MSMRV354 Remove and replace a recreational vehicle shower walls

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to remove and replace the shower walls in a recreational vehicle. The same walls may be replaced, or the removed walls may be replaced with different walls. The work will be carried out in a recreational vehicle service and repair facility.

This unit of competency covers the preparation for, removal of, replacement of, and clean-up after the removal and replacement of shower walls.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

		3.6	Ensure substructure is fixed as appropriate
4	**Replace shower walls in accordance with devised procedures**	4.1	Use relevant hazard controls, including PPE
		4.2	Replace shower walls in accordance with the devised procedure
		4.3	Trim as required
		4.4	Ensure shower walls are attached as required
		4.5	Seal shower walls as required
5	**Finish removal and replacement of shower walls**	5.1	Check shower walls have been refitted correctly and make any required adjustments
		5.2	Clean up recreational vehicle and make ready for hand back to customer
		5.3	Clean up work area, leaving it ready for the next job
		5.4	Segregate and handle waste in accordance with procedures
		5.5	Complete any required documentation/records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory The latest version of all legislation, regulations, industry codes of practice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

framework and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- product faults
- tooling problems

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMRV354 Remove and replace a recreational vehicle shower walls

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- remove and refit shower walls in at least three (3) recreational vehicles
- refurbish the substructure in at least three (3) recreational vehicles
- interpret requirements and plan work
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with customers, team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- removal, refurbishment and refitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor /third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRV355 Remove and replace a camper/pop-top roof

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to remove and replace the roof of a camper/pop-top recreational vehicle. This unit also covers the removal and replacement of the associated moving parts, such as catches, fabric (canvas/vinyl) and other ancillary components, but not lifters and gas struts. The same roof/components may be replaced, or the removed roof/components may be replaced with a different roof and/or components. The work will be carried out in a recreational vehicle service and repair facility.

This unit of competency covers the preparation for, removal of, replacement of, and clean-up after the removal and replacement of a roof and its ancillary components.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MSMRV355 Remove and replace a camper/pop-top roof

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- remove and refit camper/pop-top roofs and ancillary components in at least three (3) recreational vehicles
- refurbish the components/substructure in at least three (3) recreational vehicles
- interpret requirements and plan work
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with customers, team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- removal, refurbishment and refitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

MSMRV356 Remove and replace gas struts and roof lifting equipment on a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to remove and replace the roof lifters and gas struts on a recreational vehicle. The same lifters and struts may be replaced, or the removed lifters and struts may be replaced with different lifters and struts. The work will be carried out in a recreational vehicle service and repair facility.

This unit of competency covers the preparation for, removal of, replacement of, and clean-up after the removal and replacement of lifters and struts.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MSMRV356 Remove and replace gas struts and roof lifting equipment on a recreational vehicle

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- remove and refit gas struts and roof lifting equipment from at least three (3) recreational vehicles
- refurbish the components in at least three (3) recreational vehicles
- interpret requirements and plan work
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with customers, team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- removal, refurbishment and refitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRV357 Remove and replace external components of a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to remove and replace the roof hatches, windows and external doors on a recreational vehicle. The same hatches, windows and doors may be replaced, or the removed hatches, windows and doors may be replaced with different hatches, windows and doors. This unit also covers the resealing of hatches, windows and doors. The work will be carried out in a recreational vehicle service and repair facility.

This unit of competency covers the preparation for, removal of, replacement of, and clean-up after the removal, replacement and resealing of hatches, windows and doors.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration

- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults
- tooling problems

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMRV357 Remove and replace external components of a recreational vehicle

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- remove and refit external components on at least three (3) recreational vehicles
- refurbish the components on at least three (3) recreational vehicles
- interpret requirements and plan work
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with customers, team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- removal, refurbishment and refitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRV358 Modify the body of a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to make body modifications, such as installing additional access doors, drawers and similar modifications, to a recreational vehicle. The work will be carried out in a recreational vehicle service and repair facility.

This unit of competency covers the preparation for, modification of and clean-up after the modification.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Plan the work**	1.1	Review the requirements of the work, including insurance requirements and customer needs
		1.2	Examine recreational vehicle and identify likely problems with the proposed location or nature of the modification
		1.3	Negotiate exact details of proposed modification with customer
		1.4	Confirm what needs to be done and determine how to do it
		1.5	Check required tools and jigs are available at the worksite
		1.6	Check required materials and components are available at the worksite
		1.7	Identify any hazards and the related hazard controls
		1.8	Check that hazard controls are in place and operational
		1.9	Query any items that are different to usual and clarify requirements
2	**Make the required penetration in accordance with devised procedures**	2.1	Use relevant hazard controls, including personal protective equipment (PPE)
		2.2	Remove recreational vehicle components as required maximising the potential for reuse
		2.3	Cut through external cladding, interior panelling and frame as required
		2.4	Segregate and handle waste in accordance with procedures
		2.5	Temporarily store removed components which are to be reused
3	**Refurbish as required**	3.1	Use relevant hazard controls, including PPE
		3.2	Examine all removed items and the adjacent parts of the

			caravan which have been revealed
		3.3	Identify any damage revealed and decide how it can be made good
		3.4	Negotiate with customer over any changes in job scope and cost
		3.5	Make good/replace as required
4	**Install the required items in accordance with devised procedures**	4.1	Use relevant hazard controls, including PPE
		4.2	Install required items in accordance with the devised procedure
		4.3	Ensure items are attached as required
		4.4	Adjust as required
		4.5	Ensure items function as intended
5	**Seal installed items in accordance with devised procedures**	5.1	Use relevant hazard controls, including PPE
		5.2	Apply seals/sealing material in accordance with the devised procedure
		5.3	Adjust/trim as required
		5.4	Ensure seals are effective
6	**Finish body modifications**	6.1	Check all installed items have been fitted correctly and make any required adjustments
		6.2	Clean up recreational vehicle and make ready for hand back to customer
		6.3	Clean up work area, leaving it ready for the next job
		6.4	Segregate and handle waste in accordance with procedures
		6.5	Complete any required documentation/records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults
- tooling problems

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

MSMRV359 Install additional appliances in a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to install additional appliances, such as diesel heaters or air conditioning, in a recreational vehicle. The work will be carried out in a recreational vehicle service and repair facility.

This unit of competency covers the preparation for, installation of and clean-up after the installation of the appliance.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

MSMRV361 Repair dry rot in a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to identify and repair dry rot in a recreational vehicle. The dry rot will typically be in window frames/sills or the wall frame. The work will be carried out in a recreational vehicle service and repair facility.

This unit of competency covers the preparation for, repair of and clean-up after repairing dry rot.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Plan the work**	1.1	Review the requirements of the work, including insurance requirements and customer needs
		1.2	Examine the suspect timber and confirm it is affected by dry rot
		1.3	Establish the possible cause, extent and impact on structural integrity of the dry rot
		1.4	Determine what needs to be done and how to do it
		1.5	Check required tools and jigs are available at the worksite
		1.6	Check required materials and components are available at the worksite
		1.7	Identify any hazards and the related hazard controls
		1.8	Check that hazard controls are in place and operational
		1.9	Query any items that are different to usual and clarify requirements
2	**Expose and remove the dry rot in accordance with devised procedures**	2.1	Use relevant hazard controls, including personal protective equipment (PPE)
		2.2	Remove items as required to expose the dry rot, maximising the potential for reuse
		2.3	Temporarily store items which are to be reused
		2.4	Examine all removed items and the adjacent parts of the caravan which have been revealed
		2.5	Remove damaged timber as required
		2.6	Identify any additional damage revealed and decide how it can be made good
		2.7	Negotiate with customer over any changes in job scope and cost
		2.8	Segregate and handle waste in accordance with procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	**Treat and replace damaged timber in accordance with devised procedures**	3.1	Use relevant hazard controls, including PPE
		3.2	Treat remaining timber as required
		3.3	Replace removed timber ensuring adequate structural integrity
		3.4	Trim as required
		3.5	Ensure new timber is attached as required
4	**Rectify cause of dry rot**	4.1	Identify source of water causing dry rot
		4.2	Reseal to prevent ingress of water
5	**Make good area of work in accordance with devised procedures**	5.1	Reinstate/replace removed items
		5.2	Check items are fixed appropriately
		5.3	Apply seals/sealing materials as required
		5.4	Trim as required
		5.5	Check items function as intended and make adjustments as required
6	**Finish dry rot repair**	6.1	Check work undertaken and make any required adjustments
		6.2	Clean up recreational vehicle and make ready for hand back to customer
		6.3	Clean up work area, leaving it ready for the next job
		6.4	Segregate and handle waste in accordance with procedures
		6.5	Complete any required documentation/records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults
- tooling problems

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMRV361 Repair dry rot in a recreational vehicle

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- repair dry rot in at least three (3) recreational vehicles
- interpret requirements and plan work
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with customers, team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- repair procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRV362 Install and repair battery systems in a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to install and repair battery systems in a recreational vehicle. It includes dual battery systems. The work will be carried out in a recreational vehicle service and repair facility.

This unit of competency covers the preparation for, installation/repair of and clean-up after the battery system work.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Plan the work**	1.1	Review the requirements of the work, including insurance requirements and customer needs
		1.2	Determine impact on electrical system of proposed changes
		1.3	Examine existing battery system, its capacity to handle proposed changes, determine what needs to be done and how to do it
		1.4	Check required tools and jigs are available at the worksite
		1.5	Check required materials and components are available at the worksite
		1.6	Identify any hazards and the related hazard controls
		1.7	Check that hazard controls are in place and operational
		1.8	Query any items that are different to usual and clarify requirements
		1.9	Remove items as required to make access for required work, maximising the potential for reuse
		1.10	Temporarily store items which are to be reused
2	**Install additional battery in accordance with devised procedures**	2.1	Use relevant hazard controls, including personal protective equipment (PPE)
		2.2	Install appropriate battery housing/restraint
		2.3	Install required electrical connections
		2.4	Place, fix and connect additional battery
		2.5	Test system and make any required changes
		2.6	Segregate and handle waste in accordance with procedures
3	**Repair battery**	3.1	Use relevant hazard controls, including PPE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	system in accordance with devised procedures	3.2	Test battery system and determine fault
		3.3	Isolate location of fault where practical
		3.4	Replace components or repair fault as appropriate
		3.5	Run and connect new cabling if required
		3.6	Ensure any redundant cable is removed or left in a safe condition as appropriate
		3.7	Test system and make any required changes
		3.8	Segregate and handle waste in accordance with procedures
4	**Make good area of work in accordance with devised procedures**	4.1	Reinstate/replace removed items
		4.2	Check items are fixed appropriately
		4.3	Apply seals/sealing materials as required
		4.4	Trim as required
		4.5	Check items function as intended and make adjustments as required
5	**Finish battery system work**	5.1	Check work undertaken and make any required adjustments
		5.2	Clean up recreational vehicle and make ready for hand back to customer
		5.3	Clean up work area, leaving it ready for the next job
		5.4	Segregate and handle waste in accordance with procedures
		5.5	Complete any required documentation/records

MSMRV363 Complete pre-delivery check of a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to complete the pre-delivery checks on a recreational vehicle. The work will be carried out in a recreational vehicle service and repair facility.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MSMRV363 Complete pre-delivery check of a recreational vehicle

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- complete pre-delivery checks on at least six (6) recreational vehicles
- interpret requirements and plan work
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with customers, team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- check procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.

MSMRV365 Remove and refit body moulding

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to remove and refit body moulding on a recreational vehicle. The same moulding may be replaced, or the removed moulding may be replaced with a different moulding. The work will be carried out in a recreational vehicle manufacturing or service and repair facility.

This unit of competency covers the preparation for, removal of, refitting of, and clean-up after the removal and refitting of a moulding.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults
- tooling problems

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMRV365 Remove and refit body moulding

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- remove and refit mouldings in at least three (3) recreational vehicles
- interpret requirements and plan work
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with customers, team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- removal and refitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Plan the work**	1.1	Review the requirements of the work, including insurance requirements and customer needs
		1.2	Examine transfer and decal, the surfaces to which they are to be applied and determine what needs to be done and how to do it
		1.3	Check required tools and jigs are available at the worksite
		1.4	Check required materials and components are available at the worksite
		1.5	Identify any hazards and the related hazard controls
		1.6	Check that hazard controls are in place and operational
		1.7	Query any items that are different to usual and clarify requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

2	**Fit transfers and decals in accordance with devised procedures**	2.1	Use relevant hazard controls, including personal protective equipment (PPE)
		2.2	Fit transfers and decals in accordance with the devised procedure
		2.3	Trim as required
		2.4	Ensure transfers and decals are attached as required
3	**Finish fitting of transfers and decals**	3.1	Check transfers and decals have been fitted correctly and make any required adjustments
		3.2	Clean up recreational vehicle and make ready for return to customer
		3.3	Clean up work area, leaving it ready for the next job
		3.4	Segregate and handle waste in accordance with procedures
		3.5	Complete any required documentation/records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

MSMRVG201 Tow a recreational vehicle safely

Modification History

Release 1. Supersedes and is equivalent to MSARVG201A Tow a recreational vehicle safely

Application

This unit of competency covers the skills and knowledge required to tow a recreational vehicle safely.

This unit of competency applies to those involved in the manufacture, service and repair, or sale of recreational vehicles. It may be applied in different workplaces, sectors and circumstances.

This unit assumes possession by the driver of a current Australian Driver's Licence. Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority. Type of vehicle driven must comply with that permitted by the Driver's Licence.

The operator will be required to work to procedures, and follow plans/specifications for what is required.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication. Check local regulations for details.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Assess safe towing weight of recreational vehicle**	1.1	Determine the gross weight of recreational vehicle and determine aggregate mass
		1.2	Check towing capacity of towing vehicle
		1.3	Check and adhere to tow bar capacity of towing vehicle
		1.4	Confirm the weight ratio of recreational and towing vehicle is safe in accordance with state/territory requirements and regulations
2	**Prepare for towing of recreational vehicle**	2.1	Prepare recreational vehicle for towing
		2.2	Conduct pre-operational checks on towing vehicle and recreational vehicle
		2.3	Carry out any minor routine repairs
		2.4	Report any complex faults and repairs to appropriate person and coordinate repairs
		2.5	Identify and act on relevant statutory regulations to reduce possible injury to self and others
		2.6	Attach recreational vehicle to towing vehicle in accordance with manufacturer and state/territory specifications, requirements and regulations
		2.7	Check visibility and adjust position of mirrors, if necessary
3	**Safely tow recreational vehicle on an**	3.1	Identify and comply with national and state/territory road rules and laws
		3.2	Show courtesy and consideration to other road users

MSMRVS202 Repair/service LPG systems in a recreational vehicle

Modification History

Release 1. Supersedes and is equivalent to MSARVS202A Repair/service LP gas systems in a recreational vehicle

Application

This unit of competency covers the skills and knowledge required to repair liquid petroleum gas (LPG) systems in a recreational vehicle. It applies to those working in a servicing agency or in the service section of a manufacturing enterprise.

The unit requires the determination of requirements and the repair or service of LPG systems with an operating pressure not exceeding 2.75 kPa in a recreational vehicle.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

This unit of competency applies to those who are responsible for recreational vehicle servicing. It applies only where relevant state/territory licensing requirements permit the repair and service of LPG systems in a recreational vehicle. Licensing requirements by state/territory and national authorities may vary.

No other licensing, legislative or certification requirements apply to this unit at the time of publication. Check local regulations.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Identify repair requirements**	1.1	Identify or verify service or repair needs to LPG system, including insurance requirements and customer needs
		1.2	Access and interpret working drawings, plans and job specifications according to model and type of recreational vehicle
		1.3	Select tools and equipment to meet the job requirements and check them to ensure they are working safely
		1.4	Identify any safety hazards associated with the job and use appropriate personal protective equipment (PPE)
2	**Assess the system**	2.1	Identify and adhere to quality assurance requirements for repair or service
		2.2	Assess storage capacity and regulator size to ensure they are adequate for the load and do not exceed regulatory requirements and standards
		2.3	Ensure that piping and ventilation used comply with regulatory requirements and standards
		2.4	Evaluate the system's piping size to ensure it is appropriate for the dimensions and loads
		2.5	Check to ensure that size used for main run and branches provides minimum inlet pressure to each appliance in accordance with regulatory requirements and standards
		2.6	Check the set-out of the piping system to ensure correct position for appliances and cylinders and compliance with regulatory requirements and standards
3	**Plan and prepare the job**	3.1	Plan all necessary and appropriate tasks in conjunction with others involved in or affected by the work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.2	Inform appropriate authorities of planned work and obtain and submit work notices, where required
		3.3	Estimate and order any required materials, equipment and appliances for the job and organise delivery
		3.4	Check materials, equipment and appliances delivered against the order form or delivery docket to ensure they correspond and are in an acceptable condition
		3.5	Identify and select appropriate tools and equipment for the repair/service
		3.6	Use appropriate PPE and read and interpret any safety information relevant to the job
4	**Service/repair system**	4.1	Service system, repair fault or install appliance in accordance with job requirements, standards and manufacturer specifications
		4.2	Repair piping system in accordance with job requirements and standards
		4.3	Position appliances to ensure adequate air supply and ventilation in accordance with job requirements and standards
		4.4	Locate and check consumer instruction plates, labels and compliance plates to ensure they comply with regulatory requirements and standards
5	**Test the system**	5.1	Adjust regulator to provide flow pressure in accordance with standards and enterprise requirements
		5.2	Select test equipment which is appropriate for the work
		5.3	Test the system, including ventilation, in accordance with standards and enterprise requirements
		5.4	Adjust the system to provide the required flow pressure in accordance with standards and enterprise requirements
		5.5	Record test data in the format required by relevant regulatory and enterprise requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

6	**Complete the job**	6.1	Assess work against the requirements of the job
		6.2	Assess quality of the total job in accordance with enterprise standards and requirements
		6.3	Complete all required paperwork for both customer and enterprise records
		6.4	Complete required clean-up procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults
- tooling problems

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMRVS202 Repair/service LPG systems in a recreational vehicle

Modification History

Release 1. Supersedes and is equivalent to MSARVS202A Repair/service LP gas systems in a recreational vehicle

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- assess and plan LPG system service and/or repair in at least three (3) recreational vehicles
- service and/or repair and test an LPG system in at least three (3) recreational vehicles
- interpret requirements and plan work
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment and subsequent use of the LPG system, including gas properties and hazards, and combustion principles
- allowable cylinders, regulators, fittings and pressures
- determination of system capacity and size for requirements
- piping system design for requirements
- service/repair procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made
- relevant regulatory requirements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRVS401 Assess and quote to service a recreational vehicle

Modification History

Release 1 - Supersedes and is equivalent to MSARVS401A Assess and quote to service a recreational vehicle

Application

This unit of competency covers the skills and knowledge required to assess and quote a job to repair and/or service a recreational vehicle.

This unit of competency applies to an individual who will identify the customer's requirements, determine other specifications for the job, calculate costs, prepare a quote and, once approved, arrange for the job to proceed.

This unit of competency applies in enterprises conducting recreational vehicle servicing and repairs and may be applied in different workplaces, sectors and circumstances.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- codes of practice of the Recreational Vehicle Manufacturers' Association of Australia (RVMAA)
- licensing requirements related to installation, servicing and repair of gas, electrical, plumbing, air conditioning fittings and wiring
- welding, joining and adhesives
- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work plans, specifications and drawings
- safe work method statements (SWMS)
- safe worksite work practices
- manufacturer manuals
- material safety data sheets (MSDS)
- requirements for personal protective equipment (PPE)
- work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standard operating procedures (SOPs)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Recreational vehicles

Recreational vehicles includes one or more of the following:

- caravan
- pop-top caravan
- camper trailer
- tent trailer
- 5th wheeler
- slide-on camper
- campervan
- motor home

Service requirements

Service requirements are determined from customer preferences and manufacturer repair/service specifications for recreational vehicle components, and include one or more of the following:

- chassis
- walls
- roof
- furnishing
- piping/wiring for services
- accessories
- appliances
- running gear

Customers

Customers include one or more of the following:

- recreational vehicle owners/users
- recreational vehicle retailers
- recreational vehicle service contractors
- insurance companies

Materials, parts and equipment

Materials, parts and equipment include one or more of the following:

- hand and power tools
- small plant
- replacement materials, floor coverings, panelling and furnishings
- components and running gear
- parts and accessories

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Repair or service costs	Repair or service costs include one or more of the following: • labour • materials • parts • fixtures and fittings • appliances • equipment (use or hire)

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSARVS401A Assess and quote to service a recreational vehicle

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=d1287d36-dff4-4e9f-ad2c-9d6270054027

Assessment Requirements for MSMRVS401 Assess and quote to service a recreational vehicle

Modification History

Release 1 - Supersedes and is equivalent to MSARVS401A Assess and quote to service a recreational vehicle

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- plan, organise and schedule work activities
- determine job requirements
- apply customer service, negotiation and communication skills
- estimate and calculate all aspects of repair/service costs to meet job requirements
- read and interpret typical floor plans, drawings and manuals of recreational vehicles
- identify and assess problems and recommend appropriate remedies
- communicate effectively with colleagues and customers on job requirements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- regulatory framework
- features of different recreational vehicle types and makes, and their design and structural features
- recommended service and maintenance requirements, and schedules for recreational vehicles
- details, features and current costs of components, materials and parts
- required equipment for the job and any associated costs and transport requirements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - must include the use of appropriate tools, equipment, data and documentation
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRVT201 Apply technical knowledge of recreational vehicle manufacturing to work activities

Modification History

Release 1 - Supersedes and is equivalent to MSARVT201A Apply technical knowledge of recreational vehicle manufacturing to work activities

Application

This unit of competency covers the basic technical knowledge required to conduct a range of work activities in the recreational vehicle manufacturing, servicing and retail sectors of the caravan industry.

This unit of competency applies to those involved in the manufacturing, servicing and retail of recreational vehicles. It may be applied in different workplaces, sectors and circumstances.

This unit of competency applies to roles performed by recreational vehicle manufacturing and service personnel, recreational vehicle and accessories sales personnel, and recreational vehicle designers and manufacturers.

The operator will be required to work to procedures, and follow plans/specifications for what is required.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication. Check local regulations for details.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Apply technical information on recreational vehicles to work activities**	1.1	Identify sources of current information on recreational vehicle manufacturing
		1.2	Access and update information relevant to work activities
		1.3	Apply technical information regarding the manufacture of recreational vehicles and accessories to work activities
2	**Identify relevant information on regulatory and legal requirements to work activities**	2.1	Apply information on legal and regulatory obligations to assist in effective work performance
		2.2	Monitor issues of current concern to the industry
		2.3	Conduct day-to-day activities in accordance with legal and regulatory obligations, industry practices and enterprise procedures
		2.4	Share knowledge with customers and colleagues, as appropriate, and incorporate into day-to-day work activities
3	**Apply information on products to work activities**	3.1	Apply information on products produced both within and outside the enterprise to work activities
		3.2	Apply information about models, parts, accessories and options to meet customer requirements/requests and enterprise needs

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory requirements

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- equipment, tool, die or mould damage
- product faults
- tooling problems

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMRVT201 Apply technical knowledge of recreational vehicle manufacturing to work activities

Modification History

Release 1 - Supersedes and is equivalent to MSARVT201A Apply technical knowledge of recreational vehicle manufacturing to work activities

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- apply relevant information to own work activities
- identify and share relevant information within and outside the organisation
- recognise situations requiring action and take the appropriate action
- communicate effectively with customers, team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- technical information, such as parts, components and specifications, relevant to own work
- sources of information relevant to own job
- regulatory and other requirements relevant to own job.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP100 Apply workplace context to own job

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP100A Apply workplace procedures

Application

This unit of competency covers the skills and knowledge required to complete own work activities.

This unit of competency applies to personnel who are required to have a working knowledge of the organisation and its processes, products, customers and competitors and to work effectively within organisation procedures.

This is a general competency that is performed by all personnel.

It applies to an individual working alone or as part of a team/work group and working in liaison with other team members and supervisors.

This unit of competency applies to all areas of operation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Identify industry sector**	1.1	Identify the industry sector
		1.2	Recognise the major competitors in the industry and their products
		1.3	State the major external issues facing the industry
2	**Identify products and customers**	2.1	Name company products
		2.2	State needs of external customers in line with organisation priorities
		2.3	State needs of internal customers
		2.4	Identify own role in meeting customer requirements
3	**Recognise plant structure and processes**	3.1	Identify key production sites/areas
		3.2	State own role in organisational structure
		3.3	Describe the production process relevant to own work area and relationship with other parts of the production process
4	**Identify own workplace responsibilities**	4.1	Identify company objectives
		4.2	Identify organisational policies and guidelines in relation to job role
		4.3	State key responsibilities, including work health and safety (WHS) of own section/team
		4.4	Identify task requirements within work role
		4.5	Describe own role in achieving section/team, plant and company objectives
5	**Follow workplace procedures**	5.1	Identify existing procedures relevant to job role
		5.2	Follow procedures in undertaking tasks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		5.3	Seek advice from relevant personnel in clarifying procedures when appropriate
6	**Recognise quality requirements**	6.1	Identify instances of variation in quality from specifications or procedures
		6.2	Identify basic quality concepts to work activities
		6.3	Follow organisation procedures for reporting and managing variations
		6.4	Report problems with materials/product quality to appropriate person
		6.5	Follow organisation procedures for identifying and suggesting improvements to improve product quality
		6.6	Work within the organisation quality system
7	**Plan and follow a personal daily routine**	7.1	Plan own daily routine to take into account rosters, industrial agreements and workplace procedures
		7.2	Seek clarification of requirements of tasks when appropriate
		7.3	Agree achievable time and other performance measures
		7.4	Complete tasks and identify and report variations to plan

the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Routine problems

Routine problems must be reported and corrective action taken according to relevant procedures.

Routine problems include one or more of the following:

- changes to the normal situation
- changes to the daily routine
- quality variations
- changes to the process inputs
- changes in the process

Corrective actions

Corrective actions include one or more of the following:

- reporting to an appropriate person

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- taking action specified in procedures

Appropriate personnel

Appropriate personnel include one or more of the following:

- supervisor
- more senior operator
- other designated personnel

Assessment Requirements for MSMSUP100 Apply workplace context to own job

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP100A Apply workplace procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to:

- use information contained in:
  - standard operating procedures (SOPs)
  - safety, hazard and incident procedures
  - maintenance logs
- identify processes relevant to work role
- identify work requirements and follow work instructions
- identify own and team/section role in meeting company objectives, including safety objectives and customer requirements
- identify the organisation's internal and external customers
- request advice and seek clarification in relation to job/work environment
- identify and apply quality standards
- recognise and report variations in quality and/or non-conformances
- identify routine problems and take corrective actions as required
- complete workplace forms and records

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - safety, emergency and hazard control
  - relevant SOPs
- the context in which the organisation operates, including:
  - the sector
  - major competitors
  - major external issues
- organisation goals, objectives and targets
- the impact of organisation procedures in own work, including:
  - equal employment opportunity (EEO) policies and procedures
  - ethical standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work health and safety (WHS) policies, procedures and programs
- quality and continuous improvement processes and standards.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP101 Clean workplace or equipment

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP101A Clean workplace or equipment

Application

This unit of competency covers the skills and knowledge required for general housekeeping duties as well as the cleaning of plant and equipment. It covers identifying requirements and standards for the work and scheduling and performance of housekeeping activities to maintain standards.

This unit of competency applies to personnel who are required to keep the work area, plant and equipment clean and tidy whether as a small or significant part of their role.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other team members and supervisors.

This unit of competency applies to all work environments.

This unit of competency focuses on working safely to meet requirements. It does not cover the operation of specific equipment or cleaning procedures. Specific housekeeping and cleaning activities and equipment to be used will vary between organisations in response to differences in plant configuration, process, practices and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Identify housekeeping requirements**	1.1	Identify site safety and housekeeping standards for the job/work environment
		1.2	Identify hazards and follow specified hazard controls
		1.3	Undertake housekeeping inspection in accordance with procedures
		1.4	Identify and schedule housekeeping requirements, as appropriate
2	**Perform general housekeeping duties**	2.1	Keep designated work areas clean to organisation-specific standards
		2.2	Keep designated work areas clear of obstructions
		2.3	Handle and use chemicals and solvents in accordance with procedures
		2.4	Ensure work area is ready for next user
		2.5	Remove work materials, tools and equipment to designated locations
3	**Clean plant and equipment**	3.1	Identify organisation procedures for routine and specialised cleaning for the job/work environment
		3.2	Apply procedures to keep assigned plant and equipment clean
		3.3	Perform specialised cleaning procedures as required
		3.4	Ensure that appropriate personal protective equipment (PPE) is used as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Dispose of waste materials**	4.1	Correctly identify waste materials
		4.2	Remove waste materials to a designated location

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets

Tools and equipment

Tools and equipment include one or more of the following:

- cleaning equipment and materials
- brooms
- shovels
- solvents
- waste containers
- safety equipment
- PPE

Hazards

Hazards include one or more of the following:

- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Assessment Requirements for MSMSUP101 Clean workplace or equipment

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP101A Clean workplace or equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- identify:
  - requirements for housekeeping and plant cleaning within own area of responsibility
  - routine and specialised requirements
  - safe handling procedures
  - the standard of cleanliness required
  - waste disposal requirements
- schedule activities to meet requirements
- select and use personal protective equipment (PPE) and appropriate tools
- complete the work in accordance with procedures and obtain appropriate sign-off as required.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - housekeeping, cleaning and waste disposal for the job/work area
  - safety, emergency and hazard control
- relevant material safety data sheets (MSDS) for cleaning and process materials
- types and applications of PPE
- hazards that may arise in the job/work area and appropriate action.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP102 Communicate in the workplace

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP102A Communicate in the workplace

Application

This unit of competency covers the skills and knowledge required to receive, relay and record written and oral messages and to provide relevant information in response to requests within timelines.

This unit of competency applies to personnel who are required to communicate clearly and accurately to record messages, seek clarification, access needed information, relay information to other people and complete workplace documentation.

This unit of competency applies to all work environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Receive and relay messages**	1.1	Confirm understanding of the message is correct
		1.2	Accurately record the message

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.3	Relay message accurately to appropriate person or section within designated timelines
2	**Interpret messages**	2.1	Clarify message if necessary
		2.2	Take appropriate action
		2.3	Respond to communication problems
3	**Respond to request for information**	3.1	Acknowledge and understand the request for information
		3.2	Access information from appropriate sources
		3.3	Relay information to appropriate person or section in a manner appropriate for the receiver
4	**Complete workplace forms**	4.1	Select appropriate form
		4.2	Assemble information required for form
		4.3	Complete workplace forms as required
		4.4	Submit workplace forms as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Messages

Messages may be in any format, including:

- written
- oral
- electronic

Messages may be any combination of simple:

- words
- numbers
- workplace signs

Equipment

Equipment includes one or more of the following:

- telephone
- two-way radio
- computer, tablet, Smartphone or similar

Sources of information

Sources of verbal information include one or more of the following:

- toolbox talks
- team meetings and production meetings
- shift handover
- planning sessions
- discussion with technical experts, supervisors and work health and safety (WHS) officers

Sources of written material include one or more of the following:

- standard operating procedures (SOPs)
- work instructions
- incident procedures
- operating manuals
- quality procedures
- training program contents/materials
- material safety data sheets (MSDS)
- job cards
- maintenance logs
- non-compliance reports
- incidence and accident reports
- permits
- schematics, process flows and engineering drawings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Routine problems

Routine problems must be reported and corrective action taken according to relevant procedures.

Routine problems include one or more of the following:

- missing/lost messages
- required information not available
- required equipment not available
- conflict of work priorities

Corrective actions

Corrective actions include one or more of the following:

- reporting to an appropriate person
- taking action specified in the procedure

Appropriate personnel

Appropriate personnel include one or more of the following:

- supervisor
- more senior operator
- other designated personnel

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSAPMSUP102A Communicate in the workplace

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=d1287d36-dff4-4e9f-ad2c-9d6270054027

Assessment Requirements for MSMSUP102 Communicate in the workplace

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP102A Communicate in the workplace

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- listen attentively
- formulate questions to clarify work requirements or instructions
- read and interpret workplace information
- complete workplace forms
- write legibly and/or use electronic keyboard
- record and interpret numbers, codes and symbols
- use clear and concise language in verbal and written communication.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - telephone and communications protocols and/or procedures
  - documentation and record keeping
  - safety, emergency and hazard control
- types and meaning of workplace codes, numbers, symbols, signs and colours typically used in the job/work environment
- types, purpose and importance of workplace documentation
- workplace expectations for acceptable language and tone (swearing, level of formality, courteousness, respect for diversity, and so on)
- challenges in communicating with people from culturally and linguistically diverse (CALD) backgrounds in the workplace and possible strategies.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will use one or a combination of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - totally off the job, in which case it will use case studies and role plays as well as questions
    - evidence drawn totally from performance in the workplace
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP106 Work in a team

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP106A Work in a team

Application

This unit of competency covers the skills and knowledge required to organise own activities within a team to fit with work schedules and to meet operational guidelines.

This unit of competency applies to team members who are required to use interpersonal and communication skills to plan, organise and complete their work activities according to instructions and with limited discretionary powers.

This unit of competency applies to all work environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Identify work activities**	1.1	Identify task requirements of the team
		1.2	Identify own tasks that are part of the team requirement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.3	Prioritise team and individual activities as directed
2	**Organise daily work plan**	2.1	Break work activities down into small achievable components
		2.2	Record activities as required by procedures
		2.3	Seek assistance from other team members when difficulties in achieving allocated tasks arise
3	**Participate in a team**	3.1	Use communication and interpersonal skills appropriate to the effective teamwork of the shift/crew/section within the workplace
		3.2	Acknowledge information and feedback provided by other team members in work group
		3.3	Acknowledge team roles and support team members in achieving their role

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Communication and interpersonal skills

Communication and interpersonal skills include one or more of the following:

- listening and seeking clarification
- seeking assistance if needed
- accepting feedback
- providing information and support
- acknowledging team roles
- giving constructive feedback
- respecting the views and needs of others
- negotiating agreement on roles, tasks and plans

Unit Mapping Information

Assessment Requirements for MSMSUP106 Work in a team

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP106A Work in a team

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- identify own tasks within team requirements
- identify components of tasks
- plan, prioritise and organise activities in accordance with instructions
- use communication and interpersonal skills with team members, team leaders and supervisors
- complete workplace records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - relevant procedures
  - record keeping requirements
- own role in team and meeting team requirements and the role of other team members, team leaders and supervisors
- company work standards and how the team contributes to them
- interpersonal/communication techniques that promote effective teamwork.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will use one or a combination of:
    - totally off the job, in which case it will use case studies and role plays as well as questions
    - evidence drawn totally from performance in the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP200 Achieve work outcomes

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP200A Achieve work outcomes

Application

This unit of competency covers the skills and knowledge required to identify and implement actions to achieve workplace targets and to suggest ways to improve processes.

This unit of competency applies to personnel who are required to achieve quality standards and productivity targets within the scope of own job.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other team members and supervisors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Identify key** aspects **of the process**	1.1	Outline the properties of materials/components used in the process
		1.2	Describe the process relevant to own work area

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.3	Identify the safety and environmental requirements relevant to this process
		1.4	State aspects of this process which require careful monitoring
2	**Implement actions to achieve targets**	2.1	Identify production targets for own work area and work role
		2.2	Describe techniques used to measure performance against workplace targets/standards
		2.3	Identify factors impacting on achieving targets
		2.4	Identify potential inefficiencies in the process
		2.5	Achieve work outcomes
3	**Participate in an improvement activity in accordance with organisation procedures**	3.1	Investigate a problem
		3.2	Identify likely causes of problem
		3.3	Suggest options for improvement
		3.4	Discuss a proposed improvement with appropriate people

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- non-routine process and quality problems
- equipment selection, availability and failure
- teamwork and work allocation problems
- safety and emergency situations and incidents

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for MSMSUP200 Achieve work outcomes

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP200A Achieve work outcomes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- identify workplace targets and performance measures
- identify and minimise inefficiencies
- identify and control hazards
- work to achieve targets
- apply known solutions to routine problems
- participate in process improvement teams/activities.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including relevant standard operating procedures (SOPs)
- potential sources of wastage/production inefficiencies
- process, normal operating parameters and product quality to recognise non-standard situations
- criteria for evaluating and selecting improvements, including:
  - benefits
  - costs
  - safety implications
  - limitations of equipment, process and materials.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include participation in an improvement activity which provides sufficient evidence of the requirements of all the elements and performance criteria
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP204 Pack products or materials

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP204A Pack products or materials

Application

This unit of competency covers the skills and knowledge required to package products and/or materials to prepare them for despatch, warehousing or storage.

It applies to operators who are required to identify packaging requirements, use technology to package the goods and complete labelling and documentation. It covers the packaging of liquids or particulate solids, drums and semi-bulk containers, and so on.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency includes the operation of all relevant ancillary equipment, such as pumps, valves, scales and other equipment integral to the packing operation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

The person undertaking this role may require licences to cover the operation of forklift trucks or other regulated load shifting devices. Licensing or certification may be required by the local Worksafe or other regulatory authority.

Pre-requisite Unit

Nil

Competency Field

Support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Prepare goods/materials for packaging	1.1	Interpret packaging specifications
		1.2	Interpret order packaging documentation
		1.3	Select appropriate technology for packaging goods/materials
		1.4	Identify packaging materials and match specifications
		1.5	Identify and control hazards
2	Package finished products or materials	2.1	Identify the nature of the product or material and the particular handling requirements
		2.2	Conduct process according to production specifications and organisational procedures
		2.3	Identify potential problems and required action/solution
		2.4	Conduct equipment start-up and run operation as necessary
		2.5	Employ ancillary equipment, as necessary, and use safe working procedures
3	Stack, label and store finished products or materials	3.1	Find out delivery, storage and location requirements in accordance with procedures
		3.2	Label or mark products or materials following workplace labelling standards
		3.3	Set up work area and handling and storage equipment taking account of safety and efficiency
		3.4	Store products where required making safe and efficient use of storage space

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.5	Complete workplace records/documentation
		3.6	Attach invoices and picking slips (where required)
4	Clear work area	4.1	Store unpacked products, products for packaging and handling equipment in appropriate areas
		4.2	Clean equipment and make ready for re-use
		4.3	Clean work area, making it safe and ready for the next user
		4.4	Report and document equipment faults

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Documentation, labels and records

Documentation, labels and records include:

- any information and data in relation to despatch, receipt, movement and storage of goods whether it is manual, paper-based, electronic or verbal, either in person or by phone/radio, and includes one or more of the following:
  - order requests
  - invoices
  - picking slips
  - labels
  - transportation requirements
  - bills of materials
  - inventory lists
  - databases

Tools and equipment

Tools and equipment include one or more of the following:

- mobile plant/fork lifts
- manual handling equipment
- hand tools
- shrink wrappers
- tape machine labellers
- loose bulk packing equipment
- computers, bar code readers
- bag filling equipment
- pallets
- wrapping machines
- personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- distribution equipment, such as A-frames, stillages, containers, elevated platforms and communication equipment

Hazards

Hazards include one or more of the following:

- inappropriate movements and postures
- humidity, air temperature and radiant heat
- manual handling hazards
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment malfunctions
- product specifications
- handling specifications
- insufficient space
- unusual size, shape or mass of products or materials
- insufficient goods to complete order

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- conflicting priorities
- incomplete or incorrect paperwork

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for MSMSUP204 Pack products or materials

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP204A Pack products or materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- identify and interpret the packaging requirements
- select and use the appropriate technology and equipment for packaging
- label and store the goods
- select and use handling equipment
- apply known solutions to routine problems
- read and interpret product specifications, job sheets, procedures, material labels and safety information
- complete documentation and records
- apply appropriate safety precautions and procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - safety, emergency and hazard control
  - inventory and ordering systems
- types and application of handling equipment and any licensing requirements
- manual handling techniques and ergonomics relevant to the job
- safe storage of dangerous goods and hazardous materials relevant to the materials handled
- production work flow requirements for packaging.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP205 Transfer loads

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP205A Transfer loads

Application

This unit of competency covers the skills and knowledge required to move loads using cranes and gantries.

It applies to operators who are required to plan and apply the correct method to secure and move the goods safely without damage to the goods, personnel or equipment.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all sectors of the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

The person undertaking this role may require licences to cover the operation of forklift trucks or other regulated load shifting devices. Licensing or certification may be required by the local Worksafe or other regulatory authority.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Plan operation	1.1	Correctly identify products, goods or material to be relocated
		1.2	Identify load characteristics, including mass, volume, shape, balance and dimensions
		1.3	Identify most efficient and appropriate piece of equipment to be used
		1.4	Estimate points of balance
		1.5	Consider effect of moving contents which may be loose, liquid, dangerous or hazardous
		1.6	Determine location of storage
		1.7	Carry out risk analysis for job
		1.8	Complete required hazard controls
		1.9	Identify most efficient and appropriate movement route
2	Prepare for lift	2.1	Select appropriate lifting equipment
		2.2	Check and test lifting gear as required
		2.3	Calculate safe working load (SWL) or working load limit (WLL)
		2.4	Clarify any non-standard requirements
		2.5	Report and replace any unsafe lifting gear
		2.6	Secure movable/loose parts of load
		2.7	Attach load suitable for transfer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Transfer load	3.1	Prepare load destination to accept load
		3.2	Move load safely to required destination in accordance with planned procedure
		3.3	Use standard communication signals to coordinate safe movement of the load
		3.4	Remove equipment/gear/accessories safely from load
		3.5	Inspect equipment/gear/accessories for wear and damage, and clean, maintain, store and record usage and condition
		3.6	Complete site/job records
4	Respond to routine problems	4.1	Monitor transfer frequently and critically throughout load shifting using measured/indicated data and senses (e.g. sight and hearing) as appropriate
		4.2	Recognise transfer problems
		4.3	Identify and take action on causes of routine problems
		4.4	Log problems as required
		4.5	Identify non-routine process and quality problems and take appropriate action

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Communication signals

Communication signals include one or both of the following:

- hand signals
- radio/voice

Tools and equipment

Tools and equipment include one or more of the following:

- cranes and gantries
- slings, ropes, chains or nets
- block and tackle
- shackles, bolts or turnbuckles
- jemmy bars
- spreader beams
- equalising gear
- clamps
- pulley systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- winches
- packs
- rigging screws
- relevant personal protective equipment (PPE)

Hazards

Hazards include one or more of the following:

- unpredicted movement of loads
- loose goods
- volatile or hazardous materials and products
- irregular shaped loads
- unlabelled goods, materials and products
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Hazard controls

Hazards controls include one or more of the following:

- obtaining a permit to work
- determining coordination requirements with other site personnel
- determining job method to include hazard prevention and controls
- applying Australian Standards for safety procedures, codes of practice and manufacturer specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- erecting barricades, warning signs and overhead protection to requirements

Checking lifting gear

Checking lifting gear includes:

- checking pulleys and block and tackle for safe operation and load capacity
- checking ropes, cable, net and chain systems before use for safe condition and conformity to specification
- conducting testing of ropes, cable, net and chain system when required to ensure safe operating capacity
- checking sling material for conformity with equipment and safety requirements

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- variations in load capacities of various sling materials
- frayed or damaged slings
- bolt or shackle failure
- lifting equipment failure

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for MSMSUP205 Transfer loads

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP205A Transfer loads

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- plan and prepare for the safe relocation of goods based on load characteristics, risk analysis, equipment to be used and calculation of load limits
- select and use equipment to lift and transfer load and perform pre and post-checks
- apply known solutions to routine problems
- complete documentation and records
- communicate effectively to clarify requirements, report problems and coordinate safe movement of the load.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - safety, emergency and hazard control
- types, application and capacity of load shifting equipment and any licensing requirements
- hazards that may arise in load transfer, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls.
  -

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP210 Process and record information

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP210A Process and record information

Application

This unit of competency covers the skills and knowledge required to process information and respond to the information requirements of own job, including the completion of workplace documents, and clearly and concisely providing relevant information to others.

This unit of competency applies to personnel who are required to identify routine information requirements, access and process information, provide workplace and technical information within their area of expertise and complete workplace documentation. Information will be conveyed orally and in writing.

This unit of competency applies to all work environments and sectors within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

	information	1.2	Request appropriate information
		1.3	Access information in accordance with procedures
		1.4	Comply with security procedures in accessing appropriate information
2	**Provide appropriate information**	2.1	Deal with enquiries promptly and courteously
		2.2	Establish details of enquiry by questioning and summarising
		2.3	Provide appropriate information relevant to enquirer's request
		2.4	Organise information clearly, concisely and logically
		2.5	Provide information in a form that is readily understood by others
		2.6	Provide information in a timely manner
		2.7	Redirect enquiries to relevant personnel for resolution where outside the operator's area of responsibility
3	**Give and follow routine instructions**	3.1	Give accurate, clear and concise instructions that are appropriate for the receiver
		3.2	Ensure that interaction with others is efficient, effective, responsive, courteous and supportive
		3.3	Confirm that instructions are understood
		3.4	Follow prescribed and routine work-related sequences
4	**Provide reports**	4.1	Complete all workplace documentation and reports clearly and accurately in accordance with procedures
		4.2	Report all relevant information clearly and concisely

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Equipment

Equipment includes one or more of the following:

- telephone
- two-way radio
- computer, tablet, Smartphone or similar

Sources of information

Sources of verbal information include one or more of the following:

- toolbox talks
- team meetings and production meetings
- shift handover
- planning sessions
- discussion with technical experts, supervisors and work health and safety (WHS) officers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Sources of written material include one or more of the following:

- SOPs
- work instructions
- incident procedures
- operating manuals
- quality procedures
- training program contents/materials
- material safety data sheets (MSDS)
- job cards
- maintenance logs
- non-compliance reports
- incidence and accident reports
- permits
- schematics, process flows and engineering drawings

Workplace documentation

Workplace documentation includes one or more of the following:

- forms
- checklists
- maintenance or production logs

Reports

Reports include one or more of the following:

- oral reports, such as shift handover and toolbox talks
- written reports, either hand written or computer-based, such as:
- incident and injury reports
- daily/shift reports/logs

Assessment Requirements for MSMSUP210 Process and record information

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP210A Process and record information

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- identify routine information requirements and access relevant information
- use questions and summarising to seek clarification and confirm understanding
- read and interpret workplace information
- complete workplace forms and reports
- provide workplace and technical information within own area of expertise
- write legibly and/or use electronic keyboard
- use clear and concise language appropriate to the receiver in verbal and written communication.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including those covering:
  - data systems and data security
  - record keeping
  - privacy
  - intellectual property (IP)
  - use of internet
- types and meaning of workplace codes, numbers, symbols, signs and colours typically used in the job/work environment

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will use one or a combination of:
    - totally off the job, in which case it will use case studies and role plays as well as questions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - evidence drawn totally from performance in the workplace
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP230 Monitor process operations

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP230A Monitor process operations

Application

This unit of competency covers the skills and knowledge required to monitor production processing equipment and take appropriate action.

This unit of competency applies to operators who are required to identify the job requirements, monitor production processing equipment, monitor the job to maintain safety and quality, and identify and take action on problems.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This competency applies to the monitoring of various forms of production equipment in all work environments and sectors within the process manufacturing industry. It includes the monitoring of all ancillary tools and equipment.

Where operation of the equipment is required, the appropriate operational unit from MSM, PMA, PMB or PMC should be used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify scope of work in accordance with procedures	1.1	Identify own work requirements
		1.2	Check procedures to identify operating parameters and approved adjustments
		1.3	Establish actions to be used in the event of faulty production
		1.4	Identify procedures for obtaining materials for the process
		1.5	Identify hazards and environmental issues relevant to own job
2	Get ready for work/job	2.1	Assemble ancillary tools and equipment
		2.2	Identify inspection procedures
		2.3	Identify any finishing activities
		2.4	Identify and implement hazard controls
		2.5	Establish the location and function of equipment emergency stops and ensure guards are in place
		2.6	Identify and note requirements for checking materials inputs and outputs; ancillary supplies and equipment; and product quality requirements for the relevant process stage
3	Maintain operations in accordance with procedures	3.1	Check process operations, noting product quality, production outputs and waste
		3.2	Check product for conformity to specification, make adjustments to the equipment, where appropriate, and store product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.3	Collect material which is able to be reprocessed and reused, and deal with waste and scrap
		3.4	Use the quality control system
		3.5	Clean up equipment and work area and manage waste.
4	Identify product quality requirements	4.1	Monitor process and note conditions which may affect product quality standards
		4.2	Report process variations within workplace procedures
		4.3	Note and implement authorised changes in procedures and specifications

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tools and equipment

Tools and equipment include one or more of the following:

- hand carts and trolleys
- knives and other bag opening equipment
- hoists/lifting equipment not requiring any special permits or licences
- basic hand tools required for opening of material packaging
- relevant personal protective equipment (PPE)

Hazards

Hazards include one or more of the following:

- automated or rotating equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- manual handling hazards
- knife hazards
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- process problems, such as:
  - equipment malfunctions
  - product jamming or sticking
  - power failures
  - air, oil or lubricant difficulties
- product problems, such as:
  - variations in materials
  - contamination of materials
  - malformed or incomplete products

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for MSMSUP230 Monitor process operations

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP230A Monitor process operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret product specifications, job sheets, procedures, material labels and safety information to identify:
  - operating procedures
  - equipment controls and adjustment parameters
  - inspection procedures and quality requirements
  - hazard minimisation procedures
  - finishing requirements
  - sourcing of materials
  - action to be taken in response to faulty production from operating procedures
- monitor production outputs and product quality and make adjustments to equipment as required and within parameters
- apply known solutions to routine problems
- report process variations
- identify hazards and apply relevant hazard controls.

Knowledge Evidence

- Evidence must be provided that demonstrates knowledge of:
- organisation procedures, including:
  - safety, emergency and hazard control
  - relevant procedures
  - quality assurance/quality control
- hazards that may arise in the job/work environment, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
  - types and application of personal protective equipment (PPE) in relation to job/work environment
- work flow sequences and materials demand.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation, particularly where safety, lack of opportunity or significant cost is an issue, for part only of the unit, such as using deliberately created product faults for assessing the checking of product for conformity to specification.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP240 Undertake minor maintenance

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP240A Undertake minor maintenance

Application

This unit of competency covers the skills and knowledge required to undertake minor maintenance and solve routine problems to procedures. It does not cover activities normally requiring traditional trade training.

This unit of competency covers minor maintenance, such as:

- operational maintenance (e.g. connection-disconnection of hoses, greasing, lubrication and lubricant systems, adjusting sealing glands, cleaning and changing filters and 'nipping up' flanges)
- general cleaning
- removal and replacement (e.g. gland packing, changing blades or cutters, replacing gaskets, replacing/maintaining seals, changing filter elements and servicing strainers).

In a typical scenario a plant operator does minor maintenance activities on the plant and equipment being operated. For instance, the pressure drop across a filter unit may be high, indicating the filter cartridge needs changing. The operator takes the filter unit out of operation, cleans the unit, uses the correct spanner to open the lid, installs a fresh cartridge, closes the unit using the spanner again, then cleans up the area and disposes of the spent cartridge. Typically this sort of maintenance will be done on the plant and will not require workshop type facilities.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Identify maintenance requirements**	1.1	Identify equipment variations/irregularities using observed data and plant records
		1.2	Assess the urgency/priority of the situation
		1.3	Identify appropriate corrective action
		1.4	Identify correct tools and materials
		1.5	Assess the impact of the maintenance activity and communicate to appropriate personnel
		1.6	Identify hazards and risk controls
		1.7	Identify work permit requirements
2	**Prepare for maintenance activity**	2.1	Ensure equipment is turned off and isolated according to procedures
		2.2	Clear the area of obstructions and hazardous materials
		2.3	Obtain appropriate tools, parts, materials and procedures
		2.4	Obtain the appropriate work permits and adhere to the requirements
		2.5	Communicate the impending maintenance activity to the appropriate personnel
3	**Perform maintenance**	3.1	Access all relevant information
		3.2	Undertake maintenance activity according to procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	activity	3.3	Use tools and maintenance techniques correctly
		3.4	Restore equipment to normal working condition
		3.5	Leave the work area in a clean and safe condition
		3.6	Ensure permits are signed-off as appropriate
4	**Test equipment**	4.1	Test equipment according to procedures
		4.2	Return equipment to service
		4.3	Ensure equipment meets normal operating requirements
5	**Record maintenance activity**	5.1	Complete maintenance logs/plant history records
		5.2	Report maintenance activity to relevant personnel
		5.3	Identify and report outstanding maintenance requirements to relevant personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Tools and equipment

Tools and equipment include one or more of the following:

- hand tools
- specialised tools
- measuring and aligning equipment

Hazards

Hazards include one or more of the following:

- rotating and moving machinery
- process materials, solids, liquids and gases under pressure or flowing
- hot surfaces or materials
- temporary connections or by-passes
- electrical, hydraulic or pneumatic energy sources
- out-of-specification operation
- other hazards that might arise

Data and plant records

Observed data and plant records include one or more of the following:

- plant data
- log sheets
- operational and performance reports
- equipment performance (e.g. speed, output and variations)
- equipment component performance
- sequences and timing of operations
- materials changes (desired and not desired)
- physical aspects, such as noise, smell, feel and pressure condition monitoring information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- planned maintenance schedules
- procedures
- manufacturer specifications, instructions, service manuals and other information

Unit Mapping Information

Assessment Requirements for MSMSUP240 Undertake minor maintenance

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP240A Undertake minor maintenance

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include the ability to:

- use available data and records to recognise fault and no-fault conditions in standard and non-standard situations
- apply operational guidelines and known solutions to correct variations/irregularities
- apply approved hazard control, work permit and safety procedures in relation to handling materials, equipment operation and clean up
- identify the need for work permits and select the appropriate permit
- apply maintenance procedures according to plant data and maintenance schedules.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- principles of operation of the equipment to be maintained
- function and troubleshooting of major internal components and their problems
- appropriate testing procedures and use of equipment for a range of equipment faults
- typical causes of equipment failures and the service conditions which may increase maintenance
- types and nature of maintenance (preventative, predictive, corrective) uses, benefits and limitations
- factors that may affect product quality or production output and appropriate remedies.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth work conditions
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP273 Handle goods

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP273A Handle goods

Application

This unit of competency covers the skills and knowledge required to receive and despatch products and/or materials from either internal or external sources as an adjunct to the job of making product.

It applies to operators who are required to receive and process orders, maintain records, identify and select goods to be despatched and ensure they are despatched to the correct location.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency focuses on processing goods to be despatched and/or received. The person undertaking this role may require additional competencies to cover the operation of forklift trucks or other regulated load shifting devices.

This competency is NOT intended for people who, as a major function, operate a store or warehouse. For these people warehousing units of competency should be used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Identify work requirements**	1.1	Read and interpret documentation
		1.2	Identify required schedules for receipt or despatch
		1.3	Identify correct product/material
		1.4	Identify potential problems and required action/solution
		1.5	Plan work sequence using workplace and product knowledge
		1.6	Select appropriate materials handling equipment as required
		1.7	Identify work health and safety (WHS) requirements
2	**Prepare for receiving or despatching goods**	2.1	Select and check goods for receiving/despatch against product/material knowledge, labels and other identification systems
		2.2	Sort, assemble and consolidate products as necessary
		2.3	Secure order and place in storage areas in accordance with schedule
		2.4	Check order against receiving/despatch schedule and order form
3	**Move materials into/out of storage or to/from production**	3.1	Check paperwork and identity of materials
		3.2	Check for completeness and/or damage
		3.3	Take action on non-conforming products/materials
		3.4	Move products/materials safely
		3.5	Store materials safely as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.6	Resolve routine problems that arise in accordance with procedures
4	**Complete materials movement records**	4.1	Complete materials movement records (in or out)
		4.2	Update records as required
		4.3	Complete other paperwork and records as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Documentation and records

Documentation and records include:

- any information and data in relation to despatch, receipt, movement and storage of goods whether it is manual, paper-based, electronic or verbal, either in person or by phone/radio, and includes one or more of the following:
  - order requests
  - invoices
  - picking slips
  - labels
  - transportation requirements
  - bills of materials
  - inventory lists
  - databases

Tools and equipment

Tools and equipment include one or more of the following:

- mobile plant/fork lifts
- manual handling equipment
- hand tools
- shrink wrappers
- tape machine labellers
- loose bulk packing equipment
- computers and bar code readers
- bag filling equipment
- pallets
- wrapping machines
- personal protective equipment (PPE)
- distribution equipment, such as A-frames, stillages, containers, elevated platforms and communication equipment

Hazards

Hazards include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- inappropriate movements and postures
- manual handling hazards
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Routine problems Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- special storage requirements, including moisture and contamination control
- compatibility of goods in loads and in storage
- handling of incomplete loads (either in or out)
- handling of materials which do not meet specifications
- conflicting priorities
- incomplete or incorrect paperwork
- product requirements
- job priority
- product/material variations

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for MSMSUP273 Handle goods

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP273A Handle goods

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- identify and select goods to be moved in accordance with documentation
- apply known solutions to routine problems
- prepare and organise goods to be moved to fit with schedules
- select and use handling equipment
- read and interpret product specifications, job sheets, procedures, material labels and safety information
- complete documentation and records
- apply appropriate safety precautions and procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - safety, emergency and hazard control
  - inventory and ordering systems
- types and application of handling equipment and any licensing requirements
- manual handling techniques and ergonomics
- safe storage of dangerous goods and hazardous materials
- transport requirements and restrictions for products/materials
- production workflow requirements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for part but not all of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP280 Manage conflict at work

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP280A Manage conflict at work

Application

This unit of competency covers the skills and knowledge required to manage conflict in a range of personal conflict situations.

This unit of competency applies to personnel who are required to liaise and cooperate with other members of the team and to work towards finding common ground and opportunities for problem resolution. It applies to any interactions in the workplace, including interactions between co-workers, between staff and customer/client, and between staff and supervisor.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all work environments and sectors within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Identify potential sources of conflict**	1.1	Identify actions which are likely to promote a reaction in others
		1.2	Assess the other person's needs and/or concerns
		1.3	Assess own ability to respond to the other person's needs
		1.4	Recognise possible causes of conflict
		1.5	Identify potential conflict situations
2	**Identify range of alternative approaches**	2.1	Discuss with the other person their needs and concerns
		2.2	Identify own needs and concerns and discuss with other person
		2.3	Identify possible approaches through which the needs and concerns of both may be met
		2.4	Develop a range of alternative approaches for achieving goals
3	**Resolve conflicts**	3.1	Identify areas of common ground or objectives that can be mutually supported
		3.2	Agree on an approach which will meet the majority of objectives for both parties
		3.3	Implement the approach
		3.4	Check that the agreed requirements are being met and that conflict has been resolved
4	**Respond to problems**	4.1	Identify possible problems in the conflict management process
		4.2	Determine problems needing action
		4.3	Determine possible causes
		4.4	Rectify problem using appropriate solution within area

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	of responsibility
4.5	Follow through items initiated until final resolution has occurred
4.6	Report problems outside area of responsibility to designated person

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Conflict

Conflict in the context of this unit refers to interpersonal conflict and may arise in any work-related context.

Potential sources of conflict

Potential sources of conflict include conflicts arising from one or more of the following:

- different learning/problem solving styles
- different work or personal priorities
- different personality styles
- conflicting key performance indicators (KPIs), work goals or targets
- different social, cultural, religious or ethnic background or different gender of sexual preference
- different interpretation of requirements or ‘the rules’

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Approaches to resolving conflict

Approaches to resolving conflict will be based on direct communication and include one or more of the following:

- informal, face-to-face discussions
- formal/structured face-to-face discussions
- through the use of:
  - telephones and two-way radios
  - memos, faxes, letters or emails

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- anger or aggression arising from industrial relations matters
- disagreements over processes or work practices
- variations in opinions about circumstances or events
- interpersonal disputes arising from changes in personal circumstances

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for MSMSUP280 Manage conflict at work

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP280A Manage conflict at work

Performance Evidence

- Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:
- recognise situations, actions and verbal and non-verbal communication that indicate potential or actual conflict
- communicate about needs and concerns of self and others and areas of common ground using:
  - appropriate verbal and non-verbal communication
  - statements that focus on issues and facts, not people and personalities
  - accurate reflection of people's needs and concerns
- implement conflict resolution approach and monitor its success
- apply known solutions to routine problems

manage conflict as it arises.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- likely sources of conflict in own job/workplace
- indicators of potential conflict
- communication approaches to resolving conflict
- conflict resolution skills relevant to own job/workplace.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will use one or a combination of:
    - totally off the job, in which case it will use case studies and role plays as well as questions
    - evidence drawn totally from performance in the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Identify customers and suppliers**	1.1	Identify internal and external customers and suppliers
		1.2	Identify requirements of individual customers
		1.3	Identify own role in meeting customer requirements
2	**Identify areas for improvement**	2.1	Identify issues affecting output and quality
		2.2	Identify instances of variation
		2.3	Follow procedures for reporting and managing variations
		2.4	Record non-conformance in accordance with company requirements
3	**Identify strategies for improvement**	3.1	Identify areas for improvement
		3.2	Use information on variation to develop improvement suggestions
		3.3	Use relevant quality tools and techniques for identifying causes of variation and areas for improvement
		3.4	Suggest options for improvement
		3.5	Discuss a proposed improvement with others in a team
4	**Participate in a team to implement an improvement proposal**	4.1	Implement changes in system and procedures
		4.2	Monitor performance improvements
		4.3	Evaluate results of improvements with others in a team

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Opportunities for improvement

Opportunities for improvement include one or more of the following:

- an unintended occurrence or outcome
- product faults and faulty products
- excessive variation
- trends
- waste (muda)
- improving process capability
- improving process efficiency
- improving health safety and environment (HSE) outcomes
- reducing cost/lifecycle cost

Quality tools and techniques

Quality tools and techniques include one or more of the following:

- controls charts (statistical process control)
- cause-effect diagrams
- check sheets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- histograms/Pareto charts
- scatter diagrams
- stratification
- flow charts

Assessment Requirements for MSMSUP291 Participate in continuous improvement

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP291A Participate in continuous improvement

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- identify relationship of own role to the needs of internal and external customers and suppliers
- identify variations and non-conformances
- follow procedures for reporting and managing variations and non-conformances
- communicate and work with others to:
  - analyse areas of variations and non-conformances to identify causes and develop strategies for improvements
  - implement changes to systems and procedures
  - evaluate whether changes have achieved improvements
- interpret quality data and graphs.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- the use of information in developing improvements
- types and application of analytical problem-solving techniques
- organisation processes and approvals for making changes to systems and procedures
- quality tools and techniques.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and opportunity for improvement recognition and resolution. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate quality tools
  - may use industry-based simulation for part only of the unit (typically implementation) particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP292 Sample and test materials and product

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP292A Sample and test materials and product

Application

This unit of competency covers the skills and knowledge required to take routine samples and conduct simple tests.

This unit of competency applies to operators who are required to take samples in the workplace, perform a narrow range of simple tests and interpret the results and take specified action based on those results.

It applies to simple, routine tests to procedure which will typically be done in the workplace or in a ‘factory laboratory’ (or bench) adjacent to or within the factory.

This unit of competency is typically performed by operators working either independently or as part of a work team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	Take sample	1.1	Determine type of sample and sampling equipment required
		1.2	Check sampling equipment is clean and in good order
		1.3	Take sample of required type, from the required place and at the required time and place in required container
		1.4	Label sample to procedure
		1.5	Carry sample to required place
2	Complete test	2.1	Check test required from procedures
		2.2	Check sample identification and integrity
		2.3	Check test equipment is clean, in good order and within calibration
		2.4	Complete test required in accordance with standard procedures/instructions
3	Interpret results and take action	3.1	Note anything about sample, equipment or the test itself which may have caused it to give a bad result
		3.2	Compare results to specification
		3.3	Take action appropriate to the test results and any other observations
4	Complete sample and test cycle	4.1	Complete required records
		4.2	Store and/or dispose of sample as required
		4.3	Clean all equipment and leave ready for next sample/test

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- test methods
- sampling techniques
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)

Assessment Requirements for MSMSUP292 Sample and test materials and product

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP292A Sample and test materials and product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- undertake collection and processing of sample
- select and use appropriate procedures
- undertake tests with adequate reproducibility
- check and clean equipment
- recognise suspicious test results caused by sampling/testing faults
- compare results to specifications and take appropriate action as defined in relevant procedures
- complete workplace forms, label samples and record results.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- relevant procedures
- specifications for test results
- types and application of sample techniques and their requirements
- types and application of test methods and critical factors leading to good/poor test results

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
    - walk-throughs
    - pilot plant operation
    - demonstration of skills
    - industry-based case studies/scenarios
    - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP300 Identify and apply process improvements

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP300A Identify and implement opportunities to maximise production efficiencies

Application

This unit of competency covers the skills and knowledge required to identify, monitor and participate in strategies to improve production efficiencies.

It applies to experienced personnel, such as experienced operators, team leaders or supervisors, who are required to provide input into process improvement initiatives for a team or work area.

This unit of competency applies to all work environments and sectors within the industry. It applies to a wide range of processes and equipment. In large plants with multiple processes, it may apply to more than one process if those processes interact with each other. It applies to all operators across all functions.

No licensing, legislative or certification requirements apply to this unit at the time of

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Sources of information

Sources of information include one or more of the following:

- yearly, monthly, weekly and daily production targets
- business objectives and goals

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- control charts, run charts and graphs
- enterprise manuals and procedures
- equipment specifications

Identifying process inefficiencies

Identifying process inefficiencies requires consideration of one or more of the following:

- equipment downtime
- spillages
- leaks
- contamination
- raw material quality
- utilities usage
- production quality, rejects and re-work
- wasted materials and other resources
- productivity issues
- incorrect work allocation/priorities/planning
- incorrect processes/procedures

Problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and known solutions are drawn from one or more of:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to relevant procedures.

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Non-routine problems are unexpected problems, or variations of previous problems and include one or more of the following:

- non-routine process and quality problems
- equipment selection, availability and failure
- teamwork and work allocation problems
- safety and emergency situations and incidents

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Assessment Requirements for MSMSUP300 Identify and apply process improvements

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP300A Identify and implement opportunities to maximise production efficiencies

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- read and interpret information from a range of sources to identify production inefficiencies and strategies to minimise them
- complete workplace forms and production reports
- use problem-solving tools to identify strategies for improvements
- apply operational knowledge to non-routine problems
- communicate effectively with relevant personnel at all levels to:
  - identify and recommend improvement strategies
  - implement the strategies
  - evaluate and report the results of implementation.
  -

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- duty of care
- organisation procedures
- information systems and data collation
- measures of process efficiency
- hazards that may arise in the job/work environment, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- relevant equipment and operational processes.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP301 Apply HACCP to the workplace

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP301A Apply HACCP to the workplace

Application

This unit of competency covers the skills and knowledge required to apply the hazard analysis and critical control point (HACCP) principles to the manufacture of products to be used in contact with food, beverages, pharmaceuticals or similar situations.

It applies to senior operators who are required to use a HACCP-based approach to analyse food, beverage or pharmaceutical safety risks, define controls and corrective action procedures, and ensure the system is working effectively.

The operator will have detailed operational and process knowledge but is not required to demonstrate 'hands on' operation of equipment as part of this competency.

HACCP is an internationally recognised systematic approach to identifying and controlling food and related safety hazards.

Related acronyms are used in this competency:

- CCP - critical control points
- CCF - critical control factors
- CCL - critical control limits
- HAT - hazard analysis table.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator as appropriate.

This unit of competency applies to all work environments and sectors within the industry where the product comes into contact with food, beverages or pharmaceuticals or otherwise requires 'food standards' to be maintained.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Apply a HAT to an existing process	1.1	Identify CCPs
		1.2	Recognise CCFs which are outside of or approaching CCLs
		1.3	Describe hazard related to CCFs and CCLs
		1.4	Implement corrective action in accordance with HAT
2	Develop/modify a HACCP	2.1	Conduct a hazard analysis
		2.2	Determine the CCPs
		2.3	Establish critical limits
		2.4	Establish/modify a system to monitor control of the CCPs
		2.5	Establish the corrective action to be taken when monitoring indicates that a particular CCP is not under control
		2.6	Establish procedures for verification to confirm that the HACCP system is working effectively
		2.7	Establish/modify documentation concerning all procedures and records appropriate to these principles and their application.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Interpret HACCP/HAT to another worker	3.1	Explain the purpose and rationale of HACCP
		3.2	Identify CCPs, CCFs and CCLs
		3.3	Describe indicators of CCFs not within their CCLs
		3.4	Describe impact of non-conformances
		3.5	Demonstrate corrective action
		3.6	Monitor worker implementing HACCP in their job

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- Codex Alimentarius
- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Hazards

Hazards include one or more of the following:

- biological
- chemical
- physical
- product contamination
- material contamination
- methods/routes of exposure and contamination

Non-routine problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Non-routine problems are unexpected problems, or variations of previous problems and include one or more of the following

- recognising CCFs approaching the CCLs
- determining corrective action from HAT
- applying HACCP principles to situations not directly covered by HAT
- recognising the need for a new/modified HACCP/HAT
- modifying HACCP/HAT to meet changes circumstances

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- remembered experience
- relevant knowledge obtained from appropriate people

Assessment Requirements for MSMSUP301 Apply HACCP to the workplace

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP301A Apply HACCP to the workplace

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- recognise HACCP/HAT issues and take appropriate corrective action
- analyse process and material variations in terms of the HACCP and determine appropriate actions
- apply HACCP principles to develop a new and/or modify and existing HACCP as part of a team
- communicate effectively with relevant personnel to convey technical information
- apply operational knowledge to non-routine problems
- write technical reports and HACCP/HAT tables
- interpret quantitative data, make comparisons and interpretations.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- 'seven principles' of HACCP
- importance of CCPs, CCFs and CCLs
- relevance of HAT to routine production
- impacts of variations in materials, process and product on HACCP.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of HACCP tools in the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - may use industry-based simulation for part only of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP303 Identify equipment faults

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP303A Identify equipment faults

Application

This unit of competency covers the skills and knowledge required to plan and carry out checks to identify and deal with equipment faults and to determine solutions.

This unit of competency applies to experienced personnel, such as experienced operators, team leaders or supervisors, who are required to apply knowledge of materials, product purpose and processes to identify and deal with routine and non-routine faults in equipment, propose solutions, carry out solutions within scope of authority and competence and complete logs and reports.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all work environments and sectors within the industry. It does not include maintenance that would require trade-level skills. It is not intended that this competency would cover maintenance that is carried out in a workshop.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify scope of operational check	1.1	Identify and classify equipment components and operating systems
		1.2	Match appropriate checks and procedures to the equipment operating systems
		1.3	Identify special checking procedures and parameters in manufacturer specifications and procedures
		1.4	Identify sources of information and data relevant to key variables
		1.5	Identify and control hazards
		1.6	Observe and undertake checks on the physical condition of equipment in accordance with procedures
		1.7	Record preliminary observations
		1.8	Discuss checking procedures with appropriate personnel and obtain necessary permission where required
2	Plan operational checks	2.1	Check specifications and notes from preliminary observations and identify areas to be clarified
		2.2	Plan sequence for checks, noting areas where results and observations should be recorded
		2.3	Ensure area is safe for operational check
		2.4	Make arrangements for any additional resources, including other employees
3	Check unit through full	3.1	Undertake operational checks observing relevant safety and operational requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	operational range	3.2	Confirm results and findings
		3.3	Identify faults to be dealt with
4	Identify faults and formulate recommendations	4.1	Identify impact of faults on work schedule
		4.2	Record proposals for equipment repair based on faults found, cost/time implications and workplace approval systems
		4.3	Explain proposals to relevant workplace personnel, including any options and recommendations
		4.4	Take appropriate action to return equipment to full operation in accordance with procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- plant description manuals
- manufacturer instructions and specifications
- service manuals
- machine circuit diagrams for hydraulic/pneumatic and electrical/electronic circuits
- any similar instructions provided for the smooth running of the plant

Tools and equipment

Tools and equipment include one or more of the following:

- hand tools specific for the task
- product testing equipment (e.g. flowmeter, scales, tape measure, micrometer, calliper and ultrasonic thickness)
- equipment checking equipment (e.g. vibration meter, tachometer, current tester, thermal imaging and temperature gauge)

Hazards

Hazards include one or more of the following:

- rotating and moving machinery
- process materials, solids, fluids and gases under pressure or flowing
- temporary connections or by-passes
- electrical, hydraulic or pneumatic energy sources
- out-of-specification operation
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Faults

Faults may arise from routine and non-routine causes and must be resolved by applying operational knowledge to apply existing, or develop new solutions, either individually or in collaboration with relevant experts to:

- determine faults needing action
- determine possible fault causes
- develop solutions to faults which do not have a known solution
- follow through items initiated until final resolution has occurred
- report faults outside area of responsibility/expertise to designated person

Non-routine faults are unexpected faults, or variations of previous faults and are associated with one or more of the following:

- out-of-specification product or variations
- response of equipment to materials variations
- new or changed materials
- changed equipment settings (e.g. higher speed or throughput)
- equipment breakdown or in need of maintenance

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information such as journals, engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Variables

Key variables to be monitored include one or more of the following:

- equipment performance (e.g. speed, output and variations)
- equipment component performance
- sequences and timing of operations
- materials changes (desired and not desired)

Sources of information and data

Sources of information and data include one or more of the following:

- plant data
- log sheets
- operational and performance reports
- physical aspects, such as noise, smell, feel and pressure condition monitoring information
- planned maintenance schedules
- procedures

Assessment Requirements for MSMSUP303 Identify equipment faults

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP303A Identify equipment faults

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- check and identify a fault within an item of equipment/plant
- ensure workplace is safe for checking and maintenance of equipment
- communicate effectively with personnel and all levels
- evaluate the impact of fault in terms of work schedule, cost/time and approvals needed and make recommendations for repairs
- apply operational knowledge to non-routine problems
- take appropriate action within scope of authority in accordance with procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - work permit systems
  - safety, emergency and hazard control
  - standard operating procedures (SOPs)
- hazards that may arise in the job/work environment, including:
- their possible causes
- potential consequences
- appropriate risk controls/ hierarchy of control
- principles of the operation of the equipment to be maintained:
  - operating principles for mechanical, hydraulic, pneumatic and electrical/electronic systems
  - functions and troubleshooting of internal components and their problems
  - routine and non-routine causes of equipment failures and the service conditions which may increase maintenance
- types and application of testing procedures and equipment.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP309 Maintain and organise workplace records

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP309A Maintain and organise workplace records

Application

This unit of competency covers the skills and knowledge required to maintain workplace records in paper, electronic or other form. Sample products or materials for testing or quality purposes may also form part of the records system.

This unit of competency applies to personnel who are required to process records, track location of records, apply security controls and respond to requests for information.

Work is governed by established workplace procedures and extent of authority for adjustments and other work activities are defined.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all work environments and sectors within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

			workplace procedures
5	Maintain security of workplace records	5.1	Identify security requirements for workplace records
		5.2	Maintain security arrangements for files
		5.3	Notify (any) security breaches to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Records

Records will be specified in the organisation's record keeping processes and procedures and include one or more of the following:

- hard copy, such as documents, images, reports and forms
- electronic, such as documents, images, reports, forms, databases and spreadsheets
- physical, such as samples of products or materials

Non-routine problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Non-routine problems are unexpected problems, or variations of previous problems and include one or more of the following:

- lost files
- misfiling
- poor controls
- insufficient space/storage facilities
- incorrect destruction of records

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Assessment Requirements for MSMSUP309 Maintain and organise workplace records

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP309A Maintain and organise workplace records

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- collate and file information, records and related materials according to record keeping, filing and security requirements
- prioritise and respond to requests for information from records and/or files to be relocated
- identify and locate records
- apply operational knowledge to non-routine problems
- complete workplace forms and records
- read and interpret procedures, work instructions, forms and records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including those covering:
  - data systems and data security
  - record keeping
  - privacy
  - intellectual property (IP)
- record retention schedules and record destruction procedures.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
- should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - must include the use of appropriate equipment/systems requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP310 Contribute to the development of workplace documentation

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP310A Contribute to the development of plant documentation

Application

This unit of competency covers the skills and knowledge required to develop workplace documentation in response to identified information requirements. Develop covers ‘develop from scratch’ or ‘take existing and improve’.

This unit of competency applies to experienced operators, leading hands, supervisors and similar personnel who are required to determine what needs to be done, develop the existing or new workplace documentation and apply document control.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other team members as appropriate.

This unit of competency applies to all work environments and sectors within the industry.

Work is governed by established workplace procedures, and extent of authority for drafting/document approval.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify information need/ deficiency	1.1	Determine the information needs of the organisation
		1.2	Evaluate current documentation
		1.3	Recognise information need/deficiency
		1.4	Discuss information needs with appropriate personnel
		1.5	Identify purpose of, and target audience for, documentation
2	Develop workplace documentation	2.1	Specify information need and set/prioritise objectives
		2.2	Analyse existing documentation/records for compliance with identified needs
		2.3	Develop draft documentation in required format
		2.4	Issue draft documentation to appropriate personnel for review
		2.5	Edit documentation and amend in accordance with review feedback
		2.6	Complete documentation to satisfy the initial identified need/deficiency
		2.7	Check document complies with required template and document control procedures
3	Communicate changes to workplace documentation	3.1	Explain need for revised/new documentation to all relevant personnel
		3.2	Distribute documentation to all appropriate personnel
		3.3	Evaluate effectiveness of documentation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3.4 Amend documentation if required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- document control procedures and style sheets
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Documentation Documentation includes one or more of the following:

- maintenance logs
- non-compliance reports
- incidence and accident reports
- permits
- schematics/process flows/engineering drawings
- job cards
- SOPs
- work instructions
- operating manuals
- quality procedures
- training program contents
- material safety data sheets (MSDS)

Assessment Requirements for MSMSUP310 Contribute to the development of workplace documentation

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP310A Contribute to the development of plant documentation

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- communicate with other personnel to:
  - determine the need for and purpose of documentation development and/or amendment
  - identify specifications and format to be used
  - identify target audience
  - communicate and evaluate changes to documentation
- identify and evaluate current documentation
- convey information clearly and concisely in writing using language and structure suitable for the purpose and target audience
- apply procedures for drafting, review and revision of documentation
- apply document control.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including those covering:
  - data systems and data security
  - record keeping
  - privacy
  - intellectual property (IP)
  - document control and approvals
  - style guides and standards for documentation
  - use of internet
  - relevant standard operating procedures (SOPs)
- writing styles, including:
  - plain or technical English
  - short/simple sentences, or well developed arguments
  - dot points or use of paragraphs
  - appropriate inclusion of graphics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- sections and headings or other navigational tools
- logical sequencing of information
- distinguishing between relevant and peripheral issues
- planning, drafting and editing own work.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from work activities, which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible or practical assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment may use industry-based simulation for all or part of the unit where the use of real experience is not practicable.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP330 Develop and adjust a production schedule

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP330A Develop and adjust a production schedule

Application

This unit of competency covers the skills and knowledge required to plan, schedule and prioritise production to meet operational requirements.

This unit of competency applies to experienced operators, team leaders or similar who are required to optimise plant production and costs of production using daily and weekly run plan guidelines/production schedules.

The person will have detailed operational and process knowledge but is not required to demonstrate 'hands on' operation of equipment as part of this competency.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all work environments and sectors within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify resources to meet production requirements	1.1	Determine demand for product
		1.2	Access and verify information on orders, stocks and delivery
		1.3	Determine plant/production equipment capacity
		1.4	Determine material requirements
		1.5	Determine human resource requirements
		1.6	Identify and control hazards
2	Develop schedules	2.1	Determine production priorities
		2.2	Identify production opportunities ('windows')
		2.3	Develop production schedules in accordance with procedures taking account of health, safety and environment (HSE) requirements
		2.4	Communicate and distribute production schedules to appropriate personnel
3	Monitor production schedules	3.1	Monitor production output against schedule
		3.2	Identify variations between production and schedule
		3.3	Record operational variation and discuss with appropriate personnel
		3.4	Identify possible cause of variation
4	Adjust schedules	4.1	Adjust schedules in response to operational variation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.2 Adjust schedules in response to unexpected events

4.3 Distribute adjusted/amended schedules to appropriate personnel

4.4 Maintain product output in accordance with production and HSE requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards Hazards include one or more of the following:

- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Assessment Requirements for MSMSUP330 Develop and adjust a production schedule

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP330A Develop and adjust a production schedule

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- identify production objectives, priorities, targets and resource requirements
- plan, sequence and schedule production taking account of health, safety and environment (HSE) priorities
- monitor and adjust schedules in response to operational variations
- communicate effectively with other personnel.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures
- hazards that may arise in the job/work environment, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
  - hierarchy of control
- customer and quality requirements
- routine and non-routine causes of production variation
- relevant equipment and operational processes
- types of adjustments that can be made and their likely impact on process/plant efficiencies and production outcomes/targets.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.

MSMSUP382 Provide coaching/mentoring in the workplace

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP382A Provide coaching/mentoring in the workplace

Application

This unit of competency covers the skills and knowledge required to establish and provide one-to-one coaching/mentoring in the workplace and evaluate its effectiveness.

This unit of competency applies to senior operators, team leaders and similar who have significant workplace experience and who are required to provide coaching and mentoring within their area of expertise. They are required to use interpersonal skills to assist an employee to identify and meet their development needs.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all work environments in manufacturing and related industries and their supply chain and includes the coaching/mentoring for any skills required within these environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Establish coaching/ mentoring relationship	1.1	Identify areas for development in line with organisation and individual's requirements
		1.2	Use effective communication styles to develop trust, confidence and rapport
		1.3	Discuss and clarify expectations and goals
		1.4	Agree together on how the relationship will be conducted
		1.5	Seek input from other relevant personnel, if required
2	Provide coaching/ mentoring support	2.1	Assist the individual to identify and evaluate opportunities to achieve agreed goals/development activities
		2.2	Share personal experiences and knowledge with the individual to assist in progress to agreed goals/development
		2.3	Provide a supportive environment to allow the individual to develop towards the achievement of goals
		2.4	Encourage the individual to make decisions and take responsibility for the courses of actions or solutions under consideration
		2.5	Monitor the relationship and progress of the individual
		2.6	Provide assistance and guidance in a manner which allows the individual to retain responsibility for achievement in their goals
		2.7	Identify problems inhibiting the individual from achieving their goals and take appropriate action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Evaluate effectiveness of coaching/ mentoring	3.1	Recognise and openly discuss changes in the coaching/mentoring relationship
		3.2	Make adjustments to the relationship to take account of the needs of both the mentor/coach and the individual
		3.3	Seek feedback from individual and other relevant personnel to identify and implement improvements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Relationship Agreement on the conduct of the relationship includes consideration and resolution of:

- the amount of time involved for both parties
- confidentiality of information
- identification of development opportunities
- development plan towards achieving goals

Problems Problems inhibiting the individual from achieving their goals includes consideration and resolution of:

- interpersonal skills
- communication skills
- technical skills
- foundation skills

Assessment Requirements for MSMSUP382 Provide coaching/mentoring in the workplace

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP382A Provide coaching/mentoring in the workplace

Performance Evidence

- Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:
- use interpersonal skills to:
  - build rapport, trust and respect with individuals who have diverse work styles, aspirations, cultures and perspectives
  - facilitate identifying the individual's development goals
  - facilitate identifying solutions and actions
  - encourage and support the individual to develop towards the achievement of goals
  - assist the individual to make decisions about achieving goals
- select and use skills development techniques appropriate to individual's needs to convey workplace knowledge and experience
- evaluate outcomes of process to ensure the individual is achieving goals
- explain workplace knowledge and experience clearly and concisely.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- types of interpersonal skills and application to coaching/mentoring, including:
  - building rapport, trust and respect
  - verbal and non-verbal communications
  - questioning, listening and reflecting
  - self-disclosure
  - giving and accepting feedback
  - establishing a safe environment for open communication
- relevance and application of skills development techniques, including:
  - one-on-one training using explanation and demonstration
  - use of supporting materials in written, visual or other format
  - facilitation/guidance of self-directed learning
  - identifying needs and setting goals
- sources of information for self-directed learning, including:
  - networking

MSMSUP383 Facilitate a team

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP383A Facilitate a team

Application

This unit of competency covers the skills and knowledge required to facilitate team communications and performance to achieve its goals.

This unit of competency applies to team leaders or similar roles within a team structure who are required to facilitate processes to identify team goals and timelines, plan and organise activities, support performance and resolve conflicts.

This unit of competency requires the use of a range of well-developed skills requiring some discretion and judgement to recognise and resolve a range of problems.

This unit of competency applies to all work environments and sectors within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Identify tasks to achieve team goals**	1.1	Identify and agree on team goals with team members input
		1.2	Identify tasks required to achieve team goals
		1.3	Identify team and individual safety responsibilities
		1.4	Allocate responsibilities of individuals within the team
		1.5	Ensure designated team goals are met by identifying strategies and timelines required to complete each task
2	**Organise allocation of tasks**	2.1	Estimate time and resources needed to complete tasks
		2.2	Identify competencies of individual team member and allocate/negotiate individual responsibilities
		2.3	Agree timelines for completion of each task
		2.4	Identify resources and support necessary for completion of job
3	**Monitor completion of allocated tasks**	3.1	Measure team performance against its goals
		3.2	Monitor individual compliance with procedures and take action as required
		3.3	Check at regular intervals, and apply judgement to determine whether agreed timelines for completion of tasks will be met
		3.4	Negotiate alternative strategies, within delegated discretion, to achieve allocated tasks when designated timelines are not being met
		3.5	Provide support to colleagues to ensure completion of allocated tasks
4	**Resolve team problems**	4.1	Identify problem situations for team
		4.2	Identify causes of problem
		4.3	Implement problem resolution procedures relevant to the problem and to established practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.4 Seek assistance as required to ensure problem resolution

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Identifying

Team goals will be identified from workplace documentation, including one

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

team goals or more of the following:

- procedures
- material safety data sheets (MSDS)
- job cards
- maintenance logs
- plant drawings
- daily nominations
- tool box meeting
- sales/marketing request
- memos, faxes and emails identifying output or other goals

Problems Problems include one or more of the following:

- conflict between the team members
- conflict between different team goals
- current process capacity/capability will not allow achievement of goals
- conflict between work teams and/or the achievement of their goals
- availability of resources (people, time, plant/equipment, finances and materials)

Unit Mapping Information

Assessment Requirements for MSMSUP383 Facilitate a team

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP383A Facilitate a team

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret workplace documentation to identify team goals
- use interpersonal skills to:
  - build rapport, trust and respect with individuals who have diverse work styles, aspirations, cultures and perspectives
  - facilitate team agreement on team and individual goals, timelines and allocation of tasks
  - encourage and support team members to work towards the achievement of goals
  - assist individual to make decisions about achieving goals
- facilitate processes to support team performance, including:
  - planning of team's activities
  - monitoring progress towards goals
  - taking corrective action
- identify and take appropriate action on problems and potential problems.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- types of interpersonal skills and application to team performance, including:
  - building rapport, trust and respect
  - verbal and non-verbal communication
  - questioning, listening and reflecting
  - giving and accepting feedback
  - establishing a safe environment for open communications
- impact of individual tasks on the completion of team objectives
- conflict resolution techniques
- capacity/capability of the equipment/process
- relevant equipment and operational processes
- targets and measures for production output and quality.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the appropriate demonstration of team facilitation using workplace situations, procedures and practices
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP390 Use structured problem-solving tools

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP390A Use structured problem solving tools

Application

This unit of competency covers the skills and knowledge required to use structured process improvement tools to solve process and other problems.

This unit of competency applies to experienced operators, team leaders, supervisors or people in similar roles who are required to identify improvements and/or solve problems beyond those associated directly with the process unit/equipment.

A ‘problem’ in this context should be interpreted as ‘an opportunity for improvement’, not just something causing faulty product, product faults or process irregularities/breakdowns.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

Problem-solving techniques are often applied as group processes. Where the competency is achieved in a group context the individual being assessed must meet all aspects of the competency.

This competency does NOT cover the planning and facilitation of group problem-solving activities.

Other units of competency, including MSMOPS units, may include a problem-solving element where problems specific to that competency are to be resolved. However, this unit of competency requires structured problem-solving techniques to be applied more broadly and/or with greater depth and rigour than is implied by the problem-solving element of the other units.

This unit of competency applies to all work environments and sectors within the industry.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Identify the** problem	1.1	Identify variances from desired operating/output parameters and quality
		1.2	Define the extent, cause and nature of the problem by observation and investigation
		1.3	State and specify the problem clearly
2	**Determine fundamental cause of problem**	2.1	Select problem-solving tool appropriate to the problem and the context
		2.2	Identify possible causes based on experience and the use of problem-solving tools/analytical techniques
		2.3	Develop possible cause statements
		2.4	Determine fundamental cause
3	**Determine corrective action**	3.1	Consider all possible options for resolution of the problem
		3.2	Consider strengths and weaknesses of possible options

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.3	Determine corrective action to remove the problem and possible future causes
		3.4	Develop implementation plans identifying measurable objectives, resource needs and timelines in accordance with safety and operating procedures
		3.5	Develop recommendations for ongoing monitoring and testing
4	**Communicate recommendations**	4.1	Prepare report on recommendations
		4.2	Present recommendations to appropriate personnel
		4.3	Follow up recommendations if required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Problem-solving tools/ analytical techniques

Problem-solving tools/analytical techniques include one or more of:

- basic techniques:
  - 5 why's
  - brainstorming
  - 6 hats (Edward de Bono)
  - similarity/difference analysis
- visual techniques:
  - Ishikawa/fishbone diagrams
  - logic tree
  - histograms/Pareto analysis
  - scattergrams
- process-based tools:
  - flow charts
  - process logic/process requirements
  - cause and effect diagrams/charts
  - divide and conquer
  - control charts and run charts (Shewhart charts)
- business/interpersonal techniques:
  - force field analysis
  - strengths, weaknesses, opportunities, threats (SWOT) analysis
  - plan, do, check, act (PDCA)/define, measure, analyse, improve, control (DMAIC)
- other structured processes defined in organisation procedures, (e.g. TapRoot)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Corrective actions

Corrective actions will include one or more of the following:

- consideration of at least two alternative solutions
- benefit-cost analysis (at least semi-quantitative, need not be in $ terms)
- health, safety and environment (HSE) impacts and controls
- risk assessment (HSE, business and project)
- determination of the preferred solution or a priority ranked shortlist

Implementation plans

Implementation plans to solve problems will include:

- specific, measurable, achievable, relevant, timed (SMART) objectives
- resource requirements (people, finances, plant/equipment, materials/consumables, time, skills and knowledge)
- methods for reaching objectives
- timelines
- methods of checking and adjusting adherence to plan (e.g. communication and follow-up)

Problems

A ‘problem’ in this context should be interpreted as ‘an opportunity for improvement’, not just something causing faulty product, product faults or process irregularities/breakdowns and will include one or more of the following:

- intractable process difficulty
- observed process waste/inefficiency (‘Muda’)
- issue with materials/components
- procedures/practices/process conditions which might be improved

Assessment Requirements for MSMSUP390 Use structured problem-solving tools

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP390A Use structured problem solving tools

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- identify at least one (1) problem
- analyse problem using at least one (1) analysis tool drawn from each of two (2) different groups of tools (basic, visual, process, business and organisation specific)
- select the preferred solution
- develop and use an implementation plan
- communicate effectively with other personnel.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- relevant organisation procedures
- risks, risk assessment and controls relevant to problem being analysed
- targets and measures for output and quality
- types and application of problem-solving tools/analytical techniques
- relevant equipment and operational processes.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on the significance of the problem being addressed. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP400 Develop and monitor quality systems

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP400A Develop and monitor quality systems

Application

This unit of competency covers the skills and knowledge required to establish, implement, maintain and evaluate quality systems for a complete production area and/or plant.

This unit of competency applies to experienced technicians, leading hands, supervisors or people in similar roles who are required to develop quality procedures, processes and supporting documentation, ensure resources are available and evaluate and improve the system.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other team members as appropriate.

This unit of competency applies to a wide range of processes and equipment in all work environments and sectors in manufacturing.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Establish and maintain framework for successful quality system**	1.1	Identify organisation goals and practices relevant to quality system
		1.2	Develop relevant procedures which demonstrate the commitment of the enterprise to quality and a culture of improvement
		1.3	Define and allocate responsibilities in quality system
		1.4	Consult with key personnel to define role of procedures in the quality system
		1.5	Seek financial and human resources to allow thorough implementation of quality system
		1.6	Develop system for communicating quality message and culture in the organisation
2	**Establish and maintain quality documentation system**	2.1	Identify quality documentation required, including records of improvement plans and initiatives
		2.2	Prepare and maintain quality documentation and keep data records
		2.3	Maintain document control system
3	**Implement structured training program in accordance with quality system requirements**	3.1	Analyse roles and duties of relevant personnel
		3.2	Identify training needs in relation to quality
		3.3	Identify training programs to meet these needs
		3.4	Arrange for the training program to be implemented
		3.5	Develop and maintain training records
4	**Evaluate the quality system**	4.1	Undertake regular audits of the quality system, its policies and procedures
		4.2	Develop new procedures/work instructions as required.
		4.3	Implement improvements in the quality system

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- ISO 9000 Series, ISO 10000 Series (or other relevant standard)
- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Quality

The quality system must reflect the organisation’s goals, be compliant with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

system the relevant quality standard and include:

- quality plan
- quality management systems (QMS)
- roles and responsibilities of management and other personnel
- evaluating the QMS and continuous improvement

Assessment Requirements for MSMSUP400 Develop and monitor quality systems

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP400A Develop and monitor quality systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- communicate with relevant personnel to:
  - identify resource requirements and training needs for the quality system
  - define and allocate roles
  - develop quality procedures and documentation
  - implement the quality system
- undertake audits of the system and implement improvements based on audit results
- write procedures and develop forms.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including those covering:
  - safety, emergency and hazard controls
  - standard operating procedures
  - record keeping
- business goals and key performance indicators (KPIs) and how they relate to quality system
- targets and measures for production output and quality
- relevant equipment and operational processes
- types and application of quality assurance and quality control mechanisms.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from work activities, which together provides sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment may use industry-based simulation for all or part of the unit where the use of real experience is not practicable.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - demonstration of skills
  - industry based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP404 Coordinate maintenance

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS404A Co-ordinate maintenance

Application

This unit of competency covers the skills and knowledge required to coordinate maintenance of a manufacturing facility.

It applies to experienced technicians, supervisors, maintenance coordinators or team leaders, working either independently or as part of a team. They will be required to apply knowledge of equipment operating principles, service requirements and workplace production operations to the coordination of maintenance activities to meet the objectives of restoring the plant/equipment condition, consistent with production requirements. They will not be required to actually do the maintenance.

This unit of competency applies to all work environments and sectors within the manufacturing industry. It applies to coordination of one or more of:

- predictive and preventative operational maintenance
- proactive maintenance
- reactive maintenance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Plan maintenance	1.1	Develop work plans for scheduled routine maintenance activities
		1.2	Develop contingency plans for unscheduled maintenance activities
		1.3	Source maintenance providers (internal/external)
		1.4	Develop costings for maintenance work
		1.5	Identify and control hazards
		1.6	Document and record required production interruptions, processes and procedures
		1.7	Obtain required authorisations for the maintenance work
2	Organise maintenance	2.1	Schedule maintenance activities, with reference to production requirements and availability of resources
		2.2	Review available maintenance expertise and arrange appropriate training and assessment where necessary
		2.3	Obtain approvals for maintenance schedule as necessary to coordinate with production requirements
3	Assemble maintenance requirements	3.1	Determine resources required (equipment, personnel and consumables) to meet maintenance schedule
		3.2	Locate and coordinate supply of consumables, equipment and expertise to meet maintenance schedule
		3.3	Purchase equipment, consumables and expertise as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	Complete maintenance	4.1	Complete maintenance schedule
		4.2	Make appropriate readings, measurements and recordings and compare to equipment, product and other relevant specifications
		4.3	Identify areas requiring further testing of plant, which has been subject to maintenance, and recommend appropriate procedures to supervisory staff
		4.4	Make appropriate adjustments to the maintenance schedule
		4.5	Complete records as required, noting areas where changes to equipment operation or routine maintenance are required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Tools and equipment

Tools and equipment include one or more of the following:

- hand tools specific for the task
- testing equipment
- measuring and aligning equipment
- computer equipment
- relevant personal protective equipment (PPE)

Hazards

Hazards include one or more of the following:

- ineffective isolations of energy sources, motive power and process materials
- manual handling of machinery components
- hot, cold or components containing dangerous materials
- external hazards (e.g. traffic into a maintenance area)
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Data and plant records

Data and plant records include one or more of the following:

- plant data
- log sheets
- operational and performance reports
- equipment performance (e.g. speed, output and variations)
- equipment component performance
- sequences and timing of operations
- materials changes (desired and not desired)
- physical aspects, such as noise, smell, feel and pressure condition monitoring information
- planned maintenance schedules
- procedures
- manufacturer specifications, instructions, service manuals and other information

Assessment Requirements for MSMSUP404 Coordinate maintenance

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS404A Co-ordinate maintenance

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- plan for maintenance requirements in standard and non-standard situations and determine appropriate action consistent with operation guidelines and regulatory framework
- identify and interpret information from a range of internal and external sources
- develop and adjust work plans for the maintenance activities
- coordinate resources to meet maintenance work plans
- communicate effectively with team/work group, supervisors and other personnel
- monitor work plans for maintenance activities**.**

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- characteristics and capabilities of relevant equipment, materials and processes
- functions and troubleshooting of internal components and their problems
- routine and non-routine causes of equipment failures and processes to develop solutions
- service conditions which may increase maintenance
- urgency and timeliness factors in planning maintenance activities in relation to production requirements
- proactive, predictive, preventative and reactive maintenance principles.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - must include the coordination of maintenance in an appropriate industrial context
  - may use industry-based simulation for part only of the unit where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP405 Identify problems in fluid power system

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS405A Identify problems in fluid power system

Application

This unit of competency covers the skills and knowledge required to recognise and diagnose problems in hydraulic/pneumatic control systems on process equipment, and take appropriate corrective action.

This unit of competency applies to operators who are required to apply knowledge of fluid power systems and components to the identification and isolation of faults in equipment. The key factors are the diagnosis and the recommendation of action to resolve routine and non-routine faults in order to return the equipment to production.

The unit applies to all work environments and sectors within the manufacturing industry. It requires an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify pneumatic/hydraulic system problems	1.1	Categorise the types of equipment malfunctions due to fluid power problems
		1.2	Identify the effects on product quality of fluid power problems
		1.3	Describe the function of components on the fluid power circuit diagram
		1.4	Identify possible faulty components from a circuit diagram
		1.5	Identify hazards arising from the problem and implement appropriate hazard control
2	Implement appropriate corrective action	2.1	Identify other possible problems
		2.2	Short list possible fault problems
		2.3	Investigation machine, products or data to determine most likely problem causes
		2.4	Take appropriate action to ensure problem is rectified
		2.5	Follow up on action to ensure completion in an appropriate timeframe
		2.6	Recheck after corrective action to ensure problem has been rectified
3	Develop maintenance requirements	3.1	Check manufacturer instructions to determine recommended maintenance schedule
		3.2	Check fault and maintenance history to determine adequacy of current regime and special requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3.3	Determine criticality of machine to production/business
3.4	Develop maintenance schedule/requirements for machine
3.5	Liaise with all relevant stakeholders to ensure schedule is appropriate
3.6	Report outcome to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Equipment using fluid power control systems

Equipment that uses fluid power control systems include one or more of the following:

- pumps
- pressure controls
- directional control valves (DCVs)
- remote operated valves (ROVs)
- flow control actuators
- accumulators
- filters
- heat exchangers
- proportional, servo and cartridge valves

Non-routine problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Hazards

Hazards include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- high pressures (hydraulic and pneumatic)
- hot surfaces
- equipment failures
- heat, smoke, dust or other atmospheric hazards
- flammability and explosivity
- equipment or product mass
- slippery surfaces, spills or leaks
- noise, rotational equipment or vibration
- electricity
- other hazards that might arise

Unit Mapping Information

Assessment Requirements for MSMSUP405 Identify problems in fluid power system

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS405A Identify problems in fluid power system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and demonstrate the ability to:

- identify fluid power problem and possible problem causes
- take appropriate action in a timely manner
- apply operational knowledge to non-routine problems
- develop appropriate maintenance schedule/requirements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards and hazard controls specific to the fluid power system and the plant it is used on
- principles of hydraulics/pneumatics and circuit components
- fluid power circuit diagrams
- types and causes of known fluid power problems for the plant unit and its components
- corrective action appropriate to the problem cause
- appropriate investigation procedures and use of equipment for a range of equipment faults.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - will typically include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP406 Identify faults in electronic control

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS406A Identify problems in electronic control

Application

This unit of competency covers the skills and knowledge required to recognise and diagnose control system faults in electrical/electronic control systems on process equipment. It includes the implementation of appropriate corrective action.

This unit of competency applies to technicians. The technician will be required to apply knowledge of electronic control systems and components to the identification and isolation of faults in equipment. The key factors are the diagnosis and the recommendation of action to resolve routine and non-routine faults, in order to return the equipment to production.

The operator will have detailed operational and process knowledge but is not required to demonstrate 'hands on' operation of equipment as part of this competency.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all common equipment used in the manufacturing industry and should be able to be applied to all equipment using electrical/electronic control systems. It applies to all work environments and sectors within the manufacturing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify electrical/electronic control system faults	1.1	Categorise the types of machine malfunctions due to electrical and/or electronic faults
		1.2	Describe the effects on product quality of electrical and/or electronic faults
		1.3	Identify possible faulty components from a circuit diagram and knowledge of the function of each component
2	Identify maintenance requirements	2.1	Determine recommended maintenance schedule from manufacturer instructions
		2.2	Determine adequacy of current maintenance regime and any special requirements from fault and maintenance history
		2.3	Determine criticality of machine to production and/or business
		2.4	Develop maintenance schedule and requirements for machine
		2.5	Liaise with all relevant stakeholders to ensure schedule is appropriate
		2.6	Report outcome to appropriate personnel
3	Determine appropriate corrective action	3.1	Examine other possible faults
		3.2	Short list possible fault causes
		3.3	Conduct investigations of machine, products or data to determine most likely fault causes
		3.4	Take appropriate action to ensure fault is rectified

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3.5 Follow up on action to ensure completion in an appropriate timeframe

3.6 Recheck after corrective action to ensure fault has been rectified

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- temporary instructions
- any similar instructions provided for the smooth running of the plant

Tools and equipment

Tools and equipment include one or more of the following:

- programmable logic controls (PLC) and ancillaries
- solid-state control/switching units
- switches, relays and solenoids
- position and pressure transducers
- temperature controllers

Hazards

Hazards include one or more of the following:

- electricity
- incorrect/failed connections
- insulation failure
- polarity of components
- gas
- equipment malfunction/failure
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- temperature from hot surfaces and equipment
- test equipment
- unauthorised personnel
- other hazards that might arise

Faults

Faults may arise from non-routine causes and must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts to:

- determine faults needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report faults outside area of responsibility to designated person

Non-routine faults are unexpected faults, or variations of previous faults and include one or more of the following:

- loss of flow, power
- power failure
- component malfunction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- poor maintenance procedures
- regular maintenance
- shutdown
- motor failure effect on cycle time
- short shots
- loss of clamp pressure
- no power
- electronic/electrical faults
- analysis with PLC

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Assessment Requirements for MSMSUP406 Identify faults in electronic control

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS406A Identify problems in electronic control

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- recognise and analyse control system faults
- identify and select testing methods based on cost and time effectiveness
- identify and develop maintenance requirements
- propose solutions and carry out solutions within scope of authority
- apply operational knowledge to non-routine problems
- identify and implement corrective actions
- monitor process and equipment conditions.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- fundamentals of electricity and electronics
- electronic circuit diagrams
- principles of electronic circuit components
- principles of PLC programming, troubleshooting and diagnosis
- appropriate testing procedures and use of equipment for a range of equipment faults
- interaction of process conditions on product quality
- routine and non-routine causes of equipment failures and processes to develop solutions.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for part only of the unit where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMTMINS301 Inspect a range of simple measures

Modification History

Release 2. Adjustments to the Application, Performance Criteria and Range of Conditions. Adjustment to the Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS301A Inspect a range of simple measures

Application

This unit of competency covers the ability to apply National Instrument Test Procedures to determine whether a range of simple measures are suitable for trade use. The unit also involves assessing the performance of verifiers, by auditing recently verified simple measures, to ensure they meet the legislative requirements for trade use.

This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a wide range of simple measures as part of their allocated duties. Simple measures such as trade masses, length measures and volume measures are used in a wide variety of commerce, including retail, hospitality, pharmaceuticals and laboratory services.

