Australian Government

MSM Manufacturing Training Package

Release: 2.1

CONTENTS

MSM10116 Certificate I in Process Manufacturing 20
MSM10216 Certificate I in Manufacturing (Pathways) 22
MSM20116 Certificate II in Process Manufacturing 26
MSM20216 Certificate II in Manufacturing Technology 30
MSM21015 Certificate II in Recreational Vehicle Service and Repair 33
MSM21115 Certificate II in Recreational Vehicle Manufacturing 39
MSM30116 Certificate III in Process Manufacturing 45
MSM30216 Certificate III in Surface Preparation and Coating Application 51
MSM31015 Certificate III in Recreational Vehicle Service and Repair 58
MSM31115 Certificate III in Recreational Vehicle Manufacturing 64
MSM31215 Certificate III in Recreational Vehicle and Accessories Retailing 70
MSM40116 Certificate IV in Process Manufacturing 75
MSM41015 Certificate IV in Recreational Vehicles 85
MSM41115 Certificate IV in Recreational Vehicle and Accessories Retailing 94
MSM50316 Diploma of Production Management 101
MSM51015 Diploma of Recreational Vehicles 107
AUMANA001 Prepare and document quotations 112
Assessment Requirements for AUMANA001 Prepare and document quotations 115
AUMFTA001 Document manufacturing design processes 117
Assessment Requirements for AUMFTA001 Document manufacturing design processes 120
AUMGTT001 Apply trim to vehicle components 122
Assessment Requirements for AUMGTT001 Apply trim to vehicle components 126
AURAAA002 Determine retail rates for automotive products and services 128
Assessment Requirements for AURAAA002 Determine retail rates for automotive products and services 131
AURACA001 Respond to customer needs and enquiries in an automotive workplace 133
Assessment Requirements for AURACA001 Respond to customer needs and enquiries in an automotive workplace 136
AURACA002 Manage complex customer requirements in an automotive workplace 138
Assessment Requirements for AURACA002 Manage complex customer requirements in an automotive workplace 142
AURACA003 Build customer relations in an automotive workplace 145
Assessment Requirements for AURACA003 Build customer relations in an automotive workplace 148
AURAFA004 Resolve routine problems in an automotive workplace 150
Assessment Requirements for AURAFA004 Resolve routine problems in an automotive workplace 153
AURAFA007 Develop and document specifications and procedures 155
Assessment Requirements for AURAFA007 Develop and document specifications and procedures 158
AURAKA002 Adapt work processes to new technologies in an automotive workplace 161
Assessment Requirements for AURAKA002 Adapt work processes to new technologies in an automotive workplace 164
AURALA001 Comply with legal aspects of a service and repair contract in an automotive workplace 166
Assessment Requirements for AURALA001 Comply with legal aspects of a service and repair contract in an automotive workplace 170
AURAMA004 Maintain business image in an automotive workplace 173

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 2 of 3114

Assessment Requirements for AURAMA004 Maintain business image in an automotive workplace....176
AURAMA005 Manage complex customer issues in an automotive workplace....179
Assessment Requirements for AURAMA005 Manage complex customer issues in an automotive workplace....183
AURAMA006 Contribute to planning and implementing business improvement in an automotive workplace....186
Assessment Requirements for AURAMA006 Contribute to planning and implementing business improvement in an automotive workplace....190
AURANN001 Estimate and quote automotive body repairs....193
Assessment Requirements for AURANN001 Estimate and quote automotive body repairs196
AURATA005 Estimate and quote automotive mechanical and electrical repairs....199
Assessment Requirements for AURATA005 Estimate and quote automotive mechanical and electrical repairs....202
AURC341903A Apply relevant finance, leasing and insurance contracts/policies....204
AURETB001 Diagnose and repair electric braking systems....210
Assessment Requirements for AURETB001 Diagnose and repair electric braking systems214
AURETR012 Test and repair basic electrical circuits....217
Assessment Requirements for AURETR012 Test and repair basic electrical circuits....221
AURETR015 Inspect, test and service batteries....225
Assessment Requirements for AURETR015 Inspect, test and service batteries....229
AURSAA001 Process customer complaints in an automotive workplace....232
Assessment Requirements for AURSAA001 Process customer complaints in an automotive workplace....235
AURSBA002 Identify and match uncommon automotive parts....237
Assessment Requirements for AURSBA002 Identify and match uncommon automotive parts....240
AURSCA001 Select and supply automotive parts and products....242
Assessment Requirements for AURSCA001 Select and supply automotive parts and products....245
AURSCA002 Present automotive products and services for sale....247
Assessment Requirements for AURSCA002 Present automotive products and services for sale....250
AURSCA003 Apply sales procedures in an automotive workplace....252
Assessment Requirements for AURSCA003 Apply sales procedures in an automotive workplace....255
AURSCA004 Carry out cash and non-cash payment operations....258
Assessment Requirements for AURSCA004 Carry out cash and non-cash payment operations....261
AURSCA005 Sell automotive products and services....264
Assessment Requirements for AURSCA005 Sell automotive products and services....267
AURSCA006 Promote automotive products and services....269
Assessment Requirements for AURSCA006 Promote automotive products and services 272
AURSLA001 Comply with legal requirements when selling automotive products and services....274
Assessment Requirements for AURSLA001 Comply with legal requirements when selling automotive products and services....277
AURTNA001 Estimate and quote automotive vehicle or machinery modifications....279
Assessment Requirements for AURTNA001 Estimate and quote automotive vehicle or machinery modifications....283
AURTTA017 Carry out vehicle safety inspections....285
Assessment Requirements for AURTTA017 Carry out vehicle safety inspections....288
AURTTB001 Inspect and service braking systems....290

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 3 of 3114
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for AURTTB001 Inspect and service braking systems 294
AURTTD004 Inspect and service suspension systems.....297
Assessment Requirements for AURTTD004 Inspect and service suspension systems 300
AURTTJ002 Remove, inspect and refit wheel hubs and associated brake components ...302
Assessment Requirements for AURTTJ002 Remove, inspect and refit wheel hubs and associated brake components.....306
AURTTY001 Repair vehicle chassis, frame and associated components 308
Assessment Requirements for AURTTY001 Repair vehicle chassis, frame and associated components.....312
AURV365356A Read and interpret vehicle body repair estimation/quotation.....315
AURVTG011 Install side vehicle windows 323
Assessment Requirements for AURVTG011 Install side vehicle windows.....327
AURVTN032 Inspect vehicle damage and determine repair procedures.....330
Assessment Requirements for AURVTN032 Inspect vehicle damage and determine repair procedures 334
AURVTS004 Repair vehicle composite material components.....336
Assessment Requirements for AURVTS004 Repair vehicle composite material components.....340
AURVTT015 Fabricate and install canvas products for automotive and marine components.....342
Assessment Requirements for AURVTT015 Fabricate and install canvas products for automotive and marine components 346
AURVTT019 Fabricate and install automotive and marine frames, canopies and side curtains 348
Assessment Requirements for AURVTT019 Fabricate and install automotive and marine frames, canopies and side curtains.....352
AURVTT3016 Fabricate frame structures.....355
BSBADM502 Manage meetings.....364
Assessment Requirements for BSBADM502 Manage meetings 368
BSBCUS501 Manage quality customer service.....370
Assessment Requirements for BSBCUS501 Manage quality customer service 373
BSBFIM501 Manage budgets and financial plans.....375
Assessment Requirements for BSBFIM501 Manage budgets and financial plans 378
BSBINM501 Manage an information or knowledge management system 380
Assessment Requirements for BSBINM501 Manage an information or knowledge management system.....384
BSBLDR402 Lead effective workplace relationships 386
Assessment Requirements for BSBLDR402 Lead effective workplace relationships.....390
BSBLED401 Develop teams and individuals.....392
Assessment Requirements for BSBLED401 Develop teams and individuals 396
BSBMGT401 Show leadership in the workplace 398
Assessment Requirements for BSBMGT401 Show leadership in the workplace.....402
BSBMGT403 Implement continuous improvement.....404
Assessment Requirements for BSBMGT403 Implement continuous improvement 407
BSBMGT502 Manage people performance.....409
Assessment Requirements for BSBMGT502 Manage people performance 413
BSBMGT605 Provide leadership across the organisation 415
Assessment Requirements for BSBMGT605 Provide leadership across the organisation 419
BSBWHS401 Implement and monitor WHS policies, procedures and programs to meet legislative requirements.....421
Assessment Requirements for BSBWHS401 Implement and monitor WHS policies, procedures and programs to meet legislative requirements 425
BSBWRK510 Manage employee relations.....427

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 4 of 3114
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for BSBWRK510 Manage employee relations 431
BSBWRT401 Write complex documents 433
Assessment Requirements for BSBWRT401 Write complex documents 436
CPCPCM2043A Carry out WHS requirements 438
CPCPGS3046A Install LPG systems in caravans, mobile homes and mobile workplaces 448
FNSORG501 Develop and manage a budget 458
Assessment Requirements for FNSORG501 Develop and manage a budget 462
FWPCOT2238 Cut materials with a hand-held chainsaw 464
Assessment Requirements for FWPCOT2238 Cut materials with a hand-held chainsaw 467
HLTAID003 Provide first aid 469
Assessment Requirements for HLTAID003 Provide first aid 472
MEM03001B Perform manual production assembly 476
MEM03006B Set assembly stations 482
MEM05005B Carry out mechanical cutting 488
MEM05007C Perform manual heating and thermal cutting 494
MEM05012C Perform routine manual metal arc welding 500
MEM05050B Perform routine gas metal arc welding 505
MEM07001B Perform operational maintenance of machines/equipment 511
MEM07024B Operate and monitor machine/process 517
MEM07028B Operate computer controlled machines/processes 523
MEM08002C Pre-treat work for subsequent surface coating 530
MEM08007B Control surface finish production and finished product quality 536
MEM08011B Prepare surfaces using solvents and/or mechanical means 542
MEM08012B Prepare surfaces by abrasive blasting (basic) 549
MEM08013B Prepare surfaces by abrasive blasting (advanced) 556
MEM08014B Apply protective coatings (basic) 562
MEM08015B Apply protective coatings (advanced) 571
MEM08016B Control blast coating by-products, materials and emissions 580
MEM09002B Interpret technical drawing 586
MEM09009C Create 2D drawings using computer aided design system 592
MEM09204A Produce basic engineering detail drawings 599
MEM09210A Create 3-D solid models using computer-aided design (CAD) system 606
MEM10002B Terminate and connect electrical wiring 614
MEM11001C Erect/dismantle scaffolding and equipment 620
MEM11002C Erect/dismantle complex scaffolding and equipment 627
MEM11003B Coordinate erection/dismantling of complex scaffolding/equipment 635
MEM11004B Undertake dogging 643
MEM11005B Pick and process order 650
MEM11006B Perform production packaging 656
MEM11007B Administer inventory procedures 661
MEM11010B Operate mobile load shifting equipment 666
MEM11011B Undertake manual handling 673
MEM11012B Purchase materials 678
MEM11015B Manage warehouse inventory system 684
MEM11016B Order materials 690
MEM11017B Organise and lead stocktakes 695
MEM11021B Perform advanced operation of load shifting equipment 700
MEM11022B Operate fixed/moveable load shifting equipment 706
MEM12001B Use comparison and basic measuring devices 712
MEM12002B Perform electrical/electronic measurement 717
MEM12023A Perform engineering measurements 723
MEM12024A Perform computations 729
MEM13001B Perform emergency first aid 736

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 5 of 3114
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13002B Undertake occupational health and safety activities in the workplace 741
MEM13003B Work safely with industrial chemicals and materials.....747
MEM13010A Supervise occupational health and safety in an industrial work environment.753
MEM14001B Schedule material deliveries.....761
MEM14002B Undertake basic process planning 766
MEM14003B Undertake basic production scheduling.....771
MEM14004A Plan to undertake a routine task.....777
MEM14005A Plan a complete activity.....783
MEM15001B Perform basic statistical quality control 790
MEM15002A Apply quality systems.....796
MEM15003B Use improvement processes in team activities.....802
MEM15004B Perform inspection 808
MEM15005B Select and control inspection processes and procedures.....814
MEM15024A Apply quality procedures.....821
MEM16002C Conduct formal interviews and negotiations.....826
MEM16003B Provide advanced customer service.....832
MEM16005A Operate as a team member to conduct manufacturing, engineering or related activities 838
MEM16006A Organise and communicate information 845
MEM16007A Work with others in a manufacturing, engineering or related environment851
MEM16008A Interact with computing technology.....857
MEM16009A Research and analyse engineering information 863
MEM16011A Communicate with individuals and small groups.....869
MEM16012A Interpret technical specifications and manuals.....877
MEM16013A Operate in a self-directed team.....884
MEM17001B Assist in development and deliver training in the workplace.....892
MEM17003A Assist in the provision of on the job training.....898
MEM18001C Use hand tools.....903
MEM18002B Use power tools/hand held operations.....909
MEM18038B Maintain wheels and tyres.....915
MEM18045B Fault find/repair electrical equipment/components up to 250 volts single phase supply 922
MEM22015A Source and estimate engineering materials requirements.....929
MEM30013A Assist in the preparation of a basic workplace layout 937
MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements 943
MSFFM1002 Operate basic woodworking machines 950
Assessment Requirements for MSFFM1002 Operate basic woodworking machines.....954
MSFFM2001 Use furniture making sector hand and power tools 956
Assessment Requirements for MSFFM2001 Use furniture making sector hand and power tools 960
MSFFM2002 Assemble furnishing components.....962
Assessment Requirements for MSFFM2002 Assemble furnishing components 966
MSFFM2003 Select and apply hardware 968
Assessment Requirements for MSFFM2003 Select and apply hardware.....972
MSFFM2005 Join solid timber 974
Assessment Requirements for MSFFM2005 Join solid timber.....978
MSFSF1001 Produce basic soft furnishing accessories 980
Assessment Requirements for MSFSF1001 Produce basic soft furnishing accessories.....984
MSFSF2001 Cut single layer fabrics.....986
Assessment Requirements for MSFSF2001 Cut single layer fabrics.....990
MSL915001 Provide information to customers.....992
Assessment Requirements for MSL915001 Provide information to customers 997

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 6 of 3114
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSL936001 Maintain quality system and continuous improvement processes within work or functional area....999
Assessment Requirements for MSL936001 Maintain quality system and continuous improvement processes within work or functional area....1004
MSL973001 Perform basic tests....1007
Assessment Requirements for MSL973001 Perform basic tests....1012
MSL974003 Perform chemical tests and procedures....1015
Assessment Requirements for MSL974003 Perform chemical tests and procedures....1022
MSMBLIC001 Licence to operate a standard boiler....1025
Assessment Requirements for MSMBLIC001 Licence to operate a standard boiler....1037
MSMBLIC002 Licence to operate an advanced boiler....1040
Assessment Requirements for MSMBLIC002 Licence to operate an advanced boiler....1053
MSMENV172 Identify and minimise environmental hazards....1056
Assessment Requirements for MSMENV172 Identify and minimise environmental hazards....1060
MSMENV272 Participate in environmentally sustainable work practices....1062
Assessment Requirements for MSMENV272 Participate in environmentally sustainable work practices....1066
MSMENV472 Implement and monitor environmentally sustainable work practices....1068
Assessment Requirements for MSMENV472 Implement and monitor environmentally sustainable work practices....1072
MSMENV672 Develop workplace policy and procedures for environmental sustainability1074
Assessment Requirements for MSMENV672 Develop workplace policy and procedures for environmental sustainability....1078
MSMOPS100 Use equipment....1080
Assessment Requirements for MSMOPS100 Use equipment....1085
MSMOPS101 Make measurements....1087
Assessment Requirements for MSMOPS101 Make measurements....1091
MSMOPS102 Perform tasks to support production....1093
Assessment Requirements for MSMOPS102 Perform tasks to support production....1098
MSMOPS200 Operate equipment....1100
Assessment Requirements for MSMOPS200 Operate equipment....1105
MSMOPS201 Cut polymer materials....1107
Assessment Requirements for MSMOPS201 Cut polymer materials....1112
MSMOPS202 Fabricate polymer products....1114
Assessment Requirements for MSMOPS202 Fabricate polymer products....1119
MSMOPS212 Use organisation computers or data systems....1121
Assessment Requirements for MSMOPS212 Use organisation computers or data systems1127
MSMOPS244 Lay out and cut materials....1130
Assessment Requirements for MSMOPS244 Lay out and cut materials....1135
MSMOPS301 Treat corrosion....1137
Assessment Requirements for MSMOPS301 Treat corrosion....1142
MSMOPS363 Organise on-site work....1145
Assessment Requirements for MSMOPS363 Organise on-site work....1151
MSMOPS400 Optimise process/plant area....1154
Assessment Requirements for MSMOPS400 Optimise process/plant area....1159
MSMOPS401 Trial new process or product....1162
Assessment Requirements for MSMOPS401 Trial new process or product....1168
MSMOPS601 Design equipment and system modifications....1170
Assessment Requirements for MSMOPS601 Design equipment and system modifications1175
MSMPCI101 Adapt to work in industry....1177
Assessment Requirements for MSMPCI101 Adapt to work in industry....1185
MSMPCI102 Apply effective work practices....1187

Approved Page 7 of 3114

Assessment Requirements for MSMPCI102 Apply effective work practices 1193
MSMPCI103 Demonstrate care and apply safe practices at work 1195
Assessment Requirements for MSMPCI103 Demonstrate care and apply safe practices at work 1201
MSMPCII295 Operate manufacturing equipment 1203
Assessment Requirements for MSMPCII295 Operate manufacturing equipment 1209
MSMPCII296 Make a small furniture item from timber 1212
Assessment Requirements for MSMPCII296 Make a small furniture item from timber 1219
MSMPCII297 Make an object from cloth using an existing pattern 1221
Assessment Requirements for MSMPCII297 Make an object from cloth using an existing pattern 1226
MSMPCII298 Make an object from metal 1228
Assessment Requirements for MSMPCII298 Make an object from metal 1235
MSMPCII299 Make an object from plastic 1237
Assessment Requirements for MSMPCII299 Make an object from plastic 1244
MSMPER200 Work in accordance with an issued permit 1246
Assessment Requirements for MSMPER200 Work in accordance with an issued permit 1252
MSMPER201 Monitor and control work permits 1255
Assessment Requirements for MSMPER201 Monitor and control work permits 1261
MSMPER202 Observe permit work 1264
Assessment Requirements for MSMPER202 Observe permit work 1270
MSMPER205 Enter confined space 1272
Assessment Requirements for MSMPER205 Enter confined space 1280
MSMPER300 Issue work permits 1283
Assessment Requirements for MSMPER300 Issue work permits 1290
MSMPER400 Coordinate permit process 1293
Assessment Requirements for MSMPER400 Coordinate permit process 1299
MSMRV310 Fit recreational vehicle floor 1301
Assessment Requirements for MSMRV310 Fit recreational vehicle floor 1305
MSMRV311 Fit furniture in a recreational vehicle 1307
Assessment Requirements for MSMRV311 Fit furniture in a recreational vehicle 1311
MSMRV312 Fit water systems in a recreational vehicle 1313
Assessment Requirements for MSMRV312 Fit water systems in a recreational vehicle 1317
MSMRV313 Fit 12 V cable systems in a recreational vehicle 1319
Assessment Requirements for MSMRV313 Fit 12 V cable systems in a recreational vehicle 1323
MSMRV314 Construct and fit roof to a recreational vehicle 1325
Assessment Requirements for MSMRV314 Construct and fit roof to a recreational vehicle 1329
MSMRV315 Construct and fit slide out in a recreational vehicle 1331
Assessment Requirements for MSMRV315 Construct and fit slide out in a recreational vehicle 1335
MSMRV316 Fit appliances in a recreational vehicle 1337
Assessment Requirements for MSMRV316 Fit appliances in a recreational vehicle 1341
MSMRV317 Install solar equipment on a recreational vehicle 1343
Assessment Requirements for MSMRV317 Install solar equipment on a recreational vehicle 1348
MSMRV318 Fit cladding to a recreational vehicle 1350
Assessment Requirements for MSMRV318 Fit cladding to a recreational vehicle 1355
MSMRV319 Fit front and rear moulds to a recreational vehicle 1357
Assessment Requirements for MSMRV319 Fit front and rear moulds to a recreational vehicle 1361
MSMRV320 Fit windows and doors to a recreational vehicle 1363
Assessment Requirements for MSMRV320 Fit windows and doors to a recreational vehicle 1368

Approved Page 8 of 3114
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMRV321 Fit required external items to a recreational vehicle 1370
Assessment Requirements for MSMRV321 Fit required external items to a recreational vehicle 1375
MSMRV322 Fit required external electrical components to a recreational vehicle 1377
Assessment Requirements for MSMRV322 Fit required external electrical components to a recreational vehicle 1381
MSMRV323 Fit required internal items to a recreational vehicle 1383
Assessment Requirements for MSMRV323 Fit required internal items to a recreational vehicle 1387
MSMRV324 Conduct final quality inspection for a recreational vehicle 1389
Assessment Requirements for MSMRV324 Conduct final quality inspection for a recreational vehicle 1393
MSMRV325 Fabricate a chassis and suspension for a recreational vehicle 1395
Assessment Requirements for MSMRV325 Fabricate a chassis and suspension for a recreational vehicle 1400
MSMRV350 Remove and replace a recreational vehicle roof 1402
Assessment Requirements for MSMRV350 Remove and replace a recreational vehicle roof 1407
MSMRV351 Remove and replace a recreational vehicle floor 1409
Assessment Requirements for MSMRV351 Remove and replace a recreational vehicle floor 1414
MSMRV352 Remove and replace a recreational vehicle sidewall cladding 1416
Assessment Requirements for MSMRV352 Remove and replace a recreational vehicle sidewall cladding 1421
MSMRV353 Remove and replace a recreational vehicle shower cubicle 1423
Assessment Requirements for MSMRV353 Remove and replace a recreational vehicle shower cubicle 1428
MSMRV354 Remove and replace a recreational vehicle shower walls 1430
Assessment Requirements for MSMRV354 Remove and replace a recreational vehicle shower walls 1435
MSMRV355 Remove and replace a camper/pop-top roof 1437
Assessment Requirements for MSMRV355 Remove and replace a camper/pop-top roof 1442
MSMRV356 Remove and replace gas struts and roof lifting equipment on a recreational vehicle 1444
Assessment Requirements for MSMRV356 Remove and replace gas struts and roof lifting equipment on a recreational vehicle 1450
MSMRV357 Remove and replace external components of a recreational vehicle 1452
Assessment Requirements for MSMRV357 Remove and replace external components of a recreational vehicle 1457
MSMRV358 Modify the body of a recreational vehicle 1459
Assessment Requirements for MSMRV358 Modify the body of a recreational vehicle .. 1464
MSMRV359 Install additional appliances in a recreational vehicle 1466
Assessment Requirements for MSMRV359 Install additional appliances in a recreational vehicle 1471
MSMRV360 Service camper wind up systems 1473
Assessment Requirements for MSMRV360 Service camper wind up systems 1477
MSMRV361 Repair dry rot in a recreational vehicle 1479
Assessment Requirements for MSMRV361 Repair dry rot in a recreational vehicle 1484
MSMRV362 Install and repair battery systems in a recreational vehicle 1486
Assessment Requirements for MSMRV362 Install and repair battery systems in a recreational vehicle 1491
MSMRV363 Complete pre-delivery check of a recreational vehicle 1493
Assessment Requirements for MSMRV363 Complete pre-delivery check of a recreational vehicle 1497

MSMRV364 Hand over a recreational vehicle to a customer....1499
Assessment Requirements for MSMRV364 Hand over a recreational vehicle to a customer1503
MSMRV365 Remove and refit body moulding....1505
Assessment Requirements for MSMRV365 Remove and refit body moulding....1510
MSMRV366 Fit transfers and decals to a recreational vehicle....1512
Assessment Requirements for MSMRV366 Fit transfers and decals to a recreational vehicle....1516
MSMRVG201 Tow a recreational vehicle safely....1518
Assessment Requirements for MSMRVG201 Tow a recreational vehicle safely....1523
MSMRVS202 Repair/service LPG systems in a recreational vehicle....1525
Assessment Requirements for MSMRVS202 Repair/service LPG systems in a recreational vehicle....1531
MSMRVS401 Assess and quote to service a recreational vehicle....1533
Assessment Requirements for MSMRVS401 Assess and quote to service a recreational vehicle....1538
MSMRVT201 Apply technical knowledge of recreational vehicle manufacturing to work activities....1540
Assessment Requirements for MSMRVT201 Apply technical knowledge of recreational vehicle manufacturing to work activities....1544
MSMSUP100 Apply workplace context to own job....1546
Assessment Requirements for MSMSUP100 Apply workplace context to own job....1551
MSMSUP101 Clean workplace or equipment....1554
Assessment Requirements for MSMSUP101 Clean workplace or equipment....1559
MSMSUP102 Communicate in the workplace....1561
Assessment Requirements for MSMSUP102 Communicate in the workplace....1565
MSMSUP106 Work in a team....1567
Assessment Requirements for MSMSUP106 Work in a team....1570
MSMSUP200 Achieve work outcomes....1572
Assessment Requirements for MSMSUP200 Achieve work outcomes....1576
MSMSUP204 Pack products or materials....1578
Assessment Requirements for MSMSUP204 Pack products or materials....1584
MSMSUP205 Transfer loads....1586
Assessment Requirements for MSMSUP205 Transfer loads....1593
MSMSUP210 Process and record information....1595
Assessment Requirements for MSMSUP210 Process and record information....1599
MSMSUP230 Monitor process operations....1601
Assessment Requirements for MSMSUP230 Monitor process operations....1606
MSMSUP240 Undertake minor maintenance....1609
Assessment Requirements for MSMSUP240 Undertake minor maintenance....1614
MSMSUP273 Handle goods....1616
Assessment Requirements for MSMSUP273 Handle goods....1622
MSMSUP280 Manage conflict at work....1624
Assessment Requirements for MSMSUP280 Manage conflict at work....1628
MSMSUP291 Participate in continuous improvement....1630
Assessment Requirements for MSMSUP291 Participate in continuous improvement....1634
MSMSUP292 Sample and test materials and product....1636
Assessment Requirements for MSMSUP292 Sample and test materials and product....1640
MSMSUP300 Identify and apply process improvements....1642
Assessment Requirements for MSMSUP300 Identify and apply process improvements1647

MSM10116 Certificate I in Process Manufacturing

Modification History

Release 2. Imported unit updated to current version. Equivalent

Release 1. Units updated. Supersedes and is equivalent to MSA10207 Certificate I in Process Manufacturing.

Qualification Description

The MSM10116 Certificate I in Process Manufacturing provides the competencies required for entry to the industry and addresses job outcomes at this level. It has been developed as a common certificate for use across the three process manufacturing sectors:

- chemical, hydrocarbons and refining
- plastics, rubber and cablemaking
- manufactured mineral products.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM10116 Certificate I in Process Manufacturing, competency must be achieved in **seven (7)** units of competency:

- **three (3**) core units of competency
- **four (4)** elective units of competency, **two (2)** of which may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified below.

Core units of competency

Unit code	Unit title
MSMSUP100	Apply workplace context to own job
MSMSUP102	Communicate in the workplace
MSMWHS100	Follow WHS procedures
Elective units	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	**Unit title**
MSMENV172	Identify and minimise environmental hazards
MSMOPS100	Use equipment
MSMOPS101	Make measurements
MSMOPS102	Perform tasks to support production
MSMSUP101	Clean workplace or equipment
MSMSUP106	Work in a team
MSMWHS110	Follow emergency response procedures
PMAOPS105	Select and prepare materials
PMBHAN103	Shift materials safely by hand

A maximum of **one (1)** unit may be chosen from units packaged in the MSM20116 Certificate II in Process Manufacturing.

A maximum of **two (2)** relevant units may be selected from this Training Package, other endorsed Training Packages and accredited courses, where those units are packaged in a Certificate I.

Qualification Mapping Information

Release 2. Imported unit updated to current version. Equivalent

Release 1. Supersedes and is equivalent to MSA10207 Certificate I in Process Manufacturing.

MSM10216 Certificate I in Manufacturing (Pathways)

Modification History

Release 2. Imported units updated to current versions. Equivalent.

Release 1. Units updated. Supersedes and is equivalent to MSA10107 Certificate I in Manufacturing (Pathways).

Qualification Description

The MSM10216 Certificate I in Manufacturing (Pathways) is designed to develop skills that are essential for employment and skills that relate directly to a work activity as specified in the selected industry/technical unit.

The units selected must provide practical skills that are relevant and useful to the area in which the person hopes to gain employment or is currently working. The group of units should be chosen to support the project and should incorporate both the technical and employability skills needed for work.

Achievement of the MSM10216 Certificate I in Manufacturing (Pathways) will provide the student with a set of competencies that collectively open up pathways into employment and/or further study in the manufacturing industry.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM10216 Certificate I in Manufacturing (Pathways), competency must be achieved in **nine** (**9**) units of competency:

- **three** (**3**) core units of competency
- **six** (**6**) elective units of competency, chosen as specified below:
  - **one** (**1**) unit of competency from Group A
  - **five** (**5**) units of competency from Group B, **three** (**3**) of which may be selected from this Training Package, other endorsed Training Packages and/or accredited courses, as specified below.

Note: The industry/technical units coded MSMPCII (in Group A) are designed for use only in a Pathways qualification or Skill Set. They should not be used in other instances as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

replacements for units that have direct job outcomes.

Core units

Unit code	**Unit title**
MSMPCI101	Adapt to work requirements in industry
MSMPCI102	Apply effective work practices
MSMPCI103	Demonstrate care and apply safe practices at work
ELECTIVE UNITS **Group A - Industry/technical units***	
Unit code	**Unit title**
MSMPCII296	Make a small furniture item from timber
MSMPCII297	Make an object from cloth using an existing pattern
MSMPCII298	Make an object from metal
MSMPCII299	Make an object from plastic
Group B - Other elective units	
Unit code	**Unit title**
MSTCL2001	Use a sewing machine
MSTGN2011	Identify fibres and fabrics
MSTCL2006	Press work
MSTCL2007	Lay up, mark and cut uncomplicated fabrics and lays
MSTCL2008	Finish garment production

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM03001B	Perform manual production assembly
MEM05007C	Perform manual heating and thermal cutting
MEM05012C	Perform routine manual metal arc welding
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MSFFM1002	Operate basic woodworking machines
MSFFM2001	Use furniture making sector hand and power tools
MSFFM2002	Assemble furnishing components
MSFFM2003	Select and apply hardware
MSFFM2005	Join solid timber
MSFSF1001	Produce basic soft furnishings accessories
MSFSF2001	Cut single layer fabrics
MSMOPS100	Use equipment
MSMOPS101	Make measurements
MSMOPS102	Perform tasks to support production
MSMOPS244	Lay out and cut materials
PMBFIN201	Finish products and components
PMBFIN205	Hand decorate products
PMBPREP205	Assemble materials and equipment for production
PMBPREP206	Prepare materials to formulae
PMBPROD236	Operate hand held air/power equipment for production processes
PMBPROD240	Cut materials

A maximum of **three** (**3**) relevant units can be selected from this Training Package, other endorsed Training Packages and accredited courses, where those units are packaged in a Certificate I or II.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Any elective unit/s selected from another Training Package must relate to the core function/role of the selected industry/technical unit.

Qualification Mapping Information

Release 2. Imported units updated to current versions. Equivalent.

Release 1. Supersedes and is equivalent to MSA10107 Certificate I in Manufacturing (Pathways).

MSM20116 Certificate II in Process Manufacturing

Modification History

Release 2. Imported units updated to current versions. Equivalent.

Release 1. Units updated. Supersedes and is equivalent to Supersedes MSA20107 Certificate II in Process Manufacturing.

Qualification Description

The MSM20116 Certificate II in Process Manufacturing provides the competencies required by competent production workers who undertake vital production support roles directly related to producing products. Production workers apply a breadth and depth of knowledge to a defined range of situations and would be expected to apply this knowledge to solve a defined range of problems by applying known solutions to a limited range of predictable problems.

This qualification has been developed for use across the three process manufacturing sectors:

- chemical, hydrocarbons and refining
- plastics, rubber and cablemaking
- manufactured mineral products.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM20116 Certificate II in Process Manufacturing, competency must be achieved in **fourteen (14)** units of competency:

- **three (3)** core units of competency
- **eleven (11)** elective units of competency, **four (4**) of which can be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified below.

Note: Where prerequisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	**Unit title**
MSMENV272	Participate in environmentally sustainable work practices
MSMWHS200	Work safely
MSMSUP210	Process and record information

Elective units

Unit code	**Unit title**	**Prerequisites**
FWPCOT2238	Cut materials with a hand-held chainsaw	
LMTGN2008	Coordinate work of team/section	
HLTAID003	Provide first aid	
MEM16006A	Organise and communicate information	
MEM16007A	Work with others in a manufacturing, engineering or related environment	
MEM16008A	Interact with computing technology	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MSMENV172	Identify and minimise environmental hazards	
MSMOPS100	Use equipment	
MSMOPS101	Make measurements	
MSMOPS102	Perform tasks to support production	
MSMOPS200	Operate equipment	
MSMOPS201	Cut polymer materials	
MSMOPS202	Fabricate polymer materials	
MSMOPS212	Use organisation computers or data systems	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMOPS244	Layout and cut materials	
MSMPER200	Work in accordance with an issued permit	
MSMPER201	Monitor and control work permits	
MSMPER202	Observe permit work	
MSMPER205	Enter confined space	MSMPER200
MSMSUP100	Apply workplace context to own job	
MSMSUP101	Clean workplace or equipment	
MSMSUP106	Work in a team	
MSMSUP200	Achieve work outcomes	
MSMSUP204	Pack products or materials	
MSMSUP205	Transfer loads	
MSMSUP230	Monitor process operations	
MSMSUP240	Undertake minor maintenance	
MSMSUP273	Handle goods	
MSMSUP280	Manage conflict at work	
MSMSUP291	Participate in continuous improvement	
MSMSUP292	Sample and test materials and product	
MSMWHS100	Follow WHS procedures	
MSMWHS110	Follow emergency response procedures	
MSMWHS201	Conduct hazard analysis	
MSMWHS205	Control minor incidents	
MSMWHS210	Undertake first response to non-fire incidents	
MSMWHS212	Undertake first response to fire incidents	
MSMWHS216	Operate breathing apparatus	
MSMWHS217	Gas test atmospheres	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMWHS218	Control the risks of falls	
MSS402002	Sustain process improvements	
MSS402020	Apply quick changeover procedures	
MSS402021	Apply Just in Time procedures	
MSS402030	Apply cost factors to work practices	
MSS402040	Apply 5S procedures	
MSS402050	Monitor process capability	
MSS402051	Apply quality standards	
MSS402060	Use planning software systems in operations	
MSS402080	Undertake root cause analysis	
PMBHAN103	Shift materials safely by hand	
TLID2010	Operate a forklift	

Elective units may also be chosen from the Group A or Group B units in PMA20116, PMB20107 and PMC20110.

A maximum of **four (4)** relevant units may be selected from this Training Package, other endorsed Training Packages and accredited courses, where those units are packaged in a Certificate II or III. Note: a maximum of **two (2)** units may be chosen from a Certificate III.

Qualification Mapping Information

Release 2. Imported units updated to current versions. Equivalent.

Release 1. Supersedes and is equivalent to MSA20107 Certificate II in Process Manufacturing.

MSM20216 Certificate II in Manufacturing Technology

Modification History

Release 2. Imported units updated to current versions. Equivalent.

Release 1. Units updated. Supersedes and is equivalent to MSA20208 Certificate II in Manufacturing Technology.

Qualification Description

The MSM20216 Certificate II in Manufacturing Technology applies to a learning and assessment environment where access to normal production operations is not available. A typical environment will be for application in a VET in Schools delivery environment or other simulated or trial manufacturing environment where a high degree of supervision exists. The units are suitable for delivery in a school environment and for schools to contextualise the units to local manufacturing industry activities.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM20216 Certificate II in Manufacturing Technology, competency must be achieved in **ten** (**10**) units of competency:

- **five** (**5**) core units of competency
- **five** (**5**) elective units of competency, chosen as described below:
  - **a** minimum of **one (1)** unit must be selected from each of Group A and B
  - the remaining **three (3)** electives may be chosen from Groups A, B and C, with a maximum of **two (2)** from Group C

Note: that the manufacturing technology units coded MSMPCII (in Group B) are designed for use only in a Pathways qualification or Skill Set. They should not be used in other instances as replacements for units that have direct job outcomes.

Core units of competency

Unit code	Unit title
MSMENV272	Participate in environmentally sustainable work practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMWHS200	Work safely
MSS402001	Apply competitive systems and practices
MSS402051	Apply quality standards
MSS402080	Undertake root cause analysis

ELECTIVE UNITS

Group A - Manufacturing practice

Unit code	**Unit title**
MSS402002	Sustain process improvements
MSS402010	Manage the impact of change on own work
MSS402031	Interpret product costs in terms of customer requirements
MSS402050	Monitor process capability

Group B - Manufacturing technology*

MSMPCII295	Operate manufacturing equipment
MSMPCII296	Make a small furniture item from timber
MSMPCII297	Make an object from cloth using an existing pattern
MSMPCII298	Make an object from metal
MSMPCII299	Make an object from plastic

Group C

Up to **two** (**2**) elective units can be selected from other qualifications in this Training Package, other endorsed Training Packages and accredited courses where those units are packaged in a Certificate I or II.

MSM21015 Certificate II in Recreational Vehicle Service and Repair

Modification History

Release 3. Imported units updated to current versions. Equivalent.

Release 2. Imported units updated to current version. Equivalent.

Release 1. Supersedes and is equivalent to MSA20510 Certificate II in Recreational Vehicle Service and Repair.

Qualification Description

The MSM21015 Certificate II in Recreational Vehicle Service and Repair has been developed as an entry-level qualification. People with this qualification would be expected to work under supervision, servicing and repairing recreational vehicles, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers

to meet Australian requirements, such as road worthiness and the Australian Design Rule (ADR).

They may work in a service and repair facility or a manufacturer's factory undertaking warranty work. Work may be for an insurance claim, modifying an existing recreational vehicle or undertaking routine servicing.

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements depending on the work context. Local regulations should be checked for details.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM21015 Certificate II in Recreational Vehicle Service and Repair, competency must be achieved in **fourteen (14)** units of competency:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- **three (3)** core units of competency
- **eleven (11)** elective units of competency, as specified below:
  - a minimum of **seven (7)** units of competency must be selected from Group A
  - the balance of units, to a maximum of **four (4)** may be selected from:
    - units not previously selected from Group A
    - Group B units listed below.

Note: Up to **four (4)** elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified in Groups A and B.

Note: Where prerequisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

Complete all **three (3)** units from the following list.

Unit code	Unit title
MSMENV272	Participate in environmentally sustainable work practices
MSMSUP102	Communicate in the workplace
MSMWHS200	Work safely

ELECTIVE UNITS

Group A Elective units

Select a minimum of **seven (7)** units from the following list.

Unit code	Unit title	Prerequisites
AUMGTT001	Apply trim to vehicle components	
AURETR015	Inspect, test and service batteries	
AURETR012	Test and repair basic electrical circuits	
AURETB001	Diagnose and repair electric braking systems	
AURTTB001	Inspect and service braking systems	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

AURTTD004	Inspect and service suspension systems	
AURTTJ002	Remove, inspect and refit wheel hubs and associated brake components	
AURTTA017	Carry out vehicle safety inspections	
AURVTS004	Repair vehicle composite material components	
AURVTG011	Install side vehicle windows	
AURTTY001	Repair vehicle chassis, frame and associated components	
AURVTT015	Fabricate and install canvas products for automotive and marine components	
AURVTT3016	Fabricate frame structures	
AURVTT019	Fabricate and install automotive and marine frames, canopies and side curtains	
CPCPCM2043A	Carry out WHS requirements	
CPCPGS3046A	Install LPG systems in caravans, mobile homes and mobile workplaces	CPCPCM2043A
MEM05005B	Carry out mechanical cutting	MEM12023A MEM18001C
MEM05012C	Perform routine manual metal arc welding	
MEM05050B	Perform routine gas metal arc welding	
MEM09002B	Interpret technical drawing	
MEM10002B	Terminate and connect electrical wiring	MEM09002B MEM12002B MEM18001C
MEM12002B	Perform electrical/electronic measurement	
MEM12023A	Perform engineering measurements	
MEM18038B	Maintain wheels and tyres	MEM18001
MEM18045B	Fault find/repair electrical equipment/ components up to 250 volts single phase	MEM09002B

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	supply	MEM10002B MEM12002B MEM12023A MEM18001C MEM18002B
MSMOPS101	Make measurements	
MSMRV350	Remove and replace a recreational vehicle roof	
MSMRV351	Remove and replace a recreational vehicle floor	
MSMRV352	Remove and replace a recreational vehicle sidewall cladding	
MSMRV353	Remove and replace a recreational vehicle shower cubicle	
MSMRV354	Remove and replace a recreational vehicle shower walls	
MSMRV355	Remove and replace a camper/pop-top roof	
MSMRV356	Remove and replace a gas struts and roof lifting equipment on a recreational vehicle	
MSMRV357	Remove and replace external components of a recreational vehicle	
MSMRV358	Modify the body of a recreational vehicle	
MSMRV359	Install additional appliances in a recreational vehicle	
MSMRV360	Service camper wind up systems	
MSMRV361	Repair dry rot in a recreational vehicle	
MSMRV362	Install and repair battery systems in a recreational vehicle	
MSMRV363	Complete pre-delivery check of a recreational vehicle	
MSMRV364	Hand over a recreational vehicle to a customer	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMRV365	Remove and refit body moulding	
MSMRV366	Fit transfers and decals to a recreational vehicle	
MSMRVS202	Repair/service LPG systems in a recreational vehicle	

Up to **two (2)** relevant Group A elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate II qualification.

Group B Elective units

Unit code	**Unit title**	**Prerequisites**
MEM11010B	Operate mobile load shifting equipment	
MEM11011B	Undertake manual handling	
MEM14004A	Plan to undertake a routine task	
MEM15024A	Apply quality procedures	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MSMOPS212	Use organisation computers or data systems	
MSMPER200	Work in accordance with an issued permit	
MSMRVG201	Tow a recreational vehicle safely	
MSMRVT201	Apply technical knowledge of recreational vehicle manufacturing to work activities	
MSMSUP100	Apply workplace context to own job	
MSMSUP101	Clean workplace or equipment	
MSMSUP106	Work in a team	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMSUP240	Undertake minor maintenance	
MSMSUP280	Manage conflict at work	
MSMSUP291	Participate in continuous improvement	
MSMWHS110	Follow emergency response procedures	
MSMWHS205	Control minor incidents	
MSS402040	Apply 5S procedures	
MSS402080	Undertake root cause analysis	
PMBHAN103	Shift materials safely by hand	
SIRXPDK001	Advise on products and services	
TLID2010	Operate a forklift	
Up to **two (2)** relevant Group B elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate II or III qualification.		

Qualification Mapping Information

MSM21115 Certificate II in Recreational Vehicle Manufacturing

Modification History

Release 3. Imported units updated to current versions. Equivalent.

Release 2. Imported units updated to current version. Equivalent.

Release 1. Supersedes and is equivalent to MSA20610 Certificate II in Recreational Vehicle Manufacture.

Qualification Description

The MSM21115 Certificate II in Recreational Vehicle Manufacturing has been developed as an entry-level qualification. People with this qualification would be expected to work under supervision manufacturing recreational vehicles, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers

to meet Australian requirements, such as road worthiness and the Australian Design Rule (ADR).

They may work in a large manufacturing organisation or a small workshop.

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements depending on the work context. Local regulations should be checked for details.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM21115 Certificate II in Recreational Vehicle Manufacturing, competency must be achieved in **fourteen (14)** units of competency:

- **three (3)** core units of competency
- **eleven (11)** elective units of competency, as specified below:
  - a minimum of **seven (7)** units of competency must be selected from Group A
  - the balance of units, to a maximum of **four (4)** may be selected from:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- units not previously selected from Group A
- Group B units listed below.

Note: Up to **four (4)** elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified in Groups A and B.

Note: Where prerequisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

Complete all three (3) units from the following list.

Unit code	**Unit title**
MSMENV272	Participate in environmentally sustainable work practices
MSMSUP102	Communicate in the workplace
MSMWHS200	Work safely

ELECTIVE UNITS

Group A Electives

Select a minimum of **seven (7)** units from the following list.

Unit code	**Unit title**	**Prerequisites**
AUMGTT001	Apply trim to vehicle components	
AURVTT015	Fabricate and install canvas products for automotive and marine components	
AURVTT3016	Fabricate frame structures	
AURVTT019	Fabricate and install automotive and marine frames, canopies and side curtains	
CPCPCM2043A	Carry out WHS requirements

MEM12002B	Perform electrical/electronic measurement	
MEM12023A	Perform engineering measurements	
MSMOPS101	Make measurements	
MSMRV310	Fit recreational vehicle floor	
MSMRV311	Fit furniture in a recreational vehicle	
MSMRV312	Fit water systems in a recreational vehicle	
MSMRV313	Fit 12 V cable systems in a recreational vehicle	
MSMRV314	Construct and fit roof to a recreational vehicle	
MSMRV315	Construct and fit slide out in a recreational vehicle	
MSMRV316	Fit appliances in a recreational vehicle	
MSMRV317	Install solar equipment on a recreational vehicle	
MSMRV318	Fit cladding to a recreational vehicle	
MSMRV319	Fit front and rear moulds to a recreational vehicle	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMRV320	Fit windows and doors to a recreational vehicle	
MSMRV321	Fit required external items to a recreational vehicle	
MSMRV322	Fit required external electrical components to a recreational vehicle	
MSMRV323	Fit required internal items to a recreational vehicle	
MSMRV324	Conduct final quality inspection for a recreational vehicle	
MSMRV325	Fabricate a chassis and suspension for a recreational vehicle	
MSMRV365	Remove and refit body moulding	
MSMRV366	Fit transfers and decals to a recreational vehicle	

Up to **two (2)** relevant Group A elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate III qualification.

Group B Elective units

Select a maximum of **four (4)** units from the following list.

Unit code	**Unit title**	**Prerequisites**
MEM11010B	Operate mobile load shifting equipment	
MEM14004A	Plan to undertake a routine task	
MEM15024A	Apply quality procedures	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MSMOPS102	Perform tasks to support production	
MSMOPS200	Operate equipment

MSM30116 Certificate III in Process Manufacturing

Modification History

Release 2. Minor adjustment to Packaging Rules statement in Group B units. Imported units updated to current versions. Equivalent.

Release 1. Units updated. Supersedes and is equivalent to MSA30107 Certificate III in Process Manufacturing.

Qualification Description

The MSM30116 Certificate III in Process Manufacturing provides the competencies required by advanced production workers who use a range of equipment and provide support functions directly related to producing products. They would undertake more advanced roles than workers with a Certificate II in Process Manufacturing, working in accordance with operating procedures and applying knowledge to anticipate problems and solve a range of foreseen and unforeseen problems.

This qualification is designed for use across the three process manufacturing sectors:

- chemical, hydrocarbons and oil refining
- plastics, rubber and cablemaking
- manufactured mineral products.
-

It includes the same range of electives, but with different packaging rules to provide a qualification for workers unable to meet the technical requirements of PMA, PMB or PMC.

This qualification covers:

- production support workers - people working in manufacturing and filling the vital production support roles but who may not have the opportunity to develop competency in sufficient technical units related directly to producing products
- employees who operate across more than one category within process manufacturing or 'specialised processes' and elsewhere when required.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM30116 Certificate III in Process Manufacturing, competency must be achieved in **twenty-one (21)** units of competency:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- **four (4)** core units of competency
- **seventeen (17)** elective units of competency, as specified below:
  - a minimum of **five (5)** units from Group A
  - a maximum of **twelve (12)** units from Group B.

