load (SWL) and/or Working Load Limit (WLL) for weight of goods to be moved
- 2.4 Process for relocating load is proposed including predicting and planning for potential difficulties
- 2.5 Proposed process is checked against relevant code of practice and workplace procedures for compliance
- 2.6 Lifting equipment and accessories are checked for safe operation in accordance with manufacturers instructions and workplace procedures
- 2.7 Personal protective equipment is selected and worn in accordance with OH&S requirements

ELEMENT	PERFORMANCE CRITERIA
3 Relocate load	<ul style="list-style-type: none">3.1 Any unsafe equipment is reported to appropriate personnel in accordance with workplace procedures3.2 Load is broken down, where applicable, to allow handling and moving a number of single items to ensure the maximum weight of 500 kg is not exceeded3.3 Mechanical aids and field machines are constructed, when required, by the approved shifting method, so that the load can be shifted in accordance with job instructions3.4 Safe working limits for lifting equipment are identified and maintained3.5 Planned process and route are followed using equipment within necessary range of limitations3.6 Relocated materials are set down without damage to goods, personnel or equipment and checked for stability3.7 Relocation is checked to see that it meets work requirements, and any variances are reported
4 Refurbish equipment and worksite	<ul style="list-style-type: none">4.1 Site is cleaned and cleared of debris and unwanted material4.2 Field machines, tools and equipment are cleaned, inspected, serviced, maintained and stored in accordance with standard procedures4.3 Documentation is completed in accordance with standard procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S procedures and guidelines concerning the use of manually-operated equipment to shift loads
- Risks when using manually-operated equipment to shift loads, and related precautions to control the risk
- Workplace procedures and policies for the shifting of goods and materials using manually-operated equipment
- Problems that may arise when using manually-operated equipment to shift loads, and actions that should be taken to prevent or solve them
- Housekeeping standards procedures required in the workplace

REQUIRED KNOWLEDGE AND SKILLS

- Site layout and obstacles
- Relevant knots and lashings to use
- Method for splicing and maintaining cordage and SWR
- Relevant slings and securing devices to use

Required skills:

- Communicate effectively with others when using manually-operated equipment to shift loads
- Read and interpret instructions, procedures, information and signs relevant to the shifting of loads using manually-operated equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Work collaboratively with others when using manually-operated equipment to shift loads
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when using manually-operated equipment to shift loads in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the shifting of loads using manually-operated equipment
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - identifying load limits for lifting
 - relocating a load safely
 - identifying manual operating equipment and their capabilities
 - identifying faults and deficiencies and taking action to rectify problems

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
 - through activities in an appropriately simulated environment, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work

RANGE STATEMENT

environments and situations that may affect performance.

The shifting operations may be conducted:

- in a range of work environments
- by day or night
- under all weather conditions
- in a range of terrain, soil, vegetation

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites

Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments

Materials to be shifted may include:

- goods
- equipment and tools
- cleaning materials
- components and parts of vehicles and equipment such as tyres, batteries, lifting gear, etc.
- materials used in the course of work such as drums of fuel, raw materials, packaging, etc.

Loads to be shifted may be:

- irregularly shaped
- packaged or unpackaged
- labelled or unlabelled
- palletted or unpalletted

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Manually-operated equipment may include:

- pallet jack
- hand trolley
- electric manual handling equipment
- straps
- slings
- chain blocks
- gins
- derricks
- incline planes
- chain blocks

RANGE STATEMENT

Communication in the work area may include:	<ul style="list-style-type: none">• sheers• phone• electronic data interchange (EDI)• fax• email• internet• radio• oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none">• company procedures• enterprise procedures• organisational procedures• established procedures
Personal protective equipment may include:	<ul style="list-style-type: none">• gloves• safety headwear and footwear• safety glasses• two-way radios• high visibility clothing
Measuring aids and field machines may include:	<ul style="list-style-type: none">• mechanical strapping equipment• gins, sheers, and derricks• block and tackle, pulleys• hand operated winches• jacks• improvised methods such as Spanish windlass and par buckles• use of expedient materials such as materials obtained on the job from resources available in the local environment
Information/documents may include:	<ul style="list-style-type: none">• goods identification numbers and codes• manifests, bar codes, goods and container identification• manufacturers instructions concerning the use and servicing of manually-operated load shifting equipment• workplace procedures and policies• supplier and/or client instructions• material safety data sheets• codes of practice including the National Standards for Manual Handling and the Industry Safety Code• relevant legislation, regulations and related documentation• award, enterprise bargaining agreement, other industrial arrangements• standards and certification requirements• quality assurance procedures