While no specific licensing or certification requirements apply to this unit at the time of publication, all inspection activity is legislated under the *National Measurement Act 1960.*

Pre-requisite Unit

Nil

Competency Field

Trade measurement

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	Prepare for inspection	1.1	Identify and evaluate the type of measurement to be inspected
		1.2	Access and review any history of previous inspections at trader's premises
		1.3	Access and correctly interpret appropriate documentation required for the inspection
		1.4	Identify and access test equipment, products and consumables required for the inspection
		1.5	Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures
		1.6	Store and transport test equipment in accordance with organisational procedures and industry best practice
		1.7	Identify workplace health and safety issues relevant to the inspection
2	Initiate inspection	2.1	Identify the site controller, explain the purpose of the inspection and produce formal identification, if required
		2.2	Identify relevant site health and safety issues and implement appropriate control strategies
		2.3	Conduct a preliminary evaluation of the site's trading practices and prioritise activities to maximise inspection outcomes
		2.4	Identify instruments used for trade and plan inspection to minimise disruption to the public and trader
3	Evaluate simple measure performance	3.1	Evaluate whether the operating environment will impact on simple measure performance
		3.2	Modify the operating environment or implement alternative arrangements to ensure reliable test conditions, as necessary
		3.3	Identify the maximum permissible errors for the simple measure from the legislative requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.4	Use test equipment safely in accordance with applicable legislation and organisational procedures
		3.5	Check instrument for compliance with the appropriate Certificates of Approval
		3.6	Inspect the simple measure in accordance with relevant National Instrument Test Procedure and appropriate National Measurement Institute (NMI) policy
		3.7	Evaluate results against prescribed performance criteria and determine if the simple measure is suitable for trade use in accordance with legislative requirements
4	Conduct a verifier instrument audit	4.1	Identify the scope of the verifier instrument audit
		4.2	Identify the expected outcomes of the verifier instrument audit
		4.3	Assess the instrument’s performance against the expected outcome
		4.4	Check that the verification mark complies with legislation
		4.5	Analyse any variances from the expected outcomes to identify isolated or systemic problems
5	Analyse and report inspection results	5.1	Analyse inspection data for unacceptable performance trends
		5.2	If required, display the inspection result on the simple measure in accordance with legislative requirements
		5.3	Use test reports to present inspection results in the required format
		5.4	Complete inspection documentation and records in accordance with legislative requirements and organisational procedures
		5.5	Communicate inspection results within the specified time and in accordance with organisational guidelines
		5.6	Recommend follow-up actions as appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

6	Act on non-compliance	6.1	Select applicable enforcement action for the non-compliance in accordance with legislative requirements, organisational policy and procedures
		6.2	Inform traders of non-compliances and consequences of failing to have them corrected
		6.3	Implement enforcement action in accordance with legislative requirements, organisational policy and procedures
		6.4	Respect the rights of the trader at all times

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

National Instrument Test Procedures include one or more of:	• measuring instrument test procedures • any other test procedure prescribed by the NMI
Classes of simple measures include one or more of:	• length measures • alcoholic beverage measures • lubricating oil measures • graduated measures • pharmaceutical measures • trade masses • any other simple measure prescribed by the NMI
Test equipment includes:	• reference standards of measurement • equipment, such as weighing instruments, strikes and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	funnels
Certificates of Approval include:	• any Certificate issued by the Chief Metrologist under Regulation 60 of the *National Measurement Regulations 1999* approving the pattern of a simple measure as being suitable for trade use
Prescribed performance criteria for simple measures include:	• that the instrument is of an approved pattern • that the instrument operates within the appropriate limits of error permitted by legislation • that the instrument is used in accordance with any legislative requirements
Verification	Has the same meaning as Section 18GG of the *National Measurement Act 1960*
Verification marks	Verification marks for different measures are defined in Regulations 2.28 and 2.29 of the *National Trade Measurement Regulations 2009*
Trading practices include one or more of:	• methods used for the sale of goods • using measuring instruments • position of measuring instruments • environmental factors • suitability of instrument • incorrect measurement
Legislation includes:	• national measurement legislation • applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
NMI policy includes:	• test procedure variations between a verification, in-service or audit inspection • bulletins • instructions • determinations
WHS/OHS and	• complying with WHS/OHS and environmental management

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

environmental management requirements include:	requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of material/product measured • applying any necessary hygiene controls

Unit Mapping Information

Release 2. Adjustments to the Application, Performance Criteria and Range of Conditions. Adjustment to the Assessment Conditions. Equivalent.

Assessment Requirements for MSMTMINS301 Inspect a range of simple measures

Modification History

Release 2. Adjustments to the Application, Performance Criteria and Range of Conditions. Adjustment to the Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS301A Inspect a range of simple measures

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- inspecting at least two (2) measures from each of the following types of simple measures:
  - mass
  - volume
  - length
- accessing and correctly interpreting documentation required for inspections
- ensuring test equipment and reference standards are fit for purpose in accordance with applicable legislation and organisational procedures
- planning, preparing for and safely conducting inspections to maximise outcomes and minimise disruption to the public and trader
- checking compliance and evaluating the performance of simple measures using appropriate Certificate of Approval, National Measurement Institute (NMI) policy and National Instrument Test Procedure and adjusting for any impact of the operating environment
- reliably determining if simple measures are suitable for trade use in accordance with legislative requirements
- conducting at least two (2) verifier simple measure audits to assess the performance of verifiers who test and mark simple measures for trade use
- assessing verifier performance against expected outcomes and analysing any variances to identify isolated or systemic problems
- identifying potential non-compliance of trading practices (associated with simple measures) with national measurement legislation and initiating an efficient inspection strategy that has a limited impact on others
- acting on non-compliance of simple measures or verifier performance and/or trading practices with national measurement legislation and initiating appropriate enforcement action
- demonstrating professionalism and respecting the rights of the trader at all times
- using routine communication and negotiation skills to:
  - explain the purpose of inspection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - inform traders of non-compliances and consequences of failing to rectify them
  - explain procedures and inspection outcomes to traders, verifiers and managers
- using numeric skills to:
  - perform specified calculations involving fractions, decimals, ratios, proportions and percentages
  - use correct units and the correct number of significant figures
  - analyse performance results over a single or limited range of operating conditions
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general science principles and concepts, such as weight, mass, gravity, density, heat, temperature effects and coefficients of expansion
- measures, such as maximum permissible errors, traceability and coefficients of expansion
- metrological terms and terminology specific to simple error of measurement and error of indication
- safe work method statements (SWMS) for a range of trading environments, such as laboratories, retail, industrial and farming
- national measurement legislation requirements for simple measures
- NMI policy requirements, including test procedure variations between a verification, in-service or audit inspection, bulletins, directives, instructions and determinations
- National Instrument Test Procedures and operating procedures for equipment and reference standards used in job role, including:
  - test conditions and possible environmental impacts on performance of the simple measure
  - key preparation/measurement steps in the test method
  - calculation steps to give results in appropriate units and precision
  - maximum permissible errors for simple measures under inspection
  - organisational policy and procedures for inspecting simple measures, including completing inspection documentation
  - organisational safety procedures and requirements of applicable Commonwealth, state and territory WHS/OHS legislation.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- This unit of competency should be assessed in the workplace or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
  - *MSMTMINS302 Inspect a range of simple measuring instruments*
  - *MSMTMVER403 Verify Inspectors' Class reference standards*
- Holistic assessment methods include:
  - review of inspection reports and verifier instrument audit reports prepared by the candidate
  - feedback from supervisors and peers regarding the candidate's ability to conduct inspections, evaluate the performance of simple measures and audit verifier's performance in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions
  - review of candidate's responses to inspection scenarios, such as potential/actual non compliances and appropriate actions, common issues and problems
  - observation of the candidate conducting an inspection.
- Access is required to simple measures, instruments, equipment, materials, workplace documentation, procedures, and specifications associated with this unit, including, but not limited to:
  - latest versions of appropriate documentation, such as Certificates of Verification and Approval, NMI policy, National Instrument Test Procedures for verifying simple measures and relevant legislation
  - equipment manuals, safety data sheets (SDS) and safety procedures
  - records, such as test reports, audit reports, simple measure history and test results
  - simple measures, test equipment and reference standards
  - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMINS302 Inspect a range of simple measuring instruments

Modification History

Release 2. Correction to Application, Performance Criteria and adjustment to Range, Performance Evidence and Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS302A Inspect a range of simple measuring instruments

Application

This unit of competency covers the ability to apply National Instrument Test Procedures to determine whether a range of simple measuring instruments are suitable for trade use. The unit also involves assessing the performance of verifiers, by auditing recently verified simple measuring instruments, to ensure they meet the legislative requirements for trade use.

This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a wide range of simple measuring instruments as part of their allocated duties. Simple measuring instruments are used in a very wide range of commerce. Measuring instruments are used to measure liquids in tanks; multi-dimensional measuring instruments are used to measure the cubic measurements of packages for freight; length/area instruments are used to measure a wide range of articles sold by reference to those measurements; quality measuring instruments are used to measure certain characteristics of commodities such as protein content of grain; and point of sale systems (POS systems) and control systems for liquid-measuring instruments (Consoles) are systems connected to approved measuring instruments that are used to transform or supplement displayed and/or printed measurement data and/or control certain functions of the connected instrument.

While no specific licensing or certification requirements apply to this unit at the time of publication, all inspection activity is legislated under the *National Measurement Act 1960*.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Prepare for inspection	1.1	Identify and evaluate the type of instrument to be inspected
		1.2	Access and review any history of previous inspections of the instrument
		1.3	Access and correctly interpret appropriate documentation required for the inspection
		1.4	Identify and access test equipment, products and consumables required for the inspection
		1.5	Ensure specified test equipment or reference material is fit for purpose in accordance with applicable legislation and organisational procedures, as appropriate
		1.6	Store and transport test equipment or reference material in accordance with organisational procedures and industry best practice, as appropriate
		1.7	Identify workplace health and safety issues relevant to the inspection
2	Initiate inspection	2.1	Identify the site controller, explain the purpose of the inspection and produce formal identification, if required
		2.2	Identify relevant site health and safety issues and implement appropriate control strategies
		2.3	Conduct a preliminary evaluation of the site’s trading practices and prioritise activities to maximise inspection outcomes
		2.4	Identify instruments used for trade and plan inspection to minimise disruption to the public and trader
		2.5	Identify locations for product return or disposal, as appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Evaluate simple measuring instrument performance	3.1	Evaluate whether the operating environment impacts the instrument's performance
		3.2	If necessary, modify the operating environment or implement alternative arrangements to ensure reliable test conditions
		3.3	Identify the instrument's maximum permissible errors as specified by the legislative requirements
		3.4	Use any test equipment safely in accordance with applicable legislation and organisational procedures
		3.5	Check instrument for compliance with the appropriate Certificates of Approval
		3.6	Inspect the instrument in accordance with relevant National Instrument Test Procedures and appropriate National Measurement Institute (NMI) policy
		3.7	Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
4	Conduct a verifier instrument audit	4.1	Identify the scope of the verifier instrument audit
		4.2	Identify the expected outcomes of the verifier instrument audit
		4.3	Assess the instrument's performance against the expected outcome
		4.4	Check that the verification mark complies with legislation
		5.5	Analyse any variances from the expected outcomes to identify isolated or systemic problems
5	Analyse and report inspection results	5.1	Analyse inspection data for unacceptable performance trends
		5.2	If required, display the inspection result on the instrument in accordance with legislative requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		5.3	Use test reports to present inspection results in the required format
		5.4	Complete inspection documentation in accordance with legislative requirements and organisational procedures
		5.5	Communicate inspection results within the specified time and in accordance with organisational guidelines
		5.6	Recommend follow-up actions as appropriate
6	Act on non-compliance	6.1	Select applicable enforcement action for the non-compliance in accordance with legislative requirements and organisational policy and procedures
		6.2	Inform traders of non-compliances and consequences of failing to have them corrected
		6.3	Implement enforcement action in accordance with legislative requirements and organisational policy and procedures
		6.4	Respect the rights of the trader at all times

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

National Instrument Test Procedures include one or more of:	• measuring instrument test procedures • any other test procedure prescribed by the NMI
Classes of simple measuring	• beverage dispensers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

instruments include one or more of:	• protein quality measuring instruments • grain density measuring instrument • sugar quality measuring instruments • length measuring instruments • area measuring instruments • dimensional measuring instruments • vehicle tanks • farm milk tanks • POS systems • consoles • point of sale systems • control systems • any other instrument prescribed by the NMI
Test equipment and materials include:	• reference standards of measurement • certified reference materials, such as grain for testing protein measuring instruments • equipment, such as weighing instruments, strikes, funnels, water meters, beakers, roman levels, trammels and pocket length comparators
Certificates of Approval include:	• any Certificate issued by the Chief Metrologist under Regulation 60 of the *National Measurement Regulations 1999* approving the pattern of a simple measuring instrument as being suitable for trade
Prescribed performance criteria for simple measuring instruments include:	• that the instrument is of an approved pattern • that the instrument operates within the appropriate limits of error permitted by legislation • that the instrument is used in accordance with any legislative requirements
Verification	Has the same meaning as Section 18GG of the *National Measurement Act 1960*
Verification marks	Verification marks for different instruments are defined in Regulations 2.28 and 2.29 of the *National Trade Measurement Regulations 2009*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Trading practices include one or more of:	• methods used for the sale of goods • using measuring instruments • position of measuring instruments • environmental factors • suitability of instrument • incorrect measurement
Legislation includes:	• national measurement legislation • applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
Enforcement actions include one or more of:	• formal warnings, infringement notices, undertakings, injunction and prosecutions
NMI policy includes:	• test procedure variations between a verification, in-service or audit inspection • bulletins • instructions • determinations
WHS/OHS and environmental management requirements include:	• complying with WHS/OHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of material/product measured • applying any necessary hygiene controls

Assessment Requirements for MSMTMINS302 Inspect a range of simple measuring instruments

Modification History

Release 2. Correction to Application, Performance Criteria and adjustment to Range, Performance Evidence and Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS302A Inspect a range of simple measuring instruments

Performance Evidence

- Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:
- Completing initial verification testing of at least six (6) instruments with at least one (1) instrument from three (3) of the following classes of simple measuring instruments:
  - beverage dispensers
  - protein quality measuring instruments
  - grain density measuring instruments
  - sugar quality measuring instruments
  - length measuring instruments
  - area measuring instruments
  - dimensional measuring instruments
  - vehicle tanks
  - milk tanks
  - point of sale systems
  - control systems
  - any other simple measuring instrument prescribed by the NMI
- accessing and correctly interpreting documentation required for inspections, evaluation of measuring instruments and verifier audits
- ensuring test equipment, reference standards or reference materials are fit for purpose in accordance with applicable legislation and organisational procedures
- planning, preparing for, and safely conducting inspections to maximise outcomes and minimise disruption to the public and trader
- checking compliance and evaluating the performance of instruments using appropriate Certificate of Approval, National Measurement Institute (NMI) policy and National Instrument Test Procedures, and adjusting for any impact of the operating environment
- reliably determining if instruments are suitable for trade use in accordance with legislative requirements
- conducting at least two (2) verifier instrument audits to assess the performance of verifiers who test and mark simple measuring instruments for trade use

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- assessing verifier performance against expected outcomes and analysing any variances to identify isolated or systemic problems
- identifying potential non-compliance of trading practices (applicable to the instrument) with national measurement legislation and initiating an efficient inspection strategy that has a limited impact on others
- acting on non-compliance of instrument or verifier performance and/or trading practices with national measurement legislation and initiating appropriate enforcement action
- demonstrating professionalism and respecting the rights of the trader at all times
- using routine communication and negotiation skills to:
  - explain the purpose of inspection
  - inform traders of non-compliances and consequences of failing to rectify them
  - explain procedures and inspection outcomes to traders, verifiers and managers
- using numeric skills to:
  - perform specified calculations involving fractions, decimals, ratios, proportions and percentages
  - use correct units and the correct number of significant figures
  - analyse performance results over a single or limited range of operating conditions
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general science principles and concepts, such as weight, mass, gravity, density, buoyancy, temperature and coefficients of expansion
- metrological terms and terminology specific to simple measuring instruments, such as maximum permissible errors and traceability
- national measurement legislation requirements for simple measuring instruments
- safe work method statements (SWMS) and safe operating procedures (SOPS) for a range of trading environments, such as laboratories, retail, industrial and farming
- NMI policy requirements, including test procedure variations between a verification, in-service or audit inspection, bulletins, directives, instructions and determinations
- National Instrument Test Procedures and operating procedures for equipment,certified reference materials and reference standards used in job role, including:
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in the test method
  - calculation steps to give results in appropriate units and precision
  - maximum permissible errors for simple measuring instruments under inspection
  - organisational policy and procedures for inspecting simple measuring instruments, including completing inspection documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- organisational safety procedures and requirements of applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency should be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
  - *MSMTMINS301 Inspect a range of simple measures*
  - *MSMTMVER403 Verify Inspectors' Class reference standards*
- Holistic assessment methods include:
  - review of inspection reports and verifier instrument audit reports prepared by the candidate
  - feedback from supervisors and peers regarding the candidate's ability to conduct inspections, evaluate the performance of simple measuring instruments and audit verifier's performance in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions
  - review of candidate's responses to inspection scenarios, such as potential/actual non-compliances and appropriate actions, common issues and problems
  - observation of the candidate conducting an inspection.
- Access is required to instruments, equipment, materials, workplace documentation, procedures, and specifications associated with this unit including, but not limited to:
  - latest versions of appropriate documentation, such as Certificates of Verification and Approval, NMI Policy, National Instrument Test Procedures for verifying simple measuring instruments and relevant legislation
  - equipment manuals, safety data sheets (SDS) and safety procedures
  - records, such as test reports, audit reports, instrument history and test results
  - simple measuring instruments, test equipment, reference standards and material
  - computer and relevant software and/or organisation information management system.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMINS401 Inspect a range of weighing instruments

Modification History

Release 2. Adjustments to the Application, Performance Criteria and Range of Conditions. Adjustment to the Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS401A Inspect a range of weighing instruments

Application

This unit of competency covers the ability to apply National Instrument Test Procedures to determine whether non-automatic weighing instruments and catchweighers are suitable for trade use. The unit also involves assessing the performance of verifiers, by auditing recently verified weighing instruments, to ensure they meet the legislative requirements for trade use.

This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a wide range of weighing instruments as part of their allocated duties. For example, weighing instruments are used to measure a wide range of products at the point of sale, as an order or as a pre-packaged article. There is a large range of environments where these instruments are used including pharmaceutical laboratories, supermarkets, fresh food retailers, packing houses, the chemical/petroleum industry, construction, mining and other extractive industry sectors. Inspectors must work safely, including applying basic first aid, assessing potential confined spaces, working with hazardous materials, working in hazardous environments, working with heavy machinery, completing safety inductions and working at heights.

While no specific licensing or certification requirements apply to this unit at the time of publication, all inspection activity is legislated under the *National Measurement Act 1960*.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Prepare for inspection	1.1	Identify and evaluate the type of instrument to be inspected
		1.2	Access and review any history of previous inspections at trader's premises
		1.3	Access and correctly interpret appropriate documentation required for the inspection
		1.4	Identify and access test equipment, products and consumables required for the inspection
		1.5	Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures
		1.6	Store and transport test equipment in accordance with organisational procedures and industry best practice
		1.7	Identify workplace health and safety issues relevant to the inspection
2	Initiate inspection	2.1	Identify the site controller, explain the purpose of the inspection and produce formal identification, if required
		2.2	Identify relevant site health and safety issues and implement appropriate control strategies
		2.3	Conduct a preliminary evaluation of the site's trading practices and prioritise activities to maximise inspection outcomes.
		2.4	Identify measuring instruments used for trade and plan inspection to minimise disruption to the public and trader

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Evaluate weighing instrument performance	3.1	Evaluate whether the operating environment will impact on the instrument performance
		3.2	Modify the operating environment or implement alternative arrangements to ensure reliable test conditions as necessary
		3.3	Identify the maximum permissible errors for the instrument from the legislative requirements
		3.4	Use test equipment safely in accordance with applicable legislation and organisational procedures
		3.5	Check instrument for compliance with the appropriate Certificates of Approval
		3.6	Inspect the instrument in accordance with relevant National Instrument Test Procedures and appropriate National Measurement Institute (NMI) policy
		3.7	Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
4	Conduct a verifier instrument audit	4.1	Identify the scope of the verifier instrument audit
		4.2	Identify the expected outcomes of the verifier instrument audit
		4.3	Assess the instrument's performance against the expected outcome
		4.4	Check that the verification mark complies with legislation
		4.5	Analyse any variances from the expected outcomes to identify isolated or systemic problems
5	Analyse and report inspection results	5.1	Analyse inspection data for unacceptable performance trends
		5.2	If required, display the inspection result on the instrument in accordance with legislative requirements
		5.3	Use test reports to present inspection results in the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			required format
		5.4	Complete inspection documentation in accordance with legislative requirements and organisational procedures
		5.5	Communicate inspection results within the specified time and in accordance with organisational guidelines
		5.6	Recommend follow-up actions as appropriate
6	Act on non-compliance	6.1	Select applicable enforcement action for the non-compliance in accordance with legislative requirements and organisational policy and procedures
		6.2	Inform traders of non-compliances and consequences of failing to have them corrected
		6.3	Implement enforcement action in accordance with legislative requirements and organisational policy and procedures
		6.4	Respect the rights of the trader at all times

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

National Instrument Test Procedures include one or more of:	• measuring instrument test procedures • any other test procedure prescribed by the NMI
Classes of weighing instruments include one or	• non-automatic weighing instruments tested without substitution loads

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

more of:	• automatic Class Y(a) Catchweighers • automatic Class Y(b) Catchweighers • any other weighing instrument prescribed by the NMI
Test equipment includes:	• reference standards of measurement • control instruments
Certificates of Approval include:	• any Certificate issued by the Chief Metrologist under Regulation 60 of the *National Measurement Regulations 1999* approving the pattern of a weighing instrument as being suitable for trade
Prescribed performance criteria for limited weighing instruments include:	• that the design is in accordance with the appropriate Certificates of Approval • that the performance meets the criteria described in the Certificates of Approval, National Instrument Test Procedures and legislation
Verification	Has the same meaning as Section 18GG of the *National Measurement Act 1960*
Verification marks	Verification marks for different instruments are defined in Regulations 2.28 and 2.29 of the *National Trade Measurement Regulations 2009*
Trading practices include one or more of:	• methods used for the sale of goods • using measuring instruments • position of measuring instruments • environmental factors • suitability of instrument • incorrect measurement
Enforcement actions include one or more of:	• formal warnings, infringement notices, undertakings, injunction and prosecutions
Legislation includes:	• national measurement legislation • applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS)

Assessment Requirements for MSMTMINS401 Inspect a range of weighing instruments

Modification History

Release 2. Adjustments to the Application, Performance Criteria and Range of Conditions. Adjustment to the Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS401A Inspect a range of weighing instruments

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- completing initial verification testing of:
  - at least one (1) non-automatic weighing instrument from each of the following four classes of instruments (Class 1, 2, 3 and 4); and
  - at least one (1) catchweighing instrument from either Class Y(a) or Y(b)
- accessing and correctly interpreting documentation required for inspections, evaluation of weighing instruments and verifier audits
- ensuring test equipment and reference standards are fit for purpose in accordance with applicable legislation and organisational procedures
- planning, preparing for and safely conducting inspections to maximise outcomes and minimise disruption to the public and trader
- checking compliance and evaluating the performance of weighing instruments using appropriate Certificate of Approval, National Measurement Institute (NMI) policy and National Instrument Test Procedures, and adjusting for any impact of the operating environment
- reliably determining if weighing instruments are suitable for trade use in accordance with legislative requirements
- conducting at least two (2) verifier instrument audits to assess the performance of verifiers who test and mark weighing instruments for trade use
- assessing verifier performance against expected outcomes and analysing any variances to identify isolated or systemic problems
- identifying potential non-compliance of trading practices (applicable to instruments) with national measurement legislation and initiating an efficient inspection strategy that has a limited impact on others
- recognising and acting on non-compliance of a weighing instrument or verifier performance and/or trading practices with national measurement legislation and initiating appropriate enforcement action
- demonstrating professionalism and respecting the rights of the trader at all times
- using advanced communication and negotiation skills to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - explain the inspection purpose, procedures and outcomes to traders, verifiers and managers
  - inform traders of non-compliances and consequences of failing to rectify them
  - access external equipment and resources to complete the inspection
- performing specified calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general science principles and concepts, including weight, mass and gravity
- metrological terms and terminology specific to weighing instruments, including maximum permissible errors, traceability, uncertainty, maximum permissible difference, eccentricity, repeatability, error of measurement, error of indication and linearisation
- national measurement legislation applicable to weighing instruments
- safe work method statements (SWMS) for a range of trading environments, such as laboratories, retail, manufacturing, industrial, mining, construction, medical, chemical, petroleum, farming and abattoirs
- NMI policy requirements, including test procedure variations between a verification, in-service or audit inspection, bulletins, instructions and determinations
- detailed National Instrument Test Procedures and operating procedures for equipment and reference standards used in job role, including:
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in test method
  - calculation steps to give results in appropriate units and precision
  - maximum permissible errors for weighing instruments under inspection
  - organisational policy and procedures for inspecting weighing instruments, including completing inspection documentation
  - organisational safety procedures and requirements of applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- This unit of competency should be assessed in the workplace or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
  - *MSMTMINS403 Inspect a range of trading practices*
  - *MSMTMINS404 Inspect a range of pre-packaged products*
  - *MSMTMINS402 Inspect a range of liquid measuring instruments using volume measures*
- Holistic assessment methods include:
  - review of initial verification testing reports and verifier instrument audit reports prepared by the candidate
  - feedback from supervisors and peers regarding the candidate's ability to conduct inspections, evaluate the performance of weighing instruments and audit verifier's performance in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions
  - review of candidate's responses to inspection scenarios, such as potential/actual non-compliances and appropriate actions, common issues and problems
  - observation of the candidate conducting an inspection.
- Access is required to instruments, equipment, materials, workplace documentation, procedures, and specifications associated with this unit including, but not limited to:
  - latest versions of appropriate documentation, such as Certificates of Verification and Approval, NMI policy, National Instrument Test Procedures for verifying weighing instruments and relevant legislation
  - equipment manuals, safety data sheets (SDS) and safety procedures
  - records, such as test reports, audit reports, instrument history and test results
  - weighing instruments, test equipment and reference standards
  - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMINS402 Inspect liquid measuring instruments using volume measures

Modification History

Release 2. Adjustments to the Application, Performance Criteria and Range of Conditions. Adjustment to Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS402A Inspect liquid measuring instruments using volume measures

Application

This unit of competency covers the ability to apply National Instrument Test Procedures to determine whether liquid measuring instruments, tested using volume measures, are suitable for trade use. The unit also involves auditing the performance of verifiers, by auditing recently verified liquid measuring instruments, to ensure they meet the legislative requirements for trade use.

This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a wide range of liquid measuring instruments, tested using volume measures, as part of their allocated duties.

Liquid measuring instruments are used in a very wide range of commerce. For example, petrol dispensers measure fuel at the point of sale and flowmeters are used to measure bulk commodities, such as milk, chemicals and petroleum products during production and distribution. Inspections are often performed over extended durations in non-routine and hazardous environments. Inspectors must work safely, including applying basic first aid, assessing potential confined spaces, working with hazardous materials, working in hazardous environments, working with heavy machinery, using appropriate workplace clearance forms, completing safety inductions and working at heights.

While no specific licensing or certification requirements apply to this unit at the time of publication, all inspection activity is legislated under the *National Measurement Act 1960.*

	work/occupational health and safety (WHS/OHS) legislation
NMI policy includes:	• test procedure variations between a verification, in-service or audit inspection • bulletins • instructions • determinations
WHS/OHS and environmental management requirements include:	• complying with WHS/OHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of material/product measured • applying any necessary hygiene controls

Assessment Requirements for MSMTMINS402 Inspect liquid measuring instruments using volume measures

Modification History

Release 2. Adjustments to the Application, Performance Criteria and Range of Conditions. Adjustment to Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS402A Inspect liquid measuring instruments using volume measures

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- completing initial verification testing of at least three (3) instruments from one (1) or more of the following classes of liquid measuring instruments:
  - fuel dispensers other than liquid petroleum gas (LPG) dispensers
  - milk flowmeters
- accessing and correctly interpreting documentation required for inspections, evaluation of liquid measuring instruments and verifier audits
- ensuring test equipment and reference standards are fit for purpose in accordance with applicable legislation and organisational procedures
- planning, preparing for and safely conducting inspections to maximise outcomes and minimise disruption to the public and trader
- checking compliance and evaluating the performance of liquid measuring instruments using appropriate Certificate of Approval, National Measurement Institute (NMI) policy and National Instrument Test Procedures, and adjusting for any impact of the operating environment
- reliably determining if liquid measuring instruments are suitable for trade use in accordance with legislative requirements
- conducting at least two (2) verifier instrument audits to assess the performance of verifiers who test and mark liquid measuring instruments for trade use
- assessing verifier performance against expected outcomes and analysing any variances to identify isolated or systemic problems
- identifying potential non-compliance of trading practices (applicable to instruments) with national measurement legislation and initiating an efficient inspection strategy that has a limited impact on others
- recognising and acting on non-compliance of liquid measuring instrument or verifier performance and/or trading practices with national measurement legislation and initiating appropriate enforcement action
- demonstrating professionalism and respecting the rights of the trader at all times
- using advanced communication and negotiation skills to:
  - explain the purpose of inspection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - inform traders of non-compliances and consequences of failing to rectify them
  - access external equipment and resources to complete the inspection
  - explain inspection procedures and outcomes to traders, verifiers and managers
- performing specified calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures, calculation of uncertainties
  - evaluation of formulae containing powers, exponents and logarithms functions
  - preparation and interpretation of linear graphs
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general science principles and concepts, including:
  - physical states (solid, liquid, gas), weight, mass, gravity and density
  - pressure, pressure differential, backpressure and head pressure, fluid flow and viscosity
  - temperature effects and coefficients of expansion, flashpoint, boiling point and ice point
- metrological terms and terminology specific to liquid measuring instruments, including maximum permissible errors, maximum permissible difference and maximum permissible variation, traceability, repeatability, uncertainty, error of measurement and error of indication, meter creep, hose dilation, temperature correction, linearization and gas elimination
- basic details of the design, application and function of components used in liquid measuring instruments
- national measurement legislation applicable to liquid measuring instruments
- safe work method statements (SWMS) for a range of trading environments, such as laboratories, retail, commercial, office, manufacturing, industrial, mining, construction, medical, chemical and petroleum
- NMI policy requirements, including test procedure variations between a verification, in-service or audit inspection, bulletins, instructions and determinations
- National Instrument Test Procedures and operating procedures for equipment and reference standards used in job role, including:
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in test method
  - calculation steps to give results in appropriate units and precision
  - maximum permissible errors for liquid measuring instruments under inspection
  - safety principles and procedures relevant to liquid measuring instruments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- organisational policy and procedures for inspecting liquid measuring instruments including completing inspection documentation
- organisational safety procedures and requirements of applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency should be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
  - *MSMTMINS401 Inspect a range of weighing instruments*
  - *MSMTMINS403 Inspect a range of trading practices*
  - *MSMTMINS404 Inspect a range of pre-packaged products*
- Holistic assessment methods include:
  - review of inspection reports and verifier instrument audit reports prepared by the candidate
  - feedback from supervisors and peers regarding the candidate's ability to conduct inspections, evaluate the performance of liquid measuring instruments and audit verifier’s performance in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions
  - review of candidate’s responses to inspection scenarios, such as potential/actual non-compliances and appropriate actions, common issues and problems
  - observation of the candidate conducting an inspection.
- Access is required to instruments, equipment, materials, workplace documentation, procedures, and specifications associated with this unit including, but not limited to:
  - latest versions of appropriate documentation, such as Certificates of Verification and Approval, NMI policy, intermediate National Instrument Test Procedures for verifying liquid measuring instruments and relevant legislation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - workplace clearance forms and correction tables for volume, density and pressure for a range of liquids
  - equipment manuals, safety data sheets (SDS), safety procedures and safety equipment
  - records, such as test reports, audit reports, instrument history and test results
  - liquid measuring instruments; test equipment, such as pumps, funnels and hoses; and reference standards
  - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMINS403 Inspect a range of trading practices

Modification History

Release 2. Adjustments to the Application, Performance Criteria and Range of Conditions. Adjustment to the Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS403A Inspect a range of trading practices

Application

This unit of competency covers the inspection of trading practices and application of National Test Procedures to determine whether the method of advertising, selling and measuring an article complies with national measurement legislation.

This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a wide range of trading practices as part of their duties. Transactions of all products sold by reference to measurement in all industry sectors must comply with national legislation governing trading practices. Inspectors must work safely which may include applying basic first aid, working with hazardous materials, working in hazardous environments, working with heavy machinery, completing safety inductions.

While no specific licensing or certification requirements apply to this unit at the time of publication, all inspection activity is legislated under the *National Measurement Act 1960*.

Pre-requisite Unit

Competency Field

Trade measurement

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	Prepare for inspection	1.1	Identify and evaluate the type of trading practices likely to be inspected
		1.2	Access and review any history of previous inspections at trader's premises
		1.3	Access and correctly interpret appropriate documentation required for the inspection
		1.4	Identify and access test equipment, investigation equipment and consumables required for the inspection
		1.5	Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures
		1.6	Store and transport test equipment in accordance with organisational procedures and industry best practice
		1.7	Identify workplace health and safety issues relevant to the inspection
2	Conduct a trial purchase	2.1	Observe and assess visible trading practices prior to entry into the premises
		2.2	Identify scope and expected outcomes of the trial purchase
		2.3	On entry to the premises, evaluate trading practices and where applicable modify trial purchase strategy to maximise inspection outcomes
		2.4	Conduct trial purchase while observing the measurement process and staff actions
		2.5	Assess trader's performance against expected outcomes
		2.6	Analyse any variances from the expected outcomes and identify isolated or systemic issues related to the trial purchase
3	Initiate inspection	3.1	Identify the site controller, explain the purpose of the inspection and produce formal identification, if required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.2	Identify site workplace health and safety issues and implement appropriate control strategies
		3.3	Conduct a preliminary evaluation of the site's trade measurement activities and prioritise inspection to maximise outcomes
		3.4	Identify measuring instruments being used for trade
		3.5	Identify site's trading practice activities and plan inspection to minimise disruption to the public and trader
4	Examine measurement related advertising for compliance	4.1	Identify the articles which are required to be sold by specific measurement or in terms of a measurement at base conditions
		4.2	Inspect and evaluate measurement related advertising used by the trader
		4.3	Identify any non-compliances with legislative requirements
5	Examine measuring instrument operation	5.1	Inspect measuring instrument operating environment and determine instrument suitability for purpose
		5.2	Evaluate measuring instrument operation against legislative requirements, organisational policy and procedures
		5.3	Modify the operating environment or implement alternative arrangements to ensure reliable test conditions, as necessary
		5.4	Identify the maximum permissible errors for the instrument from the legislative requirements
		5.5	Use test equipment safely in accordance with applicable legislation and organisational procedures
		5.6	Check instrument for compliance with the appropriate Certificates of Approval
		5.7	Inspect the instrument in accordance with relevant National Instrument Test Procedures and appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			National Measurement Institute (NMI) policy
		5.8	Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
6	Validate the measurement of articles	6.1	Identify articles sold by reference to measurement
		6.2	Examine the process used by the trader for measuring an article
		6.3	Evaluate the trader's measurement procedure
		6.4	Measure an article in accordance with the appropriate National Instrument Test Procedure and organisational policy and procedures
7	Analyse and report inspection results	7.1	Analyse inspection data for unacceptable trends
		7.2	Use test reports to present inspection results in the required format
		7.3	Complete inspection documentation in accordance with legislative requirements and organisational procedures
		7.4	Communicate inspection results within the specified time and in accordance with organisational guidelines
		7.5	Recommend follow-up actions as appropriate
8	Act on non-compliance	8.1	Record and collect evidence of any identified non-compliance in accordance with legislative requirements and organisational policy and procedures
		8.2	Select applicable enforcement action for the non-compliance in accordance with legislative requirements and organisational policy and procedures
		8.3	Inform trader of non-compliances and the consequences of failing to have them corrected
		8.4	Implement enforcement action in accordance with legislative requirements and organisational policy and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

8.5 Respect the rights of the trader at all times

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

National Instrument Test Procedures include one or more of:	• measuring instrument test procedures • article measurement procedures • any other test procedure prescribed by the NMI
Test equipment includes one or more of:	• measuring instruments • trolleys • cameras • video and audio recorders
Certificates of Approval include:	• any Certificate issued by the Chief Metrologist under Regulation 60 of the *National Measurement Regulations 1999* approving the pattern of a simple measure as being suitable for trade
Verification	Has the same meaning as Section 18GG of the *National Measurement Act 1960*
Verification marks	Verification marks for different measures are defined in Regulations 2.28 and 2.29 of the *National Trade Measurement Regulations 2009*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Trading practices include one or more of:	• how a measuring instrument is used • position of measuring instruments • measurement advertising • how the measurement of an article is determined • the type of measurement used to sell an article • the base conditions at which the measurement of an article is determined
Enforcement actions include one or more of:	• formal warnings, infringement notices, undertakings, injunction and prosecutions
Legislation includes:	• national measurement legislation • applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
NMI policy includes:	• bulletins • instructions • determinations
WHS/OHS and environmental management requirements include:	• complying with WHS/OHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of material/product measured • applying any necessary hygiene controls

Assessment Requirements for MSMTMINS403 Inspect a range of trading practices

Modification History

Release 2. Adjustments to the Application, Performance Criteria and Range of Conditions. Adjustment to the Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS403A Inspect a range of trading practices

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- identifying at least four (4) of the following examples of non-compliance while inspecting trading practices:
  - how a measuring instrument is used
  - position of measuring instruments
  - measurement advertising
  - how the measurement of an article is determined
  - the type of measurement used to sell an article
- accessing and correctly interpreting documents for the inspection of trading practices, including national measurement legislation, National Instrument Test Procedures and National Measurement Institute (NMI) inspection policy
- ensuring test equipment and reference standards are fit for purpose in accordance with applicable legislation and organisational procedures
- planning, preparing for and safely conducting inspections to maximise outcomes and minimise disruption to the public and trader
- observing visible trading practices, conducting trial purchases, evaluating trader's measurement related advertising, and validating measurement of articles to assess a trader's performance and identify isolated or systemic issues
- identifying potential non-compliance of trading practices with national measurement legislation and initiating an efficient inspection strategy that has a limited impact on others
- checking compliance and evaluating the performance of measuring instruments using appropriate Certificate of Approval, NMI policy and National Instrument Test Procedures and adjusting for any impact of the operating environment
- reliably determining if measuring instruments are suitable for trade use in accordance with legislative requirements
- recognising and acting on non-compliance of trading practices or measuring instruments with national measurement legislation and initiating appropriate enforcement action
- demonstrating professionalism and respecting the rights of the trader at all times
- using advanced communication and negotiation skills to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - explain the purpose of inspection
  - inform traders of non-compliances and consequences of failing to rectify them
  - access external equipment and resources to complete the inspection
  - explain inspection procedures and outcomes to traders and managers
- performing specified calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures
  - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general physical principles and concepts, including weight, mass, gravity, volume, length and area
- metrological terms and terminology, including maximum permissible errors, traceability and uncertainty
- national measurement legislation requirements applicable to trading practices and measuring instruments
- safe work method statements (SWMS) for a range of trading environments
- NMI policy requirements, including test procedure variations between a verification, in-service or audit inspection, bulletins, instructions and determinations
- National Instrument Test Procedures and operating procedures for the equipment, and reference standards used in job role, including:
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in test method
  - calculation steps to give results in appropriate units and precision
  - maximum permissible errors for measuring instruments under inspection
  - safety principles and procedures relevant to measuring instruments and inspections
  - organisational policy and procedures for inspection of trading practices, including completing inspection documentation
  - organisational safety procedures and requirements of applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
- basic first aid and site safety induction if required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency should be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
  - *MSMTMINS401 Inspect a range of weighing instruments*
  - *MSMTMINS402 Inspect a range of liquid measuring instruments using volume measures*
  - *MSMTMINS404 Inspect a range of pre-packaged products*
- Holistic assessment methods include:
  - review of inspection reports prepared by the candidate
  - feedback from supervisors and peers regarding the candidate's ability to inspect trading practices and evaluate the performance of measuring instruments and trader’s performance in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions
  - review of candidate’s responses to inspection scenarios, such as potential/actual non-compliances and appropriate actions, common issues and problems
  - observation of the candidate conducting an inspection of trading practices.
- Access is required to instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit including, but not limited to:
  - latest versions of appropriate documentation, such as Certificates of Approval, NMI policy, National Instrument Test Procedures for inspection of trading practices and relevant legislation
  - equipment manuals, safety data sheets (SDS), safety procedures and safety equipment
  - records, such as test reports, audit reports, instrument history and test results
  - measuring instruments, test equipment and reference standards
  - computer and relevant software and/or organisation information management system,
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMINS404 Inspect a range of pre-packaged products

Modification History

Release 2. Adjustments to Application, Performance Criteria and Range of Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS404A Inspect a range of pre-packaged products

Application

This unit of competency covers the inspection of pre-packaged products and application of National Test Procedures to determine whether the marking and measurement requirements of the packaged article comply with national measurement legislation.

This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a wide range of pre-packaged products as part of their allocated duties. Compliance with national legislation governing pre-packaged products applies to the accuracy of the labelling information and contents of all items packaged for sale in all industry sectors. Inspectors must work safely which may include applying basic first aid, working with hazardous materials, working in hazardous environments, completing safety inductions.

While no specific licensing or certification requirements apply to this unit at the time of publication, all inspection operations are governed by the *National Measurement Act 1960*.

Pre-requisite Unit

Trade measurement

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	Prepare for inspection	1.1	Identify and evaluate the type of pre-packaged products to be inspected
		1.2	Access and review any history of previous inspections at trader's premises
		1.3	Access and correctly interpret appropriate documentation required for the inspection
		1.4	Identify and access test equipment, investigation equipment and consumables required for the inspection
		1.5	Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures
		1.6	Store and transport test equipment in accordance with organisational procedures and industry best practice
		1.7	Identify workplace health and safety issues relevant to the inspection
2	Initiate inspection	2.1	Identify the site controller, explain the purpose of the inspection and produce formal identification, if required
		2.2	Identify site workplace health and safety issues and implement appropriate control strategies
		2.3	Conduct a preliminary evaluation of the site's trade measurement activities and prioritise inspection to maximise outcomes
		2.4	Identify the range of pre-packaged products at the premises and plan the inspection to achieve maximum outcomes while minimising disruption to the public and trader
3	Inspect packaged article markings	3.1	Identify generic trade measurement marking requirements for pre-packaged products
		3.2	Identify specific trade measurement marking requirements related to the pre-packaged product selected for inspection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.3	Assess measurement, unit pricing and packer identification markings on pre-packaged products for compliance with legislative requirements
4	Measure the net contents of pre-packaged products	4.1	Identify and access National Test Procedures appropriate for measuring the product
		4.2	Select pre-packaged products for measurement in accordance with marketplace intelligence, legislative requirements and organisational policy and procedures
		4.3	Identify, access and apply product handling and disposal requirements in accordance with workplace health and safety and environmental requirements
		4.4	Select specialised equipment, reference standards and measuring devices in accordance with organisational policy and procedures
		4.5	Measure pre-packaged product in accordance with the appropriate National Test Procedures and organisational policy and procedures
		4.6	Evaluate results against prescribed performance criteria and determine if the net contents of the individual pre-packaged products and inspection lot meet legislative requirements
5	Evaluate trader's measurement process	5.1	Examine the process used by the trader to measure a pre-packaged product
		5.2	Evaluate the effectiveness of the trader's measurement procedure, methodology and test frequency against inspection outcomes
		5.3	Inspect measuring instrument operating environment and assess suitability for purpose
		5.4	Evaluate measuring instrument operation against legislative requirements and organisational policy and procedures
		5.5	Modify the operating environment or implement alternative arrangements to ensure reliable operating conditions for the measuring instrument, as necessary

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		5.6	Identify the maximum permissible errors for the instrument from the legislative requirements
		5.7	Inspect measuring instruments in accordance with relevant National Instrument Test Procedures and appropriate National Measurement Institute (NMI) policy
6	Analyse and report inspection results	6.1	Analyse inspection data for unacceptable trends
		6.2	Use test reports to present inspection results in the required format
		6.3	Complete inspection documentation in accordance with legislative requirements and organisational procedures
		6.4	Communicate inspection results within the specified time and in accordance with organisational guidelines
		6.5	Recommend follow-up actions as appropriate
7	Act on non-compliance	7.1	Record and collect evidence of any identified non-compliance in accordance with legislative requirements and organisational policy and procedures
		7.2	Select applicable enforcement action for the non-compliance in accordance with legislative requirements and organisational policy and procedures
		7.3	Inform traders of non-compliances and consequences of failing to have them corrected
		7.4	Implement enforcement action in accordance with legislative requirements and organisational policy and procedures
		7.5	Respect the rights of the trader at all times

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

National Test Procedures include:	• article measurement procedures • any other test procedure prescribed by the NMI
Methods for measuring pre-packaged products include:	• gravimetric mass method • volumetric method • gravimetric volume method • substitution method • displacement method • mass per unit method • volumetric method for garden landscaping material • frozen fish method
Test equipment includes one or more of:	• reference standards • measuring instruments • trolleys • cameras • video and audio recorders
Enforcement actions include one or more of:	• formal warnings, infringement notices, undertakings, injunction and prosecutions
Legislation includes:	• national measurement legislation • applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
NMI policy includes:	• bulletins • instructions • determinations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

WHS/OHS and environmental management requirements include:	• complying with WHS/OHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of material/product measured • applying any necessary hygiene controls

Assessment Requirements for MSMTMINS404 Inspect a range of pre-packaged products

Modification History

Release 2. Adjustments to Application, Performance Criteria and Range of Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS404A Inspect a range of pre-packaged products

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- inspecting pre-packaged articles on at least three (3) occasions
- applying each of the following eight (8) methods for measuring pre-packaged products and identifying short measure:
  - gravimetric mass method
  - volumetric method
  - gravimetric volume method
  - substitution method
  - displacement method
  - mass per unit method
  - volumetric method for garden landscaping material
  - frozen fish method
  - accessing and correctly interpreting documents for the inspection of pre-packaged articles, including national measurement legislation, National Instrument Test Procedures and National Measurement Institute (NMI) inspection policy
  - ensuring test equipment and reference standards are fit for purpose in accordance with applicable legislation and organisational procedures
  - planning, preparing for and safely conducting inspections to maximise outcomes and minimise disruption to the public and trader
  - assessing measurement, unit pricing and packer identification markings on pre-packaged products for compliance with legislative requirements
  - determining if the net contents of individual pre-packaged products and an inspection lot meet legislative requirements
  - assessing the effectiveness of the trader's measurement procedure, methodology and test frequency against inspection outcomes
  - checking compliance and evaluating the performance of measuring instruments using appropriate Certificates of Approval, NMI policy and National Instrument Test Procedures, and adjusting for any impact of the operating environment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- reliably determining if measuring instruments are suitable for trade use in accordance with legislative requirements
- recognising and acting on non-compliance of trading practices or measuring instruments with national measurement legislation and initiating appropriate enforcement action
- demonstrating professionalism and respecting the rights of the trader at all times
- using advanced communication and negotiation skills to:
  - explain the purpose of inspection
  - inform traders of non-compliances and consequences of failing to rectify them
  - access external equipment and resources to complete the inspection
  - explain inspection procedures and outcomes to traders and managers
- performing specified calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures
  - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general physical principles and concepts, including weight, mass, gravity, volume, length, area and displacement
- metrological terms and terminology, including maximum permissible errors, traceability, uncertainty, inspection lot, deficiency and shortfall
- national measurement legislation applicable to inspection of pre-packaged products and measuring instruments
- safe work method statements (SWMS) for a range of trading environments
- NMI policy requirements, including test procedure variations between a verification, in-service or audit inspection, bulletins, instructions and determinations
- National Instrument Test Procedures and operating procedures for the equipment, and reference standards used in job role, including:
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in test method
  - calculation steps to give results in appropriate units and precision
  - maximum permissible errors for measuring instruments under inspection
  - safety principles and procedures relevant to measuring instruments and inspections
  - organisational policy and procedures for inspection of trading practices including completing inspection documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - organisational safety procedures and requirements of applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
- basic first aid and site safety induction, if required.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency should be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
  - *MSMTMINS401 Inspect a range of weighing instruments*
  - *MSMTMINS402 Inspect liquid measuring instruments using volume measures*
  - *MSMTMINS403 Inspect a range of trading practices*
- Holistic assessment methods include:
  - review of inspection reports prepared by the candidate
  - feedback from supervisors and peers regarding the candidate's ability to inspect a range of pre-packaged products and evaluate a trader’s measuring procedures and instruments in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions
  - review of candidate’s responses to inspection scenarios, such as potential/actual non-compliances and appropriate actions, common issues and problems
  - observation of the candidate conducting an inspection of a trader’s range of pre-packaged products, measuring procedures and instruments.
- Access is required to instruments, equipment, materials, workplace documentation, procedures, and specifications associated with this unit including, but not limited to:
  - latest versions of appropriate documentation, such as Certificates of Approval, NMI policy, National Instrument Test Procedures for inspection of pre-packaged products, trader measurement procedures and measuring instruments, and relevant legislation
  - equipment manuals, material safety data sheets (MSDS), safety procedures and safety equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - records, such as test reports; audit reports; instrument history and test results
  - measuring instruments, test equipment and reference standards
  - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification)
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMINS501 Inspect a range of complex measuring instruments

Modification History

Release 2. Adjustments to the Application, Performance Criteria, Range of Conditions, Adjustments to Performance Evidence, Assessment Conditions and minor corrections. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS501A Inspect a range of complex measuring instruments

Application

This unit of competency covers the ability to apply National Instrument Test Procedures to determine whether complex measuring instruments are suitable for trade use. It involves the ability to perform significant calculations to assess instrument performance and conduct tests that may require coordination of a range of resources over extended durations in hazardous environments. This unit also involves auditing the performance of verifiers who have previously tested and verified instruments for trade use.

This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may inspect a range of complex measuring instruments as part of their duties. Complex measuring instruments are used in a wide range of industrial environments. For example, automatic rail weighbridges, belt weighers, totalising hoppers, bulk fuel and liquid petroleum gas (LPG) flowmeters are used throughout the mining, road/rail freight and petroleum/gas industry sectors.

Inspections may be performed over extended durations up to five days in non-routine and hazardous environments. Inspectors must work safely which may include using correct manual handling techniques, applying basic first aid, identifying confined spaces, working with hazardous materials, working safely in hazardous environments, working with heavy machinery, use of appropriate workplace clearance forms, safety induction, risk assessment, working at heights and biosecurity issues.

While no specific licensing or certification requirements apply to this unit at the time of publication, all inspection activity is legislated under the *National Measurement Act 1960.*

Pre-requisite Unit

Competency Field

Trade measurement

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Prepare for inspection	1.1	Identify and evaluate the type of instrument to be inspected
		1.2	Access and review any history of previous inspection outcomes for the trader and instrument
		1.3	Access and correctly interpret documentation required for the inspection
		1.4	Identify and access test equipment, products and consumables required for the inspection
		1.5	Ensure test equipment is fit for purpose in accordance with applicable legislation and organisational procedures
		1.6	Store and transport equipment in accordance with organisational procedures and industry best practice
		1.7	Identify workplace health and safety issues relevant to the inspection
		1.8	Develop an inspection strategy to maximise resources and minimise time required to complete the inspection
2	Liaise with the trader to schedule complex tests	2.1	Discuss inspection arrangements with site controller where applicable
		2.2	Identify relevant local workplace, health and safety issues and implement appropriate control strategies
		2.3	Discuss the inspection strategy with the trader to minimise its impact on the trader's normal operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.4	Arrange site clearances and suitable scheduling for tests
		2.5	Negotiate access to trader's equipment, materials and support personnel required for testing to be available on site
		2.6	Arrange for any equipment to be provided by the trader, if required.
3	Initiate inspection	3.1	Identify the site controller, explain/review the purpose of the inspection and, if required, produce formal identification
		3.2	Review inspection strategy to ensure there is minimal disruption to the public and/or trader
		3.3	Communicate inspection strategy to all personnel involved
		3.4	Identify locations for product return or disposal if applicable
		3.5	Evaluate the impacts of the operating environment on the instrument performance or test results and, where applicable, implement corrective actions
		3.6	Identify operational factors impacting on instrument performance or test result and, where applicable, implement corrective actions
4	Evaluate complex measuring instrument performance	4.1	Identify the maximum permissible errors for the instrument from the legislative requirements
		4.2	Manage and review resources to maintain inspection timelines
		4.3	Provide effective communication to ensure relevant personnel are informed of variations to the inspection strategy and inspection progress
		4.4	Check instrument for compliance with the appropriate Certificates of Approval
		4.5	Inspect the instrument in accordance with relevant National Instrument Test Procedures and appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			National Measurement Institute (NMI) policy
5	Analyse inspection results	5.1	Perform specified calculations to determine a performance result for the instrument with appropriate accuracy, precision and significant figures
		5.2	Use graphical and statistical analysis to analyse results as necessary
		5.3	Analyse inspection data for unacceptable performance trends
		5.4	Ensure results are consistent with reasonable expectations and estimations
		5.5	Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
6	Evaluate verifier performance	6.1	Analyse verifiers' complex instrument test reports to identify potential verifier performance deficiencies
		6.2	Identify the scope of the verifier performance audit
		6.3	Identify the expected outcomes of the verifier performance audit
		6.4	Communicate the scope and process of the performance audit to the verifier
		6.5	Assess the verifier's performance against the expected outcome
		6.6	Analyse any variances from the expected outcomes to identify any isolated or systemic problems
		6.7	Clearly communicate the results of the performance audit to the verifier, including any rectification requirements, in accordance with legislative requirements and organisational policies and procedures
7	Report inspection results	7.1	If required, display the inspection result on the instrument in accordance with legislative requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		7.2	Use test reports to present inspection results in the required format
		7.3	Complete inspection documentation in accordance with legislative requirements and organisational procedures
		7.4	Communicate inspection results within the specified time and in accordance with organisational guidelines
		7.5	Recommend corrective actions as appropriate
8	Act on non-compliance	8.1	Select applicable enforcement action for the non-compliance in accordance with legislative requirements and organisational policy and procedures
		8.2	Inform traders of non-compliances and consequences of failing to have them corrected
		8.3	Implement enforcement action in accordance with legislative requirements and organisational policy and procedures
		8.4	Respect the rights of the trader at all times

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

National Instrument Test Procedures include one or more of:	• measurement instrument test procedures • any other test procedure prescribed by the NMI

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Classes of complex measuring instruments include one or more of:	• non-automatic weighing machines >3 tonne • LPG dispensers • bulk LPG flowmetering systems • bulk flowmetering systems for liquid hydrocarbons other than LPG • bulk flowmetering systems for liquid products **other than** liquid hydrocarbons • dispensers and flowmetering systems for gaseous products (excluding utility meters) • automatic rail weighbridges • continuous totalising automatic weighing instruments (belt weighers) • discontinuous totalising hopper weighing instruments • any other complex measuring instrument prescribed by the NMI
Test equipment includes:	• reference standards of measurement • equipment, such as weighing instruments, pumping units, two-way communication, LPG cylinders, hoses, fittings, rail wagons, trains and tankers
Certificates of Approval include:	• any Certificate issued by the Chief Metrologist under Regulation 60 of the *National Measurement Regulations 1999* approving the pattern of a complex weighing instrument as being suitable for trade
Prescribed performance criteria for complex measuring instruments include:	• that the instrument is of an approved pattern • that the instrument operates within the appropriate limits of error permitted by legislation • that the instrument is used in accordance with any legislative requirements
Verification	Has the same meaning as Section 18GG of the *National Measurement Act 1960*
Verification marks	Verification marks for different instruments are defined in Regulations 2.28 and 2.29 of the *National Trade Measurement Regulations 2009*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Trading practices include one or more of:	• methods used for the sale of goods • using measuring instruments • position of measuring instruments • environmental factors • suitability of instrument • incorrect measurement
Enforcement actions include one or more of:	• formal warnings, infringement notices, undertakings, injunction and prosecutions
Legislation includes:	• national measurement legislation • applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
NMI policy includes:	• test procedure variations between a verification, in-service or audit inspection • bulletins • instructions • determinations
WHS/OHS and environmental management requirements include:	• complying with WHS/OHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of material/product measured • applying any necessary hygiene controls

Unit Mapping Information

Release 2. Adjustments to the Application, Performance Criteria, Range of Conditions, Adjustments to Performance Evidence, Assessment Conditions and minor corrections. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS501A Inspect a range of complex measuring instruments

Assessment Requirements for MSMTMINS501 Inspect a range of complex measuring instruments

Modification History

Release 2. Adjustments to the Application, Performance Criteria, Range of Conditions, Adjustments to Performance Evidence, Assessment Conditions and minor corrections. Equivalent.

Release 1. Supersedes and is equivalent to MSATMINS501A Inspect a range of complex measuring instruments

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- completing initial verification testing of one or more of the following complex weighing instruments:
  - non-automatic weighing machines >3 tonne
  - automatic rail weighbridges
  - continuous totalising automatic weighing instruments (belt weighers)
  - discontinuous totalising hopper weighing instruments
- completing initial verification testing of one or more of the following complex fuel instruments:
  - LPG dispensers
  - bulk flowmetering systems for liquid hydrocarbons other than LPG
  - bulk LPG flowmetering systems
  - bulk flowmetering systems for liquid products other than liquid hydrocarbons
  - dispensers and flowmetering systems for gaseous products (excluding utility meters)
  - any other complex measuring instrument prescribed by the NMI
- accessing and correctly interpreting documentation required for inspections, evaluation of instruments and verifier audits
- ensuring test equipment and reference standards are fit for purpose in accordance with applicable legislation and organisational procedures
- planning, scheduling, preparing for and safely conducting inspections to optimise use of resources, maximise outcomes and minimise disruption to the public and trader
- checking compliance and evaluating the performance of complex measuring instruments using appropriate Certificates of Approval, NMI policy and National Instrument Test Procedures, and adjusting for any impact of the operating environment
- using specified calculations, graphical and statistical analysis to determine a performance result for a complex measuring instrument
- reliably determining if complex measuring instruments are suitable for trade use in accordance with legislative requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- conducting at least one (1) verifier performance audit, to assess the performance of verifiers who test and mark measuring instruments for trade use
- assessing verifier performance against expected outcomes and analysing any variances to identify isolated or systemic problems
- identifying potential non-compliance of trading practices (applicable to instruments) with national measurement legislation and initiating an efficient inspection strategy that has a limited impact on others
- recognising and acting on non-compliance of complex measuring instrument or verifier performance and/or trading practices with national measurement legislation and initiating appropriate enforcement action
- demonstrating professionalism and respecting the rights of the trader at all times
- using advanced communication and negotiation skills to:
  - explain the purpose of inspection
  - arrange site clearances, gain cooperation of site controllers and schedule complex tests
  - access trader's equipment and equipment, materials and support personnel to complete the inspection, when necessary
  - inform traders of non-compliances and consequences of failing to rectify them
  - explain inspection procedures and outcomes to traders, verifiers and managers
  - organise large equipment to be dispatched ahead of inspection visit, when necessary
- performing specified calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures, calculation of uncertainties
  - evaluation of formulae containing powers, exponents and logarithms functions
  - preparation and interpretation of linear graphs
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general science principles and concepts, including:
  - physical states (solid, liquid and gas), weight, mass, gravity and density
  - pressure, pressure differential, backpressure and head pressure, fluid flow and viscosity
  - temperature effects and coefficients of expansion, flashpoint, boiling point and ice point
- metrological terms and terminology of specific instruments, such as maximum permissible errors, maximum permissible difference and maximum permissible variation, traceability, repeatability, uncertainty, error of measurement and error of indication, meter creep, hose dilation, temperature correction, linearization and gas elimination

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- details of the design and applications for one (1) complex measuring instrument in each class, the major instrument components and their function
- national measurement legislation applicable to complex measuring instruments
- safe work method statements (SWMS) for a range of trading environments, such as laboratories, retail, commercial, office, manufacturing, industrial, mining, construction, medical, chemical and petroleum
- NMI policy requirements, including test procedure variations between a verification, in-service or audit inspection, bulletins, instructions and determinations
- National Instrument Test Procedures and operating procedures for equipment and reference standards used in job role, including:
  - test conditions and possible environmental impacts on performance of the instrument
  - key preparation/measurement steps in test method
  - calculation steps to give results in appropriate units and precision
  - maximum permissible errors for instruments being inspected
  - safety principles and procedures relevant to instruments
  - organisational policy and procedures for inspecting complex measuring instruments including completing inspection documentation
  - organisational safety procedures and requirements of applicable Commonwealth, state and territory WHS/OHS legislation
- basic first aid and site safety induction, if required.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency should be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
- Holistic assessment methods include:
  - review of test results, inspection reports and verifier performance reports prepared by the candidate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - feedback from supervisors and peers regarding the candidate's ability to conduct inspections, evaluate the performance of complex measuring instruments and audit verifier's performance in accordance with legislative and organisational procedures
    - questions to assess understanding of relevant procedures, licensing requirements, trader obligations and remedial actions
    - review of candidate's responses to inspection scenarios, such as: potential/actual non-compliances and appropriate actions, common issues and problems
    - observation of the candidate conducting an inspection.
- Access is required to instruments, equipment, materials, workplace documentation, procedures, and specifications associated with this unit including, but not limited to:
    - latest versions of appropriate documentation, such as Certificates of Verification and Approval, NMI policy, National Instrument Test Procedures for verifying complex measuring instruments and relevant legislation
    - equipment manuals, safety data sheets (SDS), safety procedures and safety equipment
    - records, such as test reports; audit reports; instrument history and test results; and correction tables for volume, density and pressure for a range of liquids
    - complex measuring instruments, test equipment and reference standards
    - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
    - relevant VET or other qualification/Statement of Attainment AND/OR
    - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).
- Currency can be demonstrated through:
    - performing the competency being assessed as part of current employment in trade measurement OR
    - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMREF301 Use and maintain reference standards

Modification History

Release 2. Adjustments to Application and Range of Conditions. Adjustment to Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMREF301A Use and maintain reference standards

Application

This unit of competency covers the ability to select and use appropriate reference standards of measurement in accordance with standard procedures and industry best practice. It also involves storing and transporting reference standards correctly and maintaining their integrity during all trade measurement activities.

This unit of competency is applicable to trade measurement inspectors appointed under national measurement legislation who may use reference standards of measurement for inspecting a range of pre-packaged products, trading practices or measuring instruments as part of their allocated duties. The unit also covers verifiers operating under a servicing licence who use reference standards of measurement to test and verify specific classes of measuring instruments used for trade. Inspectors and verifiers must work safely and this may require applying basic first aid, entering confined spaces, working with heavy machinery and site safety induction.

While no specific licensing or certification requirements apply to this unit at the time of publication, all inspection activity is legislated under the *National Measurement Act 1960*.

Assessment Requirements for MSMTMREF301 Use and maintain reference standards

Modification History

Release 2. Adjustments to Application and Range of Conditions. Adjustment to Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMREF301A Use and maintain reference standards

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- selecting, calibrating, using and maintaining appropriate reference standards in accordance with specified procedures on at least three (3) occasions
- maintaining the integrity of reference standards by controlling the operating environment and ensuring that all storage, transport and handling is in accordance with organisational procedures and industry best practice
- ensuring that the inspection, maintenance, calibration and documented status of reference standards are completed in accordance with organisational procedures
- selecting appropriate reference standards for specific trade measurement activities after careful consideration of the activity’s scope, and expected outcomes and limitations, including the operating environment
- validating reference standard suitability against the activity’s scope and expected outcomes in accordance with legislative requirements and organisational policy and procedures
- accessing and accurately interpreting reference standard Certificates of Verification, information about tolerances and measurement reports
- using the reference standard correctly, including conditioning and applying corrections, as required, to produce consistent and accurate measurements
- assessing results of trade measurement activities and analysing any variances from the expected outcomes to identify any isolated or systemic problems linked to the reference standard or its use
- using advanced communication and negotiation skills to:
  - explain the purpose of the trade measurement activities
  - access external equipment and resources to complete the activity
  - explain procedures and expected outcomes of activities to traders and managers
  - organise large reference standards to be dispatched ahead of visit to trader's premises
- performing specified calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general physical principles and concepts, including weight, mass, gravity, density, volume, length and area
- metrological terms, including maximum permissible errors, maximum permissible variations, traceability and uncertainty
- Australian legal units of measurement
- organisations involved in legal metrology in Australia
- hierarchy and classes of reference standards used in legal metrology
- purpose of Certificates of Verification issued under the national measurement legislation and the information contained in them
- National Measurement Institute (NMI) policy requirements and National Instrument Test Procedures and operating procedures for equipment and reference standards used in job role, including:
    - transport/storage specifications and procedures for test/specialised equipment and reference standards, and variations requiring approval
    - maintenance requirements for reference standards and test equipment, including when manufacturer's requirements are unavailable
    - procedures covering maintenance, recording and reporting faults and calibration
    - actions to be taken where legal traceability cannot be confirmed
    - actions to be taken if reference standards and test equipment are found to be defective
    - article measurement and measuring instrument test procedures
    - test conditions and possible environmental impacts on performance of reference standards and measuring instruments
    - key preparation/measurement steps in test method
    - calculation steps to give results in appropriate units and precision
    - maximum permissible errors for instruments under test and tolerances for reference standards
    - organisational safety procedures and requirements of applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
- basic first aid and site safety induction, if required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency should be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with MSMTM units dealing with the inspection or verification of trade measurement instruments and inspection of trading practices and pre-packaged products.
- Holistic assessment methods include:
  - review of maintenance and calibration records and analysis of results from trade measurement activities prepared by the candidate
  - feedback from supervisors and peers regarding the candidate's ability to use and maintain reference standards in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant procedures and specific actions required in response to given reference standard scenarios
  - observation of the candidate using and/or maintaining reference standards.
- Access is required to instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - latest versions of appropriate documentation, such as Certificates of Verification, NMI policy, National Instrument Test Procedures for using reference standards and relevant legislation
  - equipment manuals, safety data sheets (SDS), safety procedures and safety equipment
  - records, such as test reports, audit reports, instrument history and test results
  - measuring instruments, test equipment and reference standards
  - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMVER301 Verify simple measures

Modification History

Release 2. Adjustments to the Application and Range of Conditions. Adjustment to Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER301A Verify simple measures

Application

This unit of competency covers the ability to apply National Instrument Test Procedures to determine whether simple measures of a particular class are suitable for trade use and to mark them accordingly.

This unit of competency is applicable to verifiers operating under a servicing licence to test and mark a specific class of simple measures. Simple measures such as trade masses, length measures and volume measures are used in a wide variety of commerce including retail, hospitality, pharmaceuticals and laboratory services.

Under the requirements of Regulation 2.43 of the *National Trade Measurement Regulations 2009*, a servicing licensee or an employee must not verify a measure relevant to this unit unless they hold a statement of attainment for this unit of competency.

	verification		verified
		1.2	Access and correctly interpret documentation required for the verification
		1.3	Identify and access test equipment, products and consumables required for the verification
		1.4	Liaise with the trader to provide the items required on site
		1.5	Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures
		1.6	Store and transport test equipment in accordance with organisational procedures and industry best practice
		1.7	Identify relevant local workplace health and safety issues and implement appropriate control strategies
2	Evaluate simple measure performance	2.1	Evaluate whether the operating environment will impact on the performance of the simple measure
		2.2	Modify the operating environment or implement alternative arrangements to ensure reliable test conditions as necessary
		2.3	Identify the maximum permissible errors for the simple measure from the legislative requirements
		2.4	Use test equipment safely in accordance with applicable legislation and organisational procedures
		2.5	Check simple measure for compliance with the appropriate Certificates of Approval
		2.6	Inspect simple measure in accordance with relevant National Instrument Test Procedures and appropriate National Measurement Institute (NMI) guidance
		2.7	Evaluate results against prescribed performance criteria and determine if the simple measure is suitable for trade use in accordance with legislative requirements
3	Report verification	3.1	Display the verification result on the simple measure in

	results		accordance with legislative requirements
		3.2	Use test reports to present verification results in the required format
		3.3	Complete verification documentation in accordance with legislative requirements and organisational procedures
		3.4	Communicate results within the specified time and in accordance with organisational guidelines
4	Model and encourage compliance with statutory requirements	4.1	Apply organisation's quality procedures and practices to meet servicing licensee's legislative obligations
		4.2	Clarify any issues about verifier obligations with their servicing licensee and/or licensing administering authority as they arise
		4.3	Review work and seek feedback from others to confirm continuing compliance with legislative requirements
		4.4	Identify implications of non-compliance with legislative requirements
		4.5	Identify inadequacies in trader's use of measures which may contribute to non-compliance with national measurement legislation
		4.6	Explain inadequacies and possible remedial actions to trader
		4.7	Respect the rights of the trader at all times
5	Maintain statutory records	5.1	Keep accurate and complete records in accordance with servicing licensee's legislative requirements
		5.2	Ensure authorisation, training and relevant licences are current in accordance with organisational and servicing licensee's legislative requirements
		5.3	Inform the licensing administering authority of changes to personal information as required by statute

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

National Instrument Test Procedures include one or more of:	• measuring instrument test procedures • any other test procedure prescribed by the NMI
Classes of simple measures include one or more of:	• length measures • alcoholic beverage measures • lubricating oil measures • graduated measures • pharmaceutical measures • trade masses • any other simple measure prescribed by the NMI
Test equipment includes:	• reference standards of measurement • equipment, such as weighing instruments, strikes and funnels
Certificates of Approval include:	• any Certificate issued by the Chief Metrologist under Regulation 60 of the *National Measurement Regulations 1999* approving the pattern of a simple measure as being suitable for trade
Prescribed performance criteria for simple measures include:	• that the instrument is of an approved pattern • that the instrument operates within the appropriate limits of error permitted by legislation • that the instrument is used in accordance with any legislative requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Verification	Has the same meaning as Section 18GG of the *National Measurement Act 1960*
Verification marks	Verification marks for different instruments are defined in Regulations 2.28 and 2.29 of the *National Trade Measurement Regulations 2009*
Trading practices include one or more of:	• methods used for the sale of goods • using measuring instruments • position of measuring instruments • environmental factors • suitability of instrument • incorrect measurement
Legislation includes:	• national measurement legislation • applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
NMI guidance includes:	• NMI sanctioned variances to National Instrument Test Procedures for verification • updates • directives
WHS/OHS and environmental management requirements include:	• complying with WHS/OHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of material/product measured • applying any necessary hygiene controls

Release 1. Supersedes and is equivalent to MSATMVER301A Verify simple measures

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- testing and marking at least three (3) measures from one (1) or more of the following classes of simple measures:
  - length measures
  - alcoholic beverage measures
  - lubricating oil measures
  - graduated measures
  - pharmaceutical measures
  - trade masses
- accessing and correctly interpreting documentation required for verification of simple measures
- planning, scheduling, preparing for and safely conducting a verification to optimise use of resources and minimise disruption to the public and trader
- ensuring test equipment and reference standards are fit for purpose in accordance with applicable legislation and organisational procedures
- checking compliance and evaluating the performance of simple measures using appropriate Certificates of Approval, National Measurement Institute (NMI) policy and National Instrument Test Procedures, and adjusting for any impact of the operating environment and operational factors
- reliably determining if simple measures are suitable for trade use in accordance with legislative requirements
- displaying the verification result on simple measures and completing all verification documentation in accordance with legislative requirements and organisational procedures
- identifying and communicating any inadequacies in servicing licensee's organisational procedures and practices that may contribute to non-compliance with legislative requirements
- maintaining the accuracy, completeness and currency of statutory records required of servicing licensees, such as authorisation, training and relevant licences
- identifying and communicating any inadequacies in trader's use of simple measures which may contribute to non-compliance with national measurement legislation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- demonstrating professionalism and respecting the rights of the trader at all times
- using routine communication and negotiation skills to:
  - explain the verification purpose, procedures and outcomes to traders, verifiers and managers
  - inform traders of non-compliances and consequences of failing to rectify them
- using numeric skills to:
  - perform calculations involving fractions, decimals, ratios, proportions and percentages
  - use correct units and the correct number of significant figures
  - analyse performance results over a single or limited range of operating conditions
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general science principles and concepts, such as weight, mass, gravity, density, heat, temperature effects and coefficients of expansion
- metrological terms and terminology specific to simple measures, such as maximum permissible errors, traceability, error of measurement and error of indication
- details of the design and applications for one (1) class of simple measures, the components and their function
- servicing licensee requirements, including:
  - quality management system
  - licence conditions
  - maintenance of statutory records
- national measurement legislation requirements for simple measures
- safe work method statements (SWMS) for trading environments relevant to job role
- NMI policy, National Instrument Test Procedures and operating procedures for equipment, and reference standards used in job role, including:
  - purpose of test, test conditions and possible environmental impacts on performance of the simple measure
  - key preparation/measurement steps in the test method
  - maximum permissible errors for simple measures being verified
  - organisational policy and procedures for verifying simple measures, including completion of test results, verification documents and statutory records
  - organisational safety procedures and requirements of applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency should be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately. Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
- Holistic assessment methods include:
  - review of test results, verification documentation and statutory records completed by the candidate
  - feedback from supervisors and peers regarding the candidate's ability to verify the performance of simple measures in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant verification procedures, servicing licensee requirements, trader obligations and remedial actions
  - review of candidate’s responses to verification scenarios such as potential/actual non-compliances of traders and verifiers, appropriate actions, common issues and problems
  - observation of the candidate verifying simple measures.
- Access is required to simple measures, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - latest versions of appropriate documentation, such as Certificates of Verification and Approval, NMI policy, National Instrument Test Procedures for verifying simple measures and relevant legislation
  - equipment manuals, safety data sheets (SDS), safety procedures and safety equipment
  - records, such as test reports, audit reports, simple measure history and test results
  - simple measures, test equipment and reference standards
  - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMVER302 Verify simple measuring instruments

Modification History

Release 2. Corrections and adjustments to Application, Performance Criteria and Range of Conditions. Adjustment to Performance Evidence, and Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER302A Verify a simple measuring instrument

Application

This unit of competency covers the ability to apply National Instrument Test Procedures to determine whether simple measuring instruments of a particular class are suitable for trade use and then mark it accordingly.

This unit of competency is applicable to verifiers operating under a servicing licence to test and mark a specific class of simple measuring instruments. Simple measuring instruments are used in a very wide range of commerce. Measuring instruments are used to measure liquids in tanks; multi-dimensional measuring instruments are used to measure the cubic measurements of packages for freight; length/area instruments are used to accurately measure a wide range of articles sold by reference to those measurements; quality measuring instruments are used to measure certain characteristics of commodities such as protein content of grain; and point of sale systems (POS systems) and control systems for liquid-measuring instruments (Consoles) are systems connected to approved measuring instruments that are used to transform or supplement displayed and/or printed measurement data and/or control certain functions of the connected instrument.

Under the requirements of Regulation 2.43 of the *National Trade Measurement Regulations 2009*, a servicing licensee or an employee must not verify a measuring instrument relevant to this unit unless they hold a statement of attainment for this unit of competency.

Assessment Requirements for MSMTMVER302 Verify simple measuring instruments

Modification History

Release 2. Corrections and adjustments to Application, Performance Criteria and Range of Conditions. Adjustment to Performance Evidence, and Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER302A Verify a simple measuring instrument

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- testing and marking at least three (3) instruments from one (1) or more of the following classes of simple measuring instruments:
  - beverage measuring instruments
  - protein quality measuring instruments
  - grain density measuring instrument
  - sugar quality measuring instruments
  - length measuring instruments
  - area measuring instruments
  - multi-dimensional measuring instruments
  - vehicle tanks
  - milk tanks
  - point of sale systems
  - control systems
  - any other simple measuring instrument prescribed by the NMI
- accessing and correctly interpreting documentation required for verification of simple measuring instruments
- planning, scheduling, preparing for and safely conducting a verification to optimise use of resources and minimise disruption to the public and trader
- ensuring test equipment, reference standards or reference materials are fit for purpose in accordance with applicable legislation and organisational procedures
- checking compliance and evaluating the performance of simple measuring instruments using appropriate Certificates of Approval, National Measurement Institute (NMI) policy and National Instrument Test Procedures, and adjusting for any impact of the operating environment and operational factors
- reliably determining if simple measuring instruments are suitable for trade use in accordance with legislative requirements
- displaying the verification result on the instrument and completing all verification documentation in accordance with legislative requirements and organisational procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- identifying and communicating any inadequacies in servicing licensee's organisational procedures and practices that may contribute to non-compliance with legislative requirements
- maintaining the accuracy, completeness and currency of statutory records required of servicing licensees, such as authorisation, training and relevant licences
- identifying and communicating any inadequacies in trader's use of simple measuring instruments which may contribute to non-compliance with national measurement legislation
- demonstrating professionalism and respecting the rights of the trader at all times
- using routine communication and negotiation skills to:
  - explain the verification purpose, procedures and outcomes to traders, verifiers and managers
  - inform traders of non-compliances and consequences of failing to rectify them
- using numeric skills to:
  - perform calculations involving fractions, decimals, ratios, proportions and percentages
  - use correct units and the correct number of significant figures
  - analyse performance results over a single or limited range of operating conditions
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general science principles and concepts, such as weight, mass, gravity, density, heat, temperature effects and coefficients of expansion
- metrological terms and terminology specific to simple measuring instruments, such as maximum permissible errors and traceability
- details of the design and applications for one (1) class of simple measuring instruments, the components and their function
- servicing licensee requirements, including:
  - quality management system
  - licence conditions
  - maintenance of statutory records
- national measurement legislation requirements for simple measuring instruments
- safe work method statements (SWMS) for trading environments relevant to job role
- NMI policy, National Instrument Test Procedures and operating procedures for equipment, and reference standards used in job role, including:
  - purpose of test, test conditions and possible environmental impacts on performance of the simple measure
  - key preparation/measurement steps in the test method
  - calculation steps to give results in appropriate units and precision

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- maximum permissible errors for simple measuring instruments being verified
- organisational policy and procedures for verifying simple measuring instruments, including completion of test results, verification documents and statutory records
- organisational safety procedures and requirements of applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency is to be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
- Holistic assessment methods include:
  - review of test results, verification documentation and verifier statutory records completed by the candidate
  - feedback from supervisors and peers regarding the candidate's ability verify the performance of simple measuring instruments in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant verification procedures, servicing licensee requirements, trader obligations and remedial actions
  - review of candidate’s responses to verification scenarios, such as potential/actual non-compliances of traders and verifiers, appropriate actions, common issues and problems
  - observation of the candidate verifying simple measuring instruments.
- Access is required to simple measuring instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - latest versions of appropriate documentation, such as Certificates of Verification and Approval, NMI policy, National Instrument Test Procedures for verifying simple measuring instruments and relevant legislation
  - equipment manuals, safety data sheets (SDS), safety procedures and safety equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - records, such as test reports, instrument history and test results
  - simple measuring instruments, test equipment and reference standards, vehicle tanks and milk tanks
  - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMVER401 Verify weighing instruments

Modification History

Release 2. Adjustments to the Application and Range of Conditions. Adjustment to Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER401A Verify a limited weighing instrument

Application

This unit of competency covers the ability to apply National Instrument Test Procedures to determine whether non-automatic weighing instruments or catchweighers of a particular class are suitable for trade use and to mark it accordingly.

This unit of competency is applicable to verifiers operating under a servicing licence to test and mark a specific class of weighing instruments. Weighing instruments are used in a very wide range of commerce. For example, weighing instruments are used to measure a wide range of products at the point of sale, as an order or as a pre-packaged article. There is a large range of environments where these instruments are used, including pharmaceutical laboratories, supermarkets, fresh food retailers, packing houses, the chemical/petroleum industry, construction, mining and other extractive industry sectors.

Depending on the site, verifiers may be required to meet additional local safety requirements, such as basic first aid, confined space entry, working with heavy machinery, working at heights and completing site safety induction. Verifiers may take up to one day perform to verifications in routine environments.

Under the requirements of Regulation 2.43 of the *National Trade Measurement Regulations 2009*, a servicing licensee or an employee must not verify a measuring instrument relevant to this unit unless they hold a statement of attainment for this unit of competency.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

National Instrument Test Procedures include one or more of:	• measuring instrument test procedures • any other test procedure prescribed by the NMI
Classes of weighing instruments include one or more of:	• non-automatic weighing instruments tested without substitution loads • automatic Class Y(a) Catchweighers • automatic Class Y(b) Catchweighers • other weighing instrument prescribed by the NMI
Test equipment includes:	• reference standards of measurement
Certificates of Approval include:	• any Certificate issued by the Chief Metrologist under Regulation 60 of the *National Measurement Regulations 1999* approving the pattern of a weighing instrument as being suitable for trade use

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Prescribed performance criteria for weighing instruments include:	• that the instrument is of an approved pattern • that the instrument operates within the appropriate limits of error permitted by legislation • that the instrument is used in accordance with any legislative requirements
Verification	Has the same meaning as Section 18GG of the *National Measurement Act 1960*
Verification marks	Verification marks for different instruments are defined in Regulations 2.28 and 2.29 of the *National Trade Measurement Regulations 2009*
Trading practices include one or more of:	• methods used for the sale of goods • using measuring instruments • position of measuring instruments • environmental factors • suitability of instrument • incorrect measurement
Legislation includes:	• national measurement legislation • applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
NMI guidance includes:	• NMI sanctioned variances to National Instrument Test Procedures for verification • updates • directives
WHS/OHS and environmental management requirements include:	• complying with WHS/OHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of material/product measured • applying any necessary hygiene controls

Assessment Requirements for MSMTMVER401 Verify weighing instruments

Modification History

Release 2. Adjustments to the Application and Range of Conditions. Adjustment to Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER401A Verify a limited weighing instrument

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- testing and marking at least three (3) instruments from one (1) or more of the following classes of weighing instruments:
  - non-automatic weighing instruments ≥3 tonne
  - automatic Class Y(a) Catchweighers
  - automatic Class Y(b) Catchweighers
- accessing and correctly interpreting documentation required for verification of weighing instruments
- planning, scheduling, preparing for and safely conducting a verification to optimise use of resources and minimise disruption to the public and trader
- ensuring test equipment and reference standards are fit for purpose in accordance with applicable legislation and organisational procedures
- checking compliance and evaluating the performance of weighing instruments using appropriate Certificates of Approval, National Measurement Institute (NMI) policy and National Instrument Test Procedures, and adjusting for any impact of the operating environment and operational factors
- reliably determining if weighing instruments are suitable for trade use in accordance with legislative requirements
- displaying the verification result on the instrument and completing all verification documentation in accordance with legislative requirements and organisational procedures
- identifying and communicating any inadequacies in servicing licensee's organisational procedures and practices that may contribute to non-compliance with legislative requirements
- maintaining the accuracy, completeness and currency of statutory records required of servicing licensees, such as authorisation, training and relevant licences
- identifying and communicating any inadequacies in trader's use of weighing instruments which may contribute to non-compliance with national measurement legislation
- demonstrating professionalism and respecting the rights of the trader at all times
- using communication and negotiation skills to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - explain the verification purpose, procedures and outcomes to traders, verifiers and managers
    - inform traders of non-compliances and consequences of failing to rectify them
    - access external equipment and resources to complete the verification
- using numeric skills to perform calculations involving:
    - fractions, decimals, ratios, proportions and percentages
    - scientific notation, correct units and the correct number of significant figures
    - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general science principles and concepts, including weight, mass and gravity
- metrological terms and terminology specific to weighing instruments, including maximum permissible errors, traceability, uncertainty, maximum permissible difference, eccentricity, repeatability, error of measurement, error of indication and linearisation
- details of the design and applications for one (1) class of weighing instruments, the components and their function
- servicing licensee requirements, including:
    - quality management system
    - licence conditions
    - maintenance of statutory records
- national measurement legislation applicable to weighing instruments
- safe work method statements (SWMS) for trading environments relevant to job role
- NMI policy, National Instrument Test Procedures and operating procedures for equipment, and reference standards used in job role, including:
    - purpose of test, test conditions and possible environmental impacts on performance of the instrument
    - key preparation/measurement steps in test method
    - calculation steps to give results in appropriate units and precision
    - maximum permissible errors for weighing instruments under test
    - organisational policy and procedures for verifying weighing instruments, including completion of test results, verification documents and statutory records
    - organisational safety procedures and requirements of applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
- basic first aid and site safety induction, if required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency is to be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
- Holistic assessment methods include:
  - review of test results, verification documentation and verifier statutory records completed by the candidate
  - feedback from supervisors and peers regarding the candidate's ability to verify the performance of weighing instruments in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant verification procedures, servicing licensee requirements, trader obligations and remedial actions
  - review of candidate’s responses to verification scenarios, such as potential/actual non-compliances of traders and verifiers, appropriate actions, common issues and problems
  - observation of the candidate verifying weighing instruments.
- Access is required to weighing instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - latest versions of appropriate documentation, such as Certificates of Verification and Approval, NMI policy, National Instrument Test Procedures for verifying weighing instruments and relevant legislation
  - equipment manuals, safety data sheets (SDS), safety procedures and safety equipment
  - records, such as test reports, audit reports, instrument history and test results
  - weighing instruments, test equipment and reference standards
  - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMVER402 Verify liquid measuring instruments using volume measures

Modification History

Release 2. Adjustments to the Application and Range of Conditions. Adjustment to the Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER402A Verify liquid measuring instruments using volume measures

Application

This unit of competency covers the ability to apply National Instrument Test Procedures to determine whether liquid measuring instruments of a particular class, tested using volume measures, are suitable for trade use and to mark them accordingly.

This unit of competency is applicable to verifiers operating under a servicing licence to test and mark a specific class of liquid measuring instruments tested using a volume measure only. Liquid measuring instruments are used in a very wide range of commerce. For example, petrol dispensers measure fuel at the point of sale and flowmeters are used to measure bulk commodities, such as milk, chemicals and petroleum products during production and distribution. The verification tests are performed over extended durations in non-routine and hazardous environments.

Depending on the site, verifiers may be required to meet additional local safety requirements such as basic first aid, confined space entry, working with hazardous materials, working at heights, working with heavy machinery, use of appropriate workplace clearance forms and completing site safety induction.

Under the requirements of Regulation 2.43 of the *National Trade Measurement Regulations 2009*, a servicing licensee or an employee must not verify a measuring instrument relevant to this unit unless they hold a statement of attainment for this unit of competency.

Pre-requisite Unit

Nil

Competency Field

Trade measurement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Prepare for verification	1.1	Identify and evaluate the type of instrument to be verified
		1.2	Access and correctly interpret documentation required for the verification
		1.3	Identify and access test equipment, products and consumables required for the verification
		1.4	Liaise with the trader to provide the items required on site
		1.5	Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures
		1.6	Store and transport test equipment in accordance with organisational procedures and industry best practice
		1.7	Identify relevant local workplace health and safety issues and implement appropriate control strategies
2	Evaluate liquid measuring instrument performance	2.1	Evaluate whether the operating environment will impact on the instrument performance
		2.2	Modify the operating environment or implement alternative arrangements to ensure reliable test conditions as necessary
		2.3	Identify the maximum permissible errors for the instrument from the legislative requirements
		2.4	Use test equipment safely in accordance with applicable legislation and organisational procedures
		2.5	Check instrument for compliance with the appropriate Certificates of Approval

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.6	Inspect the instrument in accordance with relevant National Instrument Test Procedures and appropriate National Measurement Institute (NMI) guidance
		2.7	Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
3	Report verification results	3.1	Display the verification result on the instrument in accordance with legislative requirements
		3.2	Use test reports to present verification results in the required format
		3.3	Complete verification documentation in accordance with legislative requirements and organisational procedures
		3.4	Communicate results within the specified time and in accordance with organisational guidelines
4	Model and encourage compliance with statutory requirements	4.1	Apply organisation's quality procedures and practices to meet servicing licensee's legislative obligations
		4.2	Clarify any issues about verifier obligations with their servicing licensee and/or licensing administering authority as they arise
		4.3	Review work and seek feedback from others to confirm continuing compliance with legislative requirements
		4.4	Identify implications of non-compliance with legislative requirements
		4.5	Identify inadequacies in trader's use of instruments which may contribute to non-compliance with national measurement legislation
		4.6	Explain inadequacies and possible remedial actions to trader
		4.7	Respect the rights of the trader at all times
5	Maintain statutory	5.1	Keep accurate and complete records in accordance with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

records		servicing licensee's legislative requirements
	5.2	Ensure authorisation, training and relevant licences are current in accordance with organisational and servicing licensee's legislative requirements
	5.3	Inform the licensing administering authority of changes to personal information as required by statute

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

National Instrument Test Procedures include one or more of:	• measuring instrument test procedures • any other test procedure prescribed by the NMI
Classes of liquid measuring instruments using volume measures include one or more of:	• fuel dispensers other than LPG dispensers • milk flowmeters tested using a volume measure • any other liquid measuring instrument prescribed by the NMI
Test equipment includes:	• reference standards of measurement • equipment, such as a small measure, dummy nozzle, safety equipment and hand tools
Certificates of Approval include:	• any Certificate issued by the Chief Metrologist under Regulation 60 of the *National Measurement Regulations 1999* approving the pattern of a liquid measuring instrument using volume measures as being suitable for trade use

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Prescribed performance criteria for liquid measuring instruments include:	• that the instrument is of an approved pattern • that the instrument operates within the appropriate limits of error permitted by legislation • that the instrument is used in accordance with any legislative requirements
Verification	Has the same meaning as Section 18GG of the *National Measurement Act 1960*
Verification marks	Verification marks for different instruments are defined in Regulations 2.28 and 2.29 of the *National Trade Measurement Regulations 2009*
Trading practices include one or more of:	• methods used for the sale of goods • using measuring instruments • position of measuring instruments • environmental factors • suitability of instrument • incorrect measurement
Legislation includes:	• national measurement legislation • applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
NMI guidance includes:	• NMI sanctioned variances to National Instrument Test Procedures for verification • updates • directives
WHS/OHS and environmental management requirements include:	• complying with WHS/OHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of material/product measured • applying any necessary hygiene controls

Assessment Requirements for MSMTMVER402 Verify liquid measuring instruments using volume measures

Modification History

Release 2. Adjustments to the Application and Range of Conditions. Adjustment to the Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER402A Verify liquid measuring instruments using volume measures

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- testing and marking at least three (3) instruments from one (1) or more of the following classes of liquid measuring instruments using volume measures:
  - fuel dispensers other than liquid petroleum gas (LPG) dispensers
  - milk flowmeters
  - flowmeters used for non petroleum products
- accessing and correctly interpreting documentation required for verification of liquid measuring instruments
- planning, scheduling, preparing for and safely conducting a verification to optimise use of resources and minimise disruption to the public and trader
- ensuring test equipment and reference standards are fit for purpose in accordance with applicable legislation and organisational procedures
- checking compliance and evaluating the performance of liquid measuring instruments using volume measures using appropriate Certificates of Approval, National Measurement Institute (NMI) policy and National Instrument Test Procedures, and adjusting for any impact of the operating environment and operational factors
- reliably determining if liquid measuring instruments are suitable for trade use in accordance with legislative requirements
- displaying the verification result on the instrument and completing all verification documentation in accordance with legislative requirements and organisational procedures
- identifying and communicating any inadequacies in servicing licensee's organisational procedures and practices that may contribute to non-compliance with legislative requirements
- maintaining the accuracy, completeness and currency of statutory records required of servicing licensees such as authorisation, training and relevant licences
- identifying and communicating any inadequacies in trader's use of liquid measuring instruments which may contribute to non-compliance with national measurement legislation
- demonstrating professionalism and respecting the rights of the trader at all times
- using communication and negotiation skills to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - explain the verification purpose, procedures and outcomes to traders, verifiers and managers
    - inform traders of non-compliances and consequences of failing to rectify them
    - access external equipment and resources to complete the verification
- using numeric skills to perform calculations involving:
    - fractions, decimals, ratios, proportions and percentages
    - scientific notation, correct units and the correct number of significant figures, calculation of uncertainties
    - evaluation of formulae containing powers, exponents and logarithms functions
    - preparation and interpretation of linear graphs
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- general science principles and concepts, including:
    - physical states (solid, liquid and gas), weight, mass, gravity and density
    - pressure, pressure differential, backpressure and head pressure, fluid flow and viscosity
    - temperature effects and coefficients of expansion, flashpoint, boiling point and ice point
- metrological terms and terminology specific to liquid measuring instruments, including maximum permissible errors, maximum permissible difference and maximum permissible variation, traceability, repeatability, uncertainty, error of measurement and error of indication, meter creep, hose dilation, temperature correction, linearization and gas elimination
- basic details of the design, application and function of components used in one class of liquid measuring instruments
- servicing licensee requirements, including:
    - quality management system
    - licence conditions
    - maintenance of statutory records
- national measurement legislation applicable to liquid measuring instruments
- safe work method statements (SWMS) for trading environments relevant to job role
- NMI policy, National Instrument Test Procedures and operating procedures for equipment, and reference standards used in job role, including:
    - test conditions and possible environmental impacts on performance of the instrument
    - key preparation/measurement steps in test method
    - calculation steps to give results in appropriate units and precision

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - maximum permissible errors for liquid measuring instruments under test
  - safety principles and procedures relevant to liquid measuring instruments
  - organisational policy and procedures for verifying liquid measuring instruments, including completion of test results, verification documents and statutory records
  - organisational safety procedures and requirements of applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
- basic first aid and site safety induction, if required.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency should be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
- Holistic assessment methods include:
  - review of test results, verification documentation and verifier statutory records completed by the candidate
  - feedback from supervisors and peers regarding the candidate's ability to verify the performance of liquid measuring instruments using volume measures in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant verification procedures, servicing licensee requirements, trader obligations and remedial actions
  - review of candidate’s responses to verification scenarios, such as potential/actual non-compliances of traders and verifiers, appropriate actions, common issues and problems
  - observation of the candidate verifying liquid measuring instruments using volume measures.
- Access is required to liquid measuring instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - latest versions of appropriate documentation, such as Certificates of Verification and Approval, NMI policy, National Instrument Test Procedures for verifying liquid measuring instruments and relevant legislation
  - workplace clearance forms, and correction tables for volume, density and pressure for a range of liquids
  - equipment manuals, safety data sheets (SDS), safety procedures and safety equipment
  - records, such as test reports, audit reports, instrument history and test results
  - liquid measuring instruments using volume measures; test equipment, such as pumps, funnels and hoses; and reference standards
  - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification)
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMVER403 Verify Inspectors' Class reference standards

Modification History

Release 2. Minor adjustments/corrections to all sections, inc. performance and knowledge evidence. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER403A Verify inspector's class reference standards

Application

This unit of competency covers the ability to calibrate reference standards to the Inspectors' Class level using standard calibration procedures. These procedures specify all associated reference standards, equipment and methods to be used and the required parameters, quantities and ranges to be tested, including the criteria for validation or rejection. Standard calibration procedures are sometimes complex and lengthy and must be performed in a methodical and standard manner. Personnel are not permitted to deviate from explicit instructions in any manner, nor modify the procedure, nor substitute alternative equipment.

This unit of competency is applicable to laboratory and calibration technicians who carry out testing and/or calibrations using standard calibration methods in National Association of Testing Authorities (NATA) accredited laboratories. They work under limited supervision and their results are interpreted and checked by the laboratory supervisor, quality officer or designated signatory

While no specific licensing or certification requirements apply to this unit at the time of publication, all inspection activity is legislated under the *National Measurement Act 1960.*

Pre-requisite Unit

Trade measurement

Unit Sector

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

essential outcomes		demonstrate achievement of the element	
1	Receive and schedule Inspectors' Class reference standards for calibration	1.1	Identify the level of verification required by the client
		1.2	Evaluate and implement appropriate strategies where the standard's suitability for purpose does not meet client expectations
		1.3	Enter details for the Inspectors' Class reference standard into the organisation's information management system and apply appropriate tracking mechanisms
		1.4	Process 'urgent' calibration requests in accordance with organisational policy and procedures
		1.5	Maintain confidentiality of all client and organisation data and information
		1.6	Ensure that information provided to clients is accurate, relevant and authorised for release
		1.7	Deal with customers politely, efficiently and in accordance with organisational policy and procedures
2	Prepare for calibration	2.1	Identify and access the appropriate procedure for the calibration in accordance with organisational policy and procedures
		2.2	Identify possible sources of measurement error during calibration and implement appropriate control strategies
		2.3	Condition Inspectors' Class reference standards and high order reference standards in accordance with calibration and organisational procedures, where applicable
		2.4	Identify hazards and use the specified personal protective equipment, safety equipment and procedures
		2.5	Evaluate the suitability of high order reference standards and measuring equipment selected for the calibration against the organisation's specification requirements and calibration procedure
		2.6	Document calibration status, report out-of-calibration test equipment/high order reference standards and quarantine where required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Perform calibration	3.1	Assess the design and appearance of an Inspectors' Class reference standard against prescribed standards
		3.2	Perform calibration without variance according to the documented procedure to ensure repeatability of measurement
		3.3	Confirm readings are the result of a valid measurement and record data as required
		3.4	Adjust Inspectors' Class reference standard, if applicable
4	Analyse and report calibration results	4.1	Estimate and document uncertainty of measurement in accordance with organisational policy and procedures, if required
		4.2	Identify prescribed performance criteria for the Inspectors' Class reference standard and evaluate against calibration results
		4.3	Analyse calibration results to confirm they are within the maximum permissible variation and uncertainty for the scope of calibration
		4.4	Analyse any variances from the performance criteria to identify isolated or systemic problems with the Inspectors' Class reference standards or calibration procedure
		4.5	Record the results of each test/calibration accurately, unambiguously and objectively
5	Finalise calibration	5.1	Attach calibration labels, equipment stickers, quality control tags and tamper resistant seals as required by organisational procedures
		5.2	Prepare and submit to the laboratory supervisor a final report on the calibration detailing procedure, traceability, results and all other required information
		5.3	Store test equipment/high order reference standards and calibration records in accordance with organisational policy and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5.4 Identify and report unserviceable equipment or high order reference standards to the laboratory supervisor

5.5 Clean equipment and high order reference standards in accordance with organisational policy and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Inspectors' Class reference standards include one or more of:

- Inspectors' Classes of reference standards defined in the *National Measurement Regulations 1999*:
  - mass – Inspectors' Class 1, 2 and 3
  - length – Inspector's Class 1
  - volume – Inspector's Class 1

Standard calibrations include one or more of:

- testing and/or calibrating reference standards using standard methods and procedures

Legislation and standards include:

- national measurement legislation
- relevant national/international standards including ISO/IEC 17025
- applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation

Policy and procedures include:

- NMI policies and procedures
- NMI monographs
- Verifying authority internal policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

WHS/OHS and environmental management requirements include:	• complying with WHS/OHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of any materials used

Unit Mapping Information

Release 2. Minor adjustments/corrections to all sections, inc. performance and knowledge evidence. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER403A Verify inspector's class reference standards

Assessment Requirements for MSMTMVER403 Verify Inspectors' Class reference standards

Modification History

Release 2. Minor adjustments/corrections to all sections, inc. performance and knowledge evidence. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER403A Verify inspector's class reference standards

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- calibrating and verifying the following Inspectors’ Class level reference standards using standard calibration procedures:
  - at least one (1) mass Inspectors’ Class 1, 2 or 3 reference standard (single or double substitution)
  - at least one (1) Inspectors’ Class 1 length reference standard (flexible or rigid)
  - at least one (1) Inspectors’ Class 1 volume reference standard (gravimetric or volumetric)
- receiving and scheduling Inspectors’ Class reference standards for calibration in accordance with organisation policy and procedures
- accessing and correctly interpreting documentation required for verifications and calibration of Inspectors’ Class reference standards
- preparing for calibrations by considering possible hazards, sources of measurement error, control strategies, conditioning of standards and evaluating/documenting the suitability of high order reference standards and measuring equipment selected for use
- using the specified personal protective equipment, safety equipment and procedures to safely conduct calibrations
- assessing the design, suitability and appearance of Inspectors’ Class reference standards
- performing calibrations, without variance, according to the standard methods, using prescribed high order reference standards, Certificates of Verification, National Measurement Institute (NMI) policy and procedures, NMI monographs, and organisational procedures
- if applicable, making adjustments to Inspectors’ Class reference standards
- examining each calibration step critically to ensure repeatability and validity of data
- estimating uncertainties, comparing calibration results with prescribed performance criteria for the Inspectors’ Class reference standard and confirming that results are within maximum permissible variation and uncertainty
- analysing any variances in results from the performance criteria to identify isolated or systemic problems with the Inspectors’ Class reference standards or calibration procedure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- attaching all required calibration labels, equipment stickers, quality control tags and tamper resistant seals on the standard
- completing all calibration documentation and reporting in accordance with legislative requirements and organisational procedures
- cleaning and storing test equipment/high order reference standards and documenting their status in accordance with organisational policy and procedures
- using communication skills to:
  - deal with customers politely and efficiently
  - communicate with the laboratory manager
- performing specified calculations involving:
  - fractions, decimals, ratios, proportions and percentages
  - scientific notation, correct units and the correct number of significant figures
  - interpretation of statistical quantities, such as mean, median, mode, range, variance and standard deviation
  - uncertainties
  - use of calibration and correction charts, determination of regression line equations and correlation coefficients
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- purpose of metrology and calibration, including common terminology, concepts, principles, procedures and applications
- detailed knowledge of specific metrology terms and principles, including uncertainty, maximum permissible variations, traceability and legal requirements for traceability
- NATA's and the NMI’s role in Australia’s measurement and testing system, and measurement standards laboratories
- requirements for the competence of testing and calibration laboratories (for example, AS ISO/IEC 17025) as they affect job role and responsibilities
- national measurement legislation applicable to verification of Inspectors’ Class reference standards
- hierarchy and appropriate selection of reference standards
- NMI policy, procedures, monographs and operating procedures for equipment, and reference standards used in job role
- detailed knowledge of calibration procedures (equipment, measurement steps, test conditions, environmental impacts, calculations and uncertainty treatment) to give valid results with appropriate accuracy, precision and units
- non-conformance/non-compliance procedures and protocols associated with equipment, reference material and calibration procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- troubleshooting procedures for equipment and test methods
- handling, transport, storage and documentation of reference and working standards
- laboratory environmental control requirements
- lines of communication and reporting procedures.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency should be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
- Holistic assessment methods include:
  - review of calibration results, calculations and verification reports prepared by the candidate
  - feedback from supervisors regarding the candidate's ability to verify Inspectors’ Class reference standards in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant metrology/calibration terms, principles and procedures, common calibration issues and problems
  - observation of the candidate calibrating Inspectors’ Class reference standards.
- Access is required to high order and Inspectors’ Class reference standards, test equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - latest versions of appropriate documentation, such as high order reference standards, Certificates of Verification and Approval, NMI policy, test procedures for verifying Inspectors’ Class reference standards, validated/authorised methods for standard calibrations and relevant legislation
  - equipment manuals, safety data sheets (SDS), safety procedures and safety equipment
  - records, such as test reports, audit reports, reference standard history and test results
  - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMTMVER501 Verify complex measuring instruments

Modification History

Release 2. Adjustments to Application, Performance Criteria and Range of Conditions. Adjustment to Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER501A Verify a complex measuring instrument

Application

This unit of competency covers the ability to apply National Instrument Test Procedures to determine whether complex measuring instruments of a particular class are suitable for trade use and to mark them accordingly. It involves the ability to perform significant calculations to assess instrument performance and conduct tests that may require coordination of a range of resources over extended durations in hazardous environments.

This unit of competency is applicable to verifiers operating under a servicing licence to test and mark a specific class of complex measuring instruments. Complex measuring instruments are used in a wide range of heavy industries. For example, automatic rail weighbridges, belt weighers, totalising hopper weighers, bulk fuel and liquid petroleum gas (LPG) flowmeters are used throughout the mining, road/rail freight and petroleum/gas industry sectors.

Verifications may be performed over extended durations up to five days in non-routine and hazardous environments. Verifiers must work safely which may include applying basic first aid, confined space entry, working with hazardous materials, working safely in hazardous environments, working with heavy machinery, use of appropriate workplace clearance forms, safety induction, working at heights and biosecurity issues.

Under the requirements of Regulation 2.43 of the *National Trade Measurement Regulations 2009*, a servicing licensee or an employee must not verify a measuring instrument relevant to this unit unless they hold a statement of attainment for this unit of competency.

Pre-requisite Unit

Nil

Competency Field

Trade measurement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Prepare for verification	1.1	Identify and evaluate the type of instrument to be verified
		1.2	Access and correctly interpret documentation required for the verification
		1.3	Identify and access test equipment, products and consumables required for the verification
		1.4	Ensure specified test equipment is fit for purpose in accordance with applicable legislation and organisational procedures
		1.5	Store and transport test equipment in accordance with organisational procedures and industry best practice
		1.6	Develop a verification strategy to maximise resources and minimise time to complete the instrument verification
2	Liaise with the trader to schedule complex tests	2.1	Discuss testing arrangements with site controller where applicable
		2.2	Identify relevant local workplace, health and safety issues and implement appropriate control strategies
		2.3	Discuss the verification strategy with the trader to minimise its impact on the trader's normal operations
		2.4	Arrange site clearances and suitable scheduling for tests
		2.5	Negotiate access to trader's equipment, materials and support personnel required for testing to be available on site
		2.6	Arrange for any equipment to be provided by the trader, if required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Initiate verification	3.1	Identify the site controller and explain/review the purpose of the verification
		3.2	Review verification strategy to ensure there is minimal disruption to the public and/or trader
		3.3	Communicate verification strategy to personnel supporting the verification
		3.4	Identify locations for product return or disposal, if applicable
		3.5	Evaluate the impacts of the operating environment on the instrument performance or test results and implement corrective actions as necessary
		3.6	Identify operational factors impacting on instrument performance or test result and implement corrective actions as necessary
4	Evaluate complex measuring instrument performance	4.1	Identify the maximum permissible errors for the instrument from the legislative requirements
		4.2	Manage and review resources to maintain verification timelines
		4.3	Provide effective communication to ensure relevant personnel are informed of variations to the verification strategy and verification progress
		4.4	Check instrument for compliance with the appropriate Certificates of Approval
		4.5	Test the instrument in accordance with relevant National Instrument Test Procedures and appropriate National Measurement Institute (NMI) guidance
5	Analyse verification results	5.1	Perform specified calculations to determine a performance result for the instrument with appropriate accuracy, precision and significant figures
		5.2	Use graphical and statistical analysis to determine unknowns as necessary

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		5.3	Ensure calculations are consistent with estimations and reasonable expectations
		5.4	Evaluate results against prescribed performance criteria and determine if the instrument is suitable for trade use in accordance with legislative requirements
6	Report verification results	6.1	Display the verification result on the instrument in accordance with legislative requirements
		6.2	Use test reports to present verification results in the required format
		6.3	Complete verification documentation in accordance with legislative requirements and organisational procedures
		6.4	Communicate results within the specified time and in accordance with organisational guidelines
7	Model and encourage compliance with statutory requirements	7.1	Apply organisation's quality procedures and practices to meet servicing licensee's legislative obligations
		7.2	Clarify any issues about verifier obligations with their servicing licensee and/or licensing administering authority as they arise
		7.3	Review work and seek feedback from others to confirm continuing compliance with legislative requirements
		7.4	Identify implications of non-compliance with legislative requirements
		7.5	Identify inadequacies in trader's use of instruments which may contribute to non-compliance with national measurement legislation
		7.6	Explain inadequacies and possible remedial actions to trader
		7.7	Respect the rights of the trader at all times
8	Maintain statutory records	8.1	Keep accurate and complete records in accordance with servicing licensee's legislative requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

8.2 Ensure authorisation, training and relevant licences are current in accordance with organisational and servicing licensee's legislative requirements

8.3 Inform the licensing administering authority of changes to personal information as required by statute

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

National Instrument Test Procedures include one or more of:

- measuring instrument test procedures
- any other test procedure prescribed by the NMI

Classes of complex measuring instruments include one or more of:

- non-automatic weighing instruments >3 tonne
- LPG dispensers
- bulk LPG flowmetering systems
- bulk flowmetering systems for liquid hydrocarbons other than LPG
- bulk flowmetering systems for liquid products **other than** liquid hydrocarbons
- dispensers and flowmetering systems for gaseous products (excluding utility meters)
- automatic rail weighbridges
- continuous totalising automatic weighing instruments (belt weighers)
- discontinuous totalising hopper weighing instruments
- any other complex measuring instrument prescribed by the NMI

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Test equipment includes:	• reference standards of measurement • equipment, such as weighing instruments, substitution load, rail wagons, trains, control instruments, quantity of material normally weighed, two-way communication, pumping units, LPG cylinders, hydrometer pressure vessel, master meter, hoses, fittings and tankers
Certificates of Approval include:	• any Certificate issued by the Chief Metrologist under Regulation 60 of the *National Measurement Regulations 1999* approving the pattern of a complex weighing instrument as being suitable for trade use
Prescribed performance criteria for complex measuring instruments include:	• that the instrument is of an approved pattern • that the instrument operates within the appropriate limits of error permitted by legislation • that the instrument is used in accordance with any legislative requirements
Verification	Has the same meaning as Section 18GG of the *National Measurement Act 1960*
Verification marks	Verification marks for different instruments are defined in Regulations 2.28 and 2.29 of the *National Trade Measurement Regulations 2009*
Trading practices include one or more of:	• methods used for the sale of goods • using measuring instruments • position of measuring instruments • environmental factors • suitability of instrument • incorrect measurement
Legislation includes:	• national measurement legislation • applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
NMI guidance includes:	• NMI sanctioned variances to National Instrument Test Procedures for verification • updates

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• directives
WHS/OHS and environmental management requirements include:	• complying with WHS/OHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of material/product measured • applying any necessary hygiene controls

Unit Mapping Information

Release 2. Adjustments to Application, Performance Criteria and Range of Conditions. Adjustment to Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER501A Verify a complex measuring instrument

Assessment Requirements for MSMTMVER501 Verify complex measuring instruments

Modification History

Release 2. Adjustments to Application, Performance Criteria and Range of Conditions. Adjustment to Assessment Conditions. Equivalent.