Note: Where pre-requisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

Unit code	**Unit title**
MSMENV272	Participate in environmentally sustainable work practices
MSMWHS200	Work safely
MSMSUP210	Process and record information
MSS402051	Apply quality standards

ELECTIVE UNITS

Group A Elective units

Unit code	**Unit title**	**Prerequisites**
MEM03001B	Perform manual production assembly	
MEM03006B	Set assembly stations	
MEM09002B	Interpret technical drawing	
MEM09204A	Produce basic engineering detail drawings	MEM09002B
MEM11005B	Pick and process order	
MEM11006B	Perform production packaging	
MEM11007B	Administer inventory procedures	
MEM12023A	Perform engineering measurements	
MEM15001B	Perform basic statistical quality control	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM15003B	Use improvement processes in team activities	
MEM15004B	Perform inspection	
MSL973001	Perform basic tests	
MSMOPS301	Treat corrosion	
MSMOPS363	Organise on site work	
MSMPER300	Issue work permits	MSMWHS201
MSMSUP300	Identify and apply process improvements	
MSMSUP301	Apply HACCP to the workplace	
MSMSUP303	Identify equipment faults	
MSMSUP309	Maintain and organise workplace records	
MSMSUP310	Contribute to the development of plant documentation	
MSMSUP330	Develop and adjust a production schedule	
MSMSUP382	Provide coaching/mentoring in the workplace	
MSMSUP383	Facilitate a team	
MSMSUP390	Use structured problem solving tools	
MSMWHS300	Facilitate the implementation of WHS for a work group	
TAEDEL301	Provide work skill instruction	
Group A units may also be selected from the Group A and Group B units in the PMA and PMB Certificates III, and Group A and Group B1 units in the PMC Certificate III.		
Group B Elective units		
Unit code	**Unit title**	**Prerequisites**
FWPCOT2238	Cut materials with a hand-held chainsaw	
HTLAID003	Provide first aid	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSTGN2008	Coordinate work of team/section	
MEM13003B	Work safely with industrial chemicals and materials	
MEM16006A	Organise and communicate information	
MEM16007A	Work with others in a manufacturing, engineering or related environment	
MEM16008A	Interact with computing technology	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MSMENV172	Identify and minimise environmental hazards	
MSMOPS100	Use equipment	
MSMOPS101	Make measurements	
MSMOPS102	Perform tasks to support production	
MSMOPS200	Operate equipment	
MSMOPS201	Cut polymer materials	
MSMOPS202	Fabricate polymer materials	
MSMOPS212	Use enterprise computers or data systems	
MSMOPS244	Layout and cut materials	
MSMPER200	Work in accordance with an issued permit	
MSMPER201	Monitor and control work permits	
MSMPER202	Observe permit work	
MSMPER205	Enter confined space	MSMPER200
MSMSUP100	Apply workplace context to own job	
MSMSUP101	Clean workplace or equipment	
MSMSUP106	Work in a team	
MSMSUP200	Achieve work outcomes

MSMSUP204	Pack products or materials	
MSMSUP205	Transfer loads	
MSMSUP230	Monitor process operations	
MSMSUP240	Undertake minor maintenance	
MSMSUP273	Handle goods	
MSMSUP280	Manage conflict at work	
MSMSUP291	Participate in continuous improvement	
MSMSUP292	Sample and test materials and product	
MSMWHS100	Follow WHS procedures	
MSMWHS110	Follow emergency response procedures	
MSMWHS201	Conduct hazard analysis	
MSMWHS205	Control minor incidents	
MSMWHS210	Undertake first response to non-fire incidents	
MSMWHS212	Undertake first response to fire incidents	
MSMWHS216	Operate breathing apparatus	
MSMWHS217	Gas test atmospheres	
MSMWHS218	Control the risks of falls	
MSS402002	Sustain process improvements	
MSS402020	Apply quick changeover procedures	
MSS402021	Apply Just in Time procedures	
MSS402030	Apply cost factors to work practices	
MSS402040	Apply 5S procedures	
MSS402050	Monitor process capability	
MSS402051	Apply quality standards	
MSS402060	Use planning software systems in operations	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSS402080	Undertake root cause analysis	
PMBHAN103	Shift materials safely by hand	
TLID2010	Operate a forklift	

Group B units may also be chosen from:

- Group C units in the PMA and PMB Certificates III and Group B2 units in the PMC Certificate III.
- A maximum of **six (6)** relevant units from this Training Package, other endorsed Training Packages and accredited courses – a maximum of 4 units packaged in a Certificate II or III and a maximum of 2 units packaged in a Certificate IV.

Qualification Mapping Information

Release 2. Minor adjustment to Packaging Rules statement in Group B units. Imported units updated to current versions. Equivalent.

Release 1. Supersedes and is equivalent to MSA30107 Certificate III in Process Manufacturing.

MSM30216 Certificate III in Surface Preparation and Coating Application

Modification History

Release 2. Correction of typographical error in Group A Electives and inclusion missing text for Group E - Balance of units. Imported units updated to current versions. Equivalent.

Release 1. Supersedes and is equivalent to MSA30309 Certificate III in Surface Preparation and Coating Application. Units updated.

Qualification Description

The MSM30216 Certificate III in Surface Preparation and Coating Application provides the trade-level competencies required to perform the wide range of surface preparation and protective coating application operations that occur across a range of heavy industry, ships and infrastructure.

The surfaces being prepared are typically metal (usually ferrous) and may be structural or have other mechanical requirements. The protective coatings may be liquid or solid. The applied coating may, or may not be the final coat and its purpose is protective, not decorative.

People with this qualification would be expected to work under routine supervision only, preparing surfaces and/or applying protective coatings in accordance with a provided technical specification. They would be expected to recognise situations where the intended approach was not appropriate/not working and take appropriate action to ensure the final result is satisfactory.

People with this qualification may be expected to undertake some combination of:

- abrasively blast clean surfaces to Australian Standard requirements and in accordance with the specification
- prepare surfaces for coating as required by the specification
- apply liquid protective surface coatings
- apply solid polymer surface coatings (this is usually a specialised area).
-

They may work in a manufacturer's factory or they may work as contractors on the site of the plant/ship/infrastructure.

This work may be undertaken:

- in a factory environment
- in an onsite, outdoors environment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- inside a vessel or other confined space
- outside a vessel or structure
- at heights
- some combination of these.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM30216 Certificate III in Surface Preparation and Coating Application competency must be achieved in **thirty-one (31)** units of competency:

- **eleven (11)** core units of competency
- **twenty (20)** elective units of competency, as specified below:
  - a minimum of **three (3)** units from Group A
  - a minimum of **two (2)** units from Group B
  - a minimum of **three (3)** units from Group C
  - a minimum of **three (3)** units from Group D
    - the balance of units, to a maximum of **nine (9),** may be selected in any combination from the remaining units in Groups A, B, C or D.

Note: A total of **five (5)** elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified below. These comprise:

- a maximum of one surface preparation unit (Group A)
- a maximum of one coating application unit (Group B)
- a maximum of three other relevant elective units.

Note: Where prerequisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

Unit code	Unit title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM16008A	Interact with computing technology
MSMENV272	Participate in environmentally sustainable work practices
MSMWHS200	Work safely

ELECTIVE UNITS

Group A - Surface Preparation

Unit code	**Unit title**	**Prerequisites**
MEM08002C	Pre-treat work for subsequent surface coating	MEM13003B
MEM08007B	Control surface finish production and finished product quality

Group D - Other elective units

Unit code	**Unit title**	**Prerequisites**
MEM07001B	Perform operational maintenance of machines/equipment	MEM18001C
MEM11012B	Purchase materials	
MEM11016B	Order materials	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM12001B	Use comparison and basic measuring devices	
MEM15003B	Use improvement processes in team activities	MEM16007A
MEM15004B	Perform inspection	
MEM15005B	Select and control inspection process and procedures	MEM15004B
MEM16002C	Conduct formal interviews and negotiations	
MEM16005A	Operate as a team member to conduct manufacturing, engineering or related activities	
MEM16011A	Communicate with individuals and small groups	MEM16006A
MEM16013A	Operate in a self-directed team	MEM16007A
MEM17001B	Assist in the development and delivery of training in the workplace	
MEM17003A	Assist in the provision of on the job training	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MSMOPS301	Treat corrosion	
MSMOPS363	Organise on-site work	
MSMSUP100	Apply workplace context to own job	
MSMSUP303	Identify equipment faults	
MSMSUP390	Use structured problem solving tools	

Group E - Balance of units

The balance of units, to a maximum of nine (9), may be chosen from any combination of:

- units from Groups A, B, C and D above, not already selected
- up to three (3) relevant units can be selected from this Training Package, other endorsed Training Packages and accredited courses, where those units are available for inclusion at Certificate III.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Qualification Mapping Information

Release 2. Correction of typographical error in Group A Electives and inclusion missing text for Group E - Balance of units. Imported units updated to current versions. Equivalent.

Release 1. Supersedes and is equivalent to MSA30309 Certificate III in Surface Preparation and Coating Application.

MSM31015 Certificate III in Recreational Vehicle Service and Repair

Modification History

Release 3. Imported units updated to current versions. Equivalent.

Release 2. Imported units updated to current version. Equivalent.

Release 1. Supersedes and is equivalent to MSA30510 Certificate III in Recreational Vehicle Service and Repair.

Qualification Description

The MSM31015 Certificate III in Recreational Vehicle Service and Repair has been developed as a trade-level qualification. People with this qualification would be expected to work under supervision servicing and repairing recreational vehicles, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers

to meet Australian requirements, such as road worthiness and the Australian Design Rule (ADR).

They may work in a service and repair facility or a manufacturer's factory undertaking warranty work. Work may be for an insurance claim, modifying an existing recreational vehicle or undertaking routine servicing.

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements depending on the work context. Local regulations should be checked for details.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM31015 Certificate III in Recreational Vehicle Service and Repair, competency must be achieved in **twenty-two (22)** units of competency:

- **three (3)** core units of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- **nineteen (19)** elective units of competency, as specified below:
- a minimum of **thirteen (13)** units of competency must be selected from Group A
  - the balance of units, to a maximum of **six (6)** may be selected from:
  - units not previously selected from Group A
  - Group B units listed below.

Note: Up to **four (4)** elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified in Groups A and B.

Note: Where prerequisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

Complete all **three (3)** units from the following list.

Unit code	**Unit title**
MSMENV272	Participate in environmentally sustainable work practices
MSMSUP102	Communicate in the workplace
MSMWHS200	Work safely

ELECTIVE UNITS

Group A Elective units

Select a minimum of **thirteen (13)** units from the following list.

Unit code	**Unit title**	**Prerequisites**
AUMGTT001	Apply trim to vehicle components	
AURETR015	Inspect, test and service batteries	
AURETR012	Test and repair basic electrical circuits	
AURETB001	Diagnose and repair electric braking systems	
AURTTA017	Carry out vehicle safety inspections	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

AURTTB001	Inspect and service braking systems	
AURTTD004	Inspect and service suspension systems	
AURTTJ002	Remove, inspect and refit wheel hubs and associated brake components	
AURTTA017	Carry out vehicle safety inspections	
AURVTS004	Repair vehicle composite material components	
AURVTG011	Install side vehicle windows	
AURTTY001	Repair vehicle chassis, frame and associated components	
AURVTT015	Fabricate and install canvas products for automotive and marine components	
AURVTT3016	Fabricate frame structures	
AURVTT019	Fabricate and install automotive and marine frames, canopies and side curtains	
CPCPCM2043A	Carry out WHS requirements	
CPCPGS3046A	Install LPG systems in caravans, mobile homes and mobile workplaces	CPCPCM2043A
MEM05005B	Carry out mechanical cutting	MEM12023A MEM18001C
MEM05012C	Perform routine manual metal arc welding	
MEM05050B	Perform routine gas metal arc welding	
MEM09002B	Interpret technical drawing	
MEM10002B	Terminate and connect electrical wiring	MEM09002B MEM12002B MEM18001C
MEM12002B	Perform electrical/electronic measurement	
MEM12023A	Perform engineering measurements	
MEM18038B	Maintain wheels and tyres	MEM18001

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18045B	Fault find/repair electrical equipment/components up to 250 volts single phase supply	MEM09002B MEM10002B MEM12002B MEM12023A MEM18001C MEM18002B
MSMOPS101	Make measurements	
MSMRV350	Remove and replace a recreational vehicle roof	
MSMRV351	Remove and replace a recreational vehicle floor	
MSMRV352	Remove and replace a recreational vehicle sidewall cladding	
MSMRV353	Remove and replace a recreational vehicle shower cubicle	
MSMRV354	Remove and replace a recreational vehicle shower walls	
MSMRV355	Remove and replace a camper/pop-top roof	
MSMRV356	Remove and replace a gas struts and roof lifting equipment on a recreational vehicle	
MSMRV357	Remove and replace external components of a recreational vehicle	
MSMRV358	Modify the body of a recreational vehicle	
MSMRV359	Install additional appliances in a recreational vehicle	
MSMRV360	Service camper wind up systems	
MSMRV361	Repair dry rot in a recreational vehicle	
MSMRV362	Install and repair battery systems in a recreational vehicle	
MSMRV363	Complete pre-delivery check of a recreational vehicle	
MSMRV364	Hand over a recreational vehicle to a customer	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMRV365	Remove and refit body moulding	
MSMRV366	Fit transfers and decals to a recreational vehicle	
MSMRVS202	Repair/service LPG systems in a recreational vehicle	

Up to two (2) relevant Group A elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate III qualification.

Group B Elective units

Select a maximum of **six (6)** units from the following list.

Unit code	**Unit title**	**Prerequisites**
MEM11010B	Operate mobile load shifting equipment	
MEM11011B	Undertake manual handling	
MEM14004A	Plan to undertake a routine task	
MEM15024A	Apply quality procedures	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MSMOPS212	Use organisation computers or data systems	
MSMPER200	Work in accordance with an issued permit	
MSMRVG201	Tow a recreational vehicle safely	
MSMRVT201	Apply technical knowledge of recreational vehicle manufacturing to work activities	
MSMSUP100	Apply workplace context to own job	
MSMSUP101	Clean workplace or equipment	
MSMSUP106	Work in a team	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMSUP240	Undertake minor maintenance	
MSMSUP280	Manage conflict at work	
MSMSUP291	Participate in continuous improvement	
MSMWHS110	Follow emergency response procedures	
MSMWHS205	Control minor incidents	
MSS402040	Apply 5S procedures	
MSS402080	Undertake root cause analysis	
PMBHAN103	Shift materials safely by hand	
SIRXPDK001	Advise on products and services	
TLID2010	Operate a forklift	
Up to **two (2)** relevant Group B elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate II or III qualification.

MSM31215 Certificate III in Recreational Vehicle and Accessories Retailing

Modification History

Release 2. Imported units updated to current version. Equivalent.

Release 1. Supersedes and is equivalent to MSA30710 Certificate III in Recreational Vehicle and Accessories Retailing.

Qualification Description

The MSM31215 Certificate III in Recreational Vehicle and Accessories Retailing has been developed as a trade-level qualification. People with this qualification would be expected to work under supervision in the sale of recreational vehicles and accessories, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers.

They will analyse the customer's requirements and then carry them out.

They may work in a service and repair facility or a manufacturer's factory undertaking sales work. Sales may be for a new recreational vehicle, a second-hand/refurbished recreational vehicle, or spare parts and accessories. In some cases selling of the recreational vehicle may also include possible modifications that could be made to the recreational vehicle.

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements depending on the work context. Local regulations should be checked for details.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM31215 Certificate III in Recreational Vehicle and Accessories Retailing, competency must be achieved in **twenty-two (22)** units of competency:

- **three (3)** core units of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- **nineteen (19)** elective units of competency, as specified below:
  - a minimum of **thirteen (13)** units of competency must be selected from Group A
  - the balance of units, to a maximum of **six (6**) may be selected from:
    - units not previously selected from Group A
    - Group B units listed below.

Note: Up to **four (4)** elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified in Groups A and B.

Note: Where prerequisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

Complete all **three (3)** units from the following list.

Unit code	**Unit title**
MSMENV272	Participate in environmentally sustainable work practices
MSMSUP102	Communicate in the workplace
MSMWHS200	Work safely

Elective units

Group A Elective units

Select a minimum of **thirteen (13)** units from the following list.

Unit code	**Unit title**	**Prerequisites**
AUMANA001	Prepare and document quotations	
AURACA001	Respond to customer needs and enquiries in an automotive workplace	
AURC341903A	Apply relevant finance, leasing and insurance contracts/policies	
AURACA002	Establish customer requirements of a complex	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	nature	
AURACA003	Build customer relations in an automotive workplace	
AURAMA004	Maintain business image in an automotive workplace	
AURAMA005	Manage complex customer issues in an automotive workplace	
AURSCA002	Present automotive products and services for sale	
AURSCA003	Apply sales procedures in an automotive workplace	
AURSCA004	Carry out cash and non-cash payment operations	
AURSCA005	Sell automotive products and services	
AURSCA006	Promote automotive products and services	
AURSAA001	Process customer complaints in an automotive workplace	
BSBCUS501	Manage quality customer service	
SIRXSLS002	Follow point-of-sale procedures	
SIRXINV004A	Buy merchandise	
SIRXRSK001A	Minimise theft	
SIRXRSK002	Maintain store security	
SIRXPDK001	Advise on products and services	

Up to **two (2)** relevant Group A elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate III qualification.

Group B Elective units

Select a maximum of **six (6)** units from the following list.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
AURSCA001	Select and supply automotive parts and products	
AURSLA001	Comply with legal requirements when selling automotive products and services	
AURSBA002	Identify and match uncommon automotive parts	
AURTTA017	Carry out vehicle safety inspections	
HLTAID003	Provide first aid	
MSMOPS212	Use organisation computers or data systems	
MSMRVG201	Tow a recreational vehicle safely	
MSMRVT201	Apply technical knowledge of recreational vehicles manufacturing to work activities	
MSMSUP100	Apply workplace context to own job	
MSMSUP106	Work in a team	
MSMSUP280	Manage conflict at work	
MSMSUP291	Participate in continuous improvement	
SITXMPR001	Coordinate production of brochures and marketing materials	
SITXMPR002	Create a promotional display or stand	
UEGNSG615A	Fill LPG cylinders	

Up to **two (2)** relevant Group B elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate II or III qualification.

MSM40116 Certificate IV in Process Manufacturing

Modification History

Release 2. Duplicated information re importation allowance removed. Imported units updated to current versions. Equivalent.

Release 1. Supersedes and is equivalent to MSA40311 Certificate IV in Process Manufacturing. Units updated.

Qualification Description

The MSM40116 Certificate IV in Process Manufacturing provides the competencies required by advanced production workers who use a range of equipment and are involved in solving complex problems that require theoretical knowledge, combined with an understanding of operating procedures directly related to producing products.

This qualification is typically used to develop employees performing a technical role that includes the ability to work independently and conduct technical problem solving according to the needs of the work required to produce products.

This qualification is designed to develop employees who operate across more than one category within process manufacturing or other product conversion processes in manufacturing. Typical applications would be in chemical, hydrocarbons, refining, minerals processing, plastics, rubber, cablemaking, manufactured mineral products, and other areas as appropriate.

Non-technical team leaders, coordinators and supervisors may be better served by a qualification in competitive manufacturing. Qualification pathways from this qualification include MSM50316 Diploma of Production Management and MSS50312 Diploma of Competitive Systems and Practices.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM40116 Certificate IV in Process Manufacturing competency must be achieved in a total of **twenty-six (26)** units of competency.

- **five (5)** core units of competency
- **twenty-one (21)** elective units of competency, as specified below:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- a minimum of **four (4)** units from **Group A**
- the balance of units, to a maximum of **seventeen (17)** may be selected from Groups A, B and C (with a maximum of **eleven (11)** units from Group C).

Note: Up to **nine (9)** elective units may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified below.

Note: Where prerequisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

Unit code	**Unit title**
MSMENV272	Participate in environmentally sustainable work practices
MSMSUP200	Achieve work outcomes
MSMSUP210	Process and record information
MSMWHS200	Work safely
MSS402051	Apply quality standards

ELECTIVE UNITS

Group A Elective units

Unit code	**Unit title**	**Prerequisites**
MEM15001B	Perform basic statistical quality control	
MSL974003	Perform chemical tests and procedures	
MSMENV472	Implement and monitor environmentally sustainable work practices

MSM41015 Certificate IV in Recreational Vehicles

Modification History

Release 3. Imported units updated to current versions. Equivalent.

Release 2. Imported units updated to current version. Equivalent.

Release 1. Supersedes and is equivalent to MSA40510 Certificate IV in Recreational Vehicles.

Qualification Description

The MSM41015 Certificate IV in Recreational Vehicles has been developed as a post-trade level qualification. People with this qualification would be expected to lead work teams and provide supervision of people undertaking the manufacture, service and repair of recreational vehicles, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers

to meet Australian requirements, such as road worthiness and the Australian Design Rule (ADR). They will provide technical leadership as well as undertake some tasks themselves.

They may work in a service and repair facility or a manufacturer's factory. Work may include building a new recreational vehicle, repairs for an insurance claim or other repairs, modifying an existing recreational vehicle or undertaking routine servicing.

They may work in a large manufacturing organisation or a small workshop.

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements depending on the work context. Local regulations should be checked for details.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM41015 Certificate IV in Recreational Vehicles, competency must be

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

achieved in thirty-two (32) units of competency:

- **three (3)** core units of competency
- **twenty-nine (29)** elective units of competency, as specified below:
  - a minimum of **two (2)** units of competency must be selected from Group A
  - a maximum of **fourteen (14)** units of competency may be selected from Group C and D, with a maximum of **six (6)** from Group D
  - the balance of units, must be selected from Groups A and B to bring the total to twenty-nine (29).

Note: Up to **seven (7)** elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified in Groups A, B, C and D.

Note: Where prerequisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

Complete all **three (3)** units from the following list.

Unit code	**Unit title**
MSMENV272	Participate in environmentally sustainable work practices
MSMSUP102	Communicate in the workplace
MSMWHS200	Work safely

ELECTIVE UNITS

Group A Elective units

Select a minimum of **two (2)** units from the following list.

Unit code	**Unit title**	**Prerequisites**
AURATA005	Estimate and quote automotive mechanical and electrical repairs	
AURANN001	Estimate and quote automotive body repairs	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

AURV365356A	Read and interpret vehicle body repair estimation/quotation	
AURVTN032	Determine vehicle body damage and recommend repair procedures	
MEM03006B	Set assembly stations	MEM03001B MEM18001C MEM03003B MEM18002B MEM03004B
MEM16012A	Interpret technical specifications and manuals	
MSMRVS401	Assess and quote to service a recreational vehicle	

Up to **one (1)** relevant Group A elective unit of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where it is available for inclusion at Certificate IV qualification.

Group B - Elective units

Unit code	**Unit title**	**Prerequisites**
AUMGTT001	Apply trim to vehicle components	
AURETR015	Inspect, test and service batteries	
AURETR012	Test and repair basic electrical circuits	
AURETB001	Diagnose and repair electric braking systems	
AURTTB001	Inspect and service braking systems	
AURTTD004	Inspect and service suspension systems	
AURTTJ002	Remove, inspect and refit wheel hubs and associated brake components	
AURTTA017	Carry out vehicle safety inspections	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

AURVTS004	Repair vehicle composite material components	
AURTTY001	Repair vehicle chassis, frame and associated components	
AURVTT015	Fabricate and install canvas products for automotive and marine components	
AURVTT3016	Fabricate frame structures	
AURVTT019	Fabricate and install automotive and marine frames, canopies and side curtains	
CPCPCM2043A	Carry out WHS requirements	
CPCPGS3046A	Install LPG systems in caravans, mobile homes and mobile workplaces	CPCPCM2043A
MEM03001B	Perform manual production assembly	
MEM05005B	Carry out mechanical cutting	MEM12023A MEM18001C
MEM05012C	Perform routine manual metal arc welding	
MEM05050B	Perform routine gas metal arc welding	
MEM07024B	Operate and monitor machine/process	
MEM07028B	Operate computer controlled machines/ processes	MEM07024B
MEM10002B	Terminate and connect electrical wiring	MEM09002B MEM12002B MEM18001C
MEM12002B	Perform electrical/electronic measurement	
MEM12023A	Perform engineering measurements	
MEM18038B	Maintain wheels and tyres	MEM18001
MEM18045B	Fault find/repair electrical equipment/components up to 250 volts single phase supply	MEM09002B MEM10002B MEM12002B MEM12023A

		MEM18001C MEM18002B
MSMOPS101	Make measurements	
MSMRV310	Fit recreational vehicle floor	
MSMRV311	Fit furniture in a recreational vehicle	
MSMRV312	Fit water systems in a recreational vehicle	
MSMRV313	Fit 12 V cable systems in a recreational vehicle	
MSMRV314	Construct and fit roof to a recreational vehicle	
MSMRV315	Construct and fit slide out in a recreational vehicle	
MSMRV316	Fit appliances in a recreational vehicle	
MSMRV317	Install solar equipment on a recreational vehicle	
MSMRV318	Fit cladding to a recreational vehicle	
MSMRV319	Fit front and rear moulds to a recreational vehicle	
MSMRV320	Fit windows and doors to a recreational vehicle	
MSMRV321	Fit required external items to a recreational vehicle	
MSMRV322	Fit required external electrical components to a recreational vehicle	
MSMRV323	Fit required internal items to a recreational vehicle	
MSMRV324	Conduct final quality inspection for a recreational vehicle	
MSMRV325	Fabricate a chassis and suspension for a recreational vehicle	
MSMRV365	Remove and refit body moulding	
MSMRV366	Fit transfers and decals to a recreational vehicle	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMRVS202	Repair/service LPG systems in a recreational vehicle	

Up to **two (2)** relevant Group B elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate III qualification.

Group C Elective units

Unit code	**Unit title**	**Prerequisites**
MEM13002B	Undertake occupational health and safety activities in the workplace	
MEM13010A	Supervise occupational health and safety in an industrial work environment	MEM13002B
MEM14001B	Schedule material deliveries	
MEM14002B	Undertake basic process planning	
MEM14003B	Undertake basic production scheduling	
MEM16002C	Conduct formal interviews and negotiations	
MEM16006A	Organise and communicate information	
MEM30013A	Assist in the preparation of a basic workplace layout	
MSMENV472	Implement and monitor environmentally sustainable work practices	
MSMSUP200	Achieve work outcomes	
MSMSUP383	Facilitate a team	
MSMSUP390	Use structured problem-solving tools	
MSS402002	Sustain process improvements	
MSS402081	Contribute to the application of a proactive maintenance strategy	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSS403002	Ensure process improvements are sustained	
MSS403011	Facilitate implementation of competitive systems and practices	
MSS403021	Facilitate a Just in Time system	
MSS403040	Facilitate and improve implementation of 5S	
MSS403041	Facilitate breakthrough improvements	
MSS403051	Mistake proof an operational process	
MSS404082	Assist in implementing a proactive maintenance strategy	

Up to **two (2)** relevant Group C elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate IV qualification.

Group D Elective units

Unit code	**Unit title**	**Prerequisites**
MEM09002B	Interpret technical drawing	
MEM11010B	Operate mobile load shifting equipment	
MEM14004A	Plan to undertake a routine task	
MEM15024A	Apply quality procedures	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MSMOPS102	Perform tasks to support production	
MSMOPS200	Operate equipment	
MSMOPS212	Use organisation computers or data systems	
MSMPER200	Work in accordance with an issued permit	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMRVT201	Apply technical knowledge of recreational vehicle manufacturing to work activities	
MSMSUP100	Apply workplace context to own job	
MSMSUP101	Clean workplace or equipment	
MSMSUP106	Work in a team	
MSMSUP240	Undertake minor maintenance	
MSMSUP273	Handle goods	
MSMSUP280	Manage conflict at work	
MSMSUP291	Participate in continuous improvement	
MSMWHS110	Follow emergency response procedures	
MSMWHS205	Control minor incidents	
MSS402021	Apply Just in Time procedures	
MSS402040	Apply 5S procedures	
MSS402080	Undertake root cause analysis	
PMBHAN103	Shift materials safely by hand	
TLID2010	Operate a forklift	
Up to **two (2)** relevant Group D elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate II or III qualification.

MSM41115 Certificate IV in Recreational Vehicle and Accessories Retailing

Modification History

Release 3. Imported units updated to current versions. Equivalent.

Release 2. Imported units updated to current version. Equivalent.

Release 1. Supersedes and is equivalent to MSA40710 Certificate IV in Recreational Vehicle and Accessories Retailing.

Qualification Description

The MSM41115 Certificate IV in Recreational Vehicle and Accessories Retailing has been developed as a post-trade level qualification. People with this qualification would be expected to lead sales teams and provide supervision of people in the sale of recreational vehicles and accessories, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers.

They will provide technical leadership as well as undertake some tasks themselves.

They may work in a service and repair facility or a manufacturer's factory undertaking sales work. Sales may be for a new recreational vehicle, a second-hand/refurbished recreational vehicle or spare parts and accessories. In some cases selling of the recreational vehicle may also include possible modifications that could be made to the recreational vehicle.

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements depending on the work context. Local regulations should be checked for details.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM41115 Certificate IV in Recreational Vehicle and Accessories

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Retailing competency must be achieved in **thirty-two (32)** units of competency:

- **three (3)** core units of competency
- **twenty-nine (29)** elective units of competency, as specified below:
  - a minimum of **two (2)** units of competency must be selected from Group A
  - a maximum of **fourteen (14)** units of competency may be selected from Groups C and D, with a maximum of **six (6)** from Group D
  - the balance of units, must be selected from Groups A and B to bring the total to **twenty-nine (29)**.

Note: Up to **seven (7)** relevant units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified in Groups A, B, C and D.

Note: Where prerequisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

Complete all **three (3)** units from the following list.

Unit code	**Unit title**
MSMENV272	Participate in environmentally sustainable work practices
MSMSUP102	Communicate in the workplace
MSMWHS200	Work safely

Group A Elective units

Select a minimum of **two (2)** units from the following list.

Unit code	**Unit title**	**Prerequisites**
AURACA002	Manage complex customer requirements in an automotive workplace	
AURATA005	Estimate and quote automotive mechanical and electrical repairs	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

AURANN001	Estimate and quote automotive body repairs	
AURV365356A	Read and interpret vehicle body repair estimation/quotation	
AURVTN032	Inspect vehicle damage and determine repair procedures	
MEM16003B	Provide advanced customer service	
MEM16012A	Interpret technical specifications and manuals	
SIRRMER003	Coordinate visual merchandising activities	
SIRXMER004A	Manage merchandise and store presentation	
SITXMPR004	Coordinate marketing activities	

Up to **one (1)** relevant Group A elective unit of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where it is available for inclusion at Certificate IV qualification.

Group B Elective units

Unit code	**Unit title**	**Prerequisites**
AUMANA001	Prepare and document quotations	
AURACA001	Respond to customer needs and enquiries in an automotive workplace	
AURC341903A	Apply relevant finance, leasing and insurance contracts/policies	
AURACA003	Build customer relations in an automotive workplace	
AURAMA004	Maintain business image in an automotive workplace	
AURAMA005	Manage complex customer issues in an automotive workplace	
AURSCA002	Present automotive products and services for sale	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

AURSCA003	Apply sales procedures in an automotive workplace	
AURSCA004	Carry out cash and non-cash payment operations	
AURSCA005	Sell automotive products and services	
AURSCA006	Promote automotive products and services	
AURSAA001	Process customer complaints in an automotive workplace	
BSBCUS501	Manage quality customer service	
SIRXSLS002	Follow point-of-sale procedures	
SIRXINV004A	Buy merchandise	
SIRXRSK001A	Minimise theft	
SIRXRSK002	Maintain store security	
SIRXPDK001	Advise on products and services	

Up to **two (2)** relevant Group B elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate III qualification.

Group C Elective units

Unit code	**Unit title**	**Prerequisites**
AURAAA002	Determine retail rates for automotive products and services	
AURAFA004	Resolve routine problems in an automotive workplace	
AURAKA002	Adapt work processes to new technologies in an automotive workplace	
AURAMA006	Contribute to planning and implementing business improvement in an automotive workplace	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13002B	Undertake occupational health and safety activities in the workplace	
MEM13010A	Supervise occupational health and safety in an industrial work environment	MEM13002B
MEM15002A	Apply quality systems	
MEM15004B	Perform inspection	
MEM16002C	Conduct formal interviews and negotiations	
MEM16006A	Organise and communicate information	
MEM22015A	Source and estimate engineering materials requirement's	
MSMENV472	Implement and monitor environmentally sustainable work practices	
MSMRVS401	Assess and quote to service a recreational vehicle	
MSS403040	Facilitate and improve implementation of 5S	
MSMSUP200	Achieve work outcomes	
MSMSUP383	Facilitate a team	
MSMSUP390	Use structured problem-solving tools	
PSPGEN029	Value diversity	
SITXMGT002	Establish and conduct business relationships	
TAEASS401	Plan assessment activities and processes	
TAEASS402	Assess competence	
TAEASS403	Participate in assessment validation	
TAEDEL301	Provide work skill instruction	

Up to **two (2)** relevant Group C elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate III or IV qualification.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Group D Elective units

Unit code	Unit title	Prerequisites
AURSCA001	Select and supply automotive parts and products	
AURSLA001	Comply with legal requirements when selling automotive products and services	
AURSBA002	Identify and match uncommon automotive parts	
AURTTA017	Carry out vehicle safety inspections	
HLTAID003	Provide first aid	
MSMOPS212	Use enterprise computers or data systems	
MSMRVG201	Tow a recreational vehicle safely	
MSMRVT201	Apply technical knowledge of recreational vehicles manufacturing to work activities	
MSMSUP100	Apply workplace context to own job	
MSMSUP106	Work in a team	
MSMSUP280	Manage conflict at work	
MSMSUP291	Participate in continuous improvement	
SITXMPR001	Coordinate production of brochures and marketing materials	
SITXMPR002	Create a promotional display or stand	
UEGNSG615A	Fill LPG cylinders	

Up to **two (2)** relevant Group D elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate II, III or IV qualification.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSM50316 Diploma of Production Management

Modification History

Release 2. Imported units updated to current versions. Equivalent.

Release 1. Units updated. Supersedes and is equivalent to MSA50311 Diploma of Production Management.

Qualification Description

The MSM50316 Diploma of Production Management provides the skills and knowledge required to plan, direct and coordinate production activities in a manufacturing environment. The qualification has been developed with the process manufacturing sector as a focus. It may also be applied in other organisations in the value chain.

The qualification has been developed on an assumption that competency will be developed through a combination of on and off-the-job learning strategies.

The MSM50315 Diploma of Production Management specifies the competencies required for employment in job roles related to assisting organisations to improve production. Employment outcomes related to this qualification may include roles such as a production or operations manager.

This qualification provides skills that can be applied to the design and control of production systems within an organisation, including:

- planning and scheduling
- tracking and analysing
- directing and operating.

This qualification provides the skills needed to assist organisations to improve production where competitive systems and practices (lean) processes are not fully employed. It therefore complements but does not duplicate qualifications supplying skills related to competitive systems and practices. Where these skills are required the MSS50312 Diploma of Competitive Systems and Practices should be considered.

This qualification can be accessed by direct entry. However, entrants for the qualification should already possess operational or technical skills related to the organisation seeking production improvements, either through prior relevant experience or qualifications. For this reason the qualification is not suitable as an entry-level qualification for school leavers.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM50316 Diploma of Production Management, competency must be achieved in **ten (10)** units of competency:

- **one (1)** core unit of competency
- **nine (9)** elective units of competency, chosen as specified below:
  - a minimum of **one (1)** unit must be selected from each of Group A, Group B and Group C
  - the balance of units, to a maximum of **six (6)**, can be selected from:
    - units from Group A, B or C, not previously selected
    - a maximum of **three (3)** relevant units from this Training Package, other endorsed Training Packages and accredited courses, where those units are packaged in a Diploma.

Note: Where prerequisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

Unit code	**Unit title**
MSMENV472	Implement and monitor environmentally sustainable work practices

ELECTIVE UNITS

Group A Elective units

Unit code	**Unit title**	**Prerequisites**
BSBFIM501	Manage budgets and financial plans	
FNSORG501	Develop and manage a budget	
MEM14001B	Schedule material deliveries	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSMOPS401	Trial new process or product	
MSMSUP330	Develop and adjust a production schedule	
MSS404060	Facilitate the use of planning software systems in a work area or team	
MSS405003	Manage a value stream	
MSS405022	Design a process layout	
MSS405030	Optimise cost of product or service	
MSS405060	Develop the application of enterprise control systems in an organisation	
MSS405075	Facilitate the development of a new product	MSS404052
PSPHRM004	Implement workforce planning and succession strategies	
TLIL4059	Implement asset management systems	
TLIL5055	Manage a supply chain	
TLIP4013	Implement and monitor logistics planning and process	
TLIR4008	Implement and supervise stocktaking procedures	
TLIR4009	Implement purchasing systems	
TLIR4010	Plan purchasing	
TLIR5006	Develop, implement and review purchasing strategies	
TLIX5015	Establish supply chains	

Group B Elective units

Unit code	**Unit title**	**Prerequisites**
BSBMGT403	Implement continuous improvement	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM11007B	Administer inventory procedures	
MEM11015B	Manage warehouse inventory system	MEM11007B MEM15002A
MEM15002A	Apply quality systems	
MSMSUP390	Use structured problem-solving tools	
MSMSUP400	Develop and monitor quality systems	
MSL936001	Maintain quality system and continuous improvement processes within work or functional area	
MSS402030	Apply cost factors to work practices	
MSS404052	Apply statistics to operational processes	
MSS405031	Undertake value analysis of a product or process costs in terms of customer requirements	
MSS405032	Analyse cost implications of maintenance strategy	
MSS405050	Determine and improve process capability	MSS404052
MSS405053	Manage application of six sigma for process control and improvement	MSS404052
MSS405061	Determine and establish information collection requirements and processes	
MSS405081	Develop a proactive maintenance strategy	
MSS405082	Adapt a proactive maintenance strategy to the process operations sector	MSS405081
PMAOPS500	Optimise production systems	

Group C Elective units

Unit code	**Unit title**	**Prerequisites**
BSBADM502	Manage meetings	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

BSBINM501	Manage an information or knowledge management system	
BSBLED401	Develop teams and individuals	
BSBLDR402	Lead effective workplace relationships	
BSBMGT401	Show leadership in the workplace	
BSBMGT502	Manage people performance	
BSBMGT605	Provide leadership across the organisation	
BSBWHS401	Implement and monitor WHS policies, procedures and programs to meet legislative requirements	
BSBWRK510	Manage employee relations	
BSBWRT401	Write complex documents	
MEM11007B	Administer inventory procedures	
MEM11012B	Purchase materials	
MSMENV672	Develop workplace policy and procedures for environmental sustainability	
MSMWHS401	Assess risk	
MSMWHS503	Maintain the workplace WHS management system	
MSMWHS510	Manage risk	
MSL915001	Provide information to customers	
MSS015002	Develop strategies for more sustainable use of resources	
MSS015015	Evaluate sustainability impact of a process	
MSS405011	Manage people relationships	
MSS405012	Manage workplace learning	
MSS405041	Implement improvement systems in an organisation	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSS405070	Develop and manage sustainable energy practices	
PMASUP520	Review procedures to minimise environmental impact of process	
PMASUP620	Manage environmental management system	
PSPPM501B	Design complex projects	
PSPPM502B	Manage complex projects	
PSPPM503B	Close complex projects	
TLIA5058	Manage facility and inventory requirements	
TLIR4003	Negotiate a contract	
TLIR5005	Manage a contract	
A maximum of **three (3)** relevant units may be selected from this Training Package, other endorsed Training Packages and accredited courses, where those units are packaged in a Diploma.

MSM51015 Diploma of Recreational Vehicles

Modification History

Release 3. Imported units updated to current versions. Equivalent.

Release 2. Imported units updated to current version. Equivalent.

Release 1. Supersedes and is equivalent to MSA50510 Diploma of Recreational Vehicles.

Qualification Description

The MSM51015 Diploma of Recreational Vehicles has been developed to reflect the role of senior technicians and managers in a recreational vehicle manufacturing, repair or service organisation. People with this qualification would be expected to undertake technical projects and/or manage departments or entire organisations undertaking the manufacture, service and repair of recreational vehicles, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers.

They may work in a service and repair facility or a manufacturer's factory. The organisation may build new recreational vehicles, repair recreational vehicles for insurance claims, modify existing recreational vehicles or undertake routine servicing.

They may work in a large manufacturing organisation or a smaller workshop.

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements depending on the work context. Local regulations should be checked for details.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MSM51015 Diploma of Recreational Vehicles, competency must be achieved in **ten** (10) units of competency:

- **three (3)** core units of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- **seven (7)** elective units of competency, as specified below:
  - a minimum of **two (2)** units of competency must be selected from Group A
  - the balance of units, to a maximum of **five (5)**, may be selected from:
    - units not previously selected from Group A
    - Group B units listed below.

Note: Up to **two (2)** elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified in Groups A and B.

Note: Where prerequisite units are identified they must be counted in the total number of units required for achievement of the qualification.

Core units

Complete all **three (3)** units from the following list.

Unit code	**Unit title**
MSMENV272	Participate in environmentally sustainable work practices
MSMSUP210	Process and record information
MSMWHS200	Work safely

ELECTIVE UNITS

Group A Elective units

Select a minimum of **two (2)** units from the following list.

Unit code	**Unit title**	**Prerequisites**
AURV365356A	Read and interpret vehicle body repair estimation/quotation	
AURVTN032	Inspect vehicle damage and determine repair procedures	
MEM09002B	Interpret technical drawing	
MEM09204A	Prepare basic engineering detail drawings	MEM09002B

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM09009C	Create 2D drawings using computer-aided design (CAD) system	MEM09002B MEM16008A
MEM09210A	Create 3-D solid models using computer aided design system	MEM09002B MEM30031A
MEM16008A	Interact with computing technology	
MEM16009A	Research and analyse engineering information	MEM16006A MEM16012A
MEM16012A	Interpret technical specifications and manuals	
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
MSS405075	Facilitate the development of a new product	MSS404052

Up to **one (1)** relevant Group A elective unit of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where it is available for inclusion at a Diploma level qualification.

Group B Elective units

Unit code	**Unit title**	**Prerequisites**
AUMFTA001	Document manufacturing design processes	
AURALA001	Comply with legal aspects of a service and repair contract in an automotive workplace	
AURAMA006	Contribute to planning and implementing business improvement in an automotive workplace	
AURAFA007	Develop and document specifications and procedures	
AURTNA001	Estimate and quote automotive vehicle or machinery modifications	
BSBFIM501	Manage budgets and financial plans	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM11007B	Administer inventory procedures	
MEM11012B	Purchase materials	
MEM11017B	Organise and lead stocktakes	MEM11007B
MEM14001B	Schedule material deliveries	
MEM15004B	Perform inspection	
MEM15005B	Select and control inspection processes and procedures	MEM15004B

AUMANA001 Prepare and document quotations

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMANA3001 Prepare and document quotation

Application

This unit describes the performance outcomes required to determine job requirements and produce a quotation for a customer.

It applies to those in an automotive environment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Competency Field

Manufacturing - Common

Unit Sector

Loss Assessment or Repair Quoting

Elements and Performance Criteria

Elements Elements describe the essential outcomes	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Determine customer requirements	1.1 Customer requirements are established and job parameters specified according to workplace procedures 1.2 Customer requirements are compared with existing workplace products and services 1.3 Variations required by the customer are established
2. Estimate the job	2.1 Variations from standard workplace product or service are identified and estimated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
	2.2 Additional processes, parts and skills required to meet customer requirements are estimated 2.3 Workplace job costing procedures, including ***cost-reduction initiatives***, are used to estimate materials, parts, labour and equipment costs for the job 2.4 Estimates for contingencies and changed work requirements are included in the total job cost
3. Document and confirm quotation	3.1 Quotation is prepared and confirmed with client according to workplace procedures 3.2 Customer purchase and payment arrangements are negotiated 3.3 Changes and variations are negotiated to meet customer and workplace needs 3.4 Workplace record and customer file are processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	• identify job and customer requirements • interpret workplace procedures and specifications relating to quotation.
Writing skills to:	• produce job requirements and material lists • legibly complete quotation, associated workplace records and customer file.
Oral communication skills to:	• communicate and negotiate with customers.
Numeracy skills to:	• identify customer specifications • determine job budget including, materials, parts, labour and equipment costs • estimate contingencies and changed work requirements • produce a quotation that has mathematical information legibly embedded.
Planning and organising skills to:	• determine order and timing of processes.
Problem-solving skills to:	• determine process needed to fulfil customer product or service

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
	requirements.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Cost-reduction initiatives must include:	• continuous improvement programs • waste avoidance.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AUMANA001 Prepare and document quotations

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMANA3001 Prepare and document quotation

Performance Evidence

Before competency can be determined, individuals must have competently prepared and documented a quotation on a minimum of three occasions.

Individuals must demonstrate they can:

- prepare a detailed estimate of job labour, parts, equipment and materials based on customer requirements
- accurately estimate the job, allowing for contingencies
- prepare a detailed, legible quotation document
- follow workplace procedures when preparing and processing the quotation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- procedures for determining and negotiating customer requirements in order to prepare a quotation
- procedures for planning and estimating a job, including:
  - methods of determining labour rates and job time length
  - methods of determining job processes and material requirements
  - methods of planning for contingencies
- cost minimisation and waste avoidance procedures and practices
- workplace quotation flow chart.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to quotations they have prepared.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- real or simulated customer product or service requiring a quotation
- workplace documentation for estimating and preparing a quotation
- workplace procedures for preparing and processing a quotation.

AUMFTA001 Document manufacturing design processes

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMFTA3001 Document designs

Application

This unit describes the performance outcomes required to document the design details of the production processes of vehicles and their components.

It applies to those in an automotive and related manufacturing environment and involves the application of skills and knowledge at a specialist level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Manufacturing - Passenger Vehicle

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Identify document needs	1.1 Design brief and ***requirements*** are identified and confirmed with appropriate personnel 1.2 Production processes, drawings, technical specifications and instructions are identified and clarified with participating personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
2. Develop draft documents	2.1 Draft ***documents*** relating to the specification, costing, manufacture and assembly of products are prepared according to workplace procedures 2.2 Draft document content is confirmed with relevant personnel and their feedback integrated as appropriate
3. Finalise documentation process	3.1 Approved documents are communicated to relevant production, management and engineering personnel 3.2 Documents are distributed and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	• interpret production and work area requirements • interpret workplace procedures and product specifications • interpret design brief.
Writing skills to:	• legibly complete design documents.
Oral communication skills to:	• communicate and negotiate with workplace personnel on document design and content.
Numeracy skills to:	• quantify workplace document needs • determine document budget, materials and resources • produce a document with mathematical information.
Digital literacy skills to:	• use workplace computer programs and design applications.
Initiative skills to:	• adapt to document design requirements.
Planning and organising skills to:	• manage document research, design and development time.
Problem-solving skills to:	• identify problems, particularly in production, to meet performance indicators • access, interpret and apply workplace procedures and instructions to ensure documents meet workplace template requirements and standards.
Teamwork skills to:	• work in a design consultation process.

Assessment Requirements for AUMFTA001 Document manufacturing design processes

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMFTA3001 Document designs

Performance Evidence

Before competency can be determined, individuals must have competently developed and designed workplace documents on a minimum of two occasions.

Individuals must demonstrate they can:

- comply with workplace procedures when designing production documents
- apply working knowledge of production practices and systems
- identify design requirements
- communicate with internal personnel to seek their input into and approval of documents
- design and modify documents
- incorporate design quality, materials, production processes, testing and costing into document design process
- complete, disseminate and store design documents.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace documents covering procedures, specifications, schedules, quality instructions, procedures and performance indicators
- workplace communication protocols for developing and disseminating design documentation
- processes to identify design requirements
- processes to identify critical product quality, materials, tests and costing
- processes for developing and storing documents.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the automotive production documents that they have designed, e.g. a copy of the production documents.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- real or simulated automotive production document requirements
- automotive production document design brief and development instructions
- computer system and design software
- workplace procedures relating to the design of automotive production documents.

AUMGTT001 Apply trim to vehicle components

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMGTT2001 Apply trim to components

Application

This unit describes the performance outcomes required to measure, cut and attach trim materials to vehicle components.