RANGE STATEMENT

Applicable regulations and legislation may include:

- emergency procedures
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- licence, patent or copyright arrangements
- dangerous goods and air freight regulations
- export/import/quarantine/bond requirements
- marine orders

Competency Field

Competency Field

D - Load Handling

TLID2003A Handle dangerous goods/hazardous substances

Modification History

Release 2. This is the second release of this unit in the TLI10 Transport and Logistics Training Package Version 4.0.

Minor change to Range Statement 'Requirements for work'.

This release is equivalent to the previous release.

Unit Descriptor

This unit involves the skills and knowledge required to handle dangerous goods and hazardous substances, including identifying requirements for working with dangerous goods and/or hazardous substances; confirming site incident procedures; and selecting handling techniques. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

This unit covers anyone working in the transport, warehousing, distribution and storage industries who may handle dangerous goods and/or hazardous substances.

Work must be carried out in compliance with the relevant OH&S regulations concerning the safe handling of dangerous goods and hazardous substances.

Work is performed under general supervision. It involves the application of the codes of practice and established procedures for the safe handling of dangerous goods and hazardous substances.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Nil.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | |
|---|---|
| 1 Identify requirements for working with dangerous goods and/or hazardous substances | <p>1.1 Dangerous goods and/or hazardous substances are identified from information including class labels, manifests and other documentation</p> <p>1.2 Storage requirements for hazardous substances and/or dangerous goods are identified and applied</p> <p>1.3 Legislative requirements for hazardous substances and/or dangerous goods are known and used to plan work activities</p> <p>1.4 Handling procedures for different classes and characteristics of goods are observed</p> <p>1.5 Confirmation is sought from relevant personnel where dangerous goods or hazardous materials do not appear to be appropriately marked</p> |
| 2 Confirm site incident procedures | <p>2.1 Incident reporting processes are identified</p> <p>2.2 Emergency equipment is located and checked according to workplace procedures and statutory regulations</p> <p>2.3 Emergency procedures are identified and confirmed</p> |
| 3 Select handling techniques | <p>3.1 Load handling and shifting procedures are selected in accordance with identified requirements for particular goods</p> <p>3.2 Handling equipment is checked for conformity with workplace requirements and manufacturers guidelines</p> <p>3.3 Where relevant, suitable signage is checked for compliance with workplace procedures</p> |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- All relevant regulations and codes concerning the handling of dangerous goods and hazardous substances
- Application of relevant aspects of current Australian Dangerous Goods Code and relevant Australian Standards
- Permit and licence requirements
- Workplace procedures for handling and storing dangerous goods/hazardous substances
- Problems that may arise during the handling of dangerous goods and hazardous substances and actions that should be taken to prevent or solve them
- Risks when handling dangerous goods and hazardous substances and related precautions to control the risk
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Housekeeping standards procedures required in the workplace

Required skills:

- Communicate effectively with others when handling dangerous goods and hazardous substances
- Read and interpret instructions, procedures, regulations, information and signs relevant to the handling of dangerous goods and hazardous substances
- Identify containers and goods coding, markings and, where applicable, emergency information panels for the mode of transport storage selected
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when handling dangerous goods and hazardous substances
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when handling dangerous goods and hazardous substances in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Implement contingency plans for unanticipated situations that may arise when handling dangerous goods and hazardous substances
- Recognise hazards and apply precautions and required action to minimise, control or eliminate hazards that may exist during the handling of dangerous goods and hazardous substances
- Monitor work activities in terms of planned schedule

Required skills:

- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of :

- identifying dangerous goods/hazardous substances (from labels, IMDG markings, HAZCHEM signs and other relevant identification criteria)
- identifying and selecting the safety requirements for handling dangerous goods/hazardous substances
- maintaining workplace records and documentation
- determining (any) required permits
- identifying job and site hazards and planning work to minimise risks
- selecting appropriate equipment and work systems including personal protection equipment
- estimating weight and dimensions of load and any special requirements
- identifying and assessing handling and storage precautions and requirements for dangerous goods/hazardous substances

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or

- access to an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation.