Release 1. Supersedes and is equivalent to MSATMVER501A Verify a complex measuring instrument

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- testing and marking at least one (1) complex measuring instrument
- accessing and correctly interpreting documentation required for verification of a complex measuring instrument
- ensuring test equipment and reference standards are fit for purpose in accordance with applicable legislation and organisational procedures
- planning, scheduling, preparing for and safely conducting a verification to optimise use of resources and minimise disruption to the public and trader
- checking compliance and evaluating the performance of a complex measuring instrument using appropriate Certificates of Approval, National Measurement Institute (NMI) policy and National Instrument Test Procedures, and adjusting for any impact of the operating environment and operational factors
- using specified calculations, graphical and statistical analysis to determine the performance result for a complex measuring instrument
- reliably determining if a complex measuring instrument is suitable for trade use in accordance with legislative requirements
- displaying the verification result on the instrument and completing all verification documentation in accordance with legislative requirements and organisational procedures
- identifying and communicating any inadequacies in servicing licensee's organisational procedures and practices that may contribute to non-compliance with legislative requirements
- maintaining the accuracy, completeness and currency of statutory records required of servicing licensees, such as authorisation, training and relevant licences
- identifying and communicating any inadequacies in trader's use of complex instruments which may contribute to non-compliance with national measurement legislation
- demonstrating professionalism and respecting the rights of the trader at all times
- using advanced communication and negotiation skills to:
  - explain verification procedures and verification outcomes to traders and managers
  - arrange site clearances, gain cooperation of site controllers and schedule complex tests
  - access external equipment and resources to complete the inspection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - organise large equipment to be dispatched ahead of a verification visit, when necessary
- using numerical skills to perform specified calculations involving:
    - fractions, decimals, ratios, proportions and percentages
    - evaluation of formulae containing powers, exponents and logarithms functions
    - use of scientific notation, correct units and correct number of significant figures
    - determination of regression line equations and correlation coefficients
    - preparation and interpretation of complex control charts and frequency distribution plots
- maintaining the security and confidentiality of data in accordance with organisational and regulatory requirements
- reporting results in the required formats and expected timeframe
- working safely.

Knowledge Evidence

- Must provide evidence that demonstrates knowledge of:
- general science principles and concepts, including:
    - physical states (solid, liquid and gas), weight, mass, gravity and density
    - pressure, pressure differential, backpressure and head pressure, fluid flow and viscosity
    - temperature effects and coefficients of expansion, flashpoint, boiling point and ice point
- metrological terms and terminology specific to instrument, such as maximum permissible errors, maximum permissible difference and maximum permissible variation, traceability, repeatability, uncertainty, error of measurement and error of indication, meter creep, hose dilation, temperature correction, linearization and gas elimination
- details of the design and applications for one (1) class of complex measuring instruments, the major instrument components and their function
- servicing licensee requirements, including:
    - quality management system
    - licence conditions
    - maintenance of statutory records
- national measurement legislation applicable to complex measuring instruments
- safe work method statements (SWMS) for trading environments relevant to job role
- NMI policy, National Instrument Test Procedures and operating procedures for equipment, and reference standards used in job role, including:
    - test conditions and possible environmental impacts on performance of the instrument
    - key preparation/measurement steps in test method
    - calculation steps to give results in appropriate units and precision
    - maximum permissible errors for instrument under test
    - safety principles and procedures relevant to instrument

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - organisational policy and procedures for verifying a complex measuring instrument, including completion of test results, verification documents and statutory records
  - organisational safety procedures and requirements of applicable Commonwealth, state and territory work/occupational health and safety (WHS/OHS) legislation
- basic first aid and site safety induction, if required.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency should be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - *MSMTMREF301 Use and maintain reference standards*
- Holistic assessment methods include:
  - review of test results, verification documentation and verifier statutory records completed by the candidate
  - feedback from supervisors and peers regarding the candidate's ability to verify the performance of a complex measuring instrument in accordance with legislative and organisational procedures
  - questions to assess understanding of relevant verification procedures, servicing licensee requirements, trader obligations and remedial actions
  - review of candidate’s responses to verification scenarios, such as potential/actual non-compliances of traders and verifiers, appropriate actions, common issues and problems
  - observation of the candidate verifying a complex measuring instrument.
- Access is required to instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - latest versions of appropriate documentation, such as Certificates of Verification and Approval, NMI policy, intermediate National Instrument Test Procedures for verifying complex measuring instruments and relevant legislation
  - equipment manuals, safety data sheets (SDS), safety procedures and safety equipment
  - records, such as test reports; audit reports; instrument history and test results; and correction tables for volume, density and pressure for a range of liquids

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - complex measuring instrument, test equipment and reference standards
  - computer and relevant software and/or organisation information management system.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience in trade measurement at least to the level being assessed and broad industry knowledge (such as a relevant industry qualification).
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment in trade measurement OR
  - having consulted with trade measurement inspectors and/or verifiers performing the competency being assessed within the last twelve months.

MSMWHS100 Follow WHS procedures

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS100A Follow OHS procedures

Application

This unit of competency covers the skills and knowledge required to recognise hazards commonly occurring at the workplace and follow work health and safety (WHS) instructions and procedures.

It covers recognising known hazards, such as those identified in procedures or training, and identifying the underlying causes of these identified hazards.

This unit of competency applies to people on-site who are required to follow WHS instructions and procedures relating to the activity being undertaken. They will be aware of the importance of maintaining their own health and safety and the health and safety of others in the workplace and will also be capable of dealing with incidents and emergencies within their own scope of responsibility and under the direction of their supervisor for the site activity.

While the instructions and procedures must be derived from the relevant organisation WHS policies, the person is not required to understand or interpret these policies. This interpretation should be undertaken by their supervisor for the site activity when informing them of the WHS requirements.

This unit of competency applies to an individual who will be accompanied or directly supervised while on-site.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Work health and safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Recognise hazards	1.1	Identify hazards commonly found in the workplace
		1.2	Check work area routinely before and during work
		1.3	Describe causes of identified hazards
2	Follow procedures for hazard control	2.1	Follow procedures to remove or minimise hazards, within the scope of responsibilities and competencies
		2.2	Use required personal protective and other safety equipment (PPE)
		2.3	Describe the potential consequences of failing to follow these procedures and instructions
3	Follow emergency procedures	3.1	Recognise emergency/emergency alarm
		3.2	Go to muster point following procedure
		3.3	Follow instructions related to the emergency
4	Report problems	4.1	Report to appropriate people in accordance with workplace procedures when hazards or other problems arise

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- slip/trip hazards
- PPE not available or not functional
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- equipment in unsafe condition with hazard controls not functional
- noise, rotational equipment or vibration
- fire and explosion

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- flammability and explosivity
- hazardous products and materials
- sharp edges, protrusions or obstructions, swarf and scrap
- extreme weather
- other hazards that might arise

Problems

Problems must be reported and corrective action taken according to relevant procedures.

Problems include one or more of the following:

- recognition of hazards
- problems encountered in controlling risks associated with hazards
- observation of an injury and/or incident which occurred in the workplace
- clarification of understanding of WHS policies and procedures

Appropriate personnel

Appropriate personnel include one or more of the following:

- employer
- supervisor
- employees elected as WHS representatives
- other personnel with WHS responsibilities

Reporting methods

Reporting methods include one or more of the following:

- verbal
- written

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSAPMOHS100A Follow OHS procedures

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=d1287d36-dff4-4e9f-ad2c-9d6270054027

Assessment Requirements for MSMWHS100 Follow WHS procedures

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS100A Follow OHS procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- recognise hazards
- use required personal protective equipment (PPE)
- take the action specified in the procedures
- report the situation as specified in the procedures

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- the rights and responsibilities of personnel under the WHS legislation
- hazard and emergency signs, labels and alarms
- hazards that may arise in the job/work environment, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- types and application of PPE
- procedures for reporting WSE problems and taking action
- emergency procedures.

Assessment Conditions

- Competency must be achieved before performing this activity. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job, appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
    - walk-throughs
    - demonstration of skills
    - industry-based case studies/scenarios
    - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS110 Follow emergency response procedures

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS110A Follow emergency response procedures

Application

This unit of competency covers the skills and knowledge required to follow emergency response procedures in the workplace. It involves the use of workplace policies and procedures to maintain a safe work environment for oneself and others.

This unit of competency applies to personnel who are required to know the signals when an emergency situation takes place as well as the proper procedures to follow in order to save oneself from possible injury and/or death.

The unit of competency may be used as part of an induction program for new workers.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Work health and safety

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Identify emergency situation**	1.1	Identify emergency signals and controls on machines and/or at the worksite
		1.2	Interpret the signals to take appropriate action
		1.3	Identify emergency where there is no mechanical/electronic signal
2	**Follow emergency procedures**	2.1	Report emergency according to procedures
		2.2	Identify emergency leader
		2.3	Follow workplace procedures and work instructions for dealing with a range of emergencies, under direct supervision of emergency leader
		2.4	Describe the potential consequences of failing to follow these procedures and instructions
		2.5	Describe what to do if the emergency leader cannot be located when emergency occurs

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework	The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Identifying emergency signals

Identifying emergency signals includes one or more of the following:

- recognising emergency alarm:
  - visual (e.g. flashing lights)
  - auditory (e.g. alarms - siren/horn)
- other signs of an emergency for that plant or site

Emergency procedures

Emergency procedures include:

- work instructions and actions to take to deal with specific emergencies
- emergency issues that workers must raise with designated personnel
- designated personnel
- what to do if the emergency leader cannot be located

Emergencies

Emergencies include one or more of the following:

- observation of injury or incident in the workplace
- fires
- chemical or oil spills
- gas leak or vapour emission
- utilities failure
- bomb scares
- failure or malfunction of plant/machinery

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Designated personnel	Designated personnel include one or more of the following: • employer • supervisor • employees elected as emergency team leader • other personnel with emergency team leader responsibilities

Assessment Requirements for MSMWHS110 Follow emergency response procedures

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS110A Follow emergency response procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- recognise emergency signals and other communication of an emergency
- identify emergency situations in which there is no mechanical/electronic signal
- follow procedures to:
  - identify the emergency leader
  - take the appropriate action in an emergency
  - report according to procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- emergency, fire and injury procedures
- spill or other loss of containment (LOC) procedures
- communicating methods appropriate to role
- reporting requirements.

Assessment Conditions

Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job, appropriate supervision and safety precautions must be provided.

The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.

The collection of performance evidence:

- should provide evidence of the ability to perform over the range of situations which might be expected to be encountered including typical disruptions to normal, smooth work conditions
- will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.

Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance including environment, task skills, task management skills, contingency management skills and job role environment skills.

On-the-job assessment will typically involve participation in an emergency drill.

Assessment in a simulated environment should use evidence collected from one or more of:

- walk-throughs
- demonstration of skills
- industry-based case studies/scenarios
- 'what ifs'.

Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.

Foundation skills are integral to competent performance of the unit and should not be assessed separately.

As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS200 Work safely

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS200A Work safely

Application

This unit of competency covers the skills and knowledge required to apply workplace policies and procedures to maintain a safe work environment for self and others.

The unit of competency covers identifying work health and safety (WHS) hazards, assessing risk and following safety procedures in the workplace with minimal supervision.

Compliance with legislative requirements and duty of care are embedded in this unit through workplace instructions and procedures. Workers will be provided with clear directions, information, instruction, training and appropriate supervision regarding the relevant state/territory WHS legislation, codes of practice, relevant industry standards, workplace procedures and work instructions.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

essential outcomes		demonstrate achievement of the element	
1	**Identify hazards** and **assess risk**	1.1	Identify hazards in the work area before and during work
		1.2	Access and apply relevant material safety data sheets (MSDS)
		1.3	Assess risks for the identified hazards
		1.4	Identify controls for these hazards from procedures
		1.5	Review effectiveness of controls within the scope of authority
		1.6	Identify and report remaining risk
2	**Follow procedures for risk control**	2.1	Control risks when working under minimal supervision by following workplace procedures
		2.2	Follow safety signs and other safety indicators/zones
		2.3	Select, use and maintain relevant personal protective equipment (PPE)
		2.4	Handle and store items/materials relevant to job safely
3	**Follow emergency procedures**	3.1	Recognise emergency situations
		3.2	Take appropriate initial emergency action
		3.3	Follow procedures for dealing with a range of site/plant emergencies
4	**Initiate suggestions to enhance task/ job-specific safety**	4.1	Raise WHS issues with designated personnel in accordance with workplace procedures and relevant requirements of WHS legislation
		4.2	Contribute to participative arrangements for WHS management in the workplace within organisation procedures and the scope of responsibilities and competencies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.3	Provide input to minimise hazards in work area in line with organisation WHS procedures
		4.4	Provide input to opportunities for development of work group's competencies in relation to WHS
		4.5	Support the implementation of procedures to control risks using the hierarchy of control and in accordance with organisation procedures
		4.6	Report to appropriate people in accordance with workplace procedures when non-routine hazards arise
5	**Apply knowledge of WHS legislation and the organisation WHS policies and procedures**	5.1	Follow workplace procedures to achieve a safe working environment in accordance with all relevant WHS legislation/regulation, including codes of practice relating to particular hazards within the workplace or industry
		5.2	Identify the rights and responsibilities of employees and employers under the relevant WHS legislation
		5.3	Complete (personally or with assistance) hazard, accident or incident reports as required by workplace procedures and relevant sections of WHS legislation/regulation

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

framework local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards Hazards include one or more of the following:

- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Equipment and PPE

Equipment and PPE include one or more of the following:

- hard hats
- goggles/glasses/face shields
- hearing protection (ear muffs and plugs)
- dusk masks/canister masks/self-contained breathing apparatus(SCBA)/ long-range breathers
- gloves/gauntlets
- safety boots
- antistatic equipment
- overalls/aprons/acid jackets/pants
- handling aids
- other safety equipment

Appropriate personnel

Appropriate personnel include one or more of the following:

- employer
- supervisor
- employees elected as WHS representatives
- other personnel with WHS responsibilities

Recognising emergency situation

Emergency situations will be recognised from one or more of the following:

- visual (e.g. flashing lights)
- auditory (e.g. alarms)
- communication systems (e.g. radios and announcements)
- any other obvious mechanisms used in the workplace

Assessment Requirements for MSMWHS200 Work safely

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS200A Work safely

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- identify hazards
- follow procedures to:
  - assess risks associated with the hazards
  - identify and apply standard controls
  - check that controls are in place and operational
  - select and use personal protective equipment (PPE)
- identify and interpret signs and symbols, including emergency alarms
- correctly handle and store items/materials relevant to job
- interpret and apply relevant material safety data sheets (MSDS).

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational work health and safety (WHS) procedures, including procedures for reporting WHS problems and taking action
- rights and responsibilities of employees and employers under the relevant WHS legislation
- hazards that may arise in the job/work environment, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- hierarchy of control
- types and application of PPE
- hazard and emergency signs, labels and alarms
- appropriate responses to non-standard situations.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job, appropriate supervision and safety precautions must be provided.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - must include the use of appropriate safety gear and systems requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS201 Conduct hazard analysis

Modification History

Release 1 - New unit

Application

This unit of competency covers the skills and knowledge required to conduct a hazard analysis. These are typically called:

- job safety analysis (JSA)
- job hazard analysis (JHA)
- job safety and environmental analysis (JSEA)
- safe work method statement (SWMS)

It is not intended to apply to simpler routine hazard checks, such as ‘Take 5’, Step Back 5x5’, five step or similar.

This might be done as an independent activity in order to identify hazards and the appropriate hazard controls, or it might be done as part of a broader process, such as identifying and applying for the permits required for a job.

The conducting of a hazard analysis may be required under a safety case, by organisation procedures or simply as being good practice.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Define the context for the hazard analysis	1.1	Identify the scope and purpose of the hazard analysis
		1.2	Access the relevant forms or procedures for conducting a hazard analysis
		1.3	Identify specialised knowledge which may be required to conduct the hazard analysis
2	Identify hazards	2.1	Find out job steps to be undertaken
		2.2	Identify hazards of job site
		2.3	Obtain specialised knowledge required
		2.4	Identify hazards for each job step
		2.5	Enter information into appropriate forms in accordance with procedures
3	Assess risks	3.1	Estimate the potential severity/consequence of each identified hazard
		3.2	Consider how hazards may cause harm
		3.3	Estimate the likelihood/possible frequency of harm
		3.4	Use the organisation’s risk matrix to prioritise each risk
		3.5	Enter information into appropriate forms in accordance with procedures
4	Control risks	4.1	Apply organisation’s risk control procedures
		4.2	Use the hierarchy of control so that risks are as low as reasonably practicable (ALARP)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.3	Specify risk controls
		4.4	Check the effectiveness of controls
		4.5	Identify residual risk and implement any additional controls required
		4.6	Enter information into appropriate forms in accordance with procedures.
5	Monitor and review risk controls	5.1	Monitor risk controls and review their effectiveness
		5.2	Keep records in accordance with procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- Dangerous Goods regulations
- Hazardous substances regulations
- Hazardous Substances Information System
- Major hazard facility requirements, if relevant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- AS 2865-2009 Confined spaces
- AS 1674 Set-2007 Safety in welding and allied processes (covers all hot work)
- AS 4024.1-2014 Series - Safety of machinery
- AS/NZ 1715:2009 Selection use and maintenance of respiratory protective equipment
- National Standard for Plant [NOHSC:1010 (1994)]
- National exposure standards for atmospheric contaminants in the occupational environment [NOHSC:1003 (1995)]

Scope and purpose

The scope includes the unique identification of the plant items and/or work area which is the subject of the hazard analysis, and by default the adjoining plant/areas.

The purpose includes undertaking one or more of:

- a routine hazard analysis for a work area
- a hazard analysis for a specified job
- a hazard analysis as a precursor to issuing permits
- other purposes defined by organisation procedures

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- permit control system
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- incomplete process isolations
- mechanical and electrical isolations not in place
- atmospheric testing incomplete and atmosphere unsafe
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Specialised knowledge

Specialised knowledge includes information sourced from one or more of the following:

- the person doing the job
- an internal or external technical specialist
- a health and safety expert
- other operational personnel
- literature or internet information
- incident and other records
- risk register
- other knowledge resources of the organisation

Risk

Risk requires the consideration of the consequences of an event and one or both of:

- likelihood/probability
- expected frequency

Severity/consequence

The severity or consequence is typically interpreted against a scale ranging from minor (may require first aid, no lost time, no damage to plant or environment) through to major (may result in death,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

significant damage to plant or environment)

Harm from hazards Harm from hazards includes:

- exposure routes (ingestion, inhalation and skin/eye contact)
- chain of events (event/cause tree and bow tie)
- causal sequence which results in harm to persons, environment, plant or product

ALARP ALARP means as low as reasonably practicable and requires:

- identifying the risk reduction measures available
- determining the level of risk reduction that can be achieved and the associated cost
- implementing the risk reduction measure unless the cost is grossly disproportionate to the benefits of the risk reduction
- justifying available measures that are not taken

Unit Mapping Information

No equivalent unit.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=d1287d36-dff4-4e9f-ad2c-9d6270054027

Assessment Requirements for MSMWHS201 Conduct hazard analysis

Modification History

Release 1 - New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- complete a hazard analysis
- specify risk controls to bring risks to ALARP
- identify relevant personnel
- complete appropriate hazard analysis forms (paper or electronic)
- monitor and review effectiveness of risk controls.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- the significance of the analysis context
- how the identified hazards may cause harm
- purpose and use of the risk matrix
- monitoring and review of risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a hazard analysis report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Where part of a broader role it may be conveniently co-assessed with units relevant to that broader job.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS205 Control minor incidents

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS205A Control minor incidents

Application

This unit of competency covers the skills and knowledge required to control minor incidents. The general purpose of this initial response is to prevent any incident from escalating. In the event of an incident this person may be expected to respond to an incident team member in accordance with procedures.

The unit of competency applies to most operations personnel and some non-operations personnel. It covers skills and knowledge beyond what is typically covered in an induction program, but does not require specialist training, such as is given to members of an incident response team.

Generally the person would be part of a team during an incident response. However, he/she may be required to take independent action. At all times they would be liaising and cooperating with other members of the team.

This unit applies to all sectors of the industry.

This unit will assist individuals to meet some of their obligations under relevant state/territory legislation. However, the unit must be contextualised to ensure compliance with specific regulatory requirements that may apply in a sector, jurisdiction, or type of organisation.

Organisations within the chemical, hydrocarbons and refining industries may find themselves falling under the provisions of various Major Hazard Facilities legislation. In developing this unit consideration has been given to the requirements of Sections 8 and 9 of the National Standard for the Control of Major Hazard Facilities [NOHSC:1014 (2002)] and the National Code of Practice for the Control of Major Hazard Facilities [NOHSC:2016 (1996)].

This unit does NOT apply to more significant incidents where higher levels of incident response competencies may be required.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Evaluate the** incident	1.1	Recognise an incident has occurred or is about to occur
		1.2	Assess the incident for type of response and the likely effectiveness of first response action
		1.3	Identify the hazards arising from the incident
		1.4	Raise the alarm and seek assistance as required
		1.5	Select appropriate response to control incident
		1.6	Determine hazard control measures to be employed
		1.7	Recommend evacuation if appropriate
2	**Control the incident**	2.1	Maintain personal safety at all times
		2.2	Confine the incident to the area of origin where possible
		2.3	Select appropriate equipment to control incident
		2.4	Use equipment in accordance with procedures
		2.5	Clear and secure the incident area
		2.6	Monitor the incident and surrounding conditions and modify response as appropriate
		2.7	Hand over to specialist incident response personnel as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			appropriate
3	**Conclude the incident control**	3.1	Report the use of equipment according to procedures
		3.2	Mark or position incident control equipment after use to indicate it requires servicing or replacing
		3.3	Participate in incident debrief and report in accordance with procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- National Standard for the Control of Major Hazard Facilities [NOHSC:1014 (2002)] (where applicable)
- National Code of Practice for the Control of Major Hazard Facilities [NOHSC:2016 (1996)] (where applicable)
- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Minor incidents

Minor incidents include one or more of the following:

- fires of the A,B,C,D,E and F classes
- fuel and other spills, and losses of containment (LOC)
- process overheating
- equipment failure

Hazards

Hazards include one or more of the following:

- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Equipment

Equipment includes one or more of the following:

- fire doors
- fire sprinkler systems
- fire alarm systems
- first aid kits
- fire-extinguishers
- hoses not requiring special training
- smoke vents
- spill control kits
- personal protective equipment (PPE)
- other hazard control equipment defined in procedures

Appropriate personnel

Appropriate personnel include one or more of the following:

- employer
- supervisor
- employees elected as WHS representatives
- other personnel with WHS responsibilities

Assessment Requirements for MSMWHS205 Control minor incidents

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS205A Control minor incidents

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- recognise an incident
- evaluate the incident and select an appropriate response
- check equipment and apply correct follow-up procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- classification of fires and other incidents relevant to job/site
- types and application of first response equipment and personal protection equipment (PPE)
- limitations of first response equipment
- situations that must not be responded to because of the risk to life
- scope and limitations of own role and responsibilities
- appropriate personnel for referral and reporting.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job, appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - must include the use and actual deployment of appropriate tools, equipment (e.g. fire-extinguishers and spill kits) and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use simulated fires, losses of containment or other incidents
  - is not expected to require the use of a fire ground or similar.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS210 Undertake first response to non-fire incidents

Modification History

Release 2. Addition of information missing from the Assessment Requirements. Equivalent.

Release 1. Supersedes and is equivalent to MSAPMOHS210B Undertake first response to non-fire incidents

Application

This unit of competency covers the skills and knowledge required to recognise and respond to an incident (except for fire/explosion) to provide an appropriate first response.

This unit of competency applies to operators who are required to respond to an incident, such as a leak, spill or other incident. The worker is not expected to deal with the emerging incident, but to provide an initial first response in order to contain the incident and/or secure the immediate area in order to minimise resultant damages and loss. In this unit it is assumed that the worker is acting according to established workplace procedures.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

Organisations within the chemical, hydrocarbons and refining industries may find themselves falling under the provisions of various Major Hazard Facilities legislation. In developing this unit consideration has been given to the requirements of Sections 8 and 9 of the National Standard for the Control of Major Hazard Facilities [NOHSC:1014 (2002)] and the National Code of Practice for the Control of Major Hazard Facilities [NOHSC:2016 (1996)].

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Assess level of severity	1.1	Recognise an incident has occurred or is about to occur
		1.2	Access hazard information as appropriate
		1.3	Assess frequency, duration, actual and potential outcome
		1.4	Evaluate and communicate in a timely and appropriate manner the location, nature and extent of the incident
2	Undertake routine response to minimise affect of the incident	2.1	Select the appropriate response from the incident procedures
		2.2	Clear and secure the incident area
		2.3	Select appropriate materials and equipment to contain the incident
		2.4	Safely locate access and operate incident response equipment
		2.5	Apply incident containment procedures as appropriate
3	Notify responsible authorities	3.1	Follow incident reporting procedures
		3.2	Identify appropriate authorities and notify
		3.3	Clearly and unambiguously communicate information concerning the incident in a timely manner
4	Undertake safe evacuation	4.1	Evacuate the area in a safe and controlled manner when first response has failed to control the incident or has proven inappropriate
		4.2	Secure the immediate area of the incident to ensure no further loss occurs to people, equipment, materials,

process and environment

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- National Standard for the Control of Major Hazard Facilities [NOHSC:1014 (2002)] (where applicable)
- National Code of Practice for the Control of Major Hazard Facilities [NOHSC:2016 (1996)] (where applicable)

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Hazards and incidents

Hazards and incidents include one or more of the following:

- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- limited head spaces or overhangs
- extreme weather
- other hazards that might arise

Tools and equipment

Tools and equipment include one or more of the following:

- personal protective equipment (PPE)
- incident response equipment, such as spill kits and vapour dispersion
- evacuation equipment
- survival equipment
- breathing apparatus
- smoke or self rescue respirators
- atmosphere/gas testing equipment
- mobile and portable equipment
- first aid equipment
- pipeline repair clamps
- lamb air movers
- barricades and signage
- communications equipment, such as two-way radios, mobile and satellite phones and pagers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Responsible authorities

Responsible authorities include one or more of the following:

- internal personnel:
  - employer
  - supervisor
  - employees elected as incident team leader
  - other personnel with incident team leader responsibilities
- external personnel:
  - police
  - fire brigade
  - ambulance

Unit Mapping Information

Assessment Requirements for MSMWHS210 Undertake first response to non-fire incidents

Modification History

Release 2. Addition of information missing from the Assessment Requirements. Equivalent.

Release 1. Supersedes and is equivalent to MSAPMOHS210B Undertake first response to non-fire incidents

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- recognise and assess incident situations
- determine appropriate actions according to procedures and within scope of own responsibilities, including:
  - evacuate (self/others)
  - seek assistance as appropriate
  - apply control measures
  - select and use incident response equipment
  - select and use personal protective equipment (PPE)
  - implement corrective action
  - minimise the effect of an incident situation
- communicate clearly and unambiguously with a range of personnel on incident situations, related problems and safety and emergency procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- types and application of incident response equipment
- principles of operation of the incident response equipment
- types and application of PPE
- roles and responsibilities of internal and external personnel in relation to incident situations
- communicating methods appropriate to role
- appropriate responses to different non-fire situations.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job, appropriate supervision and safety precautions must be provided.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - must include the use of appropriate incident containment tools, equipment, media and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - must include responding to an actual spill or other incident in a simulated industrial situation and so may need to occur in a specialised area.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence will be collected independently of the above practical assessment and may use workbooks, written assessments, interviews (provided a record is kept) or other methods.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Persons seeking verification of competence/retraining must meet the same evidence requirements as above.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS212 Undertake first response to fire incidents

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS212A Undertake first response to fire incidents

Application

This unit of competency covers the skills and knowledge required to undertake an appropriate first response to fire incidents in onshore and offshore situations/emergencies.

People working, operating or who regularly travel to an onshore or offshore hydrocarbon/petrochemical installation or facility or major hazard facility may require this competency.

This unit could be applied to any of the following installations or facilities:

- factories and production plants
- onshore/offshore rig/installation
- island based facility
- floating production vessel or platform
- onshore production, processing pipeline systems and/or storage facilities
- pipeline easements
- maintenance bases.

This unit of competency applies to operators who are required to respond to fires in the workplace (other than evacuating to the assembly point). It covers the first response (only) to fire, and does not include aggressive fire-fighting. Typically this response would be undertaken to contain/extinguish a minor fire or to contain a more major fire until external help arrives (for an urban plant) or to allow for mobilisation of more highly trained responders or evacuation (for a remote/offshore plant).

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

Organisations within the chemical, hydrocarbons and refining industries may find themselves falling under the provisions of various Major Hazard Facilities legislation. In developing this unit consideration has been given to the requirements of Sections 8 and 9 of the National Standard for the Control of Major Hazard Facilities [NOHSC:1014 (2002)] and the National Code of Practice for the Control of Major Hazard Facilities [NOHSC:2016 (1996)].

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify fire emergency and raise alarm	1.1	Evaluate and communicate the location, nature and extent of the fire emergency in a timely and appropriate manner
		1.2	Determine first response requirements in order to evaluate the need to attack the fire emergency or evacuate the affected areas
2	Initiate basic fire responses	2.1	Maintain personal safety at all times in accordance with work health and safety (WHS) guidelines
		2.2	Put on appropriate personal protective equipment (PPE) in accordance with organisation procedures
		2.3	Select appropriate extinguishing agents and equipment based on knowledge of fire and fuel types
		2.4	Operate basic fire-fighting equipment safely, according to manufacturer specifications and organisation procedure, in order to contain the fire emergency
		2.5	Observe changing conditions at the fire, their effects on fire behaviour and report

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Notify responsible authorities	3.1	Follow emergency reporting procedures
		3.2	Identify and notify appropriate authorities
		3.3	Clearly and unambiguously communicate information concerning the emergency in a timely manner
4	Undertake safe evacuation	4.1	Evacuate area in a safe and controlled manner when first response has failed to control the fire emergency, or has proven inappropriate
		4.2	Secure immediate area of the emergency to ensure no further loss occurs to people, equipment, process and environment

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- National Standard for the Control of Major Hazard Facilities [NOHSC:1014 (2002)] (where applicable)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- National Code of Practice for the Control of Major Hazard Facilities [NOHSC:2016 (1996)] (where applicable)

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- manufacturer specifications
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Tools and equipment

Tools and equipment include one or more of the following:

- appropriate PPE
- breathing apparatus
- handheld extinguishers
- hose reels
- fire monitors
- fire blankets
- smoke or self rescue respirators
- mobile and portable equipment
- first aid equipment
- pipeline repair clamps
- lamb air movers
- barricades and signage
- communication equipment, such as two-way radios, mobile and satellite phones and pagers
- fire-extinguishing media, including water, foam, extinguishing powder, gaseous extinguishing agents, vapourising liquids, and other fire-extinguishing substances

Basic fire response

Basic fire response includes one or more of the following fire-fighting tactics:

- direct attack
- indirect attack
- combination attack
- exposure protection

It does NOT include internal/offensive attacks

Responsible authorities

Responsible authorities include one or more of the following:

- internal:
  - employer
  - supervisor
  - employees elected as incident team leader
  - other personnel with incident team leader responsibilities
- external:
  - police
  - fire brigade
  - ambulance

Assessment Requirements for MSMWHS212 Undertake first response to fire incidents

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS212A Undertake first response to fire incidents

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and demonstrate the ability to:

- recognise and assess fire situations, including the identification of different types of fires and fuels
- determine appropriate actions according to procedures and within scope of own responsibilities, including:
  - evacuate (self/others)
  - seek assistance as appropriate
  - apply control measures
  - select and use a range of first response fire-fighting safety equipment
  - select and use appropriate extinguishing agent
  - apply defensive fire-fighting tactics and techniques
  - select and use personal protective equipment (PPE)
  - minimise the effect of a fire incident
- communicate clearly and unambiguously with a range of personnel on fire emergency conditions, related problems and safety and emergency procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including:
  - site or organisation emergency procedures and response plans
  - site-specific isolation procedures
- characteristics of fire and fuel types
- composition and uses of extinguishing agents
- types and application of basic firefighting equipment
- types and application of PPE
- roles and responsibilities of internal and external personnel in relation to fire incidents
- appropriate responses to different fire situations.

MSMWHS216 Operate breathing apparatus

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS216A Operate breathing apparatus

Application

This unit of competency covers the skills and knowledge required to operate and maintain breathing apparatus and equipment in an irrespirable atmosphere, as defined by the Australian Standard AS/NZS 1715:2009 Selection, use and maintenance of respiratory protective equipment.

This unit of competency applies to operators who are required to wear breathing apparatus because they are working:

- in a confined space
- with hazardous gases/vapours
- in an oxygen deficient atmosphere
- in other situations requiring the wearing of breathing apparatus.

Operators may also be required to wear breathing apparatus in emergency situations, however, this is not the prime focus of this unit.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Conduct pre-donning checks and tests on breathing apparatus	1.1	Inspect breathing apparatus for immediate use in accordance with procedures
		1.2	Report/record faulty or damaged equipment in accordance with procedures
2	Operate breathing apparatus	2.1	Identify, monitor and control hazards in accordance with the procedures
		2.2	Establish and maintain communication with appropriate personnel throughout the activity
		2.3	Use breathing apparatus for the required activities in accordance with procedures
		2.4	Monitor remaining working time available and return to a respirable atmosphere as required
		2.5	Implement entrapment procedures in accordance with procedures
		2.6	Maintain personal safety at all times
3	Conclude operations in accordance with procedures	3.1	Close down breathing apparatus set
		3.2	Remove breathing apparatus set
		3.3	Undertake after-use cleaning and maintenance of breathing apparatus
		3.4	Make equipment ready for operational use

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements:
- *AS/NZS 1715:2009 Selection, use and maintenance of respiratory protective equipment* or its authorised replacement

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Breathing apparatus

Breathing apparatus includes one or more of open circuit:

- self-contained breathing apparatus (SCBA)
- airline equipment
- other similar breathing apparatus

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

It does not cover the use of rebreather (closed circuit) apparatus.

Hazards Hazards include one or more of the following:

- entrapment
- failure to maintain a face seal
- exhaustion of air supply
- heated atmospheres
- asphyxiating atmosphere (oxygen deficient)
- (non-skin absorption) toxic or poisonous atmosphere
- smoke or suspended particles/fibres in atmosphere
- malfunction of equipment
- disorientation in smoke, darkness or confinement
- fire and explosion
- dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Assessment Requirements for MSMWHS216 Operate breathing apparatus

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS216A Operate breathing apparatus

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- conduct pre-donning tests on breathing apparatus
- correctly don and operate breathing apparatus
- identify hazards and apply control measures according to procedures
- communicate while using breathing apparatus
- determine the available working time from a breathing apparatus set
- correctly close down, remove and clean breathing apparatus
- report faults and/or damage to breathing apparatus.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- the effects of irrespirable atmospheres on the body and the need for protective equipment
- characteristics, component parts, operation of compressed air breathing apparatus
- operational testing, standard operating procedures (SOPs) and safe work practices when wearing breathing apparatus
- use of procedures, personal lines and tallies
- pre-use tests and checks
- breathing apparatus control
- entrapment procedures
- communications while wearing breathing apparatus.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - must include the use of breathing apparatus, appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS217 Gas test atmospheres

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS217A Gas test atmospheres

Application

This unit of competency covers the skills and knowledge required to test the working atmosphere, using electronic test apparatus, to find out if it is safe for the proposed work.

It applies to situations where an individual may be required to carry out gas testing of an atmosphere prior to entering a specific area or workspace. The competency requires the person to interpret readings and take actions based on the interpretation.

Working environment may be hazardous, unpredictable, subject to time pressure, chaotic and expose responders to risk, on land or water, by day or night. Workplace atmospheres may include visible and invisible hazards and hazardous surfaces.

The unit is suitable for use in the following situations:

- confined spaces
- enclosed and partially enclosed spaces
- hot work
- storage tanks, silos, pits, pipes, shafts, ducts, transport vehicles and ships
- testing as part of issuing a work permit
- monitoring as part of working under a work permit
- open areas
- holding the gas tester by hand
- lowering the gas tester into a space, e.g. on a line.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Prepare for gas testing	1.1	Find out type of gas/atmosphere to be tested
		1.2	Select and calibrate equipment in accordance with procedures
		1.3	Find out gas testing regime/sampling pattern required
		1.4	Identify hazards from possible atmosphere contaminants
		1.5	Implement hazard control measures and use of appropriate personal protective equipment (PPE)
2	Test gas	2.1	Use gas testing equipment to test gas as required
		2.2	Interpret and report readings
		2.3	Monitor gas on an ongoing basis as required
		2.4	Take required action if readings are unacceptable
		2.5	Communicate required actions to be taken to appropriate personnel
3	Maintain equipment	3.1	Clean and maintain gas testing equipment in accordance with procedures
		3.2	Inspect and fault-find monitoring equipment in

accordance with procedures

3.3 Return gas testing equipment to required location and in required condition

3.4 Maintain records of tests and results in accordance with procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- AS 2865-2009 Confined spaces
- AS 1674.1-1997 Welding and allied processes - Fire precautions

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Tools and equipment

Tools and equipment include one or more of the following:

- portable instruments
- sampling tubes and pumps
- oxygen level meter
- combustible gas detectors
- other hazardous gas meters
- PPE

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems include one or more of the following:

- changes in readings
- unexpected readings
- faults in equipment

Known solutions include one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to relevant procedures.

Hazards

Hazards include one or more of the following:

- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- limited head spaces or overhangs
- extreme weather
- other hazards that might arise

Assessment Requirements for MSMWHS217 Gas test atmospheres

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS217A Gas test atmospheres

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and must include the ability to:

- recognise and assess conditions that require testing
- identify the appropriate action according to procedures and within scope of responsibility, including:
  - selecting, preparing and using gas testing equipment
  - applying testing regime
  - selecting and using personal protective equipment (PPE)
  - identifying hazards and applying control measures
  - cleaning and maintaining equipment
- take readings and interpret, report/record relevant data
- apply known solutions to routine problems
- communicate clearly and unambiguously with a range of personnel on safety conditions and procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including:
  - work permit systems
  - safety, hazards and hazard control
  - incident, fire and accident
  - PPE
  - organisation standard operating procedures (SOPs)
- common atmospheric hazards and contaminants
- explosive range, upper and lower explosive limits
- exposure standards (time-weighted average, short-term exposure limits, peak limitation values, and examination of toxic effect at the level of a range of flammable gases)
- conditions under which atmospheres become hazardous
- units of measurement used to express concentration of atmospheric contaminants (mg/cubic m. ppm, % v/v).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - must include the use of the relevant gas testing meters and any other relevant tools, equipment and safety gear, and require demonstration of preparation, operation, completion and responding to problems
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS218 Control the risks of falls

Modification History

Release 1. New unit

Application

This unit of competency covers the skills and knowledge required to recognise and control the risks of falls.

This unit of competency applies to operators who are required to undertake work in which there is a risk of injury to themselves or any other person by falling from one level to another.

This unit of competency reflects the requirements of Part 4.4 of Work Health and Safety (WHS) Regulations 2011. While the regulations focus on the requirements for the Person Conducting a Business or Undertaking (PCBU), this unit is directed at the worker undertaking a specific job/work.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit includes the use of fall-arrest equipment which complies with AS/NZS 1891 Series - Industrial fall-arrest systems and devices as part of this competency.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Pre-requisite Unit

Nil

Competency Field

Work health and safety

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify job requirements	1.1	Identify the job scope and location
		1.2	Review options for carrying out all or part of the job on the ground or on a solid construction
		1.3	Confirm the safe access to and exit from the work area where there is a risk of fall
		1.4	Obtain required authorisations for the work and verify hazard controls are functioning
		1.5	Check the adequacy of fall prevention devices, where appropriate
		1.6	Check the adequacy of work positioning systems, where appropriate
		1.7	Confirm methods of moving tools, equipment and materials to/from the work area are adequate
2	Use fall-arrest equipment in accordance with procedures	2.1	Select fall-arrest equipment needed
		2.2	Check condition of fall-arrest equipment
		2.3	Put on and adjust required fall-arrest equipment
		2.4	Check the emergency and rescue procedures in relation to the fall-arrest system
3	Undertake work in accordance with procedures	3.1	Safely access the work area
		3.2	Attach fall-arrest equipment to approved anchor as required
		3.3	Maintain the function of fall prevention devices and work positioning systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.4	Move tools, equipment and materials to work area as required
		3.5	Undertake the scoped work
		3.6	Remove all tools, equipment and materials from the work area
		3.7	Safely exit the work area
4	Complete the job	4.1	Take off, check, clean and put away fall-arrest equipment
		4.2	Close out authorisations for the work
		4.3	Complete any required documentation or records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- relevant state/territory regulation/guidelines/codes on fall protection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- AS/NZS 1891 Series - Industrial fall arrest systems and devices
- AS 1657-2013 Fixed platforms, walkways and ladders – Design, construction and installation
- AS 2550 Set-2011 Cranes, hoists and winches – Safe use Set
- AS 2550.10-2006 Cranes, hoists and winches - Safe use – Mobile elevating work platforms
- AS/NZS1418 Set:2013 Cranes hoists and winches Set
- AS/NZS 4576:1995 Guidelines for scaffolding
- AS/NZS 1576 Series - Scaffolding
- AS/NZS 1892 Series - Portable ladders
- International Industrial Rope Access Trade Association (IRATA) International Code of Practice for industrial rope access

Required authorisations

Required authorisations include:

- work permits or such other controls as may be part of the work control system/procedures

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- permit control system
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- incomplete process isolations
- mechanical and electrical isolations not in place
- atmospheric testing incomplete and atmosphere unsafe
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Unit Mapping Information

No equivalent unit

Assessment Requirements for MSMWHS218 Control the risks of falls

Modification History

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to on at least one (1) occasion:

- identify and check fall prevention devices and work positioning systems
- select, check, put on and use fall-arrest equipment
- undertake work which is at height while wearing fall-arrest equipment
- obtain required authorisation for the work
- complete any required documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- relevant procedures, hazard controls and work control/authorising systems
- methods of putting on and adjusting fall-arrest equipment
- symptoms of wear and other problems in fall-arrest equipment
- types and functions of fall prevention devices and work positioning systems.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - must include the use of fall-arrest equipment in a work area where a fall by a person from one level to another is reasonably likely to cause injury to the person or any other person
  - must include the conduct of a simple task (work), while within the work area
  - requires the work to be done under an appropriate authorisation which is a reasonable facsimile of industrial authorisations
  - requires the person to undertake all checks and complete all documentation that is required for working in a situation where a fall is reasonably likely.
- The work area used should be a reasonable facsimile of an industrial work area where there is a reasonable risk of a fall.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- The industry regards reassessment on a two year cycle as good practice.
- Persons seeking retraining/verification of competency and who have adequate evidence of having worked in a situation where a fall is reasonably likely and of applying current good practice in the last twelve months may be granted recognition of prior learning (RPL) for the practical assessment component.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.
-

MSMWHS300 Facilitate the implementation of WHS for a work group

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS300A Facilitate the implementation of OHS for a work group

Application

This unit of competency covers the skills and knowledge required to implement and monitor defined work health and safety (WHS) policies and procedures for a work group or area.

This unit of competency applies to people in a team leader or similar role and to people who are on a WHS committee.

It covers the ability to provide clear directions, information, instruction, training and appropriate supervision regarding the relevant state/territory WHS legislation, codes of practice, industry standards, workplace procedures and work instructions. It also covers the ability to coach team members to participate and contribute to WHS management issues.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSMWHS200 Work safely

Competency Field

HSE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Communicate WHS information for co-workers in team	1.1	Accurately and clearly explain to the work group basic WHS rights, responsibilities and requirements
		1.2	Provide, in a readily accessible manner, information on the relevant organisation WHS policies, procedures and programs, and accurately and clearly explain them to the work group
		1.3	Regularly provide relevant information about identified hazards and the outcomes of risk assessment and risk control procedures, and accurately and clearly explain them to the work group
2	Coach co-workers in team	2.1	Establish mutual support groups, e.g. buddy system, to encourage effective development of individual and group competencies in WHS
		2.2	Provide personal encouragement and assistance to team members to contribute to the management of WHS at the workplace
3	Facilitate the consultative process	3.1	Deal with, and promptly resolve, issues raised through consultation or refer to the appropriate personnel for resolution in accordance with workplace procedures
		3.2	Seek input from work group on WHS issues and proposed changes to process, procedures or work place
		3.3	Encourage and use feedback from individuals and teams to identify and initiate improvements in the management of WHS
		3.4	Promptly inform the work group of the outcomes of consultation over WHS issues

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	Implement and monitor organisation procedures for identifying hazards, and assessing and controlling risk	4.1	Implement and monitor WHS policies and procedures as defined by organisation
		4.2	Monitor existing risk control measures and report results regularly
		4.3	Access internal and external sources of relevant WHS information
		4.4	Evaluate and identify inadequacies in existing risk control measures in accordance with the hierarchy of control, and report to designated personnel
		4.5	Identify inadequacies in resource allocation for implementation of risk control measures and report to designated personnel
		4.6	Identify actual/potential inadequacies in procedures and report to designated personnel
		4.7	Identify actual/potential inadequacies in individual or team competency and report to designated personnel
5	Maintain and use WHS records	5.1	Accurately and legibly complete WHS records for work area, in accordance with workplace requirements for WHS records and legal requirements for the maintenance of records of workplace injury and disease
		5.2	Use aggregated information from the area WHS records to identify hazards and monitor risk control procedures within work area according to procedures and within scope of responsibilities and competencies

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- smoke, darkness and heat
- electricity
- gas and
- gases and liquids under pressure
- structural hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- structural collapse
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- flammability and explosivity
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- limited head spaces or overhangs
- unauthorised personnel
- other hazards that might arise

Appropriate personnel

Appropriate personnel include one or more of the following:

- employer
- supervisor
- employees elected as WHS representatives
- other personnel with WHS responsibilities

WHS records

WHS records include one or more of the following:

- hazard and incident reports
- logs/logs sheets
- inspection/start up/shut down checklists
- injury reports
- maintenance records

WHS information sources

WHS information sources include one or more of the following:

- WHS legislation, codes of practice and Australian and International standards
- WHS regulators
- WorkSafe Australia Guides
- industry bodies
- internet sites, journals and newsletters
- manufacturer manuals
- material safety data sheets (MSDS) and registers
- organisation WHS policies and procedures
- internal risk assessments, job safety analyses (JSAs) and workplace inspections

Assessment Requirements for MSMWHS300 Facilitate the implementation of WHS for a work group

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS300A Facilitate the implementation of OHS for a work group

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include the ability to:

- communicate using appropriate style and format for a range of stakeholders to:
  - promote and facilitate consultation and participation in the WHS processes
  - provide WHS information to work group
  - explain WHS procedures to work team members
  - report to designated personnel
  - seek input and feedback on WHS issues
  - undertake WHS issue resolution
- implement and monitor defined WHS activities for a work group or area
- encourage and assist the development of work group members
- evaluate and report on WHS procedures and practices
- participate in decisions which impact on WHS for the workgroup
- recognise a situation requiring action, including hazards, and take specified action to rectify or seek assistance as appropriate.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including:

- assessment of risk and implementation of risk control measures
- rights and responsibilities of employees under WHS legislation
- obligations of employers under the WHS legislation, including duty of care
- regulatory requirements for WHS information and consultation and processes and arrangements to meet these obligations
- regulatory requirements for WHS record keeping and reporting
- regulatory requirements for training and licensing relevant to WHS
- the hierarchy of control
- counselling, disciplinary and issue resolution processes.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Where the candidate does not currently possess evidence of competency in MSMWHS200 Work safely, it may be co-assessed with this unit.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include a demonstration of communication of WHS information to a group and the use of appropriate consultation and participation from within that group
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS400 Contribute to WHS management system

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS400A Contribute to OHS management system

Application

This unit of competency covers the skills and knowledge required to contribute to the work health and safety (WHS) management system.

The WHS management system will already have been developed by persons with the relevant specialist knowledge and skills.

This unit of competency applies to personnel who are required to implement, monitor and improve the WHS management system within a work group or area. It typically applies to a WHS specialist, or a team leader, supervisor or manager who has particular WHS responsibilities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards Hazards include one or more of the following:

- slip/trip hazards
- PPE is unavailable or not functional
- emergency equipment is unavailable
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment is in safe condition with hazard controls functional
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions, swarf and scrap
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Assessment Requirements for MSMWHS400 Contribute to WHS management system

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS400A Contribute to OHS management system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to:

- communicate using appropriate style and format for a range of stakeholders to:
  - review WHS procedures, training program and recording system
  - provide information on the effectiveness of the WHS management system in minimising risk
  - consult and seek feedback
  - develop new procedures and improve existing procedures
  - inform work group or area about changes in WHS procedures
  - interact with the work group or area to ensure the WHS processes and procedures are applied
- analyse WHS information to:
  - identify gaps in procedures and training
  - identify improvements in procedures
  - incorporate feedback from stakeholders
  - ensure WHS procedures and improvements comply with the regulatory framework
- apply the hierarchy of control to recommend actions to minimise risk
- plan and implement appropriate review processes
- write clearly and unambiguously, including:
  - reports
  - draft policies and procedures
  - WHS information.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- WHS responsibilities of employers and employees, including supervisors and contractors
- regulatory requirements for WHS, including:
  - duty of care responsibilities
  - information and consultation and processes and arrangements to meet these obligations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - record keeping and reporting
  - training and licensing relevant to WHS
- elements of a WHS management system, including:
  - principles and practices of effective WHS management and risk control
  - sources and types if information that provide realistic information on the performance of the WHS management system
  - techniques for analysing WHS data, including simple statistical analysis and graphing of trends all relevant workplace procedures
  - types and application of review processes including review of written reports, analysis of data, performance appraisal and auditing
  - WHS issue resolution processes.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS401 Assess risk

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS401A Assess risk

Application

This unit of competency covers the skills and knowledge required to identify hazards and operability problems and then analyse them by hazard analysis techniques to assess risk.

This unit of competency is a specialist unit requiring technical knowledge and is suitable for plant technicians and people in similar roles.

A team with a broad knowledge of the system and its operation will carry out the analysis. It is expected that the risk assessment processes are already defined for the enterprise and that the risk acceptance criteria have already been established. The team will be steered by engineering experts or risk assessment specialists in the industry.

This unit of competency applies to workers who take an active role in a hazard and operability study (HAZOP) or similar methodology. They are not expected to lead the HAZOP. This unit is not restricted to HAZOPs and may be applied to other methodologies requiring similar competency. The risk assessment should be consistent with AS/NZS ISO 31000:2009 Risk management – Principles and guidelines.

Team members will contribute their understanding of the process and particularly the operational aspects, and then carry out whatever tasks are assigned to them by the analysis team.

The aim of this unit of competency is to apply a methodical examination of the system and its elements to identify hazards and the states or conditions where there may be loss of control of the hazard and the resultant consequences.

The technique can be applied at any stage of a project/process life cycle.

Although hazard identification should be the main focus, operability problems should be identified to the extent that they have the potential to lead to a breakdown in hazard controls resulting in a health, safety or environmental (HSE) violation or have a negative impact on profitability.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit of competency applies to an individual working as part of a team or group.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Work health and safety

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify hazards and potential operability problems	1.1	Contribute to the compiling of a system description of all the machinery, equipment, operations, products and materials relevant to the everyday working procedures of the facility
		1.2	Contribute to the compiling of a checklist containing process parameters (primary key words) and guide words (secondary key words) relevant to the system
		1.3	Identify hazards, existing control measures and potential operability problems or breakdowns in control measures using the compiled system descriptions and the checklist
2	Assess impact of risk and determine alternative strategies	2.1	Screen for causes of deviations and establish consequences
		2.2	Determine alternative strategies for action in relation to each deviation within the range of competency and responsibility
		2.3	Review, clarify and/or analyse risk information to determine its relevance and reliability depending upon

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			the task assigned, level of competency and area of responsibility
3	Assess risk information against established risk criteria in risk management plan	3.1	Check risk acceptance criteria for any changes over past period
		3.2	Compare risk information against risk acceptance criteria and procedures to assess acceptability of risk
		3.3	Liaise with other internal departments to assess impact on business, if applicable
		3.4	Document findings according to company policies and procedures
4	Develop a risk register	4.1	Develop a risk assessment chart for each system studied containing deviation, cause, consequence, control measures and action
		4.2	Develop action plan for implementation of control measures, including any changes to procedures
		4.3	Establish or review the procedures by consulting relevant/different work groups.
		4.4	Inform relevant work groups of any changes and implement, within area of responsibility, changes in the procedures
		4.5	Monitor effectiveness of the control measures, including revised procedures
5	Establish and maintain procedures for identifying hazards, and assessing and controlling risk	5.1	Identify and develop procedures for routine hazard identification, assessment and control of risks
		5.2	Address identification of all hazards at the planning, design and evaluation stages of any changes in the workplace to ensure that new hazards are not created by the proposed changes
		5.3	Develop and maintain procedures for selection and implementation of risk control measures in accordance with the hierarchy of control

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5.4	Identify inadequacies in existing risk control measures in accordance with the hierarchy of control and, within area of responsibility, promptly provide resources enabling implementation of new measures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- limited head spaces or overhangs
- extreme weather
- other hazards that might arise

Non-routine problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Non-routine problems include one or more of the following:

- incidents with a potential for injury

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- fires and explosions
- chemical spills
- bomb scares

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Risk assessment methodology

Risk assessment methodology must:

- enhance the understanding of risk and how it may be reduced
- permit the modelling and evaluation of a wide range of failure modes
- enable the analysis to be carried out in a manner that is auditable, repeatable and verifiable
- be usable by other staff
- be appropriate to the system operating in the given domain
- give valid results from the type and quantity of data that is available
- be appropriate for the particular life cycle phase at which it is to be applied
- be supported by standard proformas for the technique
- have a rational technical basis, typically through reference to national or international standards, Defence standards or published reference books

This is not restricted to HAZOP methodology; other methodologies requiring similar competency may be used.

Process parameters

Specific process parameters (primary key words) relevant to the system will include three (3) or more of:

- flow
- temperature
- pressure
- relief
- instrumentation
- sampling
- addition
- safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- reaction
- reduce (grind and crush)
- absorb
- isolate
- vent
- start-up
- composition
- phase
- level
- corrosion
- erosion
- services
- utilities
- maintenance/maintain
- inserting
- purging
- contamination
- separate (settle, filter and centrifuge)
- mix
- drain
- shutdown

Assessment Requirements for MSMWHS401 Assess risk

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS401A Assess risk

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- apply a systematic risk assessment methodology
- identify and interpret information from a range of internal and external sources
- interpret hazard and probability data to determine risk profiles
- communicate with a range of stakeholders to:
  - identify risks and causes
  - identify consequences and assess impact of risks
  - plan and implement changes to procedures
- plan and implement control measures
- apply operational knowledge to non-routine problems
- monitor and evaluate outcomes of control measures and procedures and make improvements as appropriate
- document findings and complete reports.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- day-to-day operations of the facility, including:
  - machinery, equipment, operations, products and materials
  - process parameters (primary key words) and guide words (secondary key words)
  - workplace systems and the importance of critical procedures
- hazard identification and control measures
- how hazard controls may break down
- quantitative risk assessment, such as hazard analysis (HAZAN)
- risks and how they may be reduced
- key features of a systematic risk assessment methodology, including:
  - what makes it auditable, repeatable, verifiable and usable by other staff
  - how it can be used for modelling and evaluation of a wide range of failure modes
  - available data and how it can give valid results
  - its rational technical basis
- analysis systems appropriate to the system operating in the given domain and appropriate for the particular life cycle phase at which it is to be applied.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of having been a member of a HAZOP (or similar) team and meeting the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS503 Maintain WHS management system

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS503A Maintain the workplace OHS management system

Application

This unit of competency covers the skills and knowledge required to maintain and improve an established work health and safety (WHS) management system.

The WHS management system will already have been developed by persons with the relevant specialist knowledge and skills.

This unit of competency applies to personnel with a specialised responsibility for maintaining the WHS management system. Depending on the organisation this might be an owner, manager, team leader, WHS officer/manager, a technician with particular WHS responsibilities, or someone in a similar role. The competency applies within the area of managerial responsibility, which may be an entire organisation or department of an organisation.

The work will be carried out with the support of other team members.

Management must be aware that, while employees have WHS responsibilities, line managers are ultimately responsible, under both WHS legislation and common law duty of care, for the safety of the workplace, including ensuring that employees comply with documented work procedures. This legislation includes general WHS legislation as well as that for hazardous substances, dangerous goods and major hazard sites.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Manage WHS information in the workplace	1.1	Take action to ensure that requirements for WHS record keeping and reporting are implemented according to workplace procedures and legislative requirements
		1.2	Access sources of WHS information and evaluate for application to the workplace
		1.3	Collect and collate data and information to provide information to managers and stakeholders on WHS requirements, trends and risk controls
2	Support implementation of WHS management system	2.1	Determine WHS priorities in consultation with appropriate managers and stakeholders
		2.2	Identify WHS training needs for implementation and maintenance of the WHS management system
		2.3	Develop action plans taking account of priorities and training needs
		2.4	Monitor achievement of action plans and update plans accordingly
3	Support WHS participative arrangements	3.1	Ensure WHS information and documentation is understandable and accessible to all
		3.2	Promptly address WHS issues that may arise within area of authority or refer to appropriate person
		3.3	Provide information about the outcomes of WHS consultation in a manner that is accessible to all
4	Collect data to evaluate currency	4.1	Identify, in consultation with stakeholders and, as required expert advisors, internal data and information

	of WHS management system		that provides relevant and reliable information on the performance of the WHS management system
		4.2	Conduct workplace inspections on a regular basis.
		4.3	Identify workplace WHS implications of any changes to legislation
		4.4	Identify any WHS implications to proposed changes to the workplace
		4.5	Take action to arrange a WHS management system audit
5	Analyse data and information to identify areas for improvement	5.1	Assess compliance of WHS management system with WHS legislation
		5.2	Analyse information collected to identify areas for improvement.
		5.3	Consult with stakeholders, key personnel and, as required, WHS advisors
		5.4	Document and communicate outcomes of analysis to key personnel and stakeholders in an easily understood format
		5.5	Recognise limits of own expertise and seek appropriate advice
6	Initiate and maintain improvements	6.1	Determine priorities for WHS in consultation with stakeholders
		6.2	Develop a WHS plan with responsibilities and timeframes and validate the plan with stakeholders
		6.3	Identify and source resources required for implementation of plan
		6.4	Monitor achievement against plan
		6.5	Monitor effectiveness of modifications to WHS management system on an ongoing basis incorporating feedback from stakeholders

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Assessment Requirements for MSMWHS503 Maintain WHS management system

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS503A Maintain the workplace OHS management system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to:

- communicate using appropriate style and format for a range of stakeholders to:
  - evaluate the WHS management system
  - provide information on the effectiveness of the WHS management system in minimising risk
  - identify, plan, implement and monitor improvements
  - convey WHS and other complex/technical information
  - consult and seek input/feedback
  - interact with the workforce to maintain the process that comprise the WHS management system
- analyse WHS data to identify areas for improvement
- create and manage documentation, including:
  - WHS records
  - minutes of meetings and consultations
  - workplace inspection checklists, audits and reports
- write clearly and unambiguously, including:
  - reports
  - policies and procedures
  - WHS information
- develop WHS management system improvement plans
- apply a quality improvement process to implement and monitor improvements
- identify WHS training needs.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role, including:

- WHS responsibilities of employers, employees, supervisors and contractors, including duty of care responsibilities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- regulatory requirements for WHS information and consultation and processes and arrangements to meet these obligations
- regulatory requirements for WHS record keeping and reporting
- regulatory requirements for training and licensing relevant to WHS
- elements of a WHS management system and principles and practices of effective WHS management and risk control
- barriers to implementation of WHS, including language and literacy, cultural diversity of workforce and workplace culture in relation to WHS
- sources and types if information that provide realistic information on the performance of the WHS management system
- techniques for analysing WHS data, including simple statistical analysis and graphing of trends
- types of internal and external change that may impact on WHS and WHS compliance
- audit and inspection processes.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. MSMWHS510 Manage risk

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS510A Manage risk

Application

This unit of competency covers the skills and knowledge required to develop, implement and evaluate an organisation-wide risk management plan. Risk management is defined as coordinated activities to direct and control an organisation with regard to risk. It incorporates an assessment of all potential risks facing the organisation and the approach, management components and resources to be applied to the management of risk. It focuses on avoiding/eliminating critical incidents rather than on recovering from a disaster.

This unit of competency applies to managers or work health and safety (WHS) specialists who are developing or maintaining a risk management plan for their site or organisation.

This unit of competency is based on *AS/NZS ISO 31000:2009 Risk management - Principles and guidelines* and can be applied to any aspect of risk in an organisation. When applied to health, safety and environment (HSE) risks the business and other risks consequent on them are also considered.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MSMWHS510 Manage risk

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS510A Manage risk

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- select and apply techniques to develop a risk management plan
- identify and interpret information from a range of internal and external sources
- communicate with a range of stakeholders to:
  - identify and assess impact
  - prioritise risks
  - develop and evaluate treatment options
  - evaluate risk management activities
  - evaluate organisational capability and identify training needs
- plan, implement and monitor risk management activities
- write reports, policies and procedures.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including:

- regulatory framework
- legal requirements for operating the business relevant to the area of responsibility
- the legal implications of deeming identified risks as acceptable
- internal or external audit methods
- focus group processes
- risk analysis processes
- criteria for evaluation and prioritisation.

Assessment Conditions

The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.

The collection of performance evidence is best done from a report and/or folio of evidence drawn from:

- a single project which provides sufficient evidence of the requirements of all the elements and performance criteria

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.

A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.

Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

Foundation skills are integral to competent performance of the unit and should not be assessed separately.

As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS601 Develop WHS management system

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS601A Establish workplace OHS management system

Application

This unit of competency covers the skills and knowledge required to develop the work health and safety (WHS) management system at senior management level, in order to meet legislative requirements and to ensure that the workplace is, so far as is practicable, safe and without risks to the health of employees.

This unit of competency applies to managers and senior technicians who have a WHS responsibility. It typically applies when a WHS management system is being developed, and could be used for a complete review of an existing WHS management system. Develop means to develop initially, or to further develop/improve or maintain an existing WHS management system.

This unit of competency describes WHS requirements applicable for those with managerial responsibilities for development and ongoing management of the WHS management system within the organisation. This may be as a worker or as an owner of a business.

This unit of competency applies within an area of managerial responsibility, which may be an entire organisation or department of an organisation. Roles and responsibilities will vary from organisation to organisation.

This unit of competency applies to organisations where the WHS system with related policies, procedures and programs may or may not be established. Where the WHS system is established, the unit will relate to the review of the WHS management system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Work health and safety

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify needs of the WHS management system	1.1	Analyse the workplace to identify needs and workplace factors that may impact on the design of the WHS management system
		1.2	Clarify WHS legal obligations in relation to the specific workplace
		1.3	Review relevant standards relating to WHS management system
		1.4	Identify links with other functional areas and management systems
		1.5	Seek input from stakeholders on the design of the WHS management system
2	Review the framework for the WHS management system	2.1	Ensure WHS responsibilities and duties are documented and accountability processes are in place
		2.2	Identify and source financial and human resources required for the operation of the WHS management system
		2.3	Review WHS policies and procedures
		2.4	Ensure implications of any proposed changes to the workplace are identified and addressed
		2.5	Recognise limits of own professional expertise and consult WHS specialists as necessary

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Develop participative arrangements for the management of WHS	3.1	Develop appropriate participative processes with employees and their representatives in accordance with relevant WHS legislation and industry standards
		3.2	Provide information on WHS to employees in a format that is readily accessible and understandable
		3.3	Promptly and effectively deal with and resolve issues raised through participation and consultation in accordance with procedures for issues resolution
		3.4	Provide information about the outcomes of participation and consultation in a manner accessible to employees
4	Develop risk management processes	4.1	Develop procedures for hazard, incident and injury reporting and investigation
		4.2	Develop procedures for hazard identification, hazard analysis and risk assessment
		4.3	Develop hazard specific risk control measures currently in place to meet legal requirements and minimise risk as far as is practicable
		4.4	Develop procedures for ongoing control of identified hazards and monitoring of the effectiveness of controls
5	Develop and maintain a WHS training program	5.1	Conduct a WHS training needs assessment for the work group that takes account of legislative requirements, internal policies and procedures, skills of work group and risk control requirements
		5.2	Develop and implement a WHS training program to identify and fulfil employee's WHS training needs as a part of the organisation general training program.
		5.3	Coordinate with relevant training experts as necessary
6	Develop and maintain a system for WHS records	6.1	Identify and address legal requirements for record keeping and reporting
		6.2	Identify and access sources of WHS information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		6.3	Take actions to ensure that records are accurately completed, collected and stored
7	Implement WHS systems, strategies and plans	7.1	Determine WHS priorities in consultation with managers and taking account of participative arrangements in the workplace
		7.2	Develop plans for the implementation of WHS strategies
		7.3	Monitor and update plans for achievement as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- smoke, darkness and heat
- electricity
- gas and
- gases and liquids under pressure
- structural hazards
- structural collapse
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- flammability and explosivity
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- limited head spaces or overhangs
- unauthorised personnel
- other hazards that might arise

WHS information sources

WHS information sources include one or more of:

- WHS legislation, codes of practice and Australian and International standards
- WHS regulators
- WorkSafe Australia Guides
- industry bodies
- internet sites, journals and newsletters
- manufacturer manuals
- material safety data sheets (MSDS) and registers
- organisation WHS policies and procedures
- internal risk assessments, job safety analyses (JSAs) and workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

inspections
- internal hazard and incident reports

Unit Mapping Information

Assessment Requirements for MSMWHS601 Develop WHS management system

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS601A Establish workplace OHS management system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include the ability to:

- ascertain requirements for development of WHS management system
- develop appropriate documentation, including:
  - policies and procedures
  - training material
- identify and source financial and human resources
- develop training strategy to address WHS training requirements
- consult and negotiate to implement or review policies and procedures
- apply a systematic process to planning and implementation or review of WHS systems.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role, including:

- regulatory requirements relevant to role, including duty of care responsibilities
- requirements for WHS record keeping and reporting
- principles and practices of effective WHS management and risk control
- elements and requirements of a WHS management system
- other management systems requiring interface or integration with the WHS management system
- barriers to implementation of WHS, including language and literacy, cultural diversity of workforce and workplace culture in relation to WHS
- relevant organisation procedures, practices, codes and signs/symbols
- organisations goals, targets and measures
- hierarchy of control.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWJ201 Use high pressure water jetting equipment

Modification History

Not applicable.

Application

This unit of competency covers the skills and knowledge required to use high pressure water jetting equipment under the supervision of a competent operator. The job may be to clean, prepare, abrade, cut or demolish concrete, steel or other plant, equipment, vessels or infrastructure.

Work will be undertaken on a worksite which may be a client's site or a site belonging to the organisation.

This work is undertaken in compliance with *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance*, or its authorised replacement and *Safe Work Australia Guide for Managing Risks from High Pressure Water Jetting December 2013*, its state/territory equivalent (where one exists) or the authorised replacement.

AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance defines this work as work with:

(*a*) *High pressure water jetting systems pressurised by positive displacement pumps with an output capability greater than 800 bar litres per minute*.

(*b*) *High pressure water jetting operations carried out at pressures above 800 bar litres per minute and includes jetting operations involving the use of additives and abrasives*.

(*c*) *Water jetting operations below 800 bar litres per minute where there is a foreseeable risk of injury to operators*.

It further defines:

High pressure water jetting systems with an output capability greater than 800 bar litres per minute and less than 5600 bar litres per minute are identified as Class A and systems with an output capability in excess of 5600 bar litres per minute are identified as Class B.

This unit covers an operator who is competent to operate under supervision. For a competent operator who is to operate independently *MSMWJ301A Operate a high pressure water jetting system should be used.*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance states that 'Verification of competency or refresher training on high pressure water jetting operations shall be carried out and documented at appropriate intervals not exceeding two years to ensure the continued competency of operators'.

Competence may also be required in a range of other units of competency in order to be allowed to operate on site under supervision.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Operations

Unit Sector

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Prepare for work**	1.1	Obtain required job details as part of a team
		1.2	Complete site access and work control requirements
		1.3	Identify site hazards and required hazard controls
		1.4	Select, check, load and prepare required equipment under supervision
		1.5	Participate in toolbox meeting or similar, as required
		1.6	Complete required pre-work paperwork

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

2	**Complete on-site preparation**	2.1	Check correct equipment is at job/site location
		2.2	Check job location, scope and requirements
		2.3	Obtain required permits/work authorities, as directed
		2.4	Follow job-related documentation as directed
		2.5	Check that the required quantity and quality of water is available
		2.6	Check available waste disposal is adequate for all wastes generated by the job
		2.7	Report any deviations from requirements to supervisor
		2.8	Recognise and control job and site-specific hazards
3	**Set up job as directed**	3.1	Prepare worksite to comply with job and safety requirements
		3.2	Set up and prepare water jetting equipment
		3.3	Liaise with other work groups as appropriate to ensure safe and efficient operation
		3.4	Establish appropriate means of communication between operators
		3.5	Ensure hazard controls are operational and adequate
		3.6	Check and use required personal protective equipment
		3.7	Test emergency shut-off and request equipment be repaired if not functional.
4	**Undertake water jetting job as directed**	4.1	Start up high pressure water jetting system
		4.2	Communicate with supervisor and any other operators as required by job
		4.3	Operate equipment as directed
		4.4	Monitor the job, conditions and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.5	Maintain required line of sight
		4.6	Monitor hazards and activate emergency stop, as required
		4.7	Recognise problems and resolve routine problems
		4.8	Complete required paperwork
5	**Complete job**	5.1	Shut down equipment
		5.2	Clean job site and equipment
		5.3	Service and inspect equipment as directed
		5.4	Store equipment, as directed
		5.5	Restock running spares and consumables, as directed
		5.6	Report any issues or incidents according to procedures
		5.7	Participate in debrief
		5.8	Complete required paperwork

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework	The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Applicable legislation, regulations, standards and codes of practice include one or more of the following:

- *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe* operation *and maintenance*
- *Safe Work Australia Guide for Managing Risks from High Pressure Water Jetting December 2013*
- work health and safety (WHS) legislation, codes of practice and guidance material
- environmental regulations and guidelines
- other relevant government legislation, regulations and codes
- Australian and other standards
- other relevant codes and standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- Guidance Notes
- temporary instructions
- any similar instructions provided for the smooth running of the plant

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through federal or state/territory legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Site access requirements

Site access requirements include one or more of the following:

- site induction
- other requirements if defined by the site or client

Work control requirements

Work control requirements include one or more of the following:

- permits or other authorities to enter site, commence and continue

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

work
- other requirements if defined by the site or client

Equipment

Equipment includes one or more of the following:

- pumps
- pump motors/drivers
- hoses
- guns, lances and nozzles
- personal protective equipment (PPE)
- other equipment, plant, tools and hazard control devices required for the job

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment not operating at desired conditions
- equipment malfunction
- jobs is not as described in the scope

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to relevant procedures.

Equipment operation

Equipment operation includes one or more of the following:

- manually on the worksite
- using local controller on the worksite
- using the control system which may be remote from the jetting equipment

Job paperwork

Job paperwork is electronic, hard copy or other format, and includes one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- tool storeroom records
- equipment loaded records
- maintenance/inspection records/checklists
- tag out/reports for failed equipment
- hazard controls
- work control system requirements.

PPE

PPE includes one or more of the following:

- PPE as specified in:
  - Section 4 *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance, or its authorised replacement*
  - *Section 5 Safe Work Australia Guide for Managing Risks from High Pressure Water Jetting December 2013,* or its authorised replacement
- medical alert card as specified in Section 9.5 of *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance, or its authorised replacement*
- other equipment as required

Communication

Communication includes one or more of the following:

- hand signals
- radio head phones
- other means appropriate to the job/site

Hazards

Hazards include one or more of the following:

- hazards from high/extreme pressure and or velocity
- hazards arising from the materials used in/generated by the water jetting job
- hose set-up and hose run
- hazards specific to the site/process
- slip/trip hazards
- PPE is unavailable or not functional
- emergency equipment is unavailable
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- equipment is in safe condition with hazard controls functional
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working where the possibility of a fall is reasonably likely, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours, smoke or other atmospheric hazards
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions, swarf and scrap
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Hazard controls Hazard controls include one or more of the following:

- controls required by *AS/NZS 4233.1: 2013 High pressure water jetting systems - Safe operation and maintenance, or its authorised replacement*
- controls identified in the relevant permits to work
- use of PPE
- other appropriate controls consistent with the hierarchy of control

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSAPMWJ201A Use high pressure water jetting equipment

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=d1287d36-dff4-4e9f-ad2c-9d6270054027

Assessment Requirements for MSMWJ201 Use high pressure water jetting equipment

Modification History

Not applicable.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and under supervision demonstrate the ability to:

- assemble and operate equipment which meets the requirements of a Class B system as defined by *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance* or its authorised replacement, including:
  - at least one (1) gun operation AND
  - at least one (1) of:
    - pipe cleaning
    - heat exchanger/tube cleaning
    - surface preparation
    - vessel (interior) cleaning using a cleaning head AND
  - use at least two (2) different types of nozzles/heads.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including:

- system controls required by *AS/NZS 4233.1: 2013 High pressure water jetting systems - Safe operation and maintenance,* or its authorised replacement
- possible injuries resulting from high pressure water jets and appropriate responses
- basic principles of how high pressure water jetting nozzles/jets work
- basic understanding of reaction force and its determination
- preoperational checks and set-up
- relevant communication systems, including hand signals
- types of waste generated and procedures for safe disposal.

Assessment Conditions

- Competency must be achieved before performing this work under supervision. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job appropriate supervision and safety precautions must be provided.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- While water jetting equipment meeting the requirements of Class B must be used, the plant/job requiring water jetting may be a realistic simulation of an industry plant/application/situation.
- All appropriate tools, equipment, paper work/permits and safety gear required will be available and used as required. The assessor should act as the supervisor, giving such directions as would be provided on the job. It is expected that one assessor would not observe a group larger than ten persons at the one assessment event.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence will be collected independently of the above practical assessment and may use workbooks, written assessments, interviews (provided a record is kept) or other methods.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Persons seeking verification of competence/retraining to comply with *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance*, or its authorised replacement must meet the same evidence requirements as above.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=d1287d36-dff4-4e9f-ad2c-9d6270054027

MSMWJ301 Operate a high pressure water jetting system

Modification History

Release 1. Supersedes and is equivalent to MSAPMWJ301A Operate a high pressure water jetting system

Application

This unit of competency covers the skills and knowledge required to operate a high pressure water jetting system which may be used to clean, prepare, abrade, cut or demolish concrete, steel or other plant, equipment, vessels or infrastructure.

This work is undertaken in compliance with AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance, or its authorised replacement and Safe Work Australia Guide for Managing Risks from High Pressure Water Jetting December 2013, its state/territory equivalent (where one exists) or the authorised replacement.

Work will be undertaken on a worksite which may be a client's site or a site belonging to the organisation.

AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance defines this work as work with:

(a) High pressure water jetting systems pressurised by positive displacement pumps with an output capability greater than 800 bar litres per minute.

(b) High pressure water jetting operations carried out at pressures above 800 bar litres per minute and includes jetting operations involving the use of additives and abrasives.

(c) Water jetting operations below 800 bar litres per minute where there is a foreseeable risk of injury to operators.

It further defines:

High pressure water jetting systems with an output capability greater than 800 bar litres per minute and less than 5600 bar litres per minute are identified as Class A and systems with an output capability in excess of 5600 bar litres per minute are identified as Class B.

The competent operator as defined by this unit of competency will be able to operate independently. Operators who are not competent to operate independently should be competent to operate under supervision (refer to MSMWJ201 Use high pressure water jetting equipment).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Operators will also need to be competent in a range of other units of competency in order to be allowed to operate independently on site. Work will be undertaken on a worksite which may be a client's site or a site belonging to the organisation.

AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance states that 'Verification of competency or refresher training on high pressure water jetting operations shall be carried out and documented at appropriate intervals not exceeding two years to ensure the continued competency of operators'.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

		4.5	Maintain required line of sight
		4.6	Monitor the job, conditions and equipment
		4.7	Recognise and diagnose problems
		4.8	Take appropriate action to respond to problems
		4.9	Complete required paperwork
5	**Complete job in accordance with procedures**	5.1	Shut down equipment
		5.2	Advise job owner of job completion and any relevant observations during the job
		5.3	Clean job site and equipment
		5.4	Service and inspect equipment
		5.5	Store equipment
		5.6	Restock running spares and consumables
		5.7	Report any issues or incidents, as required
		5.8	Debrief relevant stakeholders
		5.9	Complete required paperwork

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory Framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include one or more of the following:

- *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance*
- work health and safety (WHS) legislation, codes of practice and guidance material
- environmental regulations and guidelines
- other relevant government legislation, regulations and codes
- Australian and other standards
- other relevant codes and standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the job

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through federal or state/territory legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Site access requirements

Site access requirements include one or more of the following:

- site induction
- other site/client requirements

Equipment

Equipment includes one or more of the following:

- pump
- pump motor/driver
- hoses
- guns, lances and nozzles
- PPE
- other equipment, plant, tools and hazard control devices required by the job

Equipment variables

Equipment variables include:

- nozzle type
- pressure/flow required
- additives to be used
- other items under the control of the operator

Non-routine problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Non-routine problems are unexpected problems, or variations of previous problems and include one or more of the following:

- equipment not operating at desired conditions
- equipment malfunction
- jobs is not as described in the scope
- job owner wants a scope variation
- other unplanned event or unexpected consequence from a planned event

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Operational knowledge includes one or more of: the following

- procedures
- training
- technical information such as journals, engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Job owner

Job owner includes one or more of the following:

- client or their representative
- site manager or their representative
- production manager or their representative
- maintenance manager or their representative
- other person with prime responsibility for the plant/plant area which is the subject of the water jetting job

Equipment operation

Equipment operation includes one or more of the following:

- manually on the worksite
- using local controller on the worksite
- using the control system which may be remote from the jetting equipment
-

Job paperwork

Job paperwork is electronic, hard copy or other format, and includes one or more of the following:

- tool storeroom records
- equipment loaded records
- maintenance/inspection records/checklists
- tag out/reports for failed equipment
- hazard controls
- work control system requirements

PPE

PPE includes one or more of the following:

- PPE as specified in:
- Section 4 *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance,* or its authorised replacement
- Section 5 *Safe Work Australia Guide for Managing Risks from High Pressure Water Jetting December 2013,* or its authorized replacement
- medical alert card as specified in Section 9.5 of *AS/NZS 4233.1:2013*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

High pressure water jetting systems - Safe operation and maintenance, or its authorised replacement
- other equipment as required

Communication

Communication includes one or more of the following:

- hand signals
- radio headphones
- other means appropriate to the job/site

Hazards

Hazards include one or more of the following:

- hazards from high/extreme pressure and or velocity
- hazards arising from the materials used in/generated by the water jetting job
- hose set up and hose run
- hazards specific to the site/process
- slip/trip hazards
- PPE is unavailable or not functional
- emergency equipment is unavailable
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment is in safe condition with hazard controls functional
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working where there is a reasonable risk of a fall, in restricted or confined spaces, or in environments subjected to heat, noise, dusts, vapours, smoke, or other atmospheric hazards
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions, swarf and scrap
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Hazard controls Hazard controls include one or more of the following:

- controls required by *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance, or its authorised replacement*
- controls identified in the relevant permits to work
- use of PPE
- other appropriate controls consistent with the hierarchy of control

Assessment Requirements for MSMWJ301 Operate a high pressure water jetting system

Modification History

Release 1. Supersedes and is equivalent to MSAPMWJ301A Operate a high pressure water jetting system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- assemble and operate equipment which meets the requirements of a Class B system as defined by *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance* or its authorised replacement, including:
  - at least one (1) gun operation AND
  - at least one (1) of:
    - pipe cleaning
    - heat exchanger/tube cleaning
    - surface preparation
    - vessel (interior) cleaning using a cleaning head AND
  - use at least two (2) different types of nozzles/heads.
  -

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including:

- hazards and hazard controls specific to the operation of water jetting equipment
- principles of operation and science (physics) of water jetting equipment and its component items
- types and duties of water jetting equipment and its component plant items
- correct methods of starting up, shutting down, operating and controlling water jetting equipment and its component plant items by type and duty
- relevant communication systems, including hand signals
- operational parameters and limits
- types and causes of known problems for water jetting and its components
- corrective action appropriate to the problem cause
- the importance of monitoring and controlling job conditions
- methods, purpose (and appropriate corrective action) of monitoring job variables
- situations requiring:
  - activating emergency stop

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- stopping work until a situation is resolved
- raising alarm (when, how, who to)
- responding to injury.
-

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- While water jetting equipment meeting the requirements of Class B must be used, the plant/job requiring water jetting may be a realistic simulation of an industry plant/application/situation.
- All appropriate tools, equipment, paper work/permits and safety gear required will be available and used as required. The assessor should only intervene if it would be unsafe to allow the assessment to continue. It is expected that one assessor would not observe a group larger than ten persons at the one assessment event.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence will be collected independently of the above practical assessment and may use workbooks, written assessments, interviews (provided a record is kept) or other methods.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Persons seeking verification of competence/retraining to comply with AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance or its authorised replacement must meet the same evidence requirements as above.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWJ302 Operate a drain cleaning system

Modification History

Release 1 - New unit

Application

This unit of competency covers the skills and knowledge required to operate a drain cleaning system which may be used to clean, unblock or remove debris from a closed drain (pipe) or open channel drainage system.

It covers stormwater, wastewater (domestic type sewerage), trade waste/industrial, publically and privately owned drains and related infrastructure. This work is undertaken in compliance with AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance and Section 6.8 Lancing, pipe and drain cleaning, or its authorised replacement, and Safe Work Australia Guide for Managing Risks from High Pressure Water Jetting (December 2013), its state/territory equivalent (where one exists) or the authorised replacement.

Work will be undertaken on a worksite which may be a client's site or may be public space.

Operators will also need to be competent in a range of other units of competency in order to be allowed to operate independently on site.

AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance states that 'Verification of competency or refresher training on high pressure water jetting operations shall be carried out and documented at appropriate intervals not exceeding two years to ensure the continued competency of operators'.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Prepare for work**	1.1	Obtain required job details
		1.2	Complete site access and work control requirements
		1.3	Identify site hazards and required hazard controls
		1.4	Select, check and load equipment and personal protective equipment (PPE) required for the job
		1.5	Ensure the adequate quantity of fuel and other consumables have been filled/loaded
		1.6	Lead tool box meeting as required
		1.7	Check work team members comply with site and job competency requirements
		1.8	Complete required pre-work paperwork
2	**Complete on-site preparation**	2.1	Check job scope, location and requirements with job owner/contact person
		2.2	Obtain required permits/work authorities
		2.3	Interpret and follow job-related documentation
		2.4	Define work area and check exclusion zones
		2.5	Check direction of flow and walk the route (upstream/downstream)
		2.6	Complete pre-start on vehicle and check emergency stop
		2.7	Check available waste disposal is adequate for all wastes generated by the job
		2.8	Recognise and control job and site-specific hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	**Set up job in accordance with procedures**	3.1	Prepare worksite to comply with job and safety requirements
		3.2	Inspect, assemble and check drain cleaning equipment to procedures
		3.3	Liaise with other work groups as appropriate to ensure safe and efficient operation
		3.4	Establish appropriate means of communication between operators and ensure correct positioning of personnel
		3.5	Ensure hazard controls are operational and adequate
		3.6	Check and use required personal protective equipment
4	**Undertake drain cleaning job in accordance with procedures**	4.1	Start up drain cleaning system
		4.2	Communicate with/supervise other operator as required by job
		4.3	Operate equipment to meet job requirements
		4.4	Monitor hazards and activate emergency stop, as required
		4.5	Maintain required line of sight
		4.6	Monitor the job, conditions and equipment
		4.7	Recognise and diagnose problems
		4.8	Take appropriate action to respond to problems
		4.9	Complete required paperwork
5	**Complete job in accordance with procedures**	5.1	Shut down equipment
		5.2	Ensure the appropriate disposal of all waste
		5.3	Reinstate assets (e.g. access hole covers)
		5.4	Advise job owner/contact person of job completion and any relevant observations during the job
		5.5	Clean job site and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5.6 Service and inspect equipment

5.7 Store equipment

5.8 Contact depot for further work instructions

5.9 Report any issues or incidents, as required

5.10 Debrief relevant stakeholders

5.11 Complete required paperwork

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory Framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance*
- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

Procedures include one or more of the following:

- work instructions
- standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safe work method statements (SWMS), job safety and environment analysis (JSEA) or job hazard analysis (JHA)
- temporary instructions
- any similar instructions provided for the smooth running of the job

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through federal or state/territory legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

Site access requirements

Site access requirements include one or more of the following:

- site induction
- other site/client requirements

Equipment

Equipment includes one or more of the following:

- positive displacement pump
- pump motor/driver
- hoses
- nozzles
- starter bars
- anti-withdrawal devices
- easement reel
- PPE
- other equipment, plant, tools and hazard control devices required by the job

Equipment variables

Equipment variables include:

- hose type
- nozzle type
- pressure/flow required
- other items under the control of the operator

Non-routine problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts to:

- determine problems needing action
- determine possible fault causes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Non-routine problems are unexpected problems, or variations of previous problems and include one or more of the following:

- equipment not operating at desired conditions
- equipment failure
- burst hose/loss of pressure
- damaged/broken pipes
- injury
- motor vehicle incident
- emergency response
- job is not as described in the scope
- job owner wants a scope variation
- other unplanned event or unexpected consequence from a planned event

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Job owner

Job owner includes one or more of the following:

- client or their representative
- site manager or their representative
- production manager or their representative
- maintenance manager or their representative
- other person with prime responsibility for the plant/plant area which is the subject of the drain cleaning job

Equipment operation

Equipment operation includes one or more of the following:

- manually on the worksite
- using local controller on the worksite
- using the control system which may be remote from the drain cleaning equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Monitor

Monitoring drain cleaning operation includes monitoring one or more of the following:

- outlet points
- hose length
- hose resistance
- strainer basket
- debris
- CCTV

Job paperwork

Job paperwork is electronic, hard copy or other format, and includes one or more of: the following

- tool storeroom records
- site/drain plans
- equipment loaded records
- maintenance/inspection records/checklists
- tag out/reports for failed equipment
- hazard controls
- work control system requirements

PPE

PPE includes one or more of the following:

- PPE as specified in:
  - Section 4 *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance*, or its authorised replacement
  - Section 5 *Safe Work Australia Guide for Managing Risks from High Pressure Water Jetting December 2013*, or its authorised replacement
- medical alert card as specified in Section 9.5 of *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance*, or its authorised replacement
- other equipment as required

Communication

Communication includes one or more of the following:

- hand signals
- radio headphones
- other means appropriate to the job/site

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Hazards

Hazards include one or more of the following:

- hazards from high pressure and/or velocity
- hazards arising from the materials used in/generated by the drain cleaning job
- hose set up and hose run
- hazards specific to the site/process
- slip/trip hazards
- PPE is unavailable or not functional
- emergency equipment is unavailable
- electricity
- gas (e.g. methane and hydrogen sulphide)
- structural collapse
- equipment is in safe condition with hazard controls functional
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- working in restricted or confined spaces, or in environments subjected to heat, noise, dusts, vapours or darkness
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions, swarf and scrap
- sharps (e.g. syringes)
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Hazard controls

Hazard controls include one or more of the following:

- controls required by *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance, or its authorised replacement*
- controls identified in the relevant permits to work
- use of PPE
- other appropriate controls consistent with the hierarchy of control

Assessment Requirements for MSMWJ302 Operate a drain cleaning system

Modification History

Release 1 - New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to:

- assemble and operate drain cleaning equipment which meets the requirements of a Class B system as defined by *AS/NZS 4233.1:2013 High pressure water jetting systems - Safe operation and maintenance* or its authorised replacement, including:
  - at least one (1) drain cleaning operation AND
  - at least one (1) drain clearing (choke/blockage) operation AND
  - at least one (1) of:
    - closed drain cleaning
    - open channel drain cleaning, AND
  - use at least two (2) different types of nozzles/heads.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including:

- hazards and hazard controls specific to the operation of drain cleaning equipment
- techniques and methodology of drain cleaning both for wastewater and stormwater drains
- principles of operation and science (physics) of drain cleaning equipment and its component items
- correct methods of starting up, shutting down, operating and controlling drain cleaning equipment and its component plant items by type and duty
- relevant communication systems, including hand signals
- operational parameters and limits
- types and causes of known problems for drain cleaning and its components
- corrective action appropriate to the problem cause
- the importance of monitoring and controlling job conditions
- methods, purpose (and appropriate corrective action) of monitoring job variables
- situations requiring:
  - activating emergency stop
  - stopping work until a situation is resolved
  - raising alarm (when, how, who to)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- responding to injury.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job, appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- While drain cleaning equipment meeting the requirements of Class B must be used, the plant/job requiring drain cleaning may be a realistic simulation of an industry plant/application/situation.
- All appropriate tools, equipment, paper work/permits and safety gear required will be available and used as required. The assessor should only intervene if it would be unsafe to allow the assessment to continue. It is expected that one assessor would not observe a group larger than ten persons at the one assessment event.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:

MSMWJ303 Operate a vacuum loading system

Modification History

Release 1 - New unit

Application

This unit of competency covers the skills and knowledge required to operate a vacuum loading system which may be used to move materials from an open space or vessel into a container. The materials moved may be solids (lump or particulate), liquids or gases/vapours. The materials may also be hazardous (chemical hazard, flammable/explosive, and particulate carbonaceous particulates).

Work will be undertaken on a worksite which may be a client's site or may be public space.

Operators will also need to be competent in a range of other units of competency in order to be allowed to operate independently on site.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory Framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- medical alert card

Procedures

Procedures include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS), job safety and environment analysis (JSEA) or job hazard analysis (JHA)
- temporary instructions
- any similar instructions provided for the smooth running of the job

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through federal or state/territory legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

Site access requirements

Site access requirements include one or more of:

- site induction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- other site/client requirements

Equipment

Equipment includes one or more of the following:

- vacuum pumps, including at least one of the following:
  - liquid piston ring
  - roots blower
  - vane pump
  - axial turbine
- separating systems, including at least one of:
  - bubble filter
  - bag house
  - cyclone
- antistatic hoses
- earth straps
- vacuum breakers/vacuum relief systems
- PPE
- other equipment, plant, tools and hazard control devices required by the job

Equipment variables

Equipment variables include:

- hose type/size
- pressure/vacuum
- additives to be used
- other items under the control of the operator

Non-routine problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Non-routine problems are unexpected problems, or variations of previous problems and include one or more of the following:

- equipment not operating at desired conditions
- equipment failure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hose blocking
- cross contamination of product
- leaks/spills
- injury
- motor vehicle incident
- emergency response
- job is not as described in the scope
- job owner wants a scope variation
- other unplanned event or unexpected consequence from a planned event

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information such as journals, engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Job owner

Job owner includes one or more of the following:

- client or their representative
- site manager or their representative
- production manager or their representative
- maintenance manager or their representative
- other person with prime responsibility for the plant/plant area which is the subject of the job

Equipment operation

Equipment operation includes one or more of the following:

- manually on the worksite
- using local controller on the worksite
- using the control system which may be remote from the vacuum loading equipment

Monitor

Monitoring vacuum loading operation includes monitoring one or more of the following:

- noise
- lump size
- correct revolutions per minute (RPM)
- vacuum pressure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- blower temperature
- quantity of load
- truck weight
- leaks/spills
- pinch points
- operator fatigue/heat stress

Job paperwork Job paperwork is be electronic, hard copy or other format and includes one or more of the following:

- tool storeroom records
- site plans
- equipment loaded records
- maintenance/inspection records/checklists
- tag out/reports for failed equipment
- safety data sheets (SDS)
- hazard controls
- work control system requirements

Communication Communication includes one or more of the following:

- hand signals
- radio headphones
- other means appropriate to the job/site

Hazards Hazards include one or more of the following:

- hazards from vacuum
- hazards arising from the materials used in/generated by the vacuum loading job
- hose set up and hose run
- hazards specific to the site/process
- dangerous goods
- slip/trip hazards
- PPE is unavailable or not functional
- emergency equipment is unavailable
- static electricity
- gas
- structural collapse
- overhead/underground obstructions
- equipment in unsafe condition with hazard controls not functional
- industrial (machinery, equipment and product)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- noise, rotational equipment or vibration
- working in restricted or confined spaces, or in environments subjected to heat, noise, dusts, vapours or darkness
- hazardous products and materials (particularly carbonaceous particulates)
- unauthorised personnel
- sharp edges, protrusions or obstructions, swarf and scrap
- sharps (e.g. syringes)
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Hazard controls Hazard controls include one or more of the following:

- controls identified in the relevant permits to work
- use of PPE
- use of emergency equipment
- other appropriate controls consistent with the hierarchy of control

Unit Mapping Information

No equivalent unit

Assessment Requirements for MSMWJ303 Operate a vacuum loading system

Modification History

Release 1 - New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to:

- assemble and operate vacuum loading equipment, including:
  - at least two (2) vacuum loading operations, AND
  - at least two (2) of:
    - solids
    - liquids
    - gases/vapour.
    -

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including:

- hazards and hazard controls specific to the operation of vacuum loading equipment
- techniques and methodology of vacuum loading
- principles of operation and science (physics) of vacuum loading equipment and its component items
- correct methods of starting up, shutting down, operating and controlling vacuum loading equipment and its component plant items by type and duty
- relevant communication systems including hand signals
- operational parameters and limits
- types and causes of known problems for vacuum loading and its components
- corrective action appropriate to the problem cause
- the importance of monitoring and controlling job conditions
- methods, purpose (and appropriate corrective action) of monitoring job variables
- situations requiring:
  - activating emergency stop
  - stopping work until a situation is resolved
  - raising alarm (when, how, who to)
  - responding to injury.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job, appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- While vacuum loading equipment must be used, the plant/job requiring vacuum loading may be a realistic simulation of an industry plant/application/situation.
- All appropriate tools, equipment, paper work/permits and safety gear required will be available and used as required. The assessor should only intervene if it would be unsafe to allow the assessment to continue. It is expected that one assessor would not observe a group larger than ten persons at the one assessment event.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence will be collected independently of the above practical assessment and may use workbooks, written assessments, interviews (provided a record is kept) or other methods.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Persons seeking verification of competence/retraining must meet the same evidence requirements as above.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSS015002 Develop strategies for more sustainable use of resources

Modification History

Release 1. Supersedes and is equivalent to MSS015002A Develop strategies for more sustainable use of resources.

Application

This unit of competency covers identifying strategies for more sustainable uses of resources. The unit includes the identification of waste (muda) as part of a strategy for achieving better sustainability outcomes in a process as well as quantifying theoretical and actual resource (including energy) consumption.

This unit applies inside organisations and their value chains and specifically applies to the use of resources as part of an overall response to improving sustainability. The unit has been developed with manufacturing operations as a focus. However, because of the range of organisations in a typical manufacturing value chain it may also be applied to other types of organisations.

The unit assumes that a decision to attempt to achieve more sustainable use of resources has already been made. The unit covers the skills needed for developing a strategic approach to resource use at the organisation or value chain level.

The unit does not cover the technical skills required to implement specific initiatives that may be identified as part of the strategic plan. However, there is a requirement to present and organise data. The complexity of this requirement will vary according to the type and scale of the organisation's processes.

Where the carbon footprint (or water footprint or similar) of an enterprise or value chain is known, the unit can be applied to developing strategies for the reduction of that footprint. A manager or technical specialist who has a major responsibility for sustainability as part of a broader work role would typically undertake this, or sustainability may be their primary work responsibility.

For specific techniques covering the auditing of water, energy, emissions and transport, refer to relevant sustainability audit units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Quantify resource consumption**	1.1	Identify all significant resources used by process.
		1.2	Identify consumption measurements available for each resource.
		1.3	Determine consumption for each resource.
2	**Quantify resource loss**	2.1	Determine theoretical consumption of each resource.
		2.2	Compare theoretical consumption with actual consumption.
		2.3	Determine loss (emission) for each resource.
3	**Recommend strategies for reducing muda (waste)**	3.1	Short-list high emission process steps.
		3.2	Analyse process to identify emission steps or locations.
		3.3	Determine root cause of emission.
		3.4	Investigate methods for reducing emission.
		3.5	Develop strategies and recommendations for improvement.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Prepare resources use audit report**	4.1	Identify purpose of report and key stakeholders.
		4.2	Compile data, implications and recommendations.
		4.3	Consult with stakeholders as appropriate.
		4.4	Draft and present report.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Muda (waste) includes all of

- excess production and early production
- delays
- movement and transport
- poor process design
- inventory
- inefficient performance of a process
- making defective items
- activities which do not yield any benefit to the organisation or any benefit to the organisation’s customers.

Emissions include one or more of

- known or able to be physically measured emissions of gases, vapours, fumes, liquids or solids
- assumed emissions through material balancing
- assumed emissions through energy loss, including heat, friction and other energy conversion yield losses.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Significant resources are deemed to be significant because they include one or more of	• high volume • high value • high environmental significance • important to the product or process • covered by legislation or regulation • important to the enterprise.

Assessment Requirements for MSS015002 Develop strategies for more sustainable use of resources

Modification History

Release 1. Supersedes and is equivalent to MSS015002A Develop strategies for more sustainable use of resources.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one or more value chain or process, to:

- quantify significant resource consumption and emission using materials balancing
- identify and consult with stakeholders
- develop strategies for reducing emissions
- prepare and present a resources use report.

Knowledge Evidence

- Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to identify strategies for more sustainable uses of resources including knowledge of:
- the concept of muda (waste) and muda categories
- muda reduction methods and strategies
- methods and uses of material balancing
- methods and uses of energy balancing
- methods of comparing theoretical with actual resource consumption
- methods for mapping processes and resources consumed
- methods of measuring actual resource usage
- AS/NZS ISO 14001 Environmental Management Standards (or its authorised replacement or other relevant standard).

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A third party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project where strategies for more sustainable uses of resources are identified for an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS015015 Evaluate sustainability impact of a process

Modification History

Release 1. Supersedes and is equivalent to MSS015015A Evaluate sustainability impact of a process.

Application

This unit of competency covers evaluating the impact on sustainability of an entire process (manufacturing, logistics, office or other process) or the product from such a process. It does not specifically address the regulatory requirements for an environmental impact statement.

This unit applies to establishing the overall or broad sustainability impact of a process and making recommendations for mitigating negative sustainability impacts. It may apply to value chains beyond the boundary of an organisation, or the entire value chain within an organisation. The unit scope includes products made, services offered, and use of sites by an organisation or part or all of its value chain. This unit covers the application to substantial portions of value chains and may be beyond the boundaries of the organisation.

Environmental sensitivities referred to in this unit are at the issue level. The technical measurement of operational performance or measurement of emissions or other environmental impact is not covered by this unit.

A manager or technical specialist who has a major responsibility for sustainability as part of a broader work role would typically undertake this, or sustainability may be their primary work responsibility. The manager or technical specialist may undertake this alone or as part of a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Evaluate the value chain for the selected process**	1.1	Select portion of the value chain for analysis.
		1.2	Identify process steps along the chain.
		1.3	Identify the change which occurs at each step.
		1.4	Define the interactions with the environment at each step.
2	**Determine sustainability issues for the process**	2.1	Identify environmental sensitivities at each step in the value chain.
		2.2	Identify other sustainability issues at each step in the value chain.
		2.3	Short-list sustainability issues which will require action to mitigate or eliminate negative sustainability impacts.
3	**Analyse sustainability issues for the process**	3.1	Determine root cause of each short-listed issue.
		3.2	Develop possible solutions to root causes.
		3.3	Develop alternative mitigation strategies where needed.
		3.4	Estimate resources required for solutions and alternative mitigation strategies.
		3.5	Rank possible solutions strategies by desirability.
		3.6	Produce and present report to stakeholders.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Interactions with the environment include one or more of	• drawing physical resources from the environment • releasing materials to the environment (e.g. emissions) • drawing energy from/releasing energy to the environment.
Environmental sensitivities include one or more of	• fragile areas and rare or threatened species • heritage or religious issues • hazardous emissions • regulated emissions or other regulatory issues • community perceptions or other issues.
Sustainability issues include one or more of	• resource footprint (e.g. carbon and water) of product and process • current and future availability of raw materials • current and future availability of energy • waste generation and disposal • efficiency of process • the extent to which the production process and product affects the environment • relationship with the local and broader community (e.g. effect of operations on aesthetic appearance, preservation of heritage, and proximity to schools and religious facilities) • extent of regulatory oversight and cost of compliance.
Desirability ranking includes one or more of	• direct dollar benefit/cost • customer benefit • stakeholder perception • life cycle improvements.

Assessment Requirements for MSS015015 Evaluate sustainability impact of a process

Modification History

Release 1. Supersedes and is equivalent to MSS015015A Evaluate sustainability impact of a process.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more processes/product families, to:

- identify steps in the process and portion of manufacturing value chain
- determine ecological and sustainability impacts of processes
- determine root causes of impacts
- evaluate solution and mitigation strategies.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to evaluate the impact on sustainability of an entire process/product including knowledge of:

- value chain mapping and analysis with regard to sustainability
- process and changes which occur within the process
- environmental impacts of materials and energy used/emitted
- environmental sensitivities of all areas impacted by the value chain (and related areas where impact spreads beyond immediate area, e.g. by loss of containment)
- root cause analysis and problem solving
- mitigation strategies
- benefit/cost analyses techniques
- methods of dealing with sustainability issues and the benefits arising from each
- AS/NZS ISO 14000 Environmental Management Standards (or its authorised replacement or other relevant standard).

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project where the overall sustainability impact of a process is established and recommendations for mitigating negative sustainability impacts are made for an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
    - relevant VET or other qualification/Statement of Attainment AND/OR
    - relevant workplace experience
- Currency can be demonstrated through:
    - performing the competency being assessed as part of current employment OR
    - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402001 Apply competitive systems and practices

Modification History

Release 1 - Supersedes and is equivalent to MSS402001A Apply competitive systems and practices

Application

This unit of competency covers the skills and knowledge required to implement basic improvement practices within an organisation using competitive systems and practices. The unit focuses on bringing together the basic concepts and the holistic application of these basic concepts and processes to operations. It would typically be carried out working as part of a team.

This unit applies to an individual in an organisation that has embarked on competitive systems and practices. The unit covers the skills and knowledge required to contribute to the competitive systems and practices processes and assumes that they are to be used within the scope of the individual's job and authority.

This unit requires the application of skills associated with planning and organising an individual's own role within the competitive systems and practices framework.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Identify own place in the value chain**	1.1	Identify customers relevant to own work and their needs/requirements.
		1.2	Identify suppliers for own work.
		1.3	Identify value contributions along the chain.
		1.4	Identify and recommend methods of increasing own contribution to the value chain.
2	**Improve the product and process value**	2.1	Identify customer features/benefits in the product and process.
		2.2	Identify aspects of product and process which contribute to customer features/benefits.
		2.3	Identify aspects of product and process which do not contribute to customer benefits/features.
		2.4	Recommend methods of reducing waste and increasing features/benefits.
3	**Use competitive systems and practices**	3.1	Identify competitive systems and practices used in organisation and own work area.
		3.2	Apply practices appropriate for the job or process.
		3.3	Monitor the job/process and make adjustments to improve it in accordance with procedures.
		3.4	Identify own skill requirements and seek skill development, if required.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Customers include one or more of:

- internal or external customers and should be sufficiently close to the individual's work as to be easily identifiable
- final customers used as the basis for the identification of value and waste.

Suppliers include one or more of:

- internal suppliers
- external suppliers sufficiently close to the individual's work as to be easily identifiable.

Procedures (written, verbal, visual, computer based, etc.) include one or more of:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements
- formulas/recipes
- batch sheets
- temporary instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS402001 Apply competitive systems and practices

Modification History

Release 1 - Supersedes and is equivalent to MSS402001A Apply competitive systems and practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to always apply competitive systems and practices to their own job to:

- identify own place in the value chain relevant to their job
- use competitive systems and practices tools and thinking
- recommend improvements in product and/or process.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- customer requirements and their role in fulfilling them
- the value chain for products they make and their place in it
- identification of muda (waste) and its reduction.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the application of competitive systems and practice in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402002 Sustain process improvements

Modification History

Release 1. Supersedes and is equivalent to MSS402002A Sustain process improvements

Application

This unit of competency covers the skills and knowledge required by an individual to prevent process improvements in their own work from slipping back to former practices or digressing to less efficient practices.