It applies to those in an automotive manufacturing environment and involves the application of skills and knowledge at a production worker level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Manufacturing - Bus, Truck and Trailer

Unit Sector

Technical - Trimming and Upholstery

Elements and Performance Criteria

Elements Elements describe the essential outcomes	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Plan and prepare	1.1 Work orders, job specifications and working drawings are identified, interpreted and confirmed 1.2 Trim materials, tools and equipment are selected and inspected, and faults repaired or reported
2. Match materials	2.1 Trim materials are matched, measured and cut according to job specifications and workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
	2.2 Material characteristics are identified and selected for use 2.3 Attaching or bonding information is identified and interpreted from ***appropriate sources***
3. Attach materials	3.1 ***Workplace procedures*** are identified and followed 3.2 Trim materials are pre-fitted and checked for alignment, appearance and quality according to job specifications 3.3 Trim materials are attached to components by approved methods
4. Complete work processes	4.1 Tools and equipment are cleaned, inspected and stored according to workplace procedures 4.2 Faulty equipment is identified, reported and tagged 4.3 Work areas are cleaned, and unused materials stored 4.4 Waste materials are removed and disposed of or recycled according to workplace environmental procedures 4.5 Work sheets are completed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	• interpret work health and safety (WHS) requirements and workplace procedures • interpret machine safe operating procedures • interpret job specifications, work orders and working drawings.
Writing skills to:	• complete work sheets and job schedules • prepare work plans and inspection reports • complete machine maintenance forms • complete faulty equipment tags • complete job consumable lists.
Oral communication skills to:	• confirm work orders and job specifications with appropriate personnel • report faults with materials, tools and equipment.
Numeracy skills to:	• calculate material length, width and height • calculate measurements from working drawings • mark out materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• set trimming machine settings • use measuring equipment • identify common 2D and 3D trim shapes.
Initiative skills to:	• adapt to changing work conditions.
Planning and organising skills to:	• interpret and apply information on job requirements, quality and workplace procedures • plan work from work orders.
Self-management skills to:	• take responsibility for organising own work.
Problem-solving skills to:	• access, interpret and apply information on workplace procedures and instructions.
Teamwork skills to:	• solve problems particularly in teams in order to meet job outcomes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Appropriate sources must include:	• customer requirements • material and product specifications.
Workplace procedures must include:	• procedures for recording and reporting the application of trim to vehicle components • use of tools and equipment for applying trim to vehicle components • WHS requirements for applying trim to vehicle components • workplace quality standards relevant to applying trim to vehicle components.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AUMGTT001 Apply trim to vehicle components

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMGTT2001 Apply trim to components

Performance Evidence

Before competency can be determined, individuals must have competently applied trim to vehicle components on a minimum of three occasions.

Individuals must demonstrate they can:

- locate, interpret and apply work information and specifications relating to applying trim to vehicle components
- use trimming, bonding and attaching equipment safely
- cut covers and trim to job specifications
- select appropriate bonding and attaching processes for applying trim to vehicle components
- attach trim to vehicle components according to workplace procedures and work health and safety (WHS) requirements
- complete work sheets relating to applying trim to vehicle components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- WHS requirements relevant to applying trim to vehicle components
- procedures for trim matching, measuring and calculating required trim dimensions
- trim cutting procedures
- trim application and removal methods
- trim adjustment methods
- types and use of materials and equipment relevant to applying trim to vehicle components, including:
  - glues
  - rivets
  - trim cutting equipment
  - trim forming equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - trim stapling equipment
- sewing procedures of vehicle trim.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle components to which they have applied trim, e.g. production work sheets.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- trim application work sheets, instructions and job specifications
- vehicle trimming materials, equipment and consumables
- vehicle components that require trimming
- personal protective equipment (PPE) relevant to applying trim to vehicle components.

AURAAA002 Determine retail rates for automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to calculate fixed and variable costs to determine retail labour rates and cost of products and services for sale in automotive service and repair workplaces.

It applies to those working in administrative and sales areas of an automotive workplace who are required to calculate costs of products and services to ensure business profitability.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Administration

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Determine fixed costs	1.1 Fixed cost components are identified and classified into

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	categories 1.2 Past records and business requirements are used to estimate fixed costs for next period 1.3 Fixed administrative and business operation overhead costs are calculated 1.4 Proportion of fixed costs to be included in retail rates is determined
2. Determine labour rate	2.1 Cost components of labour are identified and classified into categories 2.2 Average charge per hour for each identified category is calculated 2.3 Cost component of subcontractors used on jobs is determined and included in calculations for relevant jobs 2.4 ***Hourly labour rates*** are calculated according to workplace procedures
3. Determine variable costs	3.1 Variable costs are identified and calculated using data obtained from accounting records or supplier information 3.2 Required materials are estimated and recorded
4. Determine retail price of products and services	4.1 ***Previous sales figures*** and trends in turnover volume are reviewed 4.2 Competitors' price for similar products or services is researched and reflected in final retail rate 4.3 Retail prices, margins and mark-ups for each product or service category are finalised according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Reading skills to:	• access and research pricing information in order to cost products and services.
Writing skills to:	• legibly and accurately enter data and record information in workplace documentation • prepare quotations and reports based on pricing and costing of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
	products and services.
Numeracy skills to:	• perform mathematical operations, including, addition, subtraction, multiplication, division, percentages and fractions, relating to quantity and time • use mathematical ideas and techniques to calculate fixed and variable costs, labour rates, and profit margins.
Digital literacy skills to:	• use digital systems and software to access, filter, extract and organise information in order to determine costs and retail rates of work, including spreadsheets and databases.
Self-management skills to:	• follow workplace procedures and prepare retail rates and price information within workplace timeframes.
Problem solving skills to:	• determine pricing to meet workplace requirements relating to profitability and break even points.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Hourly labour rates must include:	• provision for:
	  • fixed costs
	  • on costs.

Previous sales figures must include:	• wholesale cost of product or service • retail price of product or service.

Assessment Requirements for AURAAA002 Determine retail rates for automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- research and compare costs from external suppliers and competitors for:
  - two automotive workplace services
  - one consumable item
  - one automotive accessory product
- calculate retail rates for above products and services.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- basic accounting principles and practices relating to costings:
  - Goods and Services Tax (GST) calculations
  - mark-up, break even and profit calculations
  - simple and compound interest
  - inflation effects
  - straight line depreciation
- factors impacting on pricing products and services:
  - overheads, including accommodation costs, utilities, depreciation, insurances, licences and other business charges
  - labour costs, including on costs covering leave provision, superannuation, training and workers' compensation
  - actual employee chargeable hours
- sources of information on prices and costs:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - supplier or component price lists
  - accounting records
  - labour or payroll records
  - purchasing records
  - repair orders and job cards
  - standard repair and warranty times
- key features of workplace software and technology relating to extracting and manipulating data and information.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to determining retail rates for automotive products and services, e.g. itemised calculation of retail rate.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- range of information and data relating to product and service costs, including supplier price lists, workplace sales and service data, financial data and payroll records
- calculator, computer hardware and software, and general office equipment.

Assessment Requirements for AURACA001 Respond to customer needs and enquiries in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- identify needs or enquiries of three different customers with different requirements, including one dissatisfied customer
- provide advice or information on automotive products and services to above customers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- techniques for assisting customers, including:
  - effective questioning
  - active listening
  - building rapport
  - explaining clear options
  - making recommendations
  - finalising contact
- customer service standards and practices relevant to automotive workplaces, including:
  - greeting and farewelling customers
  - recording customer requirements and enquiries
  - customer service delivery standards
  - contact and follow-up procedures
- indicators of customer dissatisfaction, including verbal and non-verbal cues
- techniques for resolving customer problems, including procedures for complaint escalation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- key legal requirements relating to customer rights as a consumer, and business obligations under Australian Consumer Law (ACL)
- procedures for making referrals relating to:
  - customer dissatisfaction
  - suppliers of other products and services
- key features and benefits of workplace-specific products and services
- techniques for undertaking basic calculations to provide information to customers relating to quantities, timeframes, and delivery of automotive products and services.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having responded to customer needs and enquiries, e.g. complaints register.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following must be made available:

- automotive workplace or simulated workplace
- three different customers with different requirements, including one dissatisfied customer.

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Confirm customer requirements	1.1 Collaborative techniques, including active listening and questioning, are used to elicit, clarify and confirm customer requirements 1.2 Customer requirements are clearly and legibly documented according to workplace procedures and organisational legal requirements 1.3 Customer acknowledgement and confirmation of the documented requirements are obtained
2. Advise customer of available options	2.1 Viable options are generated in response to customer needs and workplace legal requirements according to workplace procedures 2.2 Further information is researched as required to confirm or clarify options 2.3 ***Options*** are explained and discussed with customer to assist informed decision making 2.4 Supporting information is provided as required to assist customer understanding 2.5 Sales or service conditions are communicated verbally or in writing according to workplace procedures
3. Agree action plan with customer	3.1 Customer's preferred option is detailed and ***documented in action plan*** 3.2 Customer commitment to agreed action plan is gained according to workplace procedures 3.3 Assistance in completing relevant documentation is provided to customers as required 3.4 Customer feedback is sought on services provided

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• use customer feedback and experience to inform future options and customer dealings.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Reading skills to:	• interpret sales or service conditions relating to workplace products and services • research and review information about product and service options that meet customer needs.
Writing skills to:	• legibly and accurately complete workplace action plans, quotations and documentation outlining customer requirements and options.
Oral communication skills to:	• summarise and present key information in presenting options to customers • relate to people from diverse backgrounds using clear language and tone, and unambiguous terminology.
Numeracy skills to:	• use mathematical operations, including addition, subtraction, multiplication, division, and percentages, to determine price and timeframes suitable to customer options.

Digital literacy skills to:	• use digital systems and tools to:
	  • communicate with others
	  • access, search and retrieve information relating to products and services.

Planning and organising skills to:	• use a planned approach to sequence and schedule customer requirements in the action plan.
Problem solving skills to:	• develop solutions unique to a customer and their issue • use conflict resolution techniques to avoid escalation of issues.
Technology skills to:	• use office equipment to prepare written information and to communicate with customers and suppliers via a range of channels.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Options must include:	• benefits • timeframes • approximate costs.
Documented action plan must include:	• agreed delivery timeframe • agreed cost.

Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- develop an action plan for three different customers with different complex requirements relating to automotive products or services, which must include:
  - costing details
  - quotation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- negotiation, communication and problem-solving techniques, including:
  - active listening
  - questioning techniques
  - interpreting body language
  - negotiating or closing a deal
- types of complex customer requirements relating to:
  - cost requirements
  - warranty requirements
  - customised, bespoke, or unusual requirements
  - special timeframes
  - availability of parts or components
  - requirements of special or important customers
  - complex technical problems
  - matters involving more than one solution or area of service

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - needs of customers dissatisfied with previously provided product or service
  - complex financial or insurance arrangements
- key legal requirements relating to customer rights as a consumer, and business obligations under Australian Consumer Law (ACL), including:
  - anti-discrimination
  - equal opportunity
  - privacy and confidentiality
  - consumer protection and rights
  - freedom of information
- industry codes of practice and ethical principles, including duty of care and consumer access to appeal processes
- workplace policies and procedures relating to:
  - customer service
  - feedback and complaints handling
  - quality requirements
  - documentation and recording procedures
- detailed automotive product and service knowledge relevant to workplace, manufacturers or suppliers
- sources of additional information about automotive products and services, including:
  - manufacturers and suppliers
  - internet and social media
  - competitors.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having managed complex customer issues in an automotive workplace, e.g. complaints register.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

Assessment Requirements for AURACA003 Build customer relations in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- update and maintain a customer database according to workplace procedures
- provide a report that shows evidence of monitoring and reviewing information relating to customer needs and value-adding opportunities
- provide evidence of conducting one of the following activities to address customer service standards and requirements:
  - staff or team meeting
  - staff or team training session
  - staff or team information session
  - staff or team member feedback or review.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- procedures for using workplace databases, including:
  - accessing database and entering data
  - retrieving data
  - analysing data, including basic statistical processes, including mean, median and mode
  - presenting data, including tables and graphs
- customer service principles and practices relevant to automotive workplaces, including:
  - recording customer requirements and enquiries
  - contact and follow-up procedures
  - feedback and complaints handling, including feedback surveys

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- techniques for value adding to customer services, including creating positive consumer experiences through customer-centred approaches
- procedures for comparing actual customer service operations against expected operations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to customer relationship building activities in an automotive workplace, e.g. customer feedback surveys.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources should be made available:

- automotive workplace or simulated workplace
- office equipment, computer and database software
- customer database containing customer information and data
- workplace procedures relating to customer service and use of database.

AURAFA004 Resolve routine problems in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify, clarify and resolve routine basic problems commonly encountered in an automotive workplace. It involves determining and implementing solutions to identified problems, and identifying and reporting on their effectiveness.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Foundation Skills

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and clarify	1.1 Early indicators of ***problems*** are identified or anticipated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
nature of the routine problem	1.2 Existence of actual problem is verified 1.3 Information regarding problem is gathered from a variety of sources 1.4 Key components of problem are identified within available timeframe
2. Determine, implement and evaluate solution	2.1 Range of possible methods for resolving the problem are identified 2.2 Strengths and weaknesses of each option are analysed 2.3 Optimal solution is determined and applied within workplace timeframes 2.4 Effectiveness of solution is evaluated against options and modifications to solution are made, as required
3. Assist others to identify, clarify and resolve problems	3.1 Assistance is provided to help others identify routine problems 3.2 Problem is discussed with others and any previous solutions are used to help resolve problem

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• identify own skills and abilities required to perform the job and learning opportunities to gain skills to solve day-to-day problems.
Reading skills to:	• interpret and understand written documentation found in the automotive workplace.
Writing skills to:	• legibly and accurately fill out workplace documentation, such as quality control sheets and graphs, problem solving checklists and reports.
Oral communication skills to:	• speak clearly to be understood • speak using appropriate automotive workplace terms • use appropriate gestures to assist with understanding • listen effectively and give feedback to sender to confirm clear understanding.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Teamwork skills to:	• apply knowledge of own role to complete activities efficiently to support team activities and tasks.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Problems must include:	• problems in normal work activities within the scope of own responsibility of that of the work group • problems caused by internal or external changes in work conditions or the work environment.

Assessment Requirements for AURAFA004 Resolve routine problems in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- clarify and resolve three of the following routine problems in an automotive workplace caused by:
  - inaccurate or outdated workplace procedure
  - internal changes to work conditions or environment
  - external changes to work conditions or environment
  - additional or non-standard work activities.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace procedures relating to problem identification and resolution strategies
- problem solving methods and techniques, including:
  - brainstorming
  - root cause analysis
  - trial and error approach
  - problem cause and effect strategies
- reporting procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having solved routine basic problems in their automotive workplace, e.g. workplace memos.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace procedures relating to employee participation in problem solving activities.

AURAFA007 Develop and document specifications and procedures

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify and analyse work task requirements and activities, and then develop and document technical specifications and procedures providing concise and unambiguous direction and guidance relating to them.

It applies to those working in the automotive service and repair industry. It involves conducting research and writing technical specifications and procedures at a specialist technician or manager level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and plan requirements	1.1 Technical activities and tasks requiring specifications and procedures to be developed are identified 1.2 Requirements and formats for specifications and procedures are established and confirmed 1.3 Requirements for information entry, storage, output and quality of document production are identified according to workplace procedures 1.4 Document design is confirmed as appropriate for efficient entry of information and satisfies established document presentation requirements 1.5 Authoritative sources and references are identified for use in preparation of specifications and procedures
2. Prepare and develop specifications	2.1 Technical information for inclusion in specifications is collected and validated according to workplace procedures 2.2 Specifications are developed that reflect document design requirements and are written in a manner appropriate to workplace
3. Prepare and develop procedures	3.1 Technical activities and tasks requiring procedures to be developed are analysed, sequenced and logically grouped 3.2 Technical procedures are developed that reflect document design requirements and are written in a manner appropriate to workplace
4. Document specifications and procedures	4.1 Developed material is documented according to workplace procedures and document design requirements 4.2 Information management requirements, including document storage, are followed according to workplace procedures and document requirements 4.3 Document is presented ready for use as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Reading skills to:	• interpret technical information, instructions and requirements in written material as required to carry out technical research activities • interpret and understand a range of written document specifications and procedures found in the automotive workplace.
Writing skills to:	• communicate ideas and information in a manner appropriate to workplace.
Numeracy skills to:	• use standard mathematical terminology and structures to incorporate measurements, calibration and test requirements into technical specifications and procedural documentation.
Digital literacy skills to:	• navigate computer software to collect, add and edit information in documents.
Planning and organising skills to:	• plan and organise the research and writing of technical specifications and procedural requirements to avoid backtracking and workflow interruptions.
Technology skills to:	• use computers and software.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Assessment Requirements for AURAFA007 Develop and document specifications and procedures

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- develop and document the technical specifications and procedures of an automotive repair or manufacturing process that would take more than thirty minutes to complete, including:
  - safety requirements of the process
  - steps involved in undertaking the process, including:
    - use of any tools, equipment and materials
    - explanatory graphics
  - specifications explaining the requirements that a product or assembly must meet or exceed
  - bibliography of sources of information.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- types and application of technical documents, including:
  - technical background reports
  - technical guides
  - technical specifications, including:
    - open specifications
    - closed specifications
    - methods of describing limits, including tolerances, clearances and wear
  - technical and standard operating procedures, including:
    - safe operating procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

        - dismantle and assembly procedures
    - literature reviews
- technical document writing techniques, including:
    - confirming document scope
    - understanding the audience
    - developing a plan
    - collecting information, including:
        - using primary and secondary sources
        - acknowledging sources
    - methods of organising information to meet document requirements, including:
        - linear or chronological
        - parts of an object graphics
        - simple to complex
        - specific to general
        - general to specific
    - writing first drafts, including:
        - using style guides
        - using graphics
    - revising and editing drafts
- workplace policies relating to publishing documents with company intellectual property content.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the specifications and procedures that they have developed, e.g. procedural documents relevant to their workplace.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- automotive repair workplace or simulated workplace
- situations requiring research and documentation of technical specifications and procedures
- range of reference materials relevant to technical research activities and vehicle specifications and procedures.

AURAKA002 Adapt work processes to new technologies in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to investigate the nature of new technologies, and modify existing work processes and procedures to incorporate the new technologies.

It applies to those working in the automotive industry. It involves adapting work processes and new technologies in an automotive service or repair workplace or an automotive office administration environment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Information Technology

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Investigate the new technology	1.1 Information is obtained on new technology through a range of ***sources*** and in line with workplace expectations and procedures 1.2 New technologies of value to the workplace are identified and evaluated to determine their application and suitability 1.3 Impact of new technologies on existing work processes is identified and analysed 1.4 Information about additional materials and equipment required to adopt the technology is sourced and evaluated
2. Modify existing work processes and procedures	2.1 Action plan is prepared to implement new technology into work processes 2.2 Processes are modified to incorporate new technologies 2.3 Impact on workflow and productivity is analysed and minimised through planning process and communication with staff 2.4 Information on the use of new technologies is communicated to staff, as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding relating to new technologies.
Reading skills to:	• research and critically analyse text and numerical information about new technologies from a range of sources.
Writing skills to:	• legibly and accurately record information about new technologies and convey to others using clear and concise language.
Oral communication skills to:	• clearly present information to others about new technologies and changes to work processes using concise language and tone appropriate for audience.
Numeracy skills to:	• use mathematical ideas and techniques to interpret numerical information relating to new technologies and impact on work processes.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Initiative and enterprise skills to:	• proactively adopt new technologies and adapt and improve work processes.
Planning and organising skills to:	• plan and prioritise implementation of new technologies in work processes.
Technology skills to:	• use computers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Sources must include:	• desk-based research • consultation with technical sources • training and information sessions.

Assessment Requirements for AURAKA002 Adapt work processes to new technologies in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- conduct research and collate information on one new piece of technology to be adopted in the automotive workplace
- prepare an action plan outlining the modification of existing work processes and staff training required to incorporate above new piece of technology into the workplace.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- existing workplace activity, processes and procedures relevant to implementation of specific new technology
- sources of information on new technology, including:
  - internet
  - manufacturer or component supplier specifications
  - technical journals and manuals
  - workshops, information sessions, and trade shows
- procedures for cost-benefit analysis of opportunities and risks, considering:
  - cost savings
  - customer satisfaction
  - marketing opportunities
  - new business opportunities
  - payback period
  - profit margins
  - short and long-term benefits

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- key features of action or implementation plan covering:
  - timelines
  - costs
  - business case or purpose
  - team or section requirements
- procedures for documenting action or implementation plans:
  - checklists
  - written documents
  - visual management board and items.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having adapted work processes to new technologies in an automotive workplace, e.g. action plans.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive service and repair workplace or simulated workplace
- sources of information about new technologies
- tools and materials to research information
- computer hardware and software and general office equipment.

AURALA001 Comply with legal aspects of a service and repair contract in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to act within legal and ethical boundaries of a service and repair contract when dealing with customers, implement measures to avoid disputes, and resolve disputes that do occur.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Regulatory or Legal

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Interpret service and repair contract	1.1 Legal obligations of all parties involved in a valid service and repair contract are identified

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 Legal liabilities of repairer performing work without a valid service and repair contract are identified 1.3 Regulatory bodies with authority to inspect the workplace if the customer takes legal action are identified 1.4 Workplace service and repair contract is analysed to determine relevant legal compliance requirements
2. Comply with service and repair contract requirements	2.1 Procedures are implemented to advise customers of the terms of contract into which they are entering 2.2 Procedures are implemented to ensure staff only use valid service and repair contracts 2.3 Procedures are implemented to minimise liability or customer claims in relation to bailment
3. Establish service and repair warranty requirements	3.1 ***Warranties document*** is developed detailing requirements 3.2 Procedures are implemented to ensure staff are aware of warranty requirements 3.3 Warranty requirements are documented and stored according to workplace procedures
4. Enforce service and repair contract requirements	4.1 Workplace policy on payment terms for services provided are implemented according to workplace procedures 4.2 Workplace legal rights and obligations when selling or disposing of uncollected vehicles or goods are identified and observed as required 4.3 Legal procedures to recover payment when a customer defaults are identified and implemented as required
5. Conduct dispute resolution processes	5.1 Procedures to minimise disputes with customers are implemented 5.2 Workplace records are maintained to support outcomes in any customer disputes 5.3 External sources of assistance in dispute resolution are identified 5.4 Outcomes of customer disputes and resolutions are analysed to develop procedures to avoid future disputes

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Learning skills to:	• identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding relating to legal and ethical business dealings.

Reading skills to:	• interpret:
	  • textual and numerical information in product or service documentation relating to contractual agreements
	  • original equipment manufacturer (OEM) or authorised agency's service and repair agreements
	  • vehicle specifications and job requirements.

Writing skills to:	• legibly and accurately complete:
	  • dispute resolution forms and legal action plans outlining customer's statutory rights and settlement options
	  • vehicle warranty documents and reports.

Oral communication skills to:	• communicate ideas and information to customers and supervisors relating to legal and ethical business dealings • participate in verbal exchanges using active listening and questioning techniques to gather, clarify and confirm customer information and feedback.
Numeracy skills to:	• use mathematical ideas and techniques to count and measure.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Warranties document must:	• meet legal requirements • comply with workplace policies • not compromise customer consumer guarantees • be written in plain language.

Assessment Requirements for AURALA001 Comply with legal aspects of a service and repair contract in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- comply with the legal aspects of service and repair contracts with three different customers, in which the work must involve:
  - an abandoned vehicle
  - a vehicle kept as bailment
  - customer dissatisfaction due to failed installed parts.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- types and purpose of contracts, including:
  - key phases of contract, including:
    - offer
    - acceptance
    - consideration
  - oral and written contracts
- key components of Australian Consumer Law (ACL) relating to legal and ethical requirements of contracts and service agreements, including:
  - damages arising from breach of contracts
  - reasonable costs
  - proof of transaction
  - delays in delivery and non-supply

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - charge back
  - contracts with minors
  - unfair contract terms
  - loss or damage to consumer property
  - misleading or deceptive conduct
  - warranties
  - dispute resolution
- key features of automotive service and repair contracts, including:
  - terms of the relationship, including:
    - acknowledgements and agreements from customer
    - definitions
  - rights, responsibilities and obligations of the service provider and principal, including:
    - level of performance and services being provided
    - authority in respect of the vehicle, including entering and test driving the vehicle
    - guarantees and warranties
    - lien to secure payment
    - abandonment of vehicle
    - liability
    - privacy
    - jurisdiction of the contract
  - business processes, including:
    - pricing
    - payment and invoicing
    - returns policies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having complied with the legal aspects of a service and repair contract in an automotive workplace, e.g. correspondence between customer and business.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace n
- commercially realistic range of automotive service and repair contracts
- three different customers with the service and repair contract issues specified in the performance evidence.

workplace	requirements, and ***safety requirements*** 1.2 Workplace is kept free of rubbish and waste according to workplace procedures, local government requirements, and safety requirements 1.3 Defined areas for specific tasks are maintained according to workplace procedures 1.4 Maintenance plan is monitored to ensure facilities and equipment are regularly maintained 1.5 Workplace signage is clearly and appropriately displayed throughout the organisation
2. Monitor workplace attire and grooming standards	2.1 Expectations regarding attire and grooming are communicated to staff on a regular basis 2.2 Standards are updated as needs arise according to workplace requirements 2.3 Dress and grooming of staff are monitored to ensure standards are met 2.4 Breaches of standards are identified and staff informed
3. Monitor waste disposal processes	3.1 Waste disposal is monitored to ensure compliance with workplace procedures and local government requirements 3.2 Recycling opportunities are identified and implemented according to workplace procedures and local government requirements 3.3 Workplace environmental documents are maintained
4. Promote workplace products and services	4.1 Promotional activities are monitored to ensure planned implementation according to workplace procedures 4.2 Promotional activities are actively supported according to own role and workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Reading skills to:	• interpret relevant safety information, local government requirements, and workplace procedures.
Numeracy skills to:	• use mathematical operations, including addition, subtraction, multiplication and division, to calculate quantities relating to housekeeping activities.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Teamwork skills to:	• work with staff and supervisors when monitoring and following procedures that impact on business image.
Technology skills to:	• operate housekeeping and general office equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: • manually handling goods • using cleaning chemicals and dangerous goods • selecting and using personal protective equipment (PPE).

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- maintain the business image of an automotive workplace over one week, including:
  - ensuring a clean and tidy appearance of the workplace
  - ensuring correct staff attire and grooming
  - ensuring waste is correctly disposed of
  - engaging in one promotional activity to the limits of own role.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to maintaining business image in an automotive workplace, including procedures for:
  - manually handling goods
  - using cleaning chemicals and dangerous goods
  - selecting and using personal protective equipment (PPE)
- procedures for maintaining the physical appearance of an automotive workplace, including procedures for:
  - cleaning buildings, grounds and equipment
  - waste disposal and recycling processes, including designated locations for waste storage and collection
  - maintaining defined areas for specific tasks, including:
    - reception area
    - staff and public amenities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - service and repair work areas
  - monitoring maintenance plans
  - monitoring workplace signage, including:
    - checking currency
    - placement
    - condition
- procedures for monitoring workplace attire and grooming standards, including procedures for:
  - communicating requirements to staff
  - evaluating staff attire and grooming against workplace standards
- procedures for monitoring waste disposal processes, including:
  - workplace and local government requirements
  - recycling procedures for:
    - office waste
    - service and repair work area waste
  - waste collection schedules
- procedures for promoting workplace products and services, including:
  - basic principles of display and design, including layout and presentation
  - types of display areas, including:
    - signage and fixtures on floor
    - interior or exterior areas
    - permanent or temporary displays
    - publicly accessible areas
    - shelves and windows in areas
  - displaying products, including their rotation, maintenance, storage requirements, pricing and labelling
  - arranging advertising and promotional information.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having maintained the business image of an automotive workplace, e.g. maintenance plans.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace procedures relating to:
  - maintaining equipment and facilities
  - personal presentation, attire and grooming
  - waste disposal and recycling processes
- commercially realistic number of diverse staff working in an automotive workplace.

AURAMA005 Manage complex customer issues in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to resolve complex customer issues and complaints. Complex customer issues include those caused by cost variations, warranty issues, policy matters, additional repair time and disputed work standards. The unit involves examining the exact nature of a customer issue, communicating effectively, making informed judgements, negotiating an outcome or referring the issue to an appropriate person, and documenting outcomes for continuous improvement.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Management, Leadership and Supervision

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Examine the nature of the issue	1.1 Customer issue and associated feelings and opinions are identified 1.2 Facts relating to the issue are determined using ***appropriate communication skills*** 1.3 Workplace procedures and manufacturer or supplier policy relating to the issue are sourced and interpreted 1.4 Further information is researched as required to confirm or clarify issue 1.5 Rights and responsibilities of customer and workplace are determined and communicated to customer
2. Resolve or escalate the issue	2.1 Implications of the issue for customer and workplace are analysed and determined, and suitable resolution options are identified 2.2 Options for resolving the issue are explained and negotiated with customer according to workplace policies and procedures 2.3 Information required to assist customer in evaluating service and product options that best meet customer needs is provided 2.4 Complaints requiring attention from an external party are actioned by referring to appropriate person according to workplace procedures 2.5 Where a resolution cannot be negotiated and agreed, issue is escalated to appropriate person
3. Document issue and outcome	3.1 Record issue, outcome and customer feedback according to workplace procedures 3.2 Report agreed outcome to appropriate person according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Learning skills to:	• use feedback and experience obtained from negotiating with customers to inform future customer dealings and workplace procedures.
Reading skills to:	• research and review information about supplier products and services relevant to customer issues.
Writing skills to:	• legibly and accurately complete workplace reports outlining customer issues and associated outcomes.
Oral communication skills to:	• participate effectively in verbal exchanges using collaborative techniques, including active listening and questioning, to gather, clarify and confirm customer issues or complaints • summarise and present key points of information to negotiate effectively to resolve the issue.
Numeracy skills to:	• use mathematical operations, including addition, subtraction, multiplication division and percentages, to determine additional costs, refunds and time implications relating to the issue.

Digital literacy skills to:	• use digital systems and tools to:
	  • communicate with others
	  • access, search and retrieve information relating to products and services.

Initiative skills to:	• present options and alternatives to negotiate solutions to customer issues.
Planning and organising skills to:	• select problem resolution methods and techniques appropriate to the circumstances • use a planned approach to resolving and negotiating a customer's issue or complaint.
Technology skills to:	• use office equipment to prepare written information and to communicate with customers via a range of channels.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Appropriate communication skills must include:	• active listening • questioning techniques • interpreting body language.

Assessment Requirements for AURAMA005 Manage complex customer issues in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate that they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- manage the complex issues of three different customers in an automotive service and repair environment, including issues involving two of the following:
  - cost variations
  - warranty issues
  - policy matters
  - additional repair time
  - disputed work standards
- one of the above must involve escalating the issue to appropriate person.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace procedures relating to:
  - customer service
  - dealing with dissatisfied customers
  - complaints handling and recommending appropriate action
  - escalating issues to appropriate person
  - reporting and documenting complaints
- common complex customer issues, including disputes concerning:
  - cost
  - work standards
  - time taken or expected for repairs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - selection of parts
  - warranties
- key legal requirements relating to customer rights as a consumer, and business obligations under Australian Consumer Law (ACL)
- negotiation, communication and problem-solving strategies, including:
  - active listening
  - questioning techniques
  - interpreting body language
  - negotiating or closing a deal
- automotive product and service knowledge relevant to workplace manufacturers or suppliers in order to recommend:
  - alternative products and services
  - variations in a limited product and service range.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having managed complex customer issues in an automotive workplace, e.g. complaint resolution report.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace procedures relating to customer service and workplace legal obligations
- three different customers with the complex issues specified in the performance evidence
- workplace and manufacturer or supplier product or service information.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Review business plan and business performance	1.1 Goals and key performance indicators (KPIs) specified in workplace business plan are analysed and relevance to operational area is assessed 1.2 Gaps and risks to achieving business goals and KPIs are identified 1.3 Risk management strategies to meet business goals and KPIs are identified and developed 1.4 Contingency plan to address possible areas of non-conformance with the plan is developed
2. Assist in developing, implementing and monitoring marketing and promotional strategies	2.1 Key business products or services are analysed to determine a suitable focus for marketing and promotional activities, according to the objectives of the business plan 2.2 Costs and benefits of using different distribution channels and providing different levels of customer service are analysed to determine the appropriate marketing mix 2.3 Agreed marketing and promotional strategies are agreed and implemented 2.4 Marketing activities are monitored and business performance is evaluated according to the objectives and targets of the business plan
3. Seek continuous improvement opportunities	3.1 Business development strategies are regularly reviewed with supervisor 3.2 Operational plans are reviewed to determine possible improvements to business 3.3 New ideas or activities are presented as a business case and discussed with line manager 3.4 Approval is sought from line manager before implementing new ideas and activities

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently • evaluate appropriateness of information for its purpose.
Reading skills to:	• interpret literature containing different forms, including text, diagrams, charts and graphs, and pictures • evaluate text in business plan and associated literature to determine its ability to impart intended meaning to others.
Writing skills to:	• integrate information and ideas from a range of technical information, using appropriate support material and embedded information in a range of sources • logically convey and present textual and numerical information in a structured format appropriate to the audience.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to convey and clarify information about business KPIs and financial targets • summarise and clearly present key points of information in discussions with others about business improvements.
Numeracy skills to:	• use mathematical operations to calculate percentages and ratios and interpret trends in financial data • interpret numerical information embedded in cost-benefit analyses.
Digital literacy skills to:	• use digital systems and tools to access, filter, extract and organise numerical information.
Planning and organising skills to:	• sort and sequence relevant financial data and information to support a position and to present to others.
Problem solving skills to:	• identify and rectify issues within own control to meet KPIs.
Teamwork skills to:	• liaise collaboratively with management and staff to contribute to discussions and planning processes.
Technology skills to:	• select and use business technology to prepare and communicate business information.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for AURAMA006 Contribute to planning and implementing business improvement in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- review the performance of an automotive workplace against its business plan over twelve months
- analyse the effectiveness of the business marketing strategies against sales over twelve months
- develop a strategy to improve business performance based on the above review and analysis.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key features of a business plan, including:
  - purpose of business plan
  - types of business planning, including:
    - feasibility studies
    - strategic, operational, financial and marketing planning
  - setting short, medium and long-term goals and objectives
  - role of key performance indicators (KPIs) and targets
- key components of financial statements, including:
  - cash flow
  - trends
  - areas of risk
- principles and factors to consider in setting budgets, including:

© Commonwealth of Australia, 2025
Manufacturing Industry Skills Alliance

  - setting targets and stretch targets
  - business profit margins
  - expenditure, including fixed and variable costs
  - calculating service and hourly rates
  - contingency and unplanned events
  - stock holding costs
  - rework components and costs
  - subcontracting costs
- business development principles, and strategies for improving business performance, including:
  - stages in business development
  - basic marketing concepts and principles
  - promotional activities
  - ways to reduce costs and address budget deficits
- report formats for preparing a business case, including financial analysis.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having contributed to business planning processes and improvement activities in an automotive workplace, e.g. business plans.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- financial information for an automotive workplace budget over a period of 12 months
- workplace business plan
- computer, office equipment and technology to prepare financial and written reports.

AURANN001 Estimate and quote automotive body repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare vehicle or equipment repair quotations for customer and insurance purposes, including associated materials and labour costs. It involves preparing for the task, estimating repair costs, producing written quotations, and completing workplace documentation.

It applies to those working in the automotive body repair industry. The quotes are for light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles or motorcycles. It does not apply to estimating and quoting on vehicle mechanical and electrical repairs.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Loss Assessment or Repair Quoting - Body

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to quote	1.1 Repair requirements are clarified 1.2 Workplace quotation information and recommended labour time guides are sourced and interpreted 1.3 Job cost estimation and calculation details are sourced and interpreted
2. Estimate and cost repairs	2.1 Required replacement parts and materials are estimated and costed according to workplace procedures 2.2 Direct labour and subcontractor services are estimated and costed according to workplace procedures 2.3 Overheads and mark-up percentages are estimated and costed according to workplace procedures 2.4 Potential quotation variations relating to unsighted damage are noted on the quotation 2.5 Quotation is prepared according to workplace procedures 2.6 Final costs, calculations and other details are verified with workplace supervisor
3. Present quotation to customer	3.1 Quotation is presented to customer or insurer for approval 3.2 Approval is obtained from customer or insurer to commence repairs 3.3 Documentation is completed and quotation filed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Reading skills to:	• interpret vehicle specifications and job requirements • interpret original equipment manufacturer (OEM) and recommended labour time guides.
Writing skills to:	• legibly and accurately complete: • vehicle damage inspection reports

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
	• repair quotations.
Oral communication skills to:	• participate in verbal exchanges using active listening and questioning techniques to gather, clarify and confirm customer information and feedback.
Numeracy skills to:	• use mathematical operations, including addition, subtraction, multiplication, division and percentages, to perform calculations and check accuracy of costs of options and solutions.
Technology skills to:	• use workplace technology when preparing a vehicle body repair quotation.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for AURANN001 Estimate and quote automotive body repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria and foundation skills:

- inspect three different vehicles or equipment with body damage, and for each vehicle or equipment:
  - estimate the cost of replacement parts and labour
  - prepare a written repair quotation for insurance claim purposes.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace procedures and work health and safety (WHS) and occupational health and safety (OHS) requirements relating to estimating and quoting automotive body repairs, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using hand tools and equipment
- location and content of specifications relating to the damaged vehicle or equipment being inspected
- body repair quality standards
- procedures for identifying and determining location and extent of vehicle damage
- procedures for estimating and job costing, including calculating:
  - labour costs, including calculating time to perform work, from:
  - inspecting vehicle damage
  - analysing original equipment manufacturer (OEM) or authorised agency repair procedures
  - analysing workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - parts costs, including those of:
  - new parts
  - second-hand parts
  - repaired parts
  - costs relating to external products or services
- procedures for gaining evidence to support repair quotation, including:
  - part dismantling of damaged area for repair plan
  - estimating and documenting indirect or unforeseen damage
  - taking and storing photographs.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having prepared an automotive body repair quotation, e.g. workplace-specific quotations.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive body repair workplace or simulated workplace
- three different vehicles or equipment requiring body repairs
- manufacturer and component repair and replacement costing guides
- OEM repair time manuals and labour rates
- office equipment, including calculators, computer, internet and software
- workplace procedures relating to vehicle or machinery body repairs.

AURATA005 Estimate and quote automotive mechanical and electrical repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare an estimate and quotation to repair the mechanical or electrical systems of vehicles or machinery. It involves preparing an initial estimate of costs, then preparing a detailed quotation for the required work, and presenting the quotation to customer.

It applies to those working in the automotive service and repair industry. It includes quotations for light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles or motorcycles. The unit does not apply to estimating and quoting vehicle body repair costs.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Estimate repair or service costs	1.1 Clarify service and repair requirements 1.2 Time requirements for job are estimated from a comparison of previous similar repairs 1.3 Costs associated with replacement parts are estimated 1.4 Parts and work needing to be subcontracted are identified and costs estimated 1.5 Estimate is calculated, feasibility of job is discussed with customer, and agreement is reached to proceed with quote
2. Prepare quotation	2.1 Job labour cost is documented and agreed with workplace supervisor 2.2 Parts and consumables are costed according to workplace pricing procedures 2.3 Quotation variations relating to unsighted damage are noted and prepared for customer acceptance 2.4 Quotation is reviewed by workplace supervisor and finalised
3. Present quotation to customer	3.1 Detailed quotation is provided to customer for approval 3.2 Approval from customer to commence work and undertake any supplementary quotation work is obtained as required 3.3 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Reading skills to:	• interpret vehicle specifications and job requirements • interpret original equipment manufacturer (OEM) and recommended labour time guides.
Oral communication skills to:	• participate in verbal exchanges using active listening and questioning techniques to gather, clarify and confirm customer information and feedback.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Numeracy skills to:	• use mathematical operations, including addition, subtraction, multiplication and division, to perform calculations and check accuracy of costs of options and solutions.
Digital literacy skills to:	• use digital systems and tools to access, search and retrieve information relating to products and services.
Technology skills to:	• use workplace technology related to preparing a vehicle mechanical and electrical service repair quotation.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Assessment Requirements for AURATA005 Estimate and quote automotive mechanical and electrical repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria and foundation skills:

- inspect four different vehicles or equipment, two with mechanical and two with electrical faults, and:
  - estimate required repair or replacement of parts and labour
  - prepare a written repair quotation for the above vehicles or equipment for customer approval.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace procedures and work health and safety (WHS) and occupational health and safety (OHS) requirements relating to estimating and quoting on repairs, including procedures for:
  - selecting and using personal protection equipment (PPE)
  - manual handling vehicle components and systems
  - using hand tools and equipment
- components of estimates and job costings, including:
  - labour
  - parts
  - costs relating to external products or services required
- original equipment manufacturer (OEM) or authorised agency's service and repair procedures
- process to identify and determine location and extent of failure or faults in vehicle
- evidence to support repair quotation, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - part dismantle of damaged area for repair plan
  - indirect or unforeseen damage
  - photographs
- vehicle inspection, failure or fault assessment procedures
- service and repair industry standards.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to preparing a repair quotation relating to an automotive mechanical and electrical service and repair quotation, e.g. a written quote.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- four different vehicles requiring mechanical and electrical repairs or service
- automotive mechanical or electrical repair workplace or simulated workplace
- manufacturer and component repair and replacement costing guides
- OEM service and repair time manuals and labour rates
- office equipment, including calculators, computer, internet and software
- workplace procedures relating to vehicle mechanical and electrical repairs or service.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify finance/leasing options and documentation	1.1. Finance/leasing option is identified to meet specific needs of customer, including affordability and payment structure 1.2. A finance/leasing provider is identified
2. Apply finance/leasing documentation	2.1. Contracts and finance/leasing documents are completed and agreed/signed by customer 2.2. Legal requirements are identified and observed
3. Identify insurance policies and documentation	3.1. Type of insurance policy for customer is identified taking into account customer's requirements and insurance document and vehicle type and age 3.2. Insurance provider is chosen according to policy price, customer requirements and enterprise policies and procedures
4. Apply insurance documentation	4.1. Insurance contract/policy documentation is completed and agreed/signed by customer 4.2. Legal requirements are identified and observed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
• collect, organise and understand information related to information from different insurance providers is collated • communicate ideas and information presented to the customer • plan and organise activities to obtain information for customers • work with others and in a team by consulting experienced/ specialised staff • use mathematical ideas and techniques to ensure variations in cover and cost are presented to the customer • establish diagnostic processes for recommendations made on information supplied by the customer • use workplace technology related to business technology to document insurance and finance information
Required knowledge
Knowledge of: • industry documents and how to maintain them • various types of finance/lease agreements • written communication • oral communication skills • various types of insurance policies • legal requirements

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	critical aspects of: • correctly identifies and satisfies customer finance/ leasing and insurance requirements and completing documentation • interpreting and conveying workplace information • maintenance of workplace documents.

Context of and specific resources for assessment	• The underpinning knowledge and skills may be assessed on or off the job.
	• The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
	• The prescribed outcome must be achieved without direct supervision.
	• The following should be made available:
	  • a workplace or simulated workplace
	  • finance and leasing agreements
	  • insurance policies
	  • documents and stationery
	  • computer, calculator and general office equipment
	  • a qualified workplace assessor.

Method of assessment	Practical assessments: • maintain industry documents • convey information both orally and in writing • access, interpret and apply finance/lease agreements • access, interpret and apply insurance policies • complete finance/leasing and insurance documentation.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Methods	Methods include: • determining customer leasing/finance and/or insurance requirements and undertaking documentation procedures • written, oral, fax or email
Information/documents	Information/documents may include: • enterprise operating procedures • product manufacturer/component supplier specifications • customer requirements • industry/workplace codes of practice
Occupational health and safety (OHS) practices	OHS practices must abode by: • state/territory OHS legislation • award provisions

AURETB001 Diagnose and repair electric braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the electric braking systems of vehicle or machinery. These systems are single wire (non CAN-bus) circuits and include electric braking systems in light vehicles and machinery fitted with electric trailer braking controllers or trailers fitted with electric brakes. The unit involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in an automotive service and repair industry. Electric braking systems include those in agricultural machinery, heavy commercial vehicles, light vehicles or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical – Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes**.**	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section**.**
1. Prepare to diagnose and repair electric braking system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose electric braking system	2.1 Diagnostic tests are carried out according to workplace procedures and ***safety requirements*** 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings and recommendations for necessary repairs or adjustments are reported according to workplace procedures
3. Repair electric braking system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, safety requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• identify and locate various sources of information efficiently.
Reading skills to:	• interpret text, symbols and wiring diagrams in information relating to electrical system testing and repair equipment from manufacturer specifications and workplace instructions and procedures.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report diagnostic findings and make repair recommendations.
Numeracy skills to:	• match electrical components and part identification numbers to workplace instructions, vehicle and component part lists, and manufacturer specifications • interpret vehicle electrical measurements and readings • measure voltage, current and resistance and use basic mathematical operations, including addition and subtraction, to calculate deviations from manufacturer specifications.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialised equipment, including multimeters and scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • using specialised tools and equipment
	  • using appropriate personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• identifying hazards and controlling risks associated with working on vehicle high voltage ignition systems, including standard precautions such as not wearing jewellery while working around high current wiring systems.

Assessment Requirements for AURETB001 Diagnose and repair electric braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the electrical non CAN-bus networked braking system of two different vehicles or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing electric braking systems, including procedures for:
  - using specialised tools and equipment
  - using appropriate personal protective equipment (PPE)
  - identifying hazards and controlling risks associated with working on vehicle high voltage ignition systems, including standard precautions including not wearing jewellery while working around high current wiring systems
- electrical principles, including:
  - current, voltage, resistance and power
  - series circuits
  - parallel circuits
  - series and parallel circuits
  - Ohm's law
  - Faraday's law
  - Kirchhoff's law
  - electromagnetic interference and radiation
- application, purpose and operation of electric braking systems and components, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - control systems, including:
        - electric over hydraulic
        - electric over vacuum
    - circuit protection devices
    - switches, relays and globes, including light emitting diodes (LEDs)
    - cable types and sizes and current carrying capacity
    - sensors (two and three-wire)
    - actuators, including pulse width modulated (PWM)
- techniques for reading and interpreting technical information, including circuit types, diagrams and symbols
- diagnostic testing procedures for electric braking systems, including:
    - using diagnostic flow charts
    - testing electrical systems, including procedures for:
        - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
        - testing resistance and voltage drop
        - testing open and short circuits
        - checking shorts to signal, power circuits and grounds
    - visual, aural and functional assessments of electric braking system components, including:
        - component damage and wear
        - component or connector corrosion
        - component water or moisture ingress
- repair procedures for electric braking system circuits, including procedures for removing and replacing:
    - brake controllers
    - electric drum brakes
    - electric disc brakes
    - electric braking system wiring and connectors
- post-repair testing procedures, including static and dynamic performance tests of electric braking systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where assessment includes third-party evidence, individuals must provide evidence that links them to the electric braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer electric braking system specifications
- two different vehicles or machinery with electric braking system faults
- diagnostic equipment for electric braking systems, including:
  - multimeter
  - scan tool
- tools, equipment and materials appropriate for repairing vehicle and machinery electric braking systems.

Assessment Requirements for AURETR012 Test and repair basic electrical circuits

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- test a basic electrical circuit, including:
  - one short circuit across an electrical resistive load
  - one open circuit before or after an electrical resistive load
  - one high resistance circuit before or after an electrical resistive load
  - current flow and voltage drop across an electrical resistive load
- test for continuity in a basic wiring harness and visually check terminals in the wiring harness for moisture ingress and corrosion
- carry out four different circuit repairs that include:
  - crimping various terminal sizes
  - soldering wire gauges to terminals
  - applying heat shrink insulation to crimped or soldered joints
  - replacing male and female terminals in a connector housing
  - performing terminal retention checks to replaced terminals.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to testing and repairing basic electrical circuits, including procedures for:
  - using specialised tools and equipment
  - selecting and using personal protective equipment (PPE)
  - identifying hazards and controlling risks associated with wearing jewellery while working around electrical systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- electrical principles, including:
  - current, voltage, resistance and power
  - series circuits
  - parallel circuits
  - series parallel circuits
  - Ohm's law
- key features of basic electrical circuit components, including:
  - cable types and sizes and current carrying capacity
  - circuit protection devices
  - switches
  - relays
  - automotive globes
- techniques for reading and interpreting technical information, including circuit types, diagrams and symbols
- procedures for using and operating electrical test equipment, including:
  - digital multimeters
  - test lights suitable for circuit testing, including resistive and light emitting diode (LED)
  - test probes suitable for testing circuit continuity
  - fused test lead
  - procedures for checking, identifying and isolating faulty equipment
- common types of faults, including:
  - open circuits
  - high resistance circuits
  - short circuits
  - damaged insulation
  - frayed wires
  - burnt wiring
  - water and moisture ingress
  - connector damage
  - terminal damage
- testing procedures for electrical systems, including:
  - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
  - electrical measuring and testing procedures, including:
    - electrical resistance checks
    - open and short circuit tests
    - voltage drop tests
    - current flow tests
  - visual testing procedures, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - component moisture ingress
    - connector damage
- repair procedures for electrical circuits, including:
    - wire soldering procedures
    - terminal crimping procedures
    - replacing male and female terminals in a connector housing
    - connector removal and replacement procedures
    - basic electrical components removal and replacement procedures
- post-repair testing procedures, including:
    - confirming that electrical system is operating to manufacturer specifications
    - confirming that no other problems are present as a result of the repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the basic electrical circuits they have tested and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer electrical system specifications
- vehicle or machinery with faults in the basic electrical circuits specified in the performance evidence
- electrical test equipment to test basic electrical circuits and components
- consumable materials relevant to repairing basic electrical circuits and components, including connectors, terminals, wire, electrical tape and heat shrink sleeving
- electrical repair tools, equipment and materials relating to basic electrical circuits and components.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate battery information efficiently.
Reading skills to:	• interpret information from manufacturer and workshop literature when seeking battery service procedures and specifications.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions and report inspection findings to appropriate personnel.