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The dangerous goods may be handled in a range of work environments by day or night and may be:

- for short-term storage
- for long-term storage
- in transit

Customers may be:

- internal or external

Workplace environment may include:

- movement of equipment
- movement of goods
- materials and vehicular traffic

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- authorities and permits
- hours of operations
- noise restrictions
- additional gear and equipment
- segregation procedures

RANGE STATEMENT

Hazards may include:	<ul style="list-style-type: none">• emergency procedures, including response to spillage/leaks, evacuation and firefighting• hazardous or dangerous materials• contamination of, or from, materials being handled• noise, light, energy sources• stationary and moving machinery, parts or components• service lines• spills, leakages, ruptures• fire or ignition• dust/vapours
Hazard management is:	<ul style="list-style-type: none">• consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Consultative processes may involve:	<ul style="list-style-type: none">• other employees and supervisors• suppliers, potential customers and existing clients• representatives of regulatory authorities with jurisdiction over OH&S, dangerous goods and hazardous substances• management and union representatives• industrial relations and OH&S specialists• other maintenance, professional or technical staff
Personnel in the work area may include:	<ul style="list-style-type: none">• workplace personnel• site visitors• contractors• official representatives
Identification of goods may be from:	<ul style="list-style-type: none">• material safety data sheets• packaging labels• manifests• stock lists• HAZCHEM interpretative advice
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none">• company procedures• enterprise procedures• organisational procedures• established procedures
Personal protective equipment may include:	<ul style="list-style-type: none">• gloves• safety headwear and footwear• safety glasses• mask and respirator• protective clothing• breathing apparatus

RANGE STATEMENT

Information/documents may include:

- goods identification numbers and codes
- manifests, stock lists, packaging labels, bar codes, stock lists
- goods and container identification
- workplace procedures and policies concerning the handling of dangerous goods and hazardous substances
- supplier and/or client instructions
- material safety data sheets (MSDS)
- current Australian Dangerous Goods Code
- HAZCHEM interpretative advice
- relevant legislation, codes, regulations and related documentation concerning the handling of dangerous goods and hazardous substances
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures pertaining to dangerous goods and hazardous substances

Applicable regulations and legislation may include:

- relevant Australian and state/territory regulations relating to the handling of dangerous goods and hazardous substances
- current Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
 - Australian and International Dangerous Goods Codes
 - Australian Marine Orders and the International Maritime Dangerous Goods Code
 - IATA Dangerous Goods by Air regulations
 - Australian and International Explosives Codes
- all relevant Australian Standards
- relevant state/territory OH&S legislation
- workplace relations regulations
- equal employment opportunity and affirmative action legislation
- equal opportunity legislation
- relevant state/territory environmental protection legislation

Elements and Performance Criteria

ELEMENT <i>Elements describe the essential outcomes of a unit of competency.</i>	PERFORMANCE CRITERIA <i>Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.</i>
1. Plan work	1.1 Potential workplace <i>hazards</i> are identified 1.2 <i>Hazard control measures</i> are identified consistent with <i>appropriate standards</i> to ensure the safety of personnel and equipment 1.3 Appropriate <i>forklift</i> truck is selected according to the load and workplace conditions 1.4 Working area is inspected to determine appropriate path of movement for loads and forklift truck 1.5 <i>Communication methods</i> are identified according to <i>procedures</i>
2. Conduct routine checks	2.1 Forklift is visually checked for any damage or defects 2.2 All <i>signage and labels</i> are visible and legible according to the <i>appropriate standard</i> 2.3 All controls are located and identified 2.4 <i>Pre-start operational checks</i> are carried out according to <i>procedures</i> 2.5 <i>Forklift</i> is started according to <i>procedures</i> and checked for any abnormal noise 2.6 <i>Post-start operational checks</i> are carried out according to <i>procedures</i> 2.7 All forklift functions and safety devices are tested to their maximum according to <i>procedures</i>