This unit applies to organisations implementing competitive systems and practices and continuous improvement. It covers the skills needed to ensure that process improvements are sustained and opportunities taken to suggest further improvements.

Improvement initiatives can be made by any of a number of methods and by teams or individuals. The unit assumes that desired levels of performance or quality are known to employees.

The unit can be applied to all areas of an organisation, including production, maintenance, logistics and office functions.

This unit requires the application of skills associated with problem solving, initiative and enterprise and self-management in order to understand implement and monitor improvement practices. It also requires the ability to identify and address personal skill gaps in order to manage own ability to implement change.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Examine previous improvements**	1.1	Identify impact of previous process improvements to equipment, operations, services or products in own work area.
		1.2	Identify improvements where objectives have not been met.
2	**Implement corrective actions**	2.1	Identify corrective actions that can be taken by self on process improvements that have not met objectives.
		2.2	Obtain any required approvals.
		2.3	Identify any additional, personal skill gaps and seek skill development.
		2.4	Adopt improved processes.
3	**Check changes**	3.1	Identify claimed improvements.
		3.2	Identify methods of observing and measuring claimed improvements in own work area.
		3.3	Check if claimed improvements are occurring and report problems in accordance with procedures.
4	**Check for further improvements**	4.1	Look for areas of possible further improvement.
		4.2	Discuss further improvements with peers and supervisors.
		4.3	Take action to implement improvements in accordance with procedures.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Customers include one or more of:	• internal customers • external customers sufficiently close to the individual’s work as to be easily identifiable • final customers used as the basis for the identification of value and waste.
Suppliers include	• internal suppliers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

one or more of:	• external suppliers sufficiently close to the individual's work as to be easily identifiable.
Measuring improvements includes one or more of:	• personally taking measurements • arranging for measurements to be taken/made by appropriate personnel.
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.
Corrective actions to sustain improvements include one or more of:	• techniques for preventing mistakes by designing the operations process, equipment and tools so that an operation literally cannot be performed incorrectly (e.g. baka-yoke) • techniques that generate warning signals where a mistake is about to be performed (poka-yoke) • administrative techniques, such as procedure/work instruction changes • skilling techniques, such as training, mentoring, demonstration • process techniques, such as changing the process/conditions/variables.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS402002A Sustain process improvements

Assessment Requirements for MSS402002 Sustain process improvements

Modification History

Release 1. Supersedes and is equivalent to MSS402002A Sustain process improvements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to examine three (3) or more previous improvements, including one (1) or more where improvement objectives have not been met, and to:

- identify corrective actions that can be taken by self
- implement those corrective actions
- check whether the claimed improvements have occurred
- check for further improvements.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- muda (waste)
- indicators of processes not delivering claimed improvements
- baka-yoke and poka-yoke techniques.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include actions to sustain process improvements in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402010 Manage the impact of change on own work

Modification History

Release 1. Supersedes and is equivalent to MSS402010A Manage the impact of change on own work

Application

This unit of competency covers the skills and knowledge required by an individual to effectively manage the changes in their own work resulting from their organisation's implementation of competitive systems and practices.

This unit applies to an individual in an organisation implementing competitive systems and practices that affect the individual's own work. The unit includes the skills required to positively participate in ongoing and continuous change as it affects their work. The individual will be expected to deal with these changes as part of a team and to give feedback from their own perspective.

This unit requires the application of skills associated with problem solving, planning and organising and self-management for assessing and managing the impact of change on own work. This unit also requires the ability to seek information and feedback from team members on the impact of changes and suggested improvements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Examine the impact of change on own work practices**	1.1	Identify competitive systems and practices relevant to changes in own work.
		1.2	Examine changes to work flow.
		1.3	Examine changes to equipment/process/physical environment.
		1.4	Examine changes to work relationship with team members and other teams.
		1.5	Examine changes to data collection needs.
		1.6	Examine changed work for impacts on health, safety and environment (HSE).
		1.7	Examine changes to quality requirements.
		1.8	Identify any additional individual skill needs.
		1.9	Identify other areas requiring assistance.
2	**Implement change**	2.1	Review changes which may have an adverse impact with team leader.
		2.2	Adopt changes to individual work practice.
		2.3	Seek assistance in gathering/processing data, as required.
		2.4	Implement the data collection/processing and take actions on resulting information in accordance with procedures.
		2.5	Seek assistance/training to meet needs caused by change.
3	**Implement continuous improvement**	3.1	Critically examine all changes.
		3.2	Identify impacts of changes both up and down the immediate value stream.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3.3 Identify areas for improvement.

3.4 Make recommendations for improvement in accordance with procedures.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Impact of change

- elements being undertaken individually or as part of a team

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

may include one or more of:	• seeking assistance from team leaders for areas outside the employee's range of responsibility and authority.
Procedures (written, verbal, visual, computer based, etc.) include one or more of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.
Gathering and monitoring performance data include one or more of:	• manual gathering by individual employees through charts, tally sheets or keypad/board entry • automatic collection through software, such as SCADA software, ERP systems, MRP and proprietary systems.
Continuous improvement (kaizen) includes evaluation of one or more of:	• time required • resources used • resultant quality • other aspects relevant to the process.
Stages where value stream actions may occur include one or more of:	• sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support.

Assessment Requirements for MSS402010 Manage the impact of change on own work

Modification History

Release 1. Supersedes and is equivalent to MSS402010A Manage the impact of change on own work

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more changes, to:

- identify competitive systems and practices used in their own workplace
- identify change and its impact on own work practices in relation to implementation of competitive systems and practices
- adopt change and seek any required assistance
- identify areas for improvement.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision:

- features of common competitive systems and practices in use in own workplace
- sources of data on the process/plant
- methods of determining own skill needs
- health, safety and environment (HSE) principles relevant to own job
- change implementation contacts and procedures
- employee assistance mechanisms within organisation.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include evidence of responding to change in own workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including, relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
    - relevant VET or other qualification/Statement of Attainment AND/OR
    - relevant workplace experience
- Currency can be demonstrated through:
    - performing the competency being assessed as part of current employment OR
    - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402020 Apply quick changeover procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402020A Apply quick changeover procedures

Application

This unit of competency covers the skills and knowledge required to apply quick changeover procedures in an organisation implementing competitive systems and practices.

This unit applies to individuals in an organisation which is implementing competitive systems and practices and is pursuing quick changeover as one of its competitive operations tools. The unit can apply to quick changeovers of equipment, processes, batches or product type. It requires the application of skills associated with applying quick changeover procedures, including the planning and organising of own work, identifying problems and making suggestions for improvement of procedures.

Particular technical skills may also be required in some operations sectors and for some jobs. These skills should be gained from the Training Package relevant to the individual's industry and occupation.

This unit may not be applicable to a totally continuous operation producing only the one product, or simultaneous range of products. The unit is also not applicable to a maintenance/PVI shutdown as experienced by continuous process manufacturers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for changeover**	1.1	Determine when changeover will be required.
		1.2	Review plans and instructions for quick changeover.
		1.3	Identify role of others in quick changeover.
		1.4	Obtain all required tools/parts/materials for changeover.
		1.5	Organise process and tools/parts/materials ready for changeover.
2	**Make quick changeover**	2.1	Plan changeover according to quick changeover principles.
		2.2	Liaise and work with relevant people in quick changeover.
		2.3	Complete changeover according to procedures.
		2.4	Check output meets specification.
		2.5	Debrief with all relevant stakeholders.
		2.6	Note any steps which cause a problem.
		2.7	Recommend changes to problematic steps.
3	**Improve work health and safety (WHS)**	3.1	Identify hazards to self or others in all steps/actions.
		3.2	Determine risks from each hazard.
		3.3	Identify actions which may be performed in a more ergonomic manner.
		3.4	Recommend changes to improve WHS.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Changeover may include one or more of:	• an exchange of equipment (often dies or tools (traditional)) • a change between products/batches or between campaigns or processes. It may be any quantum change to produce a different product or undertake a different process.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Set-up can be divided into two types:	• internal set-up (requires work to stop, work that can be done only when the machine or process is not actively engaged in production, computers etc. need to be reset and restarted) • external set-up (work can continue during the changeover, work can be done concurrently with the machine or process performing production duties).
Set-up time includes:	• the work time required to change over a machine or process from one item or operation to the next item or operation.
Procedures (written, verbal, visual, computer based, etc.) include one or more of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS402020 Apply quick changeover procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402020A Apply quick changeover procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for three (3) or more quick changeovers, to:

- identify the scope and equipment to be used in a quick changeover implemented in their own workplace
- plan and complete changeover
- identify problems in quick changeovers
- contribute suggestions for improvement.

Knowledge Evidence

- Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision and to solve routine problems, including knowledge of:
- principles of quick changeover, including:
  - setting of target time for changeover
  - conversion of internal set-up time to external set-up time, where appropriate
  - simplification of changeover steps
  - monitoring and continuous improvement of changeovers
- purpose and requirements of changeover
- minimisation of changeover waste (e.g. scrap and energy)
- quality requirements for products and purposes
- relevant operational procedures
- health, safety and environment (HSE) principles relevant to own job.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include actual quick changeovers, the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402021 Apply Just in Time procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402021A Apply Just in Time procedures

Application

This unit of competency covers the skills and knowledge required to work in an organisation implementing and/or utilising Just in Time (JIT) procedures.

This unit applies to an individual working in an organisation following JIT who will need to follow procedures which are specific to JIT, such as the controlled flow of material (e.g. the use of kanban and elimination of waste). This will involve the individual in the application of the pull system to their job and the authorisation of product/material flows in accordance with procedures and their level of authority.

This unit requires the application of skills associated with planning and organising and self-management to deliver product on demand using necessary tools, equipment and processes to meet production requirements. The unit also requires an ability to recognise and act on problems that may interfere with meeting production demands.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Respond to indicator of demand**	1.1	Identify pull of product through work role.
		1.2	Recognise indicator of flow authorisation.
		1.3	Identify production or service required.
2	**Make products or deliver service to demand**	2.1	Make product or deliver service as required by ticket.
		2.2	Identify any factors likely to prevent demand being satisfied in own work or work of the team.
		2.3	Take action in accordance with procedures.
3	**Update demand information as required**	3.1	Record information on ticket to procedures, as required.
		3.2	Facilitate operation of flow authorisation as part of work.
4	**Recommend improvements**	4.1	Examine the operation of the JIT system as it relates to own work.
		4.2	Identify areas for improvement.
		4.3	Identify any additional personal skill requirements to implement JIT procedures.
		4.4	Recommend improvements.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect

performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
JIT requires availability:	• precisely when the service, product or operation is to be produced or undertaken • in the right quantity and at the right quality.
Product includes one or more of:	• a physical product • a supporting utility service, such as water, gas and power • some other service (e.g. cranes and forklifts).
Indicator of demand includes one or more of:	• kanban bin, ticket or similar • some other indicator of demand pull which authorises production or movement of an item (in some plants, this may also include authorisation using SCADA software).
Procedures (written, verbal, visual, computer based, etc.) include one or	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes

Assessment Requirements for MSS402021 Apply Just in Time procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402021A Apply Just in Time procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more JIT procedures, to:

- identify the indicators of demand and the flow authorisation system in their own workplace
- relate products and services supplied by suppliers and customers to the flow authorisation system
- interpret received indicators of demand correctly for quantity, quality and time of delivery
- contribute suggestions for improvement.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- JIT methods relevant to own job
- relevant indicator of demands for own job
- own role in flow authorisation
- faults and other issues that may threaten the JIT delivery of own product or service
- procedures for recommending improvements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include JIT procedures in own workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
    - relevant VET or other qualification/Statement of Attainment AND/OR
    - relevant workplace experience
- Currency can be demonstrated through:
    - performing the competency being assessed as part of current employment OR
    - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402030 Apply cost factors to work practices

Modification History

Release 1. Supersedes and is equivalent to MSS402030A Apply cost factors to work practices

Application

This unit of competency covers the skills and knowledge required by an individual to identify cost components in their work and to be able to determine, in general terms, the cost impacts of alternative actions.

This unit applies to an individual who is required to contribute to, and be involved in, the assessment of cost factors in their work. This may be done individually or in a team environment.

The unit covers the skills to be able to assess the relative costs of the alternatives and use this as one of the key factors in making decisions. Decisions are made within the scope of the employee's authority and according to procedures. Typical decisions include those that contribute to the efficient organisation of own work and the improvement of production time and cycle times.

This unit requires the application of skills associated with problem solving to identify cost factors and cost implications of own work and self-management to apply cost-effective practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify the major cost components of product or process in own work area**	1.1	Identify cost components in the product or process in own work area.
		1.2	Recognise the impact of current or alternative actions on costs.
2	**Identify constraints to cost-efficiency**	2.1	Identify required production/process rate and major costs.
		2.2	Identify costs factors under individual or team control.
		2.3	Relate identified costs factors to impact on overall cost of production/process.
		2.4	Identify cost factors that are a constraint to cost-efficiency in own work area.
3	**Apply cost-efficient work practices**	3.1	Identify and explain to relevant people the implications of possible actions/changes to improve cost-efficiency in simple financial terms.
		3.2	Identify non-financial implications of proposed changes in discussion with relevant people.
		3.3	Select actions which minimise overall costs.
		3.4	Monitor actions to ensure cost-efficiency in own work area is maintained.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Cost components include all of:	• fixed and variable costs, such as power/energy, materials, plant and equipment, production or process time, including impact of salary and wages • office expenses, such as telephone and internet • government taxes and charges.
Process includes one or more of:	• production • maintenance • logistics • office • other support processes in an organisation.
Overall cost includes all of:	• the assessment of negative and positive financial implications • negative long-term issues, such as work health and safety (WHS), environmental and regulatory issues.

Assessment Requirements for MSS402030 Apply cost factors to work practices

Modification History

Release 1. Supersedes and is equivalent to MSS402030A Apply cost factors to work practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, on one (1) or more occasions to use cost factors in making a decision related to their workplace, and to:

- identify major cost components
- distinguish components which they can control from those they can't
- make decisions which minimise overall cost and explain these to stakeholders.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- concepts of expense, income and capital
- fixed and variable cost components relevant to own work:
  - power/energy
  - materials, plant and equipment
  - production or process time, including impact of salary and wages
  - office expenses
  - government taxes and charges
- relative impact of each of these
- financial and non-financial impacts of cost reductions
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment will use a real project in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402031 Interpret product costs in terms of customer requirements

Modification History

Release 1. Supersedes and is equivalent to MSS402031A Interpret product costs in terms of customer requirements

Application

This unit of competency covers the skills and knowledge required by an individual to be able to identify the major cost components of either products or processes, the basic relationship of these to customer benefit, and use this to help minimise waste (defined as anything not delivering value as defined by the customer). It has a different focus to *MSS402030 Apply cost factors to work practices*, which focuses on costs in isolation, whereas this unit regards all costs not directly leading to customer benefit as waste.

This unit applies to an individual who uses their understanding of the customer's requirements of the product or process being undertaken as the basis for investigating work processes to identify waste sources and then takes action relevant to their level of competency and authority to reduce this waste. It requires an understanding of both the cost factors in the products they make and also the benefits which the customer derives from the product.

This competency may be performed individually or in a team-based environment.

This unit requires the application of skills associated with analysis and problem solving to identify waste and determine ways to minimise waste. This unit requires initiative and enterprise and application of learning in concepts of waste and waste minimisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify cost components deriving from customer benefit and other costs**	1.1	Identify customer features/benefits in product or process being undertaken.
		1.2	Identify cost components which deliver customer features/benefits and those which do not.
2	**Compare required performance of product or process steps with actual performance**	2.1	Identify performance required to meet customer needs in own work and that of team.
		2.2	Identify actual performance.
		2.3	Compare cost components of products or process with current customer-related targets.
		2.4	Separate costs components into those that contribute to customer features/benefits and those that do not.
		2.5	Determine non-contributing cost components which are under control of the individual or team.
3	**Minimise waste**	3.1	Recommend changes to eliminate or reduce waste.
		3.2	Adopt changes which minimises waste.
		3.3	Monitor effect of changes to ensure gains are made against customer features/benefits.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just In Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Customer features/ benefits include all of:	• characteristics of the product or service which the customer perceives as meeting their need • characteristics of the product or service which the customer perceives as adding value • financial or features items which the customer perceives and a benefit.
Performance includes all of:	• takt - the allowable time to produce one product at the rate and quality customers are demanding it • the rate of output of the plant compared to the takt time.
Customer-related	• internally set financial targets that contribute to meeting customer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

targets includes all of:	features/benefits • operational targets that contribute to meeting customer features/benefits • other targets that contribute to meeting customer features/benefits.
Contributing cost components include all of:	• costs that make a direct contribution to customer features/benefits. • costs that need to be incurred (although they may be minimised) in order to gain the customer feature/benefit.
Non-contributing cost components include all of:	• costs that do not contribute to customer features/benefits • costs that must be maintained, such as regulatory compliance costs which do not contribute to customer features and so should be minimised • costs that neither contribute to customer features/benefits nor must be maintained (muda) and so should be eliminated if possible.
Muda (waste) includes all of:	• any activity which does not contribute to customer or organisation benefit/features in the product • activities which do not yield any benefit to the organisation or any benefit to the organisation's customers • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items.

Assessment Requirements for MSS402031 Interpret product costs in terms of customer requirements

Modification History

Release 1. Supersedes and is equivalent to MSS402031A Interpret product costs in terms of customer requirements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, on one (1) or more occasions to recommend muda reduction related to their workplace, and to:

- identify and distinguish between cost components leading to customer benefit or otherwise
- take steps to minimise muda in their workplace.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- contributions towards customer perceived benefit
- concepts of expense, income and capital
- fixed and variable cost components relevant to own work:
  - power/energy
  - materials, plant and equipment
  - production or process time, including impact of salary and wages
  - office expenses
  - government taxes and charges
- relative impact of each of these
- financial and non-financial impacts of cost reductions
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402040 Apply 5S procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402040A Apply 5S procedures

Application

This unit of competency covers the skills and knowledge required by an individual to apply 5S procedures to their own job and work area. The unit assumes the individual has a particular job and an allocated work area and that processes in the work area are known by the individual.

This unit applies to an individual in an organisation who works in an operational position as part of production, maintenance, logistics, etc. The unit can also apply to individuals in other organisations who have a discrete role and responsibility for individually managed processes.

This unit applies where an organisation has decided to embark on a competitive systems and practices strategy and as part of this has adopted the philosophy of 5S as one of the tools to improve performance. The employee needs to apply 5S to their job and work area and maintain the housekeeping and other standards set by 5S.

This unit requires the application of skills associated with planning and organising, problem solving and self-management, in order to identify and implement 5S housekeeping practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Sort needed items from unneeded**	1.1	Identify all items in the work area.
		1.2	Sort items to achieve deliverables and value expected by downstream and final customers.
		1.3	Sort items required for regulatory or other required purposes.
		1.4	Place any non-essential item in an appropriate place other than the workplace.
		1.5	Regularly check that only essential items are in the work area.
2	**Set the workplace in order**	2.1	Identify the best location for each essential item.
		2.2	Place each essential item in its assigned location.
		2.3	After use immediately return each essential item to its assigned location.
		2.4	Regularly check that each essential item is in its assigned location.
3	**Shine the work area**	3.1	Keep the work area clean and tidy at all times.
		3.2	Conduct regular housekeeping activities during shift.
		3.3	Ensure the work area is neat, clean and tidy at both beginning and end of shift.
4	**Standardise activities**	4.1	Follow procedures.
		4.2	Follow checklists for activities, where available.
		4.3	Keep the work area to specified standard.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5	**Sustain the 5S system**	5.1	Clean up after completion of job and before commencing next job or end of shift.
		5.2	Identify situations where compliance to standards is unlikely and take actions specified in procedures.
		5.3	Inspect work area regularly for compliance to specified standard.
		5.4	Recommend improvements to lift the level of compliance in the workplace.
		5.5	Clean up after completion of job and before commencing next job or end of shift.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

5S includes all of:

- sort
- set in order
- shine
- standardise
- sustain.

Sort includes all of:

- separating necessary from unnecessary items (equipment and supplies)
- keeping only what is absolutely necessary for the work processes that comprise the job
- disposing of (or relocating) all other items.

Set in order includes all of:

- assigning required equipment and materials appropriate locations in the work area
- consideration of frequency of use, ergonomics and work health and safety (WHS)
- provision of facilities to maintain the locations.

Shine includes one or more of:

- keeping the work area clean at all times which should be carried out to a regular daily schedule against allowed time, usually at the end of the day or of a particular process
- keeping work area organised
- noting any signs of wear, damage, leakage, safety risks or other issues that require immediate attention.

Best location includes one or more of:

- changes to the layout of furniture
- arrangement of equipment
- provision of services
- location of personnel.

Standardising includes one or

- activities that help maintain the order and the housekeeping standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

more of:	• using procedures and checklists developed from a procedure.
Sustain includes one or more of:	• making sure that daily activities are completed every day regardless of circumstance • cleaning up after a job • undertaking inspections, including: • informal inspections carried out often, at least weekly • formal inspections carried out at least monthly • generating continuous improvement actions from daily activities • following up specific actions to generate continuous improvement.
Items in work area include one or more of:	• tools • jigs/fixtures • materials/components • plant and equipment • manuals • personal items (e.g. bags, lunch boxes and posters) • safety equipment and personal protective equipment (PPE) • other items which happen to be in the work area.
Procedures (written, verbal, visual, computer based, etc.) include one or more of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS402040 Apply 5S procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402040A Apply 5S procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, in one (1) or more allocated areas, to:

- implement and sustain 5S in own workplace
- identify own tasks and responsibilities
- contribute suggestions for improvement.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- purpose of 5S in the workplace
- meaning and application of 5S steps to own workplace and job
- principles of efficient workplace organisation
- identifying waste (muda)
- procedures for recommending improvements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the application of 5S procedures in a work area where 5S has not previously been undertaken, or, demonstration of sustaining 5S principles in a work area that has already undergone prior 5S procedures
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402050 Monitor process capability

Modification History

Release 1. Supersedes and is equivalent to MSS402050A Monitor process capability

Application

This unit of competency covers the skills and knowledge required for gathering of data and the interpretation of simple information to determine the compliance of the process and the taking of action as defined by the procedures where the information reveals the process is out of control parameters.

This unit applies to an individual in an organisation adopting specific competitive systems and practices, usually either six sigma or statistical process control/three sigma, as a means of determining and improving the capability of their process to customer requirements. The individual is involved in collecting specified data and performing specified manipulations to the data (typically by plotting on a chart or by entering into a nominated computer program). The information is typically presented to team members in terms of graphs/charts which they are expected to interpret at a basic level and then take action in accordance with procedures to restore the process to being under control parameters.

This unit requires the application of skills associated with entering and monitoring operational data and information and requires initiative, enterprise and problem solving in identifying production variations and making improvement recommendations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Collect and process data**	1.1	Take specified measurements/readings/observations, as required.
		1.2	Enter data in log, computer or other record.
		1.3	Manipulate and/or chart data as required by procedures.
2	**Identify variations that are not random and take action**	2.1	Examine chart and/or reliability information.
		2.2	Distinguish between random variations and those with an identifiable cause.
		2.3	Take action specified in procedures when a variation with an identifiable cause occurs.
3	**Assist in process improvement**	3.1	Collect data for process capability improvement trials.
		3.2	Make recommendations for improvement.
		3.3	Implement revised capability monitoring procedures.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems	• lean operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

and practices include one or more of:	• agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.
Process capability includes one or more of:	• the capability of the process to deliver to customer defined requirements • process stability against standardised practices and documentation to eliminate variation against customer requirements • statistical capability to deliver product within a specified range • a statistical technique to determine the range within which a product might be expected to fall.

Assessment Requirements for MSS402050 Monitor process capability

Modification History

Release 1. Supersedes and is equivalent to MSS402050A Monitor process capability

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to assist in one (1) or more process improvements and to routinely:

- collect and process data
- identify non-random variations and take the action specified in the procedures
- make recommendations for improvements.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- defects and defective product
- variation and the related statistical distribution
- control charting (or similar) methods
- analysis of information to identify trends or other non-random results
- determination of identifiable causes from variation information
- process capability determination from variation data.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include routine collection of data and identification of non-random variation in own workplace
  - must include participation in a process capability improvement project

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include the use of appropriate statistical tools, aids and apps.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402051 Apply quality standards

Modification History

Release 1. Supersedes and is equivalent to MSS402051A Apply quality standards

Application

This unit of competency covers the skills and knowledge required to apply quality standards to work operations in an organisation. The unit is designed to complement competitive systems and practices units.

This unit applies to an individual who is expected to take responsibility for the quality of their own work, and to take actions specified in the procedures and within the scope of their job and authority to ensure that quality standards are met.

This unit requires the application of skills associated with interpreting and applying workplace standards and identifying and addressing problems that interfere with quality outcomes. The unit requires initiative, enterprise and self-management to ensure quality standards are achieved.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Assess own work**	1.1	Continuously check completed work against workplace standards relevant to the operation being undertaken.
		1.2	Demonstrate an understanding of how the work activities and completed work relate to the next production process or processes and to the final products or services concerned.
		1.3	Identify and isolate faulty components, products or processes.
		1.4	Record and/or report faults and any identified causes to the supervisor concerned, where required, in accordance with workplace procedures.
2	**Assess quality of received components, parts or materials**	2.1	Continuously measure/check received components, parts, materials, information, service or final products against workplace standards and specifications for conformance.
		2.2	Demonstrate an understanding of how the received components, parts or materials, information or service relate to the current operation and how they contribute to the final quality of the product or service.
		2.3	Identify and isolate faulty components, parts, materials or information that relate to the operator's work.
		2.4	Record and/or report faults and any identified causes in accordance with workplace procedures.
		2.5	Identify causes of any identified faults and take corrective action as specified in workplace procedures.
3	**Investigate causes of quality deviations**	3.1	Record information on quality and other indicators of process performance.
		3.2	Investigate and report causes of deviations from specified quality standards for components.
		3.3	Recommend suitable preventative action based on workplace quality standards and the identified causes of deviations from specified quality standards of materials.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Quality parameters include one or more of:

- finish
- size
- durability
- product or process variations
- materials
- alignment
- colour
- damage and imperfections

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- time
- is complete/contains all required information/data
- complies to template
- uses the correct styles and formats.

Quality checks include one or more of:

- visual inspection
- physical measurements
- chemical tests
- checks against patterns, templates, styles, formats and guides
- processing time.

Materials include one or more of:

- physical raw materials
- orders, forms and other documentation
- services required for undertaking an operation (e.g. power, water, compressed air and fuel).

Procedures (written, verbal, visual, computer based, etc) include one or more of:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Indicators of production performance include one or more of:

- number of items/production rate
- delays and causes of delays (where known)
- other information as specified in the procedures.

Data entry/recording includes one or more of:

- keyboard
- written (including ticks or signs)
- verbal.

Sources of information/ documents include one or more of:

- quality and Australian Standards and procedures
- work instructions, patterns, designs and recipes
- organisation work procedures
- manufacturer instructions for materials and equipment
- organisational or external personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• customer requirements.
Investigate and report requires following set procedures which include one or more of:	• verbal instructions • documented procedures • other quality procedures as implemented within an organisation or work environment.

Workplace context includes one or more of:	• work organisation procedures and practices relating to the manufacture and quality outcomes for products
	• conditions of service, legislation and industrial agreements, including:
	  • workplace agreements and awards
	  • federal or state/territory legislation
	  • standard work practice.

Reporting/communication includes one or more of:	• verbal and written communication in accordance with organisational policies and procedures • oral, written or visual communication, including simple data.
Being responsible for the maintenance of own work quality includes one or more of	• contributing to the quality improvement of team or section output, where necessary, in accordance with workplace procedures • following safety, environmental, housekeeping and quality procedures as specified by materials/machine/equipment manufacturers, regulatory authorities and the organisation.
Applicable regulations and legislation include one or more of	• work health and safety (WHS) legislation relevant to workplace activities • workers compensation legislation.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS402051A Apply quality standards

Assessment Requirements for MSS402051 Apply quality standards

Modification History

Release 1. Supersedes and is equivalent to MSS402051A Apply quality standards

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more products/processes, to:

- check and measure relevant quality parameters
- interpret results of quality checks in terms of specifications, patterns and work standards
- take required action where standards of materials, component parts, final product or work processes are found to be unacceptable
- maintain accurate records.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- relevant quality standards, policies and procedures
- relevant production processes, materials and products
- relevant measurement techniques and quality checking procedures
- reporting procedures.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the application of quality standards to own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402060 Use planning software systems in operations

Modification History

Release 1. Supersedes and is equivalent to MSS402060A Use planning software systems in operations

Application

This unit of competency covers the skills and knowledge required to access planning software (often known as Enterprise Resource Planning (ERP), Materials Resource Planning (MRP and MRPII), and often by a proprietary name, to make routine business decisions required of the person as a regular part of their job.

This unit applies to an individual in an organisation using a planning software system and who must interface with that system. The unit applies to both accessing information from the planning software system and using it as an aid to decision making. This unit requires the application of communication, planning, and problem solving associated with using planning software in own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Use interface**	1.1	Identify terminals relevant to own workstation and functions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.2	Use keyboards, track ball/mouse and monitor and/or other peripherals to access system.
		1.3	Navigate through system and screens to find program menu and data relevant to own work.
		1.4	Identify and input information on own work processes at required frequency and to required detail.
		1.5	Access message section and acknowledge messages.
		1.6	Identify problems and make suggestions for improvements to relevance of planning software to own work.
2	**Access information**	2.1	Identify work processes that require information from planning software system.
		2.2	Obtain relevant data and information on current operations from the planning software system.
		2.3	Identify the status of items in the value stream.
		2.4	Access historical data and information.
		2.5	Interpret information and identify and prioritise any actions required in response to information.
3	**Take action in accordance with procedures**	3.1	Take action in response to information obtained from planning software.
		3.2	Follow up as appropriate to ensure anticipated results have occurred.
		3.3	Record adjustments and variations.
		3.4	Identify any learning needs to use planning software and seek appropriate support.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Relevant data and information includes one or more of	• technical and other drawings • standard operating procedures (SOPs) and other work instructions • production schedules, including historical data • orders and order tracking information • stock control • contact lists • work health and safety (WHS) information.
Stages where value stream actions may occur include one or	• sales outlet/representative • information gathering, data analysis and research • product design

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

more of:	• raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support.
Items in the value stream include one or more of:	• physical elements of the production system, such as sites, workstations, equipment and material, including stock, work in progress and finished products • information needed to meet customer requirements, such as designs, drawings, work instructions, SOPs, standards, material lists and pricing • information not directly related to current customer requirements but required by the organisation.
Procedures (written, verbal, visual, computer based, etc.) include one or more of:	• work instructions • SOPs • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS402060 Use planning software systems in operations

Modification History

Release 1. Supersedes and is equivalent to MSS402060A Use planning software systems in operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for three (3) or more uses resulting in action from the information obtained, to:

- identify the scope and relevance of planning software system to own work
- enter and retrieve data, including normal performance and variations
- use planning software system to assist in own work
- contribute suggestions for improvement.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- planning software system and operation, including:
  - terminal locations and types
  - security and access arrangements
  - range of information held in planning software relevant to own work
  - data collection methods for operations in work area
  - assistance arrangements for users of planning software
  - business activities exercised by/through the planning software system
- procedures for recommending improvements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of actual planning software in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402080 Undertake root cause analysis

Modification History

Release 1. Supersedes and is equivalent to MSS402080A Undertake root cause analysis

Application

This unit of competency covers the skills and knowledge required to undertake root cause analysis (RCA). This unit also covers the competencies needed by operators to contribute to an advanced maintenance strategy using RCA coupled with diagrams and charts.

This unit applies to individuals working in an organisation that is applying competitive systems and practices strategies. The unit applies to the formal problem solving to root cause that the individual must undertake in their own work area or where the individual contributes to problem solving to root cause as part of a team.

This unit requires an ability to seek and apply information from a variety of sources in order to inform RCAs. Initiative and enterprise is also required to identify quick fix and permanent solutions to problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Recognise problems**	1.1	Identify features or occurrences indicative of a problem.
		1.2	Use appropriate tools, techniques and charts to define the problem.
2	**Implement quick fix**	2.1	Recommend a quick fix within the scope of competency and authority.
		2.2	Use technology or processes relevant to the problem to implement quick fix.
3	**Determine root cause**	3.1	Identify a range of possible causes.
		3.2	Gather data and other information to eliminate or confirm possible causes.
		3.3	Use available data and information to link causes and effects.
		3.4	Seek assistance to obtain additional information if problem is beyond own competency/authority.
		3.5	Identify root cause.
4	**Develop permanent solution**	4.1	Identify a range of methods to eliminate the root cause or break the cause tree.
		4.2	Select the most appropriate solution.
		4.3	Liaise with relevant people.
		4.4	Recommend or implement solution within the limits of competency and authority.
		4.5	Monitor impact of solution and make further recommendations, as required.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Problems include one or more of:

- variation to normal plant or equipment operation
- unplanned or non-conforming process or operations outcomes
- out of specification products
- excess scrap
- accidents and emergencies
- regulatory breaches
- customer returns and complaints
- reduction or loss of sales.

Techniques/charts include one or more

- control charts
- Pareto charts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

of:

- run charts
- flow charts
- cause and effect diagrams
- tree diagrams
- 5 Whys analysis
- organisation specified/mandated methods.

Assessment Requirements for MSS402080 Undertake root cause analysis

Modification History

Release 1. Supersedes and is equivalent to MSS402080A Undertake root cause analysis

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more problems, to:

- undertake problem identification
- use appropriate processes to achieve root cause identification
- recommend solutions and implementation procedures to problems within own area
- monitor implementation of solutions.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- methodology of root cause analysis, including:
  - difference between quick fix and root cause elimination
  - breaking of causal tree
- indicators of problems and variances to normal operation
- relevant analysis tools (e.g. Pareto charts, 5 Whys).

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include a root cause analysis in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402081 Contribute to the application of a proactive maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS402081A Contribute to the application of a proactive maintenance strategy

Application

This unit of competency covers the skills and knowledge required by an individual to make a positive contribution to proactive maintenance strategies, including actions that contribute to equipment uptime and overall equipment effectiveness (OEE). This unit applies in an organisation which is following a predictive, preventative or reliability-centred maintenance strategy and which requires commitment from all employees. The employee should 'own' their equipment/plant and take an active part in the implementation of the strategy within the scope of their authority.

This unit requires the application of skills associated with accessing and maintaining equipment/plant documentation. It also requires problem solving, initiative and enterprise to continually monitor and maintain operational performance of equipment/plant used in work role.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

essential outcomes.		demonstrate achievement of the element.	
1	**Maintain equipment/plant**	1.1	Keep equipment/plant within area of responsibility clean.
		1.2	Ensure equipment/plant is serviced and adjusted, as required, in accordance with procedures and own level of responsibility.
		1.3	Access manufacturer manuals and specifications, where required, to expand knowledge on the maintenance of equipment/plant.
		1.4	Access and update documentation on equipment/plant operation and maintenance in accordance with workplace procedures.
2	**Monitor operation of equipment/plant**	2.1	Regularly check key conditions of the equipment/plant as defined in workplace procedures.
		2.2	Regularly check equipment/plant OEE.
		2.3	Note any deviation from conditions specified in procedures.
3	**Identify deviations and patterns**	3.1	Identify any previous occurrences of a deviation.
		3.2	Identify any related deviations which have occurred.
		3.3	Identify any unusual occurrence which may be related to a deviation.
4	**Take action appropriate to competency and authority on deviation**	4.1	Liaise with relevant people regarding the deviation and the solution.
		4.2	Implement solution and/or assist with the implementation of the solution, as appropriate.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • OEE • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Uptime includes one or more of:	• the overall availability of the plant • the inverse of downtime or the unavailability of the plant • the fraction, percentage or time the plant is available for production.
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions

Assessment Requirements for MSS402081 Contribute to the application of a proactive maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS402081A Contribute to the application of a proactive maintenance strategy

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to monitor equipment/plant in one (1) or more areas, and to:

- maintain the equipment/plant to the required standard
- identify deviations in OEE requiring action
- take the action required by the procedures.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- interpretation of trends or other non-random variation
- determining OEE (availability x performance x quality rate) and uptime metrics
- principles of operation of plant/equipment and factors likely to cause deviations in performance
- identifying deviations requiring action
- appropriate actions for dealing with deviations.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the application of proactive maintenance in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403002 Ensure process improvements are sustained

Modification History

Release 1. Supersedes and is equivalent to MSS403002A Ensure process improvements are sustained

Application

This unit of competency covers the skills and knowledge required to ensure that the gains which have been made by using improved methods, processes and/or equipment are sustained as the new baseline/standard for an area of work and so prevent regression to former practices, or digression to less efficient practices.

This unit applies to individuals working in a team or work area who have already implemented competitive systems and practices related improvements in their own work and who must work effectively with others implementing competitive systems and practices to ensure that performance improvement gains are sustained.

The unit is also suitable for individuals who have formal or informal responsibility for the work of others, such as team leaders; individuals, such as senior operators, who must mentor others; or individuals, such as technicians and tradespeople, who must integrate the application of their technical skills with the implementation of competitive systems and practices in an organisation.

The unit can be applied to all areas of an organisation, including production, maintenance, logistics and office functions.

The unit covers the implementation of practices to ensure that process improvements are sustained and opportunities taken to suggest further improvements.

Improvement initiatives can be made by any number of methods by teams or individuals. The unit assumes that desired levels of performance or quality are known.

This unit requires the application of skills associated with problem solving, initiative and enterprise, and planning and organising in order to check and monitor the impacts of change. It also requires communication and the ability to work with others to assess the impact of change in own work and on other's work, as well as self-management and learning to adapt improvements according to new information and feedback.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Examine previous improvements**	1.1	Identify impact of previous process improvements to systems, equipment, operations or products in work area.
		1.2	Identify improvements that have not met objectives.
2	**Ensure corrective actions are implemented**	2.1	Identify corrective actions that can be taken on process improvements that have not met objectives.
		2.2	Liaise with relevant people associated with the anticipated corrective action.
		2.3	Obtain any required approvals.
		2.4	Arrange for the supply of resources.
		2.5	Check impacts of corrective action on work health and safety (WHS), quality and environmental systems in work area and take action in accordance with procedures.
		2.6	Check that self and others in team or work area have required skills for corrective actions.
		2.7	Monitor implementation of corrective action.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.8	Make required adjustments.
3	**Verify systems support improvement**	3.1	Verify procedures reflect improvements.
		3.2	Check that training and assessment activities in team or work area reflect improvements.
		3.3	Liaise with relevant people to ensure their support of the new or modified system/s.
4	**Audit the change**	4.1	Determine an appropriate audit period/cycle.
		4.2	Agree relevant measures/indicators for the improvement.
		4.3	Measure performance at agreed times using agreed measures.
		4.4	Investigate causes of under-performance.
		4.5	Take appropriate corrective action to improve performance.
		4.6	Re-audit the improvement on an agreed basis.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices	• lean operations • agile operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

include one or more of:	• preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
A change aimed at reducing muda (waste) will be an improvement in one or more of:	• systems/processes • equipment • operations/practices • products.
Customers include one or more of:	• internal customers • external customers • final customers.
Suppliers include one or more of:	• internal suppliers • external suppliers • ultimate source of process inputs(e.g. raw materials).
Systems include all of:	• equipment/plant • systems/processes • procedures and work practices.
Resources include all of:	• equipment • modifications • consumables • people

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• suitable work area • time • money (expense/capital).
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.
Techniques for sustaining improvements include one or more of:	• techniques for preventing mistakes by designing the operations process, equipment and tools so that an operation cannot be performed incorrectly (e.g. baka-yoke) • techniques that generate warning signals where a mistake is about to be performed (poka-yoke) • use of technology so that it is impossible to do the job any other way • changes to process or procedures or other changes to the operations system which, if followed, will sustain the change.
Measuring performance includes one or more of:	• personally taking measurements • arranging for measurements to be taken/made by appropriate personnel.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS403002A Ensure process improvements are sustained

Links

Assessment Requirements for MSS403002 Ensure process improvements are sustained

Modification History

Release 1. Supersedes and is equivalent to MSS403002A Ensure process improvements are sustained

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, on two (2) or more occasions to:

- identify previous improvements that have not met objectives
- identify action which will correct this without adverse impact on other areas
- audit and validate the improvement from the change.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- muda and its causes
- processes and procedures for the organisation relevant to the work area
- poka yoke, baka yoke and similar sustaining approaches
- measures of performance relevant to the work area and the improvement.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should analyse real process improvements in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403010 Facilitate change in an organisation implementing competitive systems and practices

Modification History

Release 1. Supersedes and is equivalent to MSS403010A Facilitate change in an organisation implementing competitive systems and practices

Application

This unit of competency covers the skills and knowledge required by individuals responsible for facilitating change processes in an organisation implementing competitive operational practices.

This unit applies to individuals who facilitate the change process resulting from implementing one or more competitive systems or practices. This implementation may also be associated with other changes, such as the introduction of new products, processes or equipment. The unit will usually apply to individuals whose responsibility is at the team, area or section level rather than the whole organisation. The responsibility may be formally designated or be informal, as in mentoring and assisting fellow employees.

This unit assumes that consultation and agreement on the implementation of the competitive systems and practices and other associated changes has already occurred and the nature and extent of the change has been agreed.

This unit does not cover the negotiation of change in a formal industrial relations sense but does cover the skills needed to identify real or potential change implementation issues, including those that may need to be referred to formal consultation and/or dispute settlement procedures.

This unit has a strong emphasis on planning, encouraging and facilitating in a changing environment within the organisation, including using appropriate communication, teamwork, problem solving, initiative and self-management.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Define nature and impact of change for designated area and processes**	1.1	Identify the organisation's aims and objectives for the competitive systems and practices techniques related to the change process.
		1.2	Identify opportunities for implementation of change within work area.
		1.3	Determine impacts of change for work area, including potential benefits and impacts on own work and work of fellow employees.
2	**Identify key performance indicators (KPIs)**	2.1	Liaise, where required, with managers, engineers and other staff responsible for designing and/or implementing change.
		2.2	Identify KPIs for own work responsibility and that of the work area.
		2.3	Communicate KPIs to fellow employees.
		2.4	Check that data collection and processing are appropriate for KPIs.
		2.5	Raise and resolve issues related to KPIs with relevant personnel.
3	**Liaise with key stakeholders**	3.1	Identify key stakeholders impacted by the change.
		3.2	Communicate with key stakeholders within scope of authority.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.3	Identify and address issues and concerns of each stakeholder if within scope of authority.
		3.4	Develop and/or locate information required to address key concerns.
		3.5	Refer issues and concerns outside of scope of authority to appropriate personnel.
4	**Develop a strategy to help implement change**	4.1	Identify or develop a work plan for implementing change.
		4.2	Make information required to support change available to team members.
		4.3	Communicate/circulate draft work plan to other employees in work area, supervisors, technical experts and other appropriate personnel for comment.
		4.4	Assess suggested changes and incorporate into work plan, where appropriate.
5	**Implement change**	5.1	Obtain authorisation to commence change implementation in accordance with organisation procedures.
		5.2	Implement change in accordance with work plan and organisational work health and safety (WHS) and consultation procedures.
6	**Monitor implementation of change**	6.1	Maintain open communication channels with all stakeholders during implementation.
		6.2	Monitor KPIs during implementation.
		6.3	Encourage and facilitate improvement suggestions of team members.
		6.4	Identify areas requiring improvement in change implementation.
		6.5	Make improvements to implementation according to organisation procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Work plan for change includes one or more of:	• timetables • KPIs • training needs • WHS implications • contingency plans

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• responsibilities with team members and senior managers, engineers and other staff responsible for designing and/or implementing change.
Issues and concerns include one or more of:	• individual and group concerns • those expressed by and through industrial processes.
Gathering and monitoring performance data includes one or more of:	• manually by individual employees through charts, tally sheets or keypad/board entry • automatically through software, such as SCADA software, ERP systems, MRP and proprietary systems.

Assessment Requirements for MSS403010 Facilitate change in an organisation implementing competitive systems and practices

Modification History

Release 1. Supersedes and is equivalent to MSS403010A Facilitate change in an organisation implementing competitive systems and practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more changes, to:

- identify competitive systems and practices in own workplace
- identify changes to own work and work area flowing from implementation of relevant competitive systems and practices
- consult with stakeholders regarding changes and issues
- develop a strategy to implement required changes
- make suggestions for improvements.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- features of competitive operational practices in own work area
- health, safety and environment (HSE) principles and requirements for area of responsibility
- change implementation procedures
- planning and implementation strategies
- employee assistance mechanisms within organisation.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - must include facilitating change in relation to the implementation of competitive operational practices in own work area
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403011 Facilitate implementation of competitive systems and practices

Modification History

Release 1. Supersedes and is equivalent to MSS403011A Facilitate implementation of competitive systems and practices

Application

This unit of competency covers the skills and knowledge required by individuals who facilitate, lead or mentor others in competitive systems and practices implementation in a work area.

This unit applies to people responsible for facilitating others in implementing competitive systems and practices in their work. It may apply to formally designated team leaders or people given special roles in the implementation process that go beyond their own work and which involve guiding, facilitating or mentoring others. The unit applies to competitive systems and practices implementation activities at the work area or section level.

The unit requires an individual to integrate a range of competitive systems and practices knowledge and skills as part of their role. The unit covers assisting others to understand and apply a holistic view of their job and their role within an organisation, including the objectives that must be met as part of competitive systems and practices used by the organisation.

This unit requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, planning and organising, and self-management. This unit has a strong emphasis on planning and implementation, and also requires an ability to learn from experience and feed new information back into strategies to improve own performance and that of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Competitive systems and practices

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Facilitate the development of process and competitive systems and practices knowledge**	1.1	Ensure necessary technical documentation and information about the process and competitive systems and practices is available.
		1.2	Assist and mentor others in accessing information.
		1.3	Identify work activities which may inhibit the ongoing development of competitive systems and practices skills and knowledge of others.
		1.4	Arrange for the provision of workforce development and training for self and others, as appropriate.
		1.5	Encourage others to apply technical knowledge to the improvement process.
2	**Facilitate commitment to efficiency improvements**	2.1	Ensure budgets, operating procedures and other related documentation is available.
		2.2	Assist others to apply this information to their work responsibilities.
		2.3	Encourage the identification of waste.
		2.4	Encourage an environment where efficiency improvements are recommended by fellow employees.
3	**Encourage a competitive systems and**	3.1	Encourage and, where necessary, develop communications between specialists and work group members.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	practices approach to work	3.2	Lead development of strategies to monitor and deal with identified waste issues.
		3.3	Resource and encourage other employees to identify and take action on potential problems.
		3.4	Arrange for workforce development and training for self and others, as required, in relevant competitive systems and practice procedures and techniques.
		3.5	Guide others in relating identified problems to the maintenance strategy, and developing any required changes, to ensure awareness, learning and commitment.
4	**Implement process and organisation improvements**	4.1	Plan the implementation of work group suggestions and externally suggested improvements.
		4.2	Facilitate commitment to, and involvement in, the implementation planning of improvements and to follow improvements to their conclusion.
		4.3	Encourage the application of the 'plan, do, measure, improve, control' approach to the job.
		4.4	Arrange for workforce development and training, as required, to facilitate continued involvement by others in improvement processes.
		4.5	Involve work group and other key personnel in identification of skill needs and means of skills acquisition to fill any identified gaps.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect

performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Budgets include one or more of:	• financial • time • materials/products • other business plans which are relevant to the team and the work area.
Categories of waste include one or more of:	• excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers.
Key reliability issues	• cleanliness

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

include one or more of:	• poor lubrication • incorrect adjustment • poor training and instructions for employees.

Assessment Requirements for MSS403011 Facilitate implementation of competitive systems and practices

Modification History

Release 1. Supersedes and is equivalent to MSS403011A Facilitate implementation of competitive systems and practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for three (3) or more organisation improvements which include the facilitation of competitive systems and practices, to:

- identify processes and products of the organisation and work area
- analyse future skill development needs of work group
- mentor effectively in a one-on-one situation
- facilitate communication between work group and external competitive systems and practices specialists and managers
- lead work group in identifying efficiency improvements and elimination of waste.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- information technology systems used in the organisation
- features of competitive operational practices in own work area
- monitoring and data gathering systems in work area (e.g. SCADA, ERP and MRP)
- methods of gathering data against key performance indicators (KPIs)
- facilitation techniques to encourage work group development and improvement.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - must include facilitation of competitive systems and practices implementation in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403013 Lead team culture improvement

Modification History

Release 1. Supersedes and is equivalent to MSS403013A Lead team culture improvement

Application

This unit of competency covers the skills and knowledge required by a team leader or other person responsible for developing a culture within a team appropriate for supporting competitive systems and practices.

This unit applies where an organisation has embarked on competitive systems and practices and a team leader or other responsible person is required to change or improve the team culture to maximise the benefits from competitive systems and practices.

This unit requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, planning and organising, and self-management in order to provide leadership in a changing team environment. This unit has a strong emphasis on planning and change management, but also requires an ability to learn from experience and feed new information back into strategies to improve performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Facilitate the team's understanding of the competitive systems and practices strategy**	1.1	Communicate with all team members the objectives and benefits of the competitive systems and practices strategy.
		1.2	Review with team members the techniques and methods that will be used in achieving the competitive systems and practices strategy.
		1.3	Using a systems approach, help team members understand how the team fits into the organisation.
		1.4	Establish appropriate communication and teamwork within the team and with other teams.
		1.5	Develop a work structure with the team that allows for everyone to participate in the application of the competitive systems and practices strategy.
2	**Facilitate application of knowledge about the importance of controlling variation in competitive systems and practices**	2.1	Develop the application of a statistical approach by all team members to all relevant facets of the system with a view to reducing variation.
		2.2	Encourage the approach of building quality and ensuring team members assist each other in meeting requirements.
3	**Facilitate the development of skills and knowledge within the team**	3.1	Encourage appropriate training for all team members.
		3.2	Involve team members in identification of skill needs and skill gaps, and in development of a strategy for training, skills acquisition and self-improvement so as to ensure awareness, learning and commitment.
4	**Facilitate the development of commitment within the team to the competitive systems and practices strategy**	4.1	Ensure that the team has sufficient resources and adequate equipment available to meet the requirements of the competitive systems and practices strategy.
		4.2	Encourage the adoption of continuous improvement.
		4.3	Encourage employee acceptance of responsibility for the quality of own work.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.4 Provide continuous feedback and communication of progress at all levels in implementing the strategy.

4.5 Involve team members in relating identified problems and opportunities for improvement to the competitive systems and practices strategy, and involve them in developing any required changes, to ensure awareness, learning and commitment.

4.6 Establish and monitor indicators of team culture.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• run charts • standard procedures • current reality tree.
Systems approach includes consideration of the role and requirements of one or more of:	• customers • suppliers • employees • other value stream members • members of the public and community groups • other external individual, group or organisation • technical processes and equipment • statutory and regulatory requirements, including work health and safety (WHS) and environment legislation and regulations • quality standards.
Team culture can be monitored by one or more of:	• surveys • evaluation of toolbox or other regular meetings • direct discussion with team members • monitoring of other indicators (e.g. error rates and absenteeism) • analysis of root cause related to status of team culture.

Assessment Requirements for MSS403013 Lead team culture improvement

Modification History

Release 1. Supersedes and is equivalent to MSS403013A Lead team culture improvement

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more team culture changes, to:

- identify the competitive systems and practices used by the team
- identify changes to the work of the team flowing from the implementation of the relevant competitive systems and practices
- facilitate and monitor changes designed to improve team culture
- communicate effectively with team members providing relevant feedback.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- features of competitive operational practices in the team's work area
- principles of change management
- facilitation techniques to encourage team development and improvement.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403021 Facilitate a Just in Time system

Modification History

Release 1. Supersedes and is equivalent to MSS403021A Facilitate a Just in Time system

Application

This unit of competency covers the skills and knowledge required to facilitate the implementation/operation of a Just in Time (JIT)/kanban system in a team or work area.

This unit applies to a person who needs to monitor the operation of a JIT system and facilitate its working in a team or work area. This will involve liaison with stakeholders as well as examining the data generated and being alert to potential problems and areas for improvement.

This unit requires the application of skills associated with gathering, analysing and communicating information to facilitate implementation of the JIT system. It requires planning and organising skills and has a strong emphasis on communication and teamwork skills to ensure the JIT system is being effectively implemented. This unit also requires the ability to problem solve and take the initiative to consider performance issues and learn from experience to improve future performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Monitor the operation of the JIT system**	1.1	Track value of key measures.
		1.2	Recognise indicators of poor performance.
		1.3	Take appropriate quick fix action.
2	**Liaise with relevant stakeholders**	2.1	Regularly communicate with team or work group members regarding the operation of the JIT system.
		2.2	Review JIT key performance indicators (KPIs) with team or work group members.
		2.3	Communicate with relevant personnel up and down the value stream regarding the operation of the JIT system.
		2.4	Identify issues with stakeholders and take appropriate quick fix action.
3	**Improve the JIT system**	3.1	Identify areas requiring improvement in the JIT system.
		3.2	Identify root cause of JIT-related problems.
		3.3	Review value of key measures.
		3.4	Recognise skill gaps in team members and other stakeholders.
		3.5	Determine any other issues in team or work group, other stakeholders and JIT system leading to poor performance indicators.
		3.6	Develop appropriate improvement solutions.
		3.7	Liaise with relevant people regarding improvement solutions.
		3.8	Implement and/or assist with the implementation of the solutions.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Key measures include one or more of:	• inventory levels • lead time • In Full, On Time and In Specification (IFOTIS) delivery • productivity/production rate • other measures of pull through the value stream • quality.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Stages where value stream actions can occur include one or more of	• sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support.

Assessment Requirements for MSS403021 Facilitate a Just in Time system

Modification History

Release 1. Supersedes and is equivalent to MSS403021A Facilitate a Just in Time system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for three (3) or more JIT related improvements, to:

- identify the JIT system and practices used in own work area
- identify and monitor JIT key measures
- solve JIT-related problems to root cause
- communicate effectively with stakeholders
- facilitate and monitor JIT-related changes to operations and practices.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- JIT methods relevant to own work area
- production data generated by the process and its application to JIT
- methods of gathering data against key performance indicators (KPIs)
- facilitation techniques to encourage work group development and improvement.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include facilitating the implementation of a Just in Time (JIT) system in in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403030 Improve cost factors in work practices

Modification History

Release 1. Supersedes and is equivalent to MSS403030A Improve cost factors in work practices

Application

This unit of competency covers the skills and knowledge required by an individual to evaluate the product or process outcomes of a team or work group in terms of their cost components and to be able to determine, in general terms, the cost impacts of alternative actions.

Typical decisions include the efficient organisation of own work and that of others in a work area or within a team/group and the improvement of throughput and cycle times.

Decisions are made within the scope of the authority of the individual and other employees in the area or team/group and according to procedures.

This unit primarily requires the application of skills associated with communication and information gathering, teamwork and problem solving to analyse the cost components of work processes. Initiative and enterprise, and planning and organising are also required to identify opportunities for improved cost-efficiency. This unit also requires a degree of self-management and learning to effectively operate and maintain skills and performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Analyse cost components of work area or team function**	1.1	Identify cost components in the product or process.
		1.2	Identify costs factors under control of area or employees in the team.
		1.3	Identify causes of variability in costs.
		1.4	Analyse impact of costs on production or process activities undertaken.
2	**Improve cost-efficiency of processes and procedures**	2.1	Identify methods of improving productivity and/or reducing costs within area or team's responsibility.
		2.2	Determine cost/benefit ratio of alternative methods of improving productivity and/or reducing costs.
		2.3	Consult with all relevant stakeholders regarding possible changes.
		2.4	Recommend changes which will increase productivity and reduce cost and variability.
		2.5	Implement recommended changes in consultation with relevant stakeholders.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Cost components include consideration of all of:	• fixed and variable costs, such as power/energy, materials and other inputs, plant and equipment, salary and wages, and office expenses (e.g. telephone) • government taxes and charges.
Causes of variability in costs include one or more of:	• time-based variation • fluctuations in variable costs related to different volumes of sales, production or operations • fluctuations in fixed/overhead costs related to changes in the economy, financial markets and similar • abnormal cost fluctuations due to poor design of product or process, poor scheduling, faults, breakdowns and other muda (waste).
Process includes consideration of all of:	• all functions that go to meet customer requirements • all other required functions (e.g. regulatory related functions) • design • production • maintenance • logistics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• office processes.
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.
Benefits include all of:	• positive benefits • negative benefits • quality • safety • reliability • similar issues which may be impacted by a cost saving.

Assessment Requirements for MSS403030 Improve cost factors in work practices

Modification History

Release 1. Supersedes and is equivalent to MSS403030A Improve cost factors in work practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to improve cost factors on one (1) or more occasion and to:

- analyse cost components
- improve cost efficiency in an area related to own work
- express cost factors in specific terms, such as cost per item, per unit of time or other measures of output.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- cost components of products made
- costs concepts, such as expense/capital, income and benefit/cost ratios
- major cost contributors to product (e.g. energy, materials/other inputs, labour and distribution, and so on depending on the product and process)
- distinguish between internally and externally controlled costs
- distinguish between overhead/capital, expense, labour and other consumables.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real cost improvement activity in an operational workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403040 Facilitate and improve implementation of 5S

Modification History

Release 1. Supersedes and is equivalent to MSS403040A Facilitate and improve implementation of 5S

Application

This unit of competency covers the skills and knowledge required by an individual to facilitate the implementation and improvement of the 5S by self and others in a team or work area. The facilitation may be undertaken by formally designated supervisory staff, such as team leaders or other individuals in a competitive systems and practices implementation role, who need to provide support and encouragement to others to facilitate the achievement of 5S outcomes in the workplace.

This unit requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, planning and organising, and self-management in order to provide leadership in a 5S environment. This unit has a strong emphasis on planning and change management, but also requires an ability to learn from experience and feed new information back into strategies to improve performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Facilitate the set-up of 5S**	1.1	Assist others to determine what are necessary and unnecessary items in the work area.
		1.2	Assist others to determine optimum assigned location for all necessary items.
		1.3	Liaise with relevant production and work health and safety (WHS) personnel in determining optimum locations.
		1.4	Assist others to determine optimum location for unnecessary items.
		1.5	Assist others to determine 5S schedule.
		1.6	Assist others to achieve the required level of skill.
2	**Facilitate the implementation of 5S**	2.1	Ensure procedures reflect 5S practices.
		2.2	Assess skill base of team or work group members in 5S and arrange for any required training.
		2.3	Ensure that any damage and/or safety risks reported by the team or work group are addressed through correct mechanisms.
3	**Monitor 5S**	3.1	Check work area for 5S implementation as part of normal routine.
		3.2	Identify non-conformances.
		3.3	Negotiate solutions to non-conformances.
4	**Improve 5S**	4.1	Work with others to find areas for improvement.
		4.2	Assist others to develop improvement solutions.
		4.3	Facilitate the availability of resources required for the improvement solution.
		4.4	Facilitate the implementation of the improvement solution.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Procedures (written, verbal, visual, computer based, etc.) include one or more of:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5S includes all of:

- sort
- set in order
- shine
- standardise
- sustain.

Sort includes all of:

- separating necessary from unnecessary items (equipment and supplies)
- keeping only what is absolutely necessary for the work processes that comprise the job
- disposing of (or relocating) all other items.

Set in order includes all of:

- assigning required equipment and materials appropriate locations in the work area
- consideration of frequency of use, ergonomics and WHS
- provision of facilities to maintain the locations.

Shine includes one or more of:

- keeping the work area clean at all times which should be carried out to a regular daily schedule against allowed time, usually at the end of the day or of a particular process
- keeping work area, including virtual work area, organised
- noting any signs of wear, damage, leakage, safety risks or other issues that require immediate attention.

Standardising includes one or more of:

- activities that help maintain the order and the 5S standards
- using procedures and checklists developed from a procedure.

Sustain includes one or more of:

- making sure that daily activities are completed every day regardless of circumstance
- undertaking inspections, including:
  - informal inspections that should be carried often, at least weekly
  - formal inspections that should be carried out at least monthly.

Items in work area include one or more of:

- office supplies
- materials
- paperwork

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• furniture • storage systems and cabinets • lighting, wiring, plumbing and other services designed to support a working environment in the office • manuals • personal items (e.g. bags, phones, lunch boxes, clothing, photos and ornaments) • safety and personal protective equipment • any other item which happens to be in the work area.
Teams include one or more of:	• formal teams • informal teams • people working in the same area.
Target work area may be a physical and/or virtual workspace and includes one or more of:	• used by a person, a team or a cross-functional group • common to part/s of a process or value stream (already defined) • shared by people who undertake a defined procedure or set of procedures • needed to support a particular function.
Appropriate places include areas designated for one or more of:	• recycling • rubbish removal • staff room/lunch room/kitchen • office supplies, filing and other storage • functions, such as printing/copying • holding until status is confirmed.
Optimum assigned location includes:	• making changes to the layout of furniture, equipment and personnel in order to facilitate the smooth and continuous flow of work through process steps taking into account WHS considerations.
Non-conformance includes:	• incorrect or incomplete application of 5S procedures, including any daily tasks, scheduled inspections and continuous improvement procedures.

Assessment Requirements for MSS403040 Facilitate and improve implementation of 5S

Modification History

Release 1. Supersedes and is equivalent to MSS403040A Facilitate and improve implementation of 5S

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, in one (1) or more allocated areas, to:

- identify the scope of the services and/or functions supplied to and by the team or work area and the deliverables expected by customers, including the ultimate customer
- facilitate a systematic approach to implementing 5S
- lead and motivate others in achieving 5S outcomes and making improvements to the 5S systems
- set up systems for monitoring and improving 5S implementation
- manage non-conformances in implementation of 5S.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- principles and purpose of 5S
- methods of identifying waste in the work area, such as:
  - waste walk
  - document tagging
  - tracking/log sheets
  - spaghetti diagrams
  - existing information technology and enterprise resource systems (e.g. SCADA, ERP and MRP)
- methods of identifying and evaluating options
- work health and safety (WHS) requirements relevant to team and work areas
- processes for identifying and addressing skill gaps.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the implementation of 5S procedures in a work area where 5S has not previously been undertaken, or, demonstration of improving 5S application in a work area that has already undergone prior 5S procedures
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403041 Facilitate breakthrough improvements

Modification History

Release 1. Supersedes and is equivalent to MSS403041A Facilitate breakthrough improvements

Application

This unit of competency covers the knowledge and skills required to facilitate implementation of discrete targeted improvement activities to achieve breakthrough improvements in selected processes, operations or products. Typically this approach is used for improvements in areas of waste identified through value stream mapping.

This unit applies to team leaders and others who are providing guidance and support to assist a team of employees to identify improvements that can be implemented to operations, processes or products in a brief intensive project.

The unit also covers ensuring that the improvements are sustained. The process of achieving breakthrough improvements is often called kaizen blitz in lean terminology.

This unit assumes that one or more processes and operations have been mapped.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for improvement event**	1.1	Engage team members in the improvement event.
		1.2	Identify process or processes to be targeted in the improvement event.
		1.3	Assist team members to identify how their own roles contribute to value to the customer.
		1.4	Assist team to identify the boundaries of the event, including any imposed exclusions.
		1.5	Identify key process indicators and other information required for improvement event.
		1.6	Identify skill needs for personnel engaged in breakthrough improvement event and arrange for any required training.
		1.7	Establish communication processes with sponsor and stakeholders.
2	**Identify improvements**	2.1	Assist team to review current processes, operations or products and identify options for radical improvements.
		2.2	Facilitate team activities and other relevant personnel to evaluate the options and agree on improvements to be made.
		2.3	Encourage and assist team and others to plan the activities and identify metrics to be monitored.
		2.4	Facilitate allocation of resources and strategies to manage impact on routine work.
3	**Facilitate the event**	3.1	Assist team to gather baseline data on the selected metrics.
		3.2	Assist team to identify and address barriers to making the improvements.
		3.3	Monitor team dynamics and facilitate team focus and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			cooperation.
		3.4	Liaise with sponsor to communicate progress and maintain their support.
4	**Evaluate improvements**	4.1	Assist team to gather and interpret data on the metrics.
		4.2	Facilitate team activities to evaluate the outcomes of the event.
		4.3	Identify causes for areas of poor performance from changes and identify any additional changes to address them.
		4.4	Report to sponsor and other stakeholders on the outcomes of the event.
5	**Embed improvements**	5.1	Establish mechanisms to ensure new systems and/or practices are communicated to relevant personnel.
		5.2	Motivate team to apply the new systems and/or practices and sustain improvements.
		5.3	Ensure the new systems and/or practices are reflected in relevant procedures.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Team in this unit is any group of employees engaged in a breakthrough improvement event and includes one or more of:	• a permanent formally identified team • a sub-group of a team • a formally designated teams • an informal groups of employees • other stakeholders who may be brought together for a breakthrough improvement event • a specially established group for the breakthrough event (e.g. a combined production/administration/ logistics group convened for a breakthrough event addressing delivery issues).
Scope and benefit statements include one or more of:	• description of the business • the target work process • what key stakeholders seek from the improvement project • a mission for the event • a set of goals • a statement of the do's and don'ts for the improvement project.
Boundaries define one or more of:	• the start and end point of the process being targeted • the steps of the process to be included and excluded • specific job roles or related processes to be included or excluded • timeframe for the event.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Breakthrough improvement (also known as kaizen blitz) is characterised by one or more of:	• using a formal process • being a discrete targeted activity that is achieved in a relatively short timeframe • delivering significant level of improvement.
Mechanisms to communicate and sustain improvements include one or more of:	• scheduled audits • regular monitoring and/or reporting activities • use of visual aids, such as targets and progress boards, process charts and procedure posters • communications, such as standing items for team meetings, email reminders or updates.
Imposed exclusions include one or more of:	• equipment excluded from efficiency or layout review because of budget constraints • regulatory requirements that do not add value • organisation requirements, policies or procedures beyond the influence of the team • other required muda.
Key process indicators include one or more of	• statistical process control data/charts • orders • lost time, injury and other work health and safety (WHS) records • equipment reliability charts.

Assessment Requirements for MSS403041 Facilitate breakthrough improvements

Modification History

Release 1. Supersedes and is equivalent to MSS403041A Facilitate breakthrough improvements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more breakthrough improvement events, to:

- interpret operations, processes and products in terms of value to the customer
- identify, analyse and evaluate information from a variety of sources to identify opportunities for breakthrough improvements
- lead and motivate others in planning, implementing and sustaining improvements.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- team and organisation deliverables and processes used to achieve them
- how organisation operations and processes contribute to the value stream
- types of waste (muda) and imposed exclusions
- methods of identifying and evaluating options
- work health and safety (WHS) requirements relevant to the target work areas.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403051 Mistake proof an operational process

Modification History

Release 1. Supersedes and is equivalent to MSS403051A Mistake proof an operational process

Application

This unit of competency applies to an individual who needs to analyse a process that a team is responsible for and determine methods of mistake proofing it (e.g. ensuring it only produces product within an acceptable range or error-free transport and storage). The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to mistake proof the production process in their area. After improvement activities have been undertaken these improvements need to be sustained.

This unit requires the application of skills associated with information gathering and analysis. Initiative, enterprise and problem solving are also required to identify mistakes and determine strategies for eliminating them. This unit also requires communication and teamwork skills to ensure mistake proofing strategies are implemented and self-management and learning skills to continually reflect on and integrate feedback about the effectiveness of strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Analyse process**	1.1	Identify sources of variability/non-conformance in the process.
		1.2	Identify critical control points in process.
		1.3	Analyse causes of variability/non-conformance.
2	**Develop preventative techniques/systems**	2.1	Liaise with team members and other people to develop mistake proof options for performing operation.
		2.2	Test and validate mistake proofing options.
3	**Implement permanent fix**	3.1	Liaise with relevant people to have systems/procedures changed to implement solution.
		3.2	Liaise with relevant people to implement the solution.
		3.3	Liaise with relevant people to ensure self and others in the team or work area have an appropriate skills set.
		3.4	Follow through to ensure implementation occurs.
4	**Monitor implementation**	4.1	Critically observe the implementation.
		4.2	Compare the results of the implementation against the expected outcomes.
		4.3	Modify solution to improve outcomes.
		4.4	Ensure procedures reflect change.
		4.5	Ensure training/assessment reflects change.
		4.6	Audit change at agreed period/cycle.
		4.7	Take action on any observed deviation.
5	**Seek improvements**	5.1	Observe changes.
		5.2	Analyse process again, if required, to ensure improvements are sustained.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Mistake proofing (baka-yoke or poka-yoke) includes one or more of:

- eliminating the possibility of an error occurring
- reducing the occurrence of errors and/or to minimise their impact
- eliminating the possibility of the error via changes to the process
- preventing the error from occurring via physical or virtual

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	barriers • reducing likelihood of the error by encouraging correct action (e.g. through warning systems) • mitigating the impact of the error if it does occur.
Prioritising options for mistake proofing includes one or more of:	• success rate in eliminating errors • feasibility • skills required by employees • cost • capacity to reduce waste.
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS403051 Mistake proof an operational process

Modification History

Release 1. Supersedes and is equivalent to MSS403051A Mistake proof an operational process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to mistake proof (apply baka yoke or poka yoke) on one (1) or more occasions and to:

- analyse causes of variability and non-conformity
- develop and validate baka yoke or poka yoke options
- implement most appropriate option
- monitor the change and seek further improvements.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- baka yoke and poka yoke approaches
- factors causing variability in the process and methods of controlling it
- analyse error causes and determine control options
- analyse benefit/cost, feasibility, regulatory compliance and perceived value to the customer
- validation of baka yoke and poka yoke proposals.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real mistake proofing project in an operational workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS404050 Undertake process capability improvements

Modification History

Release 1. Supersedes and is equivalent to MSS404050A Undertake process capability improvements

Application

This unit of competency covers the skills and knowledge required to make process capability improvements, including analysing data from the process, developing improvements to eliminate variation due to assignable causes, and then implementing actions.

This unit applies to a person who reviews a range of process capability data and information, makes/arranges for changes to be made to procedures, equipment or process and then recalculates the process capability and monitors resulting improvement actions. The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to suggest and justify process capability improvements.

Process capability may have been determined using either a six sigma or three sigma processes. This unit applies to the application of statistical methods and the determination of capability based on those methods.

This unit primarily requires the application of skills associated with communication, information gathering and analysis. Initiative, enterprise and problem solving are also required to identify opportunities to improve process capacity. This unit also requires aspects of self-management and learning to validate own analysis.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Obtain required data**	1.1	Identify process for study.
		1.2	Obtain/organise process to obtain required data/information.
2	**Analyse information**	2.1	Analyse data and determine assignable causes.
		2.2	Develop possible improvements to eliminate assignable causes.
		2.3	Incorporate own experience and learning into proposed process improvement proposals.
		2.4	Develop process improvement proposals.
3	**Improve process capability**	3.1	Obtain required authorisations to implement improvements.
		3.2	Liaise with relevant people to implement improvements.
		3.3	Obtain/organise required data for improved process.
		3.4	Recalculate process capability.
		3.5	Implement revised data collection/processing and new capability information.
		3.6	Monitor improvement actions and make adjustments, as necessary.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Variation includes all of:	• random variation (no assignable cause) • non-random variation (which has an assignable cause).
Improved process capability may result from one or more of:	• continuous improvement with the process capability being recalculated periodically • an improvement project with the process capability recalculated as part of that project.
Procedures (written, verbal,	• work instructions • standard operating procedures (SOPs)

Assessment Requirements for MSS404050 Undertake process capability improvements

Modification History

Release 1. Supersedes and is equivalent to MSS404050A Undertake process capability improvements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to undertake one (1) or more process capability improvements and to:

- obtain required data
- determine process capability/trial limits
- use the data and other information to develop process improvement proposal(s)
- monitor the improved process and make further adjustments as appropriate.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- data collection and manipulation techniques
- variability, normal distribution and three/six sigma limits
- causes of random and non-random variation in the process
- approaches to reducing variability.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real capability improvement project for an operational workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.

MSS404052 Apply statistics to operational processes

Modification History

Release 1. Supersedes and is equivalent to MSS404052A Apply statistics to operational processes

Application

This unit covers the ability to gather and analyse process data to support the control of processes and operations. It includes interpretation of sampling procedures, frequency distributions, random and non-random variations in data/control charts; use of control limits to determine whether or not monitored processes are in control; and communicating this information to others.

This unit applies to a person working in an organisation applying statistical process control on processes or operations. The statistical process control will usually be used to monitor the processes or operations and determine when action needs to be taken. The appropriate action will then be taken in accordance with standard procedures.

This unit primarily requires the application of skills associated with gathering and analysing data and communicating statistical information to others. This unit also has a strong emphasis on problem solving, initiative and enterprise, planning and organising, and self-management to solve problems and manage processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Collect process data**	1.1	Interpret sampling scheme.
		1.2	Obtain measurements in accordance with standard sampling procedures.
		1.3	Handle data in accordance with procedures.
2	**Interpret data**	2.1	Plot data on appropriate control chart.
		2.2	Distinguish between random and non-random patterns of results.
		2.3	Identify results outside the control limits.
		2.4	Recognise situations requiring action.
		2.5	Take action in accordance with procedures.
		2.6	Determine cost of non-conformance.
3	**Calculate control limits**	3.1	Consult relevant stakeholders to determine appropriate limits.
		3.2	Use relevant methods to calculate/revise control limits.
		3.3	Plot limits on control chart and complete other records in accordance with procedures.
		3.4	Explain impact of limit to relevant stakeholders.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Sampling schemes include one or more of:

- sampling for attributes or sampling for variables
- batch, continuous or custom made products
- type of sample
- size of sample
- number of items/samples
- number/type of measurements to be done on each sample
- timing of sampling
- location of sampling points
- sampling equipment
- measurement/testing equipment/methods.

Checking, analysing and storing data includes one or more of:

- calculating means, ranges, mean of means and standard deviations (using appropriate calculation aids)
- entering data into a software package
- recording data either in writing or electronically

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- other required manipulations of the data.

Control charts include one or more of:

- run
- tally
- mean/range
- attributes
- other relevant charts.

Variations include all of:

- random variations for which no cause can be found
- non-random variations for which a cause can be found and so the cause of the variation eliminated (also called identifiable cause, assignable cause or special cause)
- non-random variations used to predict possible breaches of the control limits.

Limits include one or more of:

- control limits (also referred to as process capability) within which the process will operate if it is 'under control'
- appropriate limits: 1 sigma warning limits, 2 sigma warning limits, 3 sigma control limits, and 6 sigma limits.

Costs of non-conformance include one or more of:

- reprocessing/rework
- expediting
- unplanned service
- excess inventory
- complaint handline
- downtime
- returns
- scrap
- labour costs
- material costs
- infrastructure costs/overhead
- utility costs.

Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of

Assessment Requirements for MSS404052 Apply statistics to operational processes

Modification History

Release 1. Supersedes and is equivalent to MSS404052A Apply statistics to operational processes

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment and must include on two (2) or more occasions:

- gathering, analysing and interpreting process data to support the control of processes and operations
- applying specified sampling procedures
- investigating the causes of variation in a process
- communicating with other employees to obtain samples/data and to explain results and limits
- calculating and plotting data and control limits
- completing other required documentation.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- purpose of sampling and measurement
- sampling methods to be used
- methods of calculating means, standard deviations and the like and their purpose in statistical control
- concept of limits, including 1, 2, 3 and 6 sigma limits
- types of control charts and their applications to different types of process/product and for different purposes
- process causes of variation and typical cause types of non-random variation
- non-process (e.g. measurement) causes of variation
- recognition of stable and unstable processes
- causes of stability/instability in the process
- calculation of control limits/process capability and the applications of different control limits
- the standard distribution curve and confidence limits.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the application of statistics to an operational process in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS404060 Facilitate the use of planning software systems in a work area or team

Modification History

Release 1. Supersedes and is equivalent to MSS404060A Facilitate the use of planning software systems in a work area or team

Application

This unit of competency covers the skills and knowledge required to facilitate the use of planning software in an organisation in an individual's work area or team. These systems are known by various generic names, such as Enterprise Resource Planning (ERP), Materials Resource Planning (MRPII, MRP III etc.) or by proprietary names.

This unit applies to an individual who will access the planning software system for their own work, but will also need to provide support and organise skill development programs for their team or work group members. The individual will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to facilitate the use of the planning software system. The planning software system will be used routinely in the work of the team or work group.

This unit primarily requires the application of skills associated with using communication technology and supporting team use of planning software. Problem solving, initiative and enterprise, and planning and organisational skills are required to ensure that planning software is used efficiently. This requires aspects of learning and self-management to ensure own performance and that of the team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify scope of planning software**	1.1	Identify categories of information held by planning software.
		1.2	Identify information categories relevant to team and area processes.
		1.3	Identify range of information able to be provided to planning software by team or work group.
		1.4	Identify range of information able to be provided to team or work group by planning software.
2	**Communicate using the planning software system**	2.1	Send and receive information using planning software.
		2.2	Send and receive messages using planning software.
3	**Make decisions using planning software**	3.1	Interrogate the planning software system to find required current, historical or predicted information.
		3.2	Take actions appropriate to the information in accordance with procedures.
4	**Monitor the use of planning software**	4.1	Routinely monitor planning software information.
		4.2	Review performance and use of planning software with team.
5	**Support others to use planning software**	5.1	Regularly communicate with team or other work group members, both using planning software and face to face.
		5.2	Identify improvements required.
		5.3	Take action to implement improvements in accordance with procedures.

Assessment Requirements for MSS404060 Facilitate the use of planning software systems in a work area or team

Modification History

Release 1. Supersedes and is equivalent to MSS404060A Facilitate the use of planning software systems in a work area or team

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, to facilitate and/or provide support on three (3) or more occasions, to:

- identify team or work group area information requirements and relate to planning software categories
- lead and motivate others in using planning software
- ensure information sent to planning software is accurate and appropriate
- obtain regular and one-off information from planning software
- make decisions using planning software generated information.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- hierarchy of planning software system and operation
- information available from/through the planning software system
- query facilities and information analysis capabilities offered by planning software
- support/training/skill development mechanisms available for access by team members.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include facilitating and/or support for teams or work groups using planning software systems in own workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS404081 Undertake proactive maintenance analyses

Modification History

Release 1. Supersedes and is equivalent to MSS404081A Undertake proactive maintenance analyses

Application

This unit of competency covers the skills and knowledge required to undertake the most common forms of analyses associated with predictive/preventative/reliability centred maintenance strategies.

This unit applies to a technical expert (usually an engineer, technician or tradesperson) who is required to undertake analyses for the purpose of predictive/preventative/reliability centred maintenance as part of a competitive systems and practices strategy.

This unit primarily requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, and planning and organising in order to undertake maintenance analyses. This is normally done in the context of using computer technology, and requires aspects of learning and self-management to ensure team involvement and facilitation of learning.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Liaise with operator**	1.1	Establish a relationship with the operator of equipment/plant.
		1.2	Ensure the operator has the required skills and resources to keep the equipment/plant clean.
		1.3	Ensure the operator is able to effectively monitor the operation of the equipment/plant.
		1.4	Regularly communicate with operator about the overall equipment effectiveness (OEE) of their equipment/plant.
		1.5	Involve operator, team leader and other key personnel in identification of skill needs and means of skill acquisition to fill any identified gaps.
2	**Analyse history**	2.1	Analyse mean time between failures (MTBF) from maintenance records.
		2.2	Analyse performance data of the equipment/plant.
		2.3	Identify causes of changes to historic trends/status.
		2.4	Determine methods of ensuring causes of improvements and resolution of deterioration are locked in.
3	**Undertake failure mode effects analysis (FMEA) or similar failure effects analysis**	3.1	Undertake analysis.
		3.2	Record results of analysis.
		3.3	Investigate methods of eliminating possibility of failure and/or minimising the impact of the failure.
		3.4	Liaise with operator, team leader and other key personnel regarding possible solutions.
		3.5	Select most appropriate solution.
		3.6	Implement selected solutions.
4	**Undertake**	4.1	Obtain data for condition monitoring analysis.

condition monitoring analysis	4.2	Interpret condition monitoring data.
	4.3	Predict required maintenance type and timing from condition monitoring data.
	4.4	Liaise with operator, team leader and other key personnel regarding implications of condition monitoring report.
	4.5	Involve team members in development of changes to maintenance strategy to ensure awareness, learning and commitment.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping

Assessment Requirements for MSS404081 Undertake proactive maintenance analyses

Modification History

Release 1. Supersedes and is equivalent to MSS404081A Undertake proactive maintenance analyses

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for two (2) or more items of equipment/plant, to:

- identify and analyse data and other information on the historical performance of equipment
- undertake MBTF, FMEA and condition monitoring analyses
- involve operators, maintenance and other stakeholders in decisions on proactive maintenance strategies
- identify root cause of failure and deterioration in equipment performance
- select and implement failure elimination or minimisation solutions.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- cleaning needs, techniques and principles of equipment in area of responsibility
- methods of assessing operator and maintenance skill gaps and filling them
- techniques for determining MTBF or similar
- techniques for undertaking FMEA or similar
- principles of competitive systems and practices strategies being implemented and how to adapt them to maintenance
- root cause analysis
- techniques to analyse condition monitoring data.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
    - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS404082 Assist in implementing a proactive maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS404082A Assist in implementing a proactive maintenance strategy

Application

This unit of competency covers the skills and knowledge required by a maintenance person to assist in the implementation of a proactive maintenance strategy in an organisation. This unit includes the interaction between a maintenance worker and operators, as appropriate.

This unit applies to a maintenance person in an organisation that has adopted or is implementing total preventative/productive maintenance (TPM), reliability centred maintenance (RCM) or similar strategies. As part of this, the maintenance person is expected to assist in the implementation by determining appropriate maintenance related schedules and also by providing maintenance related assistance to non-maintenance personnel, such as assisting production personnel to fulfil their role in the TPM/RCM strategy.

This unit requires the application of skills associated with problem solving and initiative and enterprise in order to analyse maintenance requirements. Communication, teamwork and planning and organising skills will be required to implement reliability strategies. This requires aspects of self-management to ensure improvement of own performance and learning.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Develop components of reliability strategy for a work/plant area**	1.1	Determine manufacturer's recommended inspection, servicing and related schedules for relevant plant.
		1.2	Consult with relevant people with regard to appropriate inspections, services and schedules.
		1.3	Discuss any conflicts with relevant people and seek resolution of conflicts.
		1.4	Develop schedules in liaison with relevant people.
		1.5	Identify inspections and servicing which may be done by operations personnel in liaison with relevant stakeholders.
2	**Assess current practice for maintenance implications**	2.1	Identify the overall equipment effectiveness (OEE) or other organisation targets for equipment/plant.
		2.2	Evaluate procedures for plant/equipment reliability implications.
		2.3	Discuss current practices with relevant people to determine any plant/equipment reliability implications.
		2.4	Recommend changes to improve plant/equipment reliability in accordance with procedures.
3	**Assist in implementing the reliability strategy**	3.1	Arrange for schedules to be incorporated in relevant work plans.
		3.2	Identify training needs in discussion with relevant personnel.
		3.3	Assist personnel to develop required skills for inspections/ servicing within scope of authority.
		3.4	Collect data/information as required by own work plan.
		3.5	Compare data/information with performance indicators.
		3.6	Recommend improvements to reliability strategy in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

accordance with procedures.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Strategies include one or more of:	• mean time between failure (MTBF) which is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	failing • failure mode and effects analysis (FMEA) which is a systematic approach that identifies potential failure modes in a system, product or equipment based operations caused by either design or operation/process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring • industry sectors have highly adapted forms of FMEA and which may practice traditional FMEA in their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification. HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability • condition monitoring which often involves quite sophisticated monitoring of equipment, including such things as vibration monitoring, instrumental analysis of lubricating oil, and so on, to determine the current state of the equipment, monitor the change in this condition and predict when it needs servicing/maintenance to maintain reliability.
Inspection includes one or more of:	• reading dials, gauges and meters • observations, including those using sight, hearing, smell and feel • observations of product quality/faults/rejects.
Servicing includes one or more of:	• cleaning • lubricating • topping up • adjusting.
Procedures (written, verbal, visual, computer based, etc.) include one or more of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS404082 Assist in implementing a proactive maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS404082A Assist in implementing a proactive maintenance strategy

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more work/plant areas, to:

- source information from manuals and other technical documentation or software
- effectively communicate with users on equipment operational and maintenance history
- develop schedules for maintenance activities, including seeking technical assistance, where appropriate
- differentiate between proactive and traditional maintenance strategies.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- requirements of the proactive maintenance strategy being implemented
- operating principles and procedures for equipment/plant subject to proactive maintenance strategy
- purpose and processes for data collection in proactive maintenance strategies
- procedures relevant to own job and organisation implementation of proactive maintenance
- methods of making/recommending improvements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.

MSS405003 Manage a value stream

Modification History

Release 1. Supersedes and is equivalent to MSS405003A Manage a value stream

Application

This unit of competency covers the skills and knowledge required to manage an overall value stream, a supply chain or a demand chain, including close liaison with suppliers and customers. It may be applied to the managing of the chain internally/externally within an organisation.

This unit applies to a person in a senior role in an organisation, such as a manager, technical specialist or similar, who needs to manage the value/supply/demand chain on an ongoing basis to achieve the best overall contribution of valued added to their product in terms of customer benefit/features. The unit can be applied to value streams of large or small organisations and to internal and external value streams or a combination value stream.

This unit assumes that the value stream has been mapped and that the mapping is available.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Evaluate the value stream**	1.1	Identify all members in the value stream for products in area of responsibility.
		1.2	Identify value added by each member of the chain.
		1.3	Identify non-value adding steps in the value stream.
		1.4	Identify acute and chronic issues which impact on the value stream.
		1.5	Develop priority list of items for improvement.
2	**Liaise regularly with chain members**	2.1	Establish and maintain regular liaison with all chain members.
		2.2	Identify current and forecast issues with each member.
		2.3	Work with members to help them address their issues.
		2.4	Build trust and confidence in the relationship.
		2.5	Develop with each chain member a priority list of items for improvement.
		2.6	Negotiate with all chain members to ensure improvements benefit chain members and improve the benefits/features perceived by the ultimate customer.
3	**Monitor the value added at each step**	3.1	Identify changes in value added by each chain member.
		3.2	Identify areas where changes to value added are required.
		3.3	Develop a priority list of required value-added changes.
		3.4	Work with chain member to bring about improvements to value added.
4	**Continue to reduce muda (waste)**	4.1	Identify muda (waste) in value stream.
		4.2	Work with chain members to continually reduce muda.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Customer requirement stages where value stream actions may occur include one or more of:	• sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• after market support.
Value-added as perceived by the customer includes one or more of:	• technical benefits/features • location benefits/features • aesthetic benefits/features • information benefits/features.
Techniques for value stream mapping include one or more of:	• hard copy (e.g. paper or whiteboard) • appropriate software tools • expert group • participation by gemba representatives • participation by all impacted personnel.
Muda (waste) includes all of:	• excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisation's customers.

Assessment Requirements for MSS405003 Manage a value stream

Modification History

Release 1. Supersedes and is equivalent to MSS405003A Manage a value stream

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to manage one (1) or more value streams and to:

- evaluate the performance of a value stream, its members and steps
- liaise regularly with value chain members to help them, and the value chain performance, to improve
- monitor value added and muda at each step to increase value added and reduce muda.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to manage a value stream including knowledge of:

- customer perception of value added and muda
- the process(es) covered by the value stream
- performance indicators for each value stream step
- value stream analysis and mapping
- methods of reducing muda/increasing perceived value added
- upstream and downstream components of the value stream which are beyond the individuals scope of authority to manage.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor, 360 degree or other third-party report focussing on consistent performance and problem recognition and solving. A third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency.
  - must include managing a value stream in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405011 Manage people relationships

Modification History

Release 1. Supersedes and is equivalent to MSS405011A Manage people relationships

Application

This unit of competency covers the ability to manage the human relationship aspects of implementing and operating competitive systems and practices.

This unit requires strong communication, teamwork and problem solving skills to achieve effective relationships that support a competitive systems and practices environment. Initiative, enterprise, planning and organising are also required to ensure relationships are monitored and issues are resolved proactively. The unit also includes aspects of self-management and learning to ensure improvement of own performance and communication skills.

It is suitable for people who work in a managerial, technical specialist or similar role and are expected to encourage others to accept change and increase the quality, quantity and reliability of output consistent with customer requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Confirm organisation competitive systems and practices status**	1.1	Establish number and status of competitive systems and practices techniques being used within the organisation.
		1.2	Identify key performance indicators (KPIs) for each technique.
		1.3	Identify key sections and value stream members responsible for each KPI.
		1.4	Identify key personnel for communications.
2	**Develop an open environment**	2.1	Establish and maintain regular dialogue between all levels and all relevant sections of the organisation.
		2.2	Encourage a flow of communications in both directions.
		2.3	Develop and maintain a formal mechanism for the flow of issues, concerns and suggestions in both directions.
		2.4	Develop and maintain regular and frequent communication with all key stakeholders.
3	**Identify significant issues**	3.1	Identify current and potential issues in liaison with relevant team members/stakeholders.
		3.2	Assist team members/stakeholders to formulate issues.
		3.3	Identify and define boundary and non-negotiable issues for all team members/stakeholders.
		3.4	Negotiate with relevant team members/stakeholders over actual and potential issues.
4	**Proactively resolve issues**	4.1	Liaise with team members/stakeholders to develop agreed, and where possible, win-win solutions.
		4.2	Negotiate acceptable solutions, as required, in accordance with company practices/procedures.
		4.3	Obtain any required official authorisations.
		4.4	Consult with relevant stakeholders to develop implementation plan.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.5 Implement solution.
5	**Monitor ongoing situation**	5.1 Determine relevant KPIs for plan.
		5.2 Check that implementation is proceeding to plan.
		5.3 Check for unforeseen consequences.
		5.4 Take action to resolve any arising issues.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Release 1. Supersedes and is equivalent to MSS405011A Manage people relationships

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more work areas, to:

- identify the processes used and scope of products/services supplied by the organisation and the deliverables expected by customers
- relate processes and products/services to the competitive systems and practices implementation process and the stage of implementation
- communicate and gain support for changes made as a result of the implementation of the competitive systems and practices
- develop formal and informal channels of communication, including feedback mechanisms
- proactively resolve issues and problems raised by people with the competitive systems and practices implementation process.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to manage relationships, including knowledge of:

- competitive systems and practices tools used in own workplace
- work health and safety (WHS) and regulatory requirements, codes of practice, standards, risk management and registration requirements relevant to the task
- change implementation contacts and procedures for the organisation
- employee assistance mechanisms in the organisation
- current processes and principles of operation sufficient to enable communication with others on the impact of competitive operational changes
- sources of data on the process/plant and possible applications to information distribution
- methods of determining own skill needs and developing skills.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project where management of people relationships occurs in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405012 Manage workplace learning

Modification History

Release 1. Supersedes and is equivalent to MSS405012A Manage workplace learning

Application

This unit of competency covers the ability to manage learning and skill development for employees within an organisation implementing competitive systems and practices. The unit includes effective communication, teamwork, and problem solving skills, initiative and enterprise in order to assess and address skill needs for an individual and organisation. Planning and organising is required to ensure that skill development meets the needs of the organisation; and aspects of self-management and learning are required to ensure improvement of performance.

This unit of competency applies to people with responsibility for managing the identification of skills required by employees to participate in implementing competitive systems and practices; and arranging any associated learning. The unit does not cover trainer and assessor skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine**	1.1	Establish range and stage of implementation of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	current skill requirements for employees		competitive systems and practices techniques in the organisation.
		1.2	Consult with relevant stakeholders on skill requirements for effective implementation of competitive systems and practices techniques used in the organisation.
		1.3	Ensure records/database of skill mix currently required by employees are maintained in accordance with procedures.
		1.4	Re-assess and monitor the skills required by employees as organisation requirements change.
		1.5	Consult with relevant stakeholders to predict any new/different skill requirements arising from changes to products, processes, equipment or work organisation.
2	**Determine current skill mix of employees**	2.1	Ensure current records/database of skill profile of individuals are maintained.
		2.2	Consult with relevant stakeholders and monitor the application of these skills in the workplace to ensure they remain current and valid.
		2.3	Compare the actual and required skill mix for employees.
3	**Make arrangements for skill development**	3.1	Consult with employees and identify any mismatch between skills possessed and used and skills required.
		3.2	Identify any new skills required due to anticipated changes.
		3.3	Consult with relevant stakeholders to determine the best way to refresh existing skills/develop new skills.
		3.4	Develop individual skill development programs.
		3.5	Ensure skill development arrangements are implemented in accordance with procedures.
4	**Forecast possible**	4.1	Examine strategic directions of organisation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

future skill needs	4.2	Discuss possible future directions with relevant stakeholders.
	4.3	Determine possible long-term future skill requirements in consultation with relevant stakeholders.
	4.4	Develop plan to ensure skills are developed in advance of when they are required.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- current reality tree.

Stakeholders include one or more of:

- team members
- personnel officers
- industrial officers
- union delegates
- production management
- human relations management
- financial management
- engineering/technical personnel.

Skill development arrangements include one or more of:

- formal vocational and education delivery by a registered training provider (RTO)
- education and training delivery by a higher education provider
- non-accredited on and off-the-job training by the organisation, equipment suppliers, industry associations, and so on
- coaching and mentoring
- self-directed learning
- arrangements for recording skills gained by employees.

Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS405012 Manage workplace learning

Modification History

Release 1. Supersedes and is equivalent to MSS405012A Manage workplace learning

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more workplace areas or workgroups, to:

- identify the processes used and scope of products/services supplied by the organisation and the deliverables expected by customers
- relate processes and products/services to the competitive systems and practices implementation process and the stage of implementation
- establish skill needs from processes/products and competitive implementation process in the organisation
- use formal and informal channels of communication, including feedback mechanisms to assist in identification of skill needs
- manage delivery and recording of training to ensure required skills are gained by employees.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to manage workplace learning, including knowledge of:

- features and benefits of common competitive operational practices in own workplace
- skills analysis methods and how to access skill analysis from relevant experts
- skill development methods and how to access skill development programs from relevant experts
- electronic and other systems to record and maintain training and skills records
- formal qualifications and units of competency relevant to competitive systems and practices and the processes and products of the organisation
- current processes and principles of operation sufficient to enable communication with others on the impact of competitive operational changes
- sources of data on the processes and/or products of the organisation and implications for workplace learning.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project where managing workplace learning occurs in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405022 Design a process layout

Modification History

Release 1. Supersedes and is equivalent to MSS405022A Design a process layout

Application

This unit of competency covers the skills and knowledge required to design a process layout, typically a cellular flow, for either a jobbing shop or a continuous process manufacturer. This unit provides the skill for a technical expert to apply the principles of competitive systems and practices to process design layout as distinct from volume production layout. While the application of the unit may be for an initial layout, in many cases it is likely to be for the redesign of an existing layout.

The unit is written on the assumption that there is an existing process. Where this is not the case, then additional competency in equipment/process design and selection will also be required through units from an appropriate technical qualification or Training Package.

This unit requires the application of skills associated with problem solving, initiative, enterprise, planning and organising in order to design a process for the manufacture of enterprise products that incorporates team operations, product flow, infrastructure and the layout of the physical environment and related technology. This unit has a strong emphasis on gathering, analysing and applying information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Not applicable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify the products and processes used in the organisation**	1.1	Obtain or develop a process map of the existing process.
		1.2	Identify all/main products/classes of products.
		1.3	Obtain forecast sales and sales pattern of products/classes.
		1.4	Obtain profiles of products/classes.
		1.5	Group the products/classes into compatible families.
2	**Engineer the process**	2.1	Make a preliminary selection of required equipment/technology/ process for each process or product family.
		2.2	Estimate required resource times for each family.
		2.3	Calculate total resourcing required for each family.
		2.4	Estimate appropriate lot size.
		2.5	Determine viability of proposed families.
		2.6	Examine draft proposal for possible improvements in process consistent with the competitive systems and practices strategy of the organisation.
3	**Design the infrastructure**	3.1	Consult on layout needs with all stakeholders.
		3.2	Identify physical infrastructure required by system.
		3.3	Identify information and control infrastructure required.
		3.4	Identify work organisation required.
		3.5	Identify work health and safety (WHS) and other regulatory requirements to be taken into account.
		3.6	Identify workforce development and training requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.7	Check the availability of required infrastructure and compatibility with requirements.
4	**Lay out the process**	4.1	Draft proposed process flow map.
		4.2	Draft proposed configuration diagram.
		4.3	Draft proposed space plan/layout.
		4.4	Check availability of services/structural suitability, as appropriate.
		4.5	Validate proposed layout with all relevant stakeholders.
		4.6	Layout the process/work cell.
		4.7	Develop implementation plan in liaison with relevant stakeholders.
		4.8	Review layout after implementation.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Profiles of products include consideration of all of:
- components/materials needed to manufacture
- equipment/technology/processes required to manufacture
- volume of activity to manufacture forecast amount
- required operations equipment/technology/processes.

Required resource times include consideration of all of:
- set-up time
- equipment time
- person time
- process time.

Lot size includes one or more of:
- external lot size
- internal lot size
- transfer batch size
- kanban size.

Viability includes consideration of all of:
- appropriate calculated processing times
- adequacy of equipment utilisation
- acceptable maintenance implications
- ability to meet WHS requirements
- ability to meet environmental requirements
- compliance with any legislative and regulatory requirements
- acceptable to stakeholders.

Stakeholders include one or more
- customers
- employees

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

of:	• equipment suppliers and contractors (especially if new equipment required) • regulatory authorities • local community representatives • utilities (e.g. water and power).
Physical infrastructure includes one or more of:	• containers/packaging • material handling equipment (e.g. pipes, tanks, conveyors and hoppers) • utilities supply (e.g. steam, air, gas, electricity and water).
Information and control infrastructure includes one or more of:	• quality assurance • statistical process control (SPC)/six sigma • planning systems/software • data collection and control systems/software.
Work organisation includes all of:	• number of personnel • skills/capability mix of workforce.

Assessment Requirements for MSS405022 Design a process layout

Modification History

Release 1. Supersedes and is equivalent to MSS405022A Design a process layout

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to design a layout for one (1) or more processes and to:

- identify products and processes
- engineer the process
- design the infrastructure
- lay out the process.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to design a process layout, including knowledge of:

- customer requirements in terms of order size and order pattern
- processing requirements for products
- equipment capabilities and reliability
- workforce capabilities and reliability
- business requirements from layout
- work health and safety (WHS) and other regulatory requirements
- principles of process layout.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real process layout project for an operational workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405030 Optimise cost of a product or service

Modification History

Release 1. Supersedes and is equivalent to MSS405030A Optimise cost of a product or service

Application

This unit of competency covers the skills and knowledge required to examine the costs of a product or service and determine methods of reducing costs. This unit applies to an individual a who is required to undertake a detailed study of a product or service's costs, including analysing it by its cost components to determining the best method of lowering the cost overall. This unit differs from *MSS405031 Undertake value analysis of a product or process costs in terms of customer requirements*, in that it looks at all costs, including overheads and takes a wider and more traditional approach to the cost of the product. Information and cost reduction strategies gained from the application of this unit may support other cost approaches in the enterprise, including value stream costing.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information. Problem solving, initiative and enterprise, and planning and organising are required to calculate cost components and determine cost optimisation strategies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into costing methods.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Analyse total cost components of a product or service**	1.1	Identify all cost components of product or service.
		1.2	Allocate cost components to major categories, such as overhead, depreciation, energy, consumables and labour.
		1.3	Distinguish between costs which directly deliver customer features/benefits and muda (waste).
2	**Optimise costs**	2.1	Analyse causes of costs which lead to customer features/benefit.
		2.2	Determine methods of increasing the customer benefit/cost ratio.
		2.3	Analyse causes of muda costs.
		2.4	Determine methods of reducing/eliminating muda costs.
		2.5	Analyse interactions between cost components.
		2.6	Check that one method of reducing costs does not cause an increase in another cost/reduction in consumer benefit.
		2.7	Check that cost reduction plans do not reduce required levels of regulatory compliance or work health and safety (WHS).
3	**Implement cost optimisation**	3.1	Develop cost optimisation plans.
		3.2	Negotiate with relevant people to agree on implementation plans.
		3.3	Take actions to implement the cost optimisation.
		3.4	Monitor the implementation of the cost optimisation.
		3.5	Make adjustments to the plan, as required.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Muda (waste) includes all of:

- excess production and early production
- delays
- movement and transport
- poor process design
- inventory
- inefficient performance of a process
- making defective items
- activities which do not yield any benefit to the organisation or any

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

benefit to the organisations customers.

Cost includes all of:

- the monetary value of expenditures able to be directly identified for supplies, services, direct labour, materials, components, cost of inventory, faults and reworks, rejects/scrap, equipment and other items used in the production of the product
- allocations and estimates for indirect costs (e.g. indirect labour, rent, energy, water and cost of capital) where a direct monetary value cannot be identified.

Cost optimisation plans include all of:

- application scope (e.g. product/s, services, areas, employees and suppliers included in plan)
- target costs and target cost reductions
- implementation period
- method of monitoring
- method of communicating progress to stakeholders.

Assessment Requirements for MSS405030 Optimise cost of a product or service

Modification History

Release 1. Supersedes and is equivalent to MSS405030A Optimise cost of a product or service

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to optimise costs for one (1) or more products or services and to:

- analyse all cost components
- optimise costs and minimise muda
- implement the cost optimisation.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to optimise costs, including knowledge of:

- cost component categories
- methods of allocating indirect costs and their implications
- expressing customer perceived benefit in cost or dollar value terms
- major controllable costs for the organisation, and how to control them
- types of muda and how to reduce it
- benefit cost/ratios, their determination and application.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real cost optimisation project for an operational workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405031 Undertake value analysis of product or process costs in terms of customer requirements

Modification History

Release 1. Supersedes and is equivalent to MSS405031A Undertake value analysis of product or process costs in terms of customer requirements

Application

This unit of competency covers the skills and knowledge required by an individual who is required to analyse products and processes to determine the value-adding factors, including design and processing costs that most impact on meeting customer requirements and which may also include competitor benchmarking. The unit also includes implementing identified changes that increase cost-efficiency. The unit may be applied individually or in a team environment.

In this unit an individual uses an analysis of the benefits/features which a customer perceives to be in a product or service as a basis for determining appropriate or unnecessary (muda) cost and so identifying and reducing muda (waste).

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information. Problem solving, initiative and enterprise, and planning and organising are required to determine cost-efficiencies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into costing methods.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Analyse customer benefits to determine appropriate or muda (waste) costs**	1.1	Analyse product or service to determine features/benefits perceived by customer in product.
		1.2	Analyse cost components of product or service and determine those which deliver customer features/benefits and those which are either appropriate or muda.
		1.3	Determine any additional features that may be added to improve saleability.
		1.4	Analyse muda cost components and allocate to direct and indirect cost categories.
		1.5	Determine options for reducing direct and indirect muda costs.
		1.6	Select cost-related actions which maximise customer benefits and minimise costs.
		1.7	Where required, undertake competitor benchmarking to provide reference points.
2	**Analyse performance variance**	2.1	Identify muda processing or operational steps for product or service following completion of customer benefit analysis.
		2.2	Analyse all costs and determine methods of reducing costs and muda.
		2.3	Develop plan and recommendations for actions required to achieve cost improvement or added customer benefits to improve saleability.
		2.4	Submit plan and recommendations to stakeholders.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Muda includes all of:	• excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers.
Cost includes all of:	• the monetary value of expenditures able to be directly identified for supplies, services, direct labour, components, cost of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

inventory, faults and reworks, rejects/scrap, equipment and other items used in the production of the product
- allocations and estimates for indirect costs (e.g. indirect labour, rent, power and water) where a direct monetary value cannot be identified.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS405031A Undertake value analysis of product or process costs in terms of customer requirements

Assessment Requirements for MSS405031 Undertake value analysis of product or process costs in terms of customer requirements

Modification History

Release 1. Supersedes and is equivalent to MSS405031A Undertake value analysis of product or process costs in terms of customer requirements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to undertake value analysis on one (1) or more products or processes and to:

- distinguish between appropriate costs and muda
- distinguish between direct and indirect costs
- determine methods of reducing both appropriate costs and muda
- develop a plan to increase customer perceived benefits/ saleability and/or reduce costs and muda.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to undertake value analysis, including knowledge of:

- cost components, direct and indirect costs
- customer perceived benefits
- factors influencing saleability
- impact of customer features/benefits on sales, market share and firms profitability
- major costs which are controllable (and how to control them)
- types of muda
- methods of reducing muda.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real value analysis project in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405032 Analyse cost implications of maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS405032A Analyse cost implications of maintenance strategy

Application

This unit of competency covers the skills and knowledge required to analyse the cost implications of different maintenance strategies and to adjust or adopt a strategy to minimise or eliminate unnecessary costs. This unit applies to an individual in an organisation who is selecting or reviewing its proactive maintenance strategy. While technical factors are significant in the choice of maintenance strategy and tools, cost factors will also impact on the selection of a maintenance strategy. This unit covers the cost analysis of maintenance strategies and complements the technical analysis covered in MSS405081 Develop a proactive maintenance strategy. The technical analysis may be performed by the same or a different person to the person undertaking the cost analysis.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying costing information and consulting with maintenance personnel. Problem solving, initiative and enterprise, and planning and organising are required to analyse and estimate the cost of maintenance strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Analyse cost components of maintenance**	1.1	Determine cost of failure of plant/equipment.
		1.2	Determine cost of a planned maintenance shutdown activity, including costs of re-start.
		1.3	Determine cost of maintenance for a planned activity.
		1.4	Determine cost of maintenance for an unplanned activity.
		1.5	Determine costs of condition monitoring.
		1.6	Identify cost implications of different maintenance strategies.
2	**Estimate life cycle costs of plant/ equipment**	2.1	Determine initial capital cost.
		2.2	Estimate servicing, maintenance and repair costs.
		2.3	Estimate production (e.g. loss of) and other costs associated with service, maintenance and repair.
		2.4	Determine depreciation and other applicable allowances.
		2.5	Estimate ancillary costs, such as training, commissioning and productivity loss.
		2.6	Estimate technological life and costs of changing to current technology/costs of retaining obsolete equipment.
		2.7	Estimate annualised costs in present value terms.
		2.8	Identify life cycle cost implications for strategy.
3	**Liaise with proactive maintenance strategy developer**	3.1	Identify cost implications for different strategies.
		3.2	Negotiate a strategy which minimises total costs.
		3.3	Monitor the implementation of the strategy to ensure the costs are minimised.
		3.4	Make required adjustments to strategy.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Maintenance strategies and techniques include one or more of:	• total productive maintenance (TPM) • reliability centred maintenance (RCM) • root cause analysis (RCA) • mean time between failures (MBTF) • failure mode and effects analysis (FMEA) • condition monitoring

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- related proactive maintenance strategies.