Numeracy skills to:	• match battery types and identification numbers to workplace instructions and manufacturer specifications
	• interpret and compare battery specifications and procedures, including:
	  • battery-specific gravity measurements
	  • cold cranking amp (CCA) measurements.

Technology skills to:	• use specialised tools and equipment when inspecting, testing and servicing batteries, including battery load testing devices and multimeters.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Tools, equipment and materials must include:	• battery load testing device • multimeter • battery cleaning materials.
Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: • selecting and using personal protective equipment (PPE), including clothing, and eye and hand protection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• working with high current electrical systems • manually handling batteries and toxic and corrosive substances • conducting risk assessments of battery, vehicle and equipment movement before carrying out work • working safely when using battery testing equipment.
Environmental requirements must include:	• procedures: • found in safety data sheets (SDS) relating to toxic and corrosive substances • for recycling and disposing of replaced batteries.

Assessment Requirements for AURETR015 Inspect, test and service batteries

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, test and service the batteries of three different vehicles, vessels or machinery, in which the work must involve one maintenance-free battery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, testing and servicing batteries, including procedures for:
  - selecting and using personal protective equipment (PPE), including clothing, and eye and hand protection
  - working with high current electrical systems
  - manually handling batteries and toxic and corrosive substances
  - conducting risk assessments of battery, vehicle and equipment movement before carrying out work
  - working safely when using battery testing equipment
- environmental requirements, including procedures:
  - found in safety data sheets (SDS) relating to toxic and corrosive substances
  - for recycling and disposing of replaced batteries
- basic operating principles of batteries, including using chemical energy to produce electrical energy
- types of automotive batteries, including:
  - lead acid batteries
  - deep cycle batteries

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - maintenance-free batteries
  - gel batteries
  - absorbed glass mat batteries
  - calcium batteries
  - lithium ion and lithium ion phosphate batteries
- battery classifications, including:
  - reserve capacity
  - amp hour rating
  - cold cranking amps
- battery connection methods for 6 volt, 12 volt, 24 volt and 48 volt, including:
  - series
  - parallel
  - series parallel
- inspection and testing procedures for batteries, including:
  - terminals and leads
  - battery securing system
  - testing battery with load testing devices
  - testing battery with a hydrometer
  - battery memory retention
- servicing procedures for batteries, including:
  - cleaning battery and battery compartments
  - topping up battery fluid
- post-service testing procedures, including confirming that battery is serviceable and operating to manufacturer specifications.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the batteries that they have inspected, tested and serviced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer battery specifications
- PPE, including clothing, and eye and hand protection
- three different vehicles, vessels or machinery with batteries as specified in the performance evidence requiring servicing
- tools, equipment and materials appropriate for inspecting, testing and servicing batteries, including battery load testing devices, multimeters and cleaning materials.

AURSAA001 Process customer complaints in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to deal with formal and informal complaints and negative feedback from customers. It involves following established process steps to resolve issues and complaints in order to satisfy both internal and external customer complaints.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Sales and Parts, Administration and Management

Unit Sector

Administration

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Clarify nature of	1.1 Details of complaint are established

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
complaint	1.2 Summary of complaint is documented accurately 1.3 Initial explanations about process and apologies appropriate to individual customer's situation are conveyed to customer
2. Identify options to resolve complaint	2.1 Possible options for resolving complaint are identified according to workplace procedures 2.2 Solutions outside individual level of responsibility are referred to supervisor
3. Act to resolve complaint	3.1 Chosen solution is outlined to customer according to workplace procedures 3.2 Chosen solution is implemented within required timeframe and conditions are negotiated with customer 3.3 Complaint is referred to supervisor if resolution is not possible or where additional levels of authorisation are required
4. Provide feedback on complaint resolution process	4.1 Effectiveness of complaint resolution solution is assessed against customer feedback 4.2 Changes required to improve complaint resolution procedures are identified and passed on to supervisor for consideration according to workplace procedures 4.3 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Reading skills to:	• interpret information in warranties, terms and conditions, and receipts relevant to customer complaint.
Oral communication skills to:	• participate in verbal exchanges using active listening and questioning techniques to gather, clarify and confirm customer information and feedback • effectively relate to people from diverse backgrounds using clear language and tone of voice appropriate to situation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Self-management skills to:	• follow workplace procedures and seek assistance from supervisor as required.
Problem solving skills to:	• apply basic conflict resolution skills for handling dissatisfied customers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Unit Mapping Information

Equivalent to AURSAA2001 Process customer complaints

Assessment Requirements for AURSAA001 Process customer complaints in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate that they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- process and resolve three different customer complaints in an automotive sales and service workplace or simulated environment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace operations relating to:
  - workplace products and services
  - location of departments, sections and contact details
- workplace procedures relating to:
  - customer service
  - dealing with dissatisfied customers
  - complaints handling and recommending appropriate action
  - reporting and registering complaints
- key legal requirements relating to customer rights as a consumer and business obligations under the Australian Consumer Law (ACL)
- effective communication techniques and the individual's role in processing customer complaints, including:
  - giving customers full attention
  - greeting and farewelling protocols
  - speaking clearly and concisely
  - using appropriate language and non-verbal communication, including:
    - tone of voice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - body language
    - personal presentation
  - using clear written information
  - dealing with people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
- basic negotiation and problem-solving techniques, including:
  - active listening
  - questioning techniques
  - interpreting body language
  - presenting options.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to processing customer complaints in an automotive sales and service workplace, e.g. complaint summaries.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- automotive sales and service workplace or simulated workplace
- workplace procedures relating to customer service and complaints handling
- commercially realistic range of customers with different complaints.

AURSBA002 Identify and match uncommon automotive parts

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify uncommon or unusual automotive components, parts and products to meet customer vehicle requirements. It involves matching uncommon or unusual automotive parts or products to customer vehicle or equipment by cross-referencing manufacturer, model and other identifiable numbers using manuals, and computer-generated or online catalogue systems.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Sales and Parts, Administration and Management

Unit Sector

Support and Logistics

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Determine required	1.1 Available information on required ***uncommon*** part is gathered,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
information relating to uncommon part	documented and confirmed with customer 1.2 Original host for part is determined from available information
2. Identify and record details of part	2.1 Parts index system for host is identified and accessed 2.2 Part is matched accurately to cataloguing information by accessing and using parts index system, its aids and user guides, and potential suppliers are identified 2.3 Clarification regarding potential match is sought from supplier as required 2.4 Identifying details of part are documented and processed
3. Supply or order part	3.1 Part is supplied to customer or ordered if not in stock according to workplace procedures 3.2 Workplace documentation, including customer records, is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately enter information into sales orders, workplace forms and databases.
Numeracy skills to:	• estimate and calculate timeframes for organising delivery and follow-up services.
Digital literacy skills to:	• use digital systems and tools to access, search and retrieve information relating to customers, parts and products.
Initiative skills to:	• apply analytical skills when identifying and analysing technical information when sourcing non-standard parts or products that meet a customer need.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Uncommon must include:	• parts or products that are:
	  • difficult to match
	  • vintage or obsolete
	  • not original.

Unit Mapping Information

Equivalent to AURSBA3002 Apply automotive parts interpretation process

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- identify and match one uncommon automotive part from the following categories for three different customers:
  - vintage part
  - obsolete part
  - non-original part.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- information gathering techniques, including:
  - active listening and questioning
  - effective face-to-face and telephone customer service
- common automotive terminology
- identification and function of automotive vehicle systems
- application and operation of automotive parts index systems, including:
  - catalogues
  - microfiche
  - computer databases
- key legal requirements relating to supplying uncommon automotive parts, including obligations under Australian Consumer Law (ACL).

AURSCA002 Present automotive products and services for sale

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to present automotive products and services in a business sales area to maximise product and service impact on customers, and monitor and review customer feedback. It involves applying knowledge of automotive products and basic display concepts to maintain and maximise product and service sales and the overall appearance of the sales area.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Sales and Parts, Administration and Management

Unit Sector

Sales and Marketing

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Maximise presentation	1.1 Stock presentation area is defined from floor and display plan,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

of sales area	observation of space available and work instructions 1.2 Minimum product numbers and types are determined and presented according to workplace procedures 1.3 Ancillary display materials are prepared to enhance presentation of stock 1.4 Stock display areas are kept clean, tidy and safe 1.5 Correct handling, storage and display techniques are used according to product types, workplace procedures and safety requirements
2. Display individual products	2.1 Display requirements are determined from workplace instructions 2.2 Product to be displayed is sourced according to workplace procedures 2.3 Product is displayed to ***maximise market appeal*** according to workplace procedures 2.4 Correct display labels, price tickets and ancillary materials are prepared and located with product 2.5 Product condition is monitored during display period and necessary action taken to maintain market appeal
3. Review effectiveness of presentation area	3.1 Feedback on display and presentation area is sought from customers 3.2 Action to improve presentation of stock and area is determined and acted on within scope of own role

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Reading skills to:	• interpret information from workplace instructions, floor and display plans, and product and service labelling and literature.
Writing skills to:	• legibly and accurately prepare display labels and price tickets.
Oral communication skills to:	• clarify instructions and make recommendations relating to display presentation.
Numeracy skills to:	• interpret numerical information in floor and display plans • use mathematical operations, including addition and subtraction, to estimate quantity and volume of product and stock.
Technology skills to:	• use specialised equipment to prepare labels and price tickets.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Maximising market appeal must include:	• ensuring product is clean and complete • locating product in a position that maximises presentation.

Assessment Requirements for AURSCA002 Present automotive products and services for sale

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- organise a display or presentation area in an automotive workplace for three different automotive products
- organise a display or presentation area in an automotive workplace for two different automotive services.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to presenting products and services in an automotive workplace, including procedures for:
  - manually handling stock
  - ensuring clear walkways
  - handling chemicals and dangerous goods
  - using personal protective equipment (PPE)
- principles of display design, including:
  - creating impact
  - use of colour and illumination
  - accessibility and ease of maintenance
  - interactivity
- types and applications of display and presentation areas, including:
  - areas, including:
    - interior and exterior

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - permanent and temporary
    - publicly accessible
  - display systems, including cable, rod and sign systems
  - showcases
  - brochure and information display systems
  - graphic display systems, including computer monitor, television and projector
- gaining feedback on effectiveness of display and presentation areas, including procedures for:
  - analysing sales
  - delivering and analysing simple customer questionnaires.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to presenting automotive products and services for sale, e.g. sales area floor plan.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- automotive workplace or simulated workplace
- commercially realistic range of automotive services and products for sale
- commercially realistic presentation or display area
- materials needed for display of products and service information.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- engage with three potential automotive customers and respond to their enquiries regarding product and service features in line with workplace customer service standards
- sell automotive products or services to three different customers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- product and service knowledge applicable to automotive workplace, including:
  - specific product knowledge for area or section
  - company merchandise and service range
  - stock databases and service delivery calendar
  - equipment safety features
  - warranties and conditions
  - price and discounts available
- customer types and needs, including:
  - customer behaviour and cues
  - customer buying motivations, including functional and emotional motivation
  - demographics, lifestyle and income
  - individual and cultural differences
- key features of automotive industry codes of practice and statutory requirements that are reflected in workplace procedures relating to:
  - sale of products and services

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - consumer rights and protection
- sales techniques relating to selling products and services in an automotive workplace, including:
    - techniques for opening and closing a sale
    - recognising buying signals
    - overcoming customer objections
    - strategies to focus customers on specific merchandise
- common workplace procedures relating to:
    - analysing individual and workplace sales performance
    - handling customer complaints.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to applying sales techniques when selling automotive products and services in an automotive sales and service workplace, e.g. sales invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- automotive sales and service workplace or simulated workplace
- workplace procedures relating to sales and customer service
- commercially realistic range of automotive retail products and services for sale
- product and service information
- three different customers with commercially realistic product and service needs.

Assessment Requirements for AURSCA004 Carry out cash and non-cash payment operations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- determine transaction amount and conduct one of each of the following different payment operations:
  - cash
  - credit or debit card
  - cheque
- prepare three invoices for different products or services and submit them for payment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key legal requirements relating to carrying out cash and non-cash payment operations, including obligations under the Australian Consumer Law (ACL)
- factors to be considered when calculating final price, including:
  - goods and services tax (GST)
  - sales, discounts and promotions
  - deposits and partial payments
- procedures for carrying out cash and non-cash operations, including:
  - calculating sales balance
  - receiving and counting money
  - common sales security procedures for handling cash
  - calculating and returning change, including using:
    - manual methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - point-of-sale (POS) equipment
  - receiving and processing cheques
  - using electronic funds transfer at point-of-sale (EFTPOS) equipment
  - issuing receipts
- operation and maintenance of common sales equipment, including:
  - calculators
  - POS equipment, including procedures for changing receipt rolls
  - EFTPOS terminals
- procedures for preparing and distributing invoices, including:
  - types and applications of invoices
  - required contents of invoices
  - common types of software for producing invoices
  - common methods of distributing invoices to customers.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having carried out cash and non-cash payment operations in an automotive sales and service workplace, e.g. sales receipts and invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- sales and service workplace or simulated workplace
- workplace procedures for carrying out cash and non-cash payment operations and distributing invoices
- commercially realistic situations involving cash and non-cash payment transactions
- point-of-sale software
- computer hardware, software and business equipment required for processing cash and non-cash transactions and preparing invoices.

AURSCA005 Sell automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to sell products and services in an automotive retail environment. It involves identifying potential sales opportunities, and presenting, demonstrating and selling a range of automotive products and services.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Sales and Parts, Administration and Management

Unit Sector

Sales and Marketing

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Engage customer and identify potential sale	1.1 Welcoming customer environment is maintained and customer is approached in a timely and professional manner according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 Appropriate interpersonal skills are used to engage the customer 1.3 Customer needs and expectations for specific products and services are identified through questioning and active listening
2. Present and demonstrate product or service to customer	2.1 Product or service options that best meet customer needs are selected 2.2 Product or service features, functions and accessories are explained and demonstrated, eliciting customer interaction 2.3 Customers are given the opportunity, if appropriate, to test or trial the product or service 2.4 Customers are assisted to identify their preferred option
3. Obtain customer agreement to purchase product or service	3.1 Price for product or service is discussed or negotiated and agreed 3.2 Sale is made using appropriate closing technique 3.3 Sale is processed and documented according to workplace procedures
4. Complete transaction and customer follow-up procedures	4.1 Product or service transaction is supplied or delivered to customer according to supplier specifications and workplace delivery procedures 4.2 Customer satisfaction is determined and remedial action is taken as required to maximise repeat business or referral opportunities 4.3 Opportunities for value adding or repeat sales are identified and follow-up action is taken as required 4.4 Customer records are completed and plans are developed for follow-up of potential new sales of products and services

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret textual and numerical information in product or service documentation to provide customer advice • interpret key information in sales documentation and work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
	instructions to determine required action.
Writing skills to:	• legibly and accurately enter information into sales orders, workplace forms and databases.
Numeracy skills to:	• use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate quantities and prices • estimate and calculate timeframes for organising delivery and follow-up services.
Digital literacy skills to:	• use digital systems and tools to access, search, and retrieve information relating to customers, products and services.
Problem solving skills to:	• resolve routine problems relating to product availability and service delivery.
Technology skills to:	• operate specialised point-of-sale equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Assessment Requirements for AURSCA005 Sell automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- sell automotive products or services to three different customers in an automotive sales and service workplace or simulated location.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- sales communication techniques, including:
  - customer buying signals
  - effective face-to-face and telephone selling techniques
  - upselling and value adding sales techniques
  - active listening and questioning techniques
  - strategies for dealing with dissatisfied customers
- key features of loyalty programs and strategies for encouraging repeat business
- workplace procedures relating to:
  - sales processes
  - dealing with customers
  - complaints handling
  - consumer rights and responsibilities
- key features of point-of-sale equipment, stock databases and service delivery calendars
- key legal requirements relating to selling automotive products and services, including obligations under the Australian Consumer Law (ACL).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having sold a range of automotive products and services, e.g. sales invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive sales and service workplace or simulated location
- workplace procedures relating to customer sales and service
- product and service information
- commercially realistic range of automotive retail products and services
- point-of-sale equipment
- three different customers with commercially realistic sales needs.

AURSCA006 Promote automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to promote automotive products and services. It involves applying a high level of product or service knowledge, promoting products and services to current and potential customers, establishing on-selling opportunities in a sales situation, and recommending complementary products and services to customers.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Sales and Parts, Administration and Management

Unit Sector

Sales and Marketing

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Develop knowledge of automotive products	1.1 Use, purpose and application of products and services are researched and clarified as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
and services	1.2 ***Comparisons*** between available products and services, including complementary products and services, are researched and interpreted 1.3 Workplace promotional and marketing activities relevant to products and services are researched and interpreted
2. Identify and match customer needs to products and services	2.1 Customer buying motives and requirements are determined through questioning, active listening and non-verbal communication cues 2.2 Customer is guided to product or service that matches their identified buying motives and requirements 2.3 Features and benefits of product or service and relevance to customer requirements are explained and highlighted 2.4 Demonstrations are conducted and aligned to customer buying motives and requirements according to workplace marketing and sales practices 2.5 Selling techniques are used according to workplace procedures and legal requirements
3. Maximise sales opportunities	3.1 Opportunities for making additional sales are recognised and applied 3.2 On-sell opportunities are assessed through knowledge of customer needs and available complementary automotive products and services 3.3 Customer need and interest in additional or complementary products and services are determined 3.4 Benefits of additional or complementary products and services are discussed and promoted to customer

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• research and compare automotive products and services and workplace promotional campaigns to maintain currency of knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Reading skills to:	• interpret product and service specifications and promotional materials to advise customers • interpret and analyse customer information for on-selling opportunities.
Writing skills to:	• legibly and accurately prepare quotes and complete workplace forms and documentation relating to sales or promotional activities.
Oral communication skills to:	• describe and explain features and benefits of products and services using clear, jargon-free language, and tone and pace appropriate for customer.
Numeracy skills to:	• use mathematical operations, including addition, subtraction, multiplication, division and percentages, to estimate and calculate costs for customers.
Digital literacy skills to:	• use digital systems and tools to access, search and retrieve information relating to customers, products and services.
Technology skills to:	• demonstrate automotive products and services.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Comparisons must include:	• brand options • features of compared product or service • price of compared product or service.

Assessment Requirements for AURSCA006 Promote automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- promote different automotive products or services to three different customers in line with workplace customer service standards.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- methods used to promote products and services, including:
  - strengths, weaknesses, opportunities and threats (SWOT) analysis
  - marketing and research techniques
  - face-to-face selling techniques
  - active listening and questioning techniques
  - upselling and value adding sales techniques
  - negotiation strategies when dealing with dissatisfied customers
  - loyalty programs and strategies for encouraging repeat business
- customer types, including:
  - customer buying signals and buyer behaviour
  - individual and cultural differences
- sources of information about automotive products and services and related promotional activities
- comparable products and services of major competitors
- workplace procedures relating to promotional processes and marketing activities, including marketing campaigns and advertising materials
- workplace procedures relating to promoting automotive products and services, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- consumer protection
- automotive industry codes of practice relating to sales
- advertising codes of practice.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having promoted products and services in an automotive workplace, e.g. sales invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive sales and service workplace or simulated location
- workplace procedures relating to promotional sales activities
- sales material, including product and service information
- commercially realistic range of customers requiring different automotive products and services
- commercially realistic range of automotive retail products and services and associated promotional activities.

Assessment Requirements for AURSLA001 Comply with legal requirements when selling automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- sell different automotive products or services to three different customers, in which the sale must involve:
  - complying with legal requirements
  - providing accurate product or service and consumer information to customers
  - correctly completing required sales documentation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- requirements of relevant legislation, standards and codes of conduct relating to the sale of automotive products and services, including consumer rights and guarantees under the Australian Consumer Law (ACL), including:
  - consumer guarantees applying to products
  - consumer guarantees applying to services
  - exceptions to consumer guarantees
  - compensation for damages and loss
  - manufacturer's liability for faulty products
  - lawful wording of refund and return signs
  - customer complaint resolution
- roles of the Australian Competition and Consumer Commission (ACCC) in relation to consumer guarantees, including:
  - providing guidance on consumer guarantees
  - investigating complaints

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - taking action on behalf of individuals
- types and application of product sale documentation, including procedures for completing and storing documentation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having complied with legal requirements when selling automotive products and services, e.g. sales invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive sales and service workplace or simulated workplace
- workplace procedures relating to automotive product and service sales
- access to requirements of relevant legislation, standards and codes of conduct relating to the sale of automotive products and services, including consumer rights and guarantees under the ACL
- three different customers
- different automotive products or services for sale
- documentation required to complete a sale and fulfil legal requirements.

AURTNA001 Estimate and quote automotive vehicle or machinery modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare a quotation to modify the mechanical, electrical or body systems of a vehicle or machinery in order to estimate and calculate the costs, including materials, labour and overhead costs, of the modification. Mechanical and electrical systems and body enhancement kit modifications must comply with Australian Design Rules and Vehicle Safety Bulletins.

It applies to those working in the automotive service and repair industry. It includes quotations for light vehicles, heavy vehicles, agricultural machinery and mobile plant machinery, recreational vehicles or motorcycles. The unit does not apply to estimating and quoting on vehicle body structural repairs.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Loss Assessment or Repair Quoting

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to quote	1.1 Modification requirements are identified and clarified with customer 1.2 Workplace quotation information and recommended labour time guides are sourced and interpreted 1.3 Job cost estimation and calculation details are sourced and interpreted
2. Estimate cost to modify vehicle or machinery	2.1 Estimated time requirements for job are calculated and compared to recommended labour time guides and previous similar completed estimates 2.2 Feasibility of using replacement parts instead of refurbished parts is evaluated in line with original equipment manufacturer (OEM) specifications 2.3 Replacement or refurbished parts required for job are included in quotation 2.4 Parts and consumables are costed according to workplace pricing procedures 2.5 Parts and work needing to be subcontracted are identified and costed 2.6 Potential variations are identified and noted 2.7 Job labour cost estimate is documented and agreed with workplace supervisor 2.8 Quotation variations relating to unsighted damage are noted and prepared for customer acceptance 2.9 Final estimate is reviewed by workplace supervisor and quotation is finalised

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
3. Complete quotation processes	3.1 Detailed quotation is provided to customer for approval 3.2 Approval from customer to commence work and undertake any supplementary quotation work is obtained as required 3.3 Documentation is completed and quotation stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Reading skills to:	• interpret job requirement information, OEM specifications and procedures, and labour time guides efficiently.
Writing skills to:	• legibly and accurately complete: • vehicle inspection or proposed modification report • modification quotation.
Oral communication skills to:	• participate in verbal exchanges using active listening and questioning techniques to gather, clarify and confirm customer information and feedback.
Numeracy skills to:	• use mathematical equations, including addition, subtraction, multiplication, division and percentages, to perform calculations and check accuracy of costs of options and solutions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Digital literacy skills to:	• use digital systems and tools to access, search and retrieve information relating to products and services.
Technology skills to:	• use workplace technology to assist in preparing a modification quotation.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Assessment Requirements for AURTNA001 Estimate and quote automotive vehicle or machinery modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria and foundation skills:

- estimate and quote modifications to three different vehicles or machinery, including:
  - one mechanical modification
  - one electrical modification
  - one body modification.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to estimating and quoting vehicle or machinery modifications, including:
  - quality requirements
  - reporting and recording procedures
  - procedures for selecting and using personal protective equipment (PPE) and hand tools
- location and content of:
  - original equipment manufacturer (OEM) specifications and workplace procedures
  - costing catalogues
  - labour time guides
- principles of estimating and job costing
- procedures and processes for identifying, apportioning, validating and documenting total costs for work, including components of estimates and job costings, including:
  - labour
  - parts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - costs relating to required external products or services
- requirements of Australian Design Rules (ADRs) and Vehicle Safety Bulletins (VSBs) relating to mechanical and electrical system and body enhancement modifications.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having provided a quotation relating to a vehicle or machinery modification, e.g. quotations.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- three different vehicles or machinery requiring estimates and quotes relating to mechanical and electrical system or body enhancement modifications
- OEM specifications and workplace procedures
- labour time guides
- office equipment, including calculators, computer, internet and software
- manufacturer and component refurbishing costing guides.

Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out the safety inspections of three different vehicles
- produce separate vehicle safety reports relating to the above inspections.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational, health and safety (OHS) requirements relating to carrying out vehicle safety inspections, including procedures for lifting and supporting vehicles
- methods for sourcing vehicle specifications
- vehicle and component safety inspection procedures
- types of vehicle safety inspection reports.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have inspected, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- vehicle manufacturer specifications
- three different vehicles requiring safety inspections
- tools and equipment for carrying out vehicle safety inspections.

AURTTB001 Inspect and service braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service braking systems according to manufacturer specifications. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The braking systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, motorcycles, mobile plant machinery, outdoor power equipment or trailers. The braking systems may be hydraulic, air over hydraulic, air, mechanical, or hand and parking braking systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service braking system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect braking system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and ***safety and environmental requirements*** 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service braking system	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.2 ***Post-service testing*** is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to braking systems.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report inspection finding and make repair recommendations.
Numeracy skills to:	• measure brake components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications • interpret measuring equipment scales.
Technology skills to:	• use measuring equipment, such as vernier calipers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • lifting and supporting vehicles or machinery
	  • managing and controlling brake dust and brake fluids
	• environmental requirements, including procedures for trapping, storing and disposing of brake dust and brake fluid released from braking systems.

Post-service testing must include**:**	• static and dynamic testing of braking system.

Assessment Requirements for AURTTB001 Inspect and service braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the braking systems of two different vehicles or machinery, including:
  - disc braking systems
  - drum braking systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing braking systems, including procedures for:
  - lifting and supporting vehicles or machinery
  - managing and controlling brake dust and brake fluids
- environmental requirements, including procedures for trapping, storing and disposing of brake dust and brake fluid released from braking systems
- identification and function of major braking components, including:
  - discs, pads and calipers
  - drums, brake linings, wheel cylinders and hydraulic components
  - master cylinder
  - hydraulic and vacuum brake booster
  - diesel engine vacuum brake booster pump
  - electric and manual park braking systems
- basic operation of braking systems, including:
  - hydraulic braking systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - mechanical braking systems
  - air over hydraulic systems
  - air braking systems
- types, applications and testing of brake hydraulic fluids
- inspection procedures for braking system components, including:
  - component wear analysis
  - brake fluid testing
- service and adjustment procedures for braking systems, including:
  - brake bleeding
  - brake adjustment
  - park brake adjustment
- post-service testing procedures for braking systems, including static and dynamic testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer braking system specifications
- two different vehicles or machinery with disc and drum braking systems requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing braking systems.

AURTTJ002 Remove, inspect and refit wheel hubs and associated brake components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and refit wheel hubs and associated brake components during the rectification of faults in steering and suspension systems. It involves identifying and confirming work requirements, preparing for the work, removing and refitting the wheel hubs and associated brake components, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The hubs and associated brake components include those of light vehicles, four wheel drive vehicles or light commercial vehicles. This unit does not involve servicing or repairing braking systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTJ002 Remove, inspect and refit wheel hubs and associated brake components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, inspect, refit and adjust:
  - one disc brake hub and associated brake components
  - one drum brake hub and associated brake components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and refitting wheel hubs and associated brake components, including procedures for:
  - lifting and supporting vehicles and wheel hubs
  - handling and controlling brake dust and brake fluids
- environmental requirements, including procedures for trapping, storing and disposing of brake dust and brake fluid
- application, purpose and function of wheel hubs and associated brake components, including:
  - discs, pads and brake calipers
  - drums, brake linings, wheel cylinders and hydraulic components
  - park braking devices
  - wheel bearing types
- basic operation of braking systems, including:
  - hydraulic braking systems
  - mechanical braking systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- types and applications of brake hydraulic fluids and wheel bearing greases
- procedures for removing, inspecting, refitting and adjusting wheel hubs and associated brake components, including:
  - brake bleeding
  - brake and park brake adjustment
  - wheel bearing lubrication and adjustment
- post-fitting procedures and checks of wheel hubs and associated brake components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle wheel hubs and brake components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer wheel hubs and associated brake component specifications
- two different vehicles for removing and refitting the wheel hubs and associated brake components specified in the performance evidence
- tools, equipment and materials appropriate for removing, inspecting and refitting wheel hubs and associated brake components.

AURTTY001 Repair vehicle chassis, frame and associated components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, repair and align chassis, frame and components to vehicles. It involves preparing for the task, selecting and using specialist tools and equipment, identifying damage, taking pre-repair measurements, conducting repairs, taking post-repair measurements according to original equipment manufacturer (OEM) or authorised agency specifications, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Chassis and Frame

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to repair vehicle chassis, frame and associated components	1.1 Job requirements are determined from workplace instructions 1.2 Type of damage is identified, and inspection report is completed and documented according to workplace procedures 1.3 Repair specifications from OEM or authorised agency are sourced and interpreted 1.4 Hazards associated with the work are identified and risks are managed 1.5 ***Repair tools and equipment*** and personal protective equipment (PPE) are selected and checked for serviceability 1.6 Work is planned to identify repair methods, minimise waste and use time efficiently
2. Carry out repairs	2.1 Repair or replacement and alignment activities are carried out according to OEM or authorised agency repair specifications, workplace procedures, and ***safety and environmental requirements***, within industry time lines, and without causing damage to other vehicle components or systems 2.2 Measuring equipment is used to take accurate measurements and to align the chassis, frame and components
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communications skills to:	• ask questions to clarify instructions and procedures • clearly report issues or outcomes relating to repair.
Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate tolerances from manufacturer specifications • interpret repair and alignment measurements.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• correctly and safely use specialist repair equipment and tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Repair tools and equipment must include:	• hydraulic repair equipment • measuring and alignment equipment.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using specialist tools and equipment
	  • identifying workplace hazards
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURTTY001 Repair vehicle chassis, frame and associated components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair one chassis and its frame and components, in which the work must involve two of the following types of damage:
  - diamond and twist damage
  - kick-up and kick-down
  - sag
  - mash and sway.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle chassis, frame and associated components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using specialist tools and equipment
  - identifying workplace hazards
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- steps in repair inspection process
- original equipment manufacturer (OEM) or authorised agency specifications and recommended repair procedures
- features of different types of chassis damage, including:
  - diamond and twist damage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - kick-up and kick-down
  - sag
  - mash and sway
- procedures for determining chassis reparability
- vehicle design characteristics, including:
  - mono unitised
  - alloy and high strength steel (HSS) chassis
- chassis repair, replacement and alignment techniques
- key characteristics of welding types and techniques
- limitations on drilling and welding to chassis
- type and use of chassis repair tools and equipment, including:
  - application of heat colours, heat crayons and thermal temp gun
  - hydraulic repair equipment
  - equipment maintenance procedures
- measuring and alignment procedures
- type and use of measuring equipment, including:
  - gun sight gauges
  - drop lining
  - trammel gauges
  - tape measures
- final inspection procedures
- work area clean-up and maintenance requirements
- procedures for completing workplace documentation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle chassis, frames and components that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- OEM specifications and repair instructions
- PPE required to repair chassis, frame and components
- one chassis requiring repair, and its frame and associated components
- measuring and alignment equipment
- tools and equipment appropriate for repairing vehicle chassis, frame and components.

Required Skills and Knowledge

Evidence Guide

The Evidence guide identifies critical aspects, knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

Critical aspects of evidence	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: observing safety procedures and requirements communicating effectively with others involved in or affected by the work selecting methods and techniques appropriate to the circumstances completing preparatory activity in a systematic manner
Critical aspects of evidence (continued)	accurately interpreting vehicle body repair quotation determining repair requirements, including repair procedures, component/part purchases and sublet work requirements estimating repair timelines
Relationship to other units	Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role
Underpinning knowledge	A working knowledge of: OH&S regulations/requirements, equipment, material and personal safety requirements reading and interpretation skills vehicle body repair estimate/quotation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	methods planning and work coordination procedures work activity timeframe estimation procedures vehicle body repair methods and procedures work organisation and planning processes enterprise quality processes
Specific key competencies, **underpinning and employability skills required to achieve the performance criteria**	These include a number of processes that are learned throughout work and life, which are required in most jobs. Some of these are covered by the national key competencies, although others may be added. The details below highlight how these competencies are to be applied in the attainment of this unit. Application of the key competencies in this unit are to satisfy the nominated level in which: Level 1 - relates to working effectively within set conditions and processes; Level 2 - relates to management or facilitation of conditions or processes; and Level 3 - relates to design, development and evaluation of conditions or process. How will the candidate apply the following key competency in this unit? The candidate will need to:
Collect, analyse and organise information	Collect, organise and understand information related to work orders, plans and safety procedures for reading and interpreting vehicle body repair estimation/quotations (Level 2)
Communicate ideas and information	Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	(Level 1)
Plan and organise activities	Plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage (Level 1)
Work with others and in a team	Work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity (Level 1)
Solve problems	Establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage (Level 1)
Use mathematical ideas and techniques	Use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks (Level 1)
Use technology	Use workplace technology related to interpreting and using repair quotations, including the use of measuring equipment, computerised technology and communication devices and the reporting/recording of results (Level 1)
Context of assessment	Application of competence is to be assessed in the workplace or simulated worksite Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints Assessment is to comply with regulatory requirements, including Australian Standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Method of assessment	Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies Assessment may be applied under project related conditions and require evidence of process Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements
Specific resource requirements for this unit	The following resources should be made available: workplace location or simulated workplace materials relevant to interpreting and using repair quotations equipment and tooling appropriate to interpreting and using repair quotations activities covering mandatory task requirements specifications and work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Unit scope	Methods are to include: reading and interpreting repair quotation consultation with customer/qualified persons determining repair requirements, including repair procedures, component/part purchases and sublet work requirements estimating repair timelines accurate recording of repair procedures
Unit context	Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment Work is carried out in accordance with award provisions
Safety (**OH&S**)	OH&S requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices Emergency procedures related to this unit are to include, but are not limited to extinguishing fires, enterprise first aid requirements and worksite evacuation
Environmental requirements	Environmental requirements are to include but are not limited to clean-up management

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
Tooling and equipment	Tooling and equipment may include computer software/ hardware, general office equipment, communication equipment
Communications	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
Information	Information sources may include, but are not limited to verbal or written and graphical instructions, work bulletins, memos, material safety data sheets, diagrams or sketches Regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules Organisation work specifications and requirements Instructions issued by authorised enterprise or external persons

AURVTG011 Install side vehicle windows

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to fabricate templates for vehicle side windows, mark and cut panels, prepare cut edges, cut glass or perspex, and install the side windows. It involves preparing for the task, selecting and using specialist tools and equipment, selecting materials, checking material quality, sealing and installing side windows according to manufacturer specifications, cleaning and finishing the windows, and completing workplace processes and documentation.

It applies to those working in the automotive glazing service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Glazing

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to install side window	1.1 Job requirements are determined from workplace instructions 1.2 Information is accessed and interpreted from manufacturer specifications, workplace procedures, and sealant safety data sheets (SDS) 1.3 Work is planned to minimise waste and use time efficiently 1.4 Vehicle is inspected to ensure there is no prior damage and that all related accessories are operating correctly 1.5 ***Materials*** required to install side window are selected and checked for quality 1.6 Hazards associated with the work are identified and risks are managed 1.7 ***Tools and equipment*** for making opening and installing side window are selected and checked for serviceability 1.8 Vehicle is protected and safely located according to workplace procedures
2. Fabricate templates	2.1 Accurate measurements of shape and size of side window are taken in order to prepare templates 2.2 Suitable materials and equipment are used to fabricate templates 2.3 Templates are completed according to workplace procedures and without causing damage to vehicle or components
3. Mark out and cut panel for side window	3.1 Template is used to mark out areas on vehicle to be cut 3.2 Window opening is cut in panel using approved methods and equipment according to workplace procedures and ***safety and environmental requirements*** 3.3 Panel edges and trim are prepared for installation of side window 3.4 Panels and trim are reinforced as required to comply with vehicle manufacturer specifications and without causing damage to vehicle or components
4. Install side window	4.1 Material to be installed in vehicle side opening is selected and prepared 4.2 Side window is installed to manufacturer specifications using either rubber or direct glazing according to safety and environmental requirements 4.3 Window in panel opening is secured using approved materials
5. Complete work processes	5.1 Final inspection is made to ensure work meets workplace expectations, related accessories are operating correctly, customer is informed of time to wait before driving vehicle, and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	vehicle is presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 5.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report issues or outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to:
	  • calculate template and panel measurements
	  • cut opening.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	• identify quality issues, reinforcement requirements and potential problems associated with cutting opening and installing side windows.
Technology skills to:	• use specialist tools and measuring equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Materials must include**:**	• side window • panel material • template materials • trim • sealants and adhesives • cleaning agents.
Tools and equipment must include:	• personal protective equipment (PPE) • hand and power tools • measuring equipment • metal cutting equipment • vehicle protection equipment • templates.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using tools and lifting equipment
	  • using SDS for sealants
	  • material handling and storage
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials and chemicals.

Assessment Requirements for AURVTG011 Install side vehicle windows

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install side windows in two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing side vehicle windows, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using tools and lifting equipment
  - using safety data sheets (SDS) for sealants
  - material handling and storage
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and chemicals
- location and content of side window manufacturer technical information and specifications
- side window installation methods and techniques, including:
  - template production
  - template materials
  - measuring and marking out procedures
  - procedures for cutting windows and panels
  - side window installation procedures
  - type and use of specialist tools and equipment
  - glass and material handling techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - type of adhesives and sealants and their application
  - potential problems and consequences
  - cleaning materials and techniques
- procedures for protecting vehicle and components when installing side vehicle windows
- procedures for final inspection of fitted side windows.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle side windows they have installed, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive glazing workplace, off-site workplace location or simulated workplace
- workplace instructions
- PPE to be used when installing side windows
- SDS for sealants
- template materials
- metal cutting equipment, and hand and power tools to cut and install side windows
- two different vehicles requiring the installation of a side window
- side windows
- vehicle protection covers
- cleaning agents
- tools, equipment and materials appropriate for installing vehicle side windows.

AURVTN032 Inspect vehicle damage and determine repair procedures

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect a vehicle for damage and determine suitable repair procedure. It involves preparing for the task, selecting and using measuring equipment, inspecting damage, determining repair requirements, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect	1.1 Job requirements are determined from workplace instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
vehicle damage	1.2 Vehicle specifications and repair procedures from original equipment manufacturer (OEM) or authorised agency are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Vehicle to be inspected is located, checked and confirmed against vehicle information in workplace instructions 1.5 ***Inspection methods*** are analysed, and most appropriate option for vehicle and job requirement is selected 1.6 Materials and equipment required to conduct inspection are sourced and prepared
2. Inspect vehicle damage	2.1 Vehicle is inspected to determine location and extent of direct and indirect damage according to OEM or authorised agency's recommended procedures, workplace procedures and ***safety requirements*** 2.2 Accurate measurements are taken and inspection findings are recorded, including photographs where appropriate, according to workplace procedures 2.3 Vehicle inspection is completed without causing damage to vehicle or components
3. Complete repair report	3.1 Vehicle inspection report and repair plan are prepared and given to appropriate personnel according to workplace procedures 3.2 Direct and indirect damage to vehicle is clearly identified in ***report***, based on workplace and OEM or authorised agency's recommended repair procedures 3.3 Report is checked for accuracy and completeness and finalised for submission to insurance company and/or customer according to workplace procedures 3.4 Responses to queries about the damage inspection and repair report are provided when requested

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Learning skills to:	• locate specifications and relevant information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation and rectification reports outlining repair recommendations, and parts and material required.
Oral communication skills to:	• clarify instructions and procedures • convey inspection findings and repair recommendations.
Numeracy skills to:	• interpret and calculate OEM or authorised agency repair and vehicle specifications correctly using metric and imperial systems of measurement • compare measurements and identify non-conformance measurements • use basic mathematical operations, including addition, subtraction, multiplication and division to calculate material for repairs in damage inspection report • calculate recommended remove and replacement times in damage inspection report.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	• assess implications of damage to vehicle.
Technology skills to:	• use digital camera to complete reporting tasks.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Inspection methods must include:	• visual checking • physical checking: • taking measurements • partial dismantling • referencing OEM or authorised agency's specifications.
Safety requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: • selecting and using personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• using measuring equipment.
Report must include:	• material list • estimation of time required to complete repairs.

AURVTS004 Repair vehicle composite material components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair components on vehicle bodies using composite materials. It involves preparing for the task, selecting and using specialist tools and equipment, identifying suitable composite materials, calculating material quantities, mixing and applying recommended composite materials to repair components according to workplace and customer specifications, and completing workplace processes and documentation.

It applies to those working in the automotive service and body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTS004 Repair vehicle composite material components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair composite components of two different vehicles, including a repair to:
  - 50 mm diameter hole
  - 100 mm split.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS), and occupational health and safety (OHS) requirements relating to repairing vehicle composite material components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using tools and equipment
  - satisfying ventilation requirements for work area
  - using safety data sheets (SDS) for composite materials
  - handling and storing hazardous resins and chemicals
- environmental requirements, including procedures for trapping, storing and disposing of resins, chemicals and waste materials produced during fabrication process
- fibreglass and composite material repair procedures and techniques, including:
  - types and application of specialist composite tools and equipment
  - types and features of fibreglass and composite materials
  - use of composite moulds required for support backing during repair
  - measuring and calculation techniques
  - surface preparation for composite repairs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - mixing and applying composite materials according to manufacturer specifications
  - finishing techniques for composite surfaces
  - reinforcement methods to reinstate pre-damage strength
  - composite repair problems and resolution techniques
- procedures for final inspection of repaired composite component.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle components made of composite materials that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required to repair composite components
- SDS for composite materials
- composite materials
- two different vehicles requiring the composite component repairs specified in the performance evidence
- tools, equipment and materials appropriate for repairing vehicle composite material components.

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate:
	  • fitting measurements
	  • quantities of canvas materials
	• use tape measure to take measurements.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Fabrication methods must include:	• measuring, marking out and cutting canvas material • machine sewing • reinforcing and edge finishing • assembling and installing.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using specialist tools and equipment
	  • manual handling components
	• environmental requirements, including procedures for storing and disposing of waste materials.

Assessment Requirements for AURVTT015 Fabricate and install canvas products for automotive and marine components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- fabricate and install one canvas product for an automotive or marine application.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to fabricating and installing canvas products for automotive and marine components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using specialist tools and equipment
  - manual handling components
- environmental requirements, including procedures for storing and disposing of waste materials
- types and operation of trimming and fabrication tools and equipment
- designs and styles of different types of canvas products
- types, characteristics and applications of:
  - canvas materials
  - fasteners
- methods and techniques for fabricating and installing canvas products, including:
  - selecting canvas
  - planning
  - measuring
  - marking out

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - cutting
  - sewing
- procedures for protecting vehicle and components when installing products
- procedures for final inspection of fabricated and installed canvas products.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the canvas products that they have fabricated and installed, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive or marine trimming workplace or simulated workplace
- workplace instructions
- PPE required to fabricate and install canvas products
- materials required to fabricate and install canvas products
- one vehicle or vessel requiring a canvas product to be fabricated and installed
- tools, equipment and materials appropriate for fabricating and installing canvas products.

AURVTT019 Fabricate and install automotive and marine frames, canopies and side curtains

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to measure, mark out and cut, fabricate and install automotive and marine frames, canopies and side curtains to manufacturer specifications and customer instructions. It involves preparing for the task, selecting and using specialist tools and equipment, selecting materials and checking their quality, and completing workplace processes and documentation.

It applies to those working in the automotive and marine trimming industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Trimming and Upholstery

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for fabrication	1.1 Job requirements are determined from workplace instructions 1.2 Frame, components and ***materials*** are selected and inspected for quality 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 1.5 Work is planned to minimise waste and use time efficiently
2. Undertake fabrication and installation activities	2.1 Material is measured, marked out and cut according to job requirements and workplace instructions 2.2 Specialist tools and equipment are used according to ***safety and environmental requirements*** 2.3 Frame, canopies and side curtains are fabricated and assembled according to job requirements, workplace procedures, and safety and environmental requirements 2.4 Frame, canopies and side curtains are installed and fastened according to workplace procedures and without causing damage to vehicle, vessel or components 2.5 Installation and fastening are checked for correct operational requirements
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle or vessel is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate:
	  • quantities of required materials
	  • fitting measurements.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Materials must include:	• adhesives • polyvinyl chloride (PVC) • canvas • aluminium or stainless steel tubing • fasteners • bindings and zippers.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using specialist tools and equipment
	  • manual handling components
	• environmental requirements, including procedures for storing and disposing of waste materials.

AURVTT3016 Fabricate frame structures

Modification History

Release	Comment
Release 1	Replaces AURV331423DA Fabricate and install frame structures Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	This unit covers the competence required to fabricate (measure, select material and attachments, cut, make up/assemble and fit) and install frame structures. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Application of the Unit

Application of the unit	The unit includes identification and confirmation of work requirement, preparation for work, measuring frame requirements, selecting materials, assembling, fitting and installation of frame structure and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for fabrication work	1.1. Information for work is accessed from manufacturer/ component supplier specifications and interpreted. 1.2. WHS requirements, including personal protection needs, are observed throughout the work. 1.3. Materials are selected and inspected for quality. 1.4. Components, tooling and equipment for fabrication are identified, selected and prepared in accordance with worksite procedures. 1.5. Procedures are determined to minimise waste material. 1.6. Procedures are identified for maximising energy efficiency while completing the job.
2. Measure job and	2.1. Information for measuring and determining frame

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
determine frame requirements	requirements is interpreted and followed. 2.2. Measurements are accessed from manufacturer/component supplier specifications and/or from directly measured fitting requirements. 2.3. Frame dimensions are confirmed against job/customer requirements.
3. Select frame materials and attachments/joiners	3.1. Information for selection of materials and attachments/ joiners is interpreted and followed. 3.2. Materials type and size are selected according to frame dimension, in-service environment and customer requirements. 3.3. Attachment methods and materials are selected according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.
4. Cut materials, fit frame attachments/joiners and assemble frame	4.1. Information for cutting materials, fitting of attachments/ joiners and assembly is interpreted and followed. 4.2. Tooling and equipment are used for cutting and fitting attachments/joiners. 4.3. Cutting, attachment/joiner fitting and assembly is carried out and completed in accordance with work plan and specifications. 4.4. Component lengths, fittings and frame assembly dimensions are checked for conformity to specifications in accordance with worksite procedures. 4.5. All cutting, fitting and assembly operations are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.
5. Fit fabricated frame structure	5.1. Fitting is completed without causing damage to equipment, component/system or machinery. 5.2. Information for fitting fabricated frame is interpreted and followed. 5.3. Frame fitting is carried out and completed in accordance with work plan and specifications. 5.4. Production is checked for conformity to specifications in accordance with worksite procedures.
6. Install and fasten frame structure	6.1. Information for installation and fastening is interpreted and followed. 6.2. Installation and fastening processes and methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	are accessed from manufacturer/component supplier specifications and/or determined from existing fitting. 6.3. Installation and fastenings are checked for conformity to manufacturer/component supplier specifications and vehicle operational requirements.
7. Clean up work area and maintain equipment	7.1. Material that can be reused is collected and stored. 7.2. Waste and scrap is removed following workplace procedure. 7.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures. 7.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures. 7.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures. 7.6. Tooling is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• collect, organise and understand information related to work orders, plans and safety procedures for fabricating and installing frame structures • communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems • plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage • work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity • use mathematical ideas and techniques to complete measurements and estimate material requirements for work • establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
reworking and avoid wastage • use workplace technology related to fabrication and installation of frame structures, including the use of measuring equipment, computerised technology and communication devices and the reporting/recording of results
Required knowledge
A working knowledge of: • WHS regulations/requirements and personal safety requirements • technical information • equipment safety requirements/operation of tube bending and wire swaging equipment • types of frames, fittings and fasteners • frame positioning and fixing methods and procedures • types of frame materials and their application • production methods and procedures, including frame design, material and hardware selection, measuring, cutting and assembly/fitting up • enterprise quality procedures • work organisation and planning processes

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of: • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • fabricating a range of frame structures following

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	production processes • measuring job and determining frame requirements • selecting frame materials and attachments • assembling and fitting/attaching frame • monitoring production processes, specifications and outputs • completing post-activity housekeeping.
Context of, and specific resources for assessment	Application of competence is to be assessed in the workplace or simulated worksite. Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints. Assessment is to comply with regulatory requirements, including Australian Standards. The following resources should be made available: • workplace location or simulated workplace • materials relevant to fabrication and installation of frame structures • equipment, hand and power tooling appropriate to fabrication and installation of frame structures • activities covering mandatory task requirements • specifications and work instructions.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies. • Assessment may be applied under project related conditions and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Methods	Methods are to include: • material selection, measuring, cutting, mechanical fastening, wire swaging, shaping, bending, riveting, and fitting • dismantling, assembling, fitting, fixing.
Frame structures	Frame structures may be those in recreational equipment, marine craft, aircraft, heavy vehicles, plant and agricultural equipment.
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
Safe operating procedures	Safe operating procedures are to include, but are not limited to operational risk assessment and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
Emergency procedures	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
Environmental requirements	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
Tooling and equipment	Tooling and equipment may include hand tooling, power tooling, air tooling, specialist tooling, rivet gun and rivets, machines, drills, cutting equipment, measuring and assembly equipment (straight edge, tape, square).
Materials	Materials may include stainless steel hardware, bow sets, fasteners, stainless steel wire and tube, and aluminium tube.
Communications	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
Information/documents	Sources of information/documents may include: • verbal or written and graphical instructions,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to fabrication and installation of frame structures • regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules • engineer's design specifications and instructions • organisation work specifications and requirements • instructions issued by authorised enterprise or external persons • Australian Standards.