	2.8 Defects and damage are reported and recorded according to procedures , and appropriate action is taken
3. Shift load	<p>3.1 The weight of load is assessed to ensure compliance with forklift truck data plate specifications</p> <p>3.2 Appropriate hazard prevention/control measures are implemented and communicated with personnel in the work area</p> <p>3.3 Forklift is operated at a safe speed and according to procedures</p> <p>3.4 Loads are moved and placed to ensure stability of material and avoidance of hazards</p> <p>3.5 Load movement is monitored constantly ensuring safety to personnel and load, and structural stability</p> <p>3.6 Unplanned and/or unsafe situations are responded to in line with procedures</p>
4. Shut down and secure forklift truck	<p>4.1 Forklift truck is parked to avoid hazards</p> <p>4.2 Forklift is shut down according to procedures</p> <p>4.3 Routine post-operational forklift checks are carried out according to procedures</p> <p>4.4 Forklift is secured to prevent unauthorised access/use</p> <p>4.5 All defects and damage are reported and recorded according to procedures, and appropriate action is taken</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

- Accurately interpret information relating to conducting forklift truck operations (e.g. procedures)
- Safely conduct forklift truck operations including all functions to the maximum height and load capacity
- Identify hazards associated with the operation of the forklift truck, assess risks and put into place effective hazard prevention/control measures for those hazards identified
- Use communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)

REQUIRED SKILLS AND KNOWLEDGE

- Drive forklift with load in forward and reverse, maintaining visibility
- Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

- Methodology of determining the weight of a load
- Commonwealth, state or territory OH&S legislation, standards relevant to the safe operation for the forklift trucks
- Understanding of forklift characteristics and capabilities (including use of load data plates)
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Forklift truck operations and safe operating techniques
- Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Identify hazards associated with the operation of the forklift truck and put in place effective hazard controls for those hazards identified.

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • Conduct pre-start-up, operational, moving loads and shut down and secure checks of the forklift truck according to procedures. • Operate the forklift truck and move loads safely, including driving and manoeuvring, picking up and placing of loads at various stack heights. • Drive forklift truck with load in forward and reverse, maintaining visibility.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • Assessment of the safe application of knowledge and skills to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument. • Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting. • Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints. • Applicants must have access to: <ul style="list-style-type: none"> • Personal Protective Equipment (PPE) for the purpose of the Performance Assessment • associated equipment appropriate to forklift truck operations • suitable loads as described by the endorsed Assessment Instrument • manufacturers specifications • appropriate forklift truck in a safe condition.
Method of assessment	<ul style="list-style-type: none"> • Assessment must be conducted using the endorsed Assessment Instrument. These Instruments provide instruction on their application. • The use of 'simulators' in the assessment of this unit of competency is not acceptable. • Assessment may be in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for	<ul style="list-style-type: none"> • Further information about endorsed Assessment Instruments may be obtained from state/territory

EVIDENCE GUIDE**assessment**

OH&S regulators.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.

Hazards

May include but not limited to:

- ground conditions (e.g. condition of pavement, slopes)
- overhead hazards (e.g. powerlines, service pipes)
- insufficient lighting
- traffic (e.g. pedestrians, vehicles, other plant)
- weather (e.g. wind, lightning, rain)
- forklift instability (e.g. overloading, poor load placement, irregular loads)
- other hazards (e.g. dangerous materials)

Hazard control measures

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- 1 elimination
- 2 substitution
- 3 isolation
- 4 engineering control measures
- 5 using safe work practices
- 6 personal protective equipment

Appropriate standards

May include but not limited to:

- legislation
- Australian standards
- manufacturer's specifications
- industry standards (where applicable)