Cost components of maintenance include all of:

- direct costs, such as labour and materials
- indirect costs, such as management overhead
- comparison with cost of equipment replacement
- re-engineering
- breakdown repair
- cost of lost production under different maintenance strategies
- cost of inefficient equipment/plant operation due to poor maintenance.

Assessment Requirements for MSS405032 Analyse cost implications of maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS405032A Analyse cost implications of maintenance strategy

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to analyse cost implications of two (2) or more maintenance strategies and to:

- analyse cost components for each strategy
- estimate life cycle costs for each strategy
- compare the cost implications and negotiate a strategy which minimises costs.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to analyse cost implications for maintenance strategies, including knowledge of:

- cost components of maintenance strategies
- direct and indirect costs
- maintenance strategies appropriate to the organisation, their strengths and weaknesses
- techniques for estimating production, sales and other costs related to maintenance strategies
- depreciation, capital vs. expense
- present day value of future costs – determination and use of
- life cycle costing
- negotiation.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real cost analysis of maintenance strategies for an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405041 Implement improvement systems in an organisation

Modification History

Release 1. Supersedes and is equivalent to MSS405041A Implement improvement systems in an organisation

Application

This unit of competency covers the skills and knowledge required to introduce, review/adjust and institutionalise continuous improvement and breakthrough improvement processes in an organisation.

This unit applies to an individual responsible for the introduction of, or ongoing implementation/improvement of improvement systems across an organisation. The systems will include a continuous improvement system sometimes also known as kaizen, and breakthrough improvement sometimes known as kaizen blitz.

The continuous improvement (kaizen) system consists of strategies for continuously monitoring for and implementation of incremental improvements to processes, operations and products. Breakthrough improvement ‘events’ (kaizen blitz) covers the identification of improvement opportunities that are best undertaken in a single exercise.

This unit primarily requires the application of skills associated with teamwork, problem solving, initiative and enterprise, and planning and organising skills in order to identify, implement and institutionalise kaizen activity. Communication skills are required to gather information and consult with team members and other stakeholders. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into continual improvement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for improvement systems implementation/ adjustment**	1.1	Determine scope of improvement systems.
		1.2	Identify key performance indicators (KPIs) for inclusion in improvement systems.
		1.3	Prepare operating instructions and other required documentation for continuous and breakthrough improvement systems.
		1.4	Ensure compliance with health, safety and environment (HSE) and other regulatory requirements are addressed in improvement instructions.
		1.5	Identify and brief implementation team.
		1.6	Prioritise areas operation, or processes requiring early action.
		1.7	Prepare communication strategy for employees and other stakeholders.
		1.8	Make infrastructure and support arrangements for improvement systems.
		1.9	Obtain required approvals for commencement of improvement systems.
2	**Implement/adjust improvement systems**	2.1	Arrange for initial/update training in continuous improvement (kaizen) and related competitive systems and practices for employees.
		2.2	Facilitate the development of operating protocols for continuous improvement at the team level.
		2.3	Establish decision making mechanism for system level continuous improvement.
		2.4	Invite suggestions for breakthrough improvements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.5	Establish mechanism for prioritising breakthrough improvements.
		2.6	Establish breakthrough teams and implement priority breakthrough events.
		2.7	Clarify points of disagreement/uncertainty over improvement systems implementation through consultation and, where required, by reference to procedures or other relevant authority.
3	**Monitor implementation/ adjustment of improvement systems**	3.1	Consult stakeholders on processes and perceived success of early implementation of continuous and breakthrough improvement events.
		3.2	Analyse processes and operations to quantify variations in KPIs over early period of implementation of improvement systems.
		3.3	Identify and solve ongoing performance issues.
		3.4	Negotiate any differences between problems and proposed solutions.
		3.5	Develop plans and obtain agreements to implement further improvements.
		3.6	Implement improvements.
		3.7	Measure changes and calculate benefits.
		3.8	Complete all relevant documentation.
		3.9	Communicate achievements to stakeholders.
4	**Institutionalise continuous improvement**	4.1	Arrange for regular reviews of improvement systems.
		4.2	Integrate improvement system reports with other reporting processes, including visual management systems.
		4.3	Arrange for regular reporting of improvement system results to customers and other critical stakeholders.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Scope of improvement systems includes one or more of:	• target divisions, operations, work processes, products and sites that stakeholders want included in a particular improvement system • levels of targeting for the continuous improvement system, including the system level focusing on the value stream and the overall achievement of customer defined features/benefits • process level focusing on individual processes, teams and team leaders.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Relevance of KPIs includes one or more of:	• appropriateness (did they lead to/encourage desirable performance?) • currency (are they still encouraging desirable performance?) • unintended consequences (do they lead to outcomes which are not desirable – even if some performance is desirable?) • signal/noise (is the balance between desirable and undesirable outcomes strong and positive?).
Instructions for incremental or breakthrough improvement processes include one or more of:	• methods for employees to suggest incremental or breakthrough improvement • criteria for identifying a breakthrough improvement need • approval processes • monitoring and reporting processes.
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.
Solving performance issues includes one or more of:	• generating improvement ideas (brainstorming/asking experts) • selecting most appropriate improvement ideas to proceed with • conducting experiments where required to test idea • making final selection of improvement ideas • determining most appropriate improvement strategy (i.e. incremental or breakthrough (kaizen blitz) improvement).

Assessment Requirements for MSS405041 Implement improvement systems in an organisation

Modification History

Release 1. Supersedes and is equivalent to MSS405041A Implement improvement systems in an organisation

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, across an organisation or department/section, to:

- interpret operations, processes and products in terms of customer features/benefits and then set appropriate key performance indicators (KPIs)
- prepare appropriate documentation for continuous and breakthrough improvement processes
- establish decision-making processes for considering system level continuous improvement suggestions
- encourage and lead others in implementing/adjusting continuous improvement system
- problem solve implementation issues with continuous improvement system
- lead and motivate others in planning, implementing and sustaining improvements.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to implement improvement systems, including knowledge of:

- continuous and breakthrough improvement (kaizen and kaizen blitz) philosophy and process
- competitive systems and practices in own organisation
- types of KPIs and their impacts on performance
- improvement processes, including implementation, monitoring and evaluation strategies.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project where the introduction of improvement systems occurs across an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405050 Determine and improve process capability

Modification History

Release 1. Supersedes and is equivalent to MSS405050A Determine and improve process capability

Application

This unit of competency covers the skills and knowledge required to determine the actual (as distinct from design) capability of a process and then to analyse that process to remove assignable causes and reduce random causes. This unit applies to an individual (who may be a production manager, plant/process engineer, technical specialist or similar) who is responsible for developing plans to stabilise and then improve process capability and following agreement the implementation of the plans to improve process capability. The organisation may use either a six sigma or three sigma process.

This unit primarily requires the application of skills associated with communication in gathering and analysing data and consulting with relevant personnel. Teamwork, problem solving, initiative and enterprise, and planning and organising are required to determine causes to variations and implement solutions. This is done in an environment using computer technology and also requires aspects of self-management and learning to ensure feedback and new learning is integrated into process improvements and operations management control systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Obtain data for process capability study**	1.1	Identify the process requiring capability analysis, including relevant procedures.
		1.2	Identify customer specifications for product or service.
		1.3	Obtain process capability data.
2	**Analyse data**	2.1	Identify assignable causes of variation in liaison with relevant personnel.
		2.2	Develop solutions to eliminate variation due to assignable causes in liaison with relevant personnel.
		2.3	Analyse random variations for possible causes in liaison with relevant personnel.
		2.4	Confirm causes of random variation.
		2.5	Develop solutions to reduce random variations in liaison with relevant personnel.
3	**Take action to improve process capability**	3.1	Develop plans to implement solutions.
		3.2	Liaise with relevant personnel to implement solutions.
		3.3	Gain necessary approvals, as required.
		3.4	Monitor implementation and make adjustments, as required.
		3.5	Determine new/revised process capability.
		3.6	Implement revised process capability regime.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more ofL	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Process capability data includes one or more of:	• customer requirements for product or service • process stability (control chart) performance • other charts and data.
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes

Assessment Requirements for MSS405050 Determine and improve process capability

Modification History

Release 1. Supersedes and is equivalent to MSS405050A Determine and improve process capability

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to determine and improve the capability of one (1) or more processes and to:

- obtain relevant data
- analyse the data to determine random and non-random variation
- develop solutions to reduce variation
- develop and monitor the implementation of plans aimed at reducing variation
- make further improvements as appropriate and determine capability of improved process.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to determine and improve capability, including knowledge of:

- statistical methods of processing and describing data
- data collection methods
- data processing techniques required to establish variability and normal distribution
- calculate three sigma or six sigma process capability, as relevant
- random and non-random results and processes for recognition of assignable causes
- causes of different types of non-random results
- causes of random variation
- process understanding sufficient to translate the data into variations in the process and determine methods of controlling them.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real capability analysis and improvement project for an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405053 Manage application of six sigma for process control and improvement

Modification History

Release 1. Supersedes and is equivalent to MSS405053A Manage application of six sigma for process control and improvement

Application

This unit of competency covers the skills and knowledge required to manage six sigma (or similar statistics based approach) in the workplace for the purposes of process control and process improvement.

This unit covers the skills and knowledge needed by a technical expert in managing the application of six sigma in an organisation in order to minimise defects and make improvements to processes and/or products. Depending on the need the expert will apply six sigma processes themselves or work with, and advise, other employees in applying six sigma processes.

This unit requires the application of skills associated with problem solving, initiative, enterprise, planning and organising in order to apply six sigma in the workplace. This unit requires skill in gathering, analysing and applying information and data.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Review process data**	1.1	Confirm area of responsibility/study with executive leaders and other stakeholders.
		1.2	Review statistical process control (SPC), process capability and other relevant data for area of responsibility/study.
		1.3	Identify shifts in process performance and processes requiring improvement.
		1.4	Quantify the shifts in performance which have occurred or which are desired.
		1.5	Determine cost of shift in performance and cost of intervention.
		1.6	Identify improvement priorities and degree of intervention.
2	**Apply define, measure, analyse, improve, and control and standardise (DMAIC) process to priority areas**	2.1	Define improvement project.
		2.2	Determine if a six sigma project team is to be established or project undertaken individually.
		2.3	Determine metrics and acquire initial data.
		2.4	Analyse data and determine possible causes of performance shifts/process improvements.
		2.5	Develop and trial improvement solutions.
		2.6	Control and standardise the improvement.
3	**Establish/review control strategies**	3.1	Determine sampling schedule.
		3.2	Analyse data to determine process capability.
		3.3	Develop process control strategy.
		3.4	Confirm strategy with all stakeholders.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.5	Identify skills required to implement and monitor process control strategy.
		3.6	Arrange training, where required, for employees in skills and techniques needed for process control strategy.
4	**Review and confirm improvement**	4.1	Calculate and document benefits.
		4.2	Ensure procedures and other relevant documentation is updated for improved procedure.
		4.3	Review process data after an appropriate period and confirm the improvement.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

DMAIC includes all of:

- define
- measure
- analyse
- improve
- control and standardise.

Definition of the project includes all of:

- completed, verified and validated as in process map
- suppliers, inputs, process, outputs, customers (SIPOC) diagram
- discrepancies to current 'as is' process map
- formation and briefing of project team
- defining business case for project
- problem statement
- goal statement
- project scope.

Metrics includes one or more of:

- key measures/attributes
- sampling schedule for project
- defect rate
- other metrics required by the business.

Analyse includes one or more of:

- statistical analysis of data
- root cause analysis (RCA)
- failure mode and effects analysis (FMEA)
- use of various other problem solving/analysis tools.

Improve includes one or more of:

- generating and testing of improvements
- selecting appropriate improvements.

Control and standardise includes

- documenting (in organisation approved format) outcomes and procedures for standardisation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

all of:	• transferring ownership of improved process.
Sampling schedule includes one or more of:	• sampling frequency • type of sample/sample method • sample location/type • type of test/data to be collected.
Process control strategy includes one or more of:	• degree of intervention/rules for resets • SPC tools to be used.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS405053A Manage application of six sigma for process control and improvement

Assessment Requirements for MSS405053 Manage application of six sigma for process control and improvement

Modification History

Release 1. Supersedes and is equivalent to MSS405053A Manage application of six sigma for process control and improvement

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to manage six sigma for process control and improvement in the workplace for one (1) or more processes to:

- review process data to identify improvement priorities and degree of intervention
- apply DMAIC to make and then standardise improvements
- collect and analyse data to confirm improvement
- determine and review improvements obtained.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to manage the application of six sigma (or similar), including knowledge of:

- identification and definition of six sigma (or similar) projects
- sampling, data collection, and analysis
- determining quantifiable benefits
- DMAIC methodology and application
- charting, including Pareto charts, fishbone diagrams, PICK charts, run charts and scatter diagrams
- statistical principles and analysis, including confidence limits, analysis of variance, frequency distribution tables, histograms, arithmetic mean, median, mode, standard deviation, range, interquartile range, correlation and dependence
- acceptance criteria/confidence levels
- failure mode and effects analysis (FMEA)
- process mapping
- suppliers, inputs, process, outputs, customers (SIPOC) mapping
- types of data (e.g. discrete/continuous/attributes) and their use in six sigma.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a third-party (e.g. supervisor, 360 degree) report focussing on consistent performance and problem recognition and solving. A third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include either a six sigma project(s) or evidence of day-to-day managing of the application of six sigma in own workplace.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405060 Develop the application of enterprise control systems in an organisation

Modification History

Release 1. Supersedes and is equivalent to MSS405060A Develop the application of enterprise control systems in an organisation

Application

This unit of competency covers the skills and knowledge required to continuously modify and improve or develop new enterprise-wide information technology (IT) based control systems, such as Supervisory Control and Data Acquisition (SCADA), Enterprise Resource Planning (ERP), Materials Resource Planning (MRPII) and similar. Typically the development of such a system will be in liaison with an appropriate technical expert who may be an internal expert or an external consultant.

This unit applies to an individual responsible for the development and implementation of new systems or modifications/changes to the current system. While the individual might generate the ideas for change themselves and also undertake a significant part of the final implementation, they may also be working closely with an appropriate technical expert (such as the software system supplier) who may actually make the modifications.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Teamwork, problem solving, initiative and enterprise, and planning and organising skills are required to determine and implement effective enterprise systems and modifications. This unit also requires computer skills and aspects of self-management and learning to ensure feedback and new learning is integrated into system planning.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Monitor information and control needs of organisation**	1.1	Check the use of current information.
		1.2	Check the operation of current control systems.
		1.3	Communicate regularly with key information users regarding any new or changed information control needs, including information needs from and to value stream.
		1.4	Identify short comings in information and control provision.
		1.5	Take action on information and control needs to meet organisational needs.
2	**Check the current system against organisation needs**	2.1	Check the routine use of the system.
		2.2	Check any system alarm or non-conformance notification and control operation.
		2.3	Communicate regularly with key stakeholders about current system use and application.
		2.4	Determine effect of non-conformance on enterprise system.
		2.5	Identify problems/issues.
		2.6	Take action on problems and issues.
3	**Determine developments needed in a new or significantly modified system**	3.1	Identify needs requiring a new system or development of modifications to the current system.
		3.2	Draft scope, specifications and outcomes required.
		3.3	Liaise with key stakeholders and relevant technical experts to refine scope, specifications and outcomes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			needed in new or modified system.
		3.4	Agree final scope, specifications and outcomes.
4	**Develop system**	4.1	Develop project plan.
		4.2	Ensure ongoing consultation with all relevant stakeholders.
		4.3	Manage development project.
		4.4	Manage trialling of modified system.
		4.5	Ensure modified system meets organisational requirements.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

SCADA refers to:

- a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information personnel for action

In the continuous operations sector, the SCADA system is sometimes integrated into other sophisticated computer control systems, such as distributed control system (DCS) and indeed these systems do merge in advanced systems. These organisations may simply refer to their SCADA as the DCS or other similar term (such as the proprietary name of the computer system).

Stages where value stream actions may occur include one or more of:

- sales outlet/representative
- information gathering, data analysis and research
- product design
- raw material sourcing
- intermediate processing
- final assembler/collation/preparation
- support services (e.g. accounting, finance and legal)
- storage and delivery to customer
- after market support.

Items in the value stream include one or more of:

- physical elements of the production system, such as sites, workstations, equipment and material, including stock, work in progress and finished products
- information needed to meet customer requirements, such as designs, drawings, work instructions, standard operating procedures (SOPs), standards, material lists and pricing
- information not directly related to current customer requirements but required by the organisation.

Assessment Requirements for MSS405060 Develop the application of enterprise control systems in an organisation

Modification History

Release 1. Supersedes and is equivalent to MSS405060A Develop the application of enterprise control systems in an organisation

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, across an organisation or department/section, to:

- analyse organisation needs and match to enterprise control system features
- determine critical features required in enterprise control system
- modify system/have system modified as a result of trials or changing needs.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to develop and implement new enterprise control systems, including knowledge of:

- capability of resource planning/SCADA systems, as appropriate
- information and control needs of organisation/process
- project management
- support/training/skill development mechanisms available for access by personnel.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project where the development and implementation of new enterprise control systems or modifications/ changes to the current enterprise control system occur in an operational workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405061 Determine and establish information collection requirements and processes

Modification History

Release 1. Supersedes and is equivalent to MSS405061A Determine and establish information collection requirements and processes

Application

This unit of competency covers the skills and knowledge required to determine what information is needed to support decision making in a competitive systems and practices environment and then to set about establishing required information collection systems. This would usually be done as part of a team and would require consultation with all key stakeholders.

This unit covers the determination of data needs and collection methods for an organisation or specific plant or process. This will typically be done in liaison with a wide range of people, each of whom will have their own specific information requirements. This will need to be balanced and interpreted into a workable set of data to be collected.

This unit is primarily focused on those decisions which are non-routine and so need specific collection of data, or for those decisions which are routine, the establishment of a routine data collection protocol to allow for the decisions to be made based on appropriate, reliable data.

This unit primarily requires the application of communication and problem solving skills associated with determining information requirements and processes of information collection. Initiative and enterprise, and planning and organising are also required to ensure information targets specific factors. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the development of processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Analyse decisions to be made**	1.1	Identify personnel to be included in the analysis process.
		1.2	Determine the consequences of the decisions in liaison with relevant personnel.
		1.3	Determine the variables which can be controlled.
		1.4	Determine the variables which cannot be controlled.
		1.5	Determine the consequences of a change in these variables in liaison with affected personnel.
2	**Define factors which cause variables to change**	2.1	Identify factors which are able to be controlled.
		2.2	Identify factors which are not able to be controlled.
		2.3	Identify means of measuring these factors, or indicators for the values of these factors.
		2.4	Compile a list of measurements/indicators required.
		2.5	Communicate with team members and involve them in development of factors and changes to ensure awareness and facilitate learning.
3	**Develop data collection protocols**	3.1	Determine methods of making measurements.
		3.2	Determine methods of quantifying indicators.
		3.3	Determine the benefit/cost of automated (or other) collection of data.
4	**Develop systems**	4.1	Identify user of information and their needs and abilities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

to produce required information	4.2	Determine data processing needs to produce required information.
	4.3	Determine information distribution channels.
	4.4	Determine skill development need for recipients of information.
	4.5	Implement systems to produce information.
	4.6	Monitor implementation and make adjustments, as required.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis

- problem solving
- run charts
- standard procedures
- current reality tree.

Variability includes one or more of:

- any change which occurs in the job
- different times taken to do the same thing
- different effort taken to do the same thing
- different results from applying the same effort (i.e. variation in quality)
- amount of rework required.

Assessment Requirements for MSS405061 Determine and establish information collection requirements and processes

Modification History

Release 1. Supersedes and is equivalent to MSS405061A Determine and establish information collection requirements and processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more specific plants or processes, to:

- determine relevant data, including variables for decisions
- determine factors and variables subject to control
- develop strategies for data collection that deliver the greatest overall benefit
- implement data collection systems.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to determine what information is needed to support decision making, including knowledge of:

- business needs of the organisation/section
- information needs of individuals within the organisation
- possible data available/potentially available to the organisation
- methods of collecting available data
- relationship between data available and information required
- methods of converting data into useful information
- methods of developing indicators for factors resistant to measurement.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.

MSS405070 Develop sustainable energy practices

Modification History

Release 1. Supersedes and is equivalent to MSS405070A Develop and manage sustainable energy practices

Application

This unit of competency covers the skills and knowledge required by an individual to identify opportunities for, and make improvements in, sustainable energy practices in an organisation. Areas covered include efficient use of raw materials, management of waste, electricity conservation, heat conservation and management, water management, environment protection and environment obligations of enterprises.

The unit involves analysis of energy used in processes and operations and categorising the energy use according to lean principles. The unit covers categorising energy into necessary use and muda (waste) with the muda being further categorised into necessary muda and unnecessary muda. Strategies for eliminating or minimising energy muda are covered with benefit/cost analyses being required for strategies.

This unit primarily requires the application of communication and problem solving skills associated with collecting and analysing information. An ability to analyse energy use of technology or processes will be applied. Initiative and enterprise, and planning and organising are also required to develop plans for efficient energy use. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the development of processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Analyse energy use**	1.1	Identify all energy consuming processes.
		1.2	Determine quantity and nature of energy consumed.
		1.3	Analyse energy consumed and generated in different parts of the process.
		1.4	Determine source of energy consumed in process.
2	**Develop energy conservation plans**	2.1	Determine the efficiency of use of energy by all energy consuming processes.
		2.2	Determine causes of low efficiency of use.
		2.3	Develop plans for increasing the efficiency of energy use.
		2.4	Determine benefit/cost of plans.
3	**Develop energy trading plans**	3.1	Compare energy generating activities with energy consuming activities.
		3.2	Determine feasibility of energy consuming activities using energy generated by other activities.
		3.3	Develop plans for energy trading.
		3.4	Determine benefit/cost of plans.
4	**Investigate alternative sources of energy**	4.1	Develop a specification for energy required.
		4.2	Identify a range of sources for that energy.
		4.3	Determine benefit/cost for alternative energy sources.
5	**Develop plans for**	5.1	Compare benefit/costs for different alternatives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	more efficient energy use		developed.
		5.2	Rank proposals based on benefit/cost compare to limited resources.
		5.3	Check proposals meet regulatory requirements.
		5.4	Recommend proposals for improving energy efficiency.
6	**Implement selected plans**	6.1	Liaise with relevant people to implement energy efficiency plans.
		6.2	Follow through to ensure implementation occurs.
		6.3	Monitor implementation and make adjustments, as required.
		6.4	Check new energy usage to ensure improvements have occurred.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis

- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Muda includes all of:

- excess production and early production
- delays
- movement and transport
- poor process design
- inventory
- inefficient performance of a process
- making defective items
- activities which do not yield any benefit to the organisation or any benefit to the organisations customers.

Necessary muda includes all of:

- an activity or cost which does contribute directly to customer benefit/feature in the product
- an activity or cost which cannot be avoided (e.g. regulatory compliance and fixed costs).

Unnecessary muda includes all of:

- an activity or cost which does not contribute directly to customer benefit/features in the product
- an activity or cost which can be avoided.

Sources and use of energy includes one or more of:

- all sources of energy used by the process be it electricity, gas/oil/coal or mobile transport fuel
- used for heating and cooling
- used for moving materials (e.g. pumps and conveyors)
- used for modifying materials (e.g. cutting, forming, weaving, knitting, reacting, moulding, extruding and mixing)
- used for generating pressure/vacuum or providing motive power for equipment and transport.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Energy trading includes one or more of:	• formal trading, such as buying of energy through alternative suppliers and tender processes and selling of excess energy produced by the organisation to energy companies or other producers • internal trading of excess energy from one area to an energy consuming area elsewhere in the organisation.

Assessment Requirements for MSS405070 Develop sustainable energy practices

Modification History

Release 1. Supersedes and is equivalent to MSS405070A Develop and manage sustainable energy practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to develop sustainable energy practices for one (1) or more businesses and to:

- analyse current energy use
- develop conservation and trading plans
- investigate alternative sources of energy
- develop plans for more efficient energy use
- monitor plans implemented and check energy improvements have occurred.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to develop sustainable energy practices, including knowledge of:

- sources of data and required calculations
- types and sources of energy
- methods of analysing energy efficiency for different types of energy
- methods of converting energy values from one form to another
- alternative sources of energy
- principles of energy efficiency
- relevant regulatory/legislative requirements
- energy trading schemes and procedures
- organisation and process needs for energy.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
    - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project developing sustainable energy practices for an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405075 Facilitate the development of a new product

Modification History

Release 1. Supersedes and is equivalent to MSS405075A Facilitate the development of a new product

Application

This unit of competency covers the skills and knowledge required to facilitate the development of a new or evolutionary product within an existing range of products and encompasses design for manufacture, determining the process capability and the facilitation of its initial production.

This unit applies to an individual responsible for the development of a new product. The unit assumes an initial product design has been prepared by a designer and also assumes a working knowledge of all main processes and materials so that an informed choice can be made between them. The person will normally be a manager or technical expert and be required to work closely with a range of other management and operations personnel.

The unit requires balancing the business and technical sides of the new product and would typically be done as part of a cross-functional team. This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Teamwork, problem solving, initiative and enterprise, and planning and organising are required to facilitate the development of a new product. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into competitive systems and practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSS404052	Apply statistics to operational processes

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Confirm design brief of new product in consultation with relevant people**	1.1	Review product design with customer and other key stakeholders and agree on technical specification, aesthetic requirements, timelines, cost and other market requirements.
		1.2	Determine any regulatory, industry code/intellectual property (IP) requirements for product.
		1.3	Identify any required tooling, process or equipment needs.
		1.4	Confirm design brief, including relevant drawings, to meet needs.
		1.5	Determine design brief conforms to organisation objectives and capability.
		1.6	Obtain approval on total design brief from all relevant personnel.
2	**Determine material requirements for product**	2.1	Select appropriate materials or combination of materials/ components in liaison with key stakeholders.
		2.2	Determine material/component testing and evaluation regime required to meet product end use requirements, including regulatory/industry code requirements.
		2.3	Arrange for testing and evaluation of trial materials/ components.
		2.4	Guide material trial process and interpret material trial results.
		2.5	Determine final materials/components specifications and details of value chain.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	**Determine process requirements for product**	3.1	Select appropriate process to make product in liaison with key stakeholders and based on relevant factors.
		3.2	Determine any special process/equipment requirements for this product.
		3.3	Communicate with production personnel to determine any concerns and/or training or other needs.
		3.4	Adjust the design, as required, to satisfy customer and production needs.
4	**Ensure process needs for new product have been met**	4.1	Liaise with equipment design/procurement personnel.
		4.2	Interpret hardware specifications and ensure they are appropriate for the job required.
		4.3	Liaise with process personnel to ensure appropriate draft procedures for new product have been developed.
		4.4	Validate product cost and design meets organisation requirements and capability.
5	**Trial new product through the process**	5.1	Design trialling procedure to deliver required information.
		5.2	Liaise with relevant stakeholders.
		5.3	Ensure health, safety and environment (HSE) requirements are observed.
		5.4	Coordinate the trialling of the new product.
		5.5	Interpret product trial results and guide product trial process.
		5.6	Tune process to optimise production of new product.
6	**Determine process capability**	6.1	Plot appropriate statistical process control charts.
		6.2	Determine confidence limits.
		6.3	Compare confidence limits with product specification.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

7	**Coordinate product trials**	7.1	Determine product testing and evaluation regime required to meet end use requirements, including regulatory/industry code requirements.
		7.2	Arrange for testing and evaluation of trial product/prototype.
		7.3	Interpret product trial results and guide product trial process.
		7.4	Determine final product specification in liaison with key stakeholders.
		7.5	Make required changes to materials, process and equipment.
8	**Implement standard procedures for new product**	8.1	Monitor initial production and, in liaison with appropriate team members, adjust process, conditions and materials to ensure the product and process outcomes conform to customer, regulatory and organisation requirements.
		8.2	Ensure process specifications are updated and reflect the optimised operation developed.
		8.3	Ensure standard operating procedures (SOPs) are correct for the new product.
		8.4	Ensure equipment and other hardware records are updated to reflect additions/changes.
		8.5	Ensure project records are complete and all required reports have been completed and submitted.
		8.6	Archive records according to company procedure.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Organisation objectives and requirements include one or more of:	• cost/profit requirements for new products (e.g. minimum return and capital expenditure limits) • encouragement/discouragement of different types of products (e.g. on sustainability, ethical or other non-individual customer-related criteria) • potential or actual capacity conflicts with other customers or product/process activities • activities that require/may require community consultation (e.g. on noise or other environmental grounds).
Typical regulatory requirements include one or more	• work health and safety (WHS) • environmental regulations • structural codes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

of:	• product/industry-specific requirements.
Typical problems include one or more of:	• defining product end-use requirements in terms meaningful to the product design and manufacture • matching suitable materials and processes to the product needs and company expertise and facilities • matching (and improving) process capability to product tolerances.
Relevant factors include one or more of	• type of material • dimensional precision of product • length of run/number of products • required aesthetics • size and complexity of product • available capital funding • process equipment available • HSE factors.

Assessment Requirements for MSS405075 Facilitate the development of a new product

Modification History

Release 1. Supersedes and is equivalent to MSS405075A Facilitate the development of a new product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to facilitate the development of one (1) or more new/modified products and to:

- confirm the design brief
- determine material and process requirements
- ensure process needs have been met
- trial the new product and determine process capability
- conduct product trials
- standardise the new product.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to facilitate the development of a new product, including knowledge of:

- appropriate types of materials/components and criteria for choosing between them
- alternative processes/plant/equipment for making the new product and criteria for choosing between them
- determination of process capability
- appropriate sampling and testing for materials/components and products
- determination of processing time, product cost, benefit cost of the new product
- interpretation of trial/field test results.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real new/modified product development project in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405081 Develop a proactive maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS405081A Develop a proactive maintenance strategy

Application

This unit of competency covers the skills and knowledge required to develop and implement a proactive maintenance strategy for an organisation. The unit recognises that there are a number of predictive or proactive maintenance strategies, such as total productive maintenance (TPM) and reliability centred maintenance (RCM).

This unit applies to an individual responsible for developing a proactive maintenance strategy for an organisation. Typically the organisation will also be implementing other competitive systems and practices. The unit applies to the selection of appropriate strategies, initial development and implementation as well as application of the strategies to new areas and the improvement of operation in existing areas. This would typically be done in a team environment and in consultation with all key stakeholders.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Teamwork, problem solving, initiative and enterprise, and planning and organising are required to develop and implement a predictive maintenance strategy. Strategies will incorporate the maintenance requirements of relevant technologies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into maintenance strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine appropriate analytical techniques**	1.1	Liaise with key stakeholders to determine objectives of maintenance strategy.
		1.2	Examine current maintenance situation to determine major areas requiring improvement.
		1.3	Compare possible strategies, techniques and tools against organisation needs.
		1.4	Select possible strategies, techniques and tools.
		1.5	Confirm selected strategies, techniques and tools with key stakeholders.
2	**Develop reliability strategies**	2.1	Select preferred maintenance strategy.
		2.2	Examine and adapt strategy to organisation needs and priorities.
		2.3	Examine and adapt techniques and tools required to implement strategy.
		2.4	Liaise with key stakeholders to develop an implementation plan.
		2.5	Identify key information and performance indicators required.
3	**Implement strategy**	3.1	Identify data collection required.
		3.2	Identify hardware and other resources required.
		3.3	Identify skill needs required in consultation with key stakeholders.
		3.4	Ensure all resources/training are available.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.5	Implement strategy.
4	**Monitor implementation of strategy**	4.1	Compare information/performance indicators with desired levels.
		4.2	Liaise with key stakeholders regarding strategy issues.
		4.3	Identify areas requiring adjustment.
		4.4	Make required adjustments.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- problem solving
- run charts
- standard procedures
- current reality tree.

OEE includes:

The combination of the main factors causing loss of productive capacity from equipment/plant and is:

- OEE = availability x performance x quality rate

where:

- availability takes into account losses due to breakdown, set-up and adjustments
- performance takes into account losses due to minor stoppages, reduced speed and idling
- quality rate takes into account losses due to rejects, reworks and start-up waste.

Mean time between failure (MTBF) includes:

One key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is failing.

There are many possible causes of any problem. Eliminating some will have no impact, others will ameliorate the problem. However, elimination of the root cause will eliminate the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem.

Depending on the equipment, operations and procedures of the organisation, alternative statistical records of maintenance and maintenance-related events may be substituted for MTBF providing they relate strategies for improving OEE.

Failure mode effects analysis (FMEA) includes:

A systematic approach that identifies potential failure modes in a system, product, or operations/assembly operation caused by either design or operations/assembly process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Some industry sectors have highly adapted forms of FMEA and may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification.

HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability.

Condition monitoring includes: The process of analysing the implications of condition monitoring data for proactive maintenance whether it be obtained from non-destructive testing (NDT) reports, visual assessment by experts, diagnostic reports obtained from SCADA or other enterprise or equipment software and product or process quality analyses. It does not require the actual undertaking of the NDT or condition monitoring assessment or test. If this is required appropriate units from other Training Packages will be required.

Assessment Requirements for MSS405081 Develop a proactive maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS405081A Develop a proactive maintenance strategy

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more work areas or product families, to:

- consider a variety of proactive maintenance strategies for suitability to an organisation
- consult operators, maintenance, management and other stakeholders in decisions on proactive maintenance strategies
- implement selected strategies
- monitor performance to selected indicators and make improvements to selected proactive maintenance strategies.

Knowledge Evidence

Must provide evidence that demonstrates sufficient knowledge to interact with relevant personnel and be able to develop and implement a proactive maintenance strategy, including knowledge of:

- characteristics and strengths of different types of strategies, techniques and tools
- holistic costs of different strategies combining cost of maintenance with costs of lost production, sales, and so on, as relevant to the organisation
- business goals sufficient to match the strategy to the business needs
- strategic thinking and its application to proactive maintenance
- principles of process equipment and how to improve its reliability
- resources required and how to obtain them.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project where development of a proactive maintenance strategy occurs in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS405082 Adapt a proactive maintenance strategy to the process operations sector

Modification History

Not applicable.

Application

This unit of competency covers the skills and knowledge required to develop and apply a proactive maintenance strategy for continuous manufacturing processes which may also be major hazard facilities or similar.

This unit applies to an individual in a continuous manufacturing sector, such as chemical, hydrocarbons and refining, smelting and cement, which is seeking to improve the efficiency and reliability of equipment. Typically such an organisation will also be engaged in implementing competitive systems and practices. As continuous manufacturers, such as the chemical, hydrocarbons and refining sectors, are often also major hazard facilities this will influence the proactive maintenance choices which need to be made.

The unit covers the selection of appropriate strategies, techniques and tools and the adapting of them to the organisation's needs. It also covers the application of the strategies to new areas and the improvement of operation in existing areas. This would typically be done in a team environment and in consultation with all key stakeholders.

This unit requires the application of skills associated with problem solving, initiative, enterprise, planning and organising in order to adapt a proactive maintenance strategy to meet specific needs of the enterprise. This work is done in the context of using computer technology and also requires aspects of self-management and learning to ensure improvement of own performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Interpret proactive maintenance strategy**	1.1	Analyse proactive maintenance strategy.
		1.2	Identify areas which may conflict with hazard or operations requirements.
		1.3	Analyse data arising from incident reports (and similar) for maintenance implications.
		1.4	Compile hazard control implications for proactive maintenance strategy.
2	**Interpret hazard information**	2.1	Analyse hazard and operability studies (HAZOP) (or similar) data for maintenance implications.
		2.2	Analyse safety case (or similar) data for maintenance implications.
		2.3	Compile hazard control implications for proactive maintenance strategy.
3	**Identify shutdown/ turnaround cycle requirements**	3.1	Determine when the next shutdown is due and the expected time between shutdowns.
		3.2	Identify plant items/maintenance activities which can only be completed during a shutdown.
		3.3	Identify critical conditions which must not be breached in order to maintain plant reliability until shutdown.
		3.4	Compile shutdown cycle requirements for proactive maintenance strategy.
4	**Identify maintenance**	4.1	Identify proactive maintenance requirements of ancillary equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	requirements of ancillary equipment	4.2	Identify maintenance which can only be done when the plant is shut down.
		4.3	Compile ancillary equipment requirements for proactive maintenance strategy.
5	**Adapt proactive maintenance strategy**	5.1	Compare identified requirements to the proactive maintenance strategy.
		5.2	Negotiate a proactive maintenance strategy which meets these requirements.
		5.3	Involve team members in relating identified problems and opportunities for improvement to the maintenance strategy, and involve them in developing any required changes to ensure awareness, learning and commitment.
		5.4	Monitor the implementation of the strategy to ensure the identified requirements are met.
		5.5	Make required adjustments and arrange for strategy review.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three

MSTCL2001 Use a sewing machine

Modification History

Release 1. Supersedes and is equivalent to LMTCL2001B Use a sewing machine

Application

This unit of competency covers the skills and knowledge required to use a sewing machine to align and sew work pieces.

The unit of competency applies to sewing techniques where the positioning of the work is controlled by guide bars, sensor lights or other such guiding devices, or where there is uncomplicated feeding of the fabric.

Work is conducted according to defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare to use sewing machine**	2.1	Receive work pieces, check specification sheets and plan follow-up action
		2.2	Check that the bundle matches ticket information and that previous operations, such as pressing and cutting, have been successfully completed
		2.3	Lay out work pieces in sequence
		2.4	Set up workbench and seating according to workplace procedures
		2.5	Clean, check, set up and adjust machines according to specifications for work
		2.6	Identify poor machine performance and adjust as required
3	**Sew work pieces**	3.1	Sew pieces according to product requirements and quality standards
		3.2	Use machine according to requirements for speed of work
		3.3	Control machine speed and work handling according to type of operations, fabrics and product type
4	**Assess quality of sewn pieces**	4.1	Inspect sewn pieces against quality standards
		4.2	Identify any faults or pieces that do not meet quality standards and report
		4.3	Record results of quality inspection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.4	Complete production records or packing slips as required
4.5	Direct work to next operation or packing section

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:	• requirements prescribed by legislation, awards, agreements and conditions of employment • SOPs • work instructions • PPE • oral, written and visual communication • quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output • housekeeping • tasks related to environmental protection, waste disposal, pollution control and recycling • WHS practices
Australian Standards include:	• the relevant industry or Australian Standards that are current at the time this unit is being undertaken
Machines include:	Automatic machines used to perform basic machining tasks where feeding and positioning of fabric is guided by the machine, including one or more of the following: • plain lockstitch machine

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• three thread overlocker • zigzag sewing machine
Fabrics include one or more of the following	• stable woven and knitted fabrics, such as cotton drill, calico, double knit, rugby knit and poplin
Set-up includes the following:	• ensuring correct thread, needle size and type, needle guard, tension setting and attachments
Identify poor machine performance includes the following:	• identifying worn or damaged parts, and reporting or replacing according to manufacturer specifications • identifying tension faults • identifying poor thread performance or incorrect thread selection • identifying incorrect foot or needle for sewing • identifying impact of poor machine performance on sewing • checking and replacing worn or damaged needles and attachments (feet)
Sewing operations include the following:	• aligning and sewing straight seams • joining flat pieces of stable fabric together • top stitch, edge stitch, open seams, closed seams and lapped seams

Unit Mapping Information

Assessment Requirements for MSTCL2001 Use a sewing machine

Modification History

Release 1. Supersedes and is equivalent to LMTCL2001B Use a sewing machine

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs) and safe work practices
- checking work against ticket information or specification sheets
- preparing workstation tools and equipment
- performing basic machining tasks where feeding and positioning of fabric is guided by the machine, using at least two (2) different fabrics, to sew at least one (1) sample of each of the following operations:
  - aligning and sewing straight seams
  - joining flat pieces of stable fabric together
  - top stitch, edge stitch, open seams, closed seams and lapped seams
- sewing and doing routine maintenance on at least one (1) of the following machines:
  - plain lockstitch machine
  - three thread overlocker
  - zigzag machine
- inspecting completed work to check quality and production output requirements, and identifying and correcting faults
- recording results of quality inspection and completing production records or packing slips as required.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- garment assembly processes and machines where the positioning of the work may be controlled by guide bars, sensor lights or other such guiding devices, or where there is uncomplicated feeding of the fabric
- techniques in using and maintaining one or more automatic machines:
  - plain lockstitch machine
  - three thread overlocker
  - zigzag machine
- characteristics of stable woven and knitted fabrics and threads, such as cotton drill, calico, double knit, rugby knit and poplin

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- quality standards and practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
  - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
  - have vocational competency in using a sewing machine, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTCL2006 Press work

Modification History

Release 1. Supersedes and is equivalent to LMTCL2006B Press work

Application

This unit of competency covers the skills and knowledge required to press work as part of the garment production process.

The unit of competency applies to pressing work where the position and handling of work are under the control of the operator and operator skills may contribute to the final appearance and finish of the work. The operator uses skills in positioning and shaping of the garment which makes a significant contribution to the final appearance of the garment.

Work to be pressed may include stable woven and knitted natural and synthetic fabrics.

Work is conducted according to defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare to press work**	2.1	Set up work area according to workplace procedures
		2.2	Clean and check pressing equipment
		2.3	Perform routine minor maintenance
		2.4	Collect or receive work, check quality and determine any follow-up action
3	**Press work**	3.1	Lay out work in correct proximity and sequence
		3.2	Identify faults, spots and marks and take appropriate action
		3.3	Select and use appropriate attachments
		3.4	Sequence pressing
		3.5	Position work on pressing equipment according to product requirement
		3.6	Apply heat, steam, vacuum, pressure and time according to product requirements and fabric specifications
		3.7	Control equipment and work handling for variations in work type and construction and pressing requirements
		3.8	Position and shape the garment to contribute to the final appearance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Despatch pressed work**	4.1	Inspect pressed work and compare against workplace pressing standards
		4.2	Record results of inspection and report and record subsequent action to either reject or correct faulty work
		4.3	Determine and record preventative action to avoid any recurrence of faulty work
		4.4	Pass pressed work to next operation, or hang or pack it and direct to required despatch area, despatch storage or packing sections

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- personal protective equipment (PPE)
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Australian Standards include:	• the relevant industry or Australian Standards that are current at the time this unit is being undertaken
Fabrics include one or more of the following:	• woven cottons • denim • single knits • tricot • gabardine • cotton drill • calico • double knit • rugby knit • poplin
Pressing equipment includes one or more of the following:	• irons • presses • industrial steam irons • suction boards • sleeve board • sleeve roll
Routine minor maintenance includes one or more of the following:	• washing out or replacing cover and padding • shaking out rubber mat • brushing and air blowing wire mesh • applying sole-cleaning compounds to hand irons
Report and record includes one or more of the following:	• written records • shown by the attachment of a ticket • oral or written reports

Modification History

Release 1. Supersedes and is equivalent to LMTCL2006B Press work

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- checking work against work specification or pressing instructions
- preparing pressing equipment and work before commencing pressing operations
- applying pressing techniques for positioning and shaping of the garment, for a range of different fabric types and at least two (2) work pieces according to workplace procedures and quality requirements
- controlling equipment and handling work for variations in work type and construction and pressing requirement, including positioning and shaping the garment to contribute to the final appearance
- inspecting pressed work and comparing against workplace pressing standards
- recording results of inspection, reporting and recording subsequent action to either reject or correct faulty work
- determining and recording preventative action to avoid any recurrence of faulty work
- finalising pressing operation for storage, packing or despatch operations, according to workplace requirements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- pressing requirements and characteristics of typical fabrics and other materials used in garment assembly
- sewing techniques, such as pleats, tucks, gathers, darts and hems, and how pressing impacts on the finish
- quality standards and practices
- workplace practices
- recording and reporting practices.

MSTCL2007 Lay up, mark and cut uncomplicated fabrics and lays

Modification History

Release 1. Supersedes and is equivalent to LMTCL2007B Lay up, mark and cut uncomplicated fabrics and lays

Application

This unit of competency covers the skills and knowledge required to lay up, mark and cut uncomplicated fabrics and lays.

The unit of competency applies to situations where single garments or only a couple of layers of fabric are to be cut. The marker may be developed directly on the fabric lay or planned separately and applied.

Manual or computer-aided techniques may be used.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare to cut fabrics and lays**	2.1	Set up working area
		2.2	Interpret lay-up instructions for uncomplicated articles
		2.3	Collect and check fabric
		2.4	Interpret cutting order for marking requirements, such as fabric type, width, quantity and garment sizes
3	**Draft and position lay marker**	3.1	Collect required pattern pieces and check manually or by computer
		3.2	Manipulate pattern pieces and position manually on paper or by computer for most efficient fabric use
		3.3	Draw up lay marker manually or by computer
		3.4	Prepare lay-up instructions according to requirements
		3.5	Check marker against requirements and copy marker either manually or digitally by computer, camera or smartphone
		3.6	Place marker on lay, check marker and lay alignment, and take appropriate action according to job specifications
4	**Cut lay and complete work**	4.1	Cut lay using cutting equipment according to operation requirements
		4.2	Monitor work quality and check for faults

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.3 Direct cut work to next operation, clean work area and prepare for next job

4.4 Store master copy of lay marker in filing drawer or computer as appropriate

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

Uncomplicated articles include one or more of the following:

- t-shirts
- straight or A-line skirts
- shift dresses
- tracksuits

- section crowns
- brims
- tips
- side bands
- berets

Cutting equipment includes one or more of the following:

- dressmaker's shears
- cutting mats
- straight-blade cutter

Lay-up and marking equipment includes one or more of the following:

- computers and required software
- digital camera
- smartphone
- patterns
- fabric
- marker card or paper
- weights
- clamps

Fabrics include one or more of the following:

- woven fabrics, such as:
  - poplin
  - drill
  - flannelette
- knitted fabrics, such as:
  - rugby knit
  - double knit
- designs such as:
  - stripes
  - one-way designs
  - plaids

Assessment Requirements for MSTCL2007 Lay up, mark and cut uncomplicated fabrics and lays

Modification History

Release 1. Supersedes and is equivalent to LMTCL2007B Lay up, mark and cut uncomplicated fabrics and lays

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- checking work against work specification or cutting order
- setting up manual or computer drafting equipment before commencement of marker-making operations
- making markers involving patterns, uncomplicated fabrics and lays, using manual or computer techniques on at least two (2) occasions
- preparing cutting table and work before commencing cutting operations
- using lay-up techniques
- using cutting techniques
- monitoring work quality and checking for faults
- directing cut work to next operation, cleaning work area and preparing for next job
- storing master copy of lay marker in filing drawer or computer as appropriate.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- set up of work area:
  - setting up workstation, cutting table and seating according to workplace procedures and specifications for work
  - cleaning cutting equipment, checking and assessing servicing according to manufacturer instructions
  - preparing cutting table to suit correct lay length
  - setting up lay-up and marking equipment and preparing for use
- characteristics of fabrics and other materials used in garment assembly, such as woven fabrics (poplin, drill, flannelette) and knitted fabrics (rugby knit, double knit)
- assessing fabric:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - checking fabric width and quality with lay-up instructions
  - laying-up fabric and adjusting fabric tension to match fabric performance
  - checking fabric for faults
  - taking required action to cut out faults or other appropriate techniques
- pattern identification
- computer operations involved in marker-making, copying and storage
- quality standards and practices:
  - inspecting cut work
  - identifying any faults
  - taking appropriate action to ensure cut pieces meet required quality standards
  - taking preventative action to avoid any recurrence of defective pieces
  - recording preventative action
  - regularly checking performance of cutting equipment for signs of faulty operation, including evidence from inspection of cut pieces, and taking any required action
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
  - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
  - have vocational competency in laying up, marking and cutting uncomplicated fabrics and lays, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTCL2008 Finish garment production

Modification History

Release 1. Supersedes and is equivalent to LMTCL2008B Finish garment production

Application

This unit of competency covers the skills and knowledge required to finish completed work in the production of garments or other associated articles.

The unit of competency applies to hand or machine tasks. Work performed may require some decision making within defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSTGN2011 Identify fibres, fabrics and textiles used in the TCF industry

MSTGN2008 Coordinate work of team or section

Modification History

Release 1. Supersedes and is equivalent to LMTGN2008B Coordinate work of team or section

Application

This unit of competency covers the skills and knowledge required to coordinate work of a team or section.

The unit of competency applies to coordinating and monitoring the work of a team or section.

Work requires discretion, initiative and judgement. Work may be conducted in a variety of environments, such as operational workplace activities, restricted space, and hazardous, controlled or exposed conditions.

This unit of competency is applicable to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Plan and coordinate work schedules**	2.1	Confirm tasks, jobs and work priorities with supervisor or manager
		2.2	Use appropriate procedure to assign materials and tasks to team, section and individuals
		2.3	Establish and communicate priority of tasks to team, section or individuals
		2.4	Organise materials to meet work requirements
3	**Monitor performance and quality**	3.1	Communicate orally or in writing with team, section or individuals to establish required work standard and ensure understanding of task requirements
		3.2	Monitor and report standard of performance, including quality standards of team, section or individuals, to ensure achievement of outcomes
		3.3	Provide instruction and support as required to achieve standards and outcomes
		3.4	Communicate proposals for improvements to work processes, efficiency and organisation to appropriate personnel
		3.5	Identify proposals to prevent or correct problems and report to appropriate personnel, according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Communicate with work team, section and individuals**	4.1	Monitor implementation of WHS and environmental standards and procedures and provide feedback to work team, section and individuals
		4.2	Use effective communication to explain work related information
		4.3	Seek feedback from team, section members and individuals to help team work effectively

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Appropriate personnel include, but are not limited to, one or more of the following:

- line supervisor or manager
- team or section leaders
- supervisors or managers in other sections

Assessment Requirements for MSTGN2008 Coordinate work of team or section

Modification History

Release 1. Supersedes and is equivalent to LMTGN2008B Coordinate work of team or section

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- prioritising and organising resources (machines, staff, materials and production processes) and allocating work
- using appropriate procedures to assign materials and tasks to team, section and individuals
- providing instruction and advice
- maintaining and monitoring procedures
- identifying and reporting problems with work flow
- analysing and recording results according to workplace procedures
- using effective oral and written communication to explain work related information and seek feedback from team, section members and individuals to help team work effectively
- monitoring and reporting on performance and quality standards, and providing instruction and support as required to achieve standards and outcomes.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- production and work flow system in the team
- factors and constraints that impact on effective work flow
- effective work methods to achieve production objectives and timelines
- procedures to allocate tasks:
  - expression of interest
  - worker preference or choice
  - ballot
  - line supervisor directive
  - team consensus
- problem prevention and resolution
- methods for monitoring and coordinating the use of resources

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- quality assurance standards and practices
- effective communication:
  - effective verbal and non-verbal communication
  - oral, written and visual communication
  - active listening
  - positive language
  - recognising and adapting to cultural differences
  - negotiation and conflict resolution skills
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
  - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
  - have vocational competency in coordinating work of a team or section, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

MSTGN2011 Identify fibres, fabrics and textiles used in the TCF industry

Modification History

Release 1. Supersedes:

- LMTCL2003B Identify fibres and fabrics
- LMTTX2001B Identify fibres, yarns and textile materials and their uses in textile production

Not equivalent

Application

This unit of competency covers the skills and knowledge required to identify fibres, yarns, fabrics and textile materials and how they are used in the construction of garments and accessories and in textile production processes.

The unit of competency applies to a range of natural and synthetic materials which may be used for knitted, woven, spun, tufted or non-woven products. While the unit relates to a comprehensive coverage of textile, clothing and footwear (TCF) materials, evidence may be contextualised to a sector or workplace.

The unit of competency applies to work conducted in all clothing design, production and merchandising, and textile production and finishing processes using fibres, yarns and textile materials.

This unit of competency is applicable to all sectors of the TCF industry.

Work may be conducted in small to large scale enterprises and may involve individual and team related activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Distinguish types of TCF materials**	2.1	Recognise types of fibres and yarns, fabrics and textile materials used in the manufacture of clothing and textile products
		2.2	Identify methods of distinguishing and identifying fibres, yarns or textile materials
		2.3	Identify common and emerging fabrics used in the garment industry
		2.4	Identify processes used on raw fibres, basic processed yarns or finished yarns to create textiles
		2.5	Identify generic and trade names for common fabrics and textile materials
3	**Identify characteristics of**	3.1	Identify fibres used in construction of a variety of fabrics
		3.2	Identify construction processes of a range of fabrics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	fabrics	3.3	Examine a range of fabric types and identify physical and visual qualities
		3.4	Identify generic and trade names for common fabrics and textile materials
4	**Distinguish methods of constructing fabric and textile material**	4.1	Identify the purposes of processing stages
		4.2	Distinguish basic processes of spinning fibres into yarns or processing yarns into knitted, woven or non-woven textile material
		4.3	Identify textile product construction processes
		4.4	Identify uses of different types of fibres and yarns and their effects on finished products
5	**Identify uses of fabrics and textiles**	5.1	Identify common uses of a variety of fabrics and labelling requirements
		5.2	Identify a range of textile products and their end uses and labelling requirements
		5.3	Identify methods of measuring fabric and textile material quality in an identified workplace
		5.4	Identify the impact of quality on production processes

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Workplace procedures include one or more of the following:	• requirements prescribed by legislation, awards, agreements and conditions of employment • SOPs • work instructions • oral, written and visual communication • quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output • housekeeping • tasks related to environmental protection, waste disposal, pollution control and recycling • WHS practices
Australian Standards include:	• Australian/New Zealand Standard *AS/NZS 1957:1998 Textiles - Care labelling* applies to this unit at the time of publication. • the relevant industry or Australian Standards that are current at the time this unit is being undertaken
Fibres and yarns include, but are not limited to:	• natural fibres, such as cotton, wool, silk and linen • synthetic fibres, such as polyamide, polyester, acrylic, lycra, rayon and acetate
Fabrics and textiles include, but are not limited to:	• natural and synthetic single yarn fabrics and blends • knitted fabrics, including weft knits and warp knits • woven fabrics, including plain, twill, satin, dobby, jacquard and pile • non-woven fabrics, such as felts, nets, braids, bonded and composite • emerging smart fabrics
Construction processes include, but are not limited to	• spinning • knitting • weaving • blending • fusing • bonding • finishing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- identifying at least five (5) types of fibres, yarns, fabrics and textile materials and their labelling requirements according to relevant standards
- identifying at least five (5) textile fibres and yarns used construction processes
- identifying physical and visual properties of at least five (5) common fabrics or textiles, including emerging materials, relevant to sector or enterprise
- distinguishing methods of constructing fabric and textile material
- identifying suitable application and end uses of at least five (5) fibres, yarns, fabrics and textile materials
- comparing fibres, yarns and textile materials to specifications and quality requirements in an identified sector or enterprise.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- AS/NZS 1957:1998 Textiles - Care labelling
- fibre, yarn, fabric and textile identification, such as:
  - natural fibres, such as cotton, wool, silk and linen
  - synthetic fibres, such as polyamide, polyester, acrylic, lycra, rayon and acetate
- types of fabrics and textiles and their construction methods, such as:
  - natural and synthetic single yarn fabrics and blends
  - knitted fabrics, including weft knits and warp knits
  - woven fabrics, including plain, twill, satin, dobby, jacquard and pile

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - non-woven fabrics, such as felts, nets, braids, bonded and composite
    - emerging smart fabrics
- features and characteristics of fibres, yarns, fabrics and textile materials, such as:
    - bias
    - stretch
    - fraying
    - feel
    - handle
    - shrinkage
- fibres, yarns and textile construction processes, such as:
    - spun
    - ply
    - combo
    - blended
    - crimped
    - monofilament
    - multifilament
    - staple spun
    - technical textiles
- methods of identifying fibres, such as:
    - labelling
    - visual
    - handle
    - acetone
    - burn test
- fabric construction processes, such as:
    - spinning
    - knitting
    - weaving
    - blending
    - fusing
    - bonding
    - finishing
- textile processing
- visual features, such as:
    - colours
    - textures
    - patterns
    - right side/wrong side
- fabric and textile qualities, such as:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - firmness
    - softness
    - handle
    - weight
    - grain
    - gauge
    - drape
    - porosity
    - covering power
    - count
    - light penetration
- generic and trade names for common fabrics and textile materials
- fabric and textiles uses
- quality standards and practices
- workplace procedures.

Assessment Conditions

- Assessors must:
    - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
    - have vocational competency in identifying fibres, fabrics and textiles in the TCF industry, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The unit is applicable to all TCF sectors and assessment must ensure it is delivered to suit the industry it is being applied to.

PMAOMIR407 Audit incident preparedness and established response systems

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR407B Audit incident preparedness and established response systems

Application

This unit of competency covers the skills and knowledge required to assess the extent to which a facility is prepared to respond to an incident.

This unit of competency applies to personnel in incident coordinator/commander, manager or technical specialist or similar roles who are required to examine existing incident response systems and practices, identify key areas where systems overlap or system breakdowns occur, ensure that the established systems are working in accordance to the incident response plan and legislative requirements, conduct and assess incident exercises, and provide input towards system continuous enhancement.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other incident response team members and the incident manager, as appropriate.

An incident is an event which causes, or could have caused, injury or illness; damage to plant, material or the environment; disruption to production or public alarm.

An incident is an unintended event, or an unintended consequence of an intended event. This unit would typically be applied to significant incidents, such as:

- fire and explosion
- loss of containment.

In a typical scenario the person would undertake an analysis of existing incident preparedness and response systems as part of a continuous improvement process or spot check. Part of the audit may involve the conducting of an unscheduled incident response drill, analysing the results and providing a thorough debrief of the persons involved. The person then may make recommendations for changes to the system. They may have an ongoing role for managing incident information and/or the incident information system.

Competency Field

Incident readiness and response

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Clearly identify benchmarks for audit**	1.1	Access, interpret and clarify the legislative, statutory and site requirements relating to incident preparedness and response systems
		1.2	Access and review relevant documentation of the incident response plan and established incident management systems
		1.3	Conduct consultations with stakeholders and specialists as necessary
2	**Plan, organise and undertake audit of the established incident response systems**	2.1	Identify or develop methods to audit the established incident management systems and processes as prescribed by the incident response plan and/or legislation in consultation with relevant personnel
		2.2	Identify and secure the resources required to conduct the audit
		2.3	Gather and sight relevant documents and all other evidence required in accordance with procedures
		2.4	Conduct the audit according to the identified/developed methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	**Evaluate and report the results of the audit**	3.1	Evaluate evidence gathered for reliability, validity, authenticity, sufficiency, currency and consistency
		3.2	Promptly bring to the attention of relevant personnel any findings which have serious or immediate risks
		3.3	Disseminate records of the process and outcomes of the audit, including justifiable recommendations complying with procedures, to appropriate personnel in a timely manner
4	**Follow up results of the audit**	4.1	Discuss and confirm results with relevant personnel and provide feedback, including advice on corrective actions
		4.2	Follow up corrective actions relating to deficiencies until resolution has been achieved

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Systems

Systems to be evaluated for relevance to and effectiveness in incident response include:

- hazard and risk management
- evacuation
- emergency operations structure
- communications
- information management
- documentation and reporting requirements
- resource management
- training
- audit and review system
- financial management

Documents and evidence

Documents and evidence will be selected as relevant from one or more of the following:

- electronic databases
- videos
- photographs
- written information/records/archives
- training and learning programs
- recorded interviews/interview transcripts

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- any similar instructions provided for the smooth running of the plant

Unit Mapping Information

Assessment Requirements for PMAOMIR407 Audit incident preparedness and established response systems

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR407B Audit incident preparedness and established response systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- communicate effectively with internal and external stakeholders
- audit and evaluate systems, practices and processes relevant to incident response against defined benchmarks
- develop and select methodologies for effective audit and evaluation that comply with any organisation or legislative requirements
- provide input towards system continuous enhancement
- complete reports and records
- identify risks and take appropriate action
- read and interpret information from a range of sources including procedures, reports, numerical information and charts.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- regulatory framework
- organisational procedures, including those covering:
  - safety, hazards and hazard control
  - incident, fire and accident
  - environmental protection
  - risk assessment/risk management
  - relevant facility fire management and safety systems
  - communication systems
  - emergency response plans
  - audit and review processes
- hazard identification and control
- risk management principles and techniques
- incident containment tactics
- identifying benchmarks for incident response systems
- types and application of audit methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- auditing principles.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on-the-job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=9fc2cf53-e570-4e9f-ad6a-b228ffdb6875

PMAOMIR418 Coordinate incident response

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR418B Coordinate incident response

Application

This unit of competency covers the skills and knowledge required to coordinate the response to off-shore or on-shore incidents.

An incident is an event which causes, or could have caused, injury or illness; damage to plant, material or the environment; disruption to production or public alarm.

An incident is an unintended event, or an unintended consequence of an intended event, such as:

- fire and explosion
- loss of containment
- excursions above/below acceptable limits for emissions or plant conditions
- excursions above occupational hygiene or biological exposure limits
- non-compliance with regulatory requirements
- security breaches
- failure to follow procedures
- complaints
- vehicle incidents
- on/off-site incidents.

This unit of competency applies to personnel in incident coordinator/commander, incident control centre team member or similar roles who are required to minimise the escalation of the incident, allocate resources and assets, plan tactical responses, communicate with the incident response team, interact with external agencies required to assist with the emergency, and gather information about the incident.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other incident control centre team members, the incident manager and the incident support management group, as appropriate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The incident coordinator is responsible for interactions between corporate headquarters, on-site incident response teams and the person in charge of the facility. There may be more than one incident response team involved depending on the size and complexity of the incident.

The incident control centre and incident manager may be stationed on the facility or away from the facility or plant.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Incident readiness and response

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Assess the situation and determine priorities**	1.1	Seek incident information from appropriate on-site personnel
		1.2	Monitor changes in the nature, extent and potential implications of the incident
		1.3	Develop incident response tactics based on analysis of the situation and consistent with the philosophies and strategies of the organisation
		1.4	Identify required resources in accordance with the tactics developed
		1.5	Continually review objectives in light of information updates, reports and feedback

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

2	**Manage incident control centre**	2.1	Brief incident control centre personnel on the scenario and tactics, their roles and responsibilities, and of the way the centre will operate
		2.2	Allocate tasks to incident control centre personnel commensurate with their roles and level of competence
		2.3	Monitor performance of incident control centre personnel and review as the incident unfolds to determine ongoing requirements
3	**Liaise with internal management and support structures**	3.1	Regularly brief and provide communications to appropriate personnel in accordance with procedures
		3.2	Monitor and review resources to determine changing requirements in accordance with changing circumstances
		3.3	Ensure resources are available as required
		3.4	Liaise with relevant management and support structures to provide and/or obtain guidance and support
4	**Ensure communications systems are effective**	4.1	Establish communications with personnel at the incident scene
		4.2	Establish communications with other personnel on or off-site as required
		4.3	Ensure communications systems are managed to provide optimum capability
5	**Conclude and review incident activities**	5.1	Account for all personnel and other resources
		5.2	Conduct a debrief and complete company incident reports
		5.3	Evaluate and review tactics and procedures
		5.4	Evaluate and document effectiveness of the control function and its interaction with command organisations
		5.5	Communicate reports in accordance with company procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Incident response

Incident response includes one or more of the following:

- deployment of site incident response personnel
- containing/controlling the incident at source and or its spread
- search and rescue operations
- engagement of external emergency services (such as fire, ambulance, rescue and military)
- liaison with other agencies (such as environmental, clean-up and specialised troubleshooters)
- evacuation
- hazard control

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Incident response actions must:

- be in accordance with and relevant to organisation procedures
- use appropriate response equipment, where required
- prioritise the safety and/or successful recovery of personnel and others affected by the incident response
- **not** inhibit effectiveness of the incident response or further contribute to the incident

Tools and equipment

Equipment and tools include one or more of the following:

- schematics, designs, detail drawings and maps/charts
- data systems, computers systems and electronic aids
- manuals, designs, operation procedures and instructions
- emergency vehicles or equipment
- vessels and aircraft
- rescue equipment
- first aid equipment

Assessment Requirements for PMAOMIR418 Coordinate incident response

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR418B Coordinate incident response

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- communicate effectively with internal and external stakeholders in stressful situations
- develop and amend incident response tactics based on information available
- negotiate and communicate with internal support structures set up to assist with logistics planning, operations and external affairs
- identify resource needs and allocate and manage resources
- complete reports and records
- read and interpret information from a range of sources including procedures, reports, numerical information and charts.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- regulatory framework
- organisational procedures, including those covering:
  - safety, hazards and hazard control
  - incident, fire and accident
  - environmental protection
  - risk assessment/risk management
  - relevant facility fire management and safety systems
  - communication systems
  - emergency response plans
- hazard identification and control
- incident management techniques and tactics
- operational duration of essential equipment
- how to communicate effectively under stress.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job, appropriate supervision and safety precautions must be provided.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - must include coordinating the response to a simulated incident, the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on-the-job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work

PMAOMIR424 Develop and maintain community relationships

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR424B Develop and maintain community relationships

Application

This unit of competency covers the skills and knowledge required to develop relationships with community stakeholders and facilitate:

- appreciation of the plant's contribution to the economy and the local community
- community contribution to the organisation's ecological and social objectives
- public safety awareness information
- public confidence in the competence of the organisation and its personnel.

This unit of competency applies to persons who are required to identify community stakeholders and information to be communicated, and to plan, implement and evaluate engagement and communication activities.

In a typical scenario the person is a member of the incident team and is designated with the task of ensuring the preparedness of the communities surrounding and/or affected by the facility to respond to an incident. For example, the organisation is preparing to shut down part of the plant for routine maintenance and as part of that process some of the gas will be flared off. This will create a spectacular plume over the plant but because the community is alerted to both timing and what to expect, community panic and concern is limited.

While independent action may sometimes be required, the person is expected to liaise, cooperate and consult with other members of the incident management team as necessary.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify information that needs to be disseminated to the community**	1.1	Access and examine incident response plans
		1.2	Conduct consultations with appropriate personnel as necessary
2	**Establish networks within the community**	2.1	Identify stakeholders within the community
		2.2	Initiate contact with key community stakeholders
		2.3	Establish and maintain rapport
		2.4	Enlist cooperation and support in organising and conducting public safety awareness activities
3	**Design and conduct public awareness activities**	3.1	Develop a plan in consultation with stakeholders and appropriate personnel
		3.2	Design activities to support the plan in consultation with stakeholders and appropriate personnel
		3.3	Clearly identify measures for assessing the outcome of activities
		3.4	Develop and distribute marketing materials and educational materials/resources appropriate to the context, issue and audience
		3.5	Identify and secure other resources required
		3.6	Develop and implement strategies for delivery of the project to ensure maximum effectiveness
		3.7	Make adjustments as required to meet the needs of specific groups

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Evaluate activities**	4.1	Assess activity outcome against the planned goals/objectives and measures
		4.2	Complete reports detailing activities, results and recommendations according to procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Public awareness

Public awareness activities include one or more of the following:

- distribution of educational materials/resources
- use of media to disseminate information
- public educational presentations
- conduct of, or attendance in, community meetings/forums

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- incident exercises

Information to support public awareness will be selected as relevant from:

- incident response plan and management systems in place to prevent an incident
- warning signals in the event of an incident
- procedures to be followed in the event of an incident relating to evacuation and welfare operations
- appropriate people to contact and contact details
- post-incident management systems
- social objectives and contributions
- ecological issues and controls

Incident

An incident is an event which causes, or could have caused, injury or illness; damage to plant, material or the environment; disruption to production or public alarm.

An incident is an unintended event, or an unintended consequence of an intended event. This includes:

- fire and explosion
- loss of containment
- excursions above/below acceptable limits for emissions or plant conditions
- excursions above occupational hygiene or biological exposure limits
- non-compliance with regulatory requirements
- security breaches
- failure to follow procedures
- complaints
- vehicle incidents
- on/off-site incidents

Incident response

Incident response includes one or more of the following:

- deployment of site incident response personnel
- containing/controlling the incident at source and or its spread
- search and rescue operations
- engagement of external emergency services (such as fire, ambulance, rescue and military)
- liaison with other agencies (such as environmental, clean-up and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

specialised troubleshooters)
- evacuation
- hazard control

Incident response actions must:

- be in accordance with and relevant organisation procedures
- use appropriate response equipment where required
- prioritise the safety and/or successful recovery of personnel and others affected by the incident response
- **not** inhibit effectiveness of the incident response or further contribute to the incident

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Cooperation and support

Establishing cooperation and support from the surrounding community can alleviate potential problems, including one or more of the following:

- expressions of community concern about a lack of communication with the organisation
- an atmosphere of mistrust existing between the community and the organisation
- constant referrals of organisational activities to local, state/territory or Commonwealth authorities
- the volume of requests for information received from community groups or individuals
- protest meetings or rallies by concerned residents

Assessment Requirements for PMAOMIR424 Develop and maintain community relationships

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR424B Develop and maintain community relationships

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- identify and communicate and consult effectively with diverse stakeholders
- identify and plan for information to be communicated
- facilitate activities with diverse stakeholders
- write materials that convey desired messages in appropriate format and style for range of stakeholders
- identify measures and apply them to evaluation of activities.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation social and ecological objectives
- organisational procedures, including those covering:
  - incident, fire and accident
  - communication systems
  - emergency response plans
  - reporting and information storage
  - approvals and release of information
- community members and organisations who are likely to be stakeholders
- incident response plans and management systems
- promotional techniques and methods
- negotiation techniques
- group facilitation techniques
- group dynamics
- a range of presentation strategies and techniques.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work

PMAOMIR430 Conduct and assess incident exercises

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR430B Conduct and assess incident exercises

Application

This unit of competency covers the skills and knowledge required to conduct and assess incident exercises.

This unit of competency applies to incident coordinators, managers, technical specialists or those in similar roles who are part of an incident response team. They may, but may not, have an ongoing role in managing the training and incident exercise system.

They will be required to plan and design exercises that approximate incident situations and responses and which meet identified objectives, manage and monitor scheduled and unscheduled exercises, provide feedback and debriefing, and evaluate the outcomes of incident exercises.

An incident is an event which causes, or could have caused, injury or illness; damage to plant, material or the environment; disruption to production or public alarm.

An incident is an unintended event, or an unintended consequence of an intended event, such as:

- fire and explosion
- loss of containment
- excursions above/below acceptable limits for emissions or plant conditions
- excursions above occupational hygiene or biological exposure limits
- non-compliance with regulatory requirements
- security breaches
- failure to follow procedures
- complaints
- vehicle incidents
- on/off-site incidents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine objectives**	1.1	Identify the need for the incident exercise in consultation with stakeholders
		1.2	Determine the objectives of the exercise which meet the identified need
2	**Design exercise**	2.1	Select the exercise style, consistent with the objectives, in consultation with stakeholders
		2.2	Design the exercise to ensure that objectives are met and address health, safety and environment (HSE) issues
		2.3	Identify and secure the resources to support the exercise
		2.4	Document the exercise plan and prepare running sheet
		2.5	Distribute the exercise plan and running sheet stating the objectives to appropriate personnel
3	**Manage exercise**	3.1	Brief personnel involved in the exercise in respect of aims, objectives, expectations and activity outcomes
		3.2	Use the exercise plan to initiate and facilitate the conduct and direction of the exercise
		3.3	Conduct the exercise in a manner that addresses HSE issues
		3.4	Monitor the progress of the exercise and provide

Incident response

Incident response includes one or more of the following:

- deployment of site incident response personnel
- containing/controlling the incident at source and or its spread
- search and rescue operations
- engagement of external emergency services (such as fire, ambulance, rescue and military)
- liaison with other agencies (such as environmental, clean-up and specialised troubleshooters)
- evacuation
- hazard control

Incident response actions must:

- be in accordance with and relevant organisation procedures
- use appropriate response equipment, where required
- prioritise the safety and/or successful recovery of personnel and others affected by the incident response
- **not** inhibit effectiveness of the incident response or further contribute to the incident.

Incident exercises

Incident exercises include one or more of the following:

- scenario analyses
- case studies
- role plays
- discussion exercises/desktop exercises
- functional centre exercises (specific task environments within the workplace)
- field exercises
- synthetic training
- high level architecture

Incident exercises incorporate one or more of the following:

- multimedia
- computer-based
- virtual reality
- distributed interactive software
- other appropriate formats or technology
-

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Exercise design

Exercise design includes:

- determination of activity management structure
- development of documentation
- design of activity
- plans for:
  - issuing notifications
  - briefings and debriefings

Activity personnel

Activity personnel refers to people who assist in the conduct of the incident exercise and include one or more of the following:

- activity director
- directing staff/coordinators/facilitators
- safety officers
- assessors/umpires
- public relations staff
- casualty simulators
- role player liaison officers
- administrative/welfare personnel to support learning and assessment tools

Running sheet

A running sheet is a summary document/check list including one or more of the following:

- who is involved in the exercise
- who does what to whom and when
- evaluation information
- safety instructions
- timetable/schedule of events
- activity inputs

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets

Assessment Requirements for PMAOMIR430 Conduct and assess incident exercises

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR430B Conduct and assess incident exercises

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- identify need and objectives for exercises
- plan, design and evaluate exercises that are based on, and are reasonable facsimiles of, industrial incidents and are relevant to the exercise objectives
- identify and address health, safety and environment (HSE) issues
- manage and monitor conduct of scheduled and unscheduled exercises
- evaluate exercise outcomes in terms of whether:
  - the exercise was carried out in accordance with expectations
  - there were unintended or inappropriate outcomes
  - incident response procedures failed/ were inappropriate
  - there were mismatches between equipment and incident requirements
  - feedback at the conclusion of the exercise was appropriate and adequate
  - an injury occurred during the conducting of the training exercise
  - improvements could/must be made
- provide briefings, debriefings and feedback.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including those covering:
  - safety, hazards and hazard control
  - incident, fire and accident
  - environmental protection
  - risk assessment/risk management
  - relevant facility fire management and safety systems
  - communication systems
  - emergency response plans
- incident management concepts and principles
- problem solving and decision making techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- assessment and review techniques
- project management principles.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions

PMAOMIR444 Develop incident containment tactics

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR444B Develop incident containment tactics

Application

This unit of competency covers the skills and knowledge required to develop tactics to be used in the containment of incidents in on-shore and off-shore facilities.

An incident is an event which causes, or could have caused, injury or illness; damage to plant, material or the environment; disruption to production or public alarm.

An incident is an unintended event, or an unintended consequence of an intended event, such as:

- fire and explosion
- loss of containment
- excursions above/below acceptable limits for emissions or plant conditions
- excursions above occupational hygiene or biological exposure limits
- non-compliance with regulatory requirements
- security breaches
- failure to follow procedures
- complaints
- vehicle incidents
- on/off-site incidents.

This unit of competency applies to incident coordinators, managers, technical specialists or those in similar roles who are part of an incident response team. They may, but may not, have an ongoing role in managing the training and incident exercise system.

They will be required to assess the nature of the potential incident, identify objectives for incident containment, evaluate alternative tactics, analyse and interpret feedback and other information, recommend tactics appropriate to the context, and ensure that documentation and information is available to those who require it.

This unit of competency applies to an individual working alone or as part of an incident management team and working in liaison with other members of the incident management team and the incident manager, as appropriate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Incident readiness and response

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify incident containment tactics**	1.1	Identify risk characteristics of the possible incident scenarios
		1.2	Identify specific objectives of incident containment
		1.3	Identify existing tactics
		1.4	Develop a range of alternative tactics
2	**Evaluate tactics**	2.1	Predict incident behaviour and growth under alternative strategy scenarios
		2.2	Consider issues relating to health, safety and environment (HSE)
		2.3	Identify and secure resource requirements for alternative tactics
		2.4	Identify the impact of tactics on a range of factors
		2.5	Identify and clearly document tactics
		2.6	Obtain, collate and record feedback on tactics from stakeholders and incident managers, and ensure this is reflected in the documentation according to procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.7	Negotiate stakeholder needs and address
3	**Select tactics**	3.1	Document findings and feedback on the suitability of different tactics
		3.2	Recommend preferred tactics according to procedures
		3.3	Document tactics and build into strategies and training guidelines
4	**Adopt strategies**	4.1	Incorporate documentation on selected tactics into the appropriate incident management manuals
		4.2	Notify stakeholders of new tactics
		4.3	Incorporate selected tactics into incident training exercises

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Incident response

Incident response includes one or more of the following:

- deployment of site incident response personnel
- containing/controlling the incident at source and or its spread
- search and rescue operations
- engagement of external emergency services (such as fire, ambulance, rescue and military)
- liaison with other agencies (such as environmental, clean-up and specialised troubleshooters)
- evacuation
- hazard control

Incident response actions must:

- be in accordance with and relevant organisation procedures
- use appropriate response equipment, where required
- prioritise the safety and/or successful recovery of personnel and others affected by the incident response
- **not** inhibit effectiveness of the incident response or further contribute to the incident

Alternative tactics

Alternative tactics are identified through one or both of the following:

- consultation with experts
- literature review

Evaluate tactics

Evaluation of tactics requires consideration of:

- specific incident conditions
- insurance policies and considerations
- economic impact and considerations
- availability, capabilities and operational limitations of external resources and agencies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Preferred tactics

Preferred tactics meet one or more of the following:

- tactics achieve the desired outcomes
- tactic development is of greater value than expected
- adoption of tactics finds widespread approval
- incident containment is a success

Stakeholders

Stakeholders include any or all of the following:

- experts/specialists
- shareholders
- board of directors
- employees
- unions
- contractors
- suppliers
- insurance companies
- local community
- fire brigade
- police
- local emergency management organisations
- medical services
- relevant public authority

Hazards

Hazards include one or more of the following:

- heat, smoke, dust, darkness or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- plant services (steam, condensate and cooling water)
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- flammability and explosivity
- hazardous products and materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Identifying risks requires consideration of specific hazards, and:

- what level of harm can occur
- how harm can occur (various chains of events that could result in harm from the hazard)
- the likelihood that harm will occur

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Unit Mapping Information

Assessment Requirements for PMAOMIR444 Develop incident containment tactics

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR444B Develop incident containment tactics

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- collect and analyse information to evaluate and recommend containment tactics appropriate to specific context
- identify and control hazards and risks
- communicate effectively with team members, management and other stakeholders
- write clear and unambiguous procedures and training documents to support tactics.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including those covering:
  - safety, hazards and hazard control
  - incident, fire and accident
  - environmental protection
  - risk assessment/risk management
  - relevant facility fire management and safety systems
  - communication systems
  - emergency response plans
- types of incidents that can arise in the work environment
- related risks and potential impact on environment, local community and economy of the organisation
- types of incident response and containment equipment and their application
- rescue techniques
- incident prediction
- intervention and control techniques for heating, fires and explosions
- incident resources and how to access them
- incident response and disaster planning processes and techniques
- hazard identification and control
- risk management principles and techniques
- structure, roles, capabilities and operational limitations of external resources and agencies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- insurance policies and considerations
- economic impact and considerations.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job, appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - must include development of tactics associated with a simulated incident, the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work

PMAOMIR449 Monitor legal compliance obligations during incidents

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR449B Monitor legal compliance obligations during incidents

Application

This unit of competency covers the skills and knowledge required to oversee the operations of an incident management or crisis management team to ensure compliance with legislation and/or regulations.

An incident is an event which causes, or could have caused, injury or illness; damage to plant, material or the environment; disruption to production or public alarm.

An incident is an unintended event, or an unintended consequence of an intended event, such as:

- fire and explosion
- loss of containment
- excursions above/below acceptable limits for emissions or plant conditions
- excursions above occupational hygiene or biological exposure limits
- non-compliance with regulatory requirements
- security breaches
- failure to follow procedures
- complaints
- vehicle incidents
- on/off-site incidents.

This unit of competency applies to enterprise legal officers, environmental officers, safety officers or those in similar roles who are required to advise the management team on potential and actual breaches of legislation in the development of incident response plans, implement and evaluate incident response activities, submit organisational reports and prepare for legal proceedings on compliance issues.

This unit of competency applies to an individual working alone or as part of an incident management team and working in liaison with other members of the incident management team and the incident manager, as appropriate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Incident readiness and response

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Conduct routine review of incident response plans**	1.1	Identify legislation, regulation and licencing relevant to possible incident scenarios
		1.2	Determine possible compliance issues with planned responses
		1.3	Negotiate alternative response plans which do not raise compliance issues
		1.4	Ensure plans, equipment and training are modified to reflect changed response plans
2	**Oversee the operations of the incident management team during the incident**	2.1	Ensure that the incident team is aware of legislation that needs to be complied with during the incident
		2.2	Obtain information concerning legal ramifications as required in accordance with organisation's policies
		2.3	Ensure accurate recording of all relevant details of all agreed actions
		2.4	Assess actions taken and proposed against relevant legislation to determine compliance and possible impacts on the company

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	**Advise appropriate action to facilitate compliance during the incident**	3.1	Undertake consultations with regulatory authorities to facilitate minimal impact resolutions
		3.2	Advise management of options that are available to remain compliant
		3.3	Provide advice on actions to achieve compliance
4	**Monitor actions taken to achieve compliance during the incident**	4.1	Monitor company actions to resolve incidents and achieve compliance or remain compliant
		4.2	Document actions taken by the organisation to remain compliant
		4.3	Prepare reports for management regarding outcomes from the incident and any material breaches of legislation that have occurred
		4.4	Prepare for possible legal proceedings within required timeframe
5	**Seek improvements to incident responses post incident**	5.1	Identify possible areas for improvement
		5.2	Develop improved responses in liaison with relevant people
		5.3	Ensure plans, equipment and training are modified to reflect improved response plans

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Duty of care responsibilities under general work health and safety (WHS) Acts and regulations, and state/territory and national standards applying to hazardous substances, dangerous goods and major hazards must be met.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Incident response

Incident response includes one or more of the following:

- deployment of site incident response personnel
- containing/controlling the incident at source and or its spread
- search and rescue operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- engagement of external emergency services (such as fire, ambulance, rescue and military)
- liaison with other agencies (such as environmental, clean-up and specialised troubleshooters)
- evacuation
- hazard control

Incident response actions must:

- be in accordance with and relevant organisation procedures
- use appropriate response equipment, where required
- prioritise the safety and/or successful recovery of personnel and others affected by the incident response
- **not** inhibit effectiveness of the incident response or further contribute to the incident.

Legal compliance

Legal compliance during an incident involves monitoring all of:

- liquid leaving site (e.g. fire water, product and materials)
- smoke and vapour leaving site (e.g. from loss of containment (LOC) and fire)
- gas leaving site (e.g. from LOC)
- noise leaving site (e.g. from incident or incident response and alarms)

Identifying areas for improvement

Identifying areas for improvement includes addressing one or more of the following:

- difficulties tracking and identifying relevant legislation or amendments
- managing evidence for later investigations or enquiries
- interpersonal conflicts
- conflicts of interest
- failed compliance measures
- failure to comply with timeframes dictated by legislation or regulation

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMAOMIR449B Monitor legal compliance obligations during incidents

Assessment Requirements for PMAOMIR449 Monitor legal compliance obligations during incidents

Modification History

Release 1. Supersedes and is equivalent to PMAOMIR449B Monitor legal compliance obligations during incidents

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- identify potential compliance issues in incident response plans and compliance breaches in activities
- communicate effectively with team members, management and other stakeholders about compliance requirements, issues and solutions
- identify and provide advice on options for resolution of compliance issues and breaches
- document solutions and improvements to be implemented in training and procedures
- complete workplace documentation, write reports and prepare documentation for legal proceedings.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- regulatory framework and specific compliance requirements that apply to the organisation
- allowable defences for apparent compliance breaches
- types of incidents that can arise in the work environment, typical responses and potential compliance issues
- organisational procedures, including those covering:
  - safety, hazards and hazard control
  - incident, fire and accident
  - environmental protection
  - risk assessment/risk management
  - relevant facility fire management and safety systems
  - communication systems
  - emergency response plans
  - release of information to external bodies
- constraints to negotiations that arise from organisation policies, procedures and corporate structures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- Element 1 is best assessed using a report and/or folio of evidence drawn from a single project which provides sufficient evidence of the requirements of all the performance criteria.
- The balance of the unit needs to be assessed off the job, and will occur as part of the response to a simulated incident.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Knowledge evidence may be collected concurrently with performance evidence interviews (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work

PMAOPS105 Select and prepare materials

Modification History

Release 1. Supersedes and is equivalent to PMAOPS105C Select and prepare materials

Application

This unit of competency covers the skills and knowledge required to select and prepare materials for use in production processes.

This unit of competency applies to operators who are required to find the right materials, check them, measure and prepare them, if required, and deliver the materials to the process in the right condition.

A typical application of this unit of competency could be an operator preparing a range of chemicals or other substances for use in a batch process. The operator would visually inspect each item for deterioration or damage, and follow procedures to prepare materials. Once prepared, the operator would then assemble the materials for supply to production areas.

This competency applies where mixing, grinding, testing, etc are an incidental part of preparing materials for use in production.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Operations

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Identify and locate materials**	1.1	Identify material requirements correctly from documentation
		1.2	Identify type, quantity and quality of materials
		1.3	Identify material hazards and handling procedures
		1.4	Locate and check materials to procedures
		1.5	Confirm availability of required quantity of materials
		1.6	Note and report material shortages
2	**Contribute to controlling hazards**	2.1	Identify other hazards in work area
		2.2	Take action to control material hazards as per documentation
		2.3	Take appropriate action to control other hazards in the workplace
3	**Measure quantity of materials**	3.1	Identify measuring requirements and select appropriate measuring equipment
		3.2	Measure and assemble required quantities
		3.3	Check material quantities required
		3.4	Complete required documentation and labelling
		3.5	Deliver materials to correct location
4	**Prepare materials as required**	4.1	Check that hoppers, bins and holding tanks are free from contamination
		4.2	Identify classes of compatible and incompatible chemicals
		4.3	Prepare materials to procedures
5	**Store assembled materials**	5.1	Identify the storage conditions required for the main classes of chemicals

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		5.2	Identify materials that have special storage requirements
		5.3	Store and supply materials
6	**Dispose of waste materials**	6.1	Correctly identify waste materials
		6.2	Dispose of materials to procedures and work health and safety (WHS) and environmental requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Materials preparation

Materials preparation includes one or more of the following:

- pre-production measuring, assembling and identification of materials
- warming to melt waxy or other materials
- breaking up solid materials into pieces or smaller lumps
- passing materials through an in-line delumper

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- blending a powder or liquid into a solution prior to use in the process
- blending powders prior to production
- dilution of solutions
- preparation of a solution for dosing into a process

Materials

Materials include one or more of the following:

- raw materials
- packaging materials
- consumables

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Equipment

Equipment includes one or more of the following:

- buckets
- stirring paddle
- propeller or drum mixers
- delumpers
- hammers or axes
- measuring equipment, including scales, flow meters and graduated vessels
- hard hats
- goggles/glasses/face shields
- hearing protection (ear muffs and plugs)
- dusk masks/canister masks/self contained breathing apparatus (SCBA)/long range breathers
- gloves/gauntlets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safety boots
- antistatic equipment
- overalls/aprons/acid jackets/pants
- handling aids
- other safety equipment

Material hazards and handling procedures

Material hazards and handling procedures include one or more of the following:

- labels
- safety data sheets (SDS)
- verbal direction from supervisor or other person
- other standard sources, such as:
  - enterprise procedures
  - HAZCHEM symbols and codes
  - spill containment and disposal procedures

Hazards

Hazards include one or more of the following:

- smoke, darkness and heat
- dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- plant services (steam, condensate and cooling water)
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours or other atmospheric hazards
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Assessment Requirements for PMAOPS105 Select and prepare materials

Modification History

Release 1. Supersedes and is equivalent to PMAOPS105C Select and prepare materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- identify job requirements and safe work procedures
- identify and operate equipment
- identify hazards and apply hazard control procedures
- complete required workplace forms
- communicate with team and supervisors
- measure and prepare materials to meet requirements
- identify and dispose of waste materials according to work health and safety (WHS) and environmental requirements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- types and application of measuring equipment relevant to job/work environment
- classes of compatible and incompatible chemicals and implications in job/work environment
- types of materials in plant and their storage requirements
- routes of entry of chemicals to the body (basic only)
- procedures for safe handling and storage of chemicals and hazardous substances relevant to job/work environment
- types and application of personal protective equipment (PPE) relevant to job/work environment
- labelling requirements (dangerous goods codes, classification numbers and packaging group numbers)
- HAZCHEM symbols and codes relevant to the job/work environment
- organisation procedures relevant to job/work environment
- hazards that may arise in the job/work environment, and:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- environmental requirements related to waste disposal.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an appropriate industrial item of equipment
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work

PMAOPS280 Interpret process plant schematics

Modification History

Release 1. Supersedes and is equivalent to PMAOPS280B Interpret process plant schematics

Application

This unit of competency covers the skills and knowledge required to interpret process plant schematics for a range of operations uses.

This unit of competency applies to operators who are required to find specific information from a schematic, mark up a schematic for their own or someone else's use, and sketch a schematic using relevant symbols as part of an explanation to another person or as an aide memoir for themselves.

This unit of competency applies to a wide range of schematics and covers all general and common symbols. It also includes those specific to the plant which is the operator's area of responsibility and any conventions which are applied by the organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Operations

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Relate schematic to plant**	1.1	Match items on schematic with items in plant
		1.2	Determine relevant pipe and flange schedules

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.3	Identify sizes and types of minor equipment
		1.4	Locate relevant instrument tapping points and control points
		1.5	Identify direction of flow on schematic and in plant
2	**Identify points required to prepare plant**	2.1	Locate isolation and blanking points for any item of the relevant schematic
		2.2	Identify drain/vent/purge points for any item on the relevant schematic
		2.3	Identify trip system elements
		2.4	Use schematic to check/develop work lists
3	**Describe the process with a schematic**	3.1	Use a schematic as the basis of a description of the process
		3.2	Describe the process using a manual schematic
		3.3	Walk through process identifying all plant items in process order
		3.4	Identify key conditions/variables from a relevant schematic

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Items

Items on schematic/in plant include the following:

- all major plant items, such as:
  - vessels
  - columns
  - reactors
  - heat exchangers
- minor plant items, such as:
  - pumps
  - valves
  - strainers
  - filters
  - instrumentation (local and remote)

Schematics

Schematics are formally drawn, authorised diagrams and are hard copy or electronic.

Schematics have various names, including:

- piping and instrumentation diagram (P&ID)
- process flow diagram (PFD)
- process engineering flow (PEF)
- cause and effect diagrams/matrix

Manual schematic includes one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- a hand drawn sketch of the part of the process of interest
- a mark up of a formally drawn schematic

Symbols

Symbols and conventions used in the schematics for the relevant plant area should be used, and include of one or more of the following:

- Australian Standards symbols
- the organisation's standard symbols
- some other standard system

Points required to prepare plant

Points required to prepare plant include three or more of the following:

- isolations
- blank/spade/spectacle blind, breakout spool locations
- draining
- purging
- blanketing
- venting
- ventilating
- locating plant, equipment and services - above ground
- locating below ground (or otherwise obscured) pipeline and services

Key conditions/ variables

Key conditions/variables include one or more of the following:

- normal range of process conditions, such as:
  - level
  - pressure
  - flow
  - temperature
- alarm conditions/values
- trip and emergency shutdown (ESD) values

Assessment Requirements for PMAOPS280 Interpret process plant schematics

Modification History

Release 1. Supersedes and is equivalent to PMAOPS280B Interpret process plant schematics

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- interpret symbols and other drawing elements and explain their relationship to the plant and process
- identify critical processes and plant items from a schematic
- draw or mark up a schematic and use it to describe main process features and plant items.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- standard/common symbols used on schematics
- schematic conventions (e.g. with particular reference to crossing and branching lines)
- symbols and conventions used by the organisation, if different from common usage
- indications of equipment/pipe specifications
- indications of process conditions/limits.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible or practical, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMAOPS402 Respond to abnormal process situations

Modification History

Release 1. Supersedes and is equivalent to PMAOPS402A Respond to abnormal process situations

Application

This unit of competency covers the skills and knowledge required to recognise and resolve abnormal process situations that are complex and/or not solvable by direct observation. The problem would normally impact an entire plant system or process. Examples include damage to/wear of tower trays, internal leaks of heat exchangers and collapse of/channelling in tower/column/vessel packing.

This unit of competency applies to senior technicians, para-professionals or those in similar roles who are required to apply in depth knowledge of process and plant in order to methodically investigate process, plant and technical problems, determine the cause and initiate corrective action.

This role is often performed using a small, usually ad hoc group, however, the person will take a lead technical role.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSMSUP390 Use structured problem-solving tools

Competency Field

Operations

essential outcomes.		demonstrate achievement of the element.	
1	**Recognise there is a problem**	1.1	Compare current performance with expected/historic performance
		1.2	Identify plant/process areas with poor performance
		1.3	Check the impact of routine adjustments to improve performance
		1.4	Identify problems not solved by the routine solutions
2	**Define the problem**	2.1	Apply problem isolation techniques to isolate problem to a small part of the plant/process
		2.2	Quantify the effect of the problem in operational terms
		2.3	Postulate possible causes of the problem
		2.4	Identify types of evidence of each possible cause
		2.5	Investigate problem to accumulate evidence of cause type
		2.6	Analyse data to confirm cause of problem
		2.7	Determine the level of severity of the problem and priority of any required action
3	**Develop solution**	3.1	Discuss possible solutions to cause with stakeholders and technical experts
		3.2	Determine whether a quick fix is needed
		3.3	Arrange for implementation of quick fix if required
		3.4	Check effectiveness of quick fix and take action to maintain stable, safe operation
		3.5	Agree required final solution with stakeholders and technical experts
		3.6	Arrange for required solution to be undertaken in appropriate timeframe
		3.7	Follow items initiated through until final resolution has

occurred

3.8 Check effectiveness of solution and take action to maintain or improve outcome

3.9 Complete reports to procedure

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Problem isolation

Problem isolation uses techniques to isolate the cause of the problem to a specific part of the process or unit operation and uses techniques including one or more of the following:

- flow charts
- process logic/process requirements
- cause and effect diagrams/charts
- divide and conquer
- control charts, run charts (Shewhart charts)
- similarity/difference analysis
- other structured processes defined by the organisation

Problem analysis

Problem analysis identifies possible causes and examines the evidence for each cause and uses techniques including one or more of the following:

- Ishikawa/fishbone diagrams/
- logic tree
- histograms/Pareto analysis
- scatter grams
- brainstorming
- control charts, run charts (Shewhart charts)
- 6 Hats (Edward de Bono)
- other structured processes defined by the organisation

Unit Mapping Information

Assessment Requirements for PMAOPS402 Respond to abnormal process situations

Modification History

Release 1. Supersedes and is equivalent to PMAOPS402A Respond to abnormal process situations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- recognise signs of variations of plant and process that indicate different types of problems
- select and apply problem isolation and analysis techniques to determine the most likely cause of problem
- determine and initiate any immediate corrective action (quick fix) required
- determine and initiate longer term solution
- communicate and negotiate effectively with all stakeholders
- follow through to ensure resolution of problems
- undertake calculations.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- principles of operation and process science for all unit operations within the system/area and the interrelationships between them
- cause/effect relationships between plant/process condition and process variable values
- indicators of abnormal process situations, and evidence of which cause is responsible for the abnormal situation
- impact of variations in plant and process and the distinctive signs of each variation (e.g. lower quality, lower rates, greater variability or greater difficulty in control).

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- Where competency has not been previously attained in *MSMSUP390 Use structured problem-solving tools* it may be co-delivered and co-assessed.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
    - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills, or a real project in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMAOPS405 Operate complex control systems

Modification History

Release 1. Supersedes and is equivalent to PMAOPS405A Operate complex control systems

Application

This unit of competency covers the skills and knowledge required to operate a complex control panel. The panel will control entire plant areas and multiple products/process streams and will use a large number of control loops and a broad range of control algorithms; and will probably include advanced process control (APC) as one of its operations. Its operation will require managing multiple complex tasks.

This unit of competency includes all such items of equipment and unit operations which form part of the control system, including as appropriate to the facility:

- process control systems (e.g. distributed control systems (DCS), and supervisory control and data acquisition (SCADA))
- use of multiple control systems
- interacting control loops/cascade control
- personal computers
- printers
- fire and gas detection/protection systems
- emergency shutdown (ESD) systems
- communications systems.

This unit of competency applies to senior technicians or those in similar roles who are required to apply in-depth knowledge of process and plant to in order to operate, monitor and optimise an entire plant area consisting of several plant units/systems, solve process problems and liaise with other plant areas.

This control system would typically be an advanced control system and may include operation of simpler control systems as part of its operation. The panel will typically be located off plant in a control room.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Use operator interface**	1.1	Use keyboards, track ball and monitor and/or stand-alone controllers to access control system/panel
		1.2	Monitor the process using the operator interfaces
		1.3	Select appropriate controller modes
		1.4	Access historical data and information
		1.5	Acknowledge messages and alarms
		1.6	Access advanced control features as appropriate
2	**Access control information**	2.1	Obtain relevant data and information from the control system by applying systems knowledge
		2.2	Identify the status of individual pieces of equipment from the control panel and use information to identify potential faults
		2.3	Minimise fluctuations and variations in process through the interpretation of existing trends and control schematics
		2.4	Determine the overall operating effectiveness of the plant area related to the required targets for the area
		2.5	Record process variations/irregularities to procedures
3	**Control process variations and**	3.1	Monitor process using all information available in the control room

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	monitor operations	3.2	Use historical data to assist the identification of problems
		3.3	Process available information to identify potential faults
		3.4	Undertake required set point/output changes to meet plant area and process requirements
		3.5	Adjust production in response to test results and control panel information
		3.6	Monitor key process and environmental variables and take action to achieve required outcomes
		3.7	Adjust controller settings in accordance with procedures
		3.8	Use advanced control features as appropriate
		3.9	Turn controller features on and off to meet process and control needs
		3.10	Optimise operation of entire plant area in accordance with guidelines
		3.11	Undertake calibration operations in accordance with procedures.
		3.12	Coordinate with stakeholders external to the plant area in accordance with procedures
		3.13	Record adjustments and variations to specifications/schedules
		3.14	Communicate to appropriate personnel as required
4	**Facilitate planned and unplanned process start-ups and shutdowns**	4.1	Select and apply procedures to planned start-up and shutdown processes.
		4.2	Select and apply procedures to unplanned shutdown processes
		4.3	Implement all required emergency responses
		4.4	Communicate necessary information to all personnel affected by events
		4.5	Log all required information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5	**Respond to alarms or out-of-specification conditions**	5.1	Identify system(s) affected by the alarm or condition
		5.2	Interpret alarms and prioritise actions to be taken
		5.3	Respond to the alarm or incident by following procedures
		5.4	Deal with any out-of-specification material in accordance with procedures
		5.5	Communicate the problem/solution to appropriate personnel
		5.6	Record the information as required
		5.7	Provide details of the alarm and action taken to the next shift at changeover
		5.8	Follow up on the incident to see that appropriate action has been taken
6	**Control hazards**	6.1	Identify hazards/changes in hazards in the production/processing work area
		6.2	Assess the risks arising from those hazards
		6.3	Implement measures to control risks in line with procedures and duty of care
		6.4	Communicate hazards and hazard controls to affected personnel
7	**Resolve other problems within scope of responsibility**	7.1	Identify possible problems in equipment, control systems or process
		7.2	Determine problems needing action
		7.3	Determine possible fault causes
		7.4	Rectify problem using appropriate solution within area of responsibility
		7.5	Follow initiated items through until final resolution has occurred

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

7.6 Report problems outside area of responsibility to designated person

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Hazards

Hazards include one or more of the following:

- electricity
- gases and liquids under pressure
- equipment failures
- noise, rotational equipment or vibration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- plant services (steam, condensate and cooling water)
- working at heights, in restricted or confined spaces, or in environments subjected to heat, dusts or vapours
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Routine problems

Routine problems are predictable problems with known solutions and include one or more of the following:

- operating without advanced control features
- loss of power/utilities
- analysing failure modes
- variation/loss of feed
- unstable control of pressure, temperature level and flows
- control equipment failure
- process plant trips
- change in atmospheric conditions (rain, temperature, wind and lightning)
- emergency situations
- control function problems

Non-routine

Non-routine problems are unexpected problems, or variations of previous

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

problems

problems and must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Alarms or abnormal conditions

Alarms or other abnormal conditions include the following:

- emergency, including emergency shutdown (ESD)
- partial or complete controller failure

Assessment Requirements for PMAOPS405 Operate complex control systems

Modification History

Release 1. Supersedes and is equivalent to PMAOPS405A Operate complex control systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- interpret and respond to panel messages and alarms
- obtain and interpret data from the control system to minimise variation and maximise performance
- identify early warning signs of equipment/processes needing attention or with potential problems
- select and apply procedures for planned and unplanned start-up/shutdown
- identify hazards and risks and apply risk control procedures
- communicate and negotiate effectively with all stakeholders
- isolate the causes of problems and distinguish between causes of problems/alarm/fault indications, including:
  - instrument failure/malfunction
  - electrical failure/malfunction
  - mechanical failure/malfunction
  - equipment design deficiencies
  - product parameters (temperature, flows, pressure and levels)
  - process control system malfunction
  - power/utility failures
  - software problems
  - multitasking.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- advanced control features
- interactions between control loops
- interactions between plant units within the entire plant
- the architecture and location of the process/production equipment
- specific plant process operations
- interactions between plant items/processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- product specifications and tolerances, systems operating parameters and system integrity limits
- process control philosophies and strategies
- emergency shutdown (ESD) procedures
- relevant science of the process (e.g. physics, chemistry and biochemistry) to the level of identifying and manipulating factors controlling process rate and product properties, and identifying and resolving potential problems
- basic science of upstream and downstream processes
- interactions between plant area and other value stream members
- impact of external factors (e.g. variations in weather and feed)
- complex process drawings (e.g. piping and instrumentation diagram (P&ID), process flow diagram (PFD), and cause and effect
- basis of control for the plant
- instrumentation and control systems, including feed forward, feed-back and open control
- instrumentation and control system components (e.g. relevant primary sensing devices, final control elements and transducers/transmitters)
- control loops (including proportional integral derivative (PID) control, set points, controlled variable and indicated variable)
- interaction between multiple control loops (including cascade control)
- impacts of changing controller settings and the limits within which changes can be made
- effective communication techniques
- organisation procedures
- uninterrupt power supply (UPS) and its applications and use
- duty of care obligations
- hierarchy of control
- hazards that may arise in the job/work environment, and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industrial type complex control system, controlling a real or simulated process requiring demonstration of operation and responding to problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - may use industry-based simulation for all of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on-the-job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMAOPS410 Operate remote production facilities

Modification History

Release 1. Supersedes and is equivalent to PMAOPS410B Monitor remote production facilities

Application

This unit of competency covers the skills and knowledge required to operate and monitor remote process/plant, including production facilities and its associated ancillary equipment and services, from a remote, off-site control system using ground based, satellite or other communications systems. It applies to remote facilities, such as wellheads, separation facilities, utility systems, compressor/pumping stations, treatment stations and satellite processes.

This unit of competency applies to senior technicians or similar roles who are required to apply in depth knowledge of process and plant to in order to operate, monitor and optimise the remote facility, perform tests and isolations, solve process problems and liaise with other plants and facilities.

This unit of competency would typically require the use of a control system, such as a distributed control systems (DCS) or supervisory control and data acquisition (SCADA).

It is not expected that there would be a ‘field operator’ available full time at the remote facility and arranging for one to attend could be part of the role.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for operation of remote facility**	1.1	Receive and give shift handover
		1.2	Identify work requirements
		1.3	Identify and control remote facility hazards
		1.4	Check for recent work undertaken on remote facility
		1.5	Note any outstanding/incomplete work
		1.6	Check operational status of remote facility
		1.7	Liaise with field operator and other personnel responsible for remote facility confirming expected attendance time and work to be performed
2	**Operate the remote facility**	2.1	Monitor the remote facility, its component plant items, utilities and environment frequently and critically throughout shift using measured/ indicated data
		2.2	Describe impacts of any environmental changes and changes upstream and downstream
		2.3	Recognise actual and developing situations which may require action
		2.4	Apply operational knowledge to resolve problems
		2.5	Take other actions on abnormal situations which cannot be resolved during the shift to ensure safety and the resolution of the situation
		2.6	Follow through items initiated until final resolution has occurred
3	**Recover and measure product**	3.1	Monitor quality and quantity of products and wastes generated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.2	Maximise recovery of product and transfer in accordance with procedures
		3.3	Ensure all waste is treated in accordance with procedures and waste disposed of is within environmental/licence limits
		3.4	Ensure measuring, sampling, testing and data logging is occurring to schedule
4	**Organise required onsite activities**	4.1	Identify job scope and timing of required on-site work from monitored data, job schedules and observations of remote facility operations
		4.2	Arrange for appropriate personnel to attend remote site within the required timeframe
		4.3	Liaise with personnel attending site from their departure for remote site, their activities on remote site and their return to base
		4.4	Check effectiveness of on-site work before personnel leave remote site
5	**Isolate and de-isolate remote facility**	5.1	Arrange to have personnel on site in accordance with procedures
		5.2	Complete any required pre-start checks
		5.3	Start up/shut down remote facility according to the type and duty in liaison with other personnel
		5.4	Start up/shut down/changeover component plant items within unit according to their type and duty in liaison with other personnel
		5.5	Isolate entire remote facility and/or any component plant item
		5.6	Make safe for required work
		5.7	Check remote facility/plant item is ready to be returned to service
		5.8	De-isolate and prepare remote facility/plant item for

return to service

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Hazards

Hazards include one or more of the following:

- remoteness/single operator
- electricity
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- equipment or product mass
- noise, rotational equipment or vibration
- working at heights, in restricted or confined spaces, or in environments subjected to heat, dusts or vapours
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Routine problems

Routine problems are predictable problems with known solutions and include one or more of the following:

- variations in feed
- contamination of product
- control of temperature and pressure
- variations in waste
- equipment malfunction
- vibration

Non-routine problems

Non-routine problems are unexpected problems, or variations of previous problems and must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Remote production facility

This unit of competency includes all such items of equipment and unit operations which form part of the remote production facility, including as appropriate to the facility, one or more of the following:

- valves
- pumps
- prime movers
- compressors
- separators
- instrumentation
- storage tanks, ponds and dams
- filters
- wellheads
- hydraulic well control panels
- fire and gas safety systems

Assessment Requirements for PMAOPS410 Operate remote production facilities

Modification History

Release 1. Supersedes and is equivalent to PMAOPS410B Monitor remote production facilities

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- interpret and respond to panel messages and alarms
- obtain and interpret data from the control system to minimise variation and maximise performance
- predict impact of a change in one unit/area on other plant units/areas and take action
- apply process knowledge to monitor and predict the need for adjustments to system components
- identify early warning signs of equipment/processes needing attention or with potential problems and take action
- identify hazards and risks and apply risk control procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- all items on a schematic of the remote system and the function of each
- remote terminal unit, functions, operation and problems
- nature/condition of materials entering and leaving each stage of the process
- changes which have occurred in that stage and why they have occurred
- methods of changing production rates and the advantages and disadvantages of each
- effect of specific climatic and environmental factors
- process parameters and limits (e.g. temperature, pressure, flow and pH)
- principles of operation of plant/equipment
- physics and chemistry relevant to the process unit and the fluids involved
- local lease and well operations requirements and constraints
- corrective action appropriate to the problem cause
- function and troubleshooting of major components and their problems
- hierarchy of control
- hazards that may arise in the job/work environment, and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industrial type remote facilities allowing operation
  - may use industry-based simulation for all of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMAOPS411 Manage plant shutdown and restart

Modification History

Release 1. Supersedes and is equivalent to PMAOPS411B Manage plant shutdown and restart

Application

This unit of competency covers the skills and knowledge required to manage the shutdown and restart of a complex and integrated plant. It applies to planned, shutdowns and start-ups, but may also be applied to unplanned and emergency shutdowns (ESD). It does not apply to plant trips.