Application

This unit describes the skills and knowledge required to manage a range of meetings including overseeing the meeting preparation processes, chairing meetings, organising the minutes and reporting meeting outcomes.

It applies to individuals employed in a range of work environments who are required to organise and manage meetings within their workplace, including conducting or managing administrative tasks in providing agendas and meeting material. They may work as senior administrative staff or may be individuals with responsibility for conducting and chairing meetings in the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Administration – General Administration

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Prepare for meetings	1.1 Develop agenda in line with stated meeting purpose 1.2 Ensure style and structure of meeting are appropriate to its purpose 1.3 Identify meeting participants and notify them in accordance with organisational procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.4 Confirm meeting arrangements in accordance with requirements of meeting 1.5 Despatch meeting papers to participants within designated timelines
2 Conduct meetings	2.1 Chair meetings in accordance with organisational requirements, agreed conventions for type of meeting and legal and ethical requirements 2.2 Conduct meetings to ensure they are focused, time efficient and achieve the required outcomes 2.3 Ensure meeting facilitation enables participation, discussion, problem-solving and resolution of issues 2.4 Brief minute-taker on method for recording meeting notes in accordance with organisational requirements and conventions for type of meeting
3 Follow up meetings	3.1 Check transcribed meeting notes to ensure they reflect a true and accurate record of the meeting and are formatted in accordance with organisational procedures and meeting conventions 3.2 Distribute and store minutes and other follow-up documentation within designated timelines, and according to organisational requirements 3.3 Report outcomes of meetings as required, within designated timelines

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 1.4, 3.1, 3.2	• Identifies and interprets information from complex texts including legislation, organisational policies and procedures • Compares final output with original notes to check for accuracy
Writing	1.1-1.5, 3.2, 3.3	• Addresses the context, purpose and audience when generating a range of texts • Prepares complex texts from notes using appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		structure, and accurate spelling, grammar and punctuation • Records notes of meeting proceedings according to organisational requirements • Edits and corrects own work to ensure accuracy
Oral Communication	2.1-2.4	• Participates in verbal exchanges using appropriate style, tone and vocabulary for audience, context and purpose • Listens for specific information during meetings • Asks questions and listens to responses to clarify understanding
Numeracy	1.4, 1.5, 3.2, 3.3	• Recognises and interprets numerical information related to timeframes and budgets
Navigate the world of work	1.3, 2.1, 2.4, 3.1, 3.2	• Recognises and responds to both explicit and implicit organisational procedures and protocols and legislative/regulatory requirements
Interact with others	1.3, 1.5, 2.3, 3.2	• Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role • Cooperates with others as part of familiar activities, playing an active role in facilitating group interaction
Get the work done	1.1, 1.3, 1.4, 1.5, 2.1, 2.2, 2.4, 3.1, 3.2, 3.3	• Applies formal processes when planning complex tasks, producing plans with logically sequenced steps, reflecting an awareness of time constraints • Recognises and takes responsibility for addressing predictable problems in familiar work contexts

Assessment Requirements for BSBADM502 Manage meetings

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- apply conventions and procedures for formal and informal meetings including:
  - developing and distributing agendas and papers
  - identifying and inviting meeting participants
  - organising and confirming meeting arrangements
  - running the meeting and following up
- organise, take part in and chair a meeting
- record and store meeting documentation
- follow organisational policies and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline meeting terminology, structures, arrangements
- outline responsibilities of the chairperson and explain group dynamics in relation to managing meetings
- describe options for meetings including face-to-face, teleconferencing, web-conferencing and using webcams
- identify the relevant organisational procedures and policies regarding meetings, chairing and minutes including identifying organisational formats for minutes and agendas.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the general administration field of work and include access to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- reference material in regard to meeting venues and technology, catering and transport suppliers
- organisational policies and procedures for managing meetings
- office supplies and equipment
- computers and relevant software
- case studies and, where possible, real situations.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBCUS501 Manage quality customer service

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0. Version created to clarify assessment conditions
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to develop strategies to manage organisational systems that ensure products and services are delivered and maintained to standards agreed by the organisation.

It applies to individuals who supervise the provision of quality customer service within an organisation's procedures framework by others. At this level, individuals must exercise considerable discretion and judgement, using a range of problem solving and decision making strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Stakeholder Relations – Customer Service

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Plan to meet internal and external customer	1.1 Investigate, identify, assess, and include the needs of customers in planning processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
requirements	1.2 Ensure plans achieve the quality, time and cost specifications agreed with customers
2 Ensure delivery of quality products and services	2.1 Deliver products and services to customer specifications within organisation's business plan 2.2 Monitor team performance to consistently meet the organisation's quality and delivery standards 2.3 Help colleagues overcome difficulties in meeting customer service standards
3 Monitor, adjust and review customer service	3.1 Develop and use strategies to monitor progress in achieving product and/or service targets and standards 3.2 Develop and use strategies to obtain customer feedback to improve the provision of products and services 3.3 Develop, procure and use resources effectively to provide quality products and services to customers 3.4 Make decisions to overcome problems and to adapt customer services, products and service delivery in consultation with appropriate individuals and groups 3.5 Manage records, reports and recommendations within the organisation's systems and processes

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 3.1, 3.2, 3.3, 3.5	• Interprets and analyses textual information from a variety of sources and applies the knowledge that has been gained to evaluate standards for organisation's products and services
Writing	1.2, 3.1, 3.2, 3.3, 3.5	• Produces a range of text types to convey information, requirements or recommendations matching style of writing to purpose and audience
Oral Communication	1.1, 1.2, 2.1, 2.3, 3.2	• Clearly articulates systems and standards in a team environment using language suitable to diverse audiences • Uses listening and questioning techniques to obtain

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		feedback and confirm understanding
Numeracy	1.2	• Interprets and comprehends mathematical information in organisation's business and customer service plans.
Navigate the world of work	2.1, 2.2, 3.1, 3.5	• Recognises and applies organisational protocols and meets expectations associated with own work
Interact with others	1.1, 2.3, 3.4	• Identifies and uses appropriate conventions and protocols when communicating with colleagues and customers • Collaborates with others, taking into account their strengths and experience, to achieve desired outcomes • Provides support in field of expertise to team
Get the work done	1.1, 1.2, 2.1, 2.2, 3.1-3.5	• Develops and implements plans using logical processes and monitors and evaluates progress against stated goals • Accepts responsibility for addressing complex or non-routine difficulties, applying problem solving processes in determining a solution. • Uses digital technology to access, organise and present information in a format that meets requirements

Assessment Requirements for BSBCUS501 Manage quality customer service

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0 Version created to clarify assessment conditions
Release 1	This version first released with Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- develop and manage organisational systems for quality customer service
- develop and review plans, policies and procedures for delivering and monitoring quality customer service
- implement policies and procedures to ensure quality customer service
- solve complex customer complaints and system problems that lead to poor customer service
- monitor and assist teams to meet customer service requirements
- develop, procure and use human and physical resources to support quality customer service delivery.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the legislative and regulatory context of the organisation relevant to customer service
- describe organisational policy and procedures for customer service including handling customer complaints
- identify service standards and best practice models
- summarise public relations and product promotion
- outline techniques for dealing with customers including customers with specific needs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- explain techniques for solving complaints including the principles and techniques involved in the management and organisation of:
  - customer behaviour
  - customer needs research
  - customer relations
  - ongoing product and/or service quality
  - problem identification and resolution
  - quality customer service delivery
  - record keeping and management methods
  - strategies for monitoring, managing and introducing ways to improve customer service relationships
  - strategies to obtain customer feedback.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- legislation, regulations and codes of practice related to customer service
- business technology
- workplace documentation and resources
- complex customer complaints
- case studies and, where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBFIM501 Manage budgets and financial plans

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to undertake financial management within a work team in an organisation. It includes planning and implementing financial management approaches, supporting team members whose role involves aspects of financial operations, monitoring and controlling finances and reviewing and evaluating effectiveness of financial management processes.

It applies to managers in a wide range of organisations and sectors who have responsibility for ensuring that work team financial resources are used effectively and are managed in line with financial objectives of the team and organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Finance - Financial Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Plan financial management approaches	1.1 Access budget/financial plans for the work team 1.2 Clarify budget/financial plans with relevant personnel within the organisation to ensure that documented outcomes are achievable, accurate and comprehensible 1.3 Negotiate any changes required to be made to budget/financial

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	plans with relevant personnel within the organisation 1.4 Prepare contingency plans in the event that initial plans need to be varied
2 Implement financial management approaches	2.1 Disseminate relevant details of the agreed budget/financial plans to team members 2.2 Provide support to ensure that team members can competently perform required roles associated with the management of finances 2.3 Determine and access resources and systems to manage financial management processes within the work team
3 Monitor and control finances	3.1 Implement processes to monitor actual expenditure and to control costs across the work team 3.2 Monitor expenditure and costs on an agreed cyclical basis to identify cost variations and expenditure overruns 3.3 Implement, monitor and modify contingency plans as required to maintain financial objectives 3.4 Report on budget and expenditure in accordance with organisational protocols
4 Review and evaluate financial management processes	4.1 Collect and collate for analysis, data and information on the effectiveness of financial management processes within the work team 4.2 Analyse data and information on the effectiveness of financial management processes within the work team and identify, document and recommend any improvements to existing processes 4.3 Implement and monitor agreed improvements in line with financial objectives of the work team and the organisation

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 2.3, 3.1-3.4, 4.2, 4.3	• Interprets and analyses information to determine activities required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Writing	1.1, 1.4, 4.1-4.3	• Records information in correct forms and prepares materials which convey detailed and factual content in accordance with internal procedures
Oral Communication	1.2, 1.3, 2.1-2.3	• Presents information about financial issues and requirements to a range of audiences using structure and language to suit the audience • Uses active listening and questioning to clarify information and to confirm understanding
Numeracy	1.1-1.3, 2.1-2.3, 3.1-3.4, 4.1-4.3	• Uses a wide range of mathematical calculations to analyse numeric information in budgets or financial plans
Navigate the world of work	2.2, 3.3, 3.4, 4.3	• Recognises, understands and adheres to organisational requirements in undertaking own work
Interact with others	1.2, 1.3, 2.1, 2.2, 3.1, 2.3, 4.2, 4.3	• Uses a range of strategies to connect, collaborate and cooperate with other work colleagues in activities requiring collective effort and diverse skills and knowledge
Get the work done	1.1, 1.4, 2.3, 3.1-3.4, 4.1-4.3	• Uses logical processes in planning, implementing and evaluating complex tasks and developing alternative strategies in achieving goals and timelines • Uses a range of digital technologies to access, filter, compile, integrate and logically present complex information from multiple sources

Assessment Requirements for BSBFIM501 Manage budgets and financial plans

Modification History

Release	Comments
Release 1	This version first released with Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- use financial skills to work with and interpret budgets, ageing summaries, cash flow, petty cash, Goods and Services Tax (GST), and profit and loss statements
- communicate with relevant people to clarify budget/financial plans, negotiate changes and disseminate information
- prepare, implement and modify financial contingency plans
- monitor expenditure and control costs
- support and monitor team members
- report on budget and expenditure
- review and make recommendations for improvements to financial processes
- meet record keeping requirements for the Australian Taxation Office (ATO) and for auditing purposes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe basic accounting principles
- identify and explain the relevant legislation and current requirements of the Australian Taxation Office, including the Goods and Services Tax (GST)
- explain the key requirements for financiall record keeping and auditing
- describe the principles and techniques involved in managing:
  - budgeting
  - cash flows
  - electronic spreadsheets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- GST
- ledgers and financial statements
- profit and loss statements.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the financial management field of work and include access to:

- resources and documentation used in the workplace
- workplace policies and procedures
- workplace budgets and financial plans
- business technology
- case studies and, where available, real situations.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBINM501 Manage an information or knowledge management system

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to organise training for others for an information or knowledge management system and to manage the use of the system.

It applies to individuals who are responsible for seeing that key information and corporate knowledge are retained, accessible to others and improve business outcomes.

The unit applies to information or knowledge management systems which comprise policies, protocols, procedures and practices to manage information or knowledge within the organisation and among relevant stakeholders.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Knowledge Management – Information Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Organise learning to use information or knowledge management system	1.1 Identify learning needs of relevant personnel and stakeholders for input into and use of an information or knowledge management system 1.2 Identify and secure human, financial and physical resources

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	required for learning activities to use an information or knowledge management system 1.3 Organise and facilitate learning activities 1.4 Promote and support use of the system throughout the organisation 1.5 Monitor and document effectiveness of learning activities
2 Manage use of information or knowledge management system	2.1 Ensure implementation of policies and procedures for the information or knowledge management system are monitored for compliance, effectiveness and efficiency 2.2 Address implementation issues and problems as they arise 2.3 Monitor integration and alignment with data and information systems 2.4 Collect information on achievement of performance measures 2.5 Manage contingencies such as system failure or technical difficulties by accessing technical specialist help as required
3 Review use of information or knowledge management system	3.1 Analyse effectiveness of system and report on strengths and limitations of the system 3.2 Review business and operational plan and determine how effectively the system is contributing to intended outcomes 3.3 Make recommendations for improvement to system, policy or work practices

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.5, 2.1-2.5, 3.1-3.3	• Researches and critically analyses documentation from a variety of sources to determine requirements
Writing	1.1-1.5, 2.1-2.4, 3.2, 3.3	• Prepares and produces documentation for a specific audience using clear and detailed language to convey explicit information, requirements and recommendations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Oral Communication	1.1, 1.2, 1.3, 1.4, 2.2, 2.5, 3.3	• Presents information using structure and language to suit the audience • Uses active listening and questioning and reading of verbal and non-verbal signals to clarify information and to confirm understanding
Navigate the world of work	2.1, 3.3	• Takes full responsibility for following policies, procedures and legislative requirements and identifies organisational implications of new legislation or regulation • Modifies or develops organisational policies and procedures to comply with legislative requirements and organisation goals
Interact with others	1.1-1.4, 2.5, 3.3	• Implements strategies for a diverse range of colleagues and clients in order to build rapport and foster strong relationships • Collaborates with others sharing information to build strong work groups and avoid behaviours that are not conducive to a productive environment • Elicits feedback and provides feedback to others in order to improve self or workgroup behaviours
Get the work done	1.1-1.5, 2.1-2.5, 3.1, 3.2	• Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness • Monitors progress of plans and schedules and reviews and changes them to meet new demands and priorities • Applies systematic and analytical processes to address problems and make decisions in complex situations • Investigates new and innovative ideas as a means to continuously improve, work practices and processes • Uses and investigates new digital technologies and applications to manage and manipulate data and communicate effectively with others

Assessment Requirements for BSBINM501 Manage an information or knowledge management system

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify learning needs and plan and implement learning activities to enable personnel to use information or knowledge management system including
  - providing human, financial and physical resources as required
  - use of coaching, mentoring, information sessions, workshops, training programs and e-learning as appropriate
- monitor performance and address issues and contingencies as they arise including
  - accessing technical specialists as required
  - correct application of policies and procedures for the information or knowledge management system
  - alignment and effectiveness of the policies and procedures
  - effectiveness of information or knowledge management system for intended outcomes
- recommend improvements to systems, policies and practices as appropriate.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline relevant legislation, codes of practice and national standards relevant to privacy, freedom of information and knowledge management
- explain organisational policies and procedures including:
  - records management
  - information management
  - customer service
  - commercial confidentiality

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- describe the organisational operations and existing data and information systems.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the knowledge management – information management field of work and include access to:

- relevant legislation, regulation, standards and codes
- relevant workplace systems, documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBLDR402 Lead effective workplace relationships

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit defines skills, knowledge and outcomes required to use leadership to promote team cohesion. It includes motivating, mentoring, coaching and developing the team and forming the bridge between the management of the organisation and team members.

This unit applies to team leaders, supervisors and new or emerging managers where leadership plays a role in developing and maintaining effective workplace relationships. It applies in any industry or community context.

At this level work will normally be carried out within routine and non-routine methods and procedures, which require planning and evaluation and leadership and guidance of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership - Leadership

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Collect, analyse and communicate information and ideas	1.1 Collect relevant information from appropriate sources and analyse and share with the work team to improve work performance 1.2 Communicate ideas and information in a manner which is appropriate and sensitive to the cultural and social diversity of the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	audience and any specific needs 1.3 Lead consultation processes to encourage employees to contribute to issues related to their work, and promptly relay feedback to the work team in regard to outcomes 1.4 Seek and value contributions from internal and external sources in developing and refining new ideas and approaches 1.5 Implement processes to ensure that issues raised are resolved promptly or referred to relevant personnel as required
2. Develop trust and confidence as leader	2.1 Treat all internal and external contacts with integrity, respect and empathy 2.2 Use the organisation's social, ethical and business standards to develop and maintain effective relationships 2.3 Gain and maintain the trust and confidence of colleagues, customers and suppliers through competent performance 2.4 Adjust interpersonal styles and methods to meet organisation's social and cultural environment 2.5 Lead and encourage other members of the work team to follow examples set according to organisation's policies and procedures
3. Develop and maintain networks and relationships	3.1 Use networks to identify and build relationships 3.2 Use networks and other work relationships to provide identifiable benefits for the team and organisation
4. Manage difficulties into positive outcomes	4.1 Identify and analyse difficulties and take action to rectify the situation within the requirements of the organisation and relevant legislation 4.2 Guide and support colleagues to resolve work difficulties 4.3 Regularly review and improve workplace outcomes in consultation with relevant personnel 4.4 Manage poor work performance within the organisation's processes 4.5 Manage conflict constructively within the organisation's processes

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Performance Criteria	Description
Reading	1.1	• Collects, analyses and evaluates textual information from a range of resources to inform improvement strategies
Oral Communication	1.2, 1.3, 2.4, 2.5, 4.2	• Selects or adjusts communication style to maintain effectiveness of interaction and build and maintain engagement consistent with organisational requirements
Navigate the world of work	2.2, 2.5, 4.1, 4.4, 4.5	• Recognises and follows legislative and organisational requirements relevant to own role
Interact with others	1.1-1.4, 2.1, 2.3, 2.5, 3.1, 3.2, 4.2, 4.5	• Selects and uses appropriate conventions and protocols when communicating with diverse stakeholders • Adapts personal communication style to build trust and positive working relationships and to show respect for the opinions, values and particular needs of others • Plays a lead role in situations requiring effective collaboration, demonstrating conflict resolution skills and ability to engage and motivate others
Get the work done	1.1, 1.5, 4.1, 4.3	• Plans and implements activities and processes to manage and review work performance • Systematically gathers and analyses all relevant information to formulate and evaluate possible solutions to difficulties

Assessment Requirements for BSBLDR402 Lead effective workplace relationships

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- access and analyse information to achieve planned outcomes
- apply techniques for resolving problems and conflicts and dealing with poor performance within organisational and legislative requirements
- review and improve workplace outcomes in consultation with relevant personnel
- adjust interpersonal style and communications to respond to cultural and social diversity
- apply relationship management and communication skills with a range of people that:
  - demonstrate integrity, respect, empathy and cultural sensitivity and promote trust
  - forge effective relationships with internal and/or external people and help to maintain these networks
  - encourage participation and foster contribution of and respect for ideas and feedback
  - provide support to colleagues to resolve difficulties.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- give examples of how work relationships, and the cultural and social environment, can support or hinder achieving planned outcomes
- explain techniques for developing positive work relationships and building trust and confidence in a team including interpersonal styles, communications, consultation, cultural and social sensitivity, networking
- explain the impact of legislation and organisational policies on workplace relationships
- describe a range of methods and techniques for communicating information and ideas to a range of stakeholders
- outline problems solving methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- explain methods to resolve workplace conflict
- explain methods to manage poor work performance
- explain how to monitor, analyse and introduce ways to improve work relationships.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBMGT401 Show leadership in the workplace

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to lead teams and individuals by modelling high standards of conduct to reflect the organisation's standards and values.

It applies to individuals who are making the transition from being a team member to taking responsibility for the work and performance of others and providing the first level of leadership within the organisation. These managers have a strong influence on the work culture, values and ethics of the teams they supervise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Model high standards of management performance and behaviour	1.1 Ensure management performance and behaviour meets the organisation’s requirements 1.2 Ensure management performance and behaviour serves as a positive role model for others 1.3 Develop and implement performance plans in accordance with organisation’s goals and objectives 1.4 Establish and use key performance indicators to meet

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	organisation's goals and objectives
2. Enhance organisation's image	2.1 Use organisation's standards and values in conducting business 2.2 Question, through established communication channels, standards and values considered to be damaging to the organisation 2.3 Ensure personal performance contributes to developing an organisation which has integrity and credibility
3. Make informed decisions	3.1 Gather and organise information relevant to the issue/s under consideration 3.2 Facilitate individual's and team's active participation in decision-making processes 3.3 Examine options and assess associated risks to determine preferred course/s of action 3.4 Ensure decisions are timely and communicate them clearly to individuals and teams 3.5 Prepare plans to implement decisions and ensure they are agreed by relevant individuals and teams 3.6 Use feedback processes effectively to monitor the implementation and impact of decisions

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3, 1.4, 2.1, 3.1, 3.3, 3.5, 3.6	• Gathers, interprets and analyses text relating to organisational goals, standards and values to aid planning and decision making
Writing	1.3, 1.4, 3.1, 3.3, 3.5, 3.6	• Records and reports key information related to the organisational goals, standards and objectives • Researches, plans and prepares documentation for relevant stakeholders
Oral Communication	1.2, 1.3, 2.2, 2.3, 3.2, 3.4, 3.5, 3.6	• Uses appropriate structure and language when developing performance plans, or when seeking and providing information about organisational goals and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		objectives
Numeracy	1.4	• Identifies and comprehends mathematical information in familiar texts to establish key performance indicators
Navigate the world of work	1.1, 1.2, 1.3, 1.4, 2.1, 2.3	• Understands how own role meshes with others and contributes to broader work goals • Monitors adherence to organisational policies and procedures and considers own role in terms of its contribution to broader goals of the work environment
Interact with others	1.2, 1.3, 2.2, 2.3, 3.2, 3.4, 3.5, 3.6	• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective outcomes • Recognises the importance of taking audience, purpose and contextual factors into account when making decisions about what to communicate with whom, why and how
Get the work done	1.1, 1.3, 1.4, 3.1, 3.2, 3.3, 3.4, 3.5, 3.6	• Develops plans to manage relatively complex, non-routine tasks with an awareness of how they contribute to longer term operational and strategic goals • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria • Evaluates effectiveness of decisions in terms of how well they meet stated goals

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Organisation's standards and values must be identified by considering:	• explicitly stated values • values that are implied by the way the organisation conducts its business.

Assessment Requirements for BSBMGT401 Show leadership in the workplace

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify the organisation's standards and values, whether stated or implied by the way the organisation conducts its business
- evaluate own behaviour and performance against these and adjust to achieve required standards
- develop and implement performance plans and key performance indicators (KPIs) to meet organisation's goals and objectives
- use established communication channels to raise questions about standards and values that may be damaging to the organisation
- ensure own behaviour and performance contributes to the integrity and credibility of the organisation
- facilitate processes to make decisions that are based on:
  - relevant information
  - examination of options and associated risks
  - input from relevant people
- communicate about making and implementing decisions including:
  - facilitating agreement on the preferred course of action and implementation plans
  - monitoring and feedback on the implementation and impact of decisions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how to identify an organisation's standards and values when they are:
  - stated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - implied
- articulate organisational values and expectations of behaviour
- explain basic theory of group behaviour
- outline the organisation's process for raising questions about standards and values
- give examples of behaviours and performance that would typically be considered damaging to an organisation
- explain concepts including:
  - organisational values
  - role modelling
  - integrity and credibility
  - leadership.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBMGT403 Implement continuous improvement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to implement the organisation's continuous improvement systems and processes. It covers using systems and strategies to actively encourage the team to participate in the process, monitoring and reviewing performance, and identifying opportunities for further improvements.

It applies to managers who have an active role in implementing the continuous improvement process to achieve the organisation's objectives. Their position is closely associated with the creation and delivery of products and services which means that they have an important role in influencing the ongoing development of the organisation.

At this level, work will normally be carried out within routine and non-routine methods and procedures, which require planning, evaluation, leadership and guidance of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Implement continuous improvement systems and	1.1 Implement systems to ensure that individuals and teams are actively encouraged and supported to participate in decision

Assessment Requirements for BSBMGT403 Implement continuous improvement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- implement continuous improvement systems and provide mentoring and coaching support to enable individuals and teams to participate in decisions, take responsibility, show initiative and implement improvement processes
- implement processes to inform team members about savings and productivity/service improvements achievements
- communicate effectively to support the continuous improvement system and implementation of improvements
- apply continuous improvement to customer services including internal and external customers
- implement, monitor and adjust improvement plans, processes and procedures to improve performance
- document performance to identify further opportunities for improvement
- manage records and reports within the organisation's systems and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- give examples of continuous improvement processes
- list typical areas of need for coaching and mentoring to support continuous improvement
- explain how change management techniques can support continuous improvement and initiative
- identify the organisation's systems and data that can be used for benchmarking and monitoring performance for continuous improvement.

BSBMGT502 Manage people performance

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to manage the performance of staff who report to them directly. Development of key result areas and key performance indicators and standards, coupled with regular and timely coaching and feedback, provide the basis for performance management.

It applies to individuals who manage people. It covers work allocation and the methods to review performance, reward excellence and provide feedback where there is a need for improvement.

The unit makes the link between performance management and performance development, and reinforces both functions as a key requirement for effective managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Allocate work	1.1 Consult relevant groups and individuals on work to be allocated and resources available

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.2 Develop work plans in accordance with operational plans 1.3 Allocate work in a way that is efficient, cost effective and outcome focussed 1.4 Confirm performance standards, Code of Conduct and work outputs with relevant teams and individuals 1.5 Develop and agree performance indicators with relevant staff prior to commencement of work 1.6 Conduct risk analysis in accordance with the organisational risk management plan and legal requirements
2. Assess performance	2.1 Design performance management and review processes to ensure consistency with organisational objectives and policies 2.2 Train participants in the performance management and review process 2.3 Conduct performance management in accordance with organisational protocols and time lines 2.4 Monitor and evaluate performance on a continuous basis
3. Provide feedback	3.1 Provide informal feedback to staff on a regular basis 3.2 Advise relevant people where there is poor performance and take necessary actions 3.3 Provide on-the-job coaching when necessary to improve performance and to confirm excellence in performance 3.4 Document performance in accordance with the organisational performance management system 3.5 Conduct formal structured feedback sessions as necessary and in accordance with organisational policy
4. Manage follow up	4.1 Write and agree on performance improvement and development plans in accordance with organisational policies 4.2 Seek assistance from human resources specialists, where appropriate 4.3 Reinforce excellence in performance through recognition and continuous feedback 4.4 Monitor and coach individuals with poor performance 4.5 Provide support services where necessary 4.6 Counsel individuals who continue to perform below expectations and implement the disciplinary process if necessary 4.7 Terminate staff in accordance with legal and organisational

BSBMGT605 Provide leadership across the organisation

Modification History

Release	Comments
Version 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to demonstrate senior leadership behaviour and personal and professional competence. Business ethics are also addressed in this unit.

It applies to individuals who have a role in inspiring and motivating others to achieve organisational goals and to model professionalism in their organisation and industry. Leadership is seen in the context of the organisational mission.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Communicate organisational mission and goals	1.1 Clarify objectives, values and standards in accordance with organisation's strategic direction 1.2 Establish linkages between organisational objectives, values and standards and the responsibilities of relevant groups and individuals 1.3 Ensure media and language used is appropriate to individuals and group circumstances

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.4 State clear expectations of internal groups and individuals and explain in a manner which builds commitment to the organisation 1.5 Address expectations of the organisation 1.6 Investigate incidents promptly and communicate results clearly to relevant groups and individuals
2. Influence groups and individuals	2.1 Build trust, confidence and respect of diverse groups and individuals through positive role modelling and effective communication and consultation 2.2 Embrace, resource and effectively implement improvements to organisational and workplace culture 2.3 Demonstrate understanding of the global environment and new technology in work activities 2.4 Ensure actions convey flexibility and adaptability to change and accessibility 2.5 Ensure consultation and participation in decision making occurs with relevant groups and individuals where appropriate 2.6 Ensure decision making takes into account needs and expectations of both internal and external groups 2.7 Ensure decision making occurs in accordance with risk management plans for all options, and within appropriate timeframes 2.8 Ensure that the organisation is represented positively in the media and community
3. Build and support teams	3.1 Assign accountabilities and responsibilities to teams consistent with their competencies and operational plans 3.2 Ensure teams are resourced to allow them to achieve their objectives 3.3 Empower teams and individuals through effective delegation and support for their initiatives 3.4 Create and maintain a positive work environment 3.5 Encourage teams and individuals to develop innovative approaches to the performance of work
4. Demonstrate personal and professional competence	4.1 Model ethical conduct in all areas of work and encourage others to adopt business ethics 4.2 Adapt appropriate interpersonal and leadership styles to meet particular circumstances and situations 4.3 Set and achieve personal objectives and work program

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	outcomes 4.4 Ensure self-performance and professional competence is continuously improved through engagement in a range of professional development activities 4.5 Participate regularly in industry/professional networks and groups

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Learning	4.3, 4.4, 4.5	• Actively looks for and accepts ways to maintain and improve own skills and knowledge
Reading	1.2, 1.3, 1.6, 2.7, 4.4, 4.5	• Evaluates and integrates facts and ideas to construct meaning from a range of text types
Writing	1.1, 1.2, 1.3, 1.4, 1.6, 3.1, 4.3	• Records and reports key information related to the outcomes of the job to interact effectively and appropriately with the team • Researches, plans and prepares documentation using format and language appropriate to the audience
Oral Communication	1.1, 1.2, 1.4, 1.5, 1.6, 2.1, 2.5, 3.1, 3.3, 3.4, 3.5, 4.1, 4.2	• Participates in a variety of spoken exchanges with clients, co-workers and stakeholders using structure and language appropriate to context and audience
Navigate the world of work	1.1, 1.2, 1.5, 1.6, 2.8, 3.1, 4.1	• Works autonomously making high level decisions related to the achievement of organisational goals • Reflects on designation of roles and responsibilities and how everyone's role contributes to broader organisational goals • Appreciates the implications of ethical and other organisational responsibilities in carrying out own role
Interact with others	1.3, 1.4, 1.6, 2.1, 2.4, 3.1, 3.3, 3.4, 3.5, 4.1, 4.2	• Demonstrates sophisticated control over oral, visual and/or written formats, drawing on a range of communication practices to achieve goals • Identifies strengths and limitations of own interpersonal skills and addresses areas that would benefit from further development

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		• Recognises the importance of building rapport in order to establish effective working relationships and inspire trust and confidence • Collaborates and cooperates with others, playing an active role in leading and facilitating effective group interaction and influencing direction • Facilitates a climate in which others feel comfortable to identify, explore and build on a variety of perspectives in order to achieve shared outcomes
Get the work done	1.1, 1.2, 1.6, 2.2-2.7, 3.1, 3.2, 3.5	• Accepts responsibility for planning and sequencing complex tasks and workload of self and others, negotiating key aspects with others taking into account capabilities, efficiencies and effectiveness • Applies problem solving processes to identify risks, evaluate options and determine solutions • Facilitates a climate in which creativity and innovation are accepted as an integral part of achieving outcomes • Actively identifies systems, devices and applications with potential to meet current and/or future needs

BSBWHS401 Implement and monitor WHS policies, procedures and programs to meet legislative requirements

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package release 1.0

Application

This unit describes the skills and knowledge required to implement and monitor an organisation's work health and safety (WHS) policies, procedures and programs in the relevant work area in order to meet legislative requirements.

It applies to individuals with supervisory responsibilities for implementing and monitoring the organisation's WHS policies, procedures and programs in a work area. These individuals have a broad knowledge of WHS policies and contribute well developed skills in creating solutions to unpredictable problems through analysis and evaluation of information from a variety of sources. They provide supervision and guidance to others and have limited responsibility for the output of others.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Regulation, Licensing and Risk – Work Health and Safety

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the	*Performance criteria describe the performance needed to*

ELEMENT	PERFORMANCE CRITERIA
essential outcomes.	*demonstrate achievement of the element.*
1. Provide information to the work team about WHS policies and procedures	1.1 Accurately explain to the work team relevant provisions of WHS Acts, regulations and codes of practice 1.2 Provide information about the organisation's WHS policies, procedures and programs, and ensure it is readily accessible to, and understandable by the work team 1.3 Regularly provide and clearly explain to the work team information about identified hazards and the outcomes of risk assessment and control
2. Implement and monitor participation arrangements for managing WHS	2.1 Communicate to workplace parties the importance of effective consultation mechanisms in managing health and safety risks in the workplace 2.2 Apply consultation procedures to facilitate participation of the work team in managing work area hazards 2.3 Promptly deal with issues raised through consultation, according to organisational consultation procedures and WHS legislative and regulatory requirements 2.4 Promptly record and communicate to the work team the outcomes of consultation over WHS issues
3. Implement and monitor organisational procedures for providing WHS training	3.1 Identify WHS training needs according to organisational requirements and WHS legislative and regulatory requirements 3.2 Make arrangements to meet WHS training needs of team members in consultation with relevant individuals 3.3 Provide workplace learning opportunities and coaching and mentoring assistance to facilitate team and individual achievement of identified WHS training needs 3.4 Identify and report to management the costs associated with providing training for work team, for inclusion in financial and management plans
4. Implement and monitor organisational procedures and legal requirements for identifying hazards and assessing and controlling risks	4.1 Identify and report on hazards in work area according to WHS policies and procedures and WHS legislative and regulatory requirements 4.2 Promptly action team member hazard reports according to organisational procedures and WHS legislative and regulatory requirements 4.3 Implement procedures to control risks using the hierarchy of control, according to organisational and WHS legislative requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	4.4 Identify and report inadequacies in existing risk controls according to hierarchy of control and WHS legislative requirements 4.5 Monitor outcomes of reports on inadequacies, where appropriate, to ensure a prompt organisational response
5. Implement and monitor organisational procedures for maintaining WHS records for the team	5.1 Accurately complete and maintain WHS records of incidents of occupational injury and disease in work area, according to WHS policies, procedures and legislative requirements 5.2 Use aggregate information and data from work area records to identify hazards and monitor risk control procedures in work area

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.3, 5.2	• Interprets and analyses complex WHS legislative and organisational texts
Writing	1.1-1.3, 2.3, 2.4, 3.1, 3.2, 3.4, 4.1, 4.4, 5.1	• Documents WHS legislative and organisational information using structure, layout and language suitable for audience • Records WHS issues and actions taken according to reporting requirements • Prepares and maintains required records using appropriate structure and vocabulary
Oral communication	1.1-1.3, 2.1, 2.4, 3.2, 3.3, 4.1, 4.4	• Provides WHS legislative and organisational information and advice using structure and language suitable for audience
Numeracy	3.4, 5.2	• Extracts, interprets and comprehends mathematical information in relation to training costs and risk management data
Navigate the world of work	1.1,1.2, 2.3, 3.1, 4.1-4.5, 5.1	• Takes responsibility for adherence to legal and regulatory responsibilities and organisational policies and procedures in relation to WHS • Keeps up to date on changes to WHS legislation or regulations and organisational policies and procedures
Interact with	2.2, 3.2, 3.3	• Selects and uses appropriate conventions and protocols to facilitate consultation or provide feedback

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

others		• Initiates and contributes to facilitating consultative role, responding, explaining, clarifying and expanding on ideas and information as required • Collaborates with others to achieve individual and team outcomes
Get the work done	2.2, 3.2, 3.3, 4.1-4.5, 5.1	• Uses combination of formal, logical planning and intuitive understanding of context to identify relevant information and risks, and identify and evaluate alternative strategies • Uses formal decision-making processes, setting or clarifying goals, gathering information and identifying and evaluating choices against a set of criteria • Recognises and takes responsibility for reporting WHS risk control inadequacies • Uses formal and informal processes to monitor implementations of WHS solutions and reflect on outcomes

Assessment Requirements for BSBWHS401 Implement and monitor WHS policies, procedures and programs to meet legislative requirements

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- explain clearly and accurately to work team the relevant work health and safety (WHS) information including:
  - WHS legislative and organisational requirements
  - identified hazards and outcomes of risk assessment and control
- ensure that the team has access to information about WHS policies, procedures and programs in appropriate structure and language
- implement and monitor procedures according to organisational and legislative WHS requirements including:
  - consultation and communications to enable team members to participate in managing WHS risks and hazards
  - identifying WHS training needs and providing learning opportunities, coaching and mentoring as appropriate to needs
  - identifying, reporting and taking action on WHS hazards and risks
  - identifying and reporting inadequacies in existing risk controls and monitoring outcomes to ensure a prompt organisational response
  - reporting on the cost of WHS training
  - keeping WHS records
  - analysing aggregate WHS data to identify hazards and monitor risk control procedures in work area.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

© Commonwealth of Australia, 2025
Manufacturing Industry Skills Alliance

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the legal responsibilities and duties of managers, supervisors, persons conducting businesses or undertakings (PCBUs) and workers in relation to WHS risk management in the workplace
- identify key provisions of relevant WHS Acts, regulations and codes of practice that apply to the business and outline how they apply in the work area
- explain organisational policies and procedures relating to hazard identification, risk management, fire, emergency and evacuation, incident investigation and reporting
- explain the importance of effective consultation mechanisms in managing health and safety risks in the workplace
- explain how the hierarchy of control applies in the work area.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced by individuals carrying out work health and safety duties in the workplace and include access to:

- an actual workplace or simulated environment
- workplace equipment and resources
- examples of documents relating to workplace safety, hazard identification and risk assessment
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBWRK510 Manage employee relations

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to manage employee and industrial relations matters in an organisation. It involves developing and implementing employee and industrial relations policies and plans and managing conflict resolution negotiations.

It applies to those who are authorised to oversee industrial relations and manage conflict and grievances in an organisation. They will have a sound theoretical knowledge base in human resources management and industrial relations as well as current knowledge of industrial relations trends and legislation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Workforce Development – Workplace Relations

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Develop employee and industrial relations policies and plans	1.1 Analyse strategic plans and operational plans to determine long term employee relations 1.2 Analyse existing employee relations performance in relation to workforce objectives 1.3 Evaluate options in terms of cost-benefit, risk-analysis and current legislative requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.4 Work with the management team to develop industrial relations policies and plans 1.5 Identify the skills and knowledge needed by management and the workforce to effectively implement these strategies and policies
2. Implement employee relations policies and plans	2.1 Develop an implementation plan and a contingency plan for the employee relations policies and strategies 2.2 Make arrangements for training and development for identified needs to support the employee relations plan 2.3 Undertake associated employee relations activities to reach agreement on changes required by the organisational policies or implementation plan 2.4 Ensure procedures for addressing grievances and conflict are properly documented 2.5 Communicate key issues about procedures for addressing grievances and conflict to stakeholders 2.6 Review employee relations policies and plans to establish whether they are meeting their intended outcomes
3. Manage negotiations to resolve conflict	3.1 Train individuals in conflict-management techniques and procedures 3.2 Identify, and where possible alleviate or eliminate, sources of conflict or grievance according to legal requirements 3.3 Check documentation and other information sources to clarify issues in dispute 3.4 Obtain expert or specialist advice and/or refer to precedents, if required 3.5 Determine desired negotiation outcomes, negotiation strategy and negotiation timeframes 3.6 Advocate the organisation’s position in negotiation to obtain agreement 3.7 Document, and if necessary certify, the agreed outcomes with the relevant jurisdiction 3.8 Implement agreements 3.9 Take remedial action where groups or individuals fail to abide by agreements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 1.3, 3.3	• Interprets, critically analyses and applies appropriate strategies to construct meaning from complex texts
Writing	1.4, 2.1, 2.4, 2.5, 3.7	• Displays knowledge of required structure and layout, employing broad vocabulary, grammatical structure and conventions appropriate to purpose and audience
Oral communication	1,4, 2.5, 3.1, 3.6	• Conveys information using language and non-verbal features appropriate to the audience • Employs listening and questioning techniques to clarify and confirm understanding
Numeracy	1.2, 1.3	• Extracts and evaluates the mathematical information embedded in a range of tasks and texts
Navigate the world of work	1.3, 1.4, 2.3, 2.6, 3.2, 3.7	• Modifies or develops organisational policies to achieve organisational goals and comply with legislative requirements • Keeps up to date on changes to legislation or regulations relevant to own rights and responsibilities and considers implications of these
Interact with others	1.4, 2.3, 3.1, 3.2, 3.4, 3.6, 3.9	• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction and taking a leadership role on occasion • Actively builds networks that include key people with expert skills and knowledge • Uses a range of strategies to facilitate an acceptable outcome for all parties where conflicts occur
Get the work done	1.3, 1.4, 1.5, 2.1, 2.2, 2.4, 2.5, 3.2, 3.5, 3.7, 3.8	• Sequences and schedules complex activities, monitors implementation and manages relevant communication • Uses analytical techniques to identify issues and generate possible solutions, seeking input from others as required, before making decisions or implementing solutions • Draws on the diverse perspectives of others to gain insights into current practices and opportunities for change

Assessment Requirements for BSBWRK510 Manage employee relations

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- analyse organisational documentation to determine long-term employee relations objectives and current employee relations performance
- collaborate with others to develop and review industrial relations policies and plans
- develop implementation and contingency plans for industrial relations policies
- identify the skills and knowledge needed to implement the plan and organise training and development for self and staff
- document and communicate strategies and procedures for eliminating and dealing with grievances and disputes
- train others in conflict-resolution techniques
- manage industrial relations conflicts, including advocating the organisation's position during negotiations and documenting, implementing and following up agreements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain relevant industrial relations legislation or regulations
- summarise enterprise and workplace bargaining processes
- summarise key entities in the current Australian industrial relations system, including courts and tribunals, trade unions and employer bodies
- identify sources of expert advice.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the workforce development – workplace relations field of work and include access to:

- awards and enterprise bargaining agreements
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBWRT401 Write complex documents

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to plan documents, draft text, prepare final text and produce documents of some complexity.

It applies to individuals who work in a range of business environments and are skilled in the creation of reports, information and general promotion documents that are more complex than basic correspondence, memos or forms and that require review and analysis of a range of information sources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Communication – Writing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Plan documents	1.1 Determine the purposes of documents 1.2 Choose appropriate formats for documents 1.3 Establish means of communication 1.4 Determine requirements of documents 1.5 Determine categories and logical sequences of data, information and knowledge to achieve document objectives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.6 Develop overview of structure and content of documents
2 Draft text	2.1 Review and organise available data, information and knowledge according to proposed structure and content 2.2 Ensure data, information and knowledge is aggregated, interpreted and summarised to prepare text that satisfies document purposes and objectives 2.3 Include graphics as appropriate 2.4 Identify gaps in required data and information, and collect additional material from relevant enterprise personnel 2.5 Draft text according to document requirements and genre 2.6 Use language appropriate to the audience
3 Prepare final text	3.1 Review draft text to ensure document objectives are achieved and requirements are met 3.2 Check grammar, spelling and style for accuracy and punctuation 3.3 Ensure draft text is approved by relevant enterprise personnel 3.4 Incorporate revisions in final copy
4 Produce document	4.1 Choose basic design elements for documents appropriate to audience and purpose 4.2 Use word processing software to apply basic design elements to text 4.3 Check documents to ensure all requirements are met

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 2.2, 2.4, 3.1, 3.2, 4.3	• Interprets information to identify requirements and prepares material suitable to target audience and environment • Proofreads texts for accuracy
Writing	1.6, 2.2, 2.3, 2.5,	• Creates documents for a specific audience using cohesive and well-structured language to convey

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	2.6, 3.2, 3.4, 4.1	detailed and accurate information • Ensures vocabulary, layout and grammatical arrangement achieves meaning and intent of document
Oral Communication	1.1, 1.4, 2.4, 3.3	• Obtains information or clarifies requirements by asking questions and listening
Navigate the world of work	1.4, 4.3	• Adheres to organisational policies and procedures related to document production
Interact with others	1.1, 1.4, 1.5, 2.4, 3.3	• Follows accepted communication practices and protocols when seeking advice about documents from colleagues, supervisors and managers
Get the work done	1.1-1.6, 2.1-2.5, 3.3, 4.1-4.2	• Plans, organises and implements tasks required to produce documents • Makes decisions based on standard procedures, using more formal decision making processes where required • Uses the main features and functions of digital tools to complete work tasks

Assessment Requirements for BSBWRT401 Write complex documents

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- plan, draft and finalise complex documents that require review and analysis of a range of information sources
- use business technology to apply formatting, and incorporate graphics
- edit the draft text to ensure accuracy and clarity of information, obtain feedback on the draft and revise the draft
- apply the enterprise style guide/house style.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the enterprise style guide/house style
- outline formatting styles and their impact on formatting, readability and appearance of documents
- explain rules and conventions for written English, as defined by general and specialist sources.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the communication – writing field of work and include access to:

- office equipment and resources
- organisational policies and procedures
- organisational style guides.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors must satisfy NVR/AQTF assessor requirements.

CPCPCM2043A Carry out WHS requirements

Modification History

Changes to application, elements and performance criteria, required skills and knowledge, range statement and critical aspects

Not equivalent to CPCPCM2023A

Unit Descriptor

This unit of competency specifies the outcomes required to carry out work health and safety (WHS) requirements through safe work practices in a plumbing and services work environment.

The unit requires the performance of work in a safe manner through awareness of risks, work requirements and the planning and performance of safe work practices with concern for personal safety and the safety of others.

It includes the initial response to workplace emergencies; the safe use of electricity; the identification of hazardous materials, including asbestos; and compliance with legislated work safety practices.

Application of the Unit

This unit of competency supports safe work practices for the plumbing and services industry.

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure or fitting being renovated, extended, restored or maintained. It could also be conducted in an on or off-site workshop or at a customer's premises.

The unit does not cover the removal of asbestos, which is a licensed activity.

Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Participate in workplace induction.	1.1	***Workplace induction*** is received.
		1.2	Location of emergency equipment is identified.
		1.3	Current workplace emergency and evacuation procedures are identified.
		1.4	Identify safe working conditions with employer.
		1.5	Identify employee and employer rights and responsibilities regarding safe working conditions.
2	Assess risks.	2.1	Hazards in the work area are identified, assessed and reported to designated personnel.
		2.2	WHS issues and risks in the work area are identified, assessed and reported to designated personnel.
		2.3	***Safe work practices***, procedures and instructions are followed.
		2.4	WHS, hazard, accident or incident reports are completed according to workplace procedures and ***statutory and regulatory authorities*** and legislation.
3	Identify hazards and hazardous materials on work site.	3.1	Hazardous materials on a work site are identified, secured and tagged using appropriate signs and symbols; and if appropriate, handled and used according to company and legislated procedures.
		3.2	Measures for controlling risks and construction hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			are applied effectively and immediately.
		3.3	***Asbestos-containing materials (ACM) are identified*** on a work site ***and reported*** to designated personnel.
4	Plan and prepare for safe work practices.	4.1	Quality assurance requirements of company operations and safe work practices are identified and adhered to.
		4.2	Personal protective equipment (PPE) is selected, correctly fitted and used according to the requirements of the job.
		4.3	Tools and equipment are selected consistent with safe work practice requirements, checked for serviceability, and any faults are reported to supervisor.
		4.4	Required barricades, hoardings and signage are determined and erected at job location.
		4.5	Material safety data sheets (MSDS) are identified and applied.
		4.6	***Sustainability principles and concepts*** are observed when preparing for and undertaking work process.
5	Use safe work practices to carry out work.	5.1	Work is carried out safely and according to state or territory statutory requirements and company policy.
		5.2	***Safety hazards*** and common workplace accidents and incidents are identified in the course of work and reported according to policy.
		5.3	Industry, site and personal safety rights and responsibilities are applied.
		5.4	Prohibited tools and equipment in areas with identified asbestos are identified and isolated.
		5.5	Firefighting equipment is selected and used according to type of fire and correct operating procedures.
		5.6	Current site emergency and first aid procedures are followed.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

6	Maintain safety of self and others.	6.1	Safety signs, identified in terms of colour and shape, symbols and alarms, are adhered to.
		6.2	Hazardous chemicals and materials are identified, handled and stored, maintaining the safety to self, others and the environment.
		6.3	Incidents are reported according to legislative requirements and workplace procedures.
		6.4	Common causes of accidents in the industry are identified and prevention measures implemented in line with site induction.
		6.5	Site area is maintained to prevent incidents and accidents and protect self and others
7	Use electricity safely.	7.1	Safest supply and route for electrical supply are determined.
		7.2	Leads are supported and placed according to regulations.
		7.3	Power board visual check is conducted.
		7.4	Leads and equipment are checked for tags and visual damage.
		7.5	Electrical hazards are identified and reported.
8	Apply emergency response.	8.1	***Emergencies*** are identified.
		8.2	***Emergency response*** is provided according to company procedures and requirements.
		8.3	Details of actions taken are reported according to company procedures and requirements using appropriate communications.
9	Clean up work site area.	9.1	Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specifications.
		9.2	Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

and standard work practices.

9.3 Information is accessed and documentation completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - complete written reports and other relevant documentation
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to:
  - evaluate safety issues in the workplace and determine appropriate action
  - recognise WHS hazards, including asbestos, and take all opportunities to alleviate safety problems in a variety of construction work sites and environments
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools or materials
- literacy skills to read and interpret:
  - documentation from a variety of sources
  - MSDS
  - work safety procedures and instructions
- self-management skills to deal calmly and effectively with any potential safety problems and work closely with other team members and supervisors to ensure safe working conditions are maintained
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- asbestos management code relating to prevention of exposure
- job safety analysis (JSA) and safe work method statements (SWMS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- manual handling techniques
- MSDS
- relevant legislation, regulations and workplace requirements relating to WHS, including hazard reduction and personal safety
- requirements for working in confined spaces and at height, including on rooves
- tools and equipment prohibited from being used near identified ACM
- risk assessment
- safe work practices in normal working environment
- types, possible location and risks of ACM, including serpentine and amphobile groups and their use in common building materials
- workplace and equipment safety requirements
- workplace hazards and their precautions and reduction
- workplace response to emergencies

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • locate, interpret and apply relevant information, standards and specifications for applying safe work practices in the workplace • apply safety requirements throughout the performance of work sequences, including electrical requirements and personal protective clothing and equipment • apply sustainability principles and concepts • undertake site and workplace induction • correctly identify the location of ACM • understand and apply policies and procedures for reporting presence of ACM to designated personnel • assess workplace risks and interpret and apply safe work practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- understand workplace requirements for emergency response, including evacuation procedures
- correctly locate and identify workplace firefighting and other safety equipment and appliances
- correctly select and use appropriate processes, tools and equipment
- safely complete all work to specification
- comply with regulations, standards and workplace instructions, procedures and processes, including reporting and documentation
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Workplace induction may include:

- first aid officers and kits

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• personnel competent and/or licensed in the safe handling of asbestos • site induction work site locations • specific site WHS issues • specific site requirements.
Safe work practices are to be according to state and territory legislation and regulations and may include:	• handling of materials • hazard control procedures and procedures for handling hazardous materials and substances • PPE prescribed under legislation, regulations and workplace policies and practices • use of firefighting equipment • use of first aid equipment • use of tools and equipment • workplace environment and safety.
Statutory and regulatory authorities include:	• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.
Identifying and reporting asbestos-containing materials:	• includes recognising common types of ACM that may be found in construction materials and buildings • covers asbestos rope/fabrics, asbestos cement sheeting, asbestos cement piping and lagging on pipes, bituminous waterproof membrane, millboard, asbestos flues, sheeting under ceramic or vinyl floor or wall tiles in wet areas • involves reporting ACM to person in control of the workplace as set out in the relevant Asbestos Management Code.

Sustainability principles and concepts:	• cover the social, economic and environmental use of resources to meet current and future needs
	• may include:
	  • selecting appropriate components and material
	  • choosing efficient products
	  • using material efficiently
	  • storing and disposing of hazardous material to ensure minimal environmental impact.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Safety hazards may include:

- hazards and risks associated with tools and equipment
- inflammable materials and fire hazards
- lifting practices
- lighting, gases, electricity and water
- spillage, waste and debris
- toxic and hazardous substances
- working at heights
- working in confined spaces.

Emergencies may include:

- accidents
- fires
- injuries
- sudden illness.

Emergency response may include:

- common site signs
- equipment tags
- facility or location signs
- safety barricades and warning signs
- site direction
- traffic signs
- workplace evacuation involving staff and customers.

CPCPGS3046A Install LPG systems in caravans, mobile homes and mobile workplaces

Modification History

Prerequisite unit updated

Changes throughout unit, including unit title and critical aspects

Not equivalent to CPCPGS3016A

Unit Descriptor

This unit of competency specifies the outcomes required to determine the requirements for installing and commissioning liquefied petroleum gas (LPG) systems with an operating pressure not exceeding 2.75kPa in caravans, mobile homes and mobile workplaces.

Application of the Unit

Site location for work application may be a purpose-built workshop or customer's premises.

Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

CPCPCM2043A	Carry out WHS requirements

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised

unit of competency.	text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify LPG system requirements.	1.1	Plans, specifications and any special instructions are obtained.
		1.2	***Work health and safety*** (WHS) and ***environmental requirements*** associated with installing and commissioning LPG systems in caravans, mobile homes and mobile workplaces are adhered to throughout the work.
		1.3	***Quality assurance requirements*** for company operations are identified and adhered to.
		1.4	Gas load and design requirements are determined from plans, specifications, and job drawing or workplace instructions.
		1.5	System capacity is calculated to ensure adequacy for the required load and compliance with relevant Australian standards and installation requirements.
		1.6	Appropriate regulator and piping are identified in terms of size, connection sizes and capacity, according to relevant Australian standards and installation requirements.
		1.7	Location of cylinders, appliances and piping set out is identified according to job requirements and in compliance with relevant Australian standards and installation requirements.
		1.8	Quantity of piping, components and fittings is estimated in compliance with relevant Australian standards and installation requirements.
2	Prepare for installation.	2.1	***Materials***, equipment, appliances and cylinders are ordered and checked for compliance with docket and order form, and for acceptable condition.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.2	Appropriate ***tools and equipment*** for installing and commissioning ***LPG systems*** in caravans, mobile homes and mobile workplaces, including personal protective equipment, are identified and selected.
		2.3	Work is planned in conjunction with others involved in or affected by the work.
		2.4	Work area and materials are prepared to support efficient installation of the system.
		2.5	***Sustainability principles and concepts*** are observed when preparing for and undertaking work process.
3	Install LPG system, including flue and ventilation.	3.1	Cylinders, regulators, associated pipework, appliances and fixings are installed in compliance with manufacturer requirements, relevant Australian standards and installation requirements.
		3.2	Ventilation requirements are determined and installed according to relevant Australian standards.
4	Test and commission LPG system.	4.1	Appropriate test equipment is selected.
		4.2	System is tested according to relevant Australian standards and manufacturer requirements.
		4.3	System is commissioned according to relevant Australian standards and manufacturer requirements.
		4.4	Test data is recorded in format required by regulatory and installation requirements.
		4.5	Compliance plates and signage are located and fitted according to ***statutory and regulatory authorities'*** requirements, relevant Australian standards and installation requirements.
5	Clean up.	5.1	Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.
		5.2	Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

and workplace procedures.

5.3 ***Information*** is accessed and documentation completed according to statutory requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to determine requirements, and install and commission LPG systems
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- process for determining material requirements
- procedures for installing and commissioning gas systems in caravans, mobile homes and mobile workplaces
- properties of gas, gas safety, combustion principles, gas pressures, and cylinder installation and ventilation requirements
- relevant statutory requirements related to installing LPG systems
- SI system of measurements
- workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and install and commission LPG systems in caravans, mobile homes and mobile workplaces
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications for a project, determining the requirements for, installing, testing and commissioning LPG systems in either a caravan, mobile home or mobile workplace by determining the gas load, storage capacity and ventilation requirements for two gas appliances, ensuring:
  - application of sustainability principles and concepts throughout the installation process
  - correct identification of location, design and details of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

proposed installation
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Integrated Framework Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- confined spaces
- electricity
- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others

- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements may include:

- clean-up protection
- waste management.

Quality assurance requirements may include:

- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Materials:

- may include:
  - copper tubing
  - fittings
  - fixing materials
  - flue systems
  - gas cylinders
  - gas-operated appliances
  - gas hose assemblies
  - gas regulators
  - other approved materials
- are to comply with job specifications and appropriate standards for gas installations.

Tools and equipment may include:

- files
- flaring tools
- hacksaws
- hand trolleys
- hoists and jacks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- lifting and load shifting equipment
- measuring equipment
- power cutting tools
- pressure testing equipment
- silver brazing equipment
- spanners
- wrenches.

***LPG system* may include:**

- approved appliances
- cylinders
- flue systems
- piping
- regulators.

Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - selecting appropriate materials
  - efficient use and recycling of material
  - using energy efficient appliances
  - disposing of waste material appropriately.

Statutory and regulatory authorities may include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Information may include:

- charts and hand drawings
- plans and sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to determining requirements, and installing and commissioning LPG systems in caravans, mobile homes and mobile workplaces

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

FNSORG501 Develop and manage a budget

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to collect and analyse information and apply sound accounting principles to the development and ongoing management of a budget for a small organisation or section of a large organisation.

It applies to individuals who use a range of specialist and managerial techniques to plan, monitor and control budgetary work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Organisational skills

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan for and collect information for budget	1.1 Determine and confirm areas for which budget is being prepared with appropriate personnel, and identify, access and analyse data required for development of budget 1.2 Determine budget parameters with estimates based on research, consultation and negotiation with appropriate personnel 1.3 Consult relevant colleagues in budget planning process as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Develop budget	2.1 Draft budget based on analysis of all available information in accordance with organisational policy 2.2 Identify and support income and expenditure estimates with reliable information and circulate draft budget for comment
3. Finalise budget and allocate resources	3.1 Provide final budget which incorporates agreed modifications to appropriate personnel 3.2 Inform personnel affected by budget of its limits and goals in their work area and clarify financial management and reporting responsibilities 3.3 Obtain agreement to budget priorities and allocate resources
4. Monitor and control budget	4.1 Check actual income and expenditure against budget at regular intervals, and prepare and present budget reports to appropriate personnel 4.2 Identify and respond to deviations, take appropriate action and advise relevant personnel on budget status
5. Complete financial and statistical reports	5.1 Complete all required financial and statistical reports accurately within designated timelines 5.2 Make appropriate recommendations about future financial planning 5.3 Provide clearly presented and accurate reports to appropriate personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 2.2, 4.1, 4.2	• Extracts, analyses and monitors complex textual information from a range of sources to determine relevance, accuracy and compliance with organisational policy
Writing	1.1, 1.3, 2.1, 2.2, 3.1, 3.2, 4.2, 5.1, 5.2, 5.3	• Analyses and compiles numerical data and text information to convey specific information and recommendations accurately and effectively to others using clear and detailed language

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		• Demonstrates effective control of text types required by financial and statistical report conventions and documentation
Oral Communication	1.1 -1.3, 3.2, 3.3, 4.1, 4.2, 5.2	• Participates in verbal exchanges of information, demonstrating control of a range of oral techniques to elicit the views and opinions of others and confirm understanding • Clearly articulates requirements and outcomes using language, tone and pace appropriate to the audience and environment
Numeracy	1.1, 1.2, 2.1, 2.2, 3.1, 4.1, 4.2, 5.1, 5.3	• Interprets, analyses and uses numerically expressed data to effectively prepare, monitor, amend and present accurate budgetary information
Navigate the world of work	2.1, 3.2, 5.1	• Works independently and collectively in making decisions about budge requirements in accordance with organisational policy
Interact with others	1.1-1.3, 2.2, 3.1, 3.2, 4.1, 5.3	• Selects and uses appropriate conventions and protocols to gain and provide relevant budgetary information • Plays a lead role in situations requiring effective collaborative skills, demonstrating high level negotiation skills and ability to gather information through consultation
Get the work done	1.1, 1.2, 2.1, 3.3, 4.1, 4.2, 5.1, 5.2	• Accepts responsibility for planning and sequencing complex tasks and workload • Applies systematic and analytical decision-making processes to make recommendations in complex and non-routine situations • Uses digital technologies to access, extract and share relevant information to achieve required outcomes

Assessment Requirements for FNSORG501 Develop and manage a budget

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- collect and accurately interpret relevant data to develop and finalise a budget
- consult effectively and negotiate outcomes with others on budgetary issues
- accurately complete financial and statistical reports related to budgeting.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the evidence requirements safely and effectively, the individual must:

- define basic accounting and financial services industry terminology
- outline types of data required to develop the budget
- explain accounting techniques relevant to budget preparation and maintenance
- describe budgeting techniques and tools
- describe organisational and industry policy and procedures related to budget development and management.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the organisational skills field of work and include access to:

- a range of common office equipment, technology, software and consumables
- an integrated financial software system and data.

Assessors must satisfy NVR/AQTF assessor requirements.

FWPCOT2238 Cut materials with a hand-held chainsaw

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT2238A Cut materials with a hand-held chainsaw, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to prepare and cut materials with a hand-held chainsaw. This unit includes basic operator maintenance checks. More comprehensive servicing and maintenance procedures are covered in FWPCOT2237 Maintain chainsaws.

The unit applies to those who cut materials with a hand-held chainsaw in a variety of work settings including a construction, saw mill, forest products factory, timber retail yard or horticultural environment.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Timber Merchandising

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
1. Prepare for operation	1.1 Review work order and clarify with appropriate personnel. 1.2 Select equipment appropriate to work requirements and check for operational effectiveness. 1.3 Prepare, check and clear work area, ready for hand-held chainsaw operations. 1.4 Carry out pre-start checks on chainsaw in line with site requirements. 1.5 Establish and maintain communication with others in work area to ensure safety.
2. Cut material	2.1 Visually assess materials to be cut for defects that may present unsafe work conditions, and review cutting plan. 2.2 Place cutting supports to ensure a stable base. 2.3 Cut material within site standard tolerances for length and angle relative to centre line. 2.4 Use cutting techniques to industry standard lengths, maximising volume and quality of recovery material. 2.5 Operate chainsaw effectively, in line with manufacturer's recommendations. 2.6 Clear and dispose of debris in line with site procedures and environmental requirements. 2.7 Complete production and quality reports. 2.8 Identify processing problems and equipment faults and report to appropriate personnel.
3. Conduct chainsaw maintenance	3.1 Clean, maintain and store chainsaw in line with manufacturer's recommendations and site procedures. 3.2 Identify blunt or damaged saws and replace or sharpen, in line with site procedures and manufacturer's recommendations. 3.3 Record and report maintenance activities to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Problem solving skills	• identify defects in materials and problems with equipment, and rectify.

Assessment Requirements for FWPCOT2238 Cut materials with a hand-held chainsaw

Modification History

Release	Comment
1	Replaces equivalent FPICOT2238A Cut materials with a hand-held chainsaw, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- safely and efficiently use a hand-held chainsaw to cut materials
- follow organisational policies and procedures relevant to operating a hand-held chainsaw
- use appropriate methods to cut materials with a hand-held chainsaw
- carry out start-up and lock out procedures for a hand-held chainsaw
- identify defects and problems with chainsaw operations
- identify blunt or damaged saws
- effectively maximise volume and quality recovery
- communicate effectively with others at the work site
- carry out routine maintenance on a hand-held chainsaw.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- workplace requirements and standards for operating a hand-held chainsaw
- environmental protection requirements and safe disposal of waste material
- operational procedures and checks including start-up and shut-down procedures
- equipment processes, technical capability and limitations of a hand-held chainsaw
- established communication channels and protocols to maintain safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- processes for managing risks and hazards associated with chainsaw operations
- knowledge of defects in timber that can effect processing and cause risk
- workplace health and safety requirements, fire protocols and emergency evacuation procedures
- procedures for recording and reporting workplace records and information.

Assessment Conditions

The following resources must be made available:

- a hand-held chainsaw
- material to be cut
- personal protective equipment required for cutting materials with a hand held chain saw
- work order, workplace requirements and site standards for cutting materials with a hand-held chainsaw.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

HLTAID003 Provide first aid

Modification History

Release	Comments
Release 6	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 5	Updated mapping information. Changes to assessment requirements. Equivalent outcome.
Release 4	Updated mapping information. Equivalent outcome.
Release 3	Updated mapping information.
Release 2	Minor corrections to formatting to improve readability. Equivalent competency outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to elements and performance criteria, changes to scope of unit. New evidence requirements for assessment. Removal of prerequisite unit.

Application

This unit describes the skills and knowledge required to provide a first aid response to a casualty. The unit applies to all workers who may be required to provide a first aid response in a range of situations, including community and workplace settings.

Specific licensing /regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
1. Respond to an emergency situation	1.1 Recognise an emergency situation 1.2 Identify, assess and manage immediate hazards to health and safety of self and others 1.3 Assess the casualty and recognise the need for first aid response 1.4 Assess the situation and seek assistance from emergency response services
2. Apply appropriate first aid procedures	2.1 Perform cardiopulmonary resuscitation (CPR) in accordance with Australian Resuscitation Council (ARC) guidelines 2.2 Provide first aid in accordance with established first aid principles 2.3 Display respectful behaviour towards casualty 2.4 Obtain consent from casualty where possible 2.5 Use available resources and equipment to make the casualty as comfortable as possible 2.6 Operate first aid equipment according to manufacturer’s instructions 2.7 Monitor the casualty’s condition and respond in accordance with first aid principles
3. Communicate details of the incident	3.1 Accurately convey incident details to emergency response services 3.2 Report details of incident to workplace supervisor as appropriate 3.3 Maintain confidentiality of records and information in line with statutory and/or organisational policies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
4. Evaluate the incident and own performance	4.1 Recognise the possible psychological impacts on self and other rescuers involved in critical incidents 4.2 Participate in debriefing to address individual needs

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTAID003 Provide first aid

Modification History

Release	Comments
Release 6	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 5	Updated mapping information. Changes to assessment requirements. Equivalent outcome.
Release 4	Updated mapping information. Equivalent outcome.
Release 3	Updated mapping information.
Release 2	Minor corrections to formatting to improve readability. Equivalent competency outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to elements and performance criteria, changes to scope of unit. New evidence requirements for assessment. Removal of prerequisite unit.

Performance Evidence

e candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be evidence that the candidate has completed the following tasks in line with state/territory regulations, first aid codes of practice, Australian Resuscitation Council (ARC) guidelines and workplace procedures:

- Followed DRSABCD in line with ARC guidelines, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - performed at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
  - performed at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
  - responded appropriately in the event of regurgitation or vomiting
  - managed the unconscious breathing casualty
  - followed single rescue procedure, including the demonstration of a rotation of operators with minimal interruptions to compressions
  - followed the prompts of an Automated External Defibrillator (AED)
- Responded to at least two simulated first aid scenarios contextualised to the candidate's workplace/community setting, including:
  - conducted a visual and verbal assessment of the casualty
  - demonstrated safe manual handling techniques
  - post-incident debrief and evaluation
  - provided an accurate verbal or written report of the incident
- Applied first aid procedures for the following:
  - allergic reaction
  - anaphylaxis
  - bleeding control
  - choking and airway obstruction
  - envenomation, using pressure immobilisation
  - fractures, sprains and strains, using arm slings, roller bandages or other appropriate immobilisation techniques
  - respiratory distress, including asthma
  - shock

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- State/Territory regulations, first aid codes of practice and workplace procedures including:
  - ARC Guidelines relevant to provision of CPR and first aid
  - safe work practices to minimise risks and potential hazards
  - infection control principles and procedures, including use of standard precautions
  - requirements for currency of skill and knowledge
- legal, workplace and community considerations including:
  - awareness of potential need for stress-management techniques and available support following an emergency situation
  - duty of care requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - respectful behaviour towards a casualty
  - own skills and limitations
  - consent
  - privacy and confidentiality requirements
  - importance of debriefing
- considerations when providing first aid including:
  - airway obstruction due to body position
  - appropriate duration and cessation of CPR
  - appropriate use of an AED
  - chain of survival
  - standard precautions
  - how to conduct a visual and verbal assessment of the casualty
- principles and procedures for first aid management of the following scenarios:
  - abdominal injuries
  - allergic reaction
  - anaphylaxis
  - basic care of a wound
  - bleeding control
  - burns
  - cardiac conditions, including chest pain
  - choking and airway obstruction
  - crush injuries
  - diabetes
  - dislocations
  - drowning
  - envenomation
  - environmental impact, including hypothermia, hyperthermia, dehydration and heat stroke
  - eye and ear injuries
  - fractures
  - febrile convulsions
  - head, neck and spinal injuries
  - minor skin injuries
  - needle stick injuries
  - poisoning and toxic substances
  - respiratory distress, including asthma
  - seizures, including epilepsy
  - shock
  - soft tissue injuries, including strains and, sprains
  - stroke

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - unconsciousness
- basic anatomy and physiology relating to:
  - how to recognise a person is not breathing normally
  - chest
  - response/consciousness
  - upper airway and effect of positional change
  - considerations in provision of first aid for specified conditions

Assessment Conditions

Skills must be demonstrated working individually in an environment that provides realistic in-depth, industry-validated scenarios and simulations to assess candidates' skills and knowledge.

Assessment resources must include:

- adult and infant resuscitation manikins in line with ARC Guidelines for the purpose of assessment of CPR procedures
- adrenaline auto-injector training device
- AED training device
- placebo bronchodilator and spacer device
- roller bandages
- triangular bandages
- workplace First Aid kit
- workplace injury, trauma and/or illness record, or other appropriate workplace incident report form for written reports
- wound dressings

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

Assessor requirements

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

Unit Descriptor

Unit descriptor	This unit covers assembling components and/or sub-assemblies in a production environment and testing the components and/or sub-assemblies to ensure compliance with specifications.

Application of the Unit

Application of the unit	This unit applies to production-orientated assembly operations that are essentially manual in nature and do not require complex adjustments. This unit should not be selected when Unit MEM18055B (Dismantle, replace and assemble engineering components) has already been selected. Where the selection and use of tools is required as part of the assembly process, see Unit MEM18001C (Use hand tools) and Unit MEM18002B (Use power tools/hand held operations) as appropriate. **Band**: **A** **Unit Weight**: **4**

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Read and understand job sheets	1.1. Job sheets and instructions are understood and followed correctly.
2. Select assembly equipment and components	2.1. Assembly equipment is selected according to instructions or job sheets and used to standard operating procedures. 2.2. Components/sub-assemblies are obtained and arranged for assembly. 2.3. Equipment/tools are used in a safe manner.
3. Assemble components	3.1. Assembly is produced following correct sequence of operations, using selected equipment to standard operating procedures. 3.2. Production data is recorded/input to standard

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	operating procedures.
4. Perform tests	4.1. Assembly is tested/checked for compliance to job sheet requirements, following standard operating procedures as required.
5. Protect assembly from damage	5.1. Components and/or assemblies are handled and stored safely, in a manner least likely to cause damage.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • following job instructions and standard operating procedures • selecting and using assembly tools, components and sub-assemblies • entering routine and familiar information onto proformas and other standard workplace forms • following oral instruction
Required knowledge
Look for evidence that confirms knowledge of: • application and use of assembly tools and equipment • sequence in which the assemblies are to be performed • storage location of the component/sub-assemblies • required tests and checks • required action for non-conformance • potential damage through the use of inappropriate handling and/or unsafe storage procedures • use and application of personal protective equipment • safe work practices and procedures • hazards and control measures associated with manual production assembly

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to assemble components and/or sub-assemblies in a production environment and test the components and/or sub-assemblies to ensure compliance with specifications.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing manual production assembly or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Components/sub-assemblies	Parts that make up the sub-assembly and components
Recorded/input	By means of production schedules, job sheets, checklists
Tested/checked	Carried out according to specification of assembled product

MEM03006B Set assembly stations

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers setting up, adjusting and testing assembly stations according to defined procedures.

Application of the Unit

Application of the unit	This unit applies to setting a range of assembly stations. It also includes routine maintenance of the equipment. Assembly stations may be used for a range of operations and processes. For setting automated assembly processes, Unit MEM07040A (Set multistage integrated processes) should be selected. Machine setting skills are covered by Unit MEM07003B (Perform machine setting (routine) and Unit MEM07004B (Perform machine setting (complex). Where measurement skills are required, then Unit MEM12023A (Perform engineering measurements) should also be considered. **Band**: **A** **Unit Weight**: **2**

Path 1	MEM03001B	Perform manual production assembly
	MEM18001C	Use hand tools
Path 2	MEM03003B	Perform sheet and plate assembly
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations
Path 3	MEM03004B	Perform electronic/electrical assembly (production)
	MEM18001C	Use hand tools

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify job	1.1. Setting requirements are correctly identified from

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
requirements	job sheets/instructions.
2. Select and use a range of hand tools and equipment	2.1. Hand tools and equipment for setting assembly stations are used in a safe manner, according to instructions, standard operating procedures and any legislative requirements.
3. Set assembly stations	3.1. Assembly stations are set up for a range of processes and operations according to defined procedures. 3.2. Safe work practices are observed and implemented. 3.3. Assembly stations are adjusted to specifications and operational requirements. 3.4. Assembly stations are tested for correct operation.
4. Maintain equipment	4.1. Routine maintenance is carried out to standard operating procedures. 4.2. Worn or damaged components are identified and changed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings for setting assembly stations
- following oral instructions
- testing and checking assembly station and outputs
- identifying worn and/or damaged components

Required knowledge

Look for evidence that confirms knowledge of:

- procedures to be followed in setting up assembly stations
- safety hazards associated with the assembly station and/or its setting up
- specifications applicable to the assembly station
- effect of various adjustments that can be made to the assembly station

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• routine maintenance requirements • effect of worn or damaged components on the operational requirements and specifications of the assembly station • use and application of personal protective equipment • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to set, adjust and test assembly stations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication materials handling, recording and reporting associated with setting, adjusting and testing assembly stations or other units requiring the exercise of the skills and knowledge covered by this unit.

MEM05005B Carry out mechanical cutting

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers setting up and operating a range of mechanical cutting and holing equipment.

Application of the Unit

Application of the unit	This unit applies to sawing, shearing, cropping and/or holing and includes setting up and operating a range of equipment. Examples of machines that could be covered include guillotines, croppers, cold saws, band saws, automatic saws etc. Typical applications of this unit may include cutting for manufacture, production cutting and cutting of materials selected from stores in a maintenance environment. This unit does not cover hand or hand held power tools used for cutting e.g. circular saws, nibblers and side grinder. These skills are covered by Unit MEM18001C (Use hand tools) and Unit MEM18002B (Use power tools/hand held operations). This unit does not include the skills required for operational maintenance of the equipment used; these skills are covered by Unit MEM07001B (Perform operational maintenance of machines/equipment). For repair and welding of band saw blades where blade repair unit is not attached to the machine, refer to Unit MEM05013C (Perform manual production welding). **Band**: **A** **Unit Weight**: **2**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine job requirements	1.1. Job requirements and specifications are determined from job sheets and/or instructions. 1.2. Appropriate method/machine is selected to meet specifications. 1.3. Machine is loaded and adjusted for operation consistent with standard operating procedures.
2. Select/set up machine tooling	2.1. Tooling is selected to match job requirements. 2.2. Tooling is correctly installed using standard

ELEMENT	PERFORMANCE CRITERIA
	operating procedures. 2.3. Machine is set up and adjusted using standard operating procedures.
3. Operate mechanical cutting machine	3.1. Appropriate stops and guards are set and adjusted as required. 3.2. Material is secured and correctly positioned using measuring equipment as necessary. 3.3. Machine is started and stopped safely to standard operating procedures. 3.4. Machine is operated to cut/hole material to specifications using standard operating procedures.
4. Check material for conformance to specification	4.1. Material is checked against specification. Machine and/or tooling is adjusted as required and in process adjustments carried out as necessary. 4.2. Material is cut and/or holed to within workplace tolerances. 4.3. Material is used in most economical way. 4.4. Codes and standards are observed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • loading and adjusting cutting machines • selecting machines and tooling • installing cutting tool • setting up and adjusting cutting machine • securing and correctly positioning materials • cutting and holing materials • applying relevant codes and standards • reading and interpreting routine information on written job instructions, specifications and standard operating procedures • following oral instruction • measuring materials to specified workplace tolerances and within the machine

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
range • clarifying routine task-related information
Required knowledge
Look for evidence that confirms knowledge of: • the characteristics of cutting methods and machines • effect of materials on the machine tooling, tooling defects and adjustments • effect of adjustments on the dimensions of the cut material • applicable tolerances • methods of marking out materials to ensure minimum wastage • any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standard • use and application of personal protective equipment for mechanical cutting • safe work practices and procedures

MEM05007C Perform manual heating and thermal cutting

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing manual heating, thermal cutting and gouging including the assembly and disassembly and operation of the equipment on a range of materials (ferrous, non-ferrous and non-metallic) using a variety of methods.

Application of the Unit

Application of the unit	This unit applies to manual, straight line cutting standards. Manual or automatic processes are used to cut and heat to specifications. Cutting may include flame gouging by hand. All work is carried out to legislative and regulatory requirements. Predetermined standards of quality and safety are observed and work is carried out following standard operating procedures. **Band**: **A** **Unit Weight**: **2**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Assemble/disassemble plant and equipment	1.1. Accessories and equipment are correctly selected and assembled for manual heating and thermal cutting.
2. Operate heating and thermal cutting equipment	2.1. Cutting process and/or procedure appropriate for material is selected. 2.2. All safety procedures are observed. 2.3. Equipment start-up procedures are followed correctly to standard operating procedures. 2.4. Equipment adjustments are made correctly using standard operating procedures. 2.5. Appropriate cutting allowances are made. 2.6. Material is used in the most economical way. 2.7. Defects are identified and corrective action is taken to standard operating procedures. 2.8. Material is heated and cut to specification.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.9. Shape/size/length is to accepted workplace standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing pre-start checks
- safely starting equipment
- following standard operating procedures
- adjusting equipment to operating specifications
- making cutting allowances
- economising material and minimising wastage
- identifying cutting defects and taking corrective action
- heating and cutting materials to specifications
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- performing measurements needed to meet the requirements of this unit
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cutting processes appropriate to various materials
- heating and cutting specifications
- procedures for heating and cutting
- the tools, equipment and techniques for heating and cutting
- assembling procedures for equipment and accessories
- hazards and control measures associated with manual heating and thermal cutting
- use and application of personal protective clothing and equipment
- equipment pre-checks and operation
- procedures for adjusting heating and cutting equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• cutting allowances and reasons for applying them • procedures for minimising waste material • reasons for minimising waste material • cutting defects and their causes • procedures for correcting cutting defects • tools, equipment and techniques required to correct cutting defects • use and application of personal protective equipment • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform manual heating and thermal cutting.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with manual heating/thermal cutting or other units requiring the exercise of the skills and knowledge covered by this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questions should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Cutting	Use of hand held and self-propelled straight line cutters
Process	Fuel gas, oxy fuel gas and air fuel gas

MEM05012C Perform routine manual metal arc welding

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers preparing the materials and carrying out routine manual metal arc welding (MMAW).

Application of the Unit

Application of the unit	This unit applies in a maintenance or manufacturing environment where the welding is not required to meet an Australian standard or equivalent. Fillet and butt welds would typically be performed on low carbon/mild steels. Where welding is required to AS 1554 General Purpose or equivalent codes, occupational health and safety regulations and/or licensing requirements, Unit MEM05015D (Weld using manual metal arc welding process) should be selected. **Band**: **A** **Unit Weight**: **2**

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • preparing materials • setting up welding equipment • welding with GMAW • reading and interpreting routine information on written job instructions, specifications and standard operating procedures • following oral instruction • using measurement skills relating to joint preparation and routine GMAW
Required knowledge
Look for evidence that confirms knowledge of: • different current and voltage settings, gas flow rates wire diameters, wire feed speed and other variables to suit typical situations. • material and equipment preparation • properties and characteristics of materials and consumables • equipment and equipment settings • fuel gas properties and applications • post-welding treatments • weld characteristics • safe welding practices • use and application of personal protective equipment for routine GMAW

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	be able to perform routine gas metal arc welding (GMAW).
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing the materials and carrying out routine gas metal arc welding or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Materials	Mild and low carbon steel
Prepared	Preheating, setting up jigs, fixtures, clamps, joint preparation
Equipment	Hoses, welding leads, gas shrouds, gas regulators, liners, contact tips
Consumables	Filler wire, shielding gas
Cleaned	Slag and spatter

MEM07001B Perform operational maintenance of machines/equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers carrying out programmed safety and maintenance checks on machines/equipment.

Application of the Unit

Application of the unit	This unit mainly applies in a manufacturing setting, where routine programmed operational maintenance to machines/equipment is required. It is not intended to be used where higher level maintenance activities are performed. Machines/equipment range includes manual, semi-automatic and automatic machines of a stand-alone continuous production or process nature. This unit should not be selected when any of the following are selected: Unit MEM18055B (Dismantle, replace and assemble engineering components), Unit MEM18006C (Repair and fit engineering components), Unit MEM07005C (Perform general machining). **Band**: **A** **Unit Weight**: **2**

Pre-Requisites

Prerequisite units		
Path 1	MEM18001C	Use hand tools

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Undertake programmed safety and maintenance checks	1.1. Checks are undertaken safely and to prescribed procedure. 1.2. Status/report is recorded on proforma or reported orally.
2. Undertake programmed maintenance	2.1. Removal/replacement of consumable components is undertaken to prescribed procedure and instructions are followed. 2.2. Fluids and lubricants are replaced and/or topped up to prescribed schedule.

Unit Descriptor

Unit descriptor	This unit covers obtaining the job instruction, conducting the pre-start checks, and operating and monitoring the machine or process.

Application of the Unit

Application of the unit	This unit applies to a range of production operations or continuous processes. The work is performed in accordance with clear step-by-step instructions and procedures documented on job sheets or similar process instruction documents. Operational adjustments to the machine or process by the operator are made using external controls. Basic operation (excluding setting and tool adjustments) of CNC machines is covered by this unit. Where production packaging and labelling of the finished goods or product is required, Unit MEM11006B (Perform production packaging) should be considered. This unit should not be selected with any of the following units unless the skills of this unit are being applied to an additional and different type of machine and or process: Unit MEM04001B (Operate melting furnaces), Unit MEM04002B (Perform gravity die casting), Unit MEM04003B (Operate pressure die casting machine), Unit MEM04006B (Operate sand moulding and core making machines), Unit MEM06001B (Perform hand forging), Unit MEM06002B (Perform hammer forging), Unit MEM08001B (Perform wire, jig and barrel load/unload work), Unit MEM08004B (Finish work using wet, dry and vapour deposition methods), Unit MEM08008B (Operate and control surface finishing waste treatment process)

ELEMENT	PERFORMANCE CRITERIA
instructions	correctly.
2. Conduct pre-start checks	2.1. Pre-start checks are undertaken to standard operating procedure. 2.2. Safety procedures are observed and all safety equipment is checked for correct operation.
3. Operate machine/process	3.1. Machine/process is started up safely and correctly in accordance with standard operating procedures. 3.2. Machine/process is operated in accordance with job instructions or standard operating procedures. 3.3. Components/feed stock are loaded and maintained consistent with production requirements. 3.4. Machine/process output is unloaded safely to standard operating procedures, as required. 3.5. Machine/process output is handled and stored in a manner not likely to cause damage, as required. 3.6. Production data is recorded to standard operating procedures.
4. Monitor machine/process	4.1. Machine/process is monitored for safe and correct operation, deviations and faults are identified and reported in accordance with standard operating procedures. 4.2. Emergency procedures are understood and followed in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • following job sheets, standard operating procedures and other applicable workplace forms • manual handling • following oral instructions • entering routine and familiar information onto proformas and standard workplace forms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• orally reporting routine information • identifying deviations and faults in machine operation/process
Required knowledge
Look for evidence that confirms knowledge of: • pre-start checks • machine/process start-up and unloading procedures • component/feed stock levels to ensure continuous process • production recording and reporting requirements • types of product fault/deviations • consequences of improper handling and storing of finished work • procedures to be followed in emergency situations • use and application of personal protective equipment • safe work practices and procedures • hazards and control measures associated with operating and monitoring machine/process

MEM07028B Operate computer controlled machines/processes

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers obtaining the job instructions, conducting the pre-start checks, and operating and monitoring the computer controlled machine or process.

Application of the Unit

Application of the unit	This unit applies to a range of NC, CNC and robot operated machines or processes in a production environment. Work is performed to established processes, practices, specifications and instructions as appropriate. Technical difficulties are resolved in consultation with appropriate technical advisers. An appropriate level of measurement skill should be selected with this unit. Where it is required to use tools, then Unit MEM18001C (Use hand tools) should also be selected. Where basic operation excludes setting and tool adjustment skills, then Unit MEM07024B (Operate and monitor machine/process) should be selected. When operational maintenance is required, unit MEM07001B (Perform operational maintenance of machines/equipment) should be selected. **Band**: **A** **Unit Weight**: **2**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Obtain job instructions	1.1. Job sheets or equivalent instructions are understood and correctly followed.
2. Conduct pre-start checks	2.1. Pre-start checks are undertaken to standard operating procedures. 2.2. Correct safety procedures are observed and all safety equipment is checked for correct operation.
3. Operate computer	3.1. Installed computer controlled program is selected

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
controlled machine/process	and verified in accordance with job instructions. 3.2. Computer controlled machine is operated safely to product specifications using standard operating procedures. 3.3. Machine malfunctions are identified and reported. 3.4. Production samples are checked for compliance to specification using standard operating procedures.
4. Monitor machine/process	4.1. Tool wear is monitored and, where appropriate, preset tools are replaced, tool offsets are identified in computer controlled program and adjusted, or other corrective action is taken using standard operating procedures. 4.2. Product deviation from specification is reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- making pre-start checks
- checking safety equipment and guards for correct operation
- following safety procedures
- selecting and verifying the correct computer controlled program
- operating the computer controlled machine
- identifying and reporting machine malfunctions
- checking parts/products for conformance to specification
- monitoring the machine or process for signs of tool wear
- taking corrective action
- reporting part or product deviations from specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge
Look for evidence that confirms knowledge of: • pre-start checks • safety equipment and features associated with the machine/process • safety procedures associated with the machine/process • procedures for accessing computer controlled programs installed in the machine controller • procedures for verifying the correct computer controlled program • computer controlled machine operating procedures • typical machine malfunctions • procedures for reporting machine malfunctions • measuring instruments/techniques • examples of tool wear and the effect on product or part specifications • procedures to be followed once tool wear has been detected • replacing preset tools • adjustments to tool offsets • the effect of adjustments on part or product specifications • procedures for reporting product or part deviations • hazards and control measures associated with operating computer controlled machines/processes, including housekeeping • safe workplace practices and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting quality assurance standards, test data other applicable reference documents
- liaising between the production section and the control laboratory
- checking and clarifying information
- using effective communication skills and terminology for conveying and discussing task-related information
- determining and recommending process changes
- using tests to calculate process parameters on the basis of test and production data collected
- using appropriate tests, testing equipment and techniques to test the surface coating for conformance with specification

Required knowledge

Look for evidence that confirms knowledge of:

- enterprise and industry quality assurance standards that apply to surface finish production and product quality
- the role of the control laboratory and procedures for liaising with internal/external control laboratories
- surface finish specifications
- characteristics of deviations of test/production data and their causes
- the procedures, calculations and formulae for determining process parameters
- the effect of varying process parameters on the specification of the surface finish
- surface coating tests and the procedures, equipment and techniques necessary to carry out those tests
- hazards and control measures within the scope of this unit
- use and application of personal protective equipment
- safe work practices and procedures
- manual handling techniques

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Quality testing	Tests for hardness, adhesion, deposit stress, thickness, corrosion, resistance and appearance by checking coating thickness, appearance, corrosion resistance, adhesions, deposit stress

MEM08011B Prepare surfaces using solvents and/or mechanical means

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers selecting the appropriate preparation process, selecting and setting up the equipment, undertaking blasting or application of solvents as required, and checking the finished surface.

Application of the Unit

Application of the unit	This unit applies to surface preparation in new surfaces and in restoration work. Application of surface preparations can apply to metal and non-metal materials. Work is undertaken autonomously or as part of a team environment to established predetermined processes, practices and specifications including environmental requirements. All work and work practices are undertaken to regulatory and legislative requirements. **Band**: **A** **Unit Weight**: **2**

Licensing/Regulatory Information

Not Applicable

Prerequisite units		
Path 1	MEM13003B	Work safely with industrial chemicals and materials
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine job requirements	1.1. Surface preparation requirements are determined from job sheet, instructions or other predetermined specifications in accordance with standard operating procedures. 1.2. Where required, appropriate solvent and solvent application are selected to meet job specification. 1.3. Where required, appropriate mechanical equipment is selected to meet job specification. 1.4. Work site is prepared for surface cleaning activities.
2. Set up equipment	2.1. Appropriate equipment and any required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	consumables are assembled, set up and prepared correctly and safely in accordance with manufactures' specifications and standard operating procedures.
3. Prepare surfaces using solvents as required	3.1. Safe working environment for solvent use is established according to regulatory requirements and standard operating procedures. 3.2. Solvents are applied correctly. 3.3. Treated surface is neutralised and made safe to handle.
4. Prepare surfaces using mechanical means as required	4.1. Safe working environment for mechanical surface preparation is established according to regulatory requirements and standard operating procedures. 4.2. Surfaces are prepared using mechanical means. 4.3. Mechanical equipment is cleaned and checked for damage and operational faults, in accordance with standard operating procedures. 4.4. Equipment faults are recorded and reported in accordance with standard operating procedures.
5. Inspect prepared surface	5.1. Surface preparation is checked for cleanliness and conformance to specifications. 5.2. Faults or defects are rectified where required and recorded/reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • planning and sequencing operations • preparing surfaces using solvents as required • preparing surfaces using mechanical means • setting up equipment and consumables • meeting all safety requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• using solvents correctly • neutralising solvents • using mechanical equipment to prepare surface • maintaining mechanical equipment • recording and reporting of faults • inspecting prepared surface • rectifying work performed • checking for conformance to specifications • reading and interpreting routine information on written job instructions, specifications and standard operating procedures • following oral instructions • applying measurement skills needed to meet the requirements of this unit • entering routine and familiar information onto proformas and standard workplace forms
Required knowledge
Look for evidence that confirms knowledge of: • common surface contaminates, conditions • reasons for selecting solvents • mechanical equipment required • procedure for setting up equipment • specifications applying to the surface to be prepared • methods for neutralising solvents • tools, equipment, abrasives and other materials • procedures for maintaining/storing mechanical equipment • procedures for recording/reporting faulty equipment • procedures checking prepared surfaces • rectification techniques • use and application of personal protective equipment • safe work practices and procedures • relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to select the appropriate preparation process, select and set up the equipment, undertake mechanical preparation or application of solvents as required and inspect the finished surface. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with surface preparation using solvents and/or mechanical means, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Surface preparation	New surfaces and restoration work
Solvents	A range of cleaning chemicals including acids, chlorinated solvents and hydrocarbons
Solvent application methods	Spraying, wiping, brushing, vapour degreasing etc.
Mechanical equipment	Linishers, grinders, polishers, sanders, blast device, enclosures, air grinders etc.
Consumables	Emery cloth/belts, grinding/sanding disks, grinding accessories etc.

MEM08012B Prepare surfaces by abrasive blasting (basic)

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing a basic level of skill in surface preparation by abrasive blasting.

Application of the Unit

Application of the unit	This unit applies to surface preparation/cleaning on both ferrous and non-ferrous masonry and cementatious materials/components. Reference is made to supplier information and specifications as well as accepted and appropriate Australian and international standards. The majority of work is in a team environment and uses predetermined procedures and standards for safety and quality with all work and work practices undertaken to regulatory and legislative requirements. **Band**: **A** **Unit Weight**: **4**

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine job requirements	1.1. Work requirements are determined from job sheet, instructions or other predetermined specifications in accordance with standard operating procedures. 1.2. Appropriate abrasive blasting process, equipment and blasting media are identified to meet job specification. 1.3. Work site is prepared for surface cleaning activities.
2. Set up equipment	2.1. Appropriate equipment and any required consumables are assembled, set up and prepared correctly and safely in accordance with manufactures' specifications and standard operating procedures. 2.2. Correct rust inhibitor for use in wet abrasive blast methods is selected where required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Pre-operational checks are carried out on equipment and faults and are rectified or reported for further action.
3. Prepare surfaces using abrasive blasting	3.1. Blasting equipment is operated in accordance with standard operating procedures. 3.2. Emergency shut-down procedures can be undertaken. 3.3. Work procedures are undertaken to appropriate environmental requirements. 3.4. Abrasive media disposal is carried out in accordance with standard operating procedures. 3.5. Blasting equipment is cleaned and disassembled and inspected in accordance with manufacturers' specifications and standard operating procedures. 3.6. Equipment faults are recorded and reported in accordance with standard operating procedures.
4. Inspect prepared surface	4.1. Surface preparation is assessed for cleanliness and conformance with specifications. 4.2. Faults or defects are rectified where required and inspection results are recorded and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • planning and sequencing operations • undertaking numerical operations within the scope of this unit • selecting blasting equipment and media • setting up equipment and consumables • selecting rust inhibitor • conducting pre-operational checks • preparing surfaces using abrasive blasting • disposing of abrasive media

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• maintaining blasting equipment • identifying, recording and reporting of faults • inspecting prepared surface • performing rectification work • checking for conformance to specifications
Required knowledge
Look for evidence that confirms knowledge of: • reason for selecting the chosen sequence of operations • blasting equipment and media required • equipment, consumables for various methods • importance of using an appropriate rust inhibitor • process for undertaking pre-operational checks • procedures or using abrasive blasting equipment • procedures for abrasive media disposal • procedures for maintaining and storing blasting equipment • recording/reporting procedures; faulty equipment • checking prepared surfaces • rectification techniques • safe work practices and procedures • hazards and control measures related to abrasive blasting

RANGE STATEMENT	
regional contexts) may also be included.	
Blasting processes	Surface preparation using propelled abrasives including water, air steam, grits and blasting mediums
Blasting media	Abrasives, shot, glass beads, sand, steel shot, garnet, and other mediums accepted by industry and all regulatory bodies
Rust inhibitor	A substance which, when added to a corrosive liquid in small amounts, reduces the rate of corrosion
Blasting equipment	Electric and diesel compressors, blast pots, blast rooms, centrifugal blast machines, water pressure washers to 35,000 kpa, air hoses and nozzles, and specified hand and power tools, etc.

MEM08014B Apply protective coatings (basic)

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers spraying pre-treatments and protective coatings not limited to brush, roller and conventional spray equipment, at a basic level.