RANGE STATEMENT	
Forklift truck	May include but not be limited to: <ul style="list-style-type: none">• counterbalanced• reach trucks• rough terrain• internal combustion petrol, diesel, gas• electric
Communications methods	May include but not limited to: <ul style="list-style-type: none">• verbal and non-verbal language• written instructions• signage• hand signals• listening• questioning to confirm understanding• appropriate worksite protocol
Procedures	May include but not limited to: <ul style="list-style-type: none">• manufacturer's guidelines (instructions, specifications or checklists)• industry operating procedures• workplace procedures (work instructions, operating procedures, checklists)
Pre-start operational checks	May include but not limited to: <ul style="list-style-type: none">• safety devices fitted where appropriate• forklift data plate fitted and interpreted• logbook, handbook or operating manuals available• external visual check including, evidence of damage, leaks, visual evidence of structural weaknesses (including paint separation or stressed welds) is carried out• forklift attachment is checked for security• approved modifications and/or attachments fitted to manufacturer's specifications (e.g. as per forklift or attachment data plate) are identified• checks for adaptations or modifications outside manufacturer's specifications (e.g. not listed on the forklift or attachment data plate) are carried out• maintenance logbook/records checked

RANGE STATEMENT	
Post-start operational checks	<p>May include checks of the forklift truck and equipment after start-up to ensure:</p> <ul style="list-style-type: none"> • hazard warning systems (for example lights and horns), are functional • attachment movements and control functions are smooth and comply with operating requirements • steering, transmission and brake functions comply with operating requirements
Hazard prevention/control measures	<p>May include but not limited to:</p> <ul style="list-style-type: none"> • barricades and traffic control • safety tags on electrical switches/isolators • insulated powerlines • safety observer used inside exclusion zone • disconnected power • pedestrian control (barricades, signs, etc.) • excavation safeguards • movement of obstructions • personal protective equipment • adequate illumination
Unplanned and/or unsafe situations	<p>May include but not limited:</p> <ul style="list-style-type: none"> • failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental condition
Shut down	<p>May include, but is not limited to:</p> <ul style="list-style-type: none"> • parking in a suitable location away from dangerous areas • fork arms are correctly positioned (tips down, tilted forward, lowered to ground) • appropriate transmission/gear is selected for parking (relevant to transmission type) • hand/parking brake is applied • engine power is turned off • ignition key is removed (if applicable) • LPG gas cylinder valve is shut off (where fitted) • securing equipment against unauthorised operation • securing the site • ensuring access ways are clear • identifying and segregating defective equipment

RANGE STATEMENT	
	<ul style="list-style-type: none">and reporting to authorised personnelbatteries are connected to the charger (if applicable)

Unit Sector(s)

Not Applicable

UEENEEH166A Troubleshoot microcontroller based hardware systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers determining correct operation of microcontroller systems. It encompasses working safely, problem solving procedures, providing solutions derived from measurements and calculations to predictable faults in microcontroller hardware.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also used to augment formally acquired competencies.

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It is intended to apply to any formal recognition for this standard at the aligned AQF 3 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not

License to practice**3)**

require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

There are no prerequisite competencies for this unit.

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to work on microcontroller hardware	1.1	OHS procedures for a given work area are obtained and understood.
	1.2	OHS risk control work preparation measures and procedures are followed.
	1.3	The nature of microcontroller hardware problems is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4	Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

ELEMENT	PERFORMANCE CRITERIA
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve microcontroller hardware and firmware problems	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Established methods are used to solve problems from measured and calculated values as they apply to microcontroller hardware.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6 Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to solve circuit problems is documented.
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Evidence shall show that knowledge has been acquired of safe working practices and fault finding microcontroller based hardware.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH166A

Microcontroller based system troubleshooting

Evidence shall show an understanding of microcontroller-based systems troubleshooting, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Microcontroller systems overview

- Digital Systems Concepts Associated with Microcontroller based systems.
- Microcontroller architecture
- Microcontroller System block diagram
- Microcontroller manufacturers

T2. Program storage types

- Software
- Memory Terminology Hardware
- Secondary Memory and Usage

T3. Data storage types

- ROM
- RAM
- FLASH
- EEPROM

T4. I/O Ports: analogue/ digital

- Ports
- Interfacing with I/O devices (e.g. switches, LEDs, DC motors, LDRs, etc)

T5. Integrated Peripherals: timers, interrupts etc

- Introduction to timers/counters
- Introduction to interrupts

T6. Control circuitry: system clock, reset etc

- System clock circuitry
- Reset circuit
- Communication circuitry (e.g. serial port, etc)

REQUIRED SKILLS AND KNOWLEDGE

T7. Writing, testing and debugging code (eg. Micro controller instruction set)

- Addressing modes
- Using an industry standard programming environment to develop code

T8. Electronic fault finding techniques

- Fault identification techniques
- Test equipment, safe operating procedure, application and in circuit connection.