This unit of competency applies to senior technicians, panel technicians, outside technicians and those in similar roles who are required to apply in-depth knowledge of process and plant to in order to adapt normal practice, within the overall guidelines, to the situation; balance the varying requirements to ensure the shutdown occurs with maximum safety to personnel, plant, the environment and the business's productivity (in that order); and coordinate all personnel involved in the shutdown to ensure it happens in as orderly a fashion as possible and that the plant is left in the best condition possible for a quick restart.

This unit of competency does not apply to individual plant operators shutting down individual production units or following directions during a shutdown; these are included in the unit of competency for operating a particular production unit.

The individual will be liaising and communicating with all internal and external stakeholders.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Manage shutdown sequence**	1.1	Check and verify safety systems to ensure that the unit has been made safe
		1.2	Identify the reason for, or cause of, the shutdown by troubleshooting the system and by utilising all available data and information systems
		1.3	Obtain confirmation of the identified shutdown from field-based operators to verify both the nature and the reliability of the shutdown
		1.4	Rectify or initiate procedures to rectify the fault or shutdown cause through either repair of the operational fault or readjustment before returning the system to start-up status
2	**Conduct start-up process**	2.1	Satisfy all start-up permissives prior to start-up process being commenced
		2.2	Identify hazards and check that hazard controls are operational and effective
		2.3	Conduct start-up according to procedures and in a safe and efficient manner, ensuring a return to steady state operation is achieved
3	**Document shutdown and start-up process**	3.1	Complete all logs and workplace documentation relating to the shutdown/start-up process, ensuring all details, actions and responses are accurately recorded
		3.2	Record any further ongoing production problems and report to appropriate persons or authority

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Hazards

Hazards include one or more of the following:

- electricity
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- plant services (steam, condensate and cooling water)
- working at heights, in restricted or confined spaces, or in environments subjected to heat, dusts or vapours
- flammability and explosivity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Unit Mapping Information

Assessment Requirements for PMAOPS411 Manage plant shutdown and restart

Modification History

Release 1. Supersedes and is equivalent to PMAOPS411B Manage plant shutdown and restart

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to:

- interpret and analyse data to decide on type of shutdown required
- plan for efficient shutdown to:
  - cold
  - warm
  - hot
- use data to identify reason for/cause of shutdown and determine action to be taken
- select and apply procedures for planned and unplanned start-up/shutdown
- ensure all safety, permit and system preparations are in place as required for shutdown and start-up
- identify hazards and risks and apply risk control procedures.

Knowledge Evidence

- Evidence must be provided that demonstrates knowledge of:
- shutdown/start-up philosophy and procedures
- correct methods of starting, stopping, operating and controlling process
- emergency shutdown (ESD) procedures
- required state of plant and equipment to allow for a restart
- hierarchy of control
- hazards that may arise in the job/work environment, and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an industrial plant allowing demonstration of shutdown and restart
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMAOPS433 Manage wells and gathering systems

Modification History

Release 1. Supersedes and is equivalent to PMAOPS433A Manage wells and gathering systems

Application

This unit of competency covers the skills and knowledge required to manage a group of wells and gathering systems so as to optimise the output from all the wells. The management is of the technical aspects of well/system operation, and while this person may also manage well operating personnel, that is not part of this competency.

This unit of competency applies to senior operators, field technicians and those in similar roles who are required to apply in-depth knowledge of process and plant in order to examine data and make and/or recommend changes to optimise the output of the group of wells, prioritise and coordinate the work of the team, and undertake investigations and solve well and operating problems which are beyond the ability of the well operator.

This unit of competency includes all such items of equipment and unit operations which form part of the well/system. A unit comprises two or more components of plant/equipment that are operated together to produce product, including as appropriate to the facility:

- wellheads
- chokes and control valves
- meters
- flow lines
- high point vents
- low point drains
- valves, including non-return and pressure/vacuum relief
- pumps and their prime movers
- product separation units
- instrumentation and control systems (variable speed drive (VSD) and proportional integral derivative (PID))
- testing equipment
- power units
- drive heads
- flares
- fuel gas systems
- chemical injection equipment
- field flares
- storage tanks.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for work**	1.1	Receive and give shift handover
		1.2	Identify work requirements
		1.3	Identify and control hazards
		1.4	Coordinate with appropriate personnel
		1.5	Check for recent work undertaken on wells and gathering systems
		1.6	Note any outstanding/incomplete work
		1.7	Check operational status of wells and gathering systems
		1.8	Determine appropriate schedule and priorities for work
2	**Operate site, well/system and equipment**	2.1	Complete site checks
		2.2	Use well control systems
		2.3	Take required reading
		2.4	Operate plant.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.5	Start up/shut down well/system
		2.6	Isolate/de-isolate an item of, or an entire well/system
3	**Optimise wells and gathering systems**	3.1	Analyse network
		3.2	Interpret network communication
		3.3	Determine processing plant requirements and the impact of this on well and system operation
		3.4	Investigate status of individual wells
		3.5	Advise well operator of needed adjustments
		3.6	Recommend well stimulation or other required action
		3.7	Ensure flows from wells and systems meet plant and organisation needs
		3.8	Complete logs and reports as required
4	**Prioritise and organise work**	4.1	Ensure required maintenance work has been requested
		4.2	Prioritise maintenance work in liaison with appropriate personnel
		4.3	Organise well shutdowns to suit production requirements where practical
		4.4	Coordinate field operators to ensure their work and priorities match plant and organisation requirements
5	**Solve problems**	5.1	Provide guidance to operators for shutdown/start-up as required
		5.2	Develop the technical problem-solving capability of well operators
		5.3	Analyse data from wells and systems to identify systemic or recurring problems
		5.4	Take action to solve problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

6	**Finalise shift activities**	6.1	Complete shift tasks as appropriate
		6.2	Ensure identified faults are correctly logged/reported for action
		6.3	Ensure incomplete tasks are scheduled for follow-up
		6.4	Ensure all logs and reporting are complete and understood
		6.5	Check operators have completed required tasks

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

performance criteria and HSE requirements, the HSE requirements take precedence.

Hazards

Hazards include one or more of the following:

- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- plant services (steam, condensate and cooling water)
- working at heights, in restricted or confined spaces, or in environments subjected to heat, dusts or vapours
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Routine problems

Routine problems are predictable problems with known solutions and include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- leakage
- solids (formation fines)
- vibration
- loss of control of pressure and/or flow
- hydrate formation and blockages
- liquid slugging
- corrosion
- erosion
- sulphate reducing bacteria
- scale formation
- equipment failure
- change in product parameters (e.g. temperature, flow, pressure and level)
- fouling or contamination

Non-routine problems

Non-routine problems are unexpected problems, or variations of previous problems and must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Product

Product includes anything produced by a process step and so includes:

- intermediate products, such as the product from one process step, which then becomes the feed for another

Logs and reports

Logs and reports include one or more of the following:

- paper or electronic-based logs and reports

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- verbal/radio reports
- reporting items found which require action

Lease maintenance areas requiring action

Lease maintenance areas requiring action include one or more of the following:

- land erosion
- fence and gate integrity
- weeds and other growth
- actions of feral or other fauna
- other required items

Assessment Requirements for PMAOPS433 Manage wells and gathering systems

Modification History

Release 1. Supersedes and is equivalent to PMAOPS433A Manage wells and gathering systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- undertake readings and operate and monitor well system
- analyse and interpret network communication and data on individual wells and recommend action to ensure flow meets plant and organisation needs
- perform site checks, start-up/shutdown procedures, and isolations and de-isolations
- interpret fluid level readings and maintain fluid levels
- plan and coordinate the work of the team
- develop the technical problem solving capability of well operators
- identify early warning signs of equipment/processes needing attention or with potential problems
- identify hazards and risks and apply risk control procedures
- communicate effectively with team, group, supervisors and other personnel
- calculate volumetric flow rates and equipment efficiencies.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- oil/gas formation, structure and completions for coal seam gas (CSG), traditional or other oil/gas formations
- coal type and structure or other bedrock structures
- well design and construction
- inter-well communications (e.g. pressure, flow and other technical parameters)
- well status data (e.g. well flows, flow rates, pressure and temperature, downhole conditions and information)
- hydrate formation
- free flow and pumped wells
- pumping principles
- gas flow principles
- gas/water separation principles
- draining and venting requirements
- corrosion control, chemical handling and safety data sheets (SDS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- flange pressure and temperature ratings (basic)
- cathodic protection (basic)
- downhole drawings (DHDs) and their application to plant/well operation
- remote terminal unit, functions, operation and problems
- pump, drivehead, fuel gas systems operations and principles
- fluid dynamics and statics as relevant to the system
- reservoir management
- methods of changing production rates and the advantages and disadvantages of each
- water testing and gas break through testing techniques
- local lease and well operations requirements and constraints.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of hydrocarbon wells and gathering systems allowing demonstration of operation
  - may use industry-based simulation for part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMAOPS434 Commission wells and gathering systems

Modification History

Release 1. Supersedes and is equivalent to PMAOPS434A Commission wells and gathering systems

Application

This unit of competency covers the skills and knowledge required to commission a well, its gathering system and their associated systems. It applies to operational commissioning which takes place after pre-commissioning of equipment and systems; pre-commissioning is typically performed by a contractor or projects team.

This unit of competency applies to senior operators, field technicians and those in similar roles who are required to apply in-depth knowledge of process and plant to in order to bring a new (or worked over/rejuvenated) well and its gathering system on line, make adjustments to ensure it is in steady operation and delivering at the required rate, balance the impact of the new well on the entire system, and ensure the system is ready to be handed over to a field operator for normal operation.

This unit of competency includes all such items of equipment and unit operations which form part of the well/system. A unit comprises two or more components of plant/equipment that are operated together to produce product, including as appropriate to the facility:

- wellheads
- chokes and control valves
- meters
- flow lines
- high point vents
- low point drains
- valves, including non-return and pressure/vacuum relief
- pumps and their prime movers
- product separation units
- instrumentation and control systems (variable speed drive (VSD) and proportional integral derivative (PID))
- testing equipment
- power units
- drive heads
- flares
- fuel gas systems
- chemical injection equipment
- field flares

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- storage tanks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for work**	1.1	Receive and give shift handover
		1.2	Identify work requirements
		1.3	Identify and control hazards
		1.4	Coordinate with appropriate personnel
		1.5	Check well and its gathering system is ready for commissioning
		1.6	Determine appropriate schedule and priorities for work
2	**Accept handover of well and gathering system**	2.1	Ensure documents and other records provided match 'as is' plant and equipment
		2.2	Check all issues have been satisfactorily resolved
		2.3	Confirm status of individual items being handed over
		2.4	Ensure plant and equipment are operationally sound and in accordance with contract
		2.5	Accept handover when appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.6	Complete logs and reports in accordance with procedures
3	**Commission well in accordance with procedures**	3.1	Commission support systems
		3.2	Commission wellhead and components
		3.3	Make adjustments to bring well to stable operation
4	**Commission gathering system in accordance with procedures**	4.1	Commission support systems
		4.2	Introduce product to gathering system
		4.3	Check all equipment is operating correctly
		4.4	Take action to solve problems
5	**Monitor and adjust well and gathering system to meet production requirements**	5.1	Take required readings
		5.2	Ensure telemetry and controls are functional
		5.3	Adjust downhole pump speed to maintain correct liquid level
		5.4	Monitor nearby wells for impact of new well
		5.5	Complete other site checks
		5.6	Liaise with relevant operational personnel as required
		5.7	Make appropriate adjustments to ensure new well is performing as required
		5.8	Adjust new well and gathering system to balance the overall production to meet requirements
6	**Finalise commissioning activities**	6.1	Complete commissioning tasks as appropriate
		6.2	Ensure identified faults are correctly logged/reported for action
		6.3	Ensure incomplete tasks are scheduled for follow-up

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

6.4 Ensure all logs and reporting are complete and understood

6.5 Check all systems are operational and all relevant personnel are informed

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Hazards

Hazards include one or more of the following:

- electricity
- gas

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- working at heights, in restricted or confined spaces, or in environments subjected to heat, dusts or vapours
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Routine problems

Routine problems are predictable problems with known solutions and include one or more of the following:

- leakage
- solids (formation fines)
- vibration
- loss of control of pressure and/or flow
- hydrate formation and blockages
- liquid slugging
- corrosion
- erosion

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- sulphate reducing bacteria
- scale formation
- equipment failure
- change in product parameters (e.g. temperature, flow, pressure and level)
- fouling or contamination

Non-routine problems

Non-routine problems are unexpected problems, or variations of previous problems and must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Support systems and equipment

Support systems and equipment include as appropriate to the well system:

- fuel gas
- lubricating oil
- check valves
- control valves
- remote terminal unit
- telemetry (communications to base)
- control systems
- distributed control systems (DCS) screens
- other systems and equipment

Product

Product includes anything produced by a process step and so includes:

- intermediate products, such as the product from one process step, which then becomes the feed for another

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Logs and reports	Logs and reports include one or more of the following: • paper or electronic-based logs and reports • verbal/radio reports • reporting items found which require action

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMAOPS434A Commission wells and gathering systems

Assessment Requirements for PMAOPS434 Commission wells and gathering systems

Modification History

Release 1. Supersedes and is equivalent to PMAOPS434A Commission wells and gathering systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- undertake readings and operate and monitor well system
- analyse and interpret network communication and data on individual wells and recommend action to ensure flow meets plant and organisation needs
- perform site checks, start-up/shutdown procedures, and isolations and de-isolations
- interpret fluid level readings and maintain fluid levels
- plan and coordinate the work of the team
- isolate the causes of problems and distinguish between causes of problems/alarm/fault indications, including:
  - instrumentation failure/malfunction
  - electrical failure/malfunction
  - mechanical failure/malfunction
  - control system failure/malfunction
  - mismatch between flow rates and system requirements
  - wear, tear and corrosion of plant and equipment
  - quality measurement inaccuracy (e.g. analyser or sampling deficiency)
  - systemic/recurring problems
- identify hazards and risks and apply risk control procedures
- calculate volumetric flow rates and equipment efficiencies.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- oil/gas formation, structure and completions for coal seam gas (CSG), traditional or other oil/gas formations
- coal type and structure or other bedrock structures
- well design and construction
- inter-well communications (e.g. pressure, flow and other technical parameters)
- well status data (e.g. well flows, flow rates, pressure and temperature, and downhole conditions and information)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hydrate formation
- free flow and pumped wells
- pumping principles
- gas flow principles
- gas/water separation principles
- draining and venting requirements
- corrosion control, chemical handling and safety data sheets (SDS)
- flange pressure and temperature ratings (basic)
- cathodic protection (basic)
- downhole drawings (DHDs) and their application to plant/well operation
- remote terminal unit, functions, operation and problems
- pump, drivehead, fuel gas systems operations and principles
- fluid dynamics and statics as relevant to the system
- reservoir management
- all items on a schematic of the remote system and the function of each
- methods of changing production rates and the advantages and disadvantages of each
- effect of specific climatic and environmental factors
- water testing and gas break through testing techniques
- function and troubleshooting of major components and their problems
- hierarchy of control
- hazards that may arise in the job/work environment, and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of hydrocarbon wells and gathering systems allowing demonstration of commissioning
  - may use industry-based simulation for part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on-the-job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMAOPS450 Solve colour problems

Modification History

Release 1. Supersedes and is equivalent to PMAOPS450B Solve colour problems

Application

This unit of competency covers the skills and knowledge required to solve colour problems identified by internal and/or external customers. It applies to any colour problem, examples include:

- batches during manufacture do not conform to colour specification
- colour as supplied to customer does not conform
- colour as applied to substrate does not conform
- colour variation within the product
- colour was initially satisfactory but has changed over time.

This unit of competency applies to senior technicians or those in similar roles who are required to apply in-depth knowledge of process and plant in order to gather and analyse data, determine the cause of the problem and recommend a solution to the problem.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Operations

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Assist customer**	1.1	Clarify customer perception of problem

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	to articulate problem	1.2	Assess opportunities for a targeted response to meet customer needs
		1.3	Identify the rights and responsibilities of the customer and effectively communicate these to the customer
		1.4	Clarify the history of the problem
		1.5	Define problem and complete records
2	**Analyse possible problem causes**	2.1	Examine the colour of the object/surface
		2.2	Compare colour to standard to determine if colour faulty
		2.3	Determine potential causes if colour faulty
		2.4	Analyse history of problem for potential causes
		2.5	Question customer to clarify issues revealed by examination
		2.6	Take samples and arrange for tests as appropriate
		2.7	Determine range of possible causes consistent with data available
		2.8	Determine most likely cause of defined and observed problem
3	**Satisfy customer needs**	3.1	Determine appropriate strategies and activities to resolve problem
		3.2	Negotiate proposed solution with customers and other relevant parties
		3.3	Identify potential areas of difficulty in customer service delivery and take actions to address them
		3.4	Follow items initiated through until final resolution has occurred
		3.5	Meet customer needs within the scope of area of responsibility
		3.6	Report problems outside area of responsibility to designated person

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3.7 Follow procedures where a decision is made to terminate a service

3.8 Complete reports to procedure

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Routine problems

Routine problems are predictable problems with known solutions and include one or more of the following:

- wrong colourant
- wrong colourant amount
- incorrect processing/mixing/dispersing
- incorrect substrate preparation (e.g. of painted/printed surface)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- incorrect application (e.g. of paint/ink)
- incorrect colour measurement and testing
- defect standard
- process changes and variations

Non-routine problems

Non-routine problems are unexpected problems, or variations of previous problems and must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Product

Product includes anything produced by a process step and so includes:

- intermediate products, such as the product from one process step, which then becomes the feed for another

Assessment Requirements for PMAOPS450 Solve colour problems

Modification History

Release 1. Supersedes and is equivalent to PMAOPS450B Solve colour problems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- communicate effectively with internal and external customers to obtain all relevant information and negotiate a solution
- isolate the causes of problems and distinguish between causes of colour variations, including:
  - materials errors
  - processing errors
  - faulty surface preparation/application
- discriminate differences in hue, value and chroma (or colour/tone, lightness/shade and saturation)
- recognise colourant addition and colourant dispersion differences
- make judgements based on:
  - perceptibility
  - acceptability/tolerance
  - grade 1, 2 or 3 match as required by specification.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- colour and the interaction of colour components during processing and in application
- impact of weathering/aging on colour as appropriate to the product
- causes and remedies of common colour problems
- communication and negotiation techniques.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of products which may have colour problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
    - being currently employed undertaking the type of work being assessed
    - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
    - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
    - conducting on-the-job training/assessments of the type of work being assessed
    - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMAOPS460 Monitor and operate tailings management facilities

Modification History

Release 1. Supersedes and is equivalent to PMAOPS460A Monitor and operate tailings management facilities

Application

This unit of competency covers the skills and knowledge required to monitor and operate a tailings disposal site.

This unit of competency applies to environmental officers, operators or those in similar roles who are required to apply in-depth knowledge to identify risks (business and environmental), operate equipment to deposit tailings in the tailings management facility (TMF), take measurements and make observations on the integrity of the facility, and take actions to prevent or ameliorate adverse environmental outcomes from the tailings management facility.

This unit of competency applies to early stage metal beneficiation processes, typically associated with aluminium, iron, gold, copper, tin, silver, lead and zinc. The TMF will have deposited material suspended in varying levels of water ranging from slurry (e.g. ‘red mud’), through high slump pastes (e.g. filter cake) to low slump pastes; the focus being sub-aerial deposition (not subaqueous or sea deposition).

However, with appropriate contextualisation the unit of competency may be applied to other types of waste deposited in a TMF, including overburden, slag or other solid waste products from later metalliferous or other processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for work**	1.1	Receive and give shift handover
		1.2	Identify work requirements.
		1.3	Identify and control work health and safety (WHS) hazards and identify risks to the environment
		1.4	Coordinate with appropriate personnel
		1.5	Check for recent work undertaken on TMF
		1.6	Note any outstanding/incomplete work
		1.7	Check operational status of TMF and ancillary equipment
		1.8	Coordinate with appropriate personnel, including facility managers and team members
2	**Operate equipment for tailings deposition**	2.1	Access and interpret process waste/tailings management plan and comply with documented processes
		2.2	Identify the type of facility equipment and assess the appropriateness of the equipment given the tailings physical characteristics
		2.3	Measure and report on rate of flow, tailings characteristics and deposition outcomes, as required
		2.4	Set plant to deliver tailings to appropriate location of discharge point according to tailings management plan
		2.5	Complete routine checks, logs and paperwork, taking action on unexpected readings and trends
		2.6	Discharge tailings, as appropriate, based on set rotation sequence for discharges (‘paddocks’) and duration of deposition

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	**Monitor and control TMF in accordance with procedures**	3.1	Carry out routine plant and facility inspections
		3.2	Check flora and fauna near TMF
		3.3	Check for indications of problems with TMF containment/wall
		3.4	Monitor indicators of location of phreatic zone
		3.5	Check beaching and decant water draw off locations
		3.6	Collect samples and conduct and analyse tests
		3.7	Record observations
		3.8	Compare operational performance against standards established in the tailings management plan
		3.9	Adjust spigots (feed) and decant location (withdrawal) to optimise operation of TMF
		3.10	Report operational condition of the tailings management facility
4	**Recognise problems and take action in accordance with procedures**	4.1	Recognise developing situations which may require action
		4.2	Use water balance principles to determine adequacy of TFM capacity
		4.3	Adjust inflows and outflows (e.g. decant rate and tailings inflow) to respond to potential water imbalance especially overflows
		4.4	Identify and respond to problems arising from dust generated in TMF
		4.5	Report any issues identified with the integrity of the equipment delivering tailings to the TMF
		4.6	Apply the requirements of the emergency management plan in case of significant breaches of TMF integrity (for instance a breach of dam wall).
5	**Isolate and**	5.1	Complete any required pre-start checks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

de-isolate facility	5.2	Start up/shut down TMF plant and equipment according to their type and duty in liaison with other personnel
	5.3	Start up/shut down/changeover component plant items which are part of the TMF according to their type and duty in liaison with other personnel
	5.4	Isolate entire TMF and/or any component plant item
	5.5	Make safe for required work
	5.6	Check TMF/plant item is ready to be returned to service
	5.7	De-isolate and prepare TMF plant unit/plant item for return to service

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Hazards

Hazards include one or more of the following:

- drowning
- breach of TMF containment
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- hazardous products and materials
- unauthorised personnel
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Routine problems

Routine problems are predictable problems with known solutions and include one or more of the following:

- rupture of the tailings slurry delivery pipeline or decant water return pipeline
- rainfall induced erosion of the tailings facility containment wall or water imbalance
- geotechnical failure/excessive deformation of containment wall
- overfilling with tailings beyond management facility capacity, especially the result of unpredicted tailings production or storm event
- seepage of hazardous materials through the dam wall or through the foundation into the groundwater

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- migration of the phreatic zone so as to emerge from the face of the dam wall
- dust emissions especially of toxic materials
- uncontained floodwater in high rainfall areas

Non-routine problems

Non-routine problems are unexpected problems, or variations of previous problems and must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Logs and reports

Logs and reports include one or more of the following:

- paper or electronic-based logs and reports
- verbal/radio reports
- reporting items found which require action

Action

Action in accordance with procedures includes one or more of the following:

- positioning of the decant pond, damp or seepage at the dam wall, status of leak detection systems, any unusual vegetation or wildlife occurrences, tailings surface status, and integrity of the dam wall
- recording piezometer readings on water pressure, groundwater quality, seepage and leakage rates through notch weirs, settlement and displacement survey measurements of dam walls
- calculating water balance based on measures of inflow (with tailings, rainfall, catchment run-off, and so on), and storage and outflow (seepage, water reclaim, evaporation, and so on)
- responding to dust issues by spraying with chemical dust suppressants,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

covering the tailings with gravel, setting up silt trap fences or changing the tailings water ratio to maximise the wetted surface
- determining problems needing action
- accessing and applying relevant technical and plant data
- applying appropriate problem-solving techniques to determine possible fault causes
- rectifying problem using appropriate solution within area of responsibility
- following through items initiated until final resolution has occurred
- reporting problems outside area of responsibility/ability to designated person

Tailings/waste characteristics

Tailings/waste characteristics include the following:

- mineralogy: residual resource potential, and plant nutrients
- chemical reactivity: toxicity, leachate potential, acid producing potential, spontaneous combustion, cementation/hydration and weathering
- physical characteristics: particle size distribution, particle density compressibility, shear strength, liquefaction potential, erodibility and dusting potential
- placement characteristics: placed dry density, particle sorting, permeability, bearing capacity and initial placement density
- handling characteristics: solids content of slurries, trafficability during placement, flocculation/settling time and abrasiveness.

Tailings disposal strategy

Tailings disposal strategy includes one or more of the following:

- use/operating of equipment, such as pipes, pumps, conveyor belts, pipeline delivering tailings to management facility (leaks, blockages) and associated equipment (for instance centrifugal or positive displacement pumps)
- the location of discharge points
- the rotation sequence for discharges
- the duration of deposition in an area
- the location of settling ponds and decant facilities
- the location and timing of intermediate paddock bunding
- the likely landform created by the deposition processes at stages throughout operations up to and including final landform
- flowable volumes and potential flow paths
- operational maintenance requirements (e.g. dust suppression, fauna exclusion and drainage)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Work requirements

Work requirements will be identified from one or more of the following:

- briefings
- handovers
- orders
- compliance documentation
- product specifications
- nature and scope of tasks
- achievement targets
- operational conditions
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues

Unit Mapping Information

Assessment Requirements for PMAOPS460 Monitor and operate tailings management facilities

Modification History

Release 1. Supersedes and is equivalent to PMAOPS460A Monitor and operate tailings management facilities

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- conduct checks/tests to measure tailings management facility (TMF) performance, including water quality, dam wall movement, water pressure and water flow
- interpret outcome measures from tests performed
- identify early warning signs of equipment/processes needing attention or with potential problems
- implement emergency management plan
- identify environmental risks and take appropriate action
- operate and monitor deposition and decant equipment.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- types and characteristics of site-specific tailings
- design of tailings management facilities and impact on environmental risk
- methods of tailings disposal and deposition and associated equipment
- environmental risk and environmental management
- water balance and related issues
- principles of operation of pumps under conditions of different tailings consistency and water percentage
- principles of operation of conveyor belts under conditions of different tailings consistency and water percentage
- process parameters and limits of tailings disposal plant (e.g. pressure, flow and pH)
- typical issues causing problems (plant/equipment, process, environmental) and the resolution of those problems
- relevant environmental and heritage requirements
- hierarchy of control
- hazards that may arise in the job/work environment, and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industrial type TMF allowing operation and checking
  - may use industry-based simulation for part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMAOPS500 Optimise production systems

Modification History

Release 1. Supersedes and is equivalent to PMAOPS500A Optimise production systems

Application

This unit of competency covers the skills and knowledge required to analyse and optimise complex operating production systems. It applies to discrete projects which aim to resolve identified production problems, such as a need for improved quality, reduced variability, higher yields, less waste or better control.

This unit of competency is applicable to the optimisation of an entire plant, or for large sites, an entire process system within the site.

This unit of competency applies to senior technicians or those in similar roles who are required to apply in-depth knowledge of process and plant operations and problem solving in order to gather historical plant operating or product quality data, review the data for trends or dependencies, investigate cause and effect responses, develop a solution/improvement and take action to ensure that the improvement is implemented and effective.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Operations

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify process**	1.1	Review process or plant performance to determine likely

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	or system for review		areas of improvement
		1.2	Gather data on the process or system design
		1.3	Design the data collection system for the required data
2	**Collect and analyse data**	2.1	Collect or review available data from the process or plant
		2.2	Analyse the data for trends or dependencies
		2.3	Postulate possible cause and effect scenarios
3	**Develop tests or trials**	3.1	Propose controlled tests or trials to review the plant or process patterns
		3.2	Discuss possible solutions to cause with relevant people
		3.3	Arrange for required tests or controls to be undertaken in appropriate timeframe
		3.4	Collect further data from tests or trials
		3.5	Review plant or process data and compare with original data
		3.6	Prepare further tests or trials as required, or until possible solutions are developed
4	**Develop improvement solution**	4.1	Agree required improvement solution with appropriate people
		4.2	Arrange for required improvement solution to be undertaken in appropriate timeframe
		4.3	Follow items initiated through until final resolution has occurred
		4.4	Check effectiveness of solution and take action
		4.5	Complete reports to procedure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Hazards

Hazards include one or more of the following:

- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- plant services (steam, condensate and cooling water)
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

subjected to heat, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Unit Mapping Information

Assessment Requirements for PMAOPS500 Optimise production systems

Modification History

Release 1. Supersedes and is equivalent to PMAOPS500A Optimise production systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- analyse and interpret schematics, technical information, performance data and operational practices
- design and apply data collection system
- apply problem isolation and problem-solving techniques to multi-variable processes
- develop solutions/improvements
- evaluate effectiveness of solutions/improvements
- communicate and negotiate effectively with internal and external stakeholders
- complete written/electronic records
- perform complex calculations.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- plant equipment, its characteristics and limitations
- process chemistry, physics and biochemistry as relevant (e.g. to the extent of writing chemical equations and identifying factors controlling reaction rate and yield or equivalent, or determining mass or heat transfer rates for a process)
- problem isolation techniques
- problem analysis techniques
- systems operating parameters, system integrity limits, product specifications and tolerances
- principles of operation of plant/equipment
- hierarchy of control
- hazards that may arise in the job/work environment, and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.
  -

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on-the-job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMASUP410 Develop plant documentation

Modification History

Release 1. Supersedes and is equivalent to PMASUP410B Develop plant documentation

Application

This unit of competency covers the skills and knowledge required to develop, establish and evaluate plant documentation in response to identified information requirements. Examples of information requirements include workplace documents for the introduction of new systems, processes, equipment and record keeping requirements.

This unit of competency applies to senior technicians, team leaders and supervisors, or those in similar roles who are required to apply in-depth knowledge of process and plant to in order to investigate the need for new plant documentation, determine operating principles and best practice in consultation with others, draft and validate the plant documentation, and communicate and distribute the new/amended documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Identify information need/deficiency**	1.1 Identify the need for documentation in accordance with company requirements
		1.2 Evaluate current documentation where existent

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.3	Define information need/deficiency
		1.4	Discuss information requirements with appropriate personnel
2	**Develop plant documentation**	2.1	Specify information need and set/prioritise objectives
		2.2	Analyse existing documentation/records in accordance with specified requirements
		2.3	Source information and determine operating principles, best practice and other content as required.
		2.4	Develop/amend documentation as a draft in accordance with specifications to standard format
		2.5	Issue documentation to appropriate personnel for review
		2.6	Edit documentation and amend in accordance with review requirements
		2.7	Complete documentation to satisfy the initial identified need/deficiency
3	**Communicate changes to plant documentation**	3.1	Explain and communicate documentation to all relevant personnel
		3.2	Distribute documentation to all appropriate personnel
		3.3	Evaluate implementation of documentation
		3.4	Amend documents, if required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Plant documentation

Plant documentation to be developed/amended includes one or more of the following:

- operating procedures
- work instructions
- incident procedures
- operating manuals
- quality manuals and procedures
- training program contents/materials

Assessment Requirements for PMASUP410 Develop plant documentation

Modification History

Release 1. Supersedes and is equivalent to PMASUP410B Develop plant documentation

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- review and interpret a range of relevant sources of information and select relevant content
- communicate and consult effectively with all stakeholders
- clearly convey complex/technical information in writing
- use language, structures and formats that are appropriate to information needs, the reader and organisation requirements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- principles of operation of plant/equipment
- process-specific science (e.g. physics, chemistry and biochemistry) and mathematics
- organisation procedures, including those covering:
  - information systems
  - data management
  - quality
  - safety, emergency and hazard control
  - policy/procedure development
  - document control and approvals
  - style guides and standards for documentation
  - use of internet
  - relevant standard operating procedures
- standard codes of practice relevant to developing plant documentation
- sources of information, including:
  - manufacturing specifications
  - product specifications
  - company policies and procedures
  - customer requirements
  - industry/work place codes of practice
  - state/territory work health and safety (WHS) legislation and regulations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- ISO and other industry standards and regulations
- industry associations, networks and professional bodies.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include developing and/or amending at least two (2) types of plant documentation, the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMASUP420 Minimise environmental impact of process

Modification History

Release 1. Supersedes and is equivalent to PMASUP420B Minimise environmental impact of process

Application

This unit of competency covers the skills and knowledge required to minimise the environmental impact of a plant and/or process. It applies to all resources used and products made by the plant, capital projects and improvements brought about by changes in work practices and procedures.

This unit of competency applies to experienced operators or those in similar roles who are required to apply in-depth knowledge of process and plant to in order to develop practices or procedures for conserving resources and minimising pollution and waste that will deliver the most benefits.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Develop resource conservation practices and/or procedures**	1.1	Identify the nature of resources used in the plant/process
		1.2	Identify the primary source of these resources
		1.3	Determine the impact of the depletion of these resources

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			on the environment and society
		1.4	Determine which resources will yield a greater benefit from their conservation
		1.5	Develop methods to reduce the consumption of these resources
		1.6	Complete required documentation to implement change
2	**Develop pollution minimisation practices and/or procedures**	2.1	Identify the nature of pollutants produced by the plant/process
		2.2	Determine the sources of these pollutants within the plant/process
		2.3	Determine the impact of these pollutants on the environment and society
		2.4	Determine which pollutant will yield a greater benefit from their reduction
		2.5	Develop methods to reduce the production of this pollutant
		2.6	Complete required documentation to implement change
3	**Develop waste minimisation practices and/or procedures**	3.1	Identify the nature of wastes produced by the plant/process
		3.2	Determine the sources of these wastes within the plant/process
		3.3	Identify the impact of these wastes on the environment and society
		3.4	Determine which wastes will yield a greater benefit from their reduction
		3.5	Develop methods to reduce the production of this waste
		3.6	Complete required documentation to implement change

Assessment Requirements for PMASUP420 Minimise environmental impact of process

Modification History

Release 1. Supersedes and is equivalent to PMASUP420B Minimise environmental impact of process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- examine plant records, data and operating procedures and practices to determine options for:
  - maximisation of product yield from raw materials
  - reduction in volume of pollutants made and/or reduction in concentration/intensity of pollutants made and/or reduction in emissions
  - minimisation of wastes
- determine relative benefits of the options and develop processes/procedures to achieve preferred options
- document preferred options and complete written and/or electronic records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- resources used by the plant and the impact on the environment and society of using resources
- nature and source of pollutants and waste materials produced by the plant
- nature and severity of the effect the pollutants and waste materials can have on the environment and society
- types of local conditions that can make environmental threats more ‘sensitive’
- pathways of entry to the environment from the plant
- process parameters and limits
- product specifications and tolerances
- principles of operation of plant/equipment
- science (e.g. physics, chemistry and biochemistry) relevant to the process, its materials and eco impacts
- regulatory framework
- organisation procedures, including those covering:
  - environmental management
  - safety, emergency and hazard control
  - procurement.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on-the-job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMASUP432 Coordinate pipeline projects

Modification History

Release 1. Supersedes and is equivalent to PMASUP432B Coordinate pipeline projects

Application

This unit of competency covers the skills and knowledge required to scope and coordinate pipeline projects. It applies to pipeline projects, such as:

- installation of new plant piping and equipment
- pipeline repairs and modifications (e.g. hot tap and stoppling operations, welding and cutting operations)
- upgrades of existing plant, piping and equipment
- commissioning of pipelines and facilities
- construction and upgrade of pipeline easements.

This unit of competency applies to operators who are required to prepare scoping documents, specifications and/or tenders; coordinate the project through the construction and commissioning phases; prepare reports; liaise with stakeholders; and ensure that the project conforms to all safety requirements.

This unit of competency does not require the operation of a central control panel.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare project specification documents**	1.1	Analyse the proposed project to establish contract specifications
		1.2	Facilitate a documented hazard and risk assessment on the proposed project, identifying all potential hazards and risks
		1.3	Draft specification documents stating the required work activity and health, safety and environmental requirements
		1.4	Seek tenders for the specified works, review according to the relevant company procedure and appoint a winning tenderer
2	**Prepare project schedule and documentation**	2.1	Draft a project schedule to establish project timeframe, work activities and procurement of materials
		2.2	Apply the job safety analysis (JSA) process to specific project activities reflecting any health, safety and environmental (HSE) issues identified in the project risk and hazard assessment
		2.3	Write procedures and work instructions for project work activities from the outcome of the JSA process
3	**Facilitate induction training for project**	3.1	Discuss company/site-specific procedures and HSE requirements with contractors/employees carrying out the specified works
		3.2	Review all persons who are inducted to ensure they understand the company/site procedures and HSE requirements
		3.3	Inspect all equipment and machinery utilised to carry out the works to ensure these comply with company/site requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Monitor progress of project**	4.1	Purchase materials required for fabrication and installation on the project and inspect to ensure all items meet project specifications
		4.2	Monitor project works to ensure activities are carried out to project specification and minimal impact occurs on existing operations and environment
		4.3	Issue permits to work where project activities impact on existing pipeline operations
		4.4	Amend and/or modify original specifications and communicate to all parties involved according to the relevant company procedure
		4.5	Produce project reports updating project schedule progress, activities and HSE issues, and discuss with all parties involved.
		4.6	Draft operations manuals and compile vendor data manuals to assist in the operation of the equipment/facility after project completion
5	**Complete and commission project**	5.1	Commission the project to ensure all work carried out meets project specifications and operational requirements
		5.2	Restore the project site to meet environmental, heritage and operational requirements
		5.3	Cancel permits to work and sign-off at completion of works
		5.4	Check all documentation, records and drawings pertaining to the project, verify for accuracy and hand over to the relevant operational department

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- *AS 2885 (Set) Pipelines - Gas and liquid petroleum*
- *AS 4041-2006 Pressure piping*
- *AS/NZS 3000:2007 Electrical installations (known as the Australian/New Zealand Wiring Rules)*
- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- requirements set by authorities, such as:
  - Environmental Protection Authority (EPA)
  - Department of Primary Industry and Energy (DOPIE)
  - Departments of Minerals and Energy State and Territory
  - Worksafe Australia.

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Hazards

Hazards include one or more of the following:

- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- equipment or product mass
- noise, rotational equipment or vibration
- plant services (steam, condensate and cooling water)
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Sources of information

Sources of information include, as appropriate to the project:

- regulatory framework
- procedures
- internal stakeholders
- pipeline alignment drawings
- process and instrument drawings
- workshop fabrication drawings

Inspection and testing

Inspection and testing techniques include, as appropriate to the project:

- hydrostatic testing
- magnetic particle inspection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- radiography
- ultrasonic inspection
- dye penetrant inspection

Assessment Requirements for PMASUP432 Coordinate pipeline projects

Modification History

Release 1. Supersedes and is equivalent to PMASUP432B Coordinate pipeline projects

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- interpret information from a range of sources to determine project specifications, including scope of health, safety and environmental (HSE) requirements, schedules and resource requirements
- coordinate and monitor project activities
- identify hazards and risks and apply risk control procedures
- convey information relevant to the operation clearly and effectively to contractors, employees and other stakeholders
- complete written and/or electronic documentation for the project, including:
  - budget updates
  - project schedule progress report
  - materials and spares listings
  - safety statistics report
  - hazard and incident reports
  - procedures/work instructions
- interpret plans and drawings.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- architecture of pipeline systems and facilities
- pipeline operations knowledge
- pipeline system operating parameters
- quality assurance systems and plans
- emergency response plans and procedures
- preparation and submission of safety cases
- pipeline licenses
- environmental statutes and standards
- project contract and budget management techniques
- regulatory framework
- organisation procedures, including those covering:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - safety, emergency and hazard control
    - policy/procedure development
    - permit system
    - procurement
    - project management
- duty of care obligations
- hierarchy of control.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
    - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
    - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
    - relevant VET or other qualification/Statement of Attainment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMASUP440 Commission/recommission plant

Modification History

Release 1. Supersedes and is equivalent to PMASUP440B Commission/recommission plant

Application

This unit of competency covers the skills and knowledge required to commission new plant/pipeline or recommission significantly modified plant/pipeline. It applies to plant/pipeline, such as on or offshore plant, wellheads, transmission pipelines or similar.

Commissioning refers to the start-up of a new plant or plant unit and the associated equipment for the first time. Recommissioning refers to the start-up of an existing plant following major modifications, rebuild or reconfiguration.

This unit of competency applies to senior technicians and those in similar roles who are required to apply in-depth knowledge of process and plant in order to ensure design of new/modified plant meets safety and operability requirements, plan and coordinate commissioning/recommissioning, and complete required documentation. The technician would not normally have a 'hands on' operating role for all items of equipment, but may have a 'hands on' role for major items of equipment; however this is not required as part of this competency.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Contribute to/review the design of plant/ equipment**	1.1	Apply process understanding to the design process
		1.2	Identify the role and purpose of the plant and equipment
		1.3	Ensure design meets the identified need
		1.4	Identify process conditions and apply to hazard and operability studies (HAZOP)
		1.5	Undertake investigations following hazard studies
		1.6	Record and report findings
2	**Take part in commissioning planning**	2.1	Ensure the work is coordinated effectively with others involved on the work site
		2.2	Obtain materials necessary to complete the work and check against job requirements
		2.3	Obtain tools and equipment necessary to carry out the work and check for correct operation and safety
		2.4	Prepare plans to ensure that procedures are performed in the correct sequence
		2.5	Obtain approvals, where necessary, from appropriate authorities
3	**Participate in acceptance of plant/ equipment**	3.1	Undertake pre-commissioning activities
		3.2	Complete safety acceptance documentation
		3.3	Identify, record and report problems or non-conformance
		3.4	Conduct trials/test runs
		3.5	Record and report performance data
4	**Commission system**	4.1	Bring the plant/plant systems/pipeline online
		4.2	Make and report adjustments
		4.3	Prepare reports in accordance with legislative and

requirements
- manufacturer specifications
- appropriate authority approvals (e.g. local councils, road authority, sewerage, stormwater, electricity, water and telephone)
- quality assurance inspection and test reports

Plant/pipeline systems

This unit of competency includes all items of equipment and unit operations which form part of the pipeline system including, as relevant to a particular plant/pipeline:

- pipes
- valves
- operating units
- electrical and electronic components
- programmable logic controllers (PLCs)/distributed control system (DCS) or other plant controls
- cathodic protection (CP)
- pressure/flow/temperature, regulation and meters

Tools, materials and equipment

Tools, materials and equipment include one or more of the following:

- hand tools,
- power operated tools
- plant
- emergency equipment
- electrical and electronic test equipment
- gas detectors
- air compressor
- water pump

Assessment Requirements for PMASUP440 Commission/recommission plant

Modification History

Release 1. Supersedes and is equivalent to PMASUP440B Commission/recommission plant

Performance Evidence

- Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:
- plan, coordinate and monitor pre-commissioning, commissioning/recommissioning activities
- arrange resources as required
- communicate effectively with stakeholders, including manufacturers, engineering personnel, designers, contractors and maintenance and other company personnel
- participate in and/or review hazard and operability studies (HAZOP), hazard analysis studies (HAZAN) or similar techniques
- participate in and/or review design or modification plans
- identify hazards and risks and apply risk control procedures

complete written/electronic documentation.

Knowledge Evidence

- Evidence must be provided that demonstrates knowledge of:
- all items on a schematic of the system and functions of each
- principles of operation of items of equipment in the system
- principles of operation of instrumentation
- principles of basic control systems
- process control philosophies and strategies
- interactions between plant items/processes
- systems' operating parameters
- system integrity limits
- product tolerances, limitations and specifications
- types and purpose of typical pre-commissioning activities, including:
  - checking plant is built to design
  - ensuring plant is safe to operate
  - ensuring plant area and plant internals are clean and clear of debris
  - functional checking of equipment and ancillaries
- types and purpose of typical commissioning/recommissioning activities, including:
  - trial running of equipment
  - use of trial materials in plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - safe introduction of process materials to plant
  - producing product within specification
  - bringing plant to design rates
  - solving operational problems
  - disposal of waste generated in the start-up
- science (e.g. physics, chemistry and biochemistry) relevant to process and materials
- process parameters and limits (e.g. temperature, pressure, flow and pH)
- correct methods of starting, stopping, operating and controlling plant
- routine and non-routine problems that may arise, the range of possible causes and processes to develop solutions.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.

PMASUP441 Decommission plant

Modification History

Release 1. Supersedes and is equivalent to PMASUP441C Decommission plant

Application

This unit of competency covers the skills and knowledge required to decommission an existing plant/pipeline or major plant area, and its associated equipment. It applies to plant/pipeline, such as on or offshore plant, wellheads, transmission pipelines or similar.

Decommissioning refers to the removal from service of plant/pipeline and equipment and its storage, 'mothballing' or disposal.

This unit of competency applies to senior technicians and those in similar roles who are required to apply in-depth knowledge of process and plant in order to plan and supervise the systematic shutdown, cleaning out and preparation for safe 'mothballing' of all of the plant and equipment.

The technician will have detailed operational and process knowledge but is not required to demonstrate 'hands on' operation of equipment as part of this competency.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for PMASUP441 Decommission plant

Modification History

Release 1. Supersedes and is equivalent to PMASUP441C Decommission plant

Performance Evidence

- Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:
- plan, coordinate and monitor decommissioning activities
- arrange resources as required
- document the decommissioning and recommendations for safe storage/maintenance/disposal
- communicate effectively with stakeholders, including manufacturers, engineering personnel, designers, contractors and maintenance and other company personnel
- participate in hazard and operability studies (HAZOP), hazard analysis studies (HAZAN) or similar techniques
- identify hazards and risks and apply risk control procedures

complete written/electronic documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- all items on a schematic of the system and functions of each
- principles of operation of items of equipment in the system
- interactions between plant items/processes
- systems' operating parameters
- system integrity limits
- procedures for typical options/processes for removal of plant and equipment from service, including:
  - 'mothballing'
  - storage
  - disassembly
  - demolition
  - decontamination of equipment
  - disposal of equipment and waste
- safe disposal methods of materials and equipment
- decontamination processes
- science (e.g. physics, chemistry and biochemistry) relevant to process and materials processed or produced

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- process parameters and limits (e.g. temperature, pressure, flow and pH)
- correct methods of starting, stopping, operating and controlling plant
- routine and non-routine problems that may arise, the range of possible causes and processes to develop solutions
- hierarchy of control.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMASUP444 Plan plant preparation and isolation

Modification History

Release 1. Supersedes and is equivalent to PMASUP444A Plan plant preparation and isolation

Application

This unit of competency covers the skills and knowledge required to plan and prepare for isolation of plant and its return to service. This unit of competency applies after the work scope has been agreed, but before the isolation and preparation commences.

Isolation is a process for ensuring no energy or material can enter the isolated area. Typically the isolation will occur so that the plant can be prepared for subsequent work, such as maintenance.

This unit of competency applies to senior technicians, operator/maintainers, maintenance planners, authorised permit issuers, and those in similar roles who are required to apply in-depth knowledge of process and plant in order to confirm the work to be done; plan the isolation and de-isolation strategies, preparations and sequencing; obtain authorities; liaise with stakeholders and complete documentation. The technician will have detailed operational and process knowledge but is not required to demonstrate 'hands on' operation of equipment as part of this competency. This competency may form part of their regular work role or could be a full-time role on secondment for a major shutdown.

This unit of competency applies to hazardous plant, such as a major hazard facility. However, with appropriate contextualisation it can be applied to the preparation and isolation of lower hazard plants and mobile plant.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Confirm scope of work**	1.1	Examine identified work scope (e.g. what, where, who, when, why, duration and frequency)
		1.2	Confirm purpose of identified work
		1.3	Identify plant and equipment involved
		1.4	Negotiate any conflicts/inconsistencies with relevant stakeholders
		1.5	Identify possible need for temporary lifting of any isolations
2	**Develop isolation philosophy for work**	2.1	Apply relevant isolation philosophy/strategy, including type of/hierarchy of isolation and lock out/tag out
		2.2	Determine implications of isolation
		2.3	Identify physical limits of affected plant and equipment
		2.4	Check suitability and effectiveness of existing isolation procedures
		2.5	Assess possible boundaries for isolations
		2.6	Seek local knowledge for similar isolations and preparations
		2.7	Identify available/permissible preparation strategies, including purging fluids and techniques
		2.8	Draft strategies for isolation and preparation
		2.9	Communicate, as appropriate, with stakeholders
		2.10	Negotiate isolation and preparation conflicts
		2.11	Prepare isolation philosophy for work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	**Manage hazards**	3.1	Identify existing hazards of plant, process and materials
		3.2	Identify hazards associated with performing the isolations and preparation
		3.3	Identify hazards associated with purging/flushing/venting materials
		3.4	Draft strategies for controlling any releases
		3.5	Estimate required preparation durations taking into account factors, such as starting conditions, safe rates of change (pressure, temperature), volumes and pressures required
		3.6	Make recommendations for improvement in accordance with procedures
		3.7	Liaise with technical experts as required
		3.8	Specify types of isolations and locations of isolations required
		3.9	Specify controls to bring hazards to ‘as low as reasonably practicable’ (ALARP)
4	**Plan required isolation and preparation**	4.1	Determine required sequencing of all steps
		4.2	Develop isolation procedure
		4.3	Develop preparation procedure
		4.4	Develop decontamination procedures
		4.5	Develop required procedures for plant supplementary systems
		4.6	Verify procedures against relevant drawings and the plant
		4.7	Identify and schedule required pre-work
		4.8	Determine competencies required to complete planned isolations and preparation
		4.9	Plan required de-isolation and preparation for return to service

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.10	Discuss proposed plans with relevant stakeholders
		4.11	Complete required documentation
5	**Obtain authority to execute plan**	5.1	Obtain approval to implement the isolation and preparation plan
		5.2	Obtain approval to implement the de-isolation and preparation for return to service plan
		5.3	Acquire hardware and resources for isolation and de-isolation and preparation for work and return to service

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- Government of Western Australia, Department of Commerce, Guidance note – Isolation of plant, 2010 (or similar state regulation)
- National Offshore Petroleum Safety Authority (NOPSA) requirements, where relevant
- Major Hazard Facility (MHF) Licence to operate, where relevant
- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence

Hazards

Hazards include one or more of the following:

- electricity
- gas (flammable, toxic and anoxic)
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- plant services (steam, condensate and cooling water)
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Determining competencies required

Determining competencies required for isolation and preparation includes consideration of the need for skilled/qualified/licensed personnel in the areas of the following:

- electrical (normal)
- electrical high voltage and hazardous area
- electrical isolation/de-isolation
- radiation
- heights
- mobile plant
- plumbing
- mechanical fitting
- permit preparation

Isolation procedures

Isolation procedures include one or more of the following:

- isolation processes
- isolation list
- multiple isolations
- temporary lifting of isolations, when and if required
- interlocks
- and will include consideration of:
  - isolation alternatives
  - conflicts of isolation

Verifying procedures

Verifying procedures include one or more of the following:

- checking existing documents which have been used are accurate, current and complete
- checking planned isolation points do exist, are accessible, and are suitable for the isolation planned
- having a history of providing the isolation desired

Relevant drawings

Relevant drawings include one or more of the following:

- piping and instrumentation diagrams (P&IDs)
- process flow diagrams (PFDs)
- process flow sheets (PFSs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- process engineering flow sheets (PEFs)

Required pre-work

Required pre-work includes one or more of the following:

- scaffolding
- building up/depletion of inventories/work in progress (WIP)
- obtaining of supplies
- identification tags
- lock out kits

Required documentation

Required documentation includes one or more of the following:

- drawings
- procedures
- marking up existing documents
- punch lists
- vendor documents/engineering specifications
- documentation required by the site work control system (e.g. permits)

Documents will conform to the site requirements and document control systems, and will be paper-based, electronic or in another approved form.

Authority to execute

Authority to execute includes both the authorisation to proceed and the timing of that execution. Authority will be obtained through the channels required by the organisation/facility.

The level of authority required will vary for different types of work, different types of isolation and different plants/facilities.

Unit Mapping Information

Assessment Requirements for PMASUP444 Plan plant preparation and isolation

Modification History

Release 1. Supersedes and is equivalent to PMASUP444A Plan plant preparation and isolation

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- plan, prepare and develop plant preparation and isolation philosophy/activities for a particular activity
- arrange resources as required
- communicate effectively with stakeholders, including manufacturers, engineering personnel, designers, contractors and maintenance and other company personnel
- identify hazards and risks and apply risk control procedures
- complete written/electronic documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- all items on a schematic of the system and functions of each
- principles of operation of items of equipment in the system
- process parameters and limits, (e.g. temperature, pressure, flow and pH) and plant integrity limits
- typical requirements for preparation to ensure that plant and equipment is in a safe and appropriate condition for the required work, including:
  - draining
  - purging
  - inerting
  - decontaminating
  - cleaning
  - ventilating
  - controlling atmosphere (e.g. to ensure it is breathable, and is not within the flammable range)
  - adjusting temperature to make a workable environment
  - adjusting pressure (usually to atmospheric)
  - ensuring adequate access and egress

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- implications of isolation in both the area of the work and upstream and downstream, including:
  - upstream and downstream process implications
  - ability to prepare plant once isolated
  - integrity of plant once isolated and prepared
- methods for controlling releases to the environment, including:
  - preventing any release
  - containing any release
  - recovery and reuse or disposal of any release.
  -

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Simulation may be used for part only of this unit.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMASUP445 Participate in HAZOP studies

Modification History

Release 1. Supersedes and is equivalent to PMASUP445A Participate in HAZOP studies

Application

This unit of competency covers the skills and knowledge required to participate in hazard and operability studies (HAZOP).

HAZOP is a systematic method for examining complex facilities or processes to identify actual or potentially hazardous procedures and operating issues within the design, construction and commissioning of equipment and plant so that they may be eliminated or mitigated. Typically a multi-disciplinary team comprising operators, engineers, safety and other personnel will review a change in plant, process or equipment to see if the change can cause unforeseen hazards or introduce unexpected operability problems and confirm that the change meets the standards.

This unit of competency applies to senior technicians and those in similar roles who are required to apply in-depth knowledge of process and plant in order to review piping and instrumentation diagrams (P&IDs) or similar in relation to a proposed change, identify possible hazards or operability issues, recommend amendments to improve safety and operability of the change, and review and amend procedures in relation to the change.

This unit of competency applies to an individual who is part of a multi-disciplinary HAZOP team. At all times they would be liaising and cooperating with members of the team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for HAZOP study**	1.1	Explain the purpose of the HAZOP study
		1.2	Review the key steps in undertaking the HAZOP study
		1.3	Review the HAZOP tools to be used
2	**Participate in a HAZOP study**	2.1	Identify the purpose and operation of the new/modified equipment/process
		2.2	Determine the normal operating conditions, method of operation and associated equipment and componentry of proposed change
		2.3	Review relevant information to assist in the identification of possible problems
		2.4	Process available information to identify potential hazards or operability issues
		2.5	Identify potential hazards or operability issues and possible consequences utilising key words
		2.6	Assess the risks arising from identified potential hazards or operability issues
		2.7	Identify items needing further action
		2.8	Review relevant operating and safety procedures
		2.9	Recommend possible solutions to minimise risk of proposed change
3	**Complete delegated actions within scope of responsibility**	3.1	Perform delegated actions within area of responsibility
		3.2	Follow initiated items through until final resolution has occurred
		3.3	Identify problems needing further action

3.4 Determine possible fault causes within area of responsibility

3.5 Report outcomes to designated person

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hazards

Hazards identified are situations/conditions which may lead to an incident or make operation difficult and will arise from consideration of key words.

Sources of information

Sources of information include, as appropriate to the proposed change:

- provisional layouts
- safety data sheets (SDS)
- process drawings (e.g. P&IDs, process flow diagrams (PFDs), and cause and effect)
- plant model
- equipment arrangement drawings
- provisional operating instructions/procedures
- plant operating procedures
- logic diagrams
- equipment reference manuals
- hazardous area layouts
- start-up and shutdown emergency procedures
- access to plant and equipment

Delegated action

Delegated actions arising from HAZOP study include one or more of the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

following:

- review of plant operating procedures
- undertaking additional tasks from action list HAZOP report
- attendance at HAZOP review meetings
- recording results from additional tasks

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMASUP445A Participate in HAZOP studies

Assessment Requirements for PMASUP445 Participate in HAZOP studies

Modification History

Release 1. Supersedes and is equivalent to PMASUP445A Participate in HAZOP studies

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- analyse schematics and other sources of information to identify actual and/or potential hazards and recognise conditions that might lead to operability issues
- utilise key words in the identification of potential hazards or operability issues
- identify possible consequences and asses risks from identified potential hazards and operability issues
- recommend possible solutions
- complete actions delegated from the HAZOP
- communicate effectively with multi-disciplinary stakeholders.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- the architecture and location of the process/production equipment
- specific plant process operations
- interactions between plant items/processes
- product specifications and tolerances
- systems operating parameters
- system integrity limits
- process control philosophies and strategies
- emergency shutdown procedures
- science (e.g. physics, chemistry and biochemistry) relevant to process and materials
- impact of external factors (e.g. variations in weather and feed)
- process drawings (e.g. piping and instrumentation diagrams (P&IDs), process flow diagrams (PFDs), and cause and effect)
- basis of control for the plant/s
- instrumentation and control systems, components and loops as they relate to the modification under review
- impacts of changing process/production equipment settings and the limits within which changes can be made
- organisation procedures
- work health and safety (WHS), hazardous substances and environmental requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- enterprise standard operating procedures, plant processes and equipment for area under review
- duty of care obligations
- hierarchy of control.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- being currently employed undertaking the type of work being assessed
- being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on-the-job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMASUP520 Review procedures to minimise environmental impact of process

Modification History

Release 1. Supersedes and is equivalent to PMASUP520B Review procedures to minimise environmental impact of process

Application

This unit of competency covers the skills and knowledge required to establish and review procedures to minimise the environmental impact of a process and/or plant using a proactive environmental management approach. Proactive environmental management goes beyond complying with environmental requirements and integrates environmental goals with core business objectives.

This unit of competency applies to senior technicians, paraprofessionals or those in similar roles who are required to apply in-depth knowledge of process and plant in order to develop, implement and review procedures that will conserve resources and minimise pollution and waste, and ensure that the procedures are supported by appropriate training and record keeping.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Develop procedures for**	1.1 Develop workplace procedures of proactive environmental management which include resource

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	environmental management		conservation, pollution and waste minimisation
		1.2	Determine primary source of respective aspects
		1.3	Determine the negative impact of these aspects on the environment and the society if they are mismanaged
		1.4	Prioritise management options according to the greatest benefit to environment and the society
		1.5	Develop management procedures
		1.6	Complete required documentation to implement change
2	**Review procedures for environmental management**	2.1	Review the procedures on a regular basis by consulting relevant work groups for feedback
		2.2	Incorporate relevant feedback into the revised procedures in consultation with the relevant personnel
		2.3	Inform relevant work groups of any changes and implement changes in the procedures
3	**Implement and review an environmental management training program**	3.1	Identify the workplace environmental management training program
		3.2	Review the program on a regular basis by consulting relevant work groups for feedback
		3.3	Incorporate relevant feedback into the revised program in consultation with the relevant personnel
		3.4	Inform relevant work groups of any changes and implement changes in the training program
4	**Implement and review environmental management recording system**	4.1	Identify the workplace environmental management recording system
		4.2	Review the system on a regular basis by consulting relevant work groups for feedback
		4.3	Incorporate relevant feedback into the revised system in consultation with the relevant personnel

4.4 Inform relevant work groups of any changes and implement changes in the management of environmental records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Stakeholders

Stakeholders include one or more of the following:

- organisation management and operational staff
- suppliers
- contractors
- others acting on the organisation's behalf
- customers

Sources of information

Sources of information include one or more of the following:

- organisation goals, commitments and procedures (e.g. business/strategic plans, voluntary environmental agreements entered into with external organisations/authorities, and organisation policies and procedures)
- regulatory framework
- consultation with internal stakeholders
- own knowledge and experience of plant/process
- technical/operational documentation
- schematic (e.g. piping and instrumentation diagrams (P&IDs and process flow diagrams (PFDs))

Assessment Requirements for PMASUP520 Review procedures to minimise environmental impact of process

Modification History

Release 1. Supersedes and is equivalent to PMASUP520B Review procedures to minimise environmental impact of process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- analyse information from a range of sources to determine environmental aspects/interactions of plant and/or processes and potential impacts
- develop, evaluate and prioritise options for minimising impact
- develop and document procedures to implement priority options
- communicate and consult effectively with stakeholders
- review and revise relevant procedures, record keeping system and training programs to reflect amendments and feedback from stakeholders.

Knowledge Evidence

Evidence must be provided that demonstrates sufficient knowledge to interact with relevant personnel and be able to establish and review procedures to minimise the environmental impact of a process, including knowledge of:

- aspects of interaction of plant/processes with the environment and society
- the effects on the environment and society of the organisation's:
  - liquid waste
  - solid waste
  - gas/fume/vapour/smoke emissions, including fugitive emissions
  - hazardous materials
  - energy and water use
  - noise
- management strategies and workplace practices that can be used to minimise or prevent these effects, including:
  - recycling and reusing
  - reducing amount of non-renewable resources used
  - reducing volume and/or concentration/intensity of pollutants made
  - reducing emissions
  - improving housekeeping (e.g. using a broom instead of a hose, and using old rags for cleaning instead of toxic cleaners or water)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - substituting materials (e.g. replacing toxic solvent-based coatings with water-based ones)
  - changing processes (e.g. mechanical cleaning, and re-design of products/procedures so that materials are used more efficiently)
  - tenders for the provision of goods and services that specify environmentally preferred selection criteria
- nature and severity of the effect the pollutants and waste materials can have on the environment and society
- types of local conditions that can make environmental threats more 'sensitive'
- pathways of entry to the environment from the plant
- systems operating parameters
- system integrity limits
- process control philosophies and strategies
- product specifications and tolerances
- principles of operation of plant/equipment
- science (e.g. physics, chemistry and biochemistry) relevant to process and materials
- organisation procedures, including those covering:
  - environmental management
  - safety, emergency and hazard control
  - procurement
- hierarchy of control.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- It is not necessary for the recommended improvements in utility/efficiency to be complete for the purposes of this unit.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMASUP620 Manage environmental management system

Modification History

Release 1. Supersedes and is equivalent to PMASUP620B Manage environmental management system

Application

This unit of competency covers the skills and knowledge required to establish and manage the environmental management system.

This unit of competency applies to senior technicians, paraprofessionals and those in similar roles who are required to demonstrate in-depth knowledge of the business, process and plant in order to identify and quantify business opportunities from environmental management and establish procedures, goals and systems to implement environmental sustainability, continuous improvement and sustainable innovation as integral to the business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Develop an environmental management system**	1.1 Select an appropriate environmental management system as a model for the enterprise/plant
		1.2 Develop environmental management policies that reflect the organisation's commitment to environmental sustainability as an integral part of business planning

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			and as a business opportunity
		1.3	Develop strategies to encourage all stakeholders to meet high standards of environmental performance and support sustainable innovation and continuous improvement
		1.4	Develop policies and procedures to incorporate and support triple bottom line principles
		1.5	Develop policies/procedures which minimise environmental impacts
		1.6	Check policies conform to current regulatory requirements
		1.7	Address environmental management at the planning, design and evaluation stages to ensure that any changes in the workplace are identified for ongoing impact and opportunity
2	**Manage innovation and improvement**	2.1	Identify, evaluate and take into consideration changing trends and opportunities relevant to the organisation for ongoing improvement programs
		2.2	Promote continuous improvement and sustainable innovation as an essential part of doing business and as a context for assessment and planning of environmental performance
		2.3	Develop continuous improvement and innovation policies and procedures that include training and professional development to optimise the environmental performance of the organisation
		2.4	Develop a system to analyse and communicate the costs and benefits of innovations and improvements and to measure, monitor and record environmental performance
		2.5	Develop performance benchmarks and indicators and set targets to maximise continuous improvement
3	**Review environmental management**	3.1	Develop processes to ensure that an integrated ongoing review is part of the organisation policy and procedures
		3.2	Promote improvement and sustainable innovation to

system	organisational performance by ongoing evaluation and assessment, and changes to policies

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- relevant Commonwealth and state/territory Environment Acts
- applicable state/territory environmental regulations
- licences and permit conditions
- industry codes of practice and guidelines
- Australian and other standards
- environmental treaties and conventions
- national environmental policies, strategies and initiatives, such as the National Greenhouse Strategy and National Strategy for Ecologically Sustainable Development
- National Pollutant Inventory
- State of the Environment Reports
- Industry Association Commitments (e.g. The Global Mining Initiative)
- health and safety legislation, codes of practice and guidance material
- legislative requirements, including work health and safety (WHS)
- environmental regulations and guidelines
- licence and certification requirements

All operations to which this unit applies are subject to stringent health,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Sources of information

Sources of information include one or more of the following:

- organisation goals, commitments and procedures (e.g. business/strategic plans, voluntary environmental agreements entered into with external organisations/authorities, and organisation policies and procedures)
- regulatory framework
- consultation with internal and external stakeholders
- own knowledge and experience of plant/process
- technical/operational documentation
- schematic (e.g. piping and instrumentation diagrams (P&IDs) and process flow diagrams (PFDs))
- available research/data (e.g. industry benchmarking data/systems and sustainability performance measures/metrics)

Performance benchmarks

Performance benchmarks and targets include one or more of the following:

- best practice or industry codes for the industry/sector
- levels of performance expected of organisation sectors and/or the organisation as a whole

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Stakeholders

Stakeholders include one or more of the following:

- board members, financial backers and owners
- all members of the organisation, including management and staff members
- suppliers
- contractors
- others acting on the organisation's behalf
- customers
- external individuals or bodies who may have an interest in or may be affected by the organisation

Continuous improvement and innovation policies

Continuous improvement and innovation policies include one or more of the following:

- consistent reviewing activities in search of a better way
- improving the organisation in all aspects of its operation and may look at life cycle impacts of the organisation, including:
  - activities and products are designed to minimise life cycle impacts and maximise opportunities
  - tendering and purchasing processes that include life cycle criteria
  - product design and manufacture
  - packaging policies
  - product use and disposal
- vehicle policies that include use of cleaner fuels or alternative energy sources and regular servicing intervals to reduce pollution and improve efficiency

Environmental sustainability

Environmental sustainability may be influenced by one or more of the following:

- the organisational culture and operations
- internal or external economic climate
- political climate
- market focus/considerations
- environmental impacts of the business operation

Assessment Requirements for PMASUP620 Manage environmental management system

Modification History

Release 1. Supersedes and is equivalent to PMASUP620B Manage environmental management system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- obtain and analyse information from a range of sources to determine environmental aspects/interactions of plant and/or processes and potential impacts
- communicate, consult and negotiate effectively with internal and external stakeholders from a range of social, cultural and ethnic backgrounds, and physical and mental abilities
- use problem-solving skills to develop strategies and procedures to deal with identified environmental impacts and opportunities
- plan, write and evaluate a system of policies and procedures to implement the strategies and procedures into the organisation.

Knowledge Evidence

Evidence must be provided that demonstrates sufficient knowledge to interact with relevant personnel and be able to manage the environmental management system, including knowledge of:

- change management
- continuous improvement
- policy development, performance benchmarking and indicator development relevant to the organisation's activities
- environment sustainability as a 'whole system' approach
- implications/application of sustainable development for a business
- techniques to measure sustainability/environmental performance in terms of an organisation's impact on the environment and their ability to manage and minimise negative impacts
- application of the 'triple bottom line' (TBL) principle as a framework for measuring and reporting corporate performance against economic, social and environmental parameters
- management strategies and workplace practices that can be used to minimise or prevent these effects, including:
  - recycling and reusing
  - reducing amount of non-renewable resources used
  - reducing volume and/or concentration/intensity of pollutants made

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - reducing emissions
    - improving housekeeping (e.g. using a broom instead of a hose, and using old rags for cleaning instead of toxic cleaners or water)
    - substituting materials (e.g. replacing toxic solvent-based coatings with water-based ones)
    - changing processes (e.g. mechanical cleaning, and re-design of products/procedures so that materials are used more efficiently)
    - tenders for the provision of goods and services that specify environmentally preferred selection criteria
- quality systems
- supply chain management
- relevant system analysis and design principles
- organisation business goals and strategic plans
- strategies to maximise opportunities
- environment impact minimisation strategies
- environmental issues, including as relevant to the organisation, water catchments, air/emissions, noise, ecosystems, habitat and waste minimisation
- relevant social sustainability issues, including corporate image, staff morale, customer loyalty and community engagement
- financial/market issues related to environmental management, including cost reduction, product differentiation/branding and identification of market potential
- organisation procedures, including those covering:
    - environmental management
    - safety, emergency and hazard control
    - procurement
- duty of care obligations
- hierarchy of control.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
    - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
    - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Simulation may be used for part only of this unit.
- It is not necessary for the recommended improvements in utility efficiency to be complete for the purposes of this unit.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMAWHS420 Develop first aid procedures and manage resources

Modification History

Release 1. Supersedes and is equivalent to PMAOHS420B Develop First Aid procedures and manage resources

Application

This unit of competency covers the skills and knowledge required to manage the development and implementation of a workplace first aid system.

This unit of competency applies to operators who are required to plan and coordinate processes to develop new or review existing first aid procedures, communicate procedures to others, and ensure training and professional development needs are addressed.

This unit of competency applies to all work environments and sectors within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Work health and safety

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Develop effective organisational systems**	1.1	Coordinate participative processes to identify and agree on outcomes
		1.2	Initiate processes to plan, implement and control systems to achieve identified outcomes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.3	Implement/develop policies and procedures consistent with procedures.
		1.4	Develop and maintain processes for effective conduct of first aid responsibilities
		1.5	Distribute changes in policy and procedures to relevant personnel using appropriate communication channels
		1.6	Undertake review of procedures/policies, and report recommendations as required
2	**Implement effective first aid training and practice**	2.1	Maintain links with first aid bodies, professionals and clinical organisations/bodies
		2.2	Maintain currency of first aid and personal qualifications in accordance with industry and organisational requirements
		2.3	Review and validate risks against procedures
		2.4	Coordinate, plan, implement and evaluate additional training in a timely manner to meet the needs of individuals and the worksite
		2.5	Ensure practices are consistent with current standards and policies
		2.6	Coordinate planning for response to major incidents and make known to the work group in readiness for implementation
3	**Maintain up-to-date professional development of knowledge and skills**	3.1	Undertake self-education process in accordance with workplace principles and opportunities
		3.2	Access links with various professional first aid bodies and organisations to maintain currency in the field
		3.3	Access and communicate promptly relevant information to work group, and maintain certification in accordance with workplace procedures and legislation

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- directives and/or guidelines from:
  - Australian Resuscitation Council (ARC)
  - National Health and Medical Research Council (NHMRC)
  - Australian Standards
  - Worksafe Australia
- emergency procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Systems

A first aid system must be supported by systems and procedures in related areas of the organisation, including the following:

- ordering (e.g. magazines, books and supplies)
- skills updating (e.g. attending conferences/workshops and reading publications)
- professional development and networking (e.g. attending conferences/workshops and reading publications)
- communication
- technology
- training and assessment, and refresher training
- IT
- record keeping
- health safety and environment
- hazard and risk management

Professional development

Professional development includes one or more of the following:

- accessing up to date information about industry practices, codes and certification requirements via:
  - meetings
  - seminars
  - conferences
  - membership of professional first aid bodies
- education/self-education processes, such as:
  - attendance at relevant seminars and conferences
  - maintenance of professional library
  - membership of first aid bodies
  - formal training
  - supervised or unsupervised practice to maintain currency of competence

First aid bodies

First aid bodies and professional and clinical organisations/bodies include

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

and clinical organisations	the following: • Australian Resuscitation Council (ARC) • International Liaison Committee on Resuscitation (ILCOR) • support groups • registered providers/authorities

Assessment Requirements for PMAWHS420 Develop first aid procedures and manage resources

Modification History

Release 1. Supersedes and is equivalent to PMAOHS420B Develop First Aid procedures and manage resources

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- communicate effectively orally and in writing
- coordinate participative processes
- plan for and develop procedures incorporating input from others
- evaluate policy/procedures and make recommendations for improvement
- determine the need for training and professional development and coordinate appropriate responses
- manage own professional development and currency of certification
- monitor the implementation of the system and make amendments, including:
  - correct application of procedures
  - alignment to current first aid practice/standards
  - need for information/communications
  - integration with other systems/procedures
- write procedures, including technical and numerical information.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including those covering:
  - safety, hazards and hazard control
  - incident, fire and accident
  - environmental protection
  - risk assessment/risk management
- hazards that may arise in the job/work environment, and:
  - their possible causes
  - potential consequences
  - risks
  - appropriate risk controls
- regulatory framework
- state and territory regulations relating to currency of skills and knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- training and assessment processes and methods
- identifying and evaluating training/assessment options
- techniques for identifying skills/training needs
- national training agenda
- the role of professional development
- first aid principles and practices.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of developing new or reviewing existing first aid procedures which satisfy the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of developing new or reviewing existing first aid procedures which satisfy the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

PMBFIN201 Finish products and components

Modification History

Release 1. Supersedes and is equivalent to PMBFIN201C Finish products and components

Application

This unit of competency covers the skills and knowledge required to use materials and equipment to finish products to make them ready for use by customers or in a subsequent process.

Finishing refers to a range of secondary value-adding processes, such as trimming, grinding, applying protective coatings, cleaning, sorting, assembly and repair of minor surface imperfections.

This unit of competency applies to production support operators or those in similar roles who are required to communicate with others and apply procedures in order to select and apply finishing processes, inspect the product for routine and non-routine imperfections and take appropriate action.

It applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

This unit of competency applies to all sectors of the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Finishing

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Establish requirements for the finishing process**	1.1	Identify work requirements from procedures
		1.2	Assemble equipment and consumables for the finishing process
		1.3	Consult workplace procedures and safety data sheets (SDS) to confirm the work planning process
		1.4	Ensure safety equipment is available and in sound condition
		1.5	Remove products from equipment, if required, using enterprise standard handling methods
		1.6	Recognise end-of-product run
2	**Check quality of product**	2.1	Inspect product to identify routine and non-routine finishing requirements
		2.2	Identify significant finning, flash or other quality problems and report to appropriate person for investigation of mould/die closure/alignment
		2.3	Check with appropriate personnel regarding modifications to finishing process
		2.4	Identify and process non-conforming products in accordance with workplace procedures.
3	**Undertake the finishing operation**	3.1	Trim product as required
		3.2	Apply procedures to other finishing processes
		3.3	Undertake other secondary process operations required
		3.4	Follow waste and recycling procedures
		3.5	Inspect finished product and compare to specifications for suitability for further processing or for customer delivery

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.6	Assemble finished products and sort in accordance with procedures
		3.7	Pack as required
		3.8	Record product data as required
		3.9	Clean up work area and perform housekeeping
4	**Identify and rectify routine product imperfections**	4.1	Identify the range of routine imperfections that can occur during the production process
		4.2	Determine and rectify routine product imperfections in accordance with procedures
		4.3	Ensure appropriate records and log books are maintained to meet procedures/work instructions
		4.4	Identify non-routine product imperfections and report to designated person

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

emergency procedures

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include one or more of:

- electric and/or air powered tools, such as routers, saws, drills, drivers and sanders knives, files and scrapers
- knives and knife sharpeners
- band saws
- hand saws.

Additional tools and equipment will be selected as required from:

- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Routine

Routine problems must be resolved by applying known solutions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

problems

Routine problems are predictable and include one or more of:

- movement of jigs or fixtures
- power failures
- non-supply of materials
- broken cords
- damaged or inoperable equipment
- variations in materials
- temperature of product to be finished
- movement of inserts, reinforcements or fittings size of some products
- inappropriate selection and use of finishing equipment/processes
- poor surface finish
- fining or shuts
- variations in section thickness
- product defects.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to relevant procedures.

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- heat, smoke, dust, vapours or other atmospheric hazards
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- rotational equipment or vibration
- machinery, equipment and product mass
- limited head spaces or overhangs
- working at heights
- working in restricted or confined spaces

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- other hazards that might arise

Assessment Requirements for PMBFIN201 Finish products and components

Modification History

Release 1. Supersedes and is equivalent to PMBFIN201C Finish products and components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- select and use tools and equipment to meet job specifications
- remove and handle products according to procedures
- inspect products and identify conformance and/or non-conformance to quality requirements
- finish product, including one or more of:
  - trimming/cutting
  - grinding
  - applying protective coatings
  - cleaning
  - sorting and assembly
  - repair of minor surface imperfections
- preserve identifying marks and trademarks, if present
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise routine and non-routine problems
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report faults to appropriate personnel
- distinguish between possible causes of routine faults, including:
  - raw material variations
  - contamination of raw material
  - process/procedural problems
  - mechanical abnormalities
  - production defects
- apply waste and recycling procedures
- communicate effectively with team/work group and supervisors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- product quality requirements
- product defect classifications
- signs of typical product defects relevant to the products being made
- types and correct application of common protective coatings
- degrees of finish
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- impact of incorrect or faulty materials
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations and provide for demonstration of responding to problems
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industry appropriate materials, tools, equipment, data and documentation
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions.
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBFIN205 Hand decorate products

Modification History

Release 1. Supersedes and is equivalent to PMBFIN205C Hand decorate products

Application

This unit of competency covers the skills and knowledge required to decorate products by hand.

This unit of competency applies to production support operators or those in similar roles who are required to inspect the product for routine and non-routine imperfections and take appropriate action, select appropriate materials and equipment, and prepare for and apply decorations manually.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

It applies to all sectors of the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Establish requirements for the finishing process**	1.1	Interpret customer order or product specifications
		1.2	Check availability of materials and equipment
		1.3	Identify and inspect products to be decorated for suitability of process
		1.4	Report unsuitable products to designated person
		1.5	Assemble materials, tools and facilities and check for suitability
		1.6	Locate manufacturer information and safety advice on products and use to plan work
		1.7	Identify required work sequences, times and work process stages
		1.8	Identify required engineering controls and personal protective equipment (PPE), and plan order of work
2	**Prepare surfaces**	2.1	Inspect product surfaces for contamination or damage
		2.2	Identify and eliminate sources of contamination
		2.3	Prepare surfaces in accordance with manufacturer instructions and workplace requirements
3	**Hand decorate products**	3.1	Identify required decorations to meet job order requirements
		3.2	Ensure decorations are fit for use and return those damaged or unusable
		3.3	Apply decorations in the appropriate locations
		3.4	Inspect finished product and compare specifications for suitability for further processing or for customer delivery
		3.5	Assemble finished products and sort in accordance with procedures
		3.6	Clean up work area and perform housekeeping

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Identify and rectify routine hand decorating problems**	4.1	Identify the range of routine problems that can occur during the hand decorating process
		4.2	Determine and rectify routine hand decorating imperfections in accordance with procedures
		4.3	Identify faults in equipment, tag unserviceable equipment and report to designated person
		4.4	Ensure appropriate records and logbooks are maintained to meet procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment will be selected as required from:

- hand tools
- adhesive application equipment
- hand carts and trolleys
- hoists, jigs and gantries
- lifting equipment not requiring any special permits or licences
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- heat, smoke, dust, vapours or other atmospheric hazards
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- rotational equipment or vibration
- machinery, equipment and product mass
- limited head spaces or overhangs
- working at heights
- working in restricted or confined spaces
- other hazards that might arise.

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- non-supply of product
- defective product
- incorrect selection or supply of materials
- misalignment of decals, transfers or other decorative materials
- non-adherence of transfers, decals or stamps
- variations in materials
- temperature variations
- contamination of surfaces
- decals/transfers or stamps not within specification or not fit for use.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for PMBFIN205 Hand decorate products

Modification History

Release 1. Supersedes and is equivalent to PMBFIN205C Hand decorate products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- determine whether products are suitable for decoration
- select and use materials, tools and equipment to prepare for and apply decorations to meet job specifications
- identify the priority in which jobs/product will be completed ensuring appropriate materials and equipment are available
- check the completed work and identify conformance and/or non-conformance to specifications
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise routine and non-routine problems
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report faults to appropriate personnel
- distinguish between possible causes of routine faults, including:
  - raw material variations
  - contamination of raw material
  - process/procedural problems
  - mechanical abnormalities
  - production defects
- apply cleaning, waste and recycling procedures
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- product quality requirements
- product defect classifications
- signs of typical product defects relevant to the products being made
- types and application of common hand decorating techniques
- sources of contamination that may affect decorations and how to eliminate them
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations and provide for demonstration of responding to problems
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industry appropriate tools, equipment, data and documentation
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:

PMBHAN103 Shift materials safely by hand

Modification History

Release 1. Supersedes and is equivalent to PMBHAN103C Shift materials safely by hand

Application

This unit of competency covers the skills and knowledge required to safely shift materials by hand. It applies to manually shifting raw materials, components, products or similar items with or without the use of manual handling aids, such as handcarts and block and tackle.

This unit of competency applies to production support, operators or those in similar roles who are required to identify the materials to be moved and manually load, unload, shift and store the materials according to procedures.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

It applies to all sectors of the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Plan operations**	1.1	Correctly identify type and quantity of produce or material to be moved
		1.2	Identify the safest and most efficient and appropriate movement route
2	**Manually transfer products or materials**	2.1	Manually shift products or materials to and from production processes according to procedures and work health and safety (WHS) state/territory regulations
		2.2	Manually load specified products or materials at specific points during the manufacturing process, according to procedures and WHS state/territory regulations
3	**Store, stack and/or relocate products or materials**	3.1	Manually stack products or materials according to procedures and WHS state/territory regulations
		3.2	Manually store products or materials in correct locations
		3.3	Document and/or report material movements as required
4	**Respond to routine problems to procedures**	4.1	Recognise known faults that occur during the operation
		4.2	Identify and take action on causes of routine faults
		4.3	Log problems as required
		4.4	Identify non-routine process and quality problems and take appropriate action

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include one or more of:

- hand carts
- self-propelled trolleys
- wheelbarrows
- block and tackle

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- weight, shape, volume of materials to be handled
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- heat, smoke, dust, vapours or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- load too heavy or large for safe, easy moving
- load in awkward position for safe, easy moving
- clash of work priorities
- correct equipment not available
- irregularly shaped materials.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for PMBHAN103 Shift materials safely by hand

Modification History

Release 1. Supersedes and is equivalent to PMBHAN103C Shift materials safely by hand

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- select and use materials, tools and equipment to meet job specifications
- plan and sequence the work to meet job specifications
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise routine and non-routine problems
- identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report problems to appropriate personnel
- distinguish between possible causes of routine problems, including:
  - characteristics of materials
  - process/procedural problems
  - mechanical abnormalities
- distinguish between jobs which:
  - may be easily and safely done by a single person
  - will require assistance from other people
  - require manual handling equipment
  - need mechanical lifting aids
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- principles of safe manual handling
- types and application of manual handling and lifting/moving techniques
- types and application of lifting/moving equipment
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations and provide for demonstration of responding to problems
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industry appropriate materials, tools, equipment, data and documentation
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

PMBPREP205 Assemble materials and equipment for production

Modification History

Release 1. Supersedes and is equivalent to PMBPREP205C Assemble materials and equipment for production

Application

This unit of competency covers the skills and knowledge required to select and assemble materials and equipment in preparation for production.

This unit of competency applies to operators who are required to interpret product specifications, select materials and equipment, organise and confirm delivery of material/equipment, and sequence and place the materials/equipment correctly for production.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify required**	1.1	Interpret product specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	materials and equipment	1.2	Identify required materials, including additives
		1.3	Identify trade names for required product
		1.4	Determine quantity of materials required for product
		1.5	Identify required equipment, including handling, control and material preparation equipment
2	**Locate materials and equipment**	2.1	Locate required materials, equipment and machinery
		2.2	Mark items off on check list as required
		2.3	Identify non-conformances and report as required
		2.4	Identify and prepare appropriate holding area
3	**Assemble materials and equipment**	3.1	Use good manual handling practices
		3.2	Follow work health and safety (WHS) and other relevant procedures
		3.3	Collect and organise materials in a manner that ensures storage compatibility
		3.4	Visually check materials according to procedures
		3.5	Collect holding sample according to procedures
		3.6	Record details of specification and sample as required
4	**Organise internal workplace delivery of materials/ equipment as required**	4.1	Organise placement of material to required locations using enterprise procedures
		4.2	Notify and confirm delivery in accordance with enterprise requirements/procedures
		4.3	Follow workplace procedures as required by enterprise
5	**Store materials for production as**	5.1	Identify storage requirements
		5.2	Check holding area conditions meet material

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	required		requirements
		5.3	Store materials as required for production and to meet health and safety needs
		5.4	Complete required workplace documentation/records
6	**Respond to routine problems to procedures**	6.1	Recognise known problems that occur during the operation
		6.2	Identify and take action on causes of routine problems
		6.3	Log problems as required
		6.4	Identify non-routine process and quality problems and take appropriate action

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include one or more of:

- hand carts and trolleys
- knives and other bag opening equipment
- hoists/lifting equipment not requiring any special permits or licences
- bung spanners and similar
- basic hand tools required for opening of material packaging
- relevant personal protective equipment (PPE).

Problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- equipment malfunction
- non-supply or incorrect supply of materials
- use of incorrect materials
- variations in materials
- contamination of materials
- incorrect quantity of materials/additives.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- heat, smoke, dust, vapours or other atmospheric hazards
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- rotational equipment or vibration
- machinery, equipment and product mass
- limited head spaces or overhangs
- working at heights
- working in restricted or confined spaces
- other hazards that might arise.

Assessment Requirements for PMBPREP205 Assemble materials and equipment for production

Modification History

Release 1. Supersedes and is equivalent to PMBPREP205C Assemble materials and equipment for production

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- select and use tools and equipment to meet job specifications
- locate and organise delivery of required materials and equipment
- sequence and arrange placement of materials and equipment for production
- store materials according to requirements
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise routine and non-routine problems
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report faults to appropriate personnel
- distinguish between possible causes of routine faults, including:
  - raw material variations
  - contamination of raw material
  - process problems
  - mechanical abnormalities
  - misreading labels, instructions, safety data sheets
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- types and application of common polymer materials
- definitions of thermoplastics and thermosetting materials
- trade names of common plastic materials
- formulas of common plastics
- common end use examples of plastics and common family names
- routine and non-routine problems that may arise, the range of possible causes and processes to develop solutions
- impact of incorrect or faulty materials
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations and provide for demonstration of responding to problems
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industry appropriate tools, equipment, data and documentation
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPREP206 Prepare materials to formulae

Modification History

Release 1. Supersedes and is equivalent to PMBPREP206C Prepare materials to formulae

Application

This unit of competency covers the skills and knowledge required to prepare materials to formulae for production or product finishing.

This unit of competency applies to production support operators or those in similar roles who are required to plan the work sequence, measure and combine ingredients according to formulae, minimise/eliminate contamination risk, and recognise routine and non-routine problems and take appropriate action.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Identify**	1.1 Read and interpret specifications for materials and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	requirements to handle materials		identify materials
		1.2	Identify units of measurement and matching measuring equipment
		1.3	Know the tolerances of measuring equipment and relate them to the impact of over/under measurement of ingredients on production process and quality
		1.4	Follow procedures to identify and control hazards
		1.5	Read workplace procedures and use them to plan work sequence
2	**Prepare for assembly of ingredients**	2.1	Calibrate or zero equipment for measurement and/or identify appropriate measurement scales
		2.2	Set up and fit required personal protective equipment (PPE) and engineering controls
		2.3	Assemble equipment for dealing with emergencies
		2.4	Check work area for cleanliness
		2.5	Identify sources of potential contamination and take steps to minimise/eliminate contamination risk
3	**Assemble ingredients**	3.1	Collect ingredients
		3.2	Weigh/measure ingredients according to procedure
		3.3	Follow appropriate workplace approved sequence for combination of materials
		3.4	Follow standard operating procedures (SOPs) and observe appropriate safety measures when conducting work
		3.5	Check for correctness of colour to standard
		3.6	Take action specified in procedures if materials/assembled ingredients do not appear to meet requirements
		3.7	Complete workplace records

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.8	Store unused ingredients, and clean and store equipment
4	**Respond to routine problems to procedures**	4.1	Recognise known problems that occur during the operation
		4.2	Identify and take action on causes of routine problems
		4.3	Log problems as required
		4.4	Identify non-routine process and quality problems and take appropriate action

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

- All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- SOPs
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- measurement equipment.

Additional tools and equipment will be selected as required from:

- knives and other bag opening equipment
- hoists/lifting equipment not requiring any special permits or licences
- basic hand tools required for opening of material packaging
- relevant PPE.

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- weight, shape, volume of materials to be handled
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- heat, smoke, dust, vapours or other atmospheric hazards
- high temperatures
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- other hazards that might arise.

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- incorrect raw materials being used
- contamination of raw materials
- incorrect formulae being selected
- incorrect mixing techniques and/or order of adding ingredients
- cleanliness of the mixing area and/or utensils
- combining inappropriate materials
- variations in materials
- variations in quality of mixture.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for PMBPREP206 Prepare materials to formulae

Modification History

Release 1. Supersedes and is equivalent to PMBPREP206C Prepare materials to formulae

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- select and use materials, tools and equipment to meet job specifications
- weigh/measure, combine and mix ingredients according to procedures
- check the work and identify conformance and/or non-conformance to specifications
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise routine and non-routine problems
- identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report problems to appropriate personnel
- distinguish between possible causes of routine problems, including:
  - characteristics of materials
  - contamination
  - atmospheric conditions
  - process/procedural problems
  - mechanical abnormalities
- communicate effectively with team/work group and supervisors
- complete workplace records
- use measuring systems, scales and calculating devices
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- types, applications and compositions of materials commonly used in formulae

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- tolerances of measuring equipment and the impact of over/under measurement of ingredients on production process and quality
- sources of contamination that may affect formulae and how to eliminate them
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- impact of incorrect or faulty materials on formulae
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations and provide for demonstration of responding to problems
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industry appropriate materials, tools, equipment, data and documentation
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

PMBPREP304 Set a die

Modification History

Release 1. Supersedes and is equivalent to PMBPREP304C Set a die

Application

This unit of competency covers the skills and knowledge required to remove, refit and set simple dies as used in injection moulding, blow moulding and similar processes.

This unit of competency is typically performed by experienced operators or those in similar roles who are required to select dies, tools and parts required for the die changeover, plan and make the changeover, set the machine conditions and check and fine tune settings to meet specifications.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Preparation

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Prepare to**	1.1 Determine when changeover will be required, and plan

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	change dies		requirements for die change
		1.2	Obtain dies and/or cores and all parts and tools to match the production order
		1.3	Follow procedure for machine close-down and for informing relevant personnel
		1.4	Take last-off samples as required for die reports
		1.5	Close down machine in accordance with procedures
		1.6	Prepare machine for changeover in accordance with procedures
2	**Change dies**	2.1	Plan removal process to ensure no damage to self, equipment or others
		2.2	Remove, clean and store die according to workplace procedures applying corrosion protection if required
		2.3	Attach replacement die ensuring that locating devices and marks are matched and securing devices are installed and tightened to specification
3	**Set dies**	3.1	Set machine conditions for new die
		3.2	Restart machine according to procedure
		3.3	Dry cycle machine and die according to enterprise procedures
		3.4	Check operation of die against product quality specifications
		3.5	Check the first-off sample for compliance with required standards
		3.6	Fine tune settings and other production variables as required
		3.7	Note any equipment variances between actual production and documented set-up conditions
		3.8	Complete workplace documentation and report to appropriate personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Anticipate die setting problems**	4.1	Identify potential problems which may occur during the die changing and setting process
		4.2	Determine possible causes of these problems
		4.3	Identify most likely causes and prioritise appropriate actions
		4.4	Rectify problems using appropriate solutions within area of responsibility
		4.5	Recommend improvements in systems or procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Simple die For the purposes of this Training Package a simple die is a two-plate die used to give the required shape to the product and used under pressure to produce simple, straight drawn items. It includes any ejection system operating in the mould open axis.

The following are not considered simple dies:

- dies which are not subject to pressure (these are referred to as moulds in this Training Package)
- two- or three-plate dies with one or more product forming components which move in a direction other than the mould open axis, and which are driven by the mould rather than external actuation
- moulds with molten material retained within the mould between cycles.

Setting Setting machine conditions for the replacement die must be relevant to the type of equipment/process being used and includes one or more of:

- mould height on the machine
- clamp force
- mould safety system
- ejector system
- mould opening and closing distances, speeds and forces
- injection unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

These settings may be performed automatically by using an electronic storage device to load settings from a previous run of the product or may be performed by manually setting controls individually.

Tools and equipment

Tools and equipment include one or more of:

- hand carts and trolleys
- hoists/lifting equipment not requiring any special permits or licences
- basic hand tools
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- weight, shape, volume of materials to be handled
- hazardous products and materials
- hot surfaces
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- heat, smoke, dust, vapours or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise

Non-routine problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

Non-routine problems are unexpected problems or variations of previous problems and include one or more of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- corrosion of die surface and/or cooling channels
- poor alignment of die
- movement during production
- faulty components
- machine malfunction
- variation in product.

Operational knowledge includes one or more of:

- procedures
- training
- technical information such as journals, engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Unit Mapping Information

Assessment Requirements for PMBPREP304 Set a die

Modification History

Release 1. Supersedes and is equivalent to PMBPREP304C Set a die

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures and job specifications
- remove, clean and store die according to procedures
- select dies, cores, parts and tools and install replacement die to meet specifications
- set machine conditions for new die
- check the installation and operation of new die to identify conformance and/or non-conformance to specifications
- make adjustments to settings and equipment operation to rectify variations in equipment operation or product quality
- identify hazards and apply relevant hazard controls
- distinguish between causes of problems/alarm/fault indications, such as:
  - operational problems
  - instrument failure/malfunction
  - electrical failure/malfunction
  - mechanical failure/malfunction
  - wrong readings
  - equipment design deficiencies
  - product parameters (temperature, flows, pressure and levels)
- resolve non-routine problems
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role, including knowledge of:

- construction of simple dies and their components, including fixed and removable cores, inserts, ejection systems and vents
- methods of connecting dies to machines
- impact of incorrect or faulty fitting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- function of machine settings and appropriate ranges of settings for specific dies
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations and provide for demonstration of responding to problems
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industry appropriate materials, tools, equipment, data and documentation
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD236 Operate hand held air/power equipment for production processes

Modification History

Release 1. Supersedes and is equivalent to PMBPROD236C Operate hand held air/power equipment for production processes

Application

This unit of competency covers the skills and knowledge required to operate hand held air or power equipment as typically used in the assembly and finishing of components in a production process.

This unit of competency applies to operators who are required to select equipment and materials, apply procedures for checking, maintaining and using the equipment and recognise routine and non-routine problems and take appropriate action.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Identify equipment and power requirements**	1.1	Match appropriate equipment for drilling, cutting and grinding to work applications
		1.2	Choose correct power and air sources, identifying and selecting correct voltage, amperage and air pressure
		1.3	Select correct lubrication and/or water separation equipment as required
		1.4	Inspect equipment for signs of damage or faults
		1.5	Select correct accessories in terms of suitability for purpose and operable condition
2	**Follow emergency shutdown procedures**	2.1	Identify the circumstances which would justify an emergency shutdown of equipment
		2.2	Identify appropriate switches and/or other shutoff apparatus
		2.3	Shut down equipment in an emergency
		2.4	Complete reporting required following an emergency shutdown
3	**Control hazards associated with using the equipment**	3.1	Identify potential hazards arising from power sources and/or compressed air
		3.2	Recognise process by-products which may cause damage to the operator, environment, products, raw materials, other equipment or personnel
		3.3	Follow procedures to control hazards
4	**Set up equipment according to procedures**	4.1	Check equipment settings, accessories and consumables for acceptable condition
		4.2	Check equipment for sharpness/wear as appropriate
		4.3	Use manufacturer or workplace instructions for equipment as the basis of work practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.4	Correctly set up equipment for the required production process
		4.5	Check equipment through the full operating range required for the task
5	**Use equipment for production processes**	5.1	Operate equipment within the parameters of the manufacturer or workplace instructions
		5.2	Use appropriate consumables, including cooling and lubricating fluids, where required
		5.3	Deal with dust, swarf, off cuts and other production by-products and waste
6	**Shut down equipment according to procedure**	6.1	Shut down equipment as required
		6.2	Dispose of any dust, swarf, off cuts and other production by-products and waste
7	**Store equipment appropriately**	7.1	Clean equipment prior to storage
		7.2	Tag or take appropriate steps to arrange repair or servicing of equipment as required
		7.3	Maintain storage areas to workplace standards
8	**Respond to routine problems to procedures**	8.1	Recognise known faults that occur during the operation
		8.2	Identify and take action on causes of routine faults
		8.3	Log problems as required
		8.4	Identify non-routine process and quality problems and take appropriate action

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulae/recipes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include one or more portable air or power operated:

- impact wrench
- drill
- grinder
- cutter
- saw.

Additional tools and equipment will be selected as required from:

- bolts, screws, rivets, and so on
- vices, clamps and braces
- work stands
- hand tools
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- frayed cables/hoses
- dusts/swarf
- blades and cutting equipment
- metal and other shavings
- weight, shape and volume of materials to be handled
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- rotational equipment or vibration
- smoke, dust, vapours or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- tool malfunctions
- damaged leads or hoses
- incorrect tool selected
- worn or blunt tools/tool bits
- damaged/faulty tools
- non-supply of components or fittings
- incorrect supply of components or fittings
- material failures
- out-of-specification products.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for PMBPROD236 Operate hand held air/power equipment for production processes

Modification History

Release 1. Supersedes and is equivalent to PMBPROD236C Operate hand held air/power equipment for production processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- select and use tools, equipment and materials to meet job specifications
- set up, operate and shut down the portable air or power tools/equipment to procedures
- monitor key variables, including:
  - tool speeds
  - tool mass
  - operating mediums
  - condition of tools
  - useability
  - cleanliness
- operate and adjust the equipment to meet product quality and production output specifications
- clean and store tools/equipment to procedures
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- recognise routine and non-routine problems
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report faults to appropriate personnel
- distinguish between possible causes of routine faults, including:
  - incorrect type and/or quantity of materials
  - procedural errors
  - blunt or worn tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - power failures
  - tool malfunction/failures
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, multiplications, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- types and application of common air and power equipment/tools
- function of the air or power equipment being used
- principles of operation of the equipment
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- production workflow sequences and materials demand
- factors which may affect product quality or production output and appropriate remedies
- routine problems, their probable causes and relevant corrective actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on the job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD240 Cut materials

Modification History

Release 1. Supersedes and is equivalent to PMBPROD240C Cut materials

Application

This unit of competency covers the skills and knowledge required to use specialised equipment or procedures to cut materials to size, shape or to a pattern.

This unit of competency applies to operators who are required to identify the requirements for the job, prepare material and equipment for the work, operate cutting tools/equipment, and recognise routine and non-routine problems and take appropriate action.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

	requirements	1.2	Identify product, materials and equipment requirements for job
		1.3	Recognise hazards and adopt steps required to ensure safety
		1.4	Check with supervisor/appropriate person if requirements are not in accordance with usual practice
2	**Conduct pre-start checks as required**	2.1	Check safety gates and guards are in position and working
		2.2	Check raw materials are correct
		2.3	Undertake other pre-start checks in accordance with procedures
3	**Use tools/equipment**	3.1	Operate cutting tools/equipment to cut materials to procedures
		3.2	Monitor dimensions, quality and quantity of cuts
		3.3	Remedy faults and non-conformances by correcting operation or adjusting tools/equipment as required
		3.4	Collect material which is able to be recycled or reused, separate and dispose of waste and scrap
4	**Resolve routine problems**	4.1	Identify likely faults that occur during the operation/task
		4.2	Identify and take action on causes of routine faults in accordance with procedures
		4.3	Make sure appropriate records and log books of equipment operations are maintained to meet procedures
		4.4	Identify non-routine problems and report to designated person

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include one or more of:

- guillotines
- power saws
- jig saws
- band saws
- thermal cutting devices
- programmable logic controllers (PLC) if fitted.

Additional tools and equipment will be selected as required from:

- hand tools
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- blades and cutting equipment
- weight, shape, volume of materials to be handled
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- rotational equipment or vibration
- smoke, dust, vapours or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Routine problems

Routine problems must be resolved by applying known solutions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Routine problems are predictable and include one or more of:

- incorrect pattern, marking errors
- equipment wear or breakage
- variations in temperature
- loss of power or drives
- controller sequence or timer issues.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for PMBPROD240 Cut materials

Modification History

Release 1. Supersedes and is equivalent to PMBPROD240C Cut materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- select and use tools, equipment and materials to meet job specifications
- conduct pre-start checks
- operate and shut down the cutting tools/equipment to cut materials to procedures
- monitor key variables, including:
  - material characteristics
  - material availability
  - dimensions, quality and quantity of cuts
  - type of cutting equipment
  - cutting edge condition
- operate the equipment and make adjustments to meet product quality and production output specifications
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- recognise routine and non-routine problems
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report faults to appropriate personnel
- distinguish between possible causes of routine faults, including:
  - deficiencies in materials
  - procedural errors
  - blunt or worn tools
  - power failures
  - tool malfunction/failures
  - equipment adjustments/set-up
  - changes to materials during the cutting process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, multiplications, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems including knowledge of:

- types of materials that commonly require cutting in the sector and their behaviour when cut
- types of cutting equipment commonly used and their suitability for different materials
- function of the cutting tools/equipment being used
- principles of operation of the equipment
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- factors which may affect product quality or production output and appropriate remedies
- routine problems, their probable causes and relevant corrective actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations and provide for demonstration of responding to problems
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industry appropriate materials, tools, equipment, data and documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:

PMBPROD241 Lay up rubber lining or lag pulleys

Modification History

Release 1. Supersedes and is equivalent to PMBPROD241C Lay up rubber lining or lag pulleys

Application

This unit of competency covers the skills and knowledge required to lay up rubber or similar materials to line vessels or components or to lag pulleys. Vessels and tanks are typically lined in order to retard abrasion, impact or corrosion. The re-lagging of pulleys for conveyors provides a positive drive.

This unit of competency applies to operators who are required to prepare materials and surfaces, plan and sequence the work, position, join and cure the lining/lagging and recognise routine and non-routine problems and take appropriate action.

The key factors are the preparation of the surfaces to be lined/lagged and the successful application of the rubber to the surfaces without contaminating the materials. This unit of competency is typically performed by operators working either independently or as part of a work team.

This unit of competency applies to lining/lagging that is carried out in a workshop or other off-site facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Plan rubber lining or lagging work**	1.1	Review specifications and work order documentation
		1.2	Identify hazards and risk controls, including emergency evacuation and adequate ventilation, including breathing apparatus, where required
		1.3	Plan work, including materials, sequences, times and process stages
		1.4	Plan to minimise downtime, economically use materials and meet repair quality specifications
		1.5	Assemble equipment, tools and materials required, checking them for condition, quality and compliance tags
2	**Prepare surfaces for rubber lining or lagging**	2.1	Lay out materials in an appropriate contamination free area
		2.2	Ensure materials are clean and free of debris and damage
		2.3	Identify non-conforming materials and report, as required
		2.4	Examine component, vessel or pulley and ensure the surfaces to be lined or lagged are free of defects and contaminants
		2.5	Plan the sequence for application of the adhesives and materials
		2.6	Prepare lining or lagging surfaces
		2.7	Monitor surface coatings for setting time and manage the staggered supply of adhesives and materials, where appropriate
3	**Lay up rubber lining or lagging**	3.1	Ensure adequate ventilation is provided and monitored during the laying up process
		3.2	Monitor any confined space activity and conform to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			regulations and procedures
		3.3	Position lining/lagging segments according to the lay-up plan
		3.4	Exclude entrapped air and ensure complete contact between the lining/lagging and surface is obtained
		3.5	Ensure joins are sealed and adhered properly with no gaps or overlaps
		3.6	Check for slips, sagging or other separation of the lining/lagging from the surface
		3.7	Ensure lining/lagging material is finished off as required at the extremities
		3.8	Cure rubber lining/lagging where appropriate
4	**Clean work area**	4.1	Clean, inspect and store tools and equipment used
		4.2	Tag unserviceable tools and equipment, identify faults and inform relevant personnel
		4.3	Clean work area and return to approved condition
		4.4	Dispose of waste or recycle according to procedures
		4.5	Complete appropriate workplace documentation
5	**Respond to routine problems to procedures**	5.1	Recognise known faults that occur during the operation
		5.2	Identify and take action on causes of routine faults
		5.3	Log problems as required
		5.4	Identify non-routine process and quality problems and take appropriate action

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulae/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Tools and equipment

Tools and equipment include one or more of:

- hand tools (e.g. spanners, wrenches and hammers)
- knives and other trimming devices
- hoists/lifting equipment not requiring any special permits or licences
- rollers and other surface compression tools
- ventilation equipment (e.g. fans)
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- confined spaces
- working at heights
- blades and cutting equipment
- weight, shape, volume of materials to be handled
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- rotational equipment or vibration
- smoke, dust, vapours or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- variations in materials
- incorrectly cut material shapes
- contamination of materials
- contamination of the surfaces to be lined or lagged
- physical size and complexity of some components
- entrapped air
- gaps between lining segments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- inappropriate laps or joins.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for PMBPROD241 Lay up rubber lining or lag pulleys

Modification History

Release 1. Supersedes and is equivalent to PMBPROD241C Lay up rubber lining or lag pulleys

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- select and use tools, equipment and materials to meet job specifications
- prepare surfaces, adhesives and materials
- lay up, join and cure lining or lagging to meet specifications
- monitor equipment operation
- monitor key variables, including:
  - compatibility of materials, adhesives, solvents and cleaning agents
  - cleanliness and condition of lining/lagging materials
  - effect of surface condition of the component on the quality of the lining/lagging
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise routine and non-routine problems
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report faults to appropriate personnel
- distinguish between possible causes of routine faults, including:
  - wrong raw materials/additives/catalyst
  - incorrect quantity of materials/additives/catalyst
  - contaminated materials/additives/catalyst
  - procedural errors
  - equipment malfunction/failures
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions and multiplications
- make and interpret measurements and shapes.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- types of adhesives, additives and catalysts commonly used in lining or lagging and their suitability for different materials and applications
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- factors which may affect product quality or production output and appropriate remedies
- routine problems, their probable causes and relevant corrective actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations and provide for demonstration of responding to problems
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industry appropriate materials, tools, equipment, data and documentation
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD242 Bond polymers to surfaces

Modification History

Release 1. Supersedes and is equivalent to PMBPROD242A Bond polymers to surfaces

Application

This unit of competency covers the skills and knowledge required to join a solid polymer to another solid surface using adhesives, cohesives, solvents or other joining materials. The polymer may be thermoplastic or cured or uncured thermoset.