Application of the Unit

Application of the unit	This unit is designed to be used where a basic level of skill is required. It covers single and two-pack coatings not containing isocyanates. Work is undertaken autonomously or as part of a team environment using predetermined standards of safety, quality and operating procedures. Specific health and safety matters include interpretation of MSDS warnings, materials sensitivity, hazardous goods, breathable air and introduction of compressed air into the body. Specific understanding is required of given supplier information and product details. Reference is made to supplier information and specifications as well as accepted and appropriate Australian and international standards. Where isocyanates are present, Unit MEM08015B (Apply protective coatings [advanced]) should be selected. Where required, Unit MEM11004B (Undertake dogging) and Unit MEM11010B (Operate mobile load shifting equipment) should also be selected. **Band**: **A** **Unit Weight**: **4**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine job requirements	1.1. Work requirements are determined from job sheet, instructions, drawings or visual inspection. 1.2. Required protective coating materials are identified according to job specification. 1.3. Required protective coating application equipment is

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	identified according to job requirements. 1.4. Work site is prepared for application of protective coating.
2. Work piece prepared for application of protective coating	2.1. Surface condition is inspected for readiness for application of protective coating according to specification. 2.2. Unsuitable work pieces/surfaces and fabrication defects are identified and appropriate remedial action or reporting is undertaken in accordance with standard operating procedures. 2.3. Components are masked where protective coating application is not specified. 2.4. Conditions for overspray are identified.
3. Equipment prepared for application of surface coating materials	3.1. Required plant and equipment basic operations are understood. 3.2. Routine maintenance is undertaken on plant and equipment in accordance with standard operating procedures. 3.3. Status/reports are recorded by proforma or orally in accordance with standard operating procedures. 3.4. Conventional coating application equipment is assembled in accordance with equipment requirements and standard operating procedures.
4. Apply single pack coatings	4.1. Coating product type, solvent, uses, mixing procedure, clean-up and safety requirements are identified as appropriate. 4.2. Correct method of determining wet film thickness in accordance with specified dry film is demonstrated. 4.3. Coating material is thinned to suit the application method and to achieve required film thickness. 4.4. Coating is applied using specified application method and standard operating procedures. 4.5. Coating schedules can be outlined for metal and non-metal materials. 4.6. Coating application and curing technique are monitored according to standard operating procedures.
5. Clean and store equipment	5.1. Conventional coating application equipment is cleaned, disassembled and inspected for damage. 5.2. Faulty equipment is recorded and reported to appropriate personnel in accordance with standard

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	operating procedures. 5.3. Coating application equipment is stored in accordance with standard operating procedures.
6. Inspect finish surface	6.1. Surface finish is assessed for profile size differences and uses. 6.2. Coating thickness is determined using appropriate instruments and results are compared with job specifications. 6.3. Total surface is inspected for conformance to specification in accordance with standard operating procedures. 6.4. Inspection results are recorded and reported in accordance with standard operating procedures.
7. Select and maintain personal protective equipment (PPE)	7.1. Appropriate personal protective equipment for coating application is selected according to job requirements and standard operating procedures. 7.2. Personal protective equipment is used appropriately in accordance with manufacturers' specifications and standard operating procedures. 7.3. Ancillary support attachments are identified and used. 7.4. Personal protective equipment is maintained in accordance with manufacturers' specification and standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • obtaining all relevant drawings, job sheets, specifications and instructions in accordance with workplace procedures • considering all relevant information and job requirements • preparing site with due regard to OH&S requirements including site safety, clear working space, other materials/structures/personnel in the vicinity, isolation of work site where required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- undertaking comprehensive inspection and considering specifications during inspection
- using standard workplace procedures to identify, select and apply the appropriate treatment or actions to rectify items with surface or fabrication defects
- identifying surface required as 'no paint areas' and protecting these using standard masking procedures and techniques
- undertaking precautions to prevent overspray in the workplace using standard procedures
- undertaking routine maintenance on plant and equipment in accordance with standard operating procedures
- preparing all required maintenance records/reports and details communicated
- assembling equipment in accordance with manufacturers' specifications and standard operating procedures
- identifying coating type and appropriate solvents and standard workplace procedures required for mixing processes, clean-up and safe handling
- using workplace procedures for determining the wet film thicknesses of a coating from the specified dry film thickness
- calculating required thickness in accordance with product volume solids
- applying standard operating procedures for thinning coating materials and applying the specified film thickness coating to a substrate
- applying protective coating to comply with an established standard using specified methods and standard operating procedures
- controlling coating application and curing techniques using standard operating procedures
- undertaking disassembly, cleaning and checking for functionality of spraying equipment and associated items in accordance with standard operating procedures
- using standard operating procedures to report on any damage or faulty parts and communicating with appropriate personnel
- following procedure for storage including any hazard reduction and/or protection of equipment and components
- checking surface condition of the work piece, including profile size properties and problems according to standard operating procedures and other acceptable standards
- determining thickness using mechanical, electronic or other appropriate instruments and testing results compared with job specifications, drawings etc.
- undertaking comprehensive inspection as required by standard operating procedures
- preparing all required inspection records/reports and details communicated
- selecting personal protective equipment suitable for applying protective coatings
- using appropriate personal protective equipment in workplace operations in accordance with standard procedures
- selecting the appropriate supports to use with personal protective equipment in standard operational practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- checking personal protective equipment items for serviceability in accordance with manufacturers' specifications
- recording and reporting faulty items to appropriate personnel using standard workplace procedures

Required knowledge

Look for evidence that confirms knowledge of:

- work to be undertaken and specifications applying to the work
- correct interpretation of all relevant information
- safety issues, adequate precautions, awareness of other site factors that could be affected by the work
- deviation from specified surface finish/condition
- standard workplace procedures for identifying unsuitable work items
- method of locating areas to be protected from coating process and masked
- the areas subject to overspray and requiring protection
- operation of plant and equipment using standard operating procedures
- standard operating procedures for plant and equipment maintenance
- the requirements for completion and processing of maintenance reports
- assembly specifications and procedures
- workplace procedures for identifying coating types and processing solvents, mixing and safe handling practices
- the workplace procedures for determining the wet film thickness of a coating from the specified dry film thickness
- calculations using a specified formulation
- standard operating procedure for thinning coating materials for use in applying the specified film thickness coating to a substrate
- standard operating procedures to apply protective coatings to comply with an established standard
- procedures for controlling coating application and curing techniques
- standard operating procedure for disassembly, cleaning and checking
- standard operating procedures for recording and reporting defective parts
- standard operating procedures for storage and protection of equipment
- standard operating procedures and other relevant standards for assessing the profile of the surface finish
- dry film thickness testing instruments
- standard operating procedures for surface inspection, including the extent and detail of inspection as required
- requirements for completion and processing of inspection reports
- standard procedure for identifying and selecting the required personal protective equipment
- the workplace standard procedure for the use of personal protective equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the use and selection of appropriate supports to use with personal protective equipment in standard operational practices • standard procedures and manufacturers' specifications for inspecting and maintaining personal protective equipment in the workplace • hazard and control measures associated with applying protective coatings (basic) including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply protective coatings (basic). Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying protective coatings (basic) or other units requiring the exercise of the skills and knowledge

MEM08015B Apply protective coatings (advanced)

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit applies to spraying pre-treatments and protective coatings including conventional, two pack, plural component.

Application of the Unit

Application of the unit	This unit is for use when an advanced level of skill is required. It includes inspection and interpretation of the results using all current industry knowledge and equipment. Test equipment included but not limited to Holiday and Pin Hole testing, wet and dry film thickness gauges, temperature, relative humidity and dew point, hardness, gloss, adhesion and cure testing and soluble salts. Reference is made to supplier information and specifications as well as accepted and appropriate Australian and international standards. All work and work practices undertaken to regulatory and legislative requirements. For application of basic single and two pack coatings not containing isocyanates, Unit MEM08014B (Apply protective coatings [basic]) should be selected. **Band**: **A** **Unit Weight**: **4**

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		
Path 1	MEM08014B	Apply protective coatings (basic)
	MEM13003B	Work safely with industrial chemicals and materials

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine job requirements	1.1. Work requirements are determined from job sheet, instructions or other specifications in accordance with standard operating procedures. 1.2. Appropriate coating system and material is selected to meet job specification. 1.3. Appropriate coating process and equipment is selected to meet job specification. 1.4. Work site is prepared for surface coating activities.
2. Work piece prepared for application of	2.1. Surface condition is inspected for readiness for application of protective coating according to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
protective coating	specification. 2.2. Unsuitable work pieces/surfaces and fabrication defects are identified and appropriate remedial action or reporting is undertaken in accordance with standard operating procedures. 2.3. Components are masked where protective coating application is not specified. 2.4. Conditions for overspray are identified.
3. Equipment is prepared for application of surface coating materials	3.1. Required plant and equipment basic operations are understood. 3.2. Routine maintenance is undertaken on plant and equipment in accordance with standard operating procedures. 3.3. Status/reports are recorded by proforma or orally in accordance with standard operating procedures. 3.4. Coating application equipment is assembled in accordance with equipment requirements and standard operating procedures. 3.5. Personal protective equipment is selected and maintained in accordance with manufacturers' specifications and standard operating procedures.
4. Apply coatings using conventional, airless and plural component equipment	4.1. Coating product type, solvent, uses, mixing procedure, clean-up and safety requirements are identified as appropriate. 4.2. Correct method of determining wet film thickness in accordance with specified dry film is demonstrated. 4.3. Coating material is thinned to suit the application method and to achieve required film thickness. 4.4. Coating is applied using specified application method and standard operating procedures. 4.5. Coating application and curing technique is monitored according to standard operating procedures.
5. Clean and store equipment	5.1. Coating application equipment is cleaned, disassembled and inspected for damage. 5.2. Faulty equipment is recorded and reported to appropriate personnel in accordance with standard operating procedures. 5.3. Coating application equipment is stored in accordance with standard operating procedures.
6. Inspect finished	6.1. Surface finish is assessed for profile size differences

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
surface	and uses. 6.2. Coating thickness is determined using appropriate instruments and results are compared with job specifications. 6.3. Total surface is inspected for conformance to specification in accordance with standard operating procedures. 6.4. Inspection results are recorded and reported in accordance with standard operating procedures.
7. Calculate, estimate and cost application of protective coating	7.1. Surface area of work piece, materials, labour and equipment are assessed. 7.2. Cost of materials, labour, handling and equipment are determined. 7.3. Results are recorded and reported as an estimate for the application of a protective coating system.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • obtaining all relevant drawings, job sheets, specifications and instructions in accordance with work place procedures • where appropriate, inspecting the surface(s) to be coated by the individual • selecting correct coating system and material for the job surface and use • selecting correct coating process and equipment for applying the selected coating material • preparing site with due regard to OH&S requirements including site safety, clear working space, other materials/structures/personnel in the vicinity, isolation of work site where required • using standard workplace procedures to identify, select and apply the appropriate treatment or actions to rectify items with surface or fabrication defects • identifying surfaces required as 'no paint areas' and protecting these using standard masking procedures and techniques • undertaking precautions to prevent overspray in the workplace using standard procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- undertaking routine maintenance on plant and equipment in accordance with standard operating procedures
- preparing all required maintenance records/reports and communicating details
- assembling equipment in accordance with manufacturers' specifications and standard operating procedures
- selecting appropriate personal protective equipment and maintaining this in accordance with job requirements, manufacturers' specifications, OH&S requirements and standard operating procedures
- inspecting work piece and identifying any faults in accordance with standard operating procedures
- using workplace procedures for determining the wet film thickness of a coating from the specified dry film thickness
- calculating required thickness in accordance with product volume solids
- applying standard operating procedures for thinning coating materials and applying the specified film thickness coating to a substrate
- applying protective coating to comply with an established standard using specified methods and standard operating procedures
- controlling coating application and curing techniques using standard operating procedures
- undertaking disassembly, cleaning and checking for functionality of spraying equipment and associated items in accordance with standard operating procedures
- using standard operating procedures to report on any damage or faulty parts and communicating with appropriate personnel
- following procedure for storage including any hazard reduction and/or protection of equipment and components
- checking surface condition of the work piece, including profile size properties and problems according to standard operating procedures and other acceptable standards
- determining thickness using mechanical, electronic or other appropriate instruments
- comparing test results with job specifications, drawings etc.
- undertaking inspection comprehensively as required by standard operating procedures
- preparing all required inspection records/reports and communicating details
- using appropriate inspection and assessment methods
- undertaking calculations in accordance with standard operating procedures and specifications
- recording and reporting calculated costs in accordance with standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- work to be undertaken
- specifications applying to the work
- appropriate coating system and material required to meet job specification
- features of the various types of coating materials, including drying and curing requirements
- selection procedures for coating material
- appropriate coating process and equipment required for surface coating to meet job specification
- application features of the various types of coating materials and methods
- selection procedures for coating process and equipment, including conventional, airless and plural component
- awareness of other site factors that could be affected by the work
- deviation from specified surface finish/condition
- standard workplace procedures for identifying unsuitable work items
- method of locating areas to be protected from coating process and masked
- the areas subject to overspray and requiring protection
- operation of plant and equipment using standard operating procedures
- standard operating procedures for routine maintenance of plant end equipment
- requirements for completion and processing maintenance reports
- procedure for selecting and maintaining personal protective equipment
- inspection procedure
- unsuitable work pieces in consideration of job specifications
- the workplace procedures for determining wet film thickness of a coating from the specified dry film thickness
- calculations using a specified formulation
- standard operating procedures for thinning coating materials for use in applying the specified film thickness coating to a substrate
- standard operating procedures to apply protective coatings to comply with an established standard
- the procedures for controlling coating application and curing techniques
- standard operating procedure for disassembly, cleaning and checking
- standard operating procedures for recording and reporting defective parts
- standard operating procedures for storage and protection of equipment
- standard operating procedures and other relevant standards for assessing the profile of the surface finish
- dry film thickness testing instruments
- standard operating procedures for surface inspection, including the extent and detail of inspection as required
- the requirements for completion and processing of inspection reports
- the standard methods and procedures for determining surface area of various shapes of materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• standard procedures for calculating costs • the standard operating procedures for recording and reporting calculated costs • hazard and control measures associated with applying protective coatings (advanced), including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply protective coatings (advanced). Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying protective coatings (advanced) or other units requiring the exercise of the skills and knowledge covered by this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply specific health and safety considerations to surface preparation	1.1. Products, hazardous materials and processes used in blaster cleaning and coating operations are identified. 1.2. Safety procedures appropriate to the work requirements are applied. 1.3. Unsafe working conditions are identified and reported to appropriate personnel.
2. Control by-products, materials and emissions	2.1. By-products, materials and emissions are contained using established procedures. 2.2. By-products, materials and emissions are monitored and directed to appropriate treatment or storage area. 2.3. Monitoring devices are checked for correct/continuous operation. 2.4. Status/reports are recorded and reported.
3. Dispose of by-product, materials and emissions	3.1. Waste treatment processes are applied in accordance with standard operating procedures. 3.2. Treatment processes are carried out in accordance with standard operating procedures and to meet relevant authority waste requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • collecting, storing and removing samples of by-products • monitoring and transferring by-product and emissions • checking monitoring devices • implementing waste treatment process • recording and reporting of all results • collecting, storing, removing and sampling by-products
Required knowledge
Required knowledge • Look for evidence that confirms knowledge of: • products, hazardous materials and processes within the scope of this unit • regulatory and legislative requirements relating to control of blast coating by-products, materials and emissions • procedures for collecting samples • by-product collection equipment operation methods • waste control monitoring equipment and procedures • waste treatment processes • requirements and procedures for recording and reporting process status reports • hazards and control measures associated with controlling blast coating by-products, materials and emissions • use and application of personal protective equipment • safe work practices and procedures

MEM09002B Interpret technical drawing

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers interpreting technical drawing applying to any of the full range of engineering disciplines.

Application of the Unit

Application of the unit	Technical drawings may utilise perspective, exploded views or hidden view techniques. Drawings are provided to Australian Standard 1100 and/or Australian Standard 1102 and their equivalents from the full range of engineering disciplines. Standard symbols to Australian Standard 1100 and/or Australian Standard 1102 or equivalent are recognised in field of employment. Technical drawings may include symbol glossaries. Where any drawing, sketch, chart, diagram is only used as the technique for communication, then this unit does not apply: see Unit MEM12023A (perform engineering measurements) or Unit MEM16006A (Organise and communicate information). **Band**: **A** **Unit Weight**: **4**

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Select correct technical drawing	1.1. Drawing is checked and validated against job requirements or equipment. 1.2. Drawing version is checked and validated.
2. Interpret technical drawing	2.1. Components, assemblies or objects are recognised as required. 2.2. Dimensions are identified as appropriate to field of employment. 2.3. Instructions are identified and followed as required. 2.4. Material requirements are identified as required. 2.5. Symbols are recognised in the drawing as appropriate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking the drawing against job requirements/related equipment in accordance with standard operating procedures
- confirming the drawing version as being current in accordance with standard operating procedures
- where appropriate, obtaining the current version of the drawing in accordance with standard operating procedures
- reading, interpreting information on the drawing, written job instructions, specifications, standard operating procedures, charts, lists and other applicable reference documents
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- application of AS1100.101 in accordance with standard operating procedures
- relationship between the views contained in the drawing
- objects represented in the drawing
- units of measurement used in the preparation of the drawing
- dimensions of the key features of the objects depicted in the drawing
- understanding of the instructions contained in the drawing
- the actions to be undertaken in response to those instructions
- the materials from which the object(s) are made
- any symbols used in the drawing as described in range statement
- hazard and control measures associated with interpreting technical drawings, including housekeeping
- safe work practices and procedures

MEM09009C Create 2D drawings using computer aided design system

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers preparing the CAD environment, creating 2D drawings, and producing output including linked bills of materials.

Application of the Unit

Application of the unit	This unit applies to the production of 2D drawings using a CAD system, linked bills of material, file management and associated customisation of installed software including the use of macros, menus and default settings; file formats may include IGES, DXF, HPGL. The unit applies to the fields of mechanical, electrical/electronic, fabrication, and fluid power. 2D drawings may be produced from 3D models created using computer aided design system. This unit covers CAD skills only. Where detail drafting skills are required, the following units should be considered: Unit MEM09004B (Perform electrical/electronic detail drafting), Unit MEM09005B (Perform basic engineering detail drafting), Unit MEM09006B (Perform advanced engineering detail drafting). **Band**: **B** **Unit Weight**: **8**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare CAD environment	1.1. System variables are customised to suit standard operating procedures. 1.2. Menus are customised to suit standard operating procedures. 1.3. Drawing defaults are customised to standard operating procedures. 1.4. Macros are developed to standard operating procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Create 2D drawings	2.1. Drawings are created using the full capability of the available software system. 2.2. Drawing entities are linked to database attributes to suit job requirements. 2.3. Detailed views are created using various scales to meet job requirements.
3. Produce output	3.1. Files are saved in various formats to standard operating procedures. 3.2. Linked entities are listed in a bill of materials format to meet job requirements. 3.3. Supplementary data is extracted from drawing to meet job requirements and may include area, lengths, angles and perimeters.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant manuals, instructions and operation procedures for the CAD software and hardware being used
- where appropriate, customising the relevant system variables to suit the applicable drafting standards/procedures
- where appropriate, customising menus to suit the applicable drafting standards/procedures
- where appropriate, customising the system defaults to suit the applicable drafting standards/procedures
- where appropriate, developing macros
- creating drawings using the appropriate drawing features of the software system
- where appropriate, linking drawing entities to database attributes
- producing detailed views of the object being drawn
- printing drawing files at the appropriate scale
- saving drawing files in the appropriate format
- producing bills of material from the drawing files/database
- extracting supplementary data from the drawing file to meet job requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- CAD software system
- system variables that can be customised
- procedures for customising identified system variables
- reasons for customising the system variables
- applicable drafting standards/procedures
- procedures for customising menus
- reasons for customising menus
- procedures for customising system defaults
- reasons for customising system defaults
- procedures for developing macros
- reasons for developing macros
- drawing features of the CAD software system
- reasons for using specialised software features
- procedures for linking drawing entities to database attributes
- appropriate drawing scales
- procedures for printing drawing files
- procedures for creating additional views of the object being drawn
- procedures for saving drawing files
- various formats in which drawing files can be saved
- reasons for using different formats when saving drawing files
- procedures to produce bills of material
- procedures to extract data with respect to drawn shapes/features
- properties of shapes/sections/ features that can be extracted from the drawing file
- hazards and control measures associated with using computer aided design system, including housekeeping
- safe work practices and procedures

MEM09204A Produce basic engineering detail drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to identify drawing requirements, preparing engineering drawings and an engineering parts list, and issuing the drawings. Drawings include 2-D drawings to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles.

Application of the Unit

This unit is suitable for those working within a drafting work environment where most specifications required for the drawing are already determined. Specifications may be obtained from design information, customer requirements, sketches and preliminary layouts. Drawings will usually be carried out with the use of computer-aided design (CAD) systems but may also be done manually. Drawings are produced to AS 1100.101–1992 Technical drawing – General principles, from predetermined critical dimensions and specifications.

If a CAD system is used, the unit MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should also be selected.

This unit applies to all engineering and manufacturing environments.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B Interpret technical drawing

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine drawing requirements	1.1	Check purpose, scope and information requirements for drawing
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Examine requirements for presentation of drawings
		1.5	Confirm communication requirements during project
2	Produce detail drawing	2.1	Prepare drawings in plane orthogonal, or equivalent
		2.2	Apply standard drawing conventions, including dimensions, required method of projection, and full notation
		2.3	Use drawing techniques according to work requirements
		2.4	Apply industry symbols and ensure presentation meets industry standard
3	Prepare engineering parts list	3.1	Identify components or parts and organise by component type and/or in accordance with organisation/customer requirements
		3.2	Prepare parts list in accordance with organisation/customer requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	Complete drawing task	4.1	Check and confirm dimensions, angles and proportions
		4.2	Ensure drawing is presented according to organisational requirements and contains all relevant and accurate information
		4.3	Issue and file drawing according to workplace procedure
		4.4	Evaluate work and identify areas for improvement
		4.5	Plot or print the final drawing to a standard scale

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read and interpret instructions and specifications for drawing work
- obtaining all relevant job requirements, data/information and specifications necessary to produce the drawing in accordance with workplace procedures
- planning and sequencing operations
- checking and clarifying task-related information
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and conduct mathematical problem solving as required in the scope of this unit
- applying spatial principles to achieve scale and proportion
- using drafting equipment appropriate to the drawing method chosen
- recording completed drawings and/or parts lists in accordance with standard operating procedures
- handling and storing the approved drawings and/or parts lists in accordance with standard operating procedures

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and occupational health and safety (OHS) issues associated with the tools and materials used for drawing
- quality assurance procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- principles of plane geometry:
  - geometric shapes
  - plane geometry
  - geometric construction
  - line types during construction
- drawing construction:
  - four centre method
  - ordinate method
  - sectioning isometric shapes
  - dimensions and notations
- requirements and purpose of the drawing to be produced
- requirements and purpose of the engineering parts list
- sources of relevant data/information
- timeframe for completion of drawings
- persons who can confirm drawing requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to use interpret and apply drawing specifications, and produce a complete drawing to AS 1100.101–1992 Technical drawing – General principles, using manual or CAD tools.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts. Specifically the candidate must be able to: • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • interpret work and design specifications and use reference material to obtain required information for drawing work • produce a detailed engineering drawing to AS 1100.101–1992 Technical drawing – General principles, and according to work requirements.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	manuals and reference materials.

Range Statement

Standard drawing conventions	Standard drawing conventions include: • use of correct sectioning technique • identification of cutting plane • accurate line types • appropriate view positions • use of correct symbols • use of correct dimensioning technique • provision of suitable number of views • use of correct scales • neat presentation

Drawing techniques	Drawing techniques may include:
	• orthogonal projection:
	  • first angle projection
	  • third angle projection
	  • projection symbol
	  • preferred system of projection in Australia
	  • number of views
	  • relationship of views
	• sheet format:
	  • borders and title blocks
	  • application of projection symbol
	  • drawing sheets and sizes
	  • lettering styles
	  • Australian Standards
	• dimensioning:
	  • unidirectional dimensioning
	  • aligned dimensioning
	  • projection and dimension lines
	  • arrow heads
	  • dimension placement
	• scale drawing:
	  • recommended scales
	  • reduction scales
	  • enlargement scales

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• multiple scales • dimensioning techniques of scale drawings • sectioning: • types of sections • required section views • placement of views • cutting planes • labelling of cutting planes and section views • general notes

MEM09210A Create 3-D solid models using computer-aided design (CAD) system

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit covers preparing the 3-D computer-aided drafting (CAD) environment, creating and modifying 3-D solid models, and producing output from the 3-D model.

Application of the Unit

This unit is suitable for those working within a drafting work environment and may be applied across a range of engineering disciplines. This unit applies to the production of 3-D solid models using CAD modelling software. Operations at this level include, but are not limited to, the creation and manipulation of entities, such as arcs, lines and primitives, such as spheres, cones, cylinders and boxes. It includes the use of region and solid modelling techniques, section views, and pre-drawn library files. Work also includes extraction of properties and application of basic rendering techniques.

This unit includes applications in CAD, computer graphics and animation, rapid prototyping, medical testing and visualisation of scientific research.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM09002B	Interpret technical drawing
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements

Employability Skills Information

This unit contains employability skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine solid modelling requirements	1.1	Check purpose, scope and information requirements for modelling task
		1.2	Interpret available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify and prepare equipment required to complete work
		1.4	Identify and apply relevant codes, standards and symbols relevant to work
		1.5	Consult appropriate personnel to ensure the work is coordinated effectively with others involved in the project
		1.6	Obtain and apply workplace occupational health and safety (OHS) and environmental procedures for work
2	Prepare 3-D environment	2.1	Apply workplace procedures to retrieve and manipulate required information and navigate computing technology
		2.2	Set up a 3-D environment on the screen to allow multiple viewing
		2.3	Create 3-D views on the screen by manipulating drawing planes and inserting 3-D geometric shapes
		2.4	Establish coordinate system and orientation according to job requirements
		2.5	Determine and exploit key features of solid modelling software package

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Produce output from 3-D model	3.1	Perform drawing for solid modelling
		3.2	Exploit features of modelling software to optimise productivity
		3.3	Extract physical properties to job requirement, including volume, mass and centre of gravity
		3.4	Apply rendering techniques
		3.5	Produce 3-D drawings incorporating section views with all necessary annotation
4	Complete CAD operations	4.1	Confirm model accurately reflects specifications, is presented according to work requirements and contains all relevant information
		4.2	Save and file drawing elements according to organisational procedure
		4.3	Evaluate work and identify areas for improvement
		4.4	Close applications, perform CAD housekeeping and maintain organisational filing system

Required Skills and Knowledge

Required skills

Required skills include:

- using computing technologies and navigating software
- obtaining relevant job instructions and specifications
- creating the appropriate entities in 3-D space
- manipulating the entities in 3-D space
- creating swept, extruded and revolved solids in 3-D space
- modifying, where appropriate, existing 3-D models
- saving drawing files in the appropriate format
- extracting the physical properties of shapes created in 3-D space from the drawing file to meet job requirements
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

reference documents
- checking and clarifying task-related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- creating intelligent models using parametric modelling
- producing composite models (composite regions and composite solids)
- producing sectioned models (cutting planes and cross hatching)
- using pre-drawn library files and primitives to produce a 3-D model
- extracting mass and area properties from solid model
- applying rendering techniques to a 3D model (rendering types and preferences, render lighting techniques, and views and scenes)
- using various materials and surface finish options
- producing hard copies of 3-D solid models
- saving 3-D models in various file formats for retrieval into other CAD application software
- producing orthogonal detail drawings of components on standard drawing sheets to a recognised drafting scale

Required knowledge

Required knowledge includes:

- purpose for which the 3-D model is to be developed
- appropriate coordinate system for the job
- reasons for selecting the chosen coordinate system
- orientation of the model with respect to the coordinate system
- number of views required to establish the model
- procedures for creating entities in 3-D space
- the entities that can be created/manipulated in 3-D space
- procedures for manipulating entities in 3-D space
- procedures for creating swept, extruded and revolved solids in 3-D space
- applications of swept, extruded and revolved solids
- procedures for modifying existing 3-D models
- rendering types and preferences, render lighting techniques, views and scenes
- procedures for saving drawing files
- the various formats in which drawing files can be saved
- reasons for using different formats when saving drawing files
- procedures for extracting data with respect to the physical properties of shapes created in 3-D space
- the physical properties of shapes created in 3-D space that can be extracted from the drawing file
- hazard and control measures associated with using CAD system, including housekeeping
- safe work practices and procedures
- terminology associated with solid modelling (region modelling, solid modelling, and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

wire frame, as opposed to solids)
- region modelling techniques (creating a region primitive and editing regions)
- solid modelling techniques (creating solid primitives, editing solid primitives, and conversion from region to solid models)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to create 3-D models using CAD systems.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts. Specifically the candidate must be able to: • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • select and use 3-D CAD software to create solid models that meet design specifications.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with creating 3-D models using CAD systems or other units requiring the exercise of the skills and knowledge covered by this unit
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Range Statement

Solid modelling task	Solid modelling task may include: • terminology • region modelling • solid modelling • parametric modelling • composite models • section models • library files and 3-D primitives • other relevant software packages for the production of 3-D models • mass and area properties • rendering techniques • material finishes • production of hard copies • saving and retrieval of files of varying formats • consolidation (e.g. project work)
Rendering techniques	Rendering techniques may include: • rendering types and preferences • render lighting techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• views and scenes
Appropriate personnel	Appropriate personnel may include: • supervisor • leading hand • foreman • manager • site engineer • trainer • mentor • teacher • team member
OHS requirements	OHS requirements may include: • legislation • personal protective equipment • material safety management systems • hazardous substances and dangerous goods code • awards provisions • safe work practices
Environmental requirements	Environmental requirements may refer to: • liquid waste • solid waste • gas, fume, vapour, and smoke emissions, including fugitive emissions • excessive energy and water use • excessive noise
Resource requirements	Resource requirements may include: • computer software • stationary • software reference documentation • reference texts • consumables • computer • printing equipment

MEM10002B Terminate and connect electrical wiring

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers terminating, disconnecting or reconnecting electrical wiring and circuits.

Application of the Unit

Application of the unit	This unit applies to the connection of wiring and includes termination and connection of all types of cords and cables, excluding specialist cables. All testing is undertaken on completed circuits where these are not connected to main supply, using appropriate methods such as continuity and resistance checks. Specifications are obtained from electrical/electronic circuit drawings and data sheets. Soldering/desoldering of electrical/electronic components may also require the selection of Unit MEM05001B (Perform manual soldering/desoldering - electrical/electronic components) or Unit MEM05002B (Perform high reliability soldering and desoldering) as applicable. This unit does not cover the competencies required for energising and testing of the circuit. If these skills are required, the competencies covered in Unit MEM10003B (Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.) must be satisfied. Termination and connection of specialist cables such as mineral insulated, steel wire, armoured cables etc., is covered in Unit MEM10011B (Terminate and connect specialist cables). **Band**: **A**

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for electrical wiring termination and connection	1.1. All work is undertaken safely and to workplace procedures and State/Territory regulations and legislative requirements. 1.2. Materials are checked for correct specifications. 1.3. Preparation of work is undertaken or checked/inspected for correct location and specifications.
2. Connect electrical wiring	2.1. Terminations/connections are made to specifications, manufacturers' requirements and to safety and State/Territory regulations and legislative requirements. 2.2. All brackets, clamps, holders etc. are adjusted and fixed to specifications. 2.3. All cables, wires, conductors and connections etc. are marked/tagged and labelled to specification. 2.4. All completed wiring and connections are tested for compliance with specifications. 2.5. All reports and documentation are completed correctly to required specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking materials for conformance to specifications
- checking existing and new installation site for correct location and specification
- making terminations/connections to specification, manufacturer and regulatory requirements
- adjusting and fixing wiring supports
- marking, tagging and labelling cables, wires, conductors and connections to specification
- undertaking testing of wiring and connections for conformance to specification
- using language and literacy skills to complete short reports and required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
documentation • reading and interpreting routine information on written job instructions, specifications and standard operating procedures May include drawings • using measurements for checking connections and components
Required knowledge
Look for evidence that confirms knowledge of: • safety hazards associated with the termination and connection of electrical wiring • statutory and regulatory requirements associated with the termination and connection of electrical wiring • wiring support and/or protection requirements and specifications • relevant manufacturer requirements • specifications and methods for terminating different materials • wiring support techniques and alternatives • marking, tagging and labelling requirements for cables, wires, conductors and connections • tests for wiring and connections • data to be recorded/reported and the frequency of recording/reporting • requirements for approval to work • use and application of personal protective equipment for terminating and connecting electrical wiring

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to terminate and connect electrical wiring. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to erect scaffold/equipment	1.1. Site plans, scaffolding/equipment designs and drawings to industry practices are interpreted as necessary. 1.2. Work area is inspected to identify hazards and appropriate prevention/control measures are implemented to avoid hazard. 1.3. All work is undertaken safely and to prescribed procedures.
2. Erect scaffold/equipment	2.1. Erection site is prepared to meet job requirements. 2.2. Necessary signage and barriers and third party protection measures are placed in appropriate position. 2.3. Appropriate scaffolding/equipment components are selected and inspected and damaged components are labelled and rejected. 2.4. Rejected components are repaired or sent for repair. 2.5. Scaffolding/equipment is erected to plan and in accordance with safe work practices, Australian standards, State and Territory legislative requirements and equipment manufacturers' requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.6. The completed scaffolding/equipment is checked for safety and operational requirements. 2.7. Site is left clear of all surplus components, equipment, tools and debris.
3. Inspect, repair and alter scaffold/equipment	3.1. The scaffolding/equipment is inspected for damage, corrosion and wear. 3.2. Any alteration or repair is carried out in accordance with safe work practices and legislative requirements. 3.3. Any inspection log is completed as required.
4. Dismantle scaffold/equipment	4.1. Work is undertaken safely and to prescribed procedure. 4.2. Scaffolding/equipment is inspected for damage, corrosion or wear and is noted for consideration in planning for dismantling. 4.3. Scaffolding/equipment is dismantled in accordance with site procedures, State and Territory legislative requirements and critical structural and safety requirements. 4.4. Site is cleaned and cleared of all tools, excess material and debris and left in a safe state.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications and standard procedures. May include drawings for erecting scaffolding
- undertaking basic levelling and alignment
- interpreting instructions and legislative requirements
- using relevant hand tools and manual handling techniques
- assessing risk
- following oral instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• working safely and confidently at heights
Required knowledge
Look for evidence that confirms knowledge of: • erection and dismantling procedures as set out in relevant Australian standards • codes of practice, for example the Scaffolder's Guide, relevant acts and regulations • site specific requirements • safety procedures, safe work practices and procedures • use and application of personal protective equipment • hazards and control measures associated with erecting/dismantling scaffolding and equipment, including housekeeping • scaffolding techniques and equipment • limitations of equipment • materials handling, storage and environmentally friendly waste management

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to erect and dismantle scaffolding/equipment safely subject to legislative requirements. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic

	workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with erection and dismantling of scaffolding or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, codes, specifications, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Scaffolding/equipment	• Prefabricated tower scaffolds, fall protection devices, catch platforms and bracket scaffolds (tank and formwork), mobile scaffolds, gin wheels, cantilevered hoist with a load limit not exceeding 500 kilograms (material only),

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	safety nets and static lines • The major difference between basic and complex scaffolding is the height of the working platform and certain types of scaffolding and configurations
Hazards	• Chemicals, dangerous or hazardous substances/materials • Movement of equipment, goods, materials, vehicular traffic • Uneven/unstable terrain, overhead service lines, trees, underground services, obstructions, structures, surrounding buildings, facilities, bridges/walkways, lifting equipment
Prescribed procedures	• Clarification of instructions and/or plans either written or from authorised personnel • Site safety policy and procedures • Standard operating procedures • Correct use of equipment • Industry standards and requirements • Manufacturers' specifications
Signage and barriers and third party protection measures	• Physical barriers (parawebbing, bollards, timber or metal barriers) • Warning/direction signs • Personnel to restrict unauthorised access (spotters) • Permits to work
Safe work practices	Hazard identification, risk assessment, risk reduction measures, house keeping and personal protective equipment
State and Territory legislative requirements	• Appropriate OHS and Scaffolding acts and regulations • Australian standards, codes of practice and NOHSC:1006

ELEMENT	PERFORMANCE CRITERIA
	2.4. Rejected components are repaired or sent for repair. 2.5. Scaffolding/equipment is erected to plan and in accordance with acceptable safe work practices, Australian standards, State or Territory legislative requirements and equipment manufacturers' requirements. 2.6. Scaffolding/equipment is checked for safety and operational requirements and faults are identified in accordance with legislative requirements.
3. Inspect, alter and/or repair scaffold/equipment	3.1. Alterations/repairs are confirmed in accordance with safety work practices, Australian standards and equipment manufacturers' requirements. 3.2. Alterations/repairs are inspected for safety and operational requirements. 3.3. Scope of alteration/repair is confirmed and understood. 3.4. Existing scaffold/equipment is inspected for suitability of alterations/repair requirements. 3.5. Materials, equipment and tools required for alteration are determined. 3.6. Work completion is recorded/reported to appropriate authority.
4. Dismantle scaffold/equipment	4.1. Work is undertaken safely and to prescribed procedure. 4.2. Scaffolding/equipment is inspected for damage, corrosion or wear and is noted for consideration in planning for dismantling. 4.3. Scaffolding/equipment is dismantled in accordance with site procedures, State and Territory legislative requirements and critical structural and safety requirements. 4.4. Site is cleaned and cleared of all tools, excess material and debris and left in a safe state.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required skills
Look for evidence that confirms skills in: • levelling and aligning scaffolding • interpreting instructions and legislative requirements • using basic hand tools • assessing risk in relation to complex scaffolding erection • using manual handling techniques • undertaking site clean up and remediation • working safely and confidently at heights
Required knowledge
Look for evidence that confirms knowledge of: • erection and dismantling procedures as set in relevant Australian standards • codes of practice, for example the Scaffolder's Guide, relevant acts and regulations • site specific requirements • safety procedures, safe work practices and procedures • sequence of operations in erecting the scaffolding • types of scaffolding systems • hazards and control measures; electrical, stability, mobile plant issues/requirements; falls protection measures; minimum gap requirements; safe access and egress • deck loadings • use and application of personal protective equipment • scaffolding techniques and equipment • limitations of equipment • materials handling, storage and environmentally friendly waste management

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to erect, maintain and dismantle complex

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	scaffolding/equipment safely and subject to legislative requirements. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with erection, maintenance and dismantling of complex scaffolding or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Scaffolding/equipment	• Prefabricated tower scaffolds, tube and fitting scaffolds as limited by legislative requirements, tube and coupler scaffolds including tube and coupler covered ways and gantries, fall protection devices, catch platforms, bracket scaffolds (tank and formwork), mobile scaffolds, ropes, cantilevered hoists, cantilevered and spurred scaffolds, cantilever crane loading platforms and course-ways, fall protection devices, platforms • Complex scaffolding means Intermediate Scaffolding and above as set out in the legislative requirements in each State and Territory. The major difference between complex and basic scaffolding is the height of the working platform and certain types of scaffolding and configurations • Maintaining scaffolding means ensuring that the scaffolding remains in a safe condition according to manufacturers' specifications and legislative requirements
Hazards	• Chemicals, dangerous or hazardous substances/materials • Movement of equipment, goods, materials, vehicular traffic • Uneven/unstable terrain, overhead service lines, trees, underground services, obstructions, structures, surrounding buildings, facilities, bridges/walkways, lifting equipment
Prescribed procedures may include	• Clarification of instructions either written or from authorised personnel • Site safety policy and procedures • Standard operating procedures • Correct use of equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Industry standards and requirements • Manufacturers' specifications
Signage, barriers and third party protection measures may include	• Physical barriers (parawebbing, bollards, timber or metal) • Warning/direction signs • Personnel to restrict unauthorised access (spotters) • Permits to work
Safe work practices may include	Hazard identification, risk assessment, standard operating procedures, house keeping and personal protective equipment.
State or Territory legislative requirements	• Appropriate OH&S and Scaffolding acts and regulations. • Australian standards and codes of practice and • NOHSC:1006

MEM11003B Coordinate erection/dismantling of complex scaffolding/equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers coordinating the erection, alteration, repair and dismantling of scaffolding/equipment, and inspecting the completed scaffold/equipment.

Application of the Unit

Application of the unit	This unit applies to individuals coordinating a scaffolding team or employed in a supervisory capacity for the erection, maintenance and dismantling of scaffolding and equipment in a workshop, and in factories, manufacturing plants and warehouses. If specific skills are required for the repair of the scaffolding, personnel with appropriate competencies are accessed. Licensing and permit requirements are addressed accordingly. **Band**: **A** **Unit Weight**: **4**

Licensing/Regulatory Information

Refer to Application of the Unit

Pre-Requisites

Prerequisite units		
Path 1	MEM11001C	Erect/dismantle scaffolding and equipment
	MEM11002C	Erect/dismantle complex scaffolding and equipment
	MEM18001C	Use hand tools

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Plan and coordinate erection of scaffold/equipment	1.1. Site plans, scaffolding/equipment designs and drawings to industry practices are interpreted as necessary. 1.2. Work area is inspected to identify hazards and appropriate prevention/control measures are implemented to avoid hazard. 1.3. All work is undertaken safely and to prescribed procedures. 1.4. Erection site is prepared to meet job and safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	requirements. 1.5. Necessary signage and barriers are placed in appropriate position. 1.6. Scaffolding/equipment erection is coordinated in accordance with acceptable safe work practices, Australian standards, State or Territory legislative requirements and equipment manufacturers' requirements. 1.7. Completed scaffolding/equipment is inspected for safety and compliance with design, operational and statutory requirements.
2. Coordinate alterations and repairs of scaffold/equipment	2.1. Scope of alteration/repair is confirmed and understood. 2.2. Existing scaffolding/equipment is inspected and alterations/repairs determined. 2.3. Materials, equipment and tools required for alterations are determined. 2.4. Existing or new load requirements are determined using load tables. 2.5. Alteration/repairs are coordinated in accordance with safety work practices, Australian standards and equipment manufacturers' requirements. 2.6. Alterations/repairs are inspected for safety and operational requirements. 2.7. Work completion is reported to appropriate personnel and recorded.
3. Inspect completed scaffold/equipment	3.1. The critical structural and safety areas of the scaffolding/equipment are inspected for damage, corrosion and wear. 3.2. Scaffolding/equipment and structure is checked against the type of scaffolding/equipment and structure specified in the plan. 3.3. Inspection log is completed. 3.4. Potential safety and design/structural hazards are reported for rectification.
4. Coordinate dismantling of scaffold/equipment	4.1. Work is coordinated safely and to standard operating procedure. 4.2. Scaffolding/equipment is removed from site in accordance with standard operating procedures and critical structural and safety requirements. 4.3. Site clearance is coordinated, and surplus material, equipment, tools and debris are removed and site left

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	in safe and operational state. 4.4. Work completion is reported to appropriate authority.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • levelling and alignment of scaffolding • interpreting instructions and legislative requirements • using basic hand tools • assessing risk • using manual handling techniques • cleaning up and site remediation • time management • determining personnel and equipment requirements • inspecting completed scaffolding with reference to structural integrity and design faults • locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation • planning, sequencing operations • checking and clarifying strategies • working safely and confidently at heights
Required knowledge
Look for evidence that confirms knowledge of: • erection and dismantling procedures as set in the Australian standards • codes of practice, for example the Scaffolder's Guide • site specific requirements • safety procedures • types of scaffolding systems • deck loadings • hazards; electrical, stability, mobile plant issues/requirements; falls protection measures; minimum gap requirements; safe access and egress

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• sequence of operations in erecting and dismantling the scaffolding • design and materials faults such as rust, wear and tear, stress • use and application of personal protective equipment • safe work practices and procedures • scaffolding techniques and equipment • limitations of equipment • materials handling, storage and environmentally friendly waste management

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to coordinate the erection, repair, maintenance and dismantling of all scaffolding applications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with coordination of the erection, repair, maintenance

	and dismantling of all scaffolding applications or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifi-cations, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Scaffolding/equipment	• Tube and fitting scaffolds as limited by legislative requirements • Fall protection devices • Catch platforms • Standing prefabricated tower scaffolds and bracket scaffolds • Mobile scaffolds • Cantilevered hoists • Cantilevered and spurred scaffolds • Platforms and course-ways • Suspended scaffolds

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Cantilevered cranes • Loading platforms • Hung scaffolds Complex scaffolding means Intermediate Scaffolding and above as set out the legislative requirements in each State and Territory. The major difference between the complex and basic scaffolding is the height of the working platform and certain types of scaffolding and configurations
Hazards	• Chemicals, dangerous or hazardous substances/materials • Movement of equipment, goods, materials, vehicular traffic • Uneven/unstable terrain, overhead service lines, trees, underground services, obstructions, structures, surrounding buildings, facilities, bridges/walkways, lifting equipment
Prescribed procedures	• Clarification of instructions either written or from authorised personnel • Site safety policy and procedures • Standard operating procedures • Correct use of equipment • Industry standards and requirements • Manufacturers' specifications
Signage and barriers	• Physical barriers (parawebbing, bollards, timber or metal barriers) • Warning/direction signs • Personnel to restrict unauthorised access (spotters) • Permit signage
Safe work practices	Hazard identification, control measures, risk assessment, standard operating procedures, house keeping and personal protective equipment
State or Territory legislative requirements	• Appropriate OH&S and Scaffolding acts and regulations • Australian standards and codes of practice and • NOHSC:1006

MEM11004B Undertake dogging

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers attaching slings to loads and moving loads using appropriate communication and signalling methods.

Application of the Unit

Application of the unit	This unit applies to the skills used when working with loads, selecting equipment and communicating with a crane driver in a workshop or on site. The scope of work is to demonstrate competence in the application of slinging techniques, selection and inspection of lifting gear, and direction of the crane/hoist operator in the movement of the load including when the load is out of view of the operator. This unit is not intended to apply to machine loading and simple straight lifts where knowledge of codes and signals is not required. **Band**: **A** **Unit Weight**: **4**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Attach lifting gear to loads	1.1. Potential hazards associated with the use of cranes and other load shifting equipment are identified and measures to eliminate or control these hazards are planned. 1.2. Site information is obtained as necessary. 1.3. All work is undertaken safely and to prescribed procedures. 1.4. Load is inspected and best lifting method determined. 1.5. Load shifting equipment is selected appropriate to load. 1.6. Lifting gear is inspected and damaged or worn items are labelled and rejected. 1.7. Where appropriate, safe working loads are calculated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	to Australian standards. 1.8. Lifting gear is attached to load in most appropriate and safe manner and to specifications where required.
2. Move loads	2.1. Load moving is performed to acceptable safe working practices, Australian standards, codes of practice and specifications. 2.2. Lifting gear is connected to load shifting equipment using safe and appropriate techniques. 2.3. Communication and signalling methods are used as appropriate to coordinate the load movement in a safe manner. 2.4. Load is grounded or put down in accordance with prescribed procedure, in a safe and stable manner. 2.5. All lifting gear is detached from load mover and load.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting lifting methods and load shifting equipment appropriate to the task
- attaching loads
- calculating safe working loads
- communicating with related personnel about the lift
- using of basic hand tools relating to lifts
- identifying hazards and assessing risk
- identifying damaged/worn lifting gear
- self management
- team work
- problem solving

Required knowledge

Look for evidence that confirms knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• Australian standards, codes of practice and specifications • lifting methods and lifting gear to suit various loads • dogging signals and communication methods • calculations relevant to lifting procedures • lifting methods • types and applications of load shifting equipment • hazards and control measures associated with dogging • use and application of personal protective equipment • safe work practices and procedures • licensing requirements • permit requirements • site/non-site personnel • manufacturers' specifications • enterprise procedures • workplace communication procedures

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Receive order	1.1. Orders are received and checked for errors. 1.2. Product to be picked is identified.
2. Pick order	2.1. Materials handling equipment appropriate to products is selected and used, if required. 2.2. Products to be picked are located using standard operating procedures. 2.3. Order is picked accurately, either by manual handling or using materials handling equipment. 2.4. Product is handled according to storage and handling requirements identified in standard operating procedures/regulations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Finalise order picking	3.1. Picked order is checked against documentation. 3.2. Picked order is placed in correct area for consolidation. 3.3. Enterprise documentation is completed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading and interpreting routine information on written orders and standard operating procedures. May include simple drawings • using materials handling equipment in a warehouse • identifying dangerous goods • following oral instruction • entering routine and familiar information onto proformas and standard workplace forms
Required knowledge
Look for evidence that confirms knowledge of: • safe manual handling procedures • reasons for selecting materials handling equipment • safe storage and handling procedures for a range of products including dangerous goods • applicable Material Safety Data Sheets • applicable industry standards, national/Australian standards, NOHSC guidelines, State/Territory regulatory codes of practice/standards • use and application of personal protective equipment • safe work practices and procedures • hazards and control measures associated with picking and processing orders

MEM11007B Administer inventory procedures

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers using inventory procedures and requisitioning goods.