T9. Methods:

- Visual inspection
- Sectional testing
- Split-half tests
- Component isolation
- Dealing with intermittent faults

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material rries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit**

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as

- specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
 - Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Fault find Microcontroller based hardware as described in 8) and including:
 - a. Using methodical problem solving methods.
 - b. Taking measurements correctly and accurately.
 - c. Calculating parameters correctly and accurately.
 - d. Providing solution to microcontroller component/circuit problems.
 - e. Providing written justification for the solutions to problems.
 - f. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment** **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to fault finding Microcontroller based hardware.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Repairs basic electronic apparatus faults by replacement of components

Troubleshoot digital sub-systems

Troubleshoot amplifiers in an electronic apparatus

Find and repair microwave amplifier section faults in electronic apparatus

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving at least two of the following types of microcontroller hardware problems.

- Determining the operating parameters of an existing circuit
- Alternating an existing circuit to comply with specified operating parameters
- Developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

MSFSS00001 Piano Tuning Skill Set

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

Units from within this Skill Set can contribute to MSF31213 Certificate III in Piano Technology

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MSFPT3008	Apply piano tuning theory and basic acoustics
MSFPT3009	Develop control of tuning hammers
MSFPT3010	Pitch raise a piano
MSFPT3011	Tune unisons aurally to a beatless condition
MSFPT3012	Tune octaves aurally to appropriate stretch
MSFPT3013	Tune a temperament octave to produce an equally tempered scale
MSFPT3014	Tune a piano aurally and electronically within time and accuracy constraints
MSFPT3015	Voice a piano
MSFPT3016	Provide advice to customers on piano tuning and repair

Target Group

This Skill Set is for people who tune upright and grand pianos professionally.

Suggested words for Statement of Attainment

These units of competency from the MSF Furnishing Training Package meet the industry requirements for professional upright and grand piano tuning.

Custom Content Section

Not applicable.

MSFSS00002 Insulating Glass Unit Manufacturing Skill Set

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set can only be achieved after completion of MSF30413 Certificate III in Glass and Glazing, or equivalent qualification at a similar qualification level.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MSAPMOHS300A	Facilitate the implementation of OHS for a work group
MSFGG3001	Store and handle glass
MSFGG3005	Process glass by semi-automatic machines
MSFGG3006	Process glass by automatic machines
MSFGG3013	Set up and operate insulated glass unit (IGU) manufacturing equipment
MSS402051A	Apply quality standards

Target Group

People currently employed, or future employees, engaged in the manufacture of insulating glazing units (also known as double glazing units).

Suggested words for Statement of Attainment

These competencies from the MSF30413 Certificate III in Glass and Glazing meet the minimum industry requirements for the manufacture of insulating glazing units as defined in AS/NZS4666.

Custom Content Section

Not applicable.

MSFSS00003 Insulating Glass Unit Fabricator/Installer Skill Set

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set can only be achieved after completion of MSF30413 Certificate III in Glass and Glazing.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MSFGG2009 Fabricate and assemble frames

MSFGG3001 Store and handle glass

MSFGG3016 Fabricate and install residential windows and doors

MSFGG3017 Fabricate and install commercial glazing

MSS402051A Apply quality standards

Target Group

People currently employed, or future employees, engaged in the fabrication and installation of insulating glazing units (commonly known as double glazing units).

Suggested words for Statement of Attainment

These competencies from the MSF30413 Certificate III in Glass and Glazing meet the minimum industry requirements for the fabrication and installation of insulating glazing units as defined in AS/NZS4666.

Custom Content Section

Not applicable.