This unit of competency applies to operators who are required to select materials and equipment, prepare substrate and joining materials, make the join and apply required conditions, and recognise routine and non-routine problems and take appropriate action.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Check work**	1.1	Identify work requirements from production plan or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	requirements		request
		1.2	Select and check appropriate equipment or tool/s, techniques and materials to be used
		1.3	Recognise requirements which may not be in accordance with usual practice
		1.4	Ask questions of appropriate person to confirm unusual practice
		1.5	Ensure housekeeping is to requirements
		1.6	Identify hazards associated with the job and take appropriate action
		1.7	Perform other pre-operational checks to procedures
2	**Prepare materials for joining**	2.1	Check substrate for suitability
		2.2	Clean/activate substrates to procedures as required
3	**Apply joining materials**	3.1	Prepare joining materials
		3.2	Apply joining materials to substrate(s) as required
		3.3	Monitor drying/setting as appropriate
		3.4	Apply subsequent material/coats as required
		3.5	Complete logs and records as required
		3.6	Keep equipment and work area clean
4	**Join materials**	4.1	Set up required jigs and equipment for joining
		4.2	Bring surfaces together when appropriate
		4.3	Ensure intimate and continuous contact between surfaces
		4.4	Apply required conditions to join until joining process is complete

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5	**Respond to routine problems in accordance with procedures**	5.1	Recognise known faults that occur during the operation
		5.2	Identify and take action on causes of routine faults
		5.3	Log problems as required
		5.4	Identify non-routine problems and report to designated person

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include one or more of:

- brush
- syringe
- pipette
- spray gun
- application scraper

Additional tools and equipment will be selected as required from:

- vapour extraction equipment
- application booths
- hand rollers
- presses
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- fumes, humidity, air temperatures, radiant heat, hot dies
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- smoke, dust, vapours or other atmospheric hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- incorrect joining materials
- variations in materials
- contamination of joining materials or substrates
- inappropriate application of materials
- dust and other contamination
- drying rate problems
- film thickness variation
- film application rates
- coverage issues
- tack (too much, not enough, long leg/short leg)
- products with substrate or other faults.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for PMBPROD242 Bond polymers to surfaces

Modification History

Release 1. Supersedes and is equivalent to PMBPROD242A Bond polymers to surfaces

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, basic machine control panels, material labels and safety data sheets (SDS)
- select and use materials, tools and equipment to meet job specifications
- prepare surfaces to meet specifications
- check substrate suitability, including:
  - surface soundness
  - surface preparation
  - substrate porosity
  - surface pits, protrusions or other irregularities
- prepare joining material, including one or more of:
  - mixing one pot materials to achieve homogeneity
  - blending two (or more) pot material components
  - thinning (e.g. with solvent) if required
  - measuring components for blends
- monitor key variables, including:
  - application patterns
  - adhesive consistency
  - adhesive viscosity
  - solvent/thinner blend ratios
  - drying/setting times
  - pressure/contact between surfaces
- operate and adjust tools/equipment to make join and apply required conditions to meet product quality and production output specifications
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- recognise routine and non-routine problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report faults to appropriate personnel
- distinguish between possible causes of routine faults, including:
  - raw material variations/contamination
  - process abnormalities
  - procedural errors
  - mechanical abnormalities
  - atmospheric conditions
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- types of adhesives, cohesives, solvents and their differences and range of applications
- joining behaviour of polymers to relevant substrates and the role of adhesives, cohesives, solvents and other materials
- types and application of common joining processes
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- reasons for checking conditions and taking action when they are outside of normal range of process variability
- processing behaviour of polymers and the role of additives
- production workflow sequences and materials demand
- factors which may affect the quality and reliability of joins
- routine problems, their probable causes and relevant corrective actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations and provide for demonstration of responding to problems
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industry appropriate materials, tools, equipment, data and documentation
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD247 Hand lay up composites

Modification History

Release 1. Supersedes and is equivalent to PMBPROD247C Hand lay up composites

Application

This unit of competency covers the skills and knowledge required to hand lay up composite materials to form a simple product.

This unit of competency applies to operators who are required to select and prepare materials, set up moulds, lay up the composites and recognise routine and non-routine problems and take appropriate action.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulae/recipes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- open moulds for composite products
- hand mixing equipment and stirrers
- knives and cutters to trim fibres
- hand application tools, such as rollers and brushes.

Additional tools and equipment will be selected as required from:

- hand tools
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- glass and other fibre hazards (inhalation and skin penetration)
- hazardous products and materials
- cutting equipment
- sharp edges, swarf, scrap
- protrusions or obstructions
- slippery surfaces, spills or leaks
- rotational equipment or vibration
- smoke, dust, vapours or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cracks, dents or imperfections of the mould
- incorrect resin ratios
- contamination of materials
- shifting of fibres before resin laid
- stacking of fibre and resin sequence problems
- product problems, such as:
  - voids
  - poor surface finish
  - colour contamination
  - release from mould damage.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

PMBPROD248 Prepare surfaces for coating

Modification History

Release 1. Supersedes and is equivalent to PMBPROD248C Prepare surfaces for coating

Application

This unit of competency covers the skills and knowledge required to prepare surfaces for coating. It applies to preparation for coatings typically used in the plastics, rubber and cablemaking sectors, for example, adhesives, primers, surface coatings and finishes, which may be applied by hand or machine.

This unit of competency applies to operators who are required to identify work requirements, prepare materials and equipment, check product for quality and conformity to specifications, prepare the surfaces and recognise routine and non-routine problems and take appropriate action.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs0
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and

Tools and equipment include one or more of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

equipment

- hand finishing tools
- scrapers
- sandpaper
- buffs
- polishes.

Additional tools and equipment will be selected as required from:

- measurement equipment
- hand tools
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- weight, shape, volume of materials to be handled
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- heat, smoke, dust, vapours or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- wear and breakage
- overuse of tools, requiring rework
- incorrect substrate used
- incorrect measurement of surface finish
- product problems, such as:
- contamination of surface prior to polish
- damage to polished surface.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Unit Mapping Information

Assessment Requirements for PMBPROD248 Prepare surfaces for coating

Modification History

Release 1. Supersedes and is equivalent to PMBPROD248C Prepare surfaces for coating

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- select and use materials, tools, equipment and procedures to meet job specifications
- prepare surfaces according to procedures
- monitor key variables, including:
  - equipment conditions
  - production rate
  - reasons for interruptions
  - product quality
- identify hazards and apply relevant hazard controls
- implement emergency shutdown procedures
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise routine and non-routine problems
- identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report problems to appropriate personnel
- distinguish between possible causes of routine problems, including:
  - raw material variations/contamination
  - process/procedural problems
  - equipment/tool wear or malfunction
- communicate effectively with team/work group and supervisors
- complete workplace records
- use measuring systems, scales and calculating devices
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- common types of substrate and their preparation requirements
- surface finish techniques appropriate to common substrates and the equipment, tools and consumables required
- surface finish measurement techniques
- sources of contamination that may affect surface finish
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations and provide for demonstration of responding to problems
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of industry appropriate materials, tools, equipment, data and documentation
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD265 Operate portable vulcanising equipment

Modification History

Release 1. Supersedes and is equivalent to PMBPROD265C Operate portable vulcanising equipment

Application

This unit of competency covers the skills and knowledge required to operate portable vulcanising equipment and ancillary equipment that is integral to the process.

This unit of competency applies to operators who are required to plan the curing job, set up equipment and materials, conduct vulcanising operations, assess the finished work, and recognise routine and non-routine problems and take appropriate action.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify work**	1.1	Identify the job and vulcaniser characteristics and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	requirements for vulcanising operations		product quality outcomes required
		1.2	Obtain specifications relevant to the material being vulcanised
		1.3	Identify and obtain equipment and materials required for the vulcanising process
		1.4	Identify hazards associated with the job and take appropriate action
		1.5	Check materials, ancillary supplies and equipment for quality, access and condition
		1.6	Identify and check emergency stops, gauges, guards and controls
2	**Plan vulcanising operations**	2.1	Identify time, pressure and temperature requirements
		2.2	Plan the task sequences
		2.3	Plan for waste management, maintenance and housekeeping requirements
3	**Prepare vulcanising equipment**	3.1	Check vulcaniser, ancillary, equipment and attachments are fit for purpose
		3.2	Set up vulcanising press according to procedures
		3.3	Set equipment control parameters to specifications
		3.4	Obtain appropriate clearances for vulcanising to commence
4	**Conduct and monitor vulcanising operations**	4.1	Start the unit and commence vulcanising
		4.2	Monitor the unit operation throughout the entire process
		4.3	Note and report non-conformity to specifications to procedures
		4.4	Make adjustments as required
		4.5	Shut down unit when cycle completed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.6	Follow procedure to disassemble equipment as required
		4.7	Assess the outcome of the vulcanising process and take remedial action as necessary and report to the appropriate person
		4.8	Brand splice according to company policy
		4.9	Clean up, lubricate and adjust equipment as required
		4.10	Complete waste removal or recycling as required
5	**Respond to routine problems to procedure**	5.1	Recognise known faults that occur during the operation
		5.2	Identify and take action on causes of routine faults
		5.3	Log problems as required
		5.4	Identify non-routine process and quality problems and take appropriate action

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- portable vulcanising equipment
- ancillary equipment that is integral to the process
- knives and other rubber cutting and shaping equipment.

Additional tools and equipment will be selected as required from:

- powered equipment/aids
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- weight, shape, volume of materials to be handled

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hazardous products and materials
- knives, blades and cutting tools
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- rotational equipment or vibration
- high temperatures
- smoke, dust, vapours or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Routine Problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- incorrect vulcaniser set-up
- variations in materials
- contamination of materials
- unsuccessful vulcanising processes
- entrapped gasses
- wire or reinforcing exposure
- inappropriate material specification.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for PMBPROD265 Operate portable vulcanising equipment

Modification History

Release 1. Supersedes and is equivalent to PMBPROD265C Operate portable vulcanising equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, basic machine control panels, material labels and safety data sheets (SDS)
- select and use materials, procedures, tools and equipment to meet job specifications
- plan and sequence the work
- set up portable vulcanising and ancillary equipment
- monitor the equipment using measured/indicated data and smell, sight, sound and feel as appropriate
- monitor and interpret key variables, including:
  - equipment operating temperatures and times
  - additional pressures applied
  - tension
  - output rate
  - product integrity and general conformance to specification/sample
- operate and adjust the equipment to meet product quality and production output specifications
- pause the equipment or shut down equipment in normal and abnormal circumstances
- clean up, lubricate and adjust the equipment
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- recognise routine and non-routine problems
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report faults to appropriate personnel
- distinguish between possible causes of routine faults, including:
  - raw material variations/contamination

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - process abnormalities
  - procedural errors
  - mechanical abnormalities
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- the function of vulcanising equipment, machine components and guides
- principles of operation of the equipment
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- reasons for checking process control panels and reporting readings which are outside of normal range of process variability
- changes to materials during the vulcanising process
- role of additives
- production workflow sequences and materials demand
- impact of vulcanising speed, pressure, time, temperature and tension on product quality and production output
- role of heat and pressure in relation to providing strength, stiffness, resistance to deformation, fatigue and abrasion
- factors which may affect product quality or production output and appropriate remedies
- differences in vulcanising processes and additives for natural, synthetic and mixed rubber compounds
- routine problems, their probable causes and relevant corrective actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD280 Operate resin-glass depositor equipment

Modification History

Release 1. Supersedes and is equivalent to PMBPROD280B Operate resin-glass depositor equipment

Application

This unit of competency covers the skills and knowledge required to operate automated resin-glass depositor (chopper gun) equipment for composite products.

This unit of competency applies to operators who are required to check the requirements for the job; perform pre-operational checks; monitor equipment operations, moulds, product quality and conformity; and recognise routine and non-routine problems and take appropriate action.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Check work requirements**	1.1	Identify work requirements from production plan or request
		1.2	Check product, materials and equipment requirements for job
		1.3	Recognise requirements which may not be in accordance with usual practice
		1.4	Ask questions of appropriate person to confirm non-standard job specifications
		1.5	Ensure housekeeping is to requirements
		1.6	Identify hazards associated with the job and take appropriate action
		1.7	Perform other pre-operational checks in accordance with workplace procedures
2	**Check process set-up**	2.1	Check safety equipment and guards are in position and working
		2.2	Check operation of resin-glass depositor equipment
		2.3	Check moulds for cracks, chips, marks and cleanliness
		2.4	Check materials, including fibre preforms, resins, additives and release agents are correct
		2.5	Complete pre-start checks
3	**Operate equipment to procedures**	3.1	Start equipment safely and correctly when required
		3.2	Check process is operating within required limits
		3.3	Collect products and store as required
		3.4	Check product/process is in specification/to required quality standard
		3.5	Maintain supply of materials as required
		3.6	Complete logs and records as required
		3.7	Collect and segregate scrap, waste and other materials as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			required
		3.8	Keep equipment and work area clean
		3.9	Pause equipment cycle and perform emergency stop, as required
4	**Respond to routine problems in accordance with procedures**	4.1	Recognise known faults that occur during the operation
		4.2	Identify and take action on causes of routine faults
		4.3	Log problems as required
		4.4	Identify non-routine process and quality problems and take appropriate action

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- automated resin-glass depositor equipment and its major components
- moulds
- ancillary equipment that is integral to the process.

Additional tools and equipment will be selected as required from:

- programmable logic controllers (PLC) if fitted
- hand tools used in the process
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- weight, shape, volume of materials to be handled
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks

Assessment Requirements for PMBPROD280 Operate resin-glass depositor equipment

Modification History

Release 1. Supersedes and is equivalent to PMBPROD280B Operate resin-glass depositor equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, basic machine control panels, material labels and safety data sheets (SDS)
- select and use tools and equipment to meet job specifications
- monitor resin-glass depositor and ancillary equipment using measured/indicated data and smell, sight, sound and feel as appropriate
- monitor and interpret key variables, including:
  - machine conditions
  - humidity and temperature
  - ratio of fibre/additives to resin
  - production rate
  - product integrity and general conformance to specifications
- operate and adjust the equipment to meet product quality and production output specifications
- pause the equipment or shut down equipment in normal and abnormal circumstances
- demould products
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- recognise routine and non-routine problems
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report faults to appropriate personnel
- distinguish between possible causes of routine faults, including:
  - raw material variations/contamination
  - process abnormalities
  - procedural errors

  - mechanical abnormalities
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- the function of resin-glass depositor equipment, machine components and guides
- principles of operation of the equipment
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- process behaviours of resins and the role of additives
- reasons for checking process control panels and reporting readings which are outside of normal range of process variability
- production workflow sequences and materials demand
- factors which may affect product quality or production output and appropriate remedies
- routine problems, their probable causes and relevant corrective actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on the job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD323 Produce powder coated products

Modification History

Release 1. Supersedes and is equivalent to PMBPROD323C Produce powder coated products

Application

This unit of competency covers the skills and knowledge required to operate and adjust powder (dry) coating equipment to produce powder coated products.

This unit of competency applies to experienced operators who are required to start up and stop powder (dry) coating equipment, monitor equipment operation, maintain continuity of process, make adjustments to remedy faults and non-conformity and solve problems within area of responsibility.

This unit of competency applies to an experienced operator demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The experienced operator may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Plan own work requirements**	1.1	Identify equipment and processes used for production process and upstream and downstream operations from production plan or request
		1.2	Identify materials colour, grade and quantity required
		1.3	Recognise hazards and follow appropriate hazard control/minimisation methods
		1.4	Identify and check emergency stops, guards and controls
		1.5	Identify requirements for materials, quality, production and equipment checks
		1.6	Identify materials, waste management and housekeeping needs
2	**Start up powder coating process**	2.1	Determine equipment requirements
		2.2	Set up and adjust powder coating equipment, racks, overhead tracks, spray equipment and oven
		2.3	Check equipment, powder coat material and settings all match requirements
		2.4	Discard, or make adjustments to the process for, non-conforming materials
		2.5	Set up date, batch and materials markings to specifications, as required
		2.6	Complete other pre-start checks in accordance with procedures
		2.7	Start up powder coating process
3	**Operate and make adjustments as required to the powder coating process**	3.1	Start equipment safely and correctly in accordance with standard procedures
		3.2	Operate equipment, noting key variables
		3.3	Compare measures of powder build, colour and final coat match requirements
		3.4	Monitor controls, including speeds, operating temperatures and spray conditions, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	3.5	Monitor controls/displays/terminals for production/process data
	3.6	Make adjustments to remedy faults and non-conformity to standard as required
	3.7	Maintain continuity of process
	3.8	Collect and reprocess/discard scrap/trim and other materials in accordance with procedures
	3.9	Clean, adjust and lubricate equipment as required
	3.10	Pause or stop equipment in an emergency, following procedures
4 **Anticipate and solve problems**	4.1	Recognise a problem or a potential problem
	4.2	Determine problems needing priority action
	4.3	Refer problems outside area of responsibility to appropriate person, with possible causes
	4.4	Seek information and assistance as required to solve problems
	4.5	Solve problems within area of responsibility
	4.6	Follow through items initiated until final resolution has occurred

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- powder coating spray equipment
- ancillary equipment that is integral to the process
- racks, baskets and supports, including overhead tracks and drives
- curing ovens and controls.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Additional tools and equipment will be selected as required from:

- powder handling equipment
- hand tools used in the process
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- weight, shape, volume of materials to be handled
- hazardous products and materials
- rotational equipment or vibration
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- smoke, dust, vapours or other atmospheric hazards
- high temperatures
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Problems

Routine and non-routine problems must be resolved.

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

Non-routine problems are unexpected problems or variations of previous problems and include one or more of:

- unstable process variables
- sub-optimal operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- variations in feed rates
- variations in quality
- emergency situations
- intermittent faults.

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Routine problems are predictable and have known solutions and include one or more of:

- processing problems
- equipment malfunctions
- out of specification equipment operation
- variations in materials
- raw material contamination
- incorrect quantity of materials
- poor pre-treatment coverage, drainage or compatibility
- colour variation
- blemishes
- uneven coating
- over/under cured coating
- contamination of materials.

Unit Mapping Information

Assessment Requirements for PMBPROD323 Produce powder coated products

Modification History

Release 1. Supersedes and is equivalent to PMBPROD323C Produce powder coated products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, instruments/control panels, material labels and safety data sheets (SDS)
- set up powder coating equipment and materials to meet specifications
- start up and operate the equipment
- monitor key variables, including:
  - spray application and coverage
  - operating temperatures
  - speed
  - colour
  - cycle time
  - product integrity and general conformance to specification
- make adjustments to remedy faults and non-conformity
- maintain output and product quality using appropriate instruments, controls, test information and readings
- safely shut down equipment in normal and abnormal circumstances
- leave machine in appropriate condition with any required locks, tags or notices
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- distinguish between causes of problems, including:
  - operational problems
  - instrument failure/malfunction
  - electrical failure/malfunction
  - mechanical failure/malfunction
  - wrong readings
  - equipment design deficiencies
  - materials properties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - surface conditions
  - oven conditions
  - process variables
- raw material variations/contamination
- process abnormalities
- procedural errors
- recognise and prioritise problems requiring action
- resolve routine and non-routine problems
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including knowledge of:

- common types of powders and applications for range of substrate materials
- common types and purpose of pre-treatment
- function and operating principles of powder coating equipment, machine components and ancillary equipment
- impact of variations in machine process conditions and raw materials on product quality and production output
- factors which may affect product quality or production output and appropriate remedies
- powder coating manufacturing process and stages of production
- characteristics of materials and their behaviour in relation process conditions and stages of production
- quality requirements at each production stage
- mechanical, hydraulic, pneumatic, electrical and electronic principles which effect machine operation
- common adjustments in process variables and their impact on product quality and production output
- impact of variations in raw materials and equipment operation in relation to final product
- impact of variations in raw materials and equipment operation in relation to final product
- possible changes to materials properties to better suit specific process requirements
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD347 Produce composites using hand lamination

Modification History

Release 1. Supersedes and is equivalent to PMBPROD347B Produce composites using hand lamination

Application

This unit of competency covers the skills and knowledge required to operate and adjust hand lamination processes to produce complex composite product. It applies to products which are 'complex' due to their shape (e.g. acute angle corners), technical specification (e.g. high strength/rigidity/low weight) or the conditions under which the work must be undertaken (e.g. poor access, hot/cold environment).

This unit of competency applies to experienced operators who are required to set up and prepare equipment, tools and materials, monitor equipment operation, make adjustments to remedy faults and non-conformity and solve problems within area of responsibility.

This unit of competency applies to an experienced operator demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The experienced operator may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Plan own work requirements**	1.1	Identify most appropriate equipment and materials to be used for required product and upstream and downstream operations from production plan or request
		1.2	Identify materials required, including additives
		1.3	Implement measures to control identified hazards in accordance with procedures and duty of care
		1.4	Identify requirements for materials, quality, production and equipment checks
2	**Set up mould and materials to procedures**	2.1	Check materials, resins and fibres are correct and prepared to specifications
		2.2	Inspect and prepare mould as required
		2.3	Prepare jigs, fixtures and tools as required
		2.4	Take appropriate action for non-conforming items
		2.5	Set up date, batch and materials markings to specifications, as required
		2.6	Complete other checks
3	**Hand lay up composites to procedures**	3.1	Apply materials to the mould to specification
		3.2	Monitor product/process quality
		3.3	Make adjustments to remedy faults and non-conformity as required
		3.4	Adjust work to minimise scrap and waste
4	**Anticipate and solve problems**	4.1	Recognise a problem or a potential problem
		4.2	Determine problems needing priority action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.3 Refer problems outside area of responsibility to appropriate person, with possible causes

4.4 Seek information and assistance as required to solve problems.

4.5 Solve problems within area of responsibility

4.6 Follow through items initiated until final resolution has occurred

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- open moulds for composite products
- hand mixing equipment and stirrers
- knives and cutters to trim fibres
- hand application tools, such as rollers and brushes.

Additional tools and equipment will be selected as required from:

- hand tools
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- glass and other fibre hazards (inhalation and skin penetration)
- hazardous products and materials
- cutting equipment
- sharp edges, swarf and scrap
- protrusions or obstructions
- slippery surfaces, spills or leaks
- rotational equipment or vibration
- smoke, dust, vapours or other atmospheric hazards
- electricity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

Non-routine problems are unexpected problems or variations of previous problems and include one or more of:

- unstable process variables
- sub-optimal operation
- variations in feed rates
- variations in quality
- emergency situations
- mould release problems
- warping or cracking after moulding
- voids due to resin drainage
- intermittent faults.

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Assessment Requirements for PMBPROD347 Produce composites using hand lamination

Modification History

Release 1. Supersedes and is equivalent to PMBPROD347B Produce composites using hand lamination

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, instruments/control panels, material labels and safety data sheets (SDS)
- select and prepare materials, including:
  - resins
  - fibre reinforcement
  - gel coats
  - cores, fillers and surface finishes
- set up moulds and apply materials to moulds to meet specifications
- monitor key variables, including:
  - temperature of environment/resin
  - time since mixing vs pot life of resin
  - air flow/ventilation
  - viscosity of resin
  - differing fibres and fabrics
  - compacting density of application
  - product integrity and general conformance to specification
- make adjustments to remedy faults and non-conformity
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- distinguish between causes of problems, including:
  - operational problems
  - procedural problems
  - materials properties
  - process variables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- recognise and prioritise problems requiring action
- resolve non-routine problems
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including knowledge of:

- hand lamination manufacturing process and phases of the cycle
- characteristics of materials and their behaviour in relation process conditions and stages of production
- characteristics and properties of materials required to form a composite structure of the required strength and surface finish, including fibres and pot life of the resins used
- impact of resin mixtures, laying of materials and temperatures on product quality and production output
- quality requirements at each production stage
- common adjustments in process variables and their impact on product quality and production output
- impact of variations in raw materials and equipment operation in relation to final product
- possible changes to materials properties to better suit specific process requirements
- non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- Where the assessee does not currently possess evidence of competency in *PMBPROD247 Hand lay up composites*, it may be co-assessed with this unit.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD375 Vulcanise products using an autoclave

Modification History

Release 1. Supersedes and is equivalent to PMBPROD375B Vulcanise products using an autoclave

Application

This unit of competency covers the skills and knowledge required to operate and adjust an autoclave to vulcanise/cure rubber products.

This unit of competency applies to experienced operators who are required to load product, bring the autoclave online, monitor operations, maintain continuity of process, make adjustments to remedy faults and non-conformity and solve problems within area of responsibility.

This unit of competency applies to an experienced operator demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The operator may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Plan own work requirements**	1.1	Identify work requirements from workplace procedures
		1.2	Identify equipment and processes used for materials preparation, vulcanising and any related production process and for the downstream operations
		1.3	Identify hazards connected with materials and process from workplace reference materials, including safety data sheets (SDS) and equipment instructions
		1.4	Implement measures to control identified hazards in line with procedures and duty of care
		1.5	Identify requirements for materials, quality, production and equipment checks
2	**Set up autoclave vulcanising process**	2.1	Identify and read equipment information, quality specifications and standard operating procedures (SOPs)
		2.2	Check heat and pressure settings and process adjustments for conformity to procedures
		2.3	Compare equipment and material condition to known optimum condition and take appropriate action in accordance with procedures (including, where authorised, making adjustments within overall specifications to process settings to ensure product output quality is appropriate).
		2.4	Check that all gauges are operating, safety features are activated or fitted, locks and guards are in place
3	**Operate and make adjustments to the autoclave process to procedures**	3.1	Load and close autoclave and bring on line
		3.2	Monitor production outputs, equipment operating temperatures and pressures
		3.3	Make adjustments to remedy faults and non-conformity as required
		3.4	Shut down, vent and unload autoclave
		3.5	Take samples as required and identify product out of specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.6	Note and report non-conformity to required workplace specifications, following workplace procedures
		3.7	Clean, adjust and lubricate equipment as required
		3.8	Pause or stop equipment in an emergency, following procedures
4	**Respond to product quality improvement requests**	4.1	Monitor vulcanising process and note conditions which may affect product quality standards
		4.2	Report process variations
		4.3	Note and implement changes in standard operating procedures and specifications
5	**Anticipate and solve problems**	5.1	Recognise a problem or a potential problem
		5.2	Determine problems needing priority action
		5.3	Refer problems outside area of responsibility to appropriate person, with possible causes
		5.4	Seek information and assistance as required to solve problems
		5.5	Solve problems within area of responsibility
		5.6	Follow through items initiated until final resolution has occurred

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- autoclave
- ancillary equipment that is integral to the process other than boiler

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

operation.

Additional tools and equipment will be selected as required from:

- hand tools used in this process
- knives and other bag opening equipment
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- confined spaces
- weight, shape, volume of materials to be handled
- hazardous products and materials
- rotational equipment or vibration
- knives and cutting blades
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- smoke, dust or other atmospheric hazards
- high temperatures
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Problems

Routine and non-routine problems must be resolved.

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Non-routine problems are unexpected problems or variations of previous problems and include one or more of:

- unstable process variables
- sub-optimal operation
- variations in feed rates
- variations in quality
- emergency situations
- intermittent faults.

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Routine problems are predictable and have known solutions and include one or more of:

- processing problems
- equipment malfunctions
- out of specification equipment operation
- variations in materials
- wrong cure cycle
- changed product cure systems/section
- steam problems.

Assessment Requirements for PMBPROD375 Vulcanise products using an autoclave

Modification History

Release 1. Supersedes and is equivalent to PMBPROD375B Vulcanise products using an autoclave

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, instruments/control panels, material labels and safety data sheets (SDS)
- set up autoclave vulcanising process and materials to meet specifications
- operate the equipment
- monitor key variables, including:
  - operating temperatures
  - stacking and loading off product for autoclaving
  - material composition
  - operating pressure
  - cycle time
  - output rate product integrity and general conformance to specification
- make adjustments to remedy faults and non-conformity
- load and unload products
- maintain output and product quality using appropriate instruments, controls, test information and readings
- safely shut down equipment in normal and abnormal circumstances
- leave machine in appropriate condition with any required locks, tags or notices
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- distinguish between causes of problems, including:
  - operational problems
  - instrument failure/malfunction
  - electrical failure/malfunction
  - mechanical failure/malfunction
  - wrong readings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - equipment design deficiencies
  - materials properties
  - process variables
  - raw material variations/contamination
  - process abnormalities
  - procedural errors
- recognise and prioritise problems requiring action
- resolve routine and non-routine problems
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems including knowledge of:

- function and operating principles of vulcanising equipment, machine components and ancillary equipment
- impact of variations in machine process conditions and raw materials on product quality and production output
- factors which may affect product quality or production output and appropriate remedies
- vulcanising process and phases of the cycle
- characteristics of materials and their behaviour in relation process conditions and stages of production
- quality requirements at each production stage
- common adjustments in process variables and their impact on product quality and production output
- impact of variations in raw materials and equipment operation in relation to final product
- possible changes to materials properties to better suit specific process requirements
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD380 Produce composites using chopper gun/depositor

Modification History

Release 1. Supersedes and is equivalent to PMBPROD380B Produce composites using chopper gun/depositor

Application

This unit of competency covers the skills and knowledge required to operate and adjust chopper gun/depositor equipment to produce composite materials product.

This unit of competency applies to experienced operators who are required to set up equipment and materials, monitor equipment operation, make adjustments to remedy faults and non-conformity and solve problems within area of responsibility.

This unit of competency applies to an experienced operator demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The experienced operator may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

PMBPROD280 Operate resin-glass depositor equipment

Competency Field

Production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Plan own work requirements**	1.1	Identify equipment and processes to be used for production process and upstream and downstream operations from production plan or request
		1.2	Identify and check materials required, including additives
		1.3	Implement measures to control identified hazards in line with procedures and duty of care
		1.4	Identify and check emergency stops, guards and controls
		1.5	Identify requirements for materials, quality, production and equipment checks
		1.6	Identify materials, waste management and housekeeping needs
2	**Set up equipment, mould and materials to procedures**	2.1	Determine equipment requirements
		2.2	Adjust controls as required for factors, such as ambient conditions, temperature and materials
		2.3	Check equipment, raw material and mould all match job requirements
		2.4	Check materials, resins, fibres, release agents are correct
		2.5	Take appropriate action for non-conforming materials
		2.6	Set up date, batch and materials markings to specifications, as required
		2.7	Complete pre-start checks
3	**Hand operate chopper gun/depositor**	3.1	Use chopper gun/depositor to apply materials to the mould to procedures
		3.2	Monitor product quality, thickness, colour and integrity
		3.3	Make adjustments to remedy faults and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			non-conformances as required
		3.4	Collect and segregate scrap, trim and other materials as required
		3.5	Shut off machine safely and correctly as required following procedures
4	**Anticipate and solve problems**	4.1	Recognise a problem or a potential problem
		4.2	Determine problems needing priority action
		4.3	Refer problems outside area of responsibility to appropriate person, with possible causes
		4.4	Solve problems within area of responsibility
		4.5	Seek information and assistance as required to solve problems
		4.6	Follow through items initiated until final resolution has occurred

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- chopper gun/depositor
- pots, pumps and controls
- open moulds for composite products
- ancillary equipment that is integral to the process.

Additional tools and equipment will be selected as required from:

- hand tools used in the process
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- weight, shape, volume of materials to be handled
- hazardous products and materials
- rotational equipment or vibration
- knives, sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- smoke, dust, vapours or other atmospheric hazards
- high temperatures
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

Non-routine problems are unexpected problems or variations of previous problems and include one or more of:

- variations in quality
- emergency situations
- intermittent faults.

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Assessment Requirements for PMBPROD380 Produce composites using chopper gun/depositor

Modification History

Release 1. Supersedes and is equivalent to PMBPROD380B Produce composites using chopper gun/depositor

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, instruments/control panels, material labels and safety data sheets (SDS)
- set up chopper gun/depositor equipment and prepare materials to meet specifications
- operate the equipment to apply materials to moulds
- monitor key variables, including:
  - temperatures and humidity of environment
  - resin to fibre ratios
  - surface finish/appearance
  - product integrity and general conformance to specification
- make adjustments to remedy faults and nonconformity
- maintain output and product quality
- safely shut off equipment in normal and abnormal circumstances
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- distinguish between causes of problems, including:
  - operational problems
  - materials properties
  - process variables
  - procedural problems
- recognise and prioritise problems requiring action
- resolve non-routine problems
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including knowledge of:

- function and operating principles of chopper gun/depositor equipment
- chopper gun/depositor spraying process and stages of production
- properties of the materials required to form a composite structure of the required strength and surface finish, including the importance of gel coat properties and bonding
- requirements for correct spraying of materials to the mould surface
- pot life of the resins used
- clean-out procedures
- characteristics of materials and their behaviour in relation process conditions and stages of production
- quality requirements at each production stage
- common adjustments in process conditions and their impact on product quality and production output
- impact of variations in raw materials and equipment operation in relation to final product
- possible changes to materials properties to better suit specific process requirements
- non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- Where the assessee does not currently possess evidence of competency in *PMBPROD2980 Operate resin-glass depositor equipment*, it may be co-assessed with this unit.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on the job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD430 Trial a new die/tool

Modification History

Release 1. Supersedes and is equivalent to PMBPROD430B Trial a new die/tool

Application

This unit of competency covers the skills and knowledge required to trial new high pressure dies used for processes such as injection or blow moulding. It applies to all plastic and rubber processes which involve a die or tool, such as injection or blow moulding.

This unit of competency applies to technicians who are required to install required tooling, prepare machines for trials, perform trial procedures and make adjustments as required.

This unit of competency applies to technicians demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The technicians may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine trial**	1.1	Gather all relevant information available

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	requirements	1.2	Interpret job sheets or equivalent instructions correctly
		1.3	Confirm machine/equipment suitability
		1.4	Confirm die state
		1.5	Confirm readiness of raw materials
2	**Set die and machine**	2.1	Follow safe working practices
		2.2	Fit and set up die
		2.3	Set up process conditions
		2.4	Set machine to meet specifications and operational requirements
		2.5	Dry cycle machine and die according to procedures
3	**Perform die trial**	3.1	Carry out trial process following enterprise procedures
		3.2	Identify and record variations from specifications
		3.3	Monitor control panel and interpret test results for fluctuations, variations and trends
		3.4	Determine process limitations with respect to product and production specifications
		3.5	Adjust controls to ensure parameters are maintained to job specifications
4	**Rectify equipment and quality problems**	4.1	Identify range of faults that will affect product and production specifications
		4.2	Determine changes required to tooling and equipment to meet product and production specifications
		4.3	Maintain appropriate records related to machinery and equipment to enterprise standards
		4.4	Identify problems
		4.5	Worn or damaged tooling is identified and changed as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			required
		4.6	Rectify problems that are within area of responsibility
		4.7	Report problems that are outside area of responsibility to appropriate personnel
5	**Complete trial**	5.1	Shut down equipment as required
		5.2	Record trial results
		5.3	Return machine to service
		5.4	Instruct machine operator

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Equipment

Equipment includes the setting and trial of one or more of:

- injection moulding machines
- blow moulding machines
- similar machines
-

Operational requirements

Operational requirements include one or more of:

- die/tool set up and adjustment
- machine speed
- cycle time
- temperatures, including heating and cooling rates
- product quality measures
- any other specified requirement.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Simple dies

Simple dies include one or more of:

- two plates, including ejection systems operating in the mould open axis

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cavity
- back plates
- support plates
- cold runner
- sprue
- nozzle seat
- locating ring-tab
- sub, fan, diaphragm and direct gating
- ejector pins and sleeves
- ejector and stripper plates.

Advanced dies

Advanced dies include one or more of:

- a two or three plate die with one or more product forming components which move in a direction other than the mould open axis, and which are driven by the mould rather than external actuation
- sliding blocks or cores actuated by skew pins or cams
- baffled, spiral, tube, and heat pipe cooling systems
- rising cores
- internally actuated unscrewing systems.

Complex dies

Complex dies include one or more of:

- at least one external power and control source to actuate product forming components, which move in a direction other than the mould open axis, and require sequencing with the mould operation
- moulds which retain molten material within the mould between cycles
- hot runners
- insulated runners
- externally actuated sliding blocks, cores and unscrewing systems
- safety interlocks.

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- material spills or leaks
- hazardous products and materials
- manual handling hazards
- stationary and moving machinery
- machinery hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- protrusions or obstructions
- slippery surfaces
- smoke, dust, fumes, vapours or other atmospheric hazards
- humidity, air temperatures and radiant heat
- noise, light and energy sources
- other hazards that might arise.

Causes of faults include one or more of:

Causes of faults include one or more of:

- materials
- heat
- equipment adjustment
- equipment set-up.

Problems/solutions

Problems/solutions include one or more of:

- selecting the right tools for a new job
- using new and untried die or tool
- adapting the process to the new product and die/tool
- observing the process to obtain useful trial data
- comparing the product to the desired specification
- determining the cause of non-compliances.

Unit Mapping Information

Assessment Requirements for PMBPROD430 Trial a new die/tool

Modification History

Release 1. Supersedes and is equivalent to PMBPROD430B Trial a new die/tool

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- determine production requirements
- discuss work progress with other workers
- conduct pre-start checks
- start up and shut down equipment following appropriate procedures
- inspect product conformance to requirements
- identify and rectify routine faults
- identify routine product problems and notify appropriate persons
- distinguish between causes of problems, including:
  - operational problems
  - materials properties
  - process variables
  - procedural errors
- store equipment, materials and product appropriately
- adhere to safety requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate knowledge of:

- the impact of incorrect or faulty materials
- types of products made with different processes
- changes to raw materials during the process
- production work flow sequences and materials demands
- selection practices for equipment, materials, processes and procedures
- materials and process hazards
- appropriate hazard control procedures

- appropriate action to resolve faults or report faults
- start-up and shutdown procedures
- safety requirements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate industrial equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - appropriate workplace experience supervising/evaluating the type of work being assessed
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed.

PMBPROD431 Trial a new, advanced or complex mould

Modification History

Release 1. Supersedes and is equivalent to PMBPROD431B Trial a new, advanced or complex mould

Application

This unit of competency covers the skills and knowledge required to trial new, advanced or complex moulds. It applies to 'low pressure' moulds as used in rotomoulding, thermoforming and composites manufacturing.

This unit of competency applies to technicians who are required to install required tooling, prepare machines for trials, perform trial procedures and make adjustments as required.

This unit of competency applies to technicians demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The technicians may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Determine trial requirements**	1.1	Gather all relevant information available
		1.2	Interpret job sheets or equivalent instructions correctly
		1.3	Confirm machine/equipment suitability
		1.4	Confirm mould state
		1.5	Confirm readiness of raw materials
2	**Set mould and machine**	2.1	Follow safe working practices
		2.2	Fit and set up mould
		2.3	Set up process condition
		2.4	Set machine to meet specifications and operational requirements
		2.5	Dry cycle machine and mould to procedures
3	**Perform mould trial**	3.1	Carry out trial process following enterprise procedures
		3.2	Identify and record variations from specifications
		3.3	Monitor control panel and interpret test results for fluctuations, variations and trends
		3.4	Determine process limitations with respect to product and production specifications
		3.5	Adjust controls to ensure parameters are maintained to job specifications
4	**Rectify equipment and quality problems**	4.1	Identify range of faults that will affect product and production specifications
		4.2	Determine changes required to tooling and equipment to meet product and production specifications
		4.3	Maintain appropriate records related to machinery and equipment to enterprise standards
		4.4	Identify problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.5	Identify worn or damaged tooling and change as required
		4.6	Rectify problems that are within area of responsibility
		4.7	Report problems that are outside area of responsibility to appropriate personnel
5	**Complete trial**	5.1	Shut down equipment as required
		5.2	Record trial results
		5.3	Return machine to service
		5.4	Instruct machine operator

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Equipment

Equipment includes the setting and trial of one or more of:

- rotational moulding machines:
  - rock and roll
  - clamshell
  - vertical or up and over rotational
  - shuttle
  - swing arm
  - carousel
- thermoforming:
  - wood patterns moulds
  - cast aluminium moulds
  - machined aluminium moulds
  - composite moulds
  - complex moulds
- vacuum forming systems
- similar systems.

Operational requirements

Operational requirements include one or more of:

- mould set up and adjustment
- machine speed
- ratios for rotation
- cycle time
- external temperatures
- humidity
- type of heating used
- cooling rates
- product quality measures
- any other specified requirement.

Procedures

All operations must be performed in accordance with relevant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- material spills or leaks
- hazardous products and materials
- manual handling hazards
- stationary and moving machinery
- machinery hazards
- protrusions or obstructions
- slippery surfaces
- smoke, dust, fumes, vapours or other atmospheric hazards
- humidity, air temperatures and radiant heat
- noise, light and energy sources
- other hazards that might arise.

Causes of faults

Causes of faults include one or more of:

- materials
- heat
- equipment adjustment
- equipment set-up.

Problems/solutions

Problems/solutions include one or more of:

- selecting the right tools for a new job
- using new and untried moulds
- adapting the process to the new product and die/tool

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- observing the process to obtain useful trial data
- comparing the product to the desired specification
- determining the cause of non-compliances.

Assessment Requirements for PMBPROD431 Trial a new, advanced or complex mould

Modification History

Release 1. Supersedes and is equivalent to PMBPROD431B Trial a new, advanced or complex mould

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- determine production requirements
- discuss work progress with other workers
- conduct pre-start checks
- start up and shut down equipment following appropriate procedures
- inspect product conformance to requirements
- identify and rectify routine faults
- identify routine product problems and notify appropriate persons
- distinguish between causes of problems, including:
  - operational problems
  - materials properties
  - process variables
  - procedural errors
- store equipment, materials and product appropriately
- adhere to safety requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate knowledge of:

- the impact of incorrect or faulty materials
- types of products made with different processes
- changes to raw materials during the process
- production work flow sequences and materials demands
- selection practices for equipment, materials, processes and procedures
- production equipment capability
- materials and process hazards
- appropriate hazard control procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the importance of material properties and qualities
- the importance of process conditions
- approved procedures
- appropriate action to resolve faults or report faults
- start-up and shutdown procedures
- safety requirements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
- should occur over a range of situations
    - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
    - must include the use of appropriate industrial equipment requiring demonstration of operation, start and stop procedures and responding to problems
    - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience
  - appropriate workplace experience supervising/evaluating the type of work being assessed
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed.

PMBTECH301 Use material and process knowledge to solve problems

Modification History

Release 1. Supersedes and is equivalent to PMBTECH301B Use material and process knowledge to solve problems

Application

This unit of competency covers the skills and knowledge required to apply material and process knowledge to solve problems.

This unit of competency applies to experienced operators who are required to recognise actual and potential process and product problems; identify the role of polymers, additives and other materials in the problems; and determine corrective action.

This unit of competency applies to an experienced operator demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The operator may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Identify and apply applications of polymer materials**	1.1	Identify typical applications for common polymer materials
		1.2	Recognise physical properties of common polymers
		1.3	Use additives with knowledge of the effects of using the incorrect amount/type of additive
		1.4	Handle additives to minimise the associated risks
2	**Identify and apply impacts of impurities on polymer products**	2.1	Identify major impurities of concern to product and process
		2.2	Examine polymer materials for impurities
		2.3	Apply corrective actions to remove/compensate for impurities
3	**Determine expected material properties from polymer type and grade**	3.1	Identify the relationship between polymer type and polymer characteristics
		3.2	Identify the relationship between polymer grade and degree of polymerisation
		3.3	Identify the influence of polymer structure on properties
4	**Solve process problems related to polymer flow characteristics**	4.1	Use polymer flow test methods and recognise the importance of flow properties to the process
		4.2	Control critical factors leading to changes of state of the polymer during processing using knowledge of the causes
		4.3	Identify the relationship between polymer flow and other polymer properties
		4.4	Recognise process/product signs of incorrect polymer flow characteristics
		4.5	Recommend corrective actions for problems caused by polymer flow

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5	**Solve process/product problems related to heating and cooling of product/material in process**	5.1	Recognise the importance of the degree of cross linking on product properties if appropriate
		5.2	Recognise the importance of the degree of crystallisation/crystal size on product properties if appropriate
		5.3	Recognise the impact of shrinkage on product properties if appropriate
		5.4	Recognise the impact of annealing on product properties if appropriate
		5.5	Recognise process/product signs of incorrect heating/cooling
		5.6	Recommend corrective actions for problems caused by heating
6	**Solve process problems related to polymer faults**	6.1	Recognise an actual or a potential process problem
		6.2	Analyse that problem in a formal manner
		6.3	Determine appropriate corrective action
		6.4	Implement that corrective action if it is within the range of workplace authority
		6.5	Make recommendations for corrective action outside range of workplace authority
		6.6	Follow through on corrective action and make sure problem is resolved

Foundation Skills

Assessment Requirements for PMBTECH301 Use material and process knowledge to solve problems

Modification History

Release 1. Supersedes and is equivalent to PMBTECH301B Use material and process knowledge to solve problems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, instruments/control panels, material labels and safety data sheets (SDS)
- recognise actual and potential process and product problems in which materials properties and/or characteristics may play a role
- analyse actual and potential process and product problems to identify the role of materials properties and/or characteristics
- apply formal problem analysis/solving methods
- distinguish between causes of problems, including:
  - instrument failure/malfunction
  - electrical failure/malfunction
  - mechanical failure/malfunction
  - wrong readings
  - equipment design deficiencies
  - wrong raw materials/additives or wrong grade
  - incorrect quantity of materials/additives
  - contaminated materials/additives
  - out-of-specification materials
  - process set-up and/or operation process variables
- apply a theoretical understanding of polymers to determine corrective action
- implement corrective action within area of responsibility or make recommendation according to procedures
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- types and application of common polymer materials and additives
- structure of common polymers
- commonly accepted diagrammatic representations of polymer molecular shape and arrangement
- polymer properties related to flow, including:
  - molecular weight
  - molecular structure
  - factors effecting viscosity
- polymer properties related to common polymer types and grades
- impact of common impurities on process and product
- the impact of temperature and heating/cooling rate on processing and properties
- characteristics of materials and their behaviour in relation to process conditions and stages of production
- application of problem analysis/solving methods to polymer processing/products
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur using a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - industry-based case studies/scenarios
  - ‘what ifs’
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBTECH401 Predict polymer properties and characteristics

Modification History

Release 1. Supersedes and is equivalent to PMBTECH401B Predict polymer properties and characteristics

Application

This unit of competency covers the skills and knowledge required to predict polymer properties and characteristics as typically used in problem solving and product and process improvement.

This unit of competency applies to technicians or similar roles who are required to predict the impact of process conditions on polymer properties, predict physical properties from polymer morphology, determine the impact of use conditions and polymer characteristics on physical failure, and organise and interpret tests.

This unit of competency applies to an operator/technician applying specialised theoretical and technical knowledge and well developed skills in situations that require autonomy, discretion and judgement. The person may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Predict the impact of processing conditions on polymer properties**	1.1	Predict property changes due to molecular weight and temperature
		1.2	Identify the glass transition temperature and melting point relative to ambient temperature
		1.3	Describe the morphological changes occurring to polymers as the temperature is raised to typical moulding conditions
		1.4	Describe the effect of cooling rate on polymer morphology
		1.5	Predict potential product dimension/shape changes due to internal stresses resulting from molecular orientation
		1.6	Determine the affect of post-mould annealing on the degree of crystallisation and crystal
2	**Predict physical properties of polymers from their morphology**	2.1	Predict the effects temperature, crystal size, degree of crystallisation, molecular orientation on physical properties
		2.2	Predict shrinkage from morphology
3	**Determine likely physical failures of polymers**	3.1	Determine impact of physical use conditions on physical failure
		3.2	Determine impact of polymer characteristics on physical failure
4	**Organise and interpret polymer tests**	4.1	Describe melt flow properties from flow data
		4.2	Choose appropriate test type to measure desired criteria
		4.3	Specify relevant standard test method
		4.4	Interpret test result, making allowance for possible variations in test

Assessment Requirements for PMBTECH401 Predict polymer properties and characteristics

Modification History

Release 1. Supersedes and is equivalent to PMBTECH401B Predict polymer properties and characteristics

Performance Evidence

relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret technical reports and specifications, phase diagrams and standard test methods
- predict polymer properties in relation to:
  - polymer morphology
  - polymer phase change
  - processing conditions
- predict the impact of use conditions and polymer characteristics on physical failure of polymers
- organise tests
- record and interpret test results.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role, including knowledge of:

- function of equipment and stages of manufacturing process in at least one (1) method/field of polymer manufacturing
- polymer morphology using phase diagrams
- properties of polymers in relation to their morphology
- physical failure in polymers
- polymer materials test methods and property data
- changes in properties and variations in test data
- changes in physical properties due to compounding, processing or environmental conditions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur using a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBTECH402 Set advanced or complex dies

Modification History

Release 1. Supersedes and is equivalent to PMBTECH402B Set advanced or complex dies

Application

This unit of competency covers the skills and knowledge required to set and remove advanced or complex dies as typically used for injection or blow moulding.

This unit of competency applies to technicians or those in similar roles who are required to plan the die changeover, remove and replace the die, set machine conditions, fine tune settings and production variables to achieve desired results, and rectify production/quality problems.

This unit of competency applies to a technician applying specialised theoretical and technical knowledge and well developed skills in situations that require autonomy, discretion and judgement. The person may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

PMBPREP304 Set a die

Competency Field

Technical

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Prepare to change advanced or complex die**	1.1	Determine when changeover will be required, and plan requirements for die change
		1.2	Prepare dies and all equipment related to the advanced or complex die change
		1.3	Prepare the moulding machine for die removal according to enterprise procedures
2	**Change dies**	2.1	Remove die according to enterprise procedures, in a safe, systematic and time efficient manner
		2.2	Clean and store die according to workplace procedures applying corrosion protection if required.
		2.3	Prepare the moulding machine according to procedures
		2.4	Attach replacement die to the machine according to procedures
3	**Set advanced or complex die**	3.1	Set machine conditions for new die
		3.2	Restart machine in accordance with procedure
		3.3	Dry cycle machine and die according to enterprise procedures
		3.4	Check operation of die and power and control devices against die set up specifications.
		3.5	Check the first-off sample for compliance with required standards
		3.6	Fine tune settings and other production variables as required
		3.7	Note any equipment variances between actual production and documented set up conditions
		3.8	Complete workplace documentation and report to appropriate personnel
4	**Anticipate die setting problems**	4.1	Identify potential problems which may occur during the die changing and setting process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.2 Determine possible causes of these problems

4.3 Identify most likely causes and prioritise appropriate actions

4.4 Rectify problems using appropriate solutions within area of responsibility

4.5 Recommend improvements in systems or procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- technical specifications
- technical drawings
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Die A die is a former used to give shape to the product and used under pressure. Dies are typically used in the extrusion, injection, blow moulding and general rubber sectors.

Dies which are not subject to pressure are referred to as 'moulds' in this Training Package.

Advanced die An advanced die is a two or three plate die which has one or more product forming components which:

- move in a direction other than the mould open axis
- are driven by the mould rather than external actuation.

An advanced die will typically feature one or more of:

- sliding blocks or cores actuated by skew pins or cams
- baffled, spiral, tube, and heat pipe cooling systems
- rising cores
- internally actuated unscrewing systems.

Complex die A complex die is either:

- a die which has one or more product forming components that:
- use an external power and control source to actuate product forming

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

components
- move in a direction other than the mould open axis
- require sequencing with the mould operation
- a mould which retains molten material within the mould between cycles.

A complex die will typically feature one or more of:

- hot runners
- insulated runners
- externally actuated sliding blocks, cores and unscrewing systems
- safety interlocks.

Tools and equipment

Tools and equipment include:

- dies/tools
- ancillary equipment, including one or more of:
  - hot-runner temperature control
  - hydraulic or pneumatic power supply for actuation of equipment, such as cores or sliding blocks
  - mould temperature control
- hand/power tools used in this process.

Additional tools and equipment will be selected as required from:

- hoists/lifting equipment not requiring any special permits or licences
- manual handling, aids such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- weight, shape, volume of materials to be handled
- hazardous products and materials
- rotational equipment or vibration
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- smoke, dust or other atmospheric hazards
- high temperatures
- electricity
- gas
- gases and liquids under pressure
- structural hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMBTECH402B Set advanced or complex dies

Assessment Requirements for PMBTECH402 Set advanced or complex dies

Modification History

Release 1. Supersedes and is equivalent to PMBTECH402B Set advanced or complex dies

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret technical and product specifications, instruments/control panels and data
- plan and prepare for die changeover
- remove, clean and store die according to procedures
- place, attach and adjust die to specifications
- make hydraulic, pneumatic and electrical connections as required
- set machine conditions for new die
- monitor key variables, including:
  - alignment and fitting to patens
  - stability during production
  - fine adjustments of die movements to optimise production
  - die temperature control
  - die component stroke
  - clamping force
  - speeds
  - pressure
  - sequencing
  - interlocks
  - machine pressure, sequencing and interlocks
- check the installation and operation of new die to identify conformance and/or non-conformance to specifications
- make adjustments to settings and equipment operation to rectify variations in equipment operation or product quality
- identify hazards and apply relevant hazard controls
- distinguish between causes of problems, such as:
  - operational problems
  - instrument failure/malfunction
  - hydraulic failure/malfunction
  - pneumatic failure/malfunction
  - electrical failure/malfunction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - mechanical failure/malfunction
  - wrong readings
  - wrong dies
  - wrongly set die
  - worn or damaged die
  - non-optimum process conditions
  - incorrect material type or poor quality
  - equipment design deficiencies
- resolve non-routine problems
- communicate effectively with team/work group and supervisors

complete workplace records.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role, including knowledge of:

- types and features of advanced/complex dies, including
  - sliding blocks or cores actuated by skew pins or cams
  - baffled, spiral, tube, and heat pipe cooling systems
  - rising cores
  - internally actuated unscrewing systems
  - external power and control sources,
  - externally actuated sliding blocks, cores and unscrewing systems
  - safety interlocks
- die setting procedures for advanced/complex dies
- verification procedures for advanced/complex dies
- impact of incorrect or faulty fitting
- settings and adjustments of equipment, machine components and ancillary equipment in fine tuning dies
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur using a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBTECH403 Test fibre-composites materials and laminates

Modification History

Release 1. Supersedes and is equivalent to PMBTECH403B Test fibre-composites materials and laminates

Application

This unit of competency covers the skills and knowledge required to test fibre reinforced plastics materials and laminates. It applies to testing of raw materials and products. Tests are typically done to check conformance with design and quality specifications or to compare specific characteristics of materials/products.

This unit of competency applies to technicians or those in similar roles who are required to determine test specifications, prepare samples, perform tests and make recommendations based on the results.

This unit of competency applies to a technician applying specialised theoretical and technical knowledge and well developed skills in situations that require autonomy, discretion and judgement. The person may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Determine test requirements**	1.1	Identify properties to be measured according to specification
		1.2	Select appropriate test methods according to specifications
		1.3	Select appropriate testing equipment according to standards and specifications
2	**Perform raw material tests**	2.1	Prepare samples according to specification
		2.2	Perform tests in accordance with job specifications
		2.3	Record test results according to standard procedures
		2.4	Interpret test results and compare with manufacturer material data sheets
3	**Perform moulded product tests**	3.1	Prepare samples according to specification
		3.2	Perform tests in accordance with job specifications
		3.3	Record test results according to standard procedures
		3.4	Interpret test result and compare against quality specification
4	**Record and report test results**	4.1	Document tests to enterprise requirements
		4.2	Compare results against standards
		4.3	Make written recommendations based on test results

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- test procedures
- technical specifications
- technical drawings
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions

- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- testing equipment, including one or more of:
  - gel timer
  - flow meter
  - tensile tester
  - hardness tester
  - mold flow indexer
  - flammability/smoke tester
  - flexular tester.

Additional tools and equipment will be selected as required from:

- equipment specified by AS/NZ standards (where applicable)
- materials handling equipment
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- hazardous products and materials
- vapours or other atmospheric hazards
- interaction of polymers, additives and other materials
- other hazards that might arise.

Assessment Requirements for PMBTECH403 Test fibre-composites materials and laminates

Modification History

Release 1. Supersedes and is equivalent to PMBTECH403B Test fibre-composites materials and laminates

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret technical reports and specifications, material data sheets and standard test methods
- determine test specifications
- prepare samples
- perform tests
- record test results
- interpret results and make recommendations, including one (1) or more of:
  - process control actions
  - raw material suitability
  - product acceptance.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role, including knowledge of:

- types of tests, their purposes and functions, including:
  - raw material applications (e.g. resin viscosity, specific gravity of resins and gelcoats, gel time, resin exotherm, monomer content, heat deflection temperature, styrene emission, resin colour, and gelcoat water resistance)
  - laminate applications (e.g. Barcol hardness, tensile strength and elongation, compressive strength, flexural strength and flexural modulus, impact strength, glass content, water absorption, product weathering capabilities, dielectric strength, flammability, acid and alkali resistance, and thickness testing)
  - test applications (e.g. comparing use of common resins and reinforcements in laminates, comparing the tensile strength of given laminates with metals, and comparing test failure modes of laminate samples with metals)
- materials, equipment and process interactions and their impacts on performance
- quality requirements at each stage of production
- product or material test performance indices within standard variation and standard response procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- role of testing in quality control and quality assurance procedures
- relevance of failure mode to fibre reinforced plastic laminate design
- effect of creep and fatigue on laminates
- relationship of laminate thickness to bonding and material properties
- span and deflection
- safe test procedures
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

PMBTECH404 Mould chemical resistant and/or fire retardant fibre-composites

Modification History

Release 1. Supersedes and is equivalent to PMBTECH404B Mould chemical resistant and/or fire retardant fibre-composites

Application

This unit of competency covers the skills and knowledge required to laminate or lay-up special-purpose chemical resistant/fire retardant composite products. It applies to the making of a resistant/retardant laminate in a factory environment on a mould or the laying up of a composite surface on a substrate, such as a tank surface.

This competency applies to advanced operators, technicians or those in similar roles who are required to confirm the product specifications, decide on suitable materials and processes to meet specifications, and solve process and materials and problems.

This unit of competency applies to a person applying specialised theoretical and technical knowledge and well developed skills in situations that require autonomy, discretion and judgement. The person may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Confirm product specifications**	1.1	Confirm the conditions of use of the desired composite product
		1.2	Confirm the required specification of the desired composite product
		1.3	Determine any other special requirements of the desired composite product
		1.4	Obtain client sign-off of specification/requirements
2	**Select appropriate materials/process to produce the desired composite product**	2.1	Identify the laminate properties suitable for the job
		2.2	Select the appropriate resin, matrix and other materials
		2.3	Select the process to be used to make product
		2.4	Implement measures to control identified hazards in line with procedures and duty of care
		2.5	Make trial samples where required and test or arrange testing of samples as required
		2.6	Check suitability of combination of materials and process to meet all end use requirement
		2.7	Complete pre-start checks
3	**Lay up or mould the laminate**	3.1	Prepare and apply mould release to the mould surface if required
		3.2	Clean and prepare structure surface for adhesion if required
		3.3	Apply laminate materials to the mould or to the structure as required
		3.4	Inspect/test the laminate surface as required
		3.5	Make adjustments to remedy faults and nonconformity as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.6	Adjust process to minimise scrap and waste
		3.7	Clean, adjust and lubricate equipment as required
4	**Anticipate and solve problems**	4.1	Recognise a problem or a potential problem
		4.2	Determine problems needing priority action
		4.3	Determine possible fault causes
		4.4	Solve problems within area of responsibility
		4.5	Refer problems outside area of responsibility to designated person, with possible causes
		4.6	Follow through items initiated until final resolution has occurred

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling, hazardous materials and product specifications
- Australian/international standards relevant to the materials being used and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- test procedures
- technical specifications
- technical drawings
- emergency procedures
- work instructions
- standard operating procedures (SOPs)

Assessment Requirements for PMBTECH404 Mould chemical resistant and/or fire retardant fibre-composites

Modification History

Release 1. Supersedes and is equivalent to PMBTECH404B Mould chemical resistant and/or fire retardant fibre-composites

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret technical information, product specifications, material labels and safety data sheets (SDS)
- interpret corrosion resistance and fire retardance data/tables
- confirm specifications and special requirements with client
- determine materials and process that will meet product specifications and special requirements
- confirm suitability of combination of materials and process to meet requirements
- prepare for and apply laminate materials to the mould/structure
- monitor key variables, including:
  - surface finish
  - colour
  - thickness
  - product integrity and general conformance to specifications
- apply technical knowledge to recognise, anticipate and rectify quality, materials and process problems within area of responsibility
- make adjustments to remedy faults and nonconformity
- identify hazards and apply relevant hazard controls
- communicate effectively with team/work group and supervisors
- complete workplace records.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role, including knowledge of:

- types of materials, techniques and equipment used in construction of:
  - chemical resistant laminates
  - fire retardant laminates
  - wet area applications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- application of special purpose products across sectors and impact on product/process/materials requirements
- factors which may affect product quality or production output and appropriate remedies
- characteristics of materials and their behaviour in relation to process conditions and stages of production
- critical materials properties and process variables in relation to the process requirements and the end product
- materials properties and production processes for special-purpose products, including:
  - waterproofing
  - alkali and acid resistance
  - heat resistance
  - fire retardancy
  - smoke generation
  - abrasion resistance
  - cold weather performance and curing
- material and equipment conditions which may lead to out-of-specification production
- impact of variations in raw materials and equipment operation in relation to final product
- changes to materials at various stages of production
- quality requirements at each production stage
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should use a real project in an operational workplace. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur using a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBTECH405 Repair damaged fibre-composites structures

Modification History

Release 1. Supersedes and is equivalent to PMBTECH405B Repair damaged fibre-composites structures

Application

This unit of competency covers the skills and knowledge required to repair composite products with cosmetic or structural damage.

This unit of competency applies to advanced operators, technicians or those in similar roles who are required to identify, diagnose, and make repairs to products and solve process and materials and problems.

This unit of competency applies to a person applying specialised theoretical and technical knowledge and well developed skills in situations that require autonomy, discretion and judgement. The person may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

PMBPROD247 Hand lay up composites

Competency Field

Technical

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

essential outcomes.		demonstrate achievement of the element.	
1	**Assess the product and damage**	1.1	Determine scope of repair required, such as either to original manufacturer specifications or other needs
		1.2	Select appropriate repair technique
		1.3	Consult testing reports giving recommended areas to be repaired and extent of damage if available
2	**Make repairs**	2.1	Examine the accessibility of the damaged section(s)
		2.2	Identify cosmetic repair areas and structural repair areas
		2.3	Consult original manufacturer's manual or structural repairs manual where available
		2.4	Consult product release documentation and insurance company requirements if available
		2.5	Prepare and clean up the product prior to commencing the actual repair
		2.6	Make partial mould or prepare insert moulding as required for the type of repair
		2.7	Expose bonding surfaces, and/or structural anchor points, using tapered sanding techniques as determined
		2.8	Rebuild the damaged area and finish surfaces to required standard
		2.9	Take samples for testing and inclusion with documentation as required
3	**Document the repair**	3.1	Raise repair documentation for costing, legal and insurance requirements as required
		3.2	Complete other documentation and records required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling, hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- manufacturer supplied structural repair manuals
- release documentation, legal and insurance procedures for fibre reinforced plastic
- technical specifications
- technical drawings
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- hand tools used in the process
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- fumes/vapours
- weight, shape, volume of materials to be handled
- hazardous products and materials
- rotational equipment or vibration
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- smoke, dust or other atmospheric hazards
- high temperatures
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Unit Mapping Information

Assessment Requirements for PMBTECH405 Repair damaged fibre-composites structures

Modification History

Release 1. Supersedes and is equivalent to PMBTECH405B Repair damaged fibre-composites structures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret insurance documentation, technical information, product specifications, material labels and safety data sheets (SDS)
- assess product damage, accessibility repair options and costs
- determine materials and process that will meet repair requirements, including:
  - cosmetic damage
  - structural damage
- confirm suitability of combination of materials and process to meet requirements
- prepare for and make repairs
- apply technical knowledge to recognise, anticipate and rectify quality, materials and process problems within area of responsibility
- make adjustments to remedy faults and non-conformity
- identify hazards and apply relevant hazard controls
- communicate effectively with team/work group and supervisors
- take samples
- complete workplace records.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role, including knowledge of:

- repair techniques, including:
  - surface and part preparation
  - laminating, reinforcing and strengthening techniques
  - filling and joining techniques
  - surface preparation for paint, gelcoat and flowcoat
  - detailing for customer delivery
- rectification procedures for repair of marine, automotive, aerospace, industrial and architectural mouldings
- factors which may affect product quality or production output and appropriate remedies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- characteristics of materials and their behaviour in relation to process conditions and stages of production
- critical materials properties and process variables in relation to the process requirements and the end product
- material and equipment conditions which may lead to ou-of-specification production
- impact of variations in raw materials and equipment operation in relation to final product
- changes to materials at various stages of production
- quality requirements at each production stage
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication
- Where the assessee does not currently possess evidence of competency in *PMBPROD247 Hand lay up composites*, it may be co-assessed with this unit.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBTECH406 Diagnose production equipment problems

Modification History

Release 1. Supersedes and is equivalent to PMBTECH406A Diagnose production equipment problems

Application

This unit of competency covers the skills and knowledge required to diagnose production equipment problems. It applies to product faults, including reject products and other faults, and production faults/problems.

This unit of competency applies to advanced operators, technicians or those in similar roles who are required to determine the possible causes of product/production faults; investigate the likely equipment, plant and/or process causes of the faults; isolate the most probable cause; recommend the solution and monitor its implementation.

This unit of competency applies to an operator/technician applying specialised theoretical and technical knowledge and well developed skills in situations that require autonomy, discretion and judgement. The operator/technician will take the lead role in the activity but will need to liaise with a range of people at all levels in the organisation to obtain information and to implement the solution. The operator/technician will have detailed operational and process knowledge but is not required to demonstrate 'hands on' operation of equipment as part of this competency.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify faults in products/production**	1.1	Examine products/production process
		1.2	Identify faults
		1.3	Categorise faults according to type/likely cause
		1.4	Prioritise faults for action
2	**Determine most probable possible cause(s) of fault**	2.1	Analyse fault to determine possible causes
		2.2	Investigate possible causes to eliminate less probable causes
		2.3	Short list probable causes
		2.4	Check hypothesis of cause(s) is supported by the data available
		2.5	Identify most probable cause
3	**Implement solution to fault**	3.1	Develop recommended solution to fault
		3.2	Check health, safety and environment (HSE) implications of solution and modify solution as appropriate
		3.3	Communicate the recommendation as appropriate
		3.4	Check recommendation has been understood and can be implemented
		3.5	Check all hazard controls are in place
		3.6	Monitor progress of implementation
		3.7	Modify recommended solution as required
4	**Check fault**	4.1	Monitor product/process for fault

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

solution has worked	4.2	Monitor HSE impacts of changes
	4.3	Repeat analysis and solution process if required
	4.4	Update records and procedures to reflect successful solution

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Assessment Requirements for PMBTECH406 Diagnose production equipment problems

Modification History

Release 1. Supersedes and is equivalent to PMBTECH406A Diagnose production equipment problems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret test results, technical information, product specifications, instruments/control panels, material labels and safety data sheets (SDS)
- examine products/process to identify faults via one (1) or more of:
  - visual examination
  - examination of product quality or other records
  - examination of inspection records
  - examination of test results
  - specific examination testing undertaken as part of a product improvement activity
- analyse the faults to identify all feasible causes of the problem
- investigate possible causes to short list probable causes including one (1) or more of:
  - talking with operators and others
  - checking machine histories for prevailing process conditions
  - checking current process/equipment conditions
  - carrying out small tests to determine the likelihood of a causal link between a condition and a fault
- confirm most probable cause based on available data
- develop and communicate solution to the fault which meets safety requirements
- monitor implementation of the solution and review and make adjustments as required
- communicate effectively with team/work group and supervisors
- complete workplace records
- document updates to procedures
- write equipment/process condition specifications.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role including knowledge of:

- how the process/equipment works

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- characteristics of materials and their behaviour in relation to process conditions and stages of production
- impact of variations process conditions on the product
- impacts of equipment failure/change/variation on the product
- changes to materials at various stages of production
- quality/inspection/testing regime and relationship of results of to process conditions and equipment faults
- types of product faults, including variations in:
  - colour
  - surface finish
  - size/shape
  - physical properties
  - chemical properties
  - biological/biochemical/microbiological properties
- types of process/equipment condition problems, including:
  - settings, such as temperature and pressure
  - rates, such as feed rate and flow rate
  - setting and adjustment of equipment parts
  - worn and broken equipment parts
- product faults that can be caused by process/equipment problems and possible solutions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The diagnosis and solving of a number of faults with different types of causes is required, including:
  - product defect with process condition cause
  - product defect with equipment problem cause
  - process fault/problem with process condition or equipment cause.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur using a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment

PMC554020 Design and prepare models, moulds and dies

Modification History

Release 1. Supersedes and is equivalent to PMC554020D Design and prepare models, moulds and dies.

Application

This unit of competency covers the skills and knowledge required to design and prepare models, moulds, dies, frames and cases to make products from materials such as concrete, clay and ceramics. It applies to large production contexts and smaller craft contexts.

This unit of competency applies to experienced technicians, leading hands, supervisors or those in similar roles who are required to determine the specifications for devices to be made, make the devices, make adjustments to remedy faults and non-conformity and solve problems within area of responsibility.

This unit of competency applies to technician applying specialised theoretical and technical knowledge and well developed skills in situations that require autonomy, discretion and judgement. The person may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Design and make models**	1.1	Establish model design from drawings, originals or in consultation with the customer
		1.2	Select and prepare appropriate materials for model construction
		1.3	Make models ensuring the final product is to specification, and shrinkage is allowed for
2	**Set up and produce block moulds**	2.1	Select appropriate model to meet specification
		2.2	Determine required sections and parting lines
		2.3	Check mould meets work health and safety (WHS) needs
		2.4	Mix materials as required
		2.5	Fill mould with mould material as required
		2.6	Remove mould from model when required strength has been achieved
		2.7	Finish mould to specifications and register correctly
3	**Prepare cases and frames**	3.1	Consult manufacturing schedule to determine type of mould to be made
		3.2	Select appropriate frame or frames
		3.3	Mix materials as required
		3.4	Fill block mould
		3.5	Remove block mould from the case and frame when required strength has been obtained
		3.6	Register and date cases according to procedures
		3.7	Prepare block mould for use
4	**Prepare and**	4.1	Select the appropriate case/frame

	make working moulds	4.2	Mix and pour mould material as required
		4.3	Remove mould from model when required strength has been obtained
		4.4	Finish and register moulds to procedures
		4.5	Stack and dry moulds to procedures
		4.6	Store moulds to procedures
5	**Prepare dies**	5.1	Consult manufacturing schedule to determine type of die to be made
		5.2	Select and prepare required master die
		5.3	Mix and pour die material as required
		5.4	Remove die from master die when required strength has been obtained
		5.5	Mark and finish dies to enterprise specifications
		5.6	Cure and store dies to procedures
6	**Respond to problems**	6.1	Identify possible routine and non-routine problems in the equipment or process
		6.2	Determine problems needing action
		6.3	Determine possible fault causes
		6.4	Rectify problem using appropriate solution within area of responsibility
		6.5	Report problems outside area of responsibility to designated person

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- manufacturer's technical information
- job cards
- drawings
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- any similar instructions provided for the smooth running of the plant.

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- heat, smoke, dust, vapours or other atmospheric hazards
- weight, shape, volume of materials to be handled
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- electricity
- gas
- gases and liquids under pressure
- noise
- rotational equipment or vibration
- plant services (steam, condensate, cooling water, etc)
- structural hazards
- equipment failures
- machinery, equipment and product mass
- limited head spaces or overhangs
- working at heights
- working in restricted or confined spaces
- other hazards that might arise.

Problems

Routine and non-routine problems must be resolved.

Routine problems are predictable and have known solutions.

Non-routine problems are unexpected problems or variations of previous problems.

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Tools and equipment

Tools and equipment include:

- block moulds and working moulds
- cases and frames
- hand and power tools
- jigs and fixtures
- master dies
- mixing equipment
- models.

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMC554020D Design and prepare models, moulds and dies.

Links

Assessment Requirements for PMC554020 Design and prepare models, moulds and dies

Modification History

Release 1. Supersedes and is equivalent to PMC554020D Design and prepare models, moulds and dies.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret drawings, production schedules, job sheets, procedures, material labels and safety information
- establish specifications for devices, including:
  - models
  - block moulds
  - working moulds
  - dies
- design and make models to specifications
- produce block moulds, working moulds and dies
- select and prepare and use materials, fittings, tools and equipment
- monitor key variables, including:
  - raw materials/mix
  - shape
  - dimensions
  - shrinkage
  - strength
  - device integrity and conformance to specification of the moulding item
- make adjustments/repairs to ensure device and meets quality and production output specifications
- identify hazards and apply relevant hazard controls
- handle/store devices
- apply safety procedures
- apply housekeeping procedures
- recognise out-of-specification products, process problems and materials faults
- resolve routine and non-routine problems
- identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- take action to resolve problems or report them to appropriate personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- distinguish between possible causes of routine problems, including:
  - incorrect materials
  - variations in materials
  - equipment malfunction
  - procedure errors
  - incorrect specifications
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role, including knowledge of:

- principles of design as applicable to models
- functions and limitations of devices, including:
  - models
  - block moulds
  - frames and cases
  - working moulds
  - dies and master dies
- types of materials relevant to making the devices and their application, including:
  - plaster
  - timber
  - rubber
  - metal
  - fibreglass
- product specifications/materials properties that may affect device design, materials and construction
- quality requirements at each stage of construction
- factors which may affect device quality and appropriate remedies
- non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
- should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
    - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
    - must include the use of an appropriate industrial item/s of equipment requiring demonstration of operation, start-up and shutdown procedures and responding to problems
    - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
    - walk-throughs
    - pilot plant operation
    - industry-based case studies/scenarios
    - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMC554090 Undertake simple refractory design

Modification History

Release 1. Supersedes and is equivalent to PMC554090B Undertake simple refractory design.

Application

This unit of competency covers the skills and knowledge required to undertake simple refractory design. It applies to refractory design that can be achieved by the application of standard products/components in a standard manner and that is not required to be done by a registered engineer.

This unit of competency applies to operators who are required to confirm technical requirements for the refractory and determine the materials and installation methods to meet those requirements.

This unit of competency applies to technician applying specialised theoretical and technical knowledge and well developed skills in situations that require autonomy, discretion and judgement. The person may work alone or as a member of a team or group and will work in liaison with customers, installers, engineers and technical experts, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Establish the suitability of resources**	1.1	Check all information conforms with resources
		1.2	Record discrepancies in information
		1.3	Report any inaccuracies in information to the person in charge
		1.4	Identify and select materials, components, tools and equipment
2	**Undertake mechanical design**	2.1	Determine strength requirements
		2.2	Determine operating temperature range
		2.3	Select materials/mix with appropriate mechanical strength
		2.4	Identify hazards of materials and processes to be used and apply hierarchy of control to control hazards
		2.5	Determine expansion which will occur for this material
		2.6	Adjust material/mix to be suitable for temperatures
3	**Undertake thermal design**	3.1	Determine heat flow through the refractory
		3.2	Determine interface temperatures for multi-component linings
		3.3	Use simple software
		3.4	Determine interface bonding/anchor issues
4	**Specify refractory design**	4.1	Specify materials to be used
		4.2	Specify installation method to be used
		4.3	Confirm specification meets customer needs and installer requirements

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- manufacturer's technical information
- job cards
- drawings
- emergency procedures
- work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Hazards Hazards must be identified and controlled. Identifying hazards requires consideration of:

- health and safety risks
- sustainability risks
- regulatory risks.

Unit Mapping Information

Assessment Requirements for PMC554090 Undertake simple refractory design

Modification History

Release 1. Supersedes and is equivalent to PMC554090B Undertake simple refractory design.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret technical reports, technical specifications and data
- confirm technical requirements for refractory
- determine and specify materials and installation to meet mechanical and thermal requirements
- communicate technical information verbally and in writing/drawings
- communicate with internal and external stakeholders, including one or more of:
  - customer representatives
  - technical experts
  - engineers
  - refractory installer
- apply complex and/or theoretical mathematical calculations
- identify hazards and apply relevant hazard controls.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role, including knowledge of:

- properties of all common refractory materials
- application and limitations of installation techniques, including:
  - bricks, blocks
  - mouldables
  - castable
  - spray/gunned application
- heat flow calculations
- key factors in refractory design, including:
  - heat transfer
  - thermal expansion
  - abrasion
  - structural strength
  - methods of tying refractories

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- heat transfer calculations (resistances in series and parallel)
- regulatory framework
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur using a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMC554091 Analyse refractory failures

Modification History

Release 1. Supersedes and is equivalent to PMC554091B Analyse refractory failures.

Application

This unit of competency covers the skills and knowledge required to analyse refractory failures to determine failure mode.

This unit of competency applies to operators who are required to identify and analyse failure mode, organise simple testwork programs and make recommendations based on evidence.

This unit of competency applies to technician applying specialised theoretical and technical knowledge and well developed skills in situations that require autonomy, discretion and judgement. The person may work alone or as a member of a team or group and will work in liaison with customers, installers, engineers and technical experts, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for PMC554091 Analyse refractory failures

Modification History

Release 1. Supersedes and is equivalent to PMC554091B Analyse refractory failures.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret technical reports, technical specifications and data
- confirm information and resources for the work
- identify failure modes, including:
  - spalling mode
  - abrasion modes
  - corrosion modes
  - impact/compression/tensile modes
- determine methods to investigate the failure, including:
  - specifying testwork
  - observing relevant procedures
  - analysing relevant plant records and logs
- collect evidence resulting from the investigations
- develop a report on the analysis, including summary of:
  - the nature of the failure
  - the cause
  - the methods used to determine this cause
  - conclusions drawn
  - recommendations made
- distinguish between causes of failure, including:
  - mechanical (wear and impact)
  - thermal (thermal stresses and flame impingement)
  - other causes
- identify hazards and apply relevant hazard controls
- apply complex and/or theoretical mathematical calculations.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role, including knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- properties of all common refractory materials
- types of failure modes, including:
  - spalling mode
  - abrasion modes
  - corrosion modes
  - impact/compression/tensile modes
- common causes of failures
- methods of investigating failures
- impact of failures on refractory life
- regulatory framework
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria

PSPGEN029 Value diversity

Modification History

Release	Comments
1	This unit was released in PSP Public Sector Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to PSPGOV408A Value diversity. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to value diversity in the workplace. It includes promoting the benefits of diversity and contributing to diversity outcomes.

This unit applies to those working in public sector roles but may be applied to anyone working in a similar organisational context.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would be working independently, possibly supervising others, performing complex tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

General

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Promote the benefits of diversity	1.1 Analyse the diversity of the workgroup to identify the strengths and differences that benefit both staff and the organisation. 1.2 Explain workplace diversity issues, benefits and risks to others, using language and supporting material suitable to their needs and the situations they are likely to experience. 1.3 Identify and promote diversity training and awareness programs 1.4 Use opportunities for leadership in, and advocacy of workplace diversity.
2. Contribute to diversity outcomes	2.1 Maintain knowledge of diversity principles and practices that apply to the workplace. 2.2 Assist others to ensure work practices contribute to diversity benefits. 2.3 Develop a range of communication styles suitable for the workplace and its clients. 2.4 Provide managers with feedback on diversity policies, strategies and practices/services.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

ACSF levels indicative of performance :

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Learning					Reading					Writing					Oral communication					Numeracy NA					

Performance variables

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Support					Context					Text complexity					Task complexity				

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to PSPGOV408A Value diversity.

Assessment Requirements for PSPGEN029 Value diversity

Modification History

Release	Comments
1	These Assessment Requirements were released in PSP Public Sector Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- using communication styles to suit different audiences and purposes
- communicating with people from diverse backgrounds
- identifying racist behaviours
- explaining complex and formal documents, including legislation and codes of conduct, and applying them to work practices
- demonstrating a clear commitment to the principles and practices of workplace diversity

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- aspects of cultural diversity, including issues of racism, discrimination, harassment and victimisation
- direct versus indirect discrimination
- definitions of diversity
- benefits of workplace diversity
- principles and practices of cultural awareness
- avoidance of gender bias in language
- productive diversity principles including flexibility, multiplicity, devolution, negotiation and pluralism
- institutional racism and resulting indirect discrimination
- jurisdictional legislation and standards that underpin or impact on workplace diversity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- public sector policies, practices and procedures related to diversity, including those related to the provision of language services

Assessment Conditions

This unit contains no specific industry-mandated assessment conditions. Guidance on suggested and recommended conditions and methods can be found in the Implementation Guide.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

PSPHRM004 Implement workforce planning and succession strategies

Modification History

Release	Comments
1	This unit was released in PSP Public Sector Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to PSPHR504A Implement workforce planning and succession strategies. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to provide workforce planning and succession strategies to underpin the organisation's strategic and business decisions.

This unit applies to those working within a human resources administration role.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently, performing complex tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Conduct workforce analysis	1.1 Conduct in-depth analysis of current workforce practices, numbers, deployment, diversity and competencies to provide a baseline for workforce planning and management. 1.2 Analyse workforce data and benchmark when required against comparable data, identify trends and suggest interventions to address developments that do not support the organisation's strategic or business directions. 1.3 Undertake labour market and industry analysis to identify factors and trends that may impact on the organisation and the implications of these for workforce planning and management. 1.4 Use scenario planning or other forecasting tools to predict and assess likely futures for the organisation with their associated implications and risks. 1.5 Present the results of workforce analysis in objective and unbiased terms and in a form and language to suit the intended audience. 1.6 Ensure that the results of workforce analysis concerning future workforce requirements are included in decision-making processes.
2. Contribute to workforce planning	2.1 Provide information and advice to managers on all aspects of workforce planning. 2.2 Develop and/or provide workforce planning tools to managers, and give assistance in their use. 2.3 Develop and suggest solutions for current and future workforce planning and management issues. 2.4 Provide consultancy services to develop the human resource aspects of organisational and business unit plans to ensure the right numbers of appropriately diverse and skilled staff are available for future needs. 2.5 Assist managers to question current work practices and structures and prepare workforce plans.
3. Assist with succession management	3.1 Communicate the critical role of succession planning in managing the organisation's intellectual capital to managers and staff. 3.2 Develop a succession management strategy and identify candidate pools for imminent and longer term future vacancies. 3.3 Develop and agree on succession processes and the succession

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	management strategy. 3.4 Use the results of workforce analysis and planning to assist managers to undertake succession planning.

Foundation Skills

Foundation skills are embedded within the elements and performance criteria of this unit.

Unit Mapping Information

This unit supersedes and is equivalent to PSPHR504A Implement workforce planning and succession strategies.

Assessment Requirements for PSPHRM004 Implement workforce planning and succession strategies

Modification History

Release	Comments
1	These Assessment Requirements were released in PSP Public Sector Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- analysing information and trends
- consulting, negotiating and advising on workforce planning and succession management
- leading and influencing in relation to workforce analysis and planning
- applying problem solving
- explaining ideas to different audiences
- interpreting and explaining data and assisting others to apply the outcomes in the workplace
- preparing written advice and reports requiring reasoning and precision of expression

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- data analysis
- forecasting and planning
- scenario planning
- strategic thinking and analysis
- organisational business planning cycle and processes
- organisational goals, policies and procedures related to workforce planning and analysis
- standard and content requirements of workforce analysis and planning reports

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- jurisdictional legislation applying to human resources, including freedom of information, privacy, confidentiality, occupational health and safety, and environment and sustainability practices

Assessment Conditions

This unit contains no specific industry-mandated assessment conditions. Guidance on suggested and recommended conditions and methods can be found in the Implementation Guide.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

PSPPM402B Manage simple projects

Modification History

Release	TP Version	Comments
3	PSP12V1	Unit descriptor edited.
2	PSP04V4.2.	Layout adjusted. No changes to content.
1	PSP04V4.1	Primary release.

Unit Descriptor

This unit covers management of generally low risk projects that may be small scale and managed by one person or a person with a small team. It includes implementing project start-up activities, coordinating project implementation, monitoring the project and arranging follow-up activities. Contract management requirements are not included as this aspect is addressed by units of competency within the Competency field of *Procurement and Contract Management*.

In practice, managing simple projects overlaps with other generalist and specialist work activities such as applying government processes, using resources, gathering information, managing contracts etc.

This unit, and unit *PSPPM405A Administer simple projects*, are mutually exclusive. One or the other, but not both, may contribute to a qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication

Application of the Unit

Not applicable.

Licensing/Regulatory Information

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency.	Together, performance criteria specify the requirements for competent performance. Text in ***bold italics*** is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. **Implement start-up activities**	1.1 The ***project plan*** is updated with confirmed information for key dates and activities, resources and project governance details in accordance with the project implementation strategy. 1.2 Project ***stakeholders'*** understanding of and agreement to fulfil the project requirements and their roles and responsibilities are confirmed. 1.3 ***Required systems*** are established and maintained throughout the project in accordance with the project plan. 1.4 A working knowledge of ***project management tools*** is used to facilitate integration of project activities and achievement of project outcomes.
2. **Coordinate project implementation**	2.1 ***Integration*** and ***management*** of project activities are handled in accordance with the project plan. 2.2 Stakeholder input and expectations are managed and their commitment is maintained throughout the life of the project in accordance with organisational policy and procedures and the project plan. 2.3 Disagreements and disputes are resolved or referred to a higher authority in accordance with organisational policy and procedures. 2.4 Project ***change proposals*** are received and changes are recommended/made in accordance with the project plan, and documented in accordance with ***policy and procedures***.
3. **Monitor project**	3.1 All aspects of the project are continually monitored and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	corrective action is taken as necessary to maintain progress in accordance with the project plan.
	3.2 Consultation and reporting mechanisms are applied in accordance with the communication plan when dealing with management, staff and/or contractors, steering committee members or other stakeholders.
	3.3 Project governance plans and any related contracts are monitored, reviewed and amended as appropriate, and results are reported in accordance with the communication plan.
	3.4 Project progress is monitored against agreed milestones in accordance with the project plan to provide a measure of performance throughout the life of the contract.
	3.5 Programmed review of objectives and achievement is implemented in accordance with the project plan.
4. Arrange project follow-up activities	4.1 Project deliverables are analysed against ***specifications***, performance standards and project objectives, under broad guidance, and the results are reported to stakeholders.
	4.2 An initial support package or product manual is produced, if required, to provide guidance for stakeholders who will be required to apply the project results.
	4.3 The support package includes options for stakeholders to take account of environmental and cultural factors in applying project results.
	4.4 Operational and support authorities are consulted to research any testing/trialling/building requirements resulting from the project, and evaluation of any recommendations are included in the project report.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

Look for evidence that confirms skills in:

- leading and mentoring people to achieve project deliverables
- maintaining agreement of stakeholders and team members to timelines, roles and responsibilities
- communicating with stakeholders and team members using a range of communication styles to suit different audiences and purposes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- responding to diversity, including gender and disability
- using project management tools applicable to small scale or low risk projects
- applying ethical decision making and problem solving related to project management of small scale or low risk projects
- writing recommendations and preparing implementation support packages requiring precision of expression
- applying workplace safety procedures in line with project requirements
- accessing/preparing information electronically or in hard copy

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- legislation, organisational policies and procedures that may impact on project management, for example:
  - public sector codes of ethics/conduct
  - occupational health and safety and environment requirements
  - project governance requirements
  - quality standards
- risk management
- procurement guidelines
- human resources
- equal employment opportunity, equity and diversity principles
- project management tools to suit a range of small scale or low risk projects
- project management principles
- organisational and political context

Evidence Guide

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit:*Nil*
- *Co-requisite* units that must be assessed with this unit:*Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment process include, but are not limited to:
  - PSPETHC401A Uphold and support the values and principles of public service
  - PSPGOV402B Deliver and monitor service to clients

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- PSPGOV403B Use resources to achieve work unit goals
- PSPGOV411A Deal with conflict
- PSPGOV412A Use advanced workplace communication strategies
- PSPGOV422A Apply government processes
- PSPLEGN401A Encourage compliance with legislation in the public sector
- PSPPROC410A Administer contracts
- PSPPM401B Design simple projects
- PSPPM403B Close simple projects

- *Excluded units* that may not contribute to the same qualification as this unit:
  - PSPPM405A Administer simple projects

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of the Employability Skills as they relate to this unit (see Employability Summaries in Qualifications Framework)
- simple projects managed in a range of (3 or more) contexts (or occasions, over time)

Resources required to carry out assessment

These resources include:

- legislation, guidelines, procedures and protocols relating to project management
- workplace project documentation
- scenarios and case studies
- examples of project management tools

Where and how to assess evidence

Valid assessment of this unit requires:

- a workplace environment or one that closely resembles normal work practice and replicates the range of conditions likely to be encountered when implementing projects, including coping with difficulties, irregularities and breakdowns in routine
- simple projects managed in a range of (3 or more) contexts (or occasions, over time)

Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as:

- people with disabilities
- people from culturally and linguistically diverse

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

backgrounds
- Aboriginal and Torres Strait Islander people
- women
- young people
- older people
- people in rural and remote locations

Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of 2 or more of:

- case studies
- demonstration
- portfolios
- questioning
- scenarios
- authenticated evidence from the workplace and/or training courses

For consistency of assessment

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the competency in different situations or environments

Range Statement

The Range Statement provides information about the context in which the unit of competency is carried out. The variables cater for differences between States and Territories and the Commonwealth, and between organisations and workplaces. They allow for different work requirements, work practices and knowledge. The Range Statement also provides a focus for assessment. It relates to the unit as a whole. Text in ***bold italics*** in the Performance Criteria is explained here.

Project plan will include some or all of:

- acquisition strategies
- budget and financial management strategy
- contract management
- cost estimates
- evaluation criteria
- expected outcomes/measurable benefits of the project
- facilities
- inclusions and exclusions from project
- information/communication strategy
- intellectual property strategies
- milestones

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- objectives
- outputs/project deliverables and their acceptance criteria
- people plan including human resource management and human resource development
- performance criteria/indicators
- project control mechanisms
- project implementation strategy
- project governance strategy
- purpose
- quality assurance
- quality control
- quality standards for project
- rationale
- required project resources
- resource management
- risk management
- roles and responsibilities
- schedule/timeline
- task/work breakdown structure (WBS)

Stakeholders may include:

- project sponsor/funding bodies
- clients or customers (internal and external)
- industry
- other agencies
- general public
- relevant interest groups
- unions
- functional areas
- the organisation's senior management
- Ministers
- project team
- steering committee members
- end user
- supplier/service provider

Required systems for project management may include:

- planning and monitoring system
- financial management including:
  - budget allocation/funding
  - income generated
  - expenditure
- recordkeeping for documented information such as:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- correspondence
- quality data including survey, needs, test results
- contracts
- time allocated and spent on each aspect of the project
- progress reports
- performance reports against milestones
- project outcomes
- samples, prototypes, models

Project management tools may include:

- risk analysis
- organisational project governance framework
- communications plan
- reporting framework
- project management software and other tools:
  - Gantt and bar charts
  - Program Evaluation and Review Technique (PERT) charts
  - Critical Path Method
  - cost schedule control system
  - logistics support analysis
  - life cycle cost analysis
  - spreadsheets
  - recording systems - electronic and manual

Integration of project activities may include:

- scope
- time
- cost
- quality
- human resources
- communications
- risk
- procurement

Management may include:

- scope management
- communication and reporting
- schedule management
- financial management
- quality management
- resources management
- people management
- logistics management
- risk management

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- contract management
- change management

Change proposals may include:

- scope
- administration
- engineering, technical, technology changes
- time
- cost
- resources

Policy and procedures may include:

- government legislation (Federal, State and Local) affecting organisation's administration such as:
  - public sector management acts
  - financial management and accounting legislation and regulations
  - privacy legislation
- government and organisational guidelines and procedures relating to:
  - project governance
  - resourcing
  - security
  - strategic plans
  - recruitment
  - risk management
  - procurement guidelines
  - designation approvals
  - industrial agreements

Specifications may include:

- functional
- technical
- performance
- material

PSPPM501B Design complex projects

Modification History

Release	TP Version	Comments
3	PSP12V1	Unit descriptor edited.
2	PSP04V4.2.	Layout adjusted. No changes to content.
1	PSP04V4.1	Primary release.

Unit Descriptor

This unit covers planning and development of projects which may be reasonably complex in terms of scope, degree of risk, political, cultural and social factors that apply, consequences of failure and degree of control of the projects. It includes identifying project opportunities, undertaking scoping, analysing the feasibility of projects, developing project plans and managing the establishment of projects. Contract management requirements are not included as this aspect is addressed by units of competency within the Competency field of *Procurement and Contract Management*.

In practice, designing complex projects overlaps with other generalist and specialist work activities such as acting ethically, coordinating resource allocation and usage, developing client services, undertaking research and analysis.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication

Application of the Unit

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency.	Together, performance criteria specify the requirements for competent performance. Text in ***bold italics*** is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify project opportunities and undertake scoping	1.1 A ***critical analysis*** of the need for a project is conducted in accordance with organisational ***policy and procedures***. 1.2 A project definition study is undertaken, where necessary, to determine the scope of the project. 1.3 Project scoping is completed in accordance with organisational policy and procedures and identifies a rationale for the project that includes the purpose, outcomes/expected benefits. 1.4 ***Stakeholders*** are identified and canvassed to ensure that their requirements are addressed in project planning.
2. Analyse project feasibility	2.1 Research and analysis is undertaken to identify impacts and risks, ***constraining factors*** and alternate options. 2.2 Technical feasibility, supportability and cost effectiveness of the project are analysed and the outcome is reported to key stakeholders. 2.3 Alternatives for project design are assessed and a preferred option that fits the strategic direction of the organisation/work unit is identified and reported. 2.4 Relevant specialists are consulted to determine the extent of financial, technical, security, scheduling, ***whole-of-life support*** and probity, and other risks. 2.5 A business case is prepared and ***approvals*** to proceed with project development are obtained in accordance with organisational policy, procedures and guidelines.
3. Develop project	3.1 Project aims, objectives and impacts are defined in the ***project***

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
plans	***plan***, and timeframes and resources to complete quality deliverables on time and within budget are identified. 3.2 Projected outcomes are recorded in measurable and achievable forms and indicators to monitor the performance of the project are developed and agreed by relevant parties. 3.3 Potential risks are investigated and identified in the project plan and a risk management process is established to analyse information and options to ***manage risks***. 3.4 Skills, roles and responsibilities of team members and stakeholders are clarified and agreed, and reporting requirements are identified. 3.5 ***Management*** of ***project parameters*** is addressed in the project plan and evaluation criteria are designed in accordance with organisational policy and practice. 3.6 ***Project management tools*** are utilised for planning in accordance with project requirements and the project is designed and ***documented*** in consultation with ***specialists*** to meet user requirements.
4. Manage establishment of project	4.1 If required, stakeholders are lobbied in accordance with organisational policy and procedures, to negotiate endorsement for the project. 4.2 Terms of reference are written and agreed to by stakeholders and resources are obtained in accordance with organisational procedures to establish the project. 4.3 Project scope and objectives are reviewed and analysed, and a strategy is developed to establish ***work breakdown structures*** to implement the project. 4.4 Project ***infrastructure*** is identified and established in accordance with organisational policy and procedures. 4.5 Specialist and technical support relevant to the project is obtained in accordance with the project plan. 4.6 Project governance structure and processes are established as detailed in the project plan.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Look for evidence that confirms skills in:

- using project planning techniques related to projects that may be reasonably complex in terms of scope, degree of risk, political, cultural and social factors that apply, consequences of failure and degree of control of the projects
- detailing requirements, writing recommendations and preparing plans requiring precision of expression
- negotiating timelines, roles and responsibilities with stakeholders and team members
- scheduling project activities
- communicating with stakeholders using a range of communication styles to suit different audiences and purposes
- responding to diversity, including gender and disability
- using project management tools suited to planning reasonably complex projects
- applying risk management techniques in project establishment including risk sharing and transfer
- using public relations strategies to promote and gain endorsement for projects
- including workplace safety issues in project planning requirements
- accessing/preparing information electronically or in hard copy

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- legislation, organisational policies and procedures that may impact on the project and management of the project, for example:
  - public sector codes of ethics/conduct
  - occupational health and safety and environmental and sustainability requirements
- project governance requirements
- financial management requirements
- quality standards
- risk management
- procurement
- human resources
- equal employment opportunity, equity and diversity principles
- project planning methods which may be reasonably complex in terms of scope, degree of risk, political, cultural and social factors that apply, consequences of failure and degree of control of the projects
- project management tools suited to planning reasonably complex projects
- principles relating to the planning phase of project management
- the project specifications
- market capability
- resource plans

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- project approval processes
- scheduling packages
- cost schedule control systems
- integrated logistics support
- work breakdown structures
- change management in the context of designing complex projects

Evidence Guide

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit:*Nil*
- *Co-requisite* units that must be assessed with this unit:*Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment process include, but are not limited to:
  - PSPETHC501B Promote the values and ethos of public service
  - PSPGOV502B Develop client services
  - PSPGOV503B Coordinate resource allocation and usage
  - PSPGOV504B Undertake research and analysis
  - PSPGOV505A Promote diversity
  - PSPGOV507A Undertake negotiations
  - PSPGOV512A Use complex workplace communication strategies
  - PSPPM502B Manage complex projects
  - PSPPM503B Close complex projects
  - PSPPROC502A Establish contract management arrangements

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of the Employability Skills as they relate to this unit (see table Following for examples)
- complex projects designed in a range of (3 or more)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

contexts (or occasions, over time)

Resources required to carry out assessment

These resources include:

- legislation, guidelines, procedures and protocols relating to project planning and management
- workplace project documentation
- scenarios and case studies
- examples of project management tools

Where and how to assess evidence

Valid assessment of this unit requires:

- a workplace environment or one that closely resembles normal work practice and replicates the range of conditions likely to be encountered when initiating projects, including coping with difficulties, irregularities and breakdowns in routine
- complex projects designed in a range of (3 or more) contexts (or occasions, over time)

Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as:

- people with disabilities
- people from culturally and linguistically diverse backgrounds
- Aboriginal and Torres Strait Islander people
- women
- young people
- older people
- people in rural and remote locations

Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of 2 or more of:

- case studies
- demonstration
- observation
- portfolios
- projects
- questioning
- scenarios
- simulation or role plays
- authenticated evidence from the workplace and/or training courses

For consistency of

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the

- unions
- functional areas
- the organisation's senior management
- Ministers
- project team
- steering committee members
- end user
- supplier/service provider

Constraining factors may include:

- political
- industrial
- legislative
- technical
- financial
- social
- cultural
- security/privacy
- environmental
- logistical support
- resources

Whole-of-life support may include:

- maintenance
- supply
- technical data
- personnel
- training
- facilities
- packaging, handling
- storage and transportation
- support and test equipment
- computing support

Approval may be required from:

- project sponsor
- business owner of the project
- program manager
- line manager
- specialist project management office
- chief executive officer, manager or management representative
- funding body
- customer or client

Project plan will include

- acquisition strategies

some or all of:	• budget and financial management strategy • contract management • cost estimates • evaluation criteria • expected outcomes/measurable benefits of the project • facilities • inclusions and exclusions from project • information/communication strategy • intellectual property strategies • milestones • objectives • outputs/project deliverables and their acceptance criteria • people plan including human resource management and human resource development • performance criteria/indicators • project control mechanisms • project implementation strategy • project governance strategy • purpose • quality assurance • quality control • quality standards for project • rationale • required project resources • resource management • risk management • roles and responsibilities • schedule/timeline • task/work breakdown structure (WBS)
Risk management may include:	• acceptance • avoidance • minimisation • transfer
Management may include:	• risk management • schedule management • financial management • communication, including reporting • resources management • logistics management

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- scope management
- change management
- quality management
- people management
- procurement management
- occupational health and safety management

Project parameters include:

- project scope - outcomes, objectives, project deliverables
- feasibility
- skills required for project team
- people required for project including specialist expertise
- communications including reporting requirements
- risks associated with project including people, environment, resources, technology change during the life of the project, if applicable
- steering committee arrangements
- timeframe and milestones
- cost
- resources for project
- acquisition/procurement
- organisational structure for project
- project quality control and operational flexibility
- project governance structure
- monitoring through staged rollout
- project delivery requirements
- pilot outcomes
- intellectual property
- integration of project within organisation
- transition arrangements
- change management
- project evaluation

Project management tools may include:

- risk analysis
- organisational project governance framework
- communications plan
- reporting framework
- project management software and other tools:
  - Gantt and bar charts
  - Program Evaluation and Review Technique (PERT) charts
  - Critical Path Method
  - cost schedule control system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- logistics support analysis
- life cycle cost analysis
- spreadsheets
- recording systems - electronic and manual

Documented information may include:

- reports detailing strategy
- statement of requirement/work
- industry development proposals
- project plans
- resource plans
- project team work plans
- risk and issues plan and log
- performance evaluation criteria
- reports to industry
- whole-of-life support proposals
- project definition study

Relevant specialists may include:

- legal
- technical
- financial
- other functional areas
- other relevant agencies
- logistics

Work breakdown structures may include:

- how the work is to be performed and how cost and schedule data are to be tracked and reported
- identification of the project tasks (deliverables)
- identification of specific management responsibilities for tasks

Project infrastructure may include:

- staffing levels/need for recruitment action and training
- equipment and technical support
- resource requirements including travel, finance etc
- project office accommodation
- management infrastructure

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency.

Together, performance criteria specify the requirements for competent performance. Text in ***bold italics*** is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage start-up activities	1.1 ***Project plans*** are refined in consultation with steering committee and team members, and precise details are included for schedules of activities, milestones and resources.
	1.2 ***Required systems*** are established and maintained throughout the project in accordance with the complexity of the project and in line with the project plan.
	1.3 Project team members' understanding of and commitment to fulfilling the project requirements and their roles and responsibilities for the duration of the project are confirmed.
	1.4 ***Project management tools*** are selected and applied effectively to achieve project outcomes.
2. Manage project implementation	2.1 ***Integration*** and ***management*** of complex project activities are handled in accordance with the project plan.
	2.2 Leadership and required ***development*** are provided to the project team, and morale, stress levels and triggers are managed throughout the life of the project in accordance with organisational ***policy and procedures***.
	2.3 ***Stakeholder*** input and expectations are managed throughout the project in accordance with the communication plan.
	2.4 Disagreements and disputes are resolved to the satisfaction of stakeholders or referred to a higher authority in accordance with organisational policy and procedures.
	2.5 Project ***change proposals*** are negotiated, agreed and documented in accordance with policy and procedures.
3. Manage project integration	3.1 All aspects of the project and related projects are integrated and links are established to ensure objectives are met in accordance with the project plan.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.2 Consultation and reporting mechanisms are applied in accordance with the communication plan and staff and contractors are regularly consulted to discuss progress and ensure effective results.
	3.3 Project integration is monitored, and management plans and any related contracts are reviewed and amended as appropriate, with results reported in accordance with mechanisms identified in the communication plan.
	3.4 Ongoing progress is monitored against agreed milestones in accordance with the project plan to provide a measure of performance throughout the life of the project.
	3.5 Programmed review of objectives and achievement is planned and implemented in accordance with the project plan.
4. Coordinate project follow-up activities	4.1 Significant judgment is applied in the analysis of project deliverables against ***specifications***, performance standards and project objectives, and the results are reported to stakeholders.
	4.2 Support package arrangements are identified and offered to stakeholders who will be required to apply the project results.
	4.3 Options for stakeholders to take account of environmental and cultural factors in applying the project results are included in the support package.
	4.4 Operational and support authorities are consulted to investigate any testing/trialling/building and evaluation requirements resulting from the project, and funding implications estimated in project report.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

Look for evidence that confirms skills in:

- leading and mentoring people to achieve project outcomes
- maintaining agreement of stakeholders and team members to timelines, roles and responsibilities
- negotiating with stakeholders and team members using communication styles to suit different audiences and purposes
- responding to diversity, including gender and disability
- using project management tools applicable to reasonably complex projects

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- applying ethical decision making and problem solving related to project management of reasonably complex projects
- writing recommendations and preparing project reports requiring precision of expression
- applying workplace safety procedures in line with project requirements
- accessing/preparing information electronically or in hard copy

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- legislation, organisational policies and procedures that may impact on project implementation, for example:
  - public sector codes of ethics/conduct
  - occupational health and safety and environmental and sustainability requirements
- project governance requirements
- quality standards
- risk management
- procurement guidelines
- financial management and budgetary framework
- human resources
- equal employment opportunity, equity and diversity principles
- project management tools to suit a range of reasonably complex projects in terms of scope, degree of risk, political, cultural and social factors that apply, consequences of failure and degree of control of the project
- project management systems
- organisational and political context
- critical analysis in a project management context
- business and commercial issues related to the projects managed

Evidence Guide

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit:*Nil*
- *Co-requisite* units that must be assessed with this unit:*Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment

process include, but are not limited to:

- PSPETHC501B Promote the values and ethos of public service
- PSPGOV502B Develop client services
- PSPGOV503B Coordinate resource allocation and usage
- PSPGOV504B Undertake research and analysis
- PSPGOV505A Promote diversity
- PSPPM501B Design complex projects
- PSPPM503B Close complex projects
- PSPPROC501A Manage contract risk
- PSPPROC503A Manage contract performance

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of the Employability Skills as they relate to this unit (see Employability Summaries in Qualifications Framework)
- management of complex projects in a range of (3 or more) contexts (or occasions, over time)

Resources required to carry out assessment

These resources include:

- legislation, guidelines, procedures and protocols relating to project management in the organisation and the public sector
- workplace project documentation
- scenarios and case studies
- examples of project management tools

Where and how to assess evidence

Valid assessment of this unit requires:

- a workplace environment or one that closely resembles normal work practice and replicates the range of conditions likely to be encountered when managing complete projects, including coping with difficulties, irregularities and breakdowns in routine
- management of complex projects in a range of (3 or more) contexts (or occasions, over time)

Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as:

- people with disabilities
- people from culturally and linguistically diverse backgrounds

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Aboriginal and Torres Strait Islander people
- women
- young people
- older people
- people in rural and remote locations

Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of 2 or more of:

- case studies
- demonstration
- portfolios
- questioning
- scenarios
- authenticated evidence from the workplace and/or training courses

For consistency of assessment

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the competency in different situations or environments

Range Statement

The Range Statement provides information about the context in which the unit of competency is carried out. The variables cater for differences between States and Territories and the Commonwealth, and between organisations and workplaces. They allow for different work requirements, work practices and knowledge. The Range Statement also provides a focus for assessment. It relates to the unit as a whole. Text in ***bold italics*** in the Performance Criteria is explained here.

Project plans will include some or all of:

- acquisition strategies
- budget and financial management strategy
- contract management
- cost estimates
- evaluation criteria
- expected outcomes/measurable benefits of the project
- facilities
- inclusions and exclusions from project
- information/communication strategy
- intellectual property strategies
- milestones
- objectives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- outputs/project deliverables and their acceptance criteria
- people plan including human resource management and human resource development
- performance criteria/indicators
- project control mechanisms
- project implementation strategy
- project governance strategy
- purpose
- quality assurance
- quality control
- quality standards for project
- rationale
- required project resources
- resource management
- risk management
- roles and responsibilities
- schedule/timeline
- task/work breakdown structure (WBS)

Required systems for project management may include:

- planning and monitoring system
- financial management including:
- budget allocation/funding
- income generated
- expenditure
- recordkeeping for documented information such as:
- correspondence
- quality data including survey, needs, test results
- contracts
- time allocated and spent on each aspect of the project
- progress reports
- performance reports against milestones
- project outcomes
- samples, prototypes, models

Project management tools may include:

- risk analysis
- organisational project governance framework
- communications plan
- reporting framework
- project management software and other tools:
- Gantt and bar charts
- Program Evaluation and Review Technique (PERT) charts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Critical Path Method
- cost schedule control system
- logistics support analysis
- life cycle cost analysis
- spreadsheets
- recording systems - electronic and manual

Integration of project activities may include:

- scope
- time
- cost
- quality
- human resources
- communications
- risk
- procurement

Management may include:

- scope management
- communication and reporting
- schedule management
- financial management
- fraud control
- quality management
- resources management
- people management
- logistics management
- risk management
- contract management
- project implementation
- transition
- change management

Development may include:

- regular meetings
- feedback
- encouragement
- mentoring and coaching
- additional physical and human resources (within allocated budget) if and as required

Policy and procedures may include:

- government legislation (Federal, State and Local) affecting organisation's administration such as:
  - public sector management acts
  - financial management and accounting legislation and regulations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- privacy legislation
- government and organisational guidelines and procedures relating to:
  - project governance
  - resourcing
  - security
  - strategic plans
  - recruitment
  - risk management
  - procurement guidelines
  - designation approvals
  - industrial agreements
  - environment and sustainability

Stakeholders may include:

- project sponsor/funding bodies
- clients or customers (internal and external)
- industry
- other agencies
- general public
- relevant interest groups
- unions
- functional areas
- the organisation's senior management
- Ministers
- project team
- steering committee
- end user
- supplier/service provider

Contract change proposals may include:

- administration
- cost
- engineering, technical, technology changes
- resources
- scope
- specifications
- time

Specifications may include:

- functional
- technical
- performance
- material

Unit Descriptor

This unit covers closure of projects that may be reasonably complex in terms of scope, degree of risk, political, cultural and social factors that apply, consequences of failure and degree of control of the projects. It includes reviewing project activity and managing project closure. Contract management requirements are not included as this aspect is addressed by units of competency within the Competency field of *Procurement and Contract Management*.

In practice, closing complex projects overlaps with other generalist and specialist work activities such as acting ethically, coordinating resource allocation and usage, developing client services, undertaking research and analysis.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication

Application of the Unit

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency.

Together, performance criteria specify the requirements for competent performance. Text in ***bold italics*** is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Review project activity	1.1 Evaluation of project process, supplier performance and achievement against objectives is undertaken in consultation with ***stakeholders*** and results are reported in accordance with the ***project plan*** evaluation framework and organisational ***policy and procedures***. 1.2 The extent to which clients needs were met is evaluated and action to rectify problems is identified and documented. 1.3 Implications of project outputs/outcomes for policies and operating procedures are identified and recommendations are made for their amendment. 1.4 Information obtained from the evaluation of the project is provided in accordance with organisational requirements so it may be used to improve relevant policy and practice .
2. Manage project closure	2.1 Any funding associated with the project is acquitted against project budget items, and financial records are checked for accuracy and completed in accordance with organisational procedures. 2.2 Project wind-down is ***managed*** and ***documentation***, records and ***approvals*** are handled in accordance with project plan and organisational policy and procedures. 2.3 Project stakeholders are debriefed, and infrastructure and resources are redeployed in accordance with organisational policy and procedures. 2.4 Project hand-over to user/s is completed in accordance with organisational procedures, and lessons learnt are documented and reported to stakeholders to assist in continuous improvement. 2.5 Stakeholders are advised of procedures and authorities for initial support to apply project results where relevant, and strategies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	are provided to manage long-term project momentum in accordance with organisational requirements.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

Look for evidence that confirms skills in:

- analysing results and evaluating outcomes against objectives
- writing recommendations and preparing reports requiring precision of expression
- communicating with stakeholders and team members using a range of communication styles to suit different audiences and purposes
- responding to diversity, including gender and disability
- debriefing stakeholders and redeploying resources and infrastructure
- acquitting and reporting on resource expenditure including time and costs
- using project management tools applicable to reasonably complex projects
- applying workplace safety procedures in line with project requirements
- accessing/preparing information electronically or in hard copy

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- legislation, organisational policies and procedures that may impact on project finalisation, for example:
  - public sector codes of ethics/conduct
  - occupational health and safety and environmental and sustainability requirements
  - project governance requirements
  - quality standards
  - risk management
  - procurement guidelines
  - financial management
  - human resource management and development
  - equal employment opportunity, equity and diversity principles
  - project specifications and objectives
- project management tools to suit a range of reasonably complex projects in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

terms of scope, degree of risk, political, cultural and social factors that apply, consequences of failure and degree of control of the project
- project management principles and systems
- critical analysis in a project management context
- business and commercial issues related to the projects managed
- organisational and political environment

Evidence Guide

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit:*Nil*
- *Co-requisite* units that must be assessed with this unit:*Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment process include, but are not limited to:
  - PSPETHC501B Promote the values and ethos of public service
  - PSPGOV502B Develop client services
  - PSPGOV503B Coordinate resource allocation and usage
  - PSPGOV504B Undertake research and analysis
  - PSPGOV505A Promote diversity
  - PSPGOV507A Undertake negotiations
  - PSPGOV512A Use complex workplace communication strategies
  - PSPGOV517A Coordinate risk management
  - PSPPM501B Design complex projects
  - PSPPM502B Manage complex projects
  - PSPPROC504A Finalise contracts

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of the Employability Skills as they relate to this unit (see Employability Summaries in Qualifications Framework)
- reviewing and closing complex projects in a range of (3 or

more) contexts (or occasions, over time)

Resources required to carry out assessment

These resources include:

- legislation, guidelines, procedures and protocols relating to project close-out
- workplace project documentation
- scenarios and case studies
- examples of project management tools suited to reasonably complex projects

Where and how to assess evidence

Valid assessment of this unit requires:

- a workplace environment or one that closely resembles normal work practice and replicates the range of conditions likely to be encountered when reviewing and closing complex projects, including coping with difficulties, irregularities and breakdowns in routine
- reviewing and closing complex projects in a range of (3 or more) contexts (or occasions, over time)

Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as:

- people with disabilities
- people from culturally and linguistically diverse backgrounds
- Aboriginal and Torres Strait Islander people
- women
- young people
- older people
- people in rural and remote locations

Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of 2 or more of:

- case studies
- demonstration
- observation
- portfolios
- projects
- questioning
- scenarios
- simulation or role plays
- authenticated evidence from the workplace and/or training courses

SIRRMER003 Coordinate visual merchandising activities

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to coordinate store visual merchandising activities and ensure adherence to organisational standards, policies and procedures for the display of merchandise.

It applies to individuals working in frontline roles in a diverse range of retail industry sectors and business contexts that display retail products for sale. They operate with independence and under limited supervision and guidance from others, and within established organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Merchandising

Unit Sector

Retail

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Coordinate visual merchandise requirements.	1.1. Access and interpret organisational visual merchandising guidelines, and policies and procedures. 1.2. Communicate visual merchandising standards and display

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	requirements to team members. 1.3. Plan appropriate timing for producing and dismantling visual merchandise displays. 1.4. Communicate roles and responsibilities for visual merchandising to team members. 1.5. Plan and coordinate promotional and special event displays as directed by management.
2. Supervise visual merchandise activities.	2.1. Supervise construction and maintenance of displays to achieve balance and visual impact. 2.2. Ensure display information accurately depicts product or service being promoted. 2.3. Ensure displays are completed with minimum disruption to customer service and traffic flow. 2.4. Ensure displays meet organisational standards and visual merchandise guidelines. 2.5. Regularly monitor replenishment of merchandise and rotation of stock and take action to ensure optimal stock levels as required.
3. Review impact of visual merchandise activities.	3.1. Evaluate promotions or special event displays and determine impact on sales results. 3.2. Report on visual merchandising activities to relevant personnel and make suggestions for improvements as required.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Problem solving skills to:	• overcome difficulties relevant to the display of merchandise.

Unit Mapping Information

Assessment Requirements for SIRRMER003 Coordinate visual merchandising activities

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- follow merchandising display guidelines, and organisational policies and procedures to coordinate visual merchandise activities for two of the following:
  - an existing merchandise range
  - a new merchandise range
  - a seasonal merchandise range
  - a promotional event
  - discounted merchandise
- for each of the above visual merchandising activities:
  - communicate requirements with team members
  - monitor visual merchandising displays and standards
- report on the effectiveness of the above merchandising activities.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - merchandise labelling and pricing
  - required stock levels
  - merchandise rotation and replenishment
- organisational visual merchandise standards and guidelines and their application to visual merchandising activities
- key aspects of relevant industry codes of practice, legislation and statutory requirements for coordinating merchandise presentation:
  - Australian Consumer Law
  - Work Health and Safety (WHS)
- objectives and use of visual merchandise displays
- interpretation of scaled versions of store design, layout and fixture placements
- techniques for creating effective visual merchandise displays:
  - types of displays and their impact

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - display location
    - display lighting
    - display signage
- fundamental elements and principles of visual design and their use in the display and merchandise of products
- commercial impact of incorrect pricing both favourable and unfavourable:
    - customer complaints
    - profitability
- safe work practices for displaying merchandise with particular emphasis on:
    - safe use of equipment
    - safe manual handling techniques for bending, lifting and shifting heavy items
- product knowledge relevant to visual merchandise activities:
    - price
    - features
    - benefits.

Assessment Conditions

Skills must be demonstrated in a retail environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- retail merchandise
- display areas
- retail display equipment and props
- product labels and price tickets
- ticketing and pricing equipment
- relevant documentation:
    - organisational visual merchandise display guidelines
    - organisational policies and procedures for:
        - merchandise labelling and pricing
        - required stock levels
        - merchandise rotation and replenishment
    - relevant industry codes of practice, legislation and statutory requirements for coordinating merchandise presentation:
        - Australian Consumer Law
        - Work Health and Safety (WHS)
- team members; these can be:
    - individuals in an industry workplace, or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SIRXINV004A Buy merchandise

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit describes the performance outcomes, skills and knowledge required to buy merchandise in a retail environment. It involves analysing the market, planning the product range, establishing supplier relationships, negotiating supply of goods, introducing the product range, maximising profit and rationalising stock.

Application of the Unit

Application of the unit This unit requires the consistent application of store policy and legislative requirements in regard to market analysis, planning merchandise and service ranges, procurement and rationalisation of stock, maintenance of supplier relations, quality control and staff merchandise training. The team member is required to recognise known and unknown loss and how it affects buying and ordering patterns, and to interpret and apply market trends to the store situation to create opportunities to improve sales and service while maximising profits.

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability skills The required outcomes described in this unit contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit is packaged will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Analyse market.	1.1 Identify and analyse ***store merchandise and marketing policy and procedures***.
	1.2 Monitor ***customer requirements*** formally and informally in order to evaluate market trends and customer needs.
	1.3 Research new products and services.
	1.4 Identify, evaluate, implement and review opportunities to improve sales.
	1.5 Monitor ***merchandise range*** to identify the demand for individual items and seasonal variations.
	1.6 Monitor market competition.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2 Analyse factors affecting stock levels and range requirements.	2.1 Apply mathematical calculations to measure analyse and report on existing and potential stock loss and dissipation and its ***impact on business operations***.
	2.2 Analyse store or department sales figures to determine contribution rates of product lines.
	2.3 Determine store or department space requirements and brand product mix according to store policy.
	2.4 Determine future directions for merchandise ranges according to store policy.
3 Plan merchandise ranges.	3.1 Develop and implement buying plan according to outcomes of analysis and store policy.
	3.2 Determine future directions for merchandise ranges according to store policy.
	3.3 Liaise with ***relevant personnel*** to coordinate promotional and marketing activities.
	3.4 Analyse store or department sales figures to determine contribution rates of product lines.
	3.5 Determine investment levels with reference to previous years' sales figures, predicted demand and projected gross profit.
	3.6 Identify and act upon contribution improvement opportunities.
	3.7 Determine store or department space requirements and brand product mix according to store policy.
	3.8 Determine stock levels according to peak seasons, special events and supplier lead time.
	3.9 Analyse, evaluate and amend merchandise range and sources of supply according to management, staff and customer ***feedback***.
4 Establish supplier relations.	4.1 Develop cooperative relationships with supplier representatives according to store policy.
	4.2 Continuously review existing suppliers in regard to quality, profitability, service and delivery status.
	4.3 Identify new suppliers and delete existing suppliers according to ***performance indicators***.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
5 Negotiate supply of goods.	5.1 ***Negotiate*** and implement arrangements with suppliers according to store policy and procedures, and communicate to relevant personnel.
	5.2 Authorise special ***pricing arrangements*** and customer payment agreements and communicate to relevant staff and management personnel according to store policy.
	5.3 Monitor records of suppliers and stock for accuracy and legibility and take appropriate action where necessary.
	5.4 Identify ***market factors*** affecting supply and communicate to relevant personnel.
	5.5 Convey complete and accurate records of negotiations and agreements to relevant personnel within designated timelines.
	5.6 Take immediate corrective action where potential or actual problems with supply are indicated.
	5.7 Identify and develop new suppliers to maintain and improve sales and service delivery.
	5.8 Analyse, evaluate and amend stock range and source of supply according to management, staff and customer feedback.
6 Monitor quality control.	6.1 Establish merchandise quality standards with suppliers according to ***legal requirements***, customer requirements and store policy.
	6.2 Monitor and ensure quality of merchandise during supply, manufacture and delivery processes.
	6.3 Record and analyse stock return figures against target figure.
7 Introduce product ranges.	7.1 Inform relevant personnel of new product ranges and advise on preferred location of merchandise.
	7.2 Implement ***staff training*** in product knowledge to introduce product range.
	7.3 Demonstrate or display new ranges to ***staff*** according to store merchandising plan.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
8 Maximise profit.	8.1 Calculate or estimate individual product range contributions against budget and targets.
	8.2 Develop and implement product range assessment checks against budget and targets.
	8.3 Calculate or estimate overall selling space contributions according to store merchandising plan.
	8.4 Maximise profit margins in negotiations with suppliers.
	8.5 Determine store pricing policies according to stated net profit margin in store merchandising plan and consumer law.
	8.6 Negotiate specifications for ***terms of trade***.
9 Rationalise stock.	9.1 Review and update stock range at regular intervals.
	9.2 Identify stock lines to be ***deleted*** and take action to minimise adverse effect on profit.
	9.3 ***Consolidate stock*** as required to maximise sales potential.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- evaluating and analysing:
  - market trends and projections
  - sales figures and investment levels
  - space requirements
- negotiation skills
  - interpersonal communication skills to:
  - liaise with relevant personnel
  - establish supplier relationships, negotiate supply of goods
  - provide information and training on product range
  - provide feedback and coaching through clear and direct communication

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- ask questions to identify and confirm requirements
- give instructions
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- group presentation skills
- report writing
- using and applying technology, including electronic data interchange
- literacy and numeracy skills in relation to:
  - developing pricing policies
  - calculating and estimating product range contributions
  - calculating the cost of stock loss and dissipation
  - analysing stock figures.

The following knowledge must be assessed as part of this unit:

- store policy and procedures in regard to:
  - marketing
  - buying
  - profit margins
  - quality control
  - stock inventory levels: current and future
  - stock location and allocated areas
- staff product knowledge training
- industry and store information, including:
  - market needs
  - range of merchandise available
  - market competition
  - existing and possible new suppliers
  - channels of distribution
- relevant legislation and statutory requirements
- relevant industry codes of practice
  - pricing procedures, including GST requirements.

Evidence Guide

EVIDENCE GUIDE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- consistently applies store policy and procedures, industry codes of practice, statutory requirements and regulations in regard to buying, merchandising and marketing practices
- applies market analysis, planning, procurement and rationalisation of stock and merchandise and service ranges, maintenance of supplier relations and quality control
- interprets market trends and applies these to the store situation to create opportunities to improve sales and services, while maximising profits
- analyses market and plans the introduction of a product and service range
- identifies suppliers, negotiates supply of goods, rationalises stock and monitors quality control
- trains and communicates information to and from staff or team members in regard to stock and merchandise and service range.

Context of and specific resources for assessment

Assessment must ensure access to:

- a retail work environment
- relevant information and documentation, including:
  - store policy and procedures
  - legislation and statutory requirements
  - industry codes of practice
  - merchandise and supplier data.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- third-party reports from a supervisor
- customer feedback

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

- written or verbal questioning to assess knowledge and understanding
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Assessing employability skills

Employability skills are integral to effective performance in the workplace and are broadly consistent across industry sectors. How these skills are applied varies between occupations and qualifications due to the different work functions and contexts.

Employability skills embedded in this unit should be assessed holistically in the context of the job role and with other relevant units that make up the skill set or qualification.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Store merchandise and marketing policies may include:

- store culture
- current market position
- target market.

Customer requirements may be monitored by:

- questionnaires
- surveys
- observation.

Merchandise range may include:

- existing stock
- new stock.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

Impact on business operations may include:	• buying • ordering patterns • planning • budgeting.
Relevant personnel may include:	• frontline staff • relevant managers • supervisor • team leader • specialist staff.
Feedback may be sought and given:	• verbally • in writing • in groups • individually.
Performance indicators may include:	• price • quality • performance • supply reliability • merchandise range.
Negotiation process may include:	• face-to-face • correspondence • meetings • telephone or electronic media.
Pricing arrangements may include:	• cash on delivery (COD) • cheque • credit card • invoice • GST.
Market factors may include:	• fashion trends

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• product availability • sales performance.
Legal requirements may include:	• sale of second-hand goods • Trade Practices and Fair Trading Acts • licence, patent or copyright arrangements • pricing procedures, including GST requirements.
Staff training may include:	• on-the-job • off-the-job • one-on-one coaching • any combination of the above.
Staff may include:	• full-time, part-time, casual or contract staff • people from a range of social, cultural and ethnic backgrounds • people with varying degrees of language and literacy levels.
Terms of trade may include:	• special buys • payment terms • promotional deals with supplier.
Stock lines may be ***deleted*** due to:	• changes in store policy and culture • sales performance • customer requirements • fashion trends • product availability • problems with supply.
Methods to ***consolidate stock*** may include:	• movement of stock between departments or stores.

SIRXMER004A Manage merchandise and store presentation

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit describes the performance outcomes, skills and knowledge required to manage merchandise and store presentation.

Application of the Unit

Application of the unit This unit requires the team member to apply knowledge of store merchandising to plan and manage store advertising and promotions, manage store pricing policies and housekeeping. It includes interpretation of and compliance with store layout and visual merchandising policies, developing and implementing procedures to manage merchandise pricing, and managing all aspects of store housekeeping, including contingency procedures. This role applies to frontline retail managers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit is packaged will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Manage store merchandising.	1.1 Ensure layout and presentation support market position and promote customer flow according to store ***visual merchandising policies and plans***.
	1.2 Develop and implement layout assessment checks.
	1.3 Define standards for visual presentations and displays and clearly communicate to all staff
	1.4 Consult floor staff to assess customer response to space allocations.
2 Plan and manage store advertising and promotions.	2.1 Manage and implement store policies and procedures, in regard to store ***promotional activities***.
	2.2 Organise activities in line with anticipated or researched customer requirements.
	2.3 Manage ***promotions*** in order to achieve maximum customer impact.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4 Negotiate arrangements with suppliers in regard to special promotional activities.
	2.5 Coordinate store activities to complement shopping centre or retail complex promotions.
	2.6 Develop and implement assessment checks to measure effectiveness of promotions, including layout, visual impact and customer response.
	2.7 Document and report on promotional activities.
3 Manage store pricing policies.	3.1 Maintain store pricing according to ***organisation pricing policies and procedures*** in regard to pricing.
	3.2 Maintain accurate information on pricing trends and changes and communicate to relevant staff.
	3.3 Develop and implement procedures for pricing according to store policies and ***legislative requirements***.
4 Manage housekeeping.	4.1 Develop and implement store policies and procedures in regard to ***store housekeeping and maintenance***.
	4.2 Develop and manage rosters or schedules, ensuring store housekeeping standards are monitored and maintained.
	4.3 Initiate ***contingency plan*** in the event of merchandise or store presentation problems.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- providing feedback on performance
- interpersonal communication skills to:
  - communicate store standards and expectations to staff
  - consult floor staff
  - negotiate arrangements with suppliers, through clear and direct communication
  - ask questions to identify and confirm requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- roster development
- report writing
- literacy skills in regard to:
  - researching, analysing and interpreting a broad range of written material
  - preparing rosters
  - preparing reports
  - documenting results

The following knowledge must be assessed as part of this unit:

- store policies and procedures, in regard to:
  - layout and presentation
  - advertising and promotions
  - pricing or marking down of goods, including risk assessment
  - housekeeping for premises, fittings, fixtures and equipment
  - store merchandise and service range
  - store merchandising plan
  - range and availability of new products and services
  - customer demand and market trends
  - product quality standards
- OHS legislation and codes of practice
- relevant legislation and statutory requirements
- relevant industry codes of practice
- pricing procedures, including GST requirements
- principles and techniques in:
  - visual merchandising
  - project management

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- collaboratively plans layout and presentation of merchandise according to store policies and procedures
- assesses effectiveness of layout and presentation according to sales targets or predetermined objectives
- collaboratively plans, coordinates and implements advertising and promotions activities according to store policies and procedures
- assesses and reports on effectiveness of advertising and promotions to staff and management according to store policies and procedures
- collaboratively plans, coordinates and implements pricing activities according to store policies and procedures
- collaboratively plans, coordinates and implements housekeeping activities according to store policies and procedures and OHS legislation, regulations and codes of practice.

Context of and specific resources for assessment

Assessment must ensure access to:

- a retail work environment
- relevant documentation, such as:
  - store policy and procedures manuals
  - store merchandising plan
  - legislation and statutory requirements
  - OHS legislation, regulations and codes of practice
- a work team.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- third-party reports from a supervisor
- customer feedback
- answers to questions about specific skills and knowledge.

Holistic assessment with other units relevant to the

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Develop product and service knowledge.	1.1. Identify and access sources of information on products and services. 1.2. Interpret information about availability, features and benefits of products and services.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.3.Compare products and services based on product information. 1.4.Identify and use opportunities to update knowledge for the product and service range.
2. Respond to customer requests.	2.1.Answer customer questions about products and services with current and accurate information. 2.2.Use questions to clarify customer information needs. 2.3.Explain product and service details using clear communication. 2.4.Source additional information when answer to customer request is unknown or refer to relevant colleagues.
3. Enhance information provided.	3.1.Identify situations where additional information may assist the customer. 3.2.Advise on alternative products or services that may meet customer needs when requested item is not available. 3.3.Recommend complementary products, specials, new lines and promotions to customers according to their needs.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Numeracy skills to:	• interpret pricing information.

Assessment Requirements for SIRXPDK001 Advise on products and services

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- access and interpret sources of information on four different products or services
- respond to four different customer inquiries for product or service information that individually or cumulatively require provision of information on all of the following:
  - features and benefits
  - price
  - alternative products or services
  - complementary products or services.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - interactions with customers
  - product or service pricing
- basic key aspects of legislation that impact provision of information for the product or service range:
  - Australian Consumer Law
  - product or service specific legislation
- interpersonal communication techniques:
  - active listening and questioning
  - communication methods which convey information clearly and concisely
- product and service information for the product or service range:
  - features and benefits
  - price
  - care and handling of products
  - availability
  - storage requirements, shelf life and use by date
  - warranties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- ingredients or materials contained in product
- origins
- alternative products and services
- complementary products and services.

Assessment Conditions

Skills must be demonstrated in a services industries environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- a product or service range
- sources of product information
- relevant documentation:
  - current plain English regulatory documents distributed by government regulators outlining factors that impact provision of information for the product or service range
  - price lists
  - organisational policies and procedures relevant to product and service advice
- customers; these can be:
  - customers in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Employability Skills Information

Employability skills The required outcomes described in this unit contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit is packaged will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Apply routine store security.	1.1 Apply store ***security systems and procedures*** according to store policy. 1.2 Handle and secure cash according to ***store policy and procedures***. 1.3 Observe and deal with suspect behaviour by ***customers*** according to store policy and ***legislative requirements***. 1.4 Deal with internal and external theft according to store policy and legislative requirements. 1.5 Store products and equipment in a secure manner.
2 Minimise theft.	2.1 Take appropriate action to minimise theft by applying store procedures and legislative requirements. 2.2 Match merchandise to correct price tags. 2.3 Maintain surveillance of merchandise according to store policy and ***legislative requirements***.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4 Check customers' bags as required at point of sale according to store policy and legislative requirements.
	2.5 Maintain security of cash, cash register and keys according to store policy.
	2.6 Maintain security of stock, cash and equipment in regard to customers, ***staff*** and outside contractors according to store policy and legislative requirements.
	2.7 Deal with suspected or potential thieves according to store policy and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- literacy and numeracy skills in:
  - recording of stolen items
  - reporting of theft.

The following knowledge must be assessed as part of this unit:

- store policy and procedures in regard to:
  - security
  - checking customers' bags and purchases
  - reporting problems and faults
- relevant legislation and statutory requirements, particularly in regard to checking customers' bags and purchases
- Trade Practices and Fair Trading Acts
- store merchandising system
- security procedures relating to cash and non-cash transactions
- location and operation of store security equipment
- reporting procedures for internal and external theft or suspicious circumstances.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- consistently applies store policy and procedures and legislative requirements, including industry codes of practice in regard to store security and theft prevention in a range of contexts and situations
- consistently applies store policy and procedures in regard to following security procedures and for reporting theft or suspicious behaviour to relevant personnel
- monitors stock, work area, customers and staff to minimise opportunities for theft.

Context of and specific resources for assessment

Assessment must ensure access to:

- a real or simulated work environment
- relevant documentation, such as:
  - store policy and procedures manuals
  - legislation and statutory regulations
  - industry codes of practice
  - Trade Practices and Fair Trading Acts
- relevant security equipment
- point-of-sale equipment.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- a simulated work environment
- third-party reports from a supervisor
- customer feedback
- answers to questions about specific skills and knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- SIRXCCS001A Apply point-of-sale handling procedures
- SIRXCCS002A Interact with customers
- SIRXINV001A Perform stock control procedures
- SIRXFIN001A Balance point-of-sale terminal.

Assessing employability skills

Employability skills are integral to effective performance in the workplace and are broadly consistent across industry sectors. How these skills are applied varies between occupations and qualifications due to the different work functions and contexts.

Employability skills embedded in this unit should be assessed holistically in the context of the job role and with other relevant units that make up the skill set or qualification.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Security systems and procedures may deal with:

- customers
- staff
- keys
- visitors, sales representatives, contractors and vendors
- stock
- records

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

- cash, credit cards
- equipment, including:
  - alarm systems
  - video surveillance
  - mirrors
  - security tags
- locked and secure areas
- premises
- armed hold-up.

Store policy and procedures may relate to:

- security
- surveillance of merchandise
- reporting problems and faults.

Customers may include:

- people from a range of social, cultural and ethnic backgrounds and with varying physical and mental abilities.

Legislative requirements may include:

- privacy and confidentiality laws
- Trade Practices and Fair Trading Acts
- consumer law
- awards and agreements
- property offences
- credit laws
- reporting procedures
- criminal law.

Staff may include:

- management
- other staff members
- full-time, part-time and casual staff
- people from a range of social, cultural and ethnic backgrounds and with varying physical and mental abilities.

Assessment Requirements for SIRXRSK002 Maintain store security

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- maintain store security over three different work shifts by:
  - monitoring adherence to organisational security policies and procedures
  - responding to two occurrences of non-adherence to security policies and procedures
  - communicating security policies and procedures to one team member
  - ensuring security equipment is utilised and in correct working order
  - reporting on opportunities for improved store security.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - use of security equipment
  - suspicious customer behaviour
  - suspicious team member behaviour
  - armed robbery
  - cash and non-cash security
  - merchandise security
  - theft
  - responding to security breaches
  - reporting security risks and breeches
  - surveillance of merchandise
  - personal security
  - general store security
  - team members' security training
  - security for opening and closing premises
  - reporting problems and faults
  - security of visitors, sales representatives, contractors and vendors
  - security risks likely to endanger customers or team members

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- legislation as relevant to store security and own level of responsibility:
  - privacy laws
  - Australian Consumer Law
  - reporting procedures
- impacts of security breaches on individuals and organisation:
  - emotional distress
  - financial loss
  - commercial impacts
- common security risks within the retail workplace and techniques to:
  - identify risk
  - minimise risk
- types of store alarms and security systems used in industry.

Assessment Conditions

Skills must be demonstrated in a services industry environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- relevant equipment:
  - alarm systems
  - surveillance equipment
  - point-of-sale equipment
  - communication equipment
- relevant documentation:
  - current plain English regulatory documents distributed by government regulators legislation as relevant to store security and own level of responsibility as listed in Knowledge Evidence
  - organisational policies and procedures as listed in the Knowledge Evidence
- customers and team members; these can be:
  - individuals in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Assessment Requirements for SIRXSLS002 Follow point-of-sale procedures

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- follow procedures for set up, maintenance and close of point-of-sale area/terminal on three different occasions
- perform three point-of-sale transactions for each of the following:
  - cash sales
  - non-cash sales
- perform three point-of-sale transactions for each of the following:
  - refunds
  - exchanges
- make six accurate financial calculations relating to product pricing that individually or cumulatively involve:
  - multiple products
  - products of varying prices
  - products with percentage discounts
- follow procedures to complete four sales that require post purchase activity.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - exchanges
  - refunds
  - lay-by
- basic key aspects of legislation that impact point-of-sale activities:
  - Australian Consumer Law
- features of products sold by the organisation
- functions and procedures for operating point-of-sale equipment:
  - opening and closing
  - clearance of terminal and transference of tender

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - recording takings
  - consumables required by system
  - security
- cash handling procedures:
  - counting cash
  - handling cash floats
  - change required, denominations of change and tendering change
  - security
- procedures for non-cash transactions:
  - credit cards
  - EFTPOS
  - vouchers
- types of purchase follow up activities and associated organisational policies and procedures:
  - placing of orders
  - delivery
  - issuing of invoices
  - issuing of receipts
  - wrapping and packing.

Assessment Conditions

Skills must be demonstrated in a service industries environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- organisational policies and procedures for point-of-sale activities
- current plain English regulatory documents distributed by government regulators outlining key aspects of legislation that impact point-of-sale activities as listed in the Knowledge Evidence
- point-of-sale equipment and consumables
- financial transaction documentation for non-cash sales
- cash
- assessment activities that allow the individual to work with commercial speed, timing and productivity.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SITXMGT002 Establish and conduct business relationships

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to establish and manage positive business relationships. It requires the ability to use high-level communication and relationship building skills to conduct formal negotiations and make commercially significant business-to-business agreements.

The unit applies to all industry sectors, and to individuals who take responsibility for making decisions about purchasing or marketing activities. They also oversee the maintenance of contracts or agreements. This could include senior operational personnel, sales and marketing personnel, managers or owner-operators of small businesses. Agreements may relate to corporate accounts, service contracts, agency agreements, venue contracts, rate negotiations, preferred product agreements, supply agreements and marketing agreements.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1. Build business relationships.	1.1. Establish relationships in line with organisational requirements and protocols. 1.2. Use effective communication skills and techniques to build business relationships. 1.3. Proactively identify and take up opportunities to maintain regular contact with customers and suppliers.
2. Conduct negotiations.	2.1. Use negotiation techniques in line with professional and organisational protocols to maximise benefits of relationship for all parties. 2.2. Incorporate feedback and input from colleagues into negotiation where appropriate. 2.3. Communicate results of negotiations to appropriate colleagues and stakeholders within appropriate timeframes.
3. Make formal business agreements.	3.1. Confirm agreements in writing according to organisational requirements, using formal contracts where appropriate. 3.2. Obtain approvals for all aspects of formal agreements according to organisational procedures. 3.3. Evaluate and act on the need for specialist advice as required.
4. Foster and maintain business relationships.	4.1. Proactively seek, review, and act upon information needed to maintain sound business relationships. 4.2. Honour agreements within scope of individual responsibility, complying with agreed terms. 4.3. Take account of agreed performance indicators. 4.4. Make adjustments to agreements in consultation with customer or supplier and share information with appropriate colleagues. 4.5. Nurture relationships through regular contact and use of effective interpersonal and communication styles.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• interpret potentially complex agreements, conditions and contracts.
Writing skills to:	• develop or participate in the development of formal commercial agreements.
Oral communication	• conduct at times complex negotiations of significant commercial value.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

skills to:

Numeracy skills to:	• evaluate commercial data and cost structures.
Problem-solving skills to:	• evaluate potentially complex internal and external issues that affect professional relationships and business negotiations and identify appropriate options to resolve them • anticipate and respond to challenges in the negotiation process.
Initiative and enterprise skills to:	• proactively seek opportunities for building business relationships.

Assessment Requirements for SITXMGT002 Establish and conduct business relationships

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- establish and maintain business relationships with at least two of the following:
  - cooperative partner with organisation
  - contractor
  - customer
  - networks
  - supplier
- conduct formal negotiations, or make and manage agreements and contracts in relation to the two relationships established above, relevant to the specific business context
- demonstrate the use of high-level communication and relationship building skills when conducting formal negotiations and making commercially significant business-to-business agreements in the above business relationships.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- commercial context for business relationships in the relevant industry sector and related:
  - industry structure and interrelationships
  - sources of supply
  - distribution and marketing networks
  - professional networks
- opportunities to maintain regular contact with customers and suppliers:
  - association membership
  - cooperative promotions
  - industry functions
  - informal social occasions
  - program of regular telephone contact
  - social media
- principles of negotiation, stages in the negotiating process, and different negotiation techniques that can be applied

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- nature of agreements and contracts in the relevant industry sector and their key role, features and inclusions
- key components of contract law at an overview level:
  - terms and obligations of contract
  - methods of contractual agreement
  - exclusion clauses
  - dispute resolution clause
  - termination of contracts
- other legal requirements that impact negotiations and agreements in the relevant industry.

Assessment Conditions

Skills must be demonstrated in an environment or activity in any industry sector where contracts are negotiated and agreed. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- other people with whom business relationships can be established; these can be:
  - those in an industry workplace who are assisted by the individual during the assessment process; or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.
- materials that support the negotiation process:
  - preparatory facts and statistics
  - key performance indicators
  - market information.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SITXMPR001 Coordinate production of brochures and marketing materials

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to coordinate the development process for brochures and other marketing materials from a content and production perspective.

The unit applies to all industry sectors and all types of marketing materials, both physical and virtual. Individuals working independently with limited supervision undertake this role. Depending on the business context, this could include sales and marketing personnel, managers, and owner-operators of small businesses.

This unit reflects the general skills needed by those involved in sales and marketing activities and does not include the skills required by professional graphic designers or copywriters.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

outcomes.	demonstrate achievement of the element.
1. Plan production of brochures and marketing materials.	1.1. Plan production of brochures and marketing materials according to marketing objectives. 1.2. Evaluate factors that impact on nature of materials and development process, including sustainability considerations. 1.3. Create production plans, including timelines, responsibilities, budget and contingency measures.
2. Produce information for inclusion.	2.1. Produce or obtain accurate and complete information for inclusion. 2.2. Present information that promotes the business in a clear format and a culturally appropriate way.
3. Obtain quotations for artwork and printing as appropriate.	3.1. Provide accurate and complete specifications to quoting organisations within appropriate timeframe. 3.2. Obtain quotations with details of potential variations to cost and conditions that may apply.
4. Develop final copy for brochures and marketing materials.	4.1. Develop copy using basic creative writing techniques or obtain from relevant source. 4.2. Integrate accurate, practical and operational details. 4.3. Present accurate information about costs and conditions. 4.4. Check copy for accuracy prior to submission for production.
5. Coordinate production of brochures and marketing materials.	5.1. Liaise with production personnel and monitor schedule. 5.2. Check and correct production work as required. 5.3. Approve artwork according to organisational guidelines. 5.4. Obtain and deliver materials on schedule or action contingency measures.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Reading skills to:	• interpret quotations and product conditions • proofread and edit draft materials • create copy or check quality of outsourced copy • research information for inclusion from varied and potentially unfamiliar sources.
Oral communication skills to:	• collaborate with others on technical, organisational and creative issues.

Numeracy skills to:	• calculate costs and quantities of materials to be produced
	• work with:
	  • numerical concepts of size, shape and layout
	  • detailed product costings.

Problem-solving skills to:	• evaluate factors that impact on production of marketing materials • respond to challenges that arise in the production of marketing materials.
Technology skills to:	• liaise with others about technical production issues • work with current industry marketing technologies.

Assessment Requirements for SITXMPR001 Coordinate production of brochures and marketing materials

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- produce at least three of the marketing materials listed in the knowledge evidence, coordinating all aspects of the development process within specified deadlines
- produce each of the above marketing materials to:
  - meet stated objectives
  - provide current and accurate information
- proofread each of the above to ensure they are free of errors.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- key features of marketing materials:
  - advertising material
  - conference program or registration form
  - destination guide
  - direct mail piece
  - display material
  - event prospectus
  - invitation
  - product brochure
  - product support manual
  - promotional flyer or leaflet
  - venue maps
- objectives of marketing materials and the markets for which material is required
- physical and virtual media marketing opportunities
- factors that impact production of materials in both physical and virtual contexts:
  - accessibility for those with disabilities
  - availability of information
  - design issues:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - style
    - size
  - legal requirements
  - marketing considerations:
    - distribution considerations
    - market for review of competitive materials
    - objectives
  - resource constraints:
    - budget
    - in-house capability
  - technology:
    - digital media opportunities
  - objectives of the material
  - sustainability considerations
  - time parameters
- current digital print production technologies, processes and terminology
- printing and industry conventions in relation to placement of information, page numbering and copyright information
- specification inclusions:
  - conditions of contract
  - delivery platform
  - interactivity requirements
  - layout and style of text
  - number of colours
  - number of photographs
  - production and delivery deadlines
  - size
  - total number required
  - type of paper (for print-based materials)
- quality indicators in marketing material production:
  - readability
  - photographic quality
  - effective use of colour
  - spacing requirements
- creative writing techniques used for the content of brochures and other marketing materials
- procedures and requirements for preparation and proofing of material
- copyright laws and restrictions that apply to the inclusion of certain content in brochures and other marketing materials
- procedures for copyright clearance of restricted materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- trade practices requirements around the need for accuracy of information in marketing materials.

Assessment Conditions

Skills must be demonstrated in an operational business environment for which brochures and marketing materials can be developed. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- current information and communications technology for the development of content
- suppliers of graphic design services, print production organisations and copywriters with whom the individual can interact; these can be:
  - those in an industry workplace who are assisted by the individual during the assessment process; or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SITXMPR002 Create a promotional display or stand

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to create a display or stand for promotional purposes. It requires the ability to identify the objectives of the promotion, determine the audience, select all display components and assemble the display or stand.

The unit applies to all industry sectors. Individuals working with some level of independence create displays at promotional events or within their own workplaces. This includes sales and marketing personnel, managers, and owner-operators of small businesses. Displays may be used to promote any product, service, or event; a group of products cooperatively marketed, or even a whole city, region or tourism precinct.

This unit does not cover the skills of a specialist display designer or visual merchandiser.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Assessment Requirements for SITXMPR002 Create a promotional display or stand

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- create two different displays and dress two different promotional stands to meet specific organisational objectives
- use three of the following in the above displays and stands:
  - cultural artefacts
  - fabric
  - flags
  - freestanding display options
  - local produce
  - printed materials
  - product samples
  - signs
  - three-dimensional (3-D) materials
- create the above displays and stands:
  - applying the elements and principles of design
  - safely and within typical workplace time constraints.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- industry contexts in which displays are used:
  - information centre displays
  - promotional functions
  - shopping centre promotions
  - trade and consumer shows
  - window displays
- information to be considered when preparing a promotional display or stand:
  - budget allocation
  - floor plans

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - nature of display area
  - need for utilities
  - need for waste management
  - work health and safety requirements
  - security
  - set-up times and duration
  - type of surface on which display is to be created
- materials and equipment used for display in different locations and settings
- elements and principles of design as they apply to the creation of displays
- visual merchandising techniques using commonly available materials, and techniques for maximising the effectiveness of collateral in displays
- work health and safety practices for transporting, carrying and assembling the display or stand
- safety issues associated with the construction and operation of promotional displays and stands in different venues.

Assessment Conditions

Skills must be demonstrated in an operational business environment or activity. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- display space or promotional stand
- display and promotional materials used in the relevant industry sector
- display supplies:
  - adhesives and velcro
  - audio-visual systems
  - balloons and other decorations
  - collateral materials
  - computers
  - floral arrangements and potted plants
  - furniture
  - mobiles
  - pins
  - scissors
  - string.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Assessment Requirements for SITXMPR004 Coordinate marketing activities

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- plan and coordinate at least two different marketing activities for an operation, product or service
- use industry networks, information sources, and distribution and marketing networks when planning and coordinating the above activities
- reflect types of marketing activities used in the relevant industry sector and major industry promotional events in the above activities
- apply marketing principles to each marketing activity
- evaluate and report on each of the above marketing activities against the following criteria:
  - consistency with overall marketing direction
  - exposure that was achieved
  - matching attendees to target market
  - cost-effectiveness of financial and human resources
  - completion within established timeframe.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- content and structure of marketing plans
- key marketing principles:
  - marketing management process
  - the four Ps: product, place, price and promotion
  - SWOT analysis: strengths, weaknesses, opportunities and threats
- industry structure and interrelationships, industry networks and information sources
- industry and market knowledge appropriate to the sector and organisation:
  - distribution and marketing networks, especially those that support the product or service being promoted
  - e-business marketing options and major promotional events
  - commission structures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - current customer and market trends and preferences
- features, benefits and practical application of marketing activities commonly used in the service industries:
    - advertising
    - familiarisations
    - in-house promotions
    - public relations
    - social media
    - trade and consumer shows
    - signage and display
- information inputs into the planning process:
    - competitive activity
    - financial statistics
    - marketing reports
    - marketplace trends
    - sales reports
- considerations in evaluating the suitability of marketing activities:
    - consistency with overall marketing direction
    - exposure to be achieved
    - matching of attendees to target markets
    - resource considerations:
        - financial
        - human
    - timing of activity or event
- operational details relevant to the coordination of marketing activities:
    - administrative and procedural requirements
    - availability of promotional materials
    - available technology
    - contracting of other services
    - equipment requirements
    - need for external assistance
    - potential for cooperative approaches
    - public relations implications
    - staffing requirements and briefings
    - strategies to ensure maximum benefits
    - travel arrangements
- legal issues that impact on the marketing of products and services
- ethical considerations for marketing activities:
    - appropriate use of images and text
    - protection of children

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - targeting of particular groups in the community
- sustainability considerations for marketing activities:
    - reducing waste of printed materials
    - sustainability as a marketing tool.

Assessment Conditions

Skills must be demonstrated in an operational business environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- products or services for which the individual can conduct marketing activities
- current information and communications technology used by industry for marketing activities
- marketing plans, operational marketing documents, action plans and marketing reports.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

TAEASS401 Plan assessment activities and processes

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Application

This unit describes the skills and knowledge required to plan the assessment process, including recognition of prior learning (RPL), in a competency-based assessment system.

It applies to individuals with assessment planning responsibilities.

In planning activities and processes, individuals are required to identify the components of assessment tools, analyse and interpret assessment tools, and develop assessment instruments (also known as assessment tasks) and assessment plans.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Assessment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine the assessment approach	1.1 Identify the candidate and confirm the purposes and context of the assessment with relevant people according to legal, organisational and ethical requirements 1.2 Identify and access applicable industry or workplace standards for the assessment, and any specific assessment requirements
2. Prepare the assessment	2.1 Analyse units of competency and assessment requirements to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
plan	identify evidence needed to demonstrate competence, according to the rules of evidence 2.2 Select assessment methods and instruments to support the collection of defined evidence, taking into account the context in which the assessment will take place 2.3 Develop the assessment plan and gain approval from relevant stakeholders
3. Identify modification and contextualisation requirements	3.1 Use information from the candidate and, where relevant, the candidate's workplace to identify contextualisation needs 3.2 Check advice provided by the training package or course developer relevant to identified contextualisation needs 3.3 Analyse existing assessment tools and record amendments required to address identified contextualisation needs 3.4 Determine opportunities for integrated assessment activities and record any changes required to assessment tools
4. Develop the assessment instruments	4.1 Analyse available assessment instruments for their suitability for use, and identify any required modifications 4.2 Develop assessment instruments to meet the required standard and specific workplace/candidate needs 4.3 Map assessment instruments against the unit or course requirements 4.4 Write clear instructions for the candidate and assessor regarding the use of assessment instruments 4.5 Check and confirm that draft assessment instruments meet required standards and specific workplace/candidate needs and record outcomes of checks

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

FOUNDATION SKILLS *This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

	Criteria	
Reading	1.1, 1.2, 2.1, 3.1, 3.2, 3.3, 3.4, 4.2, 4.3	• Identifies and confirms legal, organisational and ethical requirements • Selects and analyses assessment-related documents
Writing	1.1, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, 3.4, 4.1, 4.2, 4.3, 4.4, 4.5	• Documents the assessment plan • Develops assessment instruments, including instructions and mapping • Records outcomes of draft assessment checks
Oral Communication	1.1, 2.3, 3.1	• Participates in exchanges about assessment processes and the trialling of instruments appropriate to the audience
Navigate the world of work	1.1	• Identifies, confirms and takes responsibility for adherence to policies, procedures, legal, and ethical requirements
Interact with others	1.1, 2.3, 3.1	• Collaborates with others as part of routine activities, and to confirm understanding
Get the work done	1.1, 1.2, 2.1, 2.2, 3.1, 3.2, 3.3, 3.4, 4.2, 4.3, 4.5	• Plans a range of routine processes and related tasks with logically sequenced steps, according to defined standards or parameters • Uses formal decision-making processes, identifying information and evaluating several choices against a limited set of criteria • Evaluates effectiveness of planning and design decisions in terms of how well they meet requirements

Assessment Requirements for TAEASS401 Plan assessment activities and processes

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Performance Evidence

The candidate must demonstrate the ability to complete tasks outlined in the elements and performance criteria of this unit, including:

- planning and organising the assessment process on a minimum of five separate occasions
- planning and organising two Recognition of Prior Learning (RPL) assessments (which may be two of the five assessment processes above.)

The evidence requirements for each occasion must include:

- a documented assessment plan
- a different endorsed or accredited unit of competency (or clusters of units of competency) for each of the five occasions
- contextualisation of the unit(s) of competency and the selected assessment tools, where required
- incorporation of reasonable adjustment strategies
- development of suitable assessment instruments for each of the five occasions

following organisational arrangements.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

- obligations of an assessor under applicable legislation and/or standards
- the major features of a unit of competency, and how they are to be addressed in assessment activities and processes
- interpreting competency standards as the minimum standard for assessment
- guidelines for contextualising units of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- different purposes of assessment and different assessment contexts, including RPL
- the purpose and features of evidence, and different types of evidence, used in competency-based assessments, including RPL
- the principles of assessment, and how they guide the assessment process
- the rules of evidence and how they guide the assessment process
- different assessment methods, including their suitability for collecting various types of evidence
- the components of assessment tools

different types of assessment instruments and their purpose and relevance for specific evidence-gathering opportunities.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and which are typical of those experienced in the training and assessment environment. This includes access to the units of competency used in assessment planning activities.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessors of this unit must hold the *TAE50116 Diploma of Vocational Education and Training* or the *TAE50111 Diploma of Vocational Education and Training* or be able to demonstrate equivalence of competencies.

TAEASS402 Assess competence

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Application

This unit describes the skills and knowledge required to implement an assessment plan, and gather quality evidence to assess the competence of a candidate using compliant assessment tools.

It applies to teachers, trainers and assessors in enterprises and registered training organisations (RTOs) and those providing assessment advisory services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Assessment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for the assessment	1.1 Interpret assessment planning documentation and applicable organisational, legal and ethical requirements for conducting the assessment and confirm with the relevant people 1.2 Access and interpret units of competency that are to be used as benchmarks for assessment, and the nominated assessment tools, to confirm the requirements for the evidence to be collected 1.3 Determine opportunities for integrated assessment activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	and document any changes to the assessment instruments, where required 1.4 Determine opportunities for evidence-gathering in actual or simulated activities, through consultation with the candidate and relevant personnel 1.5 Conduct a candidate briefing and explain, discuss and agree on the details of the planned assessment 1.6 Arrange identified material and physical resource requirements 1.7 Identify any specialist support requirements for the assessment, and organise if necessary
2. Gather quality evidence	2.1 Use agreed assessment methods and tools to gather, organise and document evidence in a format suitable for determining competence 2.2 Apply the principles of assessment and rules of evidence in gathering quality evidence
3. Support the candidate	3.1 Discuss and guide candidates in gathering their own evidence to support the recognition of prior learning (RPL) 3.2 Use appropriate communication and interpersonal skills to develop a professional relationship with the candidate that reflects sensitivity to individual differences and enables two-way feedback 3.3 Make decisions on reasonable adjustments with the candidate, based on the candidate's needs and characteristics 3.4 Access specialist support, if required, in accordance with the assessment plan 3.5 Address any workplace health and safety (WHS) risk to a person or equipment immediately
4. Make the assessment decision	4.1 Assess the collected evidence, and to evaluate whether it reflects the evidence required to demonstrate competence 4.2 Use judgement to infer whether competence has been demonstrated, based on the available evidence 4.3 Make the assessment decision in line with agreed assessment procedures and according to the agreed assessment plan 4.4 Provide clear and constructive feedback to the candidate regarding the assessment decision, and clearly document follow-up, if required
5. Record and report the assessment decision	5.1 Record assessment outcomes promptly and accurately 5.2 Complete and submit required assessment documentation,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	according to assessment procedures and confidentiality conventions 5.3 Inform other relevant parties of the assessment decision, according to confidentiality conventions
6. Review the assessment process	6.1 Review the assessment process in consultation with candidates and other relevant people to improve future practice 6.2 Document and record the review according to relevant assessment system policies and procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 4.1	• Accesses and interprets procedural and compliance documentation relevant to the assessment process • Examines and evaluates assessment evidence
Writing	1.1, 1.3, 1.5, 2.1, 3.1, 5.1, 5.2, 5.3, 6.2	• Completes workplace documentation accurately using appropriate language and following organisational requirements
Oral Communication	1.1, 1.4, 1.5, 3.1, 3.4, 4.4, 5.3, 6.1	• Communicates information and assessment process requirements clearly, using techniques appropriate to the audience and environment • Interacts appropriately with candidates to build rapport and understanding, and obtain specific information to support the assessment process
Navigate the world of work	1.1, 3.5, 5.3	• Identifies, confirms and takes responsibility for adherence to legal and ethical requirements • Recognises, and follows, explicit and implicit protocols and meets expectations associated with own role
Interact with others	1.1, 1.4, 1.5, 3.1, 3.2, 3.4, 5.3, 6.1	• Adjusts personal communication style in recognition of the values and experiences of others to build rapport • Cooperates and collaborates with others and contributes to activities requiring joint responsibility

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		and accountability
Get the work done	1.1, 1.2, 1.3, 1.4, 1.6, 1.7, 2.1, 2.2, 3.3, 3.4, 4.1, 4.2, 4.3, 6.1, 6.2	• Uses systematic, analytical processes in complex, non-routine situations, gathering information, and identifying and evaluating options against agreed criteria • Organises work according to specific requirements taking some responsibility for decisions regarding the format of information • With guidance, reviews the effectiveness of solutions in relation to the set goals

Assessment Requirements for TAEASS402 Assess competence

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in the elements and performance criteria of this unit, including:

- assessment of at least five candidates within the vocational education and training (VET) context against at least one endorsed or accredited unit of competency according to the organisation's assessment processes and practices.
- using recognition of prior learning (RPL) processes in the assessment of at least one candidate (which may be one of the five candidates above)
- making reasonable adjustments in the assessment of at least one candidate.

The assessments must be undertaken under the supervision of a qualified assessor and cover an entire unit of competency for each candidate, including:

- the application of different assessment methods and instruments involving a range of activities and events
- using two-way communication and feedback with the candidate
- exercising judgement in making the assessment decision
- recording and reporting assessment outcomes in accordance with the assessment system and organisational, legal and ethical requirements

reviewing the assessment process.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

- competency-based assessment, including:
  - VET as a competency-based system
  - how competency based assessment differs from other types of assessment
  - competency standards as the basis of qualifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - structure and application of competency standards
  - the principles of assessment and how they are applied
  - the distinction between assessment tools and assessment instruments
  - the rules of evidence and how they are applied
  - the range of assessment purposes and assessment contexts, including RPL
  - different assessment methods, including suitability for gathering various types of evidence, suitability for the content of units, and resource requirements and associated costs
  - reasonable adjustments and when they are applicable
  - types and forms of evidence, including assessment instruments that are relevant to gathering different types of evidence used in competency-based assessment, including RPL
  - the training and assessment strategies, including policies and procedures established by the industry, organisation or training authority
- RPL policies and procedures established by the organisation
- cultural sensitivity and equity considerations in assessment activities
- current legislative requirements relevant to the assessor and the assessment process
- workplace health and safety (WHS) responsibilities associated with assessing competence, including:
  - requirements for reporting hazards and incidents
  - emergency procedures
  - procedures for the use of relevant personal protective equipment
  - the safe use and maintenance of relevant equipment
  - sources of WHS information.

Assessment Conditions

Gather evidence to demonstrate consistent performance in a real assessment environment. The assessment environment must include access to assessment tools and recording materials.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessors of this unit must hold the *TAE50116 Diploma of Vocational Education and Training* or the *TAE50111 Diploma of Vocational Education and Training* or be able to demonstrate equivalence of competencies.

TAEASS403 Participate in assessment validation

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Application

This unit describes the skills and knowledge required to participate in an assessment validation process.

It applies to assessors and workplace supervisors with assessment validation responsibilities participating in, but not necessarily leading, the process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Assessment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for validation	1.1 Discuss and confirm the purpose, context and scope of the validation process within relevant assessment system policies and procedures 1.2 Arrange materials for validation activities 1.3 Check all documents used in the validation process for accuracy and version control 1.4 Analyse relevant units of competency and agree on the evidence needed to demonstrate competence

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Participate in the validation of assessment tools	2.1 Demonstrate active and appropriate participation in validation sessions and activities using agreed communication methods and modes 2.2 Apply principles of assessment and rules of evidence during validation sessions and activities 2.3 Check that context and conditions of assessment include clear instructions for assessor and candidate and relate directly to the assessment conditions of the relevant unit 2.4 Check that tasks to be administered to the candidate include clear and concise instructions and an outline of evidence requirements 2.5 Check that assessment decision-making rules and benchmarks, are clear and enable consistent outcomes 2.6 Check that recording mechanisms are clear and allow for sufficient information to be recorded 2.7 Review and use assessment maps to assist in determining validity of assessment instruments
3. Contribute to validation outcomes	3.1 Discuss validation findings to support improvements in the quality of assessment in a collective environment 3.2 Discuss, agree and record recommendations to improve assessment practice

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Performance Criteria	Description
Reading	1.1, 1.3, 1.4, 2.3, 2.4, 2.5, 2.6, 2.7	• Analyses and interprets relevant policies and procedures, benchmarks and validation materials
Writing	1.1, 3.2	• Records key information from the validation process accurately to meet requirements
Oral Communication	1.1, 1.4, 2.1, 2.2, 3.1, 3.2	• Communicates with others to confirm approaches, exchange ideas and information, articulate opinions, and reach agreement with others, using suitable tone, style and language
Navigate the world of work	1.1	• Identifies, confirms and takes responsibility for adherence to policies and procedures
Interact with others	1.1, 2.1, 2.2, 3.1, 3.2	• Collaborates with others and contributes to activities requiring joint responsibility and accountability
Get the work done	1.1, 1.2, 1.3, 1.4, 2.3, 2.4, 2.5, 2.6, 2.7, 3.2	• Organises and prioritises work commitments with a sense of what is achievable within the timeframe • Uses analytical processes in non-routine situations gathering information, and identifying and evaluating options against agreed criteria

Assessment Requirements for TAEASS403 Participate in assessment validation

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in the elements and performance criteria of this unit, including:

- actively participating in a minimum of three validation sessions that address the critical aspects of validation
- clearly identifying the purpose for each validation, and the legal and ethical responsibilities of assessors
- collating and presenting documentation for each validation in a logical manner
- communicating and liaising with relevant people
- providing feedback and interpreting documentation in validation sessions
- recording their contribution to validation findings.
-

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

- how to determine the evidence needed to demonstrate competence in a competency-based environment
- the reasons for carrying out validation and different approaches to validation that may be appropriate before, during and after an assessment
- the components of assessment tools
- critical aspects of validation, including validation of assessment processes, methods and products
- how principles of assessment are addressed in validation
- how rules of evidence are addressed in validation
- work health and safety legislation, codes of practice, standards and guidelines that impact on assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- obligations of an assessor under applicable legislation and/or standards, particularly in relation to validation activities.
-

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Conditions must be typical of those experienced in the training and assessment environment, and include access to:

- the texts and tasks usually found in the workplace
- units of competency and other materials used in validation sessions.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessors of this unit must hold the *TAE50116 Diploma of Vocational Education and Training* or the *TAE50111 Diploma of Vocational Education and Training* or be able to demonstrate equivalence of competencies.

TAEDEL301 Provide work skill instruction

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Application

This unit describes the skills and knowledge required to conduct individual and group instruction, demonstrate work skills and assess the success of training and one's own training performance, using existing learning resources in a safe and comfortable learning environment.

It emphasises the training as being driven by the work process and context, and applies to a person working under supervision as a work skill instructor in a wide range of settings not restricted to training organisations,

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Delivery and facilitation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Organise instruction and demonstration	1.1 Gather information about learner characteristics and learning needs 1.2 Confirm a safe learning environment 1.3 Gather and check instruction, demonstration objectives, and seek assistance if required 1.4 Access and review relevant learning resources and learning

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	materials for suitability and relevance, and seek assistance to interpret the contextual application 1.5 Organise access to necessary equipment or physical resources required for instruction and demonstration 1.6 Notify learners of details regarding the implementation of the learning program and/or delivery plan
2. Conduct instruction and demonstration	2.1 Use interpersonal skills with learners to establish a safe and comfortable learning environment 2.2 Follow the learning program and/or delivery plan to cover all learning objectives 2.3 Brief learners on any workplace health and safety (WHS) procedures and requirements prior to, and during, training 2.4 Use delivery techniques to structure, pace and enhance learning 2.5 Apply coaching techniques to assist learning 2.6 Use communication skills to provide information, instruct learners and demonstrate relevant work skills 2.7 Provide opportunities for practice during instruction and through work activities 2.8 Provide and discuss feedback on learner performance to support learning
3. Check training performance	3.1 Use measures to ensure learners are acquiring, and can use, new technical and generic skills and knowledge 3.2 Monitor learner progress and outcomes in consultation with the learner 3.3 Review relationship between the trainer/coach and the learner, and adjust to suit learner needs
4. Review personal training performance	4.1 Reflect upon personal performance in providing instruction and demonstration, and document strategies for improvement 4.2 Maintain, store and secure learner records, according to organisational and legal requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Performance Criteria	Description
Learning	4.1	• Reflects on practice to improve
Reading	1.1, 1.3, 1.4, 2.2	• Sources and interprets processes and procedures, learning resources and information relevant to providing a work instruction and delivery
Writing	1.4, 1.6, 2.3, 2.6, 2.8, 3.2, 4.1, 4.2	• Accurately maintains learner records and documentation appropriate to the learning context and audience
Oral Communication	1.1, 1.6, 2.3, 2.4, 2.6	• Uses appropriate communication strategies to engage, build rapport, provide instruction, monitor progress and provide feedback to individuals or groups
Interact with others	1.2, 1.3, 2.1, 2.5, 2.8, 3.2	• Recognises the importance of consultation and negotiation while collaborating to confirm strategy and achieve required outcomes • Asks questions in order to clarify understanding, and to provide and seek feedback • Builds rapport to establish effective working relationships and to achieve effective outcomes
Get the work done	1.1-1.6, 2.1-2.8, 3.1-3.3, 4.1, 4.2	• Organises and completes work according to defined requirements, taking responsibility for some decisions and sequencing tasks to achieve efficient outcomes • Identifies and responds to potential risks, problems and opportunities for improvement and considers options for different approaches

Assessment Requirements for TAEDEL301 Provide work skill instruction

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in the elements and performance criteria of this unit, including:

- carrying out a minimum of three training sessions, involving demonstrating and instructing particular work skills for at least two different individuals or small groups, with each session addressing:
  - different learning objectives
  - a range of delivery techniques and effective communication skills appropriate to the audience.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

- learner characteristics and needs
- the content and requirements of the relevant learning program, and/or the delivery plan
- the sources and availability of relevant learning resources and learning materials
- the content of relevant learning resources and learning materials
- training techniques that enhance learning, and when to use them
- introductory knowledge of learning principles and learning styles
- key workplace health and safety (WHS) issues in the learning environment, including:
  - roles and responsibilities of key personnel
  - responsibilities of learners
  - relevant policies and procedures, including hazard identification, risk assessment, reporting requirements, safe use of equipment and emergency procedures
  - risk controls for the specific learning environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Conditions must be typical of those experienced in the training and assessment environment and include access to any necessary workplace documents.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

TLIA5058 Manage facility and inventory requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

his unit involves the skills and knowledge required to manage a facility and its inventory requirements, in various contexts within the transport and logistics industry.

It includes identifying space, safety and security requirements; developing a documentation system; designing storage zones and evaluating facility utilisation.

This unit generally applies to those who provide leadership of others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify space requirements	1.1 Organisational medium-term and long-term storage needs are assessed to facilitate planning, in accordance with the enterprise business plan and legislative requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.2 Product type, picking frequencies, value, fragility, weight, handling characteristics, quantity and holding periods are assessed to consider type and amount of storage
	1.3 Facility is assessed to determine stock holding and handling requirements for each inventory item
	1.4 Volume requirements are calculated to ensure ongoing stock holding needs are met
	1.5 Total space requirement is calculated and used to formulate a space utilisation plan
2 Identify safety and security requirements	2.1 Assessment is made of risks to ensure maximum safety and security for personnel, stock and facilities
	2.2 Storage handling security and incident/emergency procedures for each class or type of product are identified and documented
	2.3 Fire prevention and firefighting systems are identified in accordance with building code regulations and storage material requirements
	2.4 Evacuation plan is developed in accordance with the enterprise safety program
3 Develop and implement documentation system	3.1 System for recording and tracing stock location, receival, throughput and despatch is developed and implemented to enable reporting, quality assurance and financial requirements to be met
	3.2 System for recording communication with carriers, customers and employees is developed and implemented to assess operational effectiveness and to provide data for system improvement
4 Design storage zones	4.1 Space requirements and equipment operation are accurately assessed to facilitate warehouse zone planning
	4.2 Assessment is made of the facility to enable the most effective use of available space
	4.3 Positioning of storage areas, bays, work stations and the like is undertaken in accordance with planning process data
	4.4 Provision for maintenance and cleaning is catered for
5 Evaluate facility	5.1 Continual system of review is used involving regular checks to ensure storage areas and systems are functioning at

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

utilisation	optimum levels
	5.2 Receiving and despatching systems are assessed to ensure they provide efficient operations
	5.3 Storage and handling systems are assessed to ensure they provide ease of access and comply with ergonomic principles
	5.4 Product handling and storage process are assessed to ensure minimisation of product damage, contamination and stock losses
	5.5 Flexibility of facility layout to meet changing storage and handling requirements is maintained
	5.6 Appropriate reporting systems are established and used to capture and maintain data to design improved facilities and systems

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA5058A Manage facility and inventory requirements.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLIA5058 Manage facility and inventory requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when managing facility and inventory requirements
- developing and implementing contingency plans
- prioritising work and coordinating the work of others
- providing leadership to others when managing facilities and inventory requirements
- reading and interpreting plans, diagrams, regulations, codes of practice and other documentation relevant to managing facilities and inventory requirements
- reporting and/or rectifying identified problems promptly
- selecting and applying appropriate technology, information systems and procedures when managing facility and inventory requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- enterprise business policies and plans including procedures for facility operations
- operational warehouse systems, resources, management and workplace operating systems
- principles, purpose and location of controls, monitoring devices and systems
- procedures for managing and controlling hazardous situations when carrying out work activities, particularly those that relate to storing materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for operating electronic communications equipment
- relevant sections of national and state/territory regulatory requirements and codes of practice, including applicable facility fire safety and building regulations
- requirements for completing relevant documentation
- selection and appropriate application of technology, information systems and procedures
- throughput and storage requirements for specific types of inventory.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLID2010 Operate a forklift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a forklift in compliance with the relevant state/territory authority licence requirements and regulations, in a variety of operational contexts.

It includes checking forklift condition, driving forklift to fulfil operational requirements, and monitoring and maintaining forklift performance and site conditions.

Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory work health and safety (WHS)/occupational health and safety (OHS) authority.

Operation of a forklift is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check forklift condition	1.1 Condition of forklift is checked for compliance with WHS/OHS and workplace requirements for warning devices, manufacturer specifications and nature of load shifting task
	1.2 Attachments are checked to ensure appropriate adjustment and operation
	1.3 Mirrors and seats are adjusted for safe operation by driver
	1.4 Logbooks are checked and appropriate workplace documentation is completed in accordance with workplace requirements
2 Drive forklift	2.1 Forklift is started, steered, manoeuvred, positioned and stopped in accordance with regulations and manufacturer instructions
	2.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage
	2.3 Operational hazards are identified and/or anticipated and avoided or controlled through defensive driving and appropriate hazard control techniques
	2.4 Forklift is driven in reverse, maintaining visibility and achieving accurate positioning
	2.5 Forklift is parked, shut down and secured in accordance with manufacturer specifications, regulations and workplace procedures
3 Operate forklift to handle loads	3.1 Lifting task to be undertaken is appropriately planned, and correct lifting truck and attachments are selected
	3.2 Load is lifted, carried, lowered and set down in accordance with WHS/OHS legislation, manufacturer specifications and company procedures
4 Monitor site conditions	4.1 Hazards and traffic flow are identified when selecting the most efficient route and appropriate adjustments are made
	4.2 Site conditions are assessed to enable safe operations and to ensure no injury to people or damage to property, equipment, loads or facilities occurs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5 Monitor and maintain forklift performance	5.1 Performance and efficiency of vehicle operation is monitored during use
	5.2 Defective/irregular performance and malfunctions are reported to relevant personnel
	5.3 Forklift records are maintained/updated in accordance with workplace procedures and legislative requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID2010A Operate a forklift.

Assessment Requirements for TLID2010 Operate a forklift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids, and carrying out lubrication processes
- communicating and working effectively with others
- completing relevant documentation
- ensuring forklift and its equipment are maintained in terms of service schedule and standard operating procedures
- identifying points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of forklift and its equipment, and taking appropriate action as required
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques
- engine power management and safe operating strategies
- forklift controls, instruments and indicators, and their use
- forklift handling procedures
- high risk work licence requirements
- operating hazards and related defensive driving and hazard control techniques
- operational emergency procedures
- pre-operational checks carried out on forklift and related action
- principles of stress management when driving a forklift
- relevant duty of care requirements for operating a forklift
- relevant WHS/OHS and environmental procedures and regulations
- site layout and obstacles
- workplace operating procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIL4059 Implement asset management systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement asset management systems in various contexts within the transport and logistics industry.

It includes determining management control processes; implementing existing practices, procedures and systems; and reviewing service levels.

The unit generally applies to those who lead individuals or teams and have responsibility for implementing and monitoring asset management systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1 Determine management control process	1.1 Roles and responsibilities of business units or departments are clarified to ensure effective management of assets in accordance with organisational policy and procedures
	1.2 Specific organisation reporting and monitoring standards are clarified as required and complied with
	1.3 Information systems that provide the information necessary for effective and efficient asset management for all levels within the organisation are maintained
	1.4 Regular audits are arranged, as required, to establish a continuous improvement cycle
2 Implement existing practices, procedures and systems	2.1 Assessments of current status of asset management activities within business units or departments are conducted regularly in accordance with asset management plan
	2.2 Work group/s are supported to adhere to milestones and targets
	2.3 Areas of difficulty are identified and strategies are followed to overcome identified difficulties
3 Review service levels	3.1 Current levels of service provided by asset stock are critically examined
	3.2 Areas of possible improvement in the effectiveness and efficiencies of owning and operating assets are identified in consultation with relevant personnel
	3.3 Appropriate benchmarking is undertaken to enable continuous improvement in asset management strategies and practices

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIL4059 Implement asset management systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- consulting and liaising, as required, when working with a team
- implementing, monitoring and reviewing management systems
- interpreting and following operational instructions and prioritising work
- managing a team and encouraging team participation
- operating electronic communications equipment to required protocol
- using critical analysis to determine the best approach to asset management for the organisation
- using lateral thinking to solve problems as they arise or to generate ideas.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- benchmarking practices
- characteristics of different types of information systems used to provide and assist in asset management
- code of practice for working collaboratively with others particularly with those involved in inputting data into asset management systems
- detail of different approaches to asset management, including theoretical knowledge
- organisational and industry functions
- procedures for identifying equipment defects and assessing for appropriate action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for operating electronic communications equipment
- quality management principles and procedures
- relevant sections of national and state/territory regulatory requirements and codes of practice
- requirements for completing relevant documentation including asset management reports.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL5055 Manage a supply chain

Modification History

Release 2. ISC Upgrade - Reference to the Trade Practice Act removed from knowledge evidence.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to manage a supply chain within various contexts in the transport and logistics industry. It covers the relationships between an organisation and its supply and demand partners along the chain.

It includes implementing a demand-driven supply chain management strategy, managing the supply chain, and evaluating and improving supply chain effectiveness.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

TLIR4003 Negotiate a contract

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to contract transport and logistics services in compliance with relevant regulations, standards, legal requirements, codes of practice and workplace procedures.

It includes negotiating the contract, finalising the contract negotiations, as well as completing all contract requirements with a contractor.

The unit generally applies to those with responsibility for resource coordination and allocation, and who lead individuals or teams.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

TLIR4008 Implement and supervise stocktaking procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and supervise stocktaking procedures in various contexts within the transport and logistics industry.

It includes monitoring and maintaining stock records, implementing stocktaking and stock rotation processes, and identifying stock losses.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

R – Contract Procurement

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Maintain stock records	1.1 Stock levels and records are monitored and maintained at required levels
	1.2 Stock reorder cycles are monitored, maintained and adjusted as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.3 Stock storage and movement records are maintained in accordance with organisational policy
2 Implement stocktaking and stock rotation processes	2.1 Relevant policies and procedures for stocktaking and cyclical counts are interpreted and explained to team members
	2.2 Stocktaking tasks are allocated to individual team members
	2.3 Team members are provided with clear directions for the performance of each task and supervised
	2.4 Stocktaking and stock rotation procedures are implemented
3 Identify stock losses	3.1 Losses are accurately identified, recorded and assessed against potential loss forecast on a regular basis
	3.2 Avoidable losses are identified and potential reasons are established
	3.3 Possible solutions to avoidable losses are recommended and implemented
	3.4 Accurate reports on stocktake data, including discrepancies, are produced for management

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures when undertaking stocktake
- communicating and working effectively with others
- completing relevant documentation
- implementing contingency plans
- monitoring work activities in terms of planned schedule
- operating equipment in accordance with standard operating procedures
- reading, interpreting and following relevant instructions, procedures and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for identifying and recording discrepancies and/or damage
- procedures for operating electronic communications equipment
- relevant sections of national, state/territory legislative and regulatory requirements, and codes of practice
- requirements for completing relevant documentation
- stock control
- stock replenishment/reorder procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIR4009 Implement purchasing systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement purchasing systems in various contexts within the transport and logistics industry.

It includes identifying purchasing requirements, sourcing purchases, checking costings and arranging the purchase of materials.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

R – Contract Procurement

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify purchasing requirements	1.1 Purchasing requirements are identified from orders and instructions in accordance with workplace procedures
	1.2 Quantities, quality of goods, price limitations and delivery requirements are determined or confirmed in consultation with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	appropriate personnel
2 Source purchase	2.1 Source/s of materials are identified from workplace preferred supplier lists or through networks and knowledge of local and/or overseas suppliers
	2.2 Supplier/vendor is advised of requirements and specifications in accordance with site requirements
	2.3 Availability of supply is confirmed
	2.4 Difficulties in supply are reported in accordance with workplace procedures
3 Check costings	3.1 Alternative suppliers are contacted to check different costings
	3.2 Actual costs are compared to predicted costs
	3.3 Recommendations regarding alternative suppliers are communicated to appropriate personnel in accordance with workplace procedures
	3.4 All records/reports are maintained in accordance with site requirements
4 Purchase materials	4.1 Capacity of supplier to meet price, quality and delivery expectations is confirmed
	4.2 Order is placed with supplier and delivery schedules are confirmed
	4.3 Appropriate orders and invoices are exchanged in accordance with workplace procedures
	4.4 Materials are checked/inspected on receipt in accordance with site requirements in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIR4009A Implement purchasing systems.

Assessment Requirements for TLIR4009 Implement purchasing systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation including reports and documenting discrepancies
- identifying, sourcing and procuring purchasing requirements in accordance with workplace procedures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, errors in data input, collection or measurement promptly, particularly in relation to cost, order quantity or quality.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- different types of purchasing systems, their use and applications
- enterprise purchase/sales records system
- procedures for operating electronic communications equipment
- relevant sections of national, state/territory legislative and regulatory requirements, and codes of practice, particularly those relating to trade practices and privacy of information
- requirements for completing relevant documentation, particularly in relation to systems implementation
- steps involved in planning work activities
- typical problems encountered in implementing purchasing systems and possible solutions.

TLIR4010 Plan purchasing

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan purchasing in various contexts in the transport and logistics industry.

It includes preparing invitations to offer, identifying suppliers, issuing invitations to offer and preparing purchase recommendations.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

R – Contract Procurement

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare invitations to	1.1 Specifications for goods and services to be purchased are obtained from relevant personnel and are clarified as

offer	required
	1.2 Purchasing methods most appropriate to particular purchases are selected
	1.3 Invitations to offer are prepared
	1.4 Approval of invitations to offer is obtained
2 Identify suppliers	2.1 Organisational records are reviewed for potential suppliers
	2.2 Sources of supply are identified
	2.3 Invitations are made to suppliers
	2.4 Sources of supply are evaluated against purchasing strategy requirements
3 Issue invitations to offer	3.1 Invitations to offer are distributed
	3.2 Briefings are conducted as required
	3.3 Clarification of issues arising is made with suppliers in accordance with purchasing strategies
4 Prepare recommendations to purchase	4.1 Offer documents are received from suppliers
	4.2 Offer documents are assessed against purchasing strategy requirements
	4.3 Further information is sought from suppliers as required
	4.4 Specialist expertise is obtained to assist with evaluation as required
	4.5 Offers are evaluated against purchasing strategy requirements
	4.6 Shortlists of suppliers who have made offers and who meet purchasing criteria are prepared
	4.7 Preferred offers are selected
	4.8 Recommendations about preferred offers are made for approval by relevant personnel
	4.9 Approval is obtained for recommended offers

Assessment Requirements for TLIR4010 Plan purchasing

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying and using software appropriately
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures and signs
- working collaboratively with others
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- organisational purchasing strategy
- procedures for operating electronic communications equipment
- product knowledge about the goods and services being supplied
- relevant legislation, codes of practice and national standards related to procurement, for example Trade Practices Act, contract law, sale of goods legislation, consumer protection legislation and legislation related to the import of goods and services, where relevant
- requirements for completing relevant documentation
- steps involved in planning work activities.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIR5005 Manage a contract

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to manage a contract in various contexts within the transport and logistics industry.

It includes confirming contract requirements, establishing a contract management system, and monitoring and evaluating the contract.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

R – Contract Procurement

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Confirm contract requirements	1.1 Relevant parties are consulted to identify their contract requirements
	1.2 Special provisions needed are identified

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.3 Need for specialist legal advice is identified and advice is obtained as required
	1.4 Key performance outcomes and measures are specified for inclusion in contract
	1.5 Relationship with contractor is established in accordance with organisational policies and procedures
2 Establish contract management system	2.1 Effective communication/information strategies are established
	2.2 Dispute and complaint system is established in accordance with organisational policies and procedures
	2.3 Consistent and accurate records of contract progress are maintained
	2.4 Management strategy is documented, monitored for effectiveness and adapted as required during the life of the contract
3 Monitor contract	3.1 Regular inspections of contract services are undertaken to ensure compliance with specifications
	3.2 Relationship with contractor is managed in accordance with organisational policies and procedures
	3.3 Regular planned progress meetings are conducted and documented between all contract personnel to ensure problems are identified, resolved early and documented
	3.4 Variations between specified scope of services and contract are identified and documented, and relevant personnel are notified without delay
	3.5 Contract costs are monitored on a regular basis to ensure service is carried out within financial and contractual requirements
	3.6 Payments for contract services are authorised in accordance with contract conditions and organisational contract administrative system
4 Evaluate contract	4.1 Evaluation of contract performance is undertaken relative to planned performance measures and in consultation with stakeholders and suppliers
	4.2 Conclusions are detailed against agreed criteria and a complete picture of supplier performance, organisational procurement processes and value for money is provided

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.3 Evaluation is documented in accordance with organisational requirements to assist improvement in future procurement activities

4.4 Relevant parties are advised of evaluation outcomes in a timely manner in accordance with organisational guidelines

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIR5005 Manage a contract

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and communicating effectively with others when managing a contract
- completing documentation related to contract management, including reports relevant to deliverables of stages and completion
- modifying activities depending on operational contingencies, risk situations and environments, and negotiating modifications with the contractor or agent as required
- monitoring and prioritising work activities in terms of planned schedule
- negotiating solutions to problems as they arise during the contract timeframe
- operating electronic communications equipment to required protocol
- reading and interpreting instructions, procedures, information and the contract itself.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- confidentiality issues in relation to contracted services such as intellectual property
- disposals considerations
- equal employment opportunity and anti-discrimination law
- ethical issues
- financial and accounting issues relevant to the contract
- financial management of a contract including negotiating price variations during the contract
- organisational purchasing policies and practices
- performance management in terms of identifying and managing contract compliance
- procedures for acceptance of goods or services

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for operating electronic communications equipment
- procurement approval processes
- procurement negotiation practices, including legal aspects
- relevant sections of national and state/territory regulatory requirements and codes of practice related to procurement, including contract law, trade practices law and commercial law to a level sufficient to be able to manage the performance of a contractor
- requirements for completing relevant documentation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIR5006 Develop, implement and review purchasing strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to develop, implement and review an organisation's purchasing strategies in various contexts within the transport and logistics industry.

It includes determining, developing, implementing and evaluating purchasing objectives and strategies, and implementing improvements.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

R – Contract Procurement

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine purchasing objectives	1.1 Industry benchmarks for purchasing are researched and analysed for organisational suitability
	1.2 Organisation's purchasing data and information are

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	analysed
	1.3 Consultations are undertaken with relevant stakeholders and personnel to inform development of purchasing objectives
	1.4 Purchasing objectives are drafted in line with organisational goals
	1.5 Approval is gained from relevant personnel for purchasing objectives
2 Develop purchasing strategies	2.1 Purchasing strategies are developed, taking into account legal requirements and purchasing objectives
	2.2 Five Rights are included in purchasing criteria
	2.3 Human resources, financial and other plans are developed to support the implementation of purchasing strategies
	2.4 Approval is gained to implement plans and purchasing strategies
	2.5 Changes resulting from approval processes are made to plans and strategies, as required
3 Implement purchasing strategies	3.1 Purchasing strategies are communicated to relevant personnel and stakeholders
	3.2 Resources needed to implement purchasing strategies are identified and accessed
	3.3 Support is provided to implement purchasing strategies
	3.4 Implementation of purchasing strategies by the organisation is monitored
	3.5 Problems and issues arising during implementation are identified and addressed
	3.6 Reports are provided to relevant personnel and stakeholders on implementation of purchasing strategies
4 Evaluate purchasing strategies and implement improvements	4.1 Implementation of purchasing strategies is reviewed
	4.2 Improvements to purchasing strategies are identified

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

from review process

4.3 Approval is gained to implement improvements to purchasing strategies

4.4 Improvements are communicated to relevant stakeholders and support is provided to implement improvements

4.5 Implementation of improvements is monitored and reviewed to determine effectiveness of improvements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIR5006 Develop, implement and review purchasing strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when developing, implementing and reviewing purchasing strategies, including consulting and negotiating with stakeholders, writing policies and procedures, and supporting staff to implement strategies
- developing human resources, financial and other plans when developing, implementing and reviewing purchasing strategies
- identifying and addressing problems relating to developing, implementing and reviewing purchasing strategies
- monitoring, reviewing and evaluating purchasing strategies
- planning and prioritising work activities, and researching and analysing data
- preparing reports appropriate to developing, implementing and reviewing purchasing strategies
- reading and interpreting instructions, procedures and information relevant to work activities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- concept of the ‘Five Rights’:
  - right price
  - right quality
  - right quantity
  - right supplier
  - right time

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- information about industry benchmarks for purchasing, including information from peak bodies, industry associations and Australian standards
- organisational policies and procedures related to purchasing; contracting and tendering; business terms and conditions for purchasing, tendering and contracting; and ethical behaviour
- product knowledge related to goods and services required by the organisation
- relevant legislation, codes of practice, national and international standards, such as Trade Practices Act, contract law, sale of goods legislation, and legislation related to the import of goods and services.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIX5015 Establish supply chains

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to establish and develop a strategy and model for supply chain management in accordance with relevant organisational policy and procedures.

Establishing and developing supply chains in the materiel system are integral supports to the stated capability requirement.

This unit was developed for materiel logisticians working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

X – Logistics

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine supply chain requirements	1.1 Supply chain components are identified and their links and inter-relationships are analysed in accordance with organisational policy and procedures
	1.2 Communication, data access, information sharing and technology requirements for an integrated supply chain are determined
	1.3 Requirements for collaborative planning, forecasting and tailored supply chains are identified
	1.4 Supply chain requirements are documented in accordance with organisational policy and procedures
2 Determine supply chain management strategy	2.1 Outsourcing, choice of suppliers and partners, reshaping contractual relationships and the performance of the entire supply chain rather than individual supply chain segments are covered by strategies
	2.2 Matching supplier capability to customer requirements including strategies to optimise electronic information sharing and inventory risk management, and to minimise environmental impacts is included in strategies
	2.3 Strategies to build effective customer supplier relationships are identified
	2.4 Customer satisfaction requirements across the supply chain continuum are included in performance management strategies
	2.5 Strategic alliances, electronic business and electronic data interchange are included in supply chain management strategies
	2.6 Legal, ethical, environmental and security issues relating to supply chain management are addressed in supply chain management strategies
	2.7 Integration of supply chain processes into existing business processes is included in strategy
3 Develop supply chain management	3.1 Supply chain management options are researched, and strengths and weaknesses of each option are identified

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

model	3.2 Supply chain management models are investigated and their requirements are analysed and compared with supply chain capability and culture 3.3 Model for supply chain management is developed that meets organisational needs including information flow, collaborative planning and forecasting, in accordance with the organisation's supply chain management strategy 3.4 Supply chain management model is developed to support reduced inventory footprints, operating costs, faster cycle times and greater customer satisfaction rates

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIX5015 Establish supply chains

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- analysing and evaluating information, and determining how it may be impacted by the supply chain or how the supply chain might be impacted by the information being considered
- analysing supply chain requirements
- applying logistics and project management knowledge when establishing supply chains
- communicating with stakeholders
- consulting and negotiating with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying relevant information from integrated logistics support program and materiel sustainment program that is relevant to establishing supply chains
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- identifying requirements for plans and adjusting them as necessary to ensure effective and efficient performance
- initiating and efficiently monitoring processes
- initiating remedial action required
- preparing and providing relevant reports and documentation
- sourcing information on best practice approaches adopted in public and private sectors, showing insight into how industry operates and business drivers that influence industry with their dealings
- undertaking performance measurement to enable objectives to be measured against defined parameters
- using organisational strategic objectives to identify long-term factors and external considerations for establishing a supply chain.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- industrial base capability
- integrated logistics support
- international agreements
- interoperability
- legislative and regulatory environment, including relevant environmental and sustainability issues
- logistics governance
- logistics support analysis principles and processes
- materiel sustainment
- organisational policy and procedures
- organisational role relevant to supply chains
- performance measurement
- planning processes
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements, including relevant environmental and sustainability issues
- supply chain concepts.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to materiel logistics
- supply chain plans.

UEGNSG615A Fill LPG cylinders

Modification History

This unit replaces UEGNSG604B Fill gas cylinders

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers inspecting and filling liquefied petroleum gas (LPG) cylinders in accordance with relevant legislation, codes, regulations and established procedures.

This encompasses following procedures to correctly and safely carry out the work using appropriate materials, tools and equipment. This work includes the inspection of the cylinder for correct date on cylinder, company's ownership, corrosion and impact damage, leaks, component and part damage.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to work sites where the distribution of liquefied petroleum gas (LPG) occurs subject to all Workplace Health and Safety (WHS)

/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to fill LPG cylinders	1.1	Work instructions are received and confirmed
	1.2	Relevant requirements and established procedures to be followed for the work to be performed are discussed with all persons to establish and confirm the work schedule
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures to be followed for the work to be performed are received and confirmed
	1.4	Suggestions to assist with the filling of gas cylinders are made to others involved in the work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA	
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures
	1.6	Scope of responsibility under the relevant work permit are received and confirmed according to requirements and established procedures with relevant persons
	1.7	Resources including equipment, tools and personal protective equipment required for the job are obtained and in working order according to established procedures
	1.8	Relevant responsibilities associated with First Aid and other related work safety procedures at the worksite are confirmed in accordance with requirements and established procedures to ensure safety measures and followed in the instance of an incident.
	1.9	Client issues are referred to appropriate persons in accordance with industry and community standards
	1.10	Site is prepared according to given instructions and the work schedule for a quality outcome and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
2 Fill LPG cylinders	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces or aloft, and use of power tools, techniques and practices are safely followed in accordance with given instructions and according to requirements confirmed to eliminate the prospects of incidents
	2.3	Operational knowledge for the filling of gas cylinders is confirmed to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA	
		requirements and established procedures
	2.4	The filling of gas cylinders is carried out in accordance with given instructions and established procedures
	2.5	Cylinders with defects such as leaks, damage etc. are identified, marked and quarantined and identified hazards and WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Non-routine events are referred to the immediate authorised persons for directions according to established procedures
	2.7	Problems associated with the filling of gas cylinders are dealt with using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Complete work and relevant documentation	3.1	Cylinders are lifted and moved according to standard operating procedures against the work schedule and anomalies reported to authorised persons
	3.2	Accidents and incidents are actioned and reported to authorised persons in accordance with established procedures
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Appropriate persons are notified of work completion according to established procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.6 Work completion records, report forms and data sheets are completed accurately in accordance with given instructions and established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for the filling of LPG cylinders.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G615A LPG cylinder filling

Evidence shall show an understanding of inspecting and filling of liquefied petroleum gas (LPG) cylinders in accordance with relevant legislation, codes, regulations and established procedures to an extent indicated by the following aspects:

T1. Relevant Australian Standards, guidelines and codes of practice including AS1596 and AS2030 or replacements

T2. Relevant OHS policies and procedures.

- Safety signs including workplace hazards and warnings

T3. LPG cylinders

- Properties of LP Gas
- Types, construction, size, valves, labelling, Material Safety Data Sheets (MSDS)
- Inspection requirements
  - correct date on cylinder,; company’s ownership,; corrosion and impact damage,; leaks,; component and part damage
- Filling
  - requirements, methods, tools/equipment, procedures, precautions
- Handling
- Leak testing

T4. Personal Protection Equipment

- Types, application, checking, maintenance and storage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

T5. Hazard identification, risk assessment and control

- Work Permits, JHA’s, JSA’s, JSEA’s, SWM’s, etc.
- Use of spill kits and PPE

T6. Manual handling

- Characteristics, types, techniques

T7. Accidents and emergency

- Types: fire, gas leak
- Emergency equipment and procedures
  - breathing apparatus
  - gas detectors/oxygen monitoring devices
- Reporting

T8. Organisation's policies, quality requirements, specifications, forms and reports for work activity

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

- Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:
    - A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

range

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Inspecting and filling of liquefied petroleum gas (LPG) cylinders in accordance with relevant legislation, codes, regulations and established procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Tools/ equipment	At least 5	• LPG cylinders • Cylinder trolleys • Hose and fittings • Leak detection devices • Valves • Gauges • Spindles • Scales • Decanting equipment • Dispensing pumps • Hand tools
B. Procedur	All	• WHS/OHS • Job safety analysis

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

es		• Manual handling • Cylinder inspection • Cylinder filling • Checking for leaks • Emergency procedures and response action
C. Unplanned event	At least one occasion	Deal with an unplanned event by drawing on required skills and l knowledge to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.
- These should be part of the formal learning/assessment environment.
-

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to inspecting and filling LPG cylinders by weight using scales or by decanting or by dispenser pump at an LPG terminal or a cylinder filling installation compliant to the requirements of AS1596.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Appropriate Persons
- Equipment
- Inspection Checks
- Legislative Requirements

Unit Sector(s)

MSM Manufacturing Training Package

Modification History

Version	Release date	Comments
2.1	12 January, 2017	**MSM Release 2.1 – Industry Reference Committee upgrade** Typographical and data entry errors corrected in the following components: **Qualifications**: • MSM10116, MSM10216, MSM20116, MSM20216, MSM21015, MSM21115, MSM30116, MSM30216, MSM31015, MSM31115, MSM40116, MSM41015, MSM41115, MSM50316, MSM51015. **Units of competency**: • MSMPER205, MSMPER300, MSMTMINS301, MSMTMINS302, MSMTMINS401, MSMTMINS402, MSMTMINS403, MSMTMINS404, MSMTMINS501, MSMTMREF301, MSMTMVER301, MSMTMVER302, MSMTMVER401, MSMTMVER402, MSMTMVER403, MSMTMVER501, MSMWHS210. **Skill Sets:** • MSMSS00007 • MSMSS00013 Superseded imported units updated to current versions. All components remain equivalent. Refer to Companion Volume Implementation Guide for further information.
2	2 June, 2016	Release 2.0 of the MSM Manufacturing Training Package includes the following additional components:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		• pathways and VET in Schools qualifications • process manufacturing qualifications • surface preparation and coating qualification • production management qualification • trade measurement units of competency and Skill Sets • confined space and leading hand Skill Sets
1	16 December 2015	Release 1 of the MSM Manufacturing Training Package includes the following components: • recreational vehicle qualifications and units of competency • water jetting and vacuum draining units of competency and Skill Sets • high risk licensing units and Skill Sets for boiler operations.

Credit Arrangements

At the time of endorsement of this Training Package no national credit arrangements exist.

MSMSS00001 Licence to operate a standard boiler

Modification History

Release 1. Supersedes and is equivalent to MSASS00005 Licence to operate a standard boiler

Description

Not applicable.

Pathways Information

This Skill Set can be a stand-alone licensing outcome or the unit it comprises credited in any qualification where it is included as core or an elective option.

Licensing/Regulatory Information

Meets national High Risk Work Licensing for standard boiler operation

Skill Set Requirements

MSMBLIC001 Licence to operate a standard boiler

Target Group

The target group is boiler operators operating standard boilers that require occupational licensing by a State and Territory OHS regulator.

Suggested words for Statement of Attainment

This unit of competency meets the minimum industry requirements for high risk work licensing of standard boiler operation.

Custom Content Section

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMSS00002 Licence to operate an advanced boiler

Modification History

Release 1. Supersedes and is equivalent to MSASS00006 Licence to operate an advanced boiler

Description

Not applicable.

Pathways Information

This Skill Set can be a stand-alone licensing outcome or the unit it comprises credited in any qualification where it is included as core or an elective option.

Licensing/Regulatory Information

Meets national High Risk Work Licensing for advanced boiler operation

Skill Set Requirements

MSMBLIC002 Licence to operate an advanced boiler

Target Group

The target group is boiler operators operating advanced boilers that require occupational licensing by a State and Territory OHS regulator.

Suggested words for Statement of Attainment

This unit of competency meets the minimum industry requirements for high risk work licensing of advanced boiler operation.

Custom Content Section

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMSS00003 Use high pressure water jetting equipment

Modification History

Release 1. Supersedes and is equivalent to MSASS00002 High pressure water jetting assistant

Description

Not applicable.

Pathways Information

These competencies can provide credit towards relevant qualifications in the MSM Manufacturing Training Package

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MSMWJ201	Use high pressure water jetting equipment
MSMWHS110	Follow emergency response procedures
MSMWHS200	Work safely
MSMPER200	Work in accordance with an issued permit

Target Group

Members of the water jetting team who are not competent to operate independently need to have basic competencies before working under supervision. This not only involves technical competence in high pressure water jetting but also requires safe operation within the worksite which may not be familiar to the operator.

Suggested words for Statement of Attainment

These competencies from the MSM Manufacturing and other Training Packages meet the minimum industry requirements for a high pressure water jetting assistant.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMSS00004 Operate a high pressure water jetting system

Modification History

Release 1. Supersedes and is equivalent to MSASS00003 High pressure water jetting operator

Description

Not applicable.

Pathways Information

These competencies can provide credit towards relevant qualifications in the MSM Manufacturing Training Package

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM09002B	Interpret technical drawing
MSMPER200	Work in accordance with an issued permit
MSMWHS110	Follow emergency response procedures
MSMWHS200	Work safely
MSMWJ301	Operate a high pressure water jetting system

Target Group

At least one member of the water jetting team needs to be competent to operate independently. This not only involves technical competence in high pressure water jetting but also requires safe operation within the worksite which may not be familiar to the operator.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the MSM Manufacturing and other Training Packages meet the minimum industry requirements for an independent high pressure water jetting operator.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMSS00005 Operate a drain cleaning system

Modification History

Release 1. New Skill Set

Description

Not applicable.

Pathways Information

These competencies can provide credit towards relevant qualifications in the MSM Manufacturing Training Package

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MSMWJ302	Operate a drain cleaning system
MSMWHS110	Follow emergency response procedures
MSMWHS200	Work safely
MSMPER200	Work in accordance with an issued permit

Target Group

At least one member of the drain cleaning team needs to be competent to operate independently. This not only involves technical competence in operating drain cleaning systems but also requires safe operation within the worksite which may not be familiar to the operator.

Suggested words for Statement of Attainment

These competencies from the MSM Manufacturing Training Package meet the minimum industry requirements for an independent operator of drain cleaning systems.

MSMSS00006 Operate a vacuum loading system

Modification History

Release 1. New Skill Set

Description

Not applicable.

Pathways Information

These competencies can provide credit towards relevant qualifications in the MSM Manufacturing Training Package

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MSMWJ303	Operate a vacuum loading system
MEM09002B	Interpret technical drawing
MSMWHS110	Follow emergency response procedures
MSMWHS200	Work safely
MSMPER200	Work in accordance with an issued permit

Target Group

At least one member of the vacuum loading team needs to be competent to operate independently. This not only involves technical competence in operating vacuum loading systems but also requires safe operation within the worksite which may not be familiar to the operator.

Suggested words for Statement of Attainment

These competencies from the MSM Manufacturing Training Package meet the minimum industry requirements for an independent operator of vacuum loading systems.

MSMSS00007 Trade Measurement Inspection

Modification History

Release 2. Correction to unit code listed in Skill Set. Equivalent.

Release 1. Replaces PSPSS00032 Trade Measurement Inspection Skill Set. Not equivalent.

Description

This Skill Set provides an introduction to trade measurement.

Pathways Information

These units from the MSM Manufacturing Training Package provide an introduction to the work of a trade measurement inspector and are likely to be undertaken during the early phase of inspector training, prior to commencing the statutory qualification PSP40516 Certificate IV in Trade Measurement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MSMTMINS301	Inspect a range of simple measures
MSMTMINS302	Inspect a range of simple measuring instruments
MSMTMREF301	Use and maintain reference standards
MSMTMVER403	Verify Inspectors' Class reference standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Target Group

This skill set is for those commencing a career as a trade measurement inspector. It provides the skills and knowledge required to undertake inspections of simple measures and simple measuring instruments used for trade and the verification of Inspectors' Class reference standards. Examples of these instruments include length measures, alcoholic beverage measures, lubricating oil measures, graduated measures, trade masses in the range 1mg to 20kg, beverage measuring instruments, protein measuring instruments, length measuring instruments, area measuring instruments, dimensional measuring instruments, vehicle tanks and milk tanks as well as the auxiliary devices point of sale systems and control systems for liquid-measuring systems (consoles). Examples of Inspectors' Class reference standards are masses, measures of length (rigid and flexible), and volume measures, such as those used to test beverage or fuel dispensers.

Suggested words for Statement of Attainment

These units are taken from MSM Manufacturing Training Package and meet the competency requirements of the National Measurement Institute for an Assistant Trade Measurement Officer.

Custom Content Section

Not applicable.

MSMSS00008 Trade Measurement Verification (Complex Measuring Instrument)

Modification History

Release 1. Supersedes and is equivalent to MSASS00007 Trade Measurement Verification (Complex Measuring Instrument)

Description

This Skill Set provides the units required to work under a servicing licence to verify complex measuring instruments used in trade measurement.

Pathways Information

These units can provide credit towards qualifications within the Manufacturing Training Package. If verifiers seek employment as trade measurement inspectors, these competencies may provide recognition towards the new Diploma of Trade Measurement.

Licensing/Regulatory Information

This Skill Set reflects the minimum requirements for licensing. However, the regulator or individual traders may impose additional requirements before a verifier can start work on some sites. Entrants to this Skill Set should have sufficient workplace skills in OHS, communication and teamwork that provide underpinning competency to acquire and apply the Skill Set.

Skill Set Requirements

MSMTMVER501	Verify complex measuring instruments
MSMTMREF301	Use and maintain reference standards

Target Group

This Skill Set is appropriate for experienced personnel such as fitters, mechanics, instrument manufacturers or importers and software developers who wish to work under a servicing licence to verify complex measuring instruments used in trade measurement. Examples of complex measuring instruments include, LPG dispensers, LPG bulk flowmetering systems, flowmetering systems tested using master meter or gravimetric methods, automatic rail weighbridges, continuous totalising automatic weighing instruments (belt weighers) and totalising hopper weighing instruments.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These units are taken from the Manufacturing Training Package and provide competencies that meet the minimum requirements for a licensed verifier of a complex measuring instrument

Custom Content Section

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMSS00009 Trade Measurement Verification (Limited Weighing Instrument)

Modification History

Release 1. Supersedes and is equivalent to MSASS00008 Trade Measurement Verification (Limited Weighing Instrument)

Description

Not applicable.

Pathways Information

These units can provide credit towards qualifications within the Manufacturing Training Package. If verifiers seek employment as trade measurement inspectors, these competencies may provide recognition towards the relevant Certificates IV in the PSP Public Service Training Package.

Licensing/Regulatory Information

This Skill Set reflects the minimum requirements for licensing. However, the regulator or individual traders may impose additional requirements before a verifier can start work on some sites.

Skill Set Requirements

MSMTMVER401	Verify weighing instruments
MSMTMREF301	Use and maintain reference standards

Target Group

This Skill Set is appropriate for experienced personnel such as fitters, mechanics, instrument manufacturers or importers and software developers who wish to work under a servicing licence to verify limited weighing instruments used in trade measurement. Examples of limited weighing instruments include, non-automatic weighing machines tested without substitution loads, automatic Class Y(a) Catchweighers and automatic Class Y(b) Catchweighers.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These units are taken from the Manufacturing Training Package and provide competencies that meet the minimum requirements for licensing as a verifier of a limited weighing instrument.

Custom Content Section

Not applicable.

MSMSS00010 Trade Measurement Verification (Liquid Measuring Instrument Using Volume Measures)

Modification History

Release 1. Supersedes and is equivalent to MSASS00009 Trade Measurement Verification (Liquid Measuring Instrument Using Volume Measures)

Description

This Skill Set provided the units required to work under a servicing license to verify liquid measuring instruments using volume measures.

Pathways Information

These units can provide credit towards qualifications within the Manufacturing Training Package. If verifiers seek employment as trade measurement inspectors, these competencies may provide recognition towards the relevant Certificates IV in the PSP Public Service Training Package.

Licensing/Regulatory Information

This Skill Set reflects the minimum requirements for licensing. However, the regulator or individual traders may impose additional requirements before a verifier can start work on some sites.

Skill Set Requirements

MSMTMVER402	Verify liquid measuring instruments using volume measures
MSMTMREF301	Use and maintain reference standards

Target Group

This Skill Set is appropriate for experienced personnel such as fitters, mechanics, instrument manufacturers or importers and software developers who wish to work under a servicing licence to verify liquid measuring instruments used in trade measurement. Examples of liquid measuring instruments using volume measures include, fuel dispensers other than LPG dispensers, bulk flowmetering systems for liquid hydrocarbons other than LPG and milk flowmeters.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These units are taken from the Manufacturing Training Package and provide competencies that meet the minimum requirements for licensing as a verifier of a liquid measuring instrument using volume measures.

MSMSS00011 Trade Measurement Verification (Simple Measuring Instrument)

Modification History

Release 1. Supersedes and is equivalent to MSASS00010 Trade Measurement Verification (Simple Measuring Instrument)

Description

This Skill Set provided the units required to work under a servicing license to verify a simple measuring instrument.

Pathways Information

These units can provide credit towards qualifications within the Manufacturing Training Package. If verifiers seek employment as trade measurement inspectors, these competencies may provide recognition towards the relevant Certificates IV in the PSP Public Service Training Package.

Licensing/Regulatory Information

This Skill Set reflects the minimum requirements for licensing. However, the regulator or individual traders may impose additional requirements before a verifier can start work on some sites.

Skill Set Requirements

MSMTMVER302	Verify simple measuring instruments
MSMTMREF301	Use and maintain reference standards

Target Group

This Skill Set is appropriate for experienced personnel such as quality assurance technicians, instrument manufacturers or importers and software developers who wish to work under a servicing licence to verify simple measuring instruments used in trade measurement. Examples of simple measuring instruments include, beverage measuring instruments, protein measuring instruments, length measuring instruments, area measuring instruments' dimensional measuring instruments, vehicle tanks and milk tanks.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMSS00013 Leading Hand/Supervisor

Modification History

Release 2. Imported unit updated to current version. Equivalent.

Release 1. Supersedes and is equivalent to MSASS00004 Leading Hand/Supervisor

Description

This Skill Set has been developed in consultation with the industry and is based on a logical cluster of units which meet critical industry needs in the area of supervision and safety. The Skill Set consists of a cluster of competencies which are commonly practiced (and possibly trained) together. It reflects an industry need to be able to recognise that a person can undertake this defined role.

Pathways Information

These competencies can provide credit towards relevant qualifications in all process manufacturing training packages.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MSMOPS212	Use enterprise computer or data systems
MSMWHS300	Facilitate the implementation of OHS for a work group
MSS403011	Facilitate implementation of competitive systems and practices
TAEDEL301	Provide work skill instruction

Target Group

Entrants to the Leading Hand/Supervisor Skill Set will be required to have completed a Certificate III qualification in a manufacturing related area, or equivalent. This Skill Set addresses the need for coordination and supervision of trainees, apprentices and other production staff to ensure work place safety, quality and production requirements are maintained and monitored.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the MSM Manufacturing and other Training Packages meet the minimum industry requirements for supervision of staff working in a manufacturing environment.

MSMSS00014 Confined space work team

Modification History

Release 1. Supersedes and is equivalent to MSASS00001 Confined space work team

Description

Persons entering a confined space must do so in accordance with the relevant Australian Standard. This Skill Set provides the competencies required for confined space entry.

Pathways Information

These units of competency can provide credit towards Certificates II and III in PMA Chemical, Hydrocarbons and Refining Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MSMWHS200	Work safely
MSMPER200	Work in accordance with an issued permit
MSMPER202	Observe permit work
MSMPER205	Enter confined space

Target Group

Where members of a work team are expected to undertake multiple roles in regard to the confined space entry, then they must be competent in all those roles. This Skill Set is targeted at such a work team. This training would occur before starting work requiring entry to a confined space. This may occur either as part of safety training to work on the site or more commonly as separate training after initial safety induction.

Suggested words for Statement of Attainment

These competencies from MSM Manufacturing Training Package meet the minimum industry requirements for members of a confined space work team.