Application of the Unit

Application of the unit	The unit applies to the administration of inventory procedures using manual or electric systems to support or maintain stores or inventory systems, for example Just-in-Time or KANBAN systems. Where routine activity within standard operating procedure is undertaken, refer to Unit MEM16006A (Organise and communicate information) or Unit MEM16008A (Interact with computing technology). **Band**: **A** **Unit Weight**: **4**

Licensing/Regulatory Information

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use inventory procedures	1.1. Inventory procedures are applied to standard operational procedures. 1.2. Requisition, purchase, shipping and invoice documentation is used as required to standard operational procedures. 1.3. Inward/outward recording/filing system is accessed and maintained to standard operational procedures. 1.4. Customer orders are maintained to standard operational procedures. 1.5. Returned orders are booked back using standard operational procedures.
2. Requisition goods	2.1. Requisition procedures are applied to standard operational procedures. 2.2. Goods are requisitioned on time. 2.3. All recording is completed and filed correctly in accordance with site procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading, interpreting and following information on requisition, purchase, shipping and invoice documentation, standard operating procedures, charts, lists and other applicable reference documents • accessing and maintaining manual and electronic inventory information • undertaking numerical operations and calculations within the scope of this unit • organising information • recording and filing information • managing time • checking for conformance to specifications • measuring to specified tolerances • entering information on to manual and electronic proformas and standard workplace documents
Required knowledge
Look for evidence that confirms knowledge of: • features and application of inventory systems such as Just-in-Time, KANBAN • inventory procedures • safe work practices and procedures • use and application of personal protective equipment • hazards and control measures associated with administering inventory procedures • measurement techniques, tools and equipment for administering inventory procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	be able to administer inventory procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with inventory procedures or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

MEM11010B Operate mobile load shifting equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers operating mobile load shifting equipment, including moving and placing loads.

Application of the Unit

Application of the unit	This unit applies to the general operation of mobile load shifting equipment, including planning the work, moving and placing loads, and shutting down and securing equipment after operation where knowledge of codes and signals is not required. The unit applies to moving loads in workshops and/or on site. This may include but is not limited to factories, wharfs, ships, warehouses, manufacturing plants, building sites, road construction, demolition sites, quarries and mine sites. If hand tools are required, Unit MEM08001B (Use hand tools) should also be selected. Awareness of licensing requirements - licenses may be required for mobile load shifting equipment in some jurisdictions. **Band**: **A** **Unit Weight**: **4**

Licensing/Regulatory Information

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare to shift loads	1.1. Work area is inspected to identify hazards, and appropriate prevention/control measures are implemented to avoid hazards. 1.2. Routine pre-operational checks are undertaken in accordance with manufacturers' specifications and regulatory safety requirements. 1.3. Attachments and/or equipment are inspected.
2. Check controls and equipment	2.1. Pre-operational and post start-up equipment checks are carried out in accordance with manufacturers' specifications and/or operating manual. 2.2. Defects and damage are reported according to site procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Shift loads	3.1. The most appropriate load shifting device is selected to suit load and shifting requirements. 3.2. Load shifting device is operated within design specifications and safe working load in accordance with standard operating procedures. 3.3. Load is lifted, ensuring balance, vision of operation and protection of load. 3.4. The safe and efficient path of movement is selected and used. 3.5. Path of movement is checked and monitored for obstacles and hazards and safely are maintained.
4. Place loads	4.1. Loads are placed ensuring safety, stability, protection of material and avoidance of hazards on site.
5. Shut down equipment and secure site	5.1. Machinery is parked avoiding equipment hazards. 5.2. Shut-down is conducted in accordance with manufacturers' specification to isolate vehicles. 5.3. Post-operational check is completed in accordance with operational procedures. 5.4. Machinery is parked in accordance with standard operating procedures, avoiding site hazards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • interpreting and following routine information on standard operating procedures. May include simple drawings, tables and figures, written documents • performing routine safety, basic service and maintenance procedures • calculating load masses and safe working loads • selecting appropriate load shifting device • following oral instructions • safely operating load shifting devices and shifting loads • working with others • interpreting communication signals and instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• determining load masses and equipment requirements • determining mass of irregular shaped loads • demonstrating emergency operating procedures • communicating faults, malfunctions and workplace hazards, reports and maintenance of operational records
Required knowledge
Look for evidence that confirms knowledge of: • pre-operational checks • design specifications of load shifting device • load chart • licensing requirements • load protection • safe load placement • operational environment • appropriate permits • hazards and control measures associated with load shifting and equipment • use and application of personal protective equipment • safe work practices and procedures • workplace communication procedures • manufacturers' specifications

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to operate load sifting equipment to move and place loads.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

EVIDENCE GUIDE	
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using load sifting equipment to move and place loads or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
regional contexts) may also be included.	
Pre-operational checks	Battery, water, fuel, hazards warning lights, fluid or gas leaks, braking, movement of booms, visual checks of tyres, emergency devise/alarms, log books, operating motions, evidence of damage, excessive wear and tear, as determined by manufacturers' specifications and standard operating procedures
Attachments and/or equipment	Hooks, electromagnetic hook, buckets, slings, tag lines, buckets, trench, excavating, rock breakers, shackles, lifting lugs, fork arms
Post start-up	• Hazards warning systems, attachments, movements and control functions are smooth • Operating and emergency controls and safety devices are located, identified and tested • Communication signals are confirmed • Defects and damage are reported
Load shifting device	Front end loaders/back hoes, ride on forklifts and pallet trucks, bobcats, vehicle loading crane
Safe working load	Weight of load is assessed to ensure compliance with equipment load plate specifications
Standard operating procedures	Industry standards, production schedules, material safety data sheets, work notes and plans, product labels, manufacturers' specifications, operator manuals, enterprise policies and procedures, supervisors' oral and written instructions, current State/Territory occupational health and safety legislation, standards and codes of practice
Obstacles and hazards	• Overhead cables, personnel, obstacles (fixed and moveable), trenches, pits, uneven terrain, trees, underground services • Exposure to chemicals, dangerous or hazardous substances • Movements of equipment, goods, materials and vehicular traffic
Shut-down	• Post-operational equipment checks, motion locks and brakes are applied • Lifting equipment is checked • Defective equipment is identified, segregated

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Lift materials manually	1.1. Material weight is determined correctly utilising most appropriate technique, and risks associated with lifting are assessed. 1.2. Lifting techniques are undertaken to National Occupational Health and Safety Commission (NOHSC) and standard operating procedures. Types of movement, methods, storage, height and position are considered.
2. Move/shift materials manually	2.1. Appropriate equipment is selected where required. 2.2. Material is placed safely and securely on moving equipment. 2.3. Material is relocated ensuring safety of personnel and security of material. 2.4. Material is unloaded from moving equipment and placed in a safe and secure manner.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • identifying relevant standards and lifting techniques • assessing weight of material • selecting lifting equipment • working and communicating in teams • assessing risks • planning • reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings • following oral instructions
Required knowledge
Look for evidence that confirms knowledge of: • manual handling techniques • hazards of incorrect procedures • NOHSC standards for manual handling • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to move loads manually using appropriate aids.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Monitor warehouse record keeping processes	1.1. Monitoring procedures are developed for requisition, purchase, shipping and invoice documentation. 1.2. Discrepancy reporting procedures are established for warehouse and other personnel in accordance with standard operating procedures. 1.3. Audit and archive procedures are followed according to standard operating procedures.
2. Supervise production of inventory system reports	2.1. Regular inventory reports are prepared in accordance with standard operating procedures. 2.2. Special stock level and other inventory reports are prepared as required. 2.3. Adjustments to inventory reporting procedures are made to meet internal and external customer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	requirements.
3. Analyse inventory reports	3.1. Reconciliation of inventory records against production or purchase of sales records is undertaken in accordance with standard operating procedures. 3.2. Major trends not requiring sophisticated statistical analysis are identified. 3.3. Inventory system relationship to manufacturing process is understood.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • producing, interpreting and analysing information on requisition, purchase, sales, shipping and invoice documentation, inventory records/reports, discrepancy reports, lists and other applicable reference documents • accessing/managing manual and electronic information • undertaking numerical operations and calculations • organising and analysing inventory information • communicating with staff about systems • monitoring warehouse documentation • reconciling inventory records • developing inventory monitoring/discrepancy procedure
Required knowledge
Look for evidence that confirms knowledge of: • inventory systems for example JIT, KANBAN, MRP2 • quality procedures • monitoring and discrepancy processes and procedures • warehouse organisation principles • storage of hazardous materials • auditing procedures • safe work practices and procedures • hazards and control measures associated with managing warehouse inventory

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
systems • relationship of manufacturing system to inventory process • techniques for developing inventory monitoring and discrepancy procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to manage a warehouse inventory system. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. 	in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with ordering materials or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan stocktake	1.1. Inventory lists are prepared and distributed. 1.2. Warehouse and/or production areas are allocated to each individual or team assisting in stocktake.
2. Brief participants in stocktake	2.1. Clear directions and appropriate documentation and equipment are provided to each individual or team participating in stocktake.
3. Generate stocktake reports	3.1. Written or computer reports are collected from individuals or teams on stock counts. 3.2. Inventory data is confirmed to match stock levels. 3.3. Stock discrepancy report is prepared and distributed according to standard operating procedure.
4. Adjust inventory documentation	4.1. Inventory documentation is reconciled to match physical stock in accordance with regulatory and operating procedures. 4.2. Stocktake information is reconciled with audit requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • preparing inventory lists and instructions on procedures to be followed • entering inventory information onto manual and electronic proformas and standard workplace forms • analysing and reporting results of stocktakes by manual and electronic means • performing calculations related to reconciling stocktake records • using communication skills to effectively instruct/direct stocktake participants
Required knowledge
Look for evidence that confirms knowledge of: • relevant inventory systems and procedures • recording systems and procedures • analysis and reporting methods/procedures • audit processes • safe work practices and procedures • hazards and control measures associated with organising and leading stocktakes

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to organise and lead a stocktake. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency

MEM11021B Perform advanced operation of load shifting equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers determining lifting and loading requirements, working within areas of restricted movement or conditions of restricted visibility, identifying loads that need special care, and operating forklifts in special traffic conditions.

Application of the Unit

Application of the unit	This unit applies to advanced forklift and load shifting skills above those required for general operation. To be credited with this unit it is expected that an employee would be competent in situations indicated by all elements and performance criteria. This unit is intended to cover load shifting applications where special-purpose equipment/accessories requiring advanced operational skills are required. This would include heavy, out of balance, awkward and irregular shaped loads traversing over rough, broken or uneven surfaces, high lift situations, extremes of climate. Awareness of licensing requirements: Licenses may be required for load shifting equipment in some jurisdictions **Band**: **A** **Unit Weight**: **2**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine lifting and loading requirements	1.1. Load is identified and checked against safe working load and final position/location and/or relevant specifications or regulations. 1.2. Special handling requirements of load are identified, if applicable. 1.3. Load is lifted correctly and placed in final position/location to achieve specified balance of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	load.
2. Work in areas of restricted movement or conditions of restricted visibility	2.1. Load is collected and manoeuvred without damage to load or collision with obstacles according to standard operating procedures.
3. Identify and carry loads that require special care	3.1. Loads requiring special care are identified. 3.2. Loads are carried in accordance with special requirements of product according to standard operating procedures and/or regulations.
4. Operate forklifts in special traffic conditions	4.1. Forklifts are operated in areas of heavy traffic. 4.2. Forklifts are operated over difficult or uneven surfaces. 4.3. Forklifts are operated in areas shared with the general public, as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading/interpreting specifications, regulations, load charts and standard operating procedures, including simple drawings
- selecting appropriate load shifting device
- identifying safe working loads
- identifying/managing special conditions and equipment
- operating in a complex mobile plant environment
- communicating with personnel on movement/location
- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

- pre-operational checks
- licensing requirements and appropriate permits
- load protection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• operational environment • methods and techniques for loads requiring special care • hazards and control measures associated with this unit • use and application of personal protective equipment • safe work practices and procedures

MEM11022B Operate fixed/moveable load shifting equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers conducting routine operation and safety checks of fixed/moveable load shifting equipment, picking up loads, shifting and placing loads.

Application of the Unit

Application of the unit	This unit applies to the operation of fixed/moveable load shifting equipment within the limits of manufacturers' recommended procedures and safe working loads. It applies to load shifting/lifting activities where knowledge of codes and signals is not required. When using dedicated lifting equipment or devices where decisions regarding loads and methods of attachment are not required, Unit MEM11011B (Undertake manual handling) should be selected. Awareness of licensing requirements - licenses may be required for fixed/moveable load shifting equipment in some jurisdictions. **Band**: **A** **Unit Weight**: **4**

ELEMENT	PERFORMANCE CRITERIA
	operation, safety of personnel and protection of load.
3. Shift loads	3.1. Where required, load is moved at an appropriate and safe speed using a safe and efficient path. 3.2. Path of movement is monitored for obstacles and hazards during shifting process.
4. Place loads	4.1. Loads are lowered at an appropriate and safe rate. 4.2. Loads are placed to ensure stability, protection of material and avoidance of hazards on site.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on instructions, specifications, load charts and standard operating procedures. May include simple drawings
- selecting and operating appropriate load shifting device
- communicating with others about movement of equipment
- checking and clarifying task-related information
- identifying the safe working load in relation to the capacity of the crane and lifting gear
- following oral instruction
- safely lifting, moving and placing loads

Required knowledge

Look for evidence that confirms knowledge of:

- operational principles of fixed/moveable load shifting equipment
- pre-operational checks
- loads and lifting attachments
- load chart and safe working loads (SWL)
- awareness of licensing requirements
- load protection
- operational environment
- appropriate permits

MEM12002B Perform electrical/electronic measurement

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers selecting and using basic electro-measuring devices to check variables and the ability to maintain the devices.

Application of the Unit

Application of the unit	This unit applies to the measurement of voltage, current, resistance, power, frequency etc. on a.c. and d.c. circuits up to 1000 volts, using appropriate measuring devices and for a range of general applications. Measurement skills for specific applications and context are covered by other units. For simple measurement tasks such as reading of fixed devices, testing continuity, and tasks requiring the use of devices mounted in measuring jigs etc. Unit MEM12023A (Perform engineering measurements) and/or Unit MEM12001B (Use comparison and basic measuring devices) should be considered. If electrical/electronic measuring devices require the connection or disconnection of circuitry, the appropriate units should also be selected. In circumstances where the application of this unit or where legislation dictates, relevant units covering first aid and/or emergency procedures should also be considered. **Band**: **A** **Unit Weight**: **2**

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Use electro-measuring devices to measure variables	1.1. Appropriate device or equipment and setting is selected to obtain required measurement. 1.2. Appropriate connections are made to obtain required measurement according to standard operating procedure. 1.3. Readings are obtained and interpreted correctly and conversion is made where necessary into the required units of measurement.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Maintain electro devices	2.1. Routine care and storage of devices is undertaken to manufacturer's specifications or standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- setting and using electro-measuring devices
- obtaining and interpreting specified electrical measurements
- selecting appropriate measuring devices
- performing arithmetic operations required to convert measurements into appropriate units of measurement
- maintaining and storing electro-measuring devices
- reading and interpreting information on standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

- terminology and concepts relating to electrical/electronic measurement
- the selection of different measuring devices for particular applications within the scope of this unit
- specifications of selected electro-measuring devices
- the application of the settings on each electro-measuring device
- the procedures for obtaining electrical/electronic measurements
- procedures for connecting electro-measuring devices to circuitry
- the correct scale for each setting on the electro-measuring device
- the scale factor to be applied to readings taken from the electro-measuring device
- the units applying to electrical and electronic measurements
- maintenance and storage requirements for a range of electro-measuring devices
- that devices can impact on the circuit condition
- relevant State/Territory or Commonwealth legislative and regulatory requirements, industry standards, NOHSC guidelines and code of practice
- hazards and control measures associated with electrical/electronic measurement
- safe work practices and procedures

Unit Descriptor

Unit descriptor	This unit covers performing measurement skills requiring straightforward use of mechanical measuring devices and associated calculations.

Application of the Unit

Application of the unit	This unit covers straightforward measurement using devices which incorporate visual indications representing units of measurement. It applies to the use of measuring devices in a range of manufacturing, engineering and related environments. It includes, where required, adjustment of measuring devices through simple means and typically includes zeroing or scale adjustment. Measurements may be expressed in metric or imperial units. All measurements are undertaken to standard operating procedures. Electrical/electronic devices used are those not requiring the connection or disconnection of circuitry. Work is undertaken autonomously or part of team environment, in the field, work station or workshops. For straightforward use of comparison or pre-set measuring devices, Unit MEM12001B (Use comparison and basic measuring devices) should be accessed. **Band**: **A** **Unit Weight**: **5**

ELEMENT	PERFORMANCE CRITERIA
	2.3. Dimensions are determined or verified using basic calculations, where required.
3. Maintain measuring devices	3.1. Routine care and storage of devices is undertaken to manufacturers' specifications or standard operating procedures. 3.2. Routine adjustments to devices are made and checked.
4. Communicate measurements as required	4.1. Measurements are accurately recorded, where required. 4.2. Freehand sketch which depicts required information is prepared, as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting the appropriate measuring device for given measuring tasks
- using appropriate measuring technique
- reading all measurements taken accurately to the finest graduation of the selected measuring device
- handling and storing measuring devices in accordance with manufacturers' specifications or standard operating procedures
- verifying all measuring devices before use
- making, where appropriate, routine adjustments to measuring devices
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations involving addition, subtraction, multiplication, division, fractions and decimals within the scope of this unit
- preparing drawings as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge
Look for evidence that confirms knowledge of: • correct application of a range of measuring devices • correct and appropriate measuring technique for a range of measuring devices • addition, subtraction, multiplication, division, fractions, decimals to the scope required by this unit • procedures for handling and storing a range of measuring devices • procedures for adjusting and zeroing a range of measuring devices • methods of communicating measurements by drawings, as required • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform engineering measurements.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	materials handling, recording and reporting associated with performing engineering measurements or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Specifications	Drawings, sketches, job instructions, schematics, diagrams, technical manuals
Range of measuring devices	Protractors, combination squares, set squares, dial indicators, thermometers, tapes, rules, micrometers, vernier-scaled measuring equipment
Basic calculations	Calculations needed to assist in determining measurements where a reading of the graduated device is not sufficient, for example subtracting one measurement from another to give a third

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	measurement. Examples of calculations needed are addition, subtraction, multiplication, division, fractions and decimals. Calculations may be made using a calculator
Routine adjustments	Validating the device using simple zeroing or scale adjustment
Measurements	Measuring length, squareness, flatness, angle, roundness, clearances or any other measurements that can be read off analog, digital or other measuring device
Information	Dimensions, instructions, base line or datum points

MEM12024A Perform computations

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers estimating approximate answers to arithmetical problems, carrying out basic calculations involving percentages and proportions, and determining simple ratios and averages. The unit includes producing and interpreting simple charts and graphs.

Application of the Unit

Application of the unit	This unit applies in manufacturing, engineering or related environments. It includes the application of the four rules of algebraic expressions, extracting information from drawings, diagrams, graphs and charts and producing simple charts and graphs. Data may be derived from readings taken or may be computer generated. Applications can include computations associated with pressure, volume, temperature, heat, speed, power, elasticity, density, mass, force etc. Calculations may be performed using pen and paper or on a calculator. **Band**: **A** **Unit Weight**: **3**

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine work requirement	1.1. Required outcomes are established from job instructions. 1.2. Data is obtained from relevant sources and interpreted correctly. 1.3. Required calculation method is determined to suit the application, including selection of relevant arithmetic operations and/or formulae. 1.4. Expected results are estimated, including rounding off, as appropriate.
2. Perform calculations	2.1. Calculation method is applied correctly. 2.2. Correct answer is obtained. 2.3. Answer is checked against estimation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Produce charts and graphs from given information	3.1. Data is transposed accurately to produce charts or graphs. 3.2. Charts or graphs accurately reflect data on which they are based.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing calculations involving whole numbers using all four basic rules
- performing calculations involving length, perimeter, area and volume
- checking calculated answers for accuracy
- rounding off estimated answers
- expressing information presented in fractional or decimal format as a percentage
- selecting appropriate formulae for the given application
- substituting the correct values for each term in the relevant formulae
- using appropriate mathematical operations
- performing calculations involving ratios or proportions
- determining required information from appropriate charts or graphs
- producing simple charts or graphs from given information or observations made
- selecting appropriate scales and using them in the production of charts and graphs
- marking appropriate limits clearly on the graph or chart
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- formula applicable to the determination of perimeter, area and volume of simple

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
geometric shapes • techniques for estimating approximate answers • reasons for using dimensions with the same units when calculating length, perimeter, area and volume • concepts of perimeter, area and volume • procedures for rounding off figures when estimating approximate answers • mixed numbers, decimals, fractions and whole numbers • concept of percentage • procedures to be followed in converting a decimal to a percentage • procedures for carrying out calculations involving fractions and using each of the four basic rules • procedures to be followed on converting a fraction to a percentage • sources of appropriate formulae • reasons for ensuring that the units of each term are consistent with the formulae selected • procedures for converting given units to those required for use in formulae • concepts of ratio and proportion • given ratios and proportions can be expressed in terms of whole numbers, fractions and decimal fractions • scales applicable to the axes of the graphs or charts • three types of charts and/or graphs used in the individual's field of work • where appropriate, upper and lower limits of acceptability applicable to data entered on a graph or chart • where appropriate, the trends indicated by the slope or gradient of a graph • where appropriate, the action to be taken when given trends occur or set limits are approached on graphs or charts • procedures for drawing 'lines of best fit' • the trends indicated by the graphs or charts drawn • hazards and control measures associated with performing computations, including housekeeping • safe work practices and procedures

MEM13001B Perform emergency first aid

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing basic emergency first aid, EAR (expired air resuscitation) and CPR (cardiopulmonary resuscitation).

Application of the Unit

Application of the unit	This unit applies to administration of basic emergency first aid treatment and the management of life threatening situations where an unconscious person requires expired air resuscitation (EAR) and cardiopulmonary resuscitation (CPR). This unit does not meet all of the requirements expected of designated First Aid Officers. The competencies required for situations involving isolation of persons from hazardous electrical situations are covered in Unit MEM18049C (Disconnect/reconnect fixed wired equipment up to 1000 volts a.c. and 1500 volts d.c.) and Unit MEM10003B (Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.). **Band**: **A** **Unit Weight**: **1**

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Perform emergency first aid	1.1. Correct procedures for EAR (expired air resuscitation) and CPR (cardiopulmonary resuscitation) are demonstrated on a mannequin. 1.2. First aid treatment of injuries is carried out correctly. 1.3. Details of first aid administered are accurately recorded. 1.4. Understanding of relevant regulatory and legislative requirements is demonstrated.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and sequencing operations
- checking and clarifying task-related information
- performing EAR (expired air resuscitation) and CPR (cardiopulmonary resuscitation) on a mannequin
- simulated first aid treatment for the full range of injuries covered by the range statement
- reading, interpreting and following emergency first aid procedures and related documents
- entering information onto proformas and other relevant documents
- communicating effectively with injured persons, appropriate personnel and authorities

Required knowledge

Look for evidence that confirms knowledge of:

- applicable regulatory and legislative requirements
- use and application of any applicable personal protective equipment
- hazards and control measures associated with performing emergency first aid, including housekeeping
- instances where EAR and CPR should be performed
- procedures for preparing a person for the administration of EAR and CPR
- procedures for performing EAR and CPR on a child and an adult
- dangers and precautions to be taken when administering EAR and CPR
- emergency first aid procedures for injuries covered by the scope of this unit
- details to be recorded of first aid administered
- procedures and reasons for recording first aid administered
- relevant regulatory and legislative requirements with respect to emergency first aid
- the impact of regulatory/legislative requirements on the individual and others
- safe work practices and procedures

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply principles of OHS in a workplace	1.1. Basic OHS principles of hazard identification, risk assessment and control are described. 1.2. Understanding of OHS legislation as it is applied in the workplace is demonstrated.
2. Carry out safety audit	2.1. Regular safety audits in the area of responsibility are carried out in accordance with appropriate OHS standards.
3. Identify health and safety improvements	3.1. OHS issues and suggestions for improvements are made to OHS Representatives and Committees as appropriate. 3.2. On the basis of safety audits or as required, hazards are identified and recommendations for their control are made. 3.3. Contributions to safety improvements are made using standard operating procedures. 3.4. OHS training needs are identified.
4. Follow requirements of enterprise OHS program	4.1. Requirements of the OHS program are satisfied within the area of responsibility. This includes for example, accident investigation and emergency procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing safety audits
- making safety improvements
- initiating OHS training
- meeting requirements of the OHS program and procedures in the individual's area(s) of responsibility
- reading and interpreting audit and safety-related documentation
- following audit and OHS procedures
- entering information onto audit reports and other relevant documents
- communicating effectively about OHS activities with workplace personnel

Required knowledge

Look for evidence that confirms knowledge of:

- principles of hazard identification, assessment and control as applied to the workplace
- procedures for hazard identification, assessment and control
- application of OHS legislation in the workplace
- procedures for conducting safety audits
- safety standards applicable to the individual's area(s) of responsibility
- the frequency at which safety audits should be conducted
- procedures for implementing OHS improvements
- the means of rectifying given or identified hazards
- reasons for selecting the chosen means of rectifying the hazard
- the authority to whom recommended OHS improvements are to be reported
- procedures for making safety improvements
- requirement for OHS training in the individual's area(s) of responsibility
- objectives of OHS training
- procedures for initiating OHS training
- accident investigation procedures
- emergency OHS procedures
- the role of the individual in carrying out accident investigations and emergency procedures

Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	

Risk assessment	Risk assessment is a process that involves:
	• analysing the risk to identify influencing factors and the range of potential consequences
	• assessing:
	  • the effectiveness of existing controls
	  • the likelihood of each consequence considering exposure and hazard level
	• and combining these in some way to obtain a level of risk

MEM13003B Work safely with industrial chemicals and materials

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers using personal protective equipment (PPEs), identifying the particular hazards and emergency procedures, and observing safe working practices in that environment.

Application of the Unit

Application of the unit	This unit may be applied in a workplace in which materials and chemicals which are subject to codes and regulations are stored and used, for example, chemicals, solvents, dangerous materials, acids, noxious waste products etc. Evidence of competency is to encompass the satisfactory application of current State/Territory OHS legislation, standards and codes of practice, and the hierarchy of hazard control measures with elimination, substitution, isolation and engineering control measures being selected before safe work practices and PPEs. This unit describes the competencies which are beyond those safety requirements normally applied in the workplace as described in Unit MEM13014A (Apply principles of occupational health and safety in the work environment) or specifically described in individual units such as welding. **Band**: **A** **Unit Weight**: **2**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Use personal protective equipment	1.1. Correct and appropriate safety clothing including personal protective equipment is selected and used correctly based on information in relevant material safety data sheet (MSDS).
2. Identify emergency procedures	2.1. Emergency procedures and plan relevant to the particular work environment are documented, understood and demonstrated as laid down in approved safety instructions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Observe safe working practices	3.1. Hazardous areas and materials are identified and special handling procedures are identified and understood. 3.2. Permits to work (if necessary) are obtained. 3.3. All equipment and hazardous materials are used in accordance with relevant OHS legislation, manufacturers' instructions and standard operating procedures. 3.4. All site-specific safety policies, safety signs, symbols and labels are correctly identified and understood. 3.5. Material safety data sheets are understood and applied. 3.6. Safe manual handling procedures (including equipment) are used. 3.7. Decanted chemicals and storage is to State/Territory dangerous goods and OHS legislation and requirements. 3.8. Housekeeping duties are performed according to standard operating procedures to maintain a safe working environment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • undertaking risk assessment • communicating with others • performing proper manual handling techniques • interpreting safety signage, labelling and placarding
Required knowledge
Look for evidence that confirms knowledge of: • dangerous goods classification and labelling/placarding • testing, use and maintenance of PPE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• inherent hazardous properties of the chemicals to be used • interpretation of the relevant MSDS • basic fire fighting procedures • site-specific emergency plan procedures • chemical spill confinement procedures • dangerous occurrence (near miss) reporting procedures • hierarchy of control

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to work safely and efficiently with various chemicals.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with working safely with industrial chemicals and materials or other units requiring the exercise of the skills and knowledge covered by this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Personal protective equipment	Personal protective may include appropriate: • goggles/face shields • respirators • air supplied or self-contained helmets • safety boots, gloves and appropriate clothes/garments
Safe working practices	• Environment is inspected • Hazards (and chemical reactive hazards) are assessed and controlled using hierarchy of hazard control • Properly maintained PPE is available • Emergency management plan is documented/understood

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Work to be undertaken in safe 'thermal' environments and all possible ignition sources are to be identified and controlled
Storage	All storage containers (minor quantities and in consumer packages) are suitable for chemical exposure and are properly labelled and/or placarded. Chemical manifests are updated at completion of work activity
State or Territory legislative requirements	Appropriate OHS, dangerous goods acts and regulations, Australian standards, Australian Code for the Transport of Dangerous Goods by Road and Rail (ADGC), NOHSC codes of practice

ELEMENT	PERFORMANCE CRITERIA
	assessed and addressed.
2. Assess risks in the work site or section	2.1. Hazards in the work site or section are identified. 2.2. Risks are assessed.
3. Apply risk management strategies for work section	3.1. Appropriate risk control measures are implemented. 3.2. Control measures are assessed for effectiveness in controlling the risk. 3.3. Hazards are monitored. 3.4. The need for expert advice to manage risks is determined. 3.5. Accident investigations are conducted as required to determine cause.
4. Supervise others in the implementation of OHS procedures in the work site or section	4.1. Communication on OHS matters is supervised. 4.2. OHS training needs are identified for the work section. 4.3. Workplace OHS training and communication activity is coordinated, evaluated and documented according to legislative requirements and organisational procedure. 4.4. Statutory OHS training requirements are coordinated and documented according to legislative requirements and organisational procedure.
5. Maintain records and statistics	5.1. Accident/incident records are maintained. 5.2. Records are analysed for trends, and particular problem areas are identified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • keeping records/minutes of discussions with consultative forums on OHS matters • scheduling meetings with the relevant consultative forums to discuss OHS matters • participating in consultative forums • communicating with staff regarding OHS matters

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- identifying OHS training needs in the workplace
- supervising OHS training implementation
- interpreting and following information on OHS legislation, workplace practices and procedures, written job instructions, specifications, standard operating procedures, charts, lists, and other applicable reference documents
- keeping records for monitoring the effectiveness of work practices and procedures with respect to the safety of the working environment
- investigating accidents in accordance with standard workplace procedures
- obtaining results of safety audits in accordance with workplace procedures
- obtaining expertise external to the workplace to assist in the identification and control of workplace hazards
- maintaining accident and incident records in accordance with standard workplace procedures

Required knowledge

Look for evidence that confirms knowledge of:

- legislative requirements for the workplace and supervisory responsibilities
- procedures for initiating discussions with the relevant consultative forums
- relevant consultative forums
- the frequency of discussions to be held with the relevant consultative forums
- organisational OHS communication requirements
- OHS training practices, procedures and options available
- work practices and procedures developed in conjunction with the relevant consultative forums
- the effect of work practices and procedures on the safety of the working environment
- procedures for monitoring the success of the work practices and procedures developed
- variables to be recorded during the monitoring process
- sources of information on occupational health and safety issues
- procedures for conducting accident investigations
- the hierarchy of hazard control measures
- reasons for progressively implementing the hierarchy of control of hazards
- the likely causes of accidents investigated
- principles of hazard control
- the mechanisms for controlling hazards
- the areas of occupational health and safety for which the workplace lacks acknowledged expertise
- procedures for accessing expertise external to the workplace
- procedures for recording accidents and incidents
- the probable causes of trends or problem areas

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• hazards and control measures relevant for the work site or section, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to supervise occupational health and safety in an industrial work environment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with supervising occupational health and safety in an industrial work environment or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Consultation mechanisms	OHS committees, OHS representation, toolbox meetings, safety meetings, record keeping systems
Personal Protective Equipment	Safety boots, gloves, goggles, glasses, ear muffs, hard hats, clothing, respirators or masks, reflective vests
Safety and housekeeping practices and procedures	Emergency/evacuation procedures, tool and equipment cleaning, maintenance and storage procedures, safety reporting and documentation procedures, barricades and signage, procedures for managing hazardous chemicals and materials
Hazards	Risks associated with tools and equipment, lighting, gases, electricity and water, toxic and hazardous substances, flammable materials and fire hazards, lifting practices, working in confined spaces, working at height, spillage, waste and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	debris, noise, mobile plants such as forklifts and front end loaders, moving parts of machinery, gravity (falls from heights), dusts
Risks	The chance of something happening that will result in injury or damage. It is measured in terms of consequences and likelihood
Risk control measures	Elimination of the hazard, substitution with a lesser hazard, isolation of personnel from the hazard, engineering controls, administrative controls (e.g. procedures and training), personal protective equipment
Communication	Signage and labelling, hazard identification notices, access to policies, procedures, SOPs, etc., meeting notices, documentation procedures, reporting procedures, meetings
Supervised	Coordinated, implemented, referred, delegated, facilitated, monitored, documented
Training needs	Induction programs, technical training, coaching and mentoring, supervision, specialist training, on site/off site, involvement of training specialists, organisational training requirements, referral to training personnel

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify material requirements	1.1. Materials required are identified from appropriate documentation including type and quality. 1.2. Quantities required are estimated in accordance with standard operating procedures.
2. Schedule material delivery	2.1. Delivery requirements and dates are determined from production plans or job sequencing requirements. 2.2. Material supply is followed up and problems reported. 2.3. Material orders are processed in accordance with established organisational practice and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Review process specifications	1.1. Supporting engineering and production data is examined, where required. 1.2. The production processes to be used are determined. 1.3. Specifications are obtained and examined.
2. Determine production sequence	2.1. Steps required for the process are identified and flow charts are produced where required in accordance with standard operating procedures. 2.2. Material and parts lists are prepared in accordance with standard operating procedures. 2.3. Tooling and/or equipment requirements are documented in accordance with standard operating procedures. 2.4. Quality assurance steps and specifications are identified and incorporated into process steps. 2.5. Process steps are documented and clearly represented in accordance with standard operating procedures.

MEM14004A Plan to undertake a routine task

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers a person planning their own work where tasks involve one or more steps or functions and are carried out routinely on a regular basis. It includes the concepts of following routine instructions, specifications and requirements.

Application of the Unit

Application of the unit	This unit covers essential skill and knowledge that underpin all units within the Metal and Engineering Training Package. Instructions, such as standard operation sheets, are provided. Clear specifications and requirements, including quality and time allowances are also provided. The task and associated planning activity are carried out under supervision. The plan may or may not be documented. The task involves one or more steps or functions carried out routinely on a regular basis. The planning activity does not require judgment to be made in relation to priorities or time limitations. **Band**: **A** **Unit Weight**: There is no unit weighting for this unit.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify task requirements	1.1. Instructions and procedures are obtained, understood and where necessary clarified. 1.2. Relevant specifications for task outcomes are obtained, understood and where necessary clarified. 1.3. Task outcomes are identified. 1.4. Task requirements such as completion time and quality measures are identified.
2. Plan steps required to complete task	2.1. Based on instructions and specifications provided, the individual steps or activities required to undertake the task are understood and where necessary clarified. 2.2. Sequence of activities is identified.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Plan is checked to ensure it complies with specifications and task requirements.
3. Review plan	3.1. Effectiveness of plan is reviewed against specifications and task requirements. 3.2. If necessary, plan is revised to better meet specifications and task requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • obtaining instructions for tasks from correct source of information (job card, supervisor, work colleagues and others) • clarifying tasks and required outcomes with appropriate personnel where necessary • identifying relevant specifications from documentation, job cards, or other information source • preparing plans for tasks • sequencing activities • comparing planned steps against specifications and task requirements • communicating and interpreting information appropriate to the scope of this unit
Required knowledge
Look for evidence that confirms knowledge of: • correct sources of information for a particular task • procedures for obtaining instructions and clarification • specifications for the task • hazards and established control measures associated with the routine task, including housekeeping • safe work practices and procedures

MEM14005A Plan a complete activity

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers planning activities which, whilst following established procedures, may require a response and modification of procedures or choice of different procedures to deal with unforeseen developments.

Application of the Unit

Application of the unit	The unit covers the development of plans for individual complete activities and may include the use of planning techniques and tools. The activity may require prioritising of the individual plan components to facilitate the meeting of the objectives. Examples of activities to be planned may include: fault diagnosis and repair of an item of equipment, a modification of an established sequence of assembly tasks. However the activities may require a response and modification of procedures or a choice of different procedures to deal with unforeseen developments. Activities are normally performed by the individual undertaking the planned activity, and associated reports are completed as required. Planning will be related to familiar work tasks and environments and be performed to standard operating procedures. Where more extensive reporting requiring research and forming conclusions is required, refer to Unit 16.14 (Report technical information). **Band**: **A** **Unit Weight**: **4**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify activity requirements	1.1. Activity outcomes and objectives are identified and clarified with appropriate persons. 1.2. Activity requirements, including resources, overall timeframe, quality requirements and criteria for acceptable completion are identified and clarified. 1.3. Relevant specifications and procedures are obtained

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	and clarified.
2. Plan process to complete activity	2.1. The individual components of the activity are identified and prioritised. 2.2. Planning tools and techniques are selected and used according to the needs of the activity. 2.3. The plan is checked for accuracy and conformance to instructions and requirements.
3. Modify plan	3.1. The plan is referred to and modified as necessary to overcome unforeseen difficulties or developments that occur as work progresses. 3.2. The results of the activity are reviewed against the plan, and possible future improvements to plan are identified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining, reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawing and other applicable reference documents
- preparing a plan including sequential steps that will enable the activity to be completed
- modifying the plan where appropriate, to take account of difficulties or developments that occur while following the prepared plan
- planning and sequencing activities
- checking and clarifying task-related information
- checking for conformance to specifications
- using numerical operations, geometry and calculations/formulae within the scope of this unit
- using planning techniques such as scheduling, time management, brainstorming, setting of goals and defined outcomes, prioritising, review and evaluation strategies

Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Look for evidence that confirms knowledge of: • tasks to be performed • person/s who can clarify the objectives, requirements and specifications • specifications relevant to the tasks to be performed • outcomes to be achieved • timeframe for activity completion • quality requirements of the product or service • priority of each step in the plan • reasons for the relative priority of each step • modifications to the plan to overcome a range of unforeseen situations • hazards and control measures associated with planning the complete activity, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to plan a complete activity.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with planning a complete activity or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	

Requirements	• Formal or informal information about the task required, such as:
	  • timeframe
	  • quality requirements
	  • outcome and performance requirements
	  • job history
	  • checks and tests

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• special reporting requirements • tools and equipment • materials and parts • reference documents • Requirements and instructions are supplied verbally or in written form such as on job sheets. Instructions are carried out in accordance with established procedures
Specifications	Technical task related information conveyed verbally or as found in: • task lists • instructions • manufacturer manuals • diagrams and schematics • technical drawings and sketches • parts lists • computer records
Planning techniques and tools	Scheduling, time management, brainstorming, setting goals and defined outcomes, prioritising, review and evaluation strategies

MEM15001B Perform basic statistical quality control

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers taking samples and applying a statistical process to monitor production.

Application of the Unit

Application of the unit	This unit applies to the collation and interpretation of statistical data in the context of statistical quality control, for example, tally, run or control charts. Uncontrolled variations are reported to appropriate authority. When the production and interpretation of charts and graphs not dependent on knowledge and understanding of the implications for quality are required, Unit MEM12024A (Perform computations) should be accessed. **Band**: **A** **Unit Weight**: **2**

Licensing/Regulatory Information

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Take samples	1.1. Difference between population and sample is understood and various sampling schemes are applied in accordance with standard operating procedures.
2. Apply statistical process to monitor production	2.1. Concept of variation in terms of average and spread is understood. Data is used to produce relevant statistical information. 2.2. Data is interpreted accurately and information is presented to appropriate authority according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required skills
Look for evidence that confirms skills in: • reading, interpreting and following information on written job instructions, standard operating procedures, charts, lists, drawings and other applicable reference documents • applying statistical process control procedures in accordance with instructions to a given production process • obtaining data from samples including average, range and random or assignable causes • producing tally, run or control charts from sampling data • reporting information from sampling data • checking and clarifying task-related information • completing proformas and standard workplace forms
Required knowledge
Look for evidence that confirms knowledge of: • the difference between population and sample, and the concept of variation in terms of average and range, random and assignable causes • numerical operations and statistical calculations/formulae within the scope of this unit • statistical process control procedures, which may include Six Sigma etc. and the sampling procedures to be followed • the types of charts that can be produced to assist monitoring of products including run charts, tally charts, histograms, control charts • procedures for reporting sample data information • use and application of personal protective equipment • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	be able to perform basic statistical quality control.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic statistical quality control or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Work within a quality system	1.1. Instructions and procedures are followed and duties are performed in accordance with requirements of quality improvement system. 1.2. Conformance to specifications is ensured. 1.3. Defects are detected and reported according to standard operating procedures. 1.4. Performance of operation or quality of product or service is monitored to ensure customer satisfaction.
2. Engage in quality improvement	2.1. Current performance is assessed. 2.2. Established performance measures are identified. 2.3. Specifications and standard operating procedures are identified. 2.4. Defects are detected and reported according to standard operating procedures. 2.5. Process improvement procedures are participated in. 2.6. The improvement of internal/external customer/supplier relationships is participated in. 2.7. Performance of operation or quality of product or service is monitored to ensure customer satisfaction.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job sheets, instructions, standard operating procedures and drawings
- checking and clarifying task-related information
- entering information onto workplace documents
- checking for conformance to specifications
- identifying duties of the individual within the quality improvement system
- identifying customers' requirements with respect to the operation or quality of the product or service
- reporting where appropriate, defects detected
- carrying out work in accordance with the process improvement procedures
- carrying out work in a manner consistent with the improvement of customer/supplier relationships
- performing numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- quality system terminology and concepts, e.g.
  - quality assurance - planning to meet customers' requirements
  - quality control - checks and procedures to ensure customer requirements are met
  - quality inspection - inspecting and testing products and services
  - total quality control - a company-wide approach that combines both quality assurance and quality control so that the customer is always satisfied
- commonly accepted meaning/s of the terms quality and quality system
- the reasons for following the requirements of the quality improvement system
- strategies and approaches for working within a quality system
- procedures to be followed in undertaking the work
- specifications to which the individual's work is to comply
- reasons for ensuring work conforms to specification
- benefits of good quality:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• quality products • reduced costs • customer confidence, satisfaction and loyalty • good reputation • job satisfaction • solving problems • increased competitiveness • keeping up with technology • costs and consequences of poor quality e.g. • lost customers • accidents • wastage • lost time • low morale • conflict • procedures for reporting defects • examples of common defects • quality improvement procedures • four steps of the quality cycle: plan, do, check, act • reasons for following process improvement procedures • examples of ways in which customer/supplier relationships can be improved • benefits of good customer/supplier relationship • hazards and control measures associated with applying quality procedures, including housekeeping • safe work practices and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- participating and communicating in a team setting
- identifying improvements and/or solving problems in a team setting
- implementing improvement strategies in a team setting
- recommending further action in accordance with standard operating procedures
- collecting and collating feedback data
- evaluating the improvement strategy implemented
- reading, interpreting information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- planning and sequencing tasks
- checking and clarifying information
- entering information onto workplace documents
- following verbal instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- roles and functions of self and team members
- team discussion and problem solving processes
- improvement tools and methods and their application
- procedures for using process improvement tools in the team environment
- improvement strategies
- procedures for implementing the improvement strategies
- the individual's role in implementing improvement strategies
- procedures for initiating further action
- the procedures for collecting and collating improvement feedback data
- the analytical tools and processes to evaluate the improvement strategy
- safe workplace practices

MEM15004B Perform inspection

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers inspecting products, keeping records and providing feedback on the conformance of product to specifications.

Application of the Unit

Application of the unit	This unit applies to basic inspection of completed or partly completed products produced by others. Inspection is carried out according to a site quality plan or specifications; it applies to a range of manufacturing enterprises; and requires application of a range of measuring equipment/devices/tools. Location and frequency of checks/tests and measurements are undertaken to standard operating procedures. In general, verification should be made as close as possible to the point of production of the feature or characteristic. Inspection may involve 'first piece inspection', fixed interval, sample etc. Depending on the inspection process, other technical units may need to be accessed, for example, appropriate measurement units. This unit is not intended to be applied to maintenance personnel carrying out their day-to-day activities, for example, fault finding, remedial and checking activities. These skills are covered by other units such as Unit MEM18006C (Repair and fit engineering components). This unit should not be selected for the purposes of non destructive testing, where Unit MEM24002B (Perform penetrant testing), Unit MEM24004B (Perform magnetic particle testing), Unit MEM24006B (Perform eddy current testing), Unit MEM24008B (Perform ultrasonic testing) or Unit MEM24010B (Perform radiographic testing) have already been selected.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
1. Inspect products	1.1. Products are tested for conformance to specifications in accordance with standard operating procedures.
2. Keep records	2.1. Test status identification is made on conforming and non-conforming products and records are accurately kept using standard operating procedures.
3. Provide feedback	3.1. Products are tested/inspected/measured after rework or repair. 3.2. Deficiencies or deviations are reported according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, standard operating procedures and other applicable reference documents
- testing products for conformance to specifications in accordance with job instructions
- testing reworked/repaired products for conformance to specification, in accordance with job instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- the procedures as defined by job instructions to be used to check conformance to specifications
- the data to be recorded and the frequency of recording required
- the consequences of not keeping accurate records
- non-conformances of given products that can be removed by rework/repair in accordance with job instructions
- hazards and control measures associated with performing basic inspection activities
- use and application of personal protective equipment
- safe work practices and procedures

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Select inspection/test procedures	1.1. Appropriate methods of inspection are selected and implemented. 1.2. Inspection/test procedures are monitored to ensure desired outcomes.
2. Control inspection/test environment and equipment	2.1. Environmental conditions are monitored to ensure reliability of tests and results. 2.2. Equipment/instruments are checked for correct calibration. 2.3. Calibration of equipment/instruments is initiated or undertaken against appropriate standard as required. 2.4. Calibration records are maintained to standard operating procedure.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.5. If equipment/instruments are found to be out of calibration, validity of previous results is checked and reported according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading, interpreting and following information on standard operating procedures and other applicable reference documents • checking and clarifying task-related information • entering and maintaining information onto proformas and standard workplace forms and records • checking for conformance to specifications • using measurement equipment within the scope of this unit • measuring components to specified tolerances • implementing inspection method for the product/ process • monitoring inspection/test procedures to ensure desired outcomes are achieved • monitoring environmental conditions • checking calibration of measuring equipment • initiating calibration of measuring equipment • calibrating measuring equipment against the appropriate reference standard • detecting and reporting out of calibration equipment • applying units of measurement and numerical operations/calculations within the scope of this unit
Required knowledge
Look for evidence that confirms knowledge of: • a range of inspection methods and their application • the appropriate inspection method for the process/product • procedures for implementing inspection methods • the desired/target outcomes of the inspection/test procedures • reasons for discrepancies/trends • procedures for monitoring inspection/test procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the effects of environmental conditions on test equipment and the results • procedures for monitoring environmental conditions • the acceptable range of variations to environmental conditions • the correct operation of the measuring equipment • the specifications of the measuring equipment • procedures for checking the calibration of the measuring equipment • appropriate techniques, tools and equipment to measure components • units of measurement and numerical operations/calculations within the scope of this unit • codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration • procedures for initiating the calibration of measuring equipment • the physical reference standard against which the measuring equipment is to be calibrated • procedures for calibrating measuring instruments • tools and equipment required to calibrate measuring equipment • procedures for recording calibration details • the reasons for keeping calibration records • the procedures to be followed when measuring equipment is found to be out of calibration • the reasons for checking results from out of calibration measuring equipment • procedures for reporting out of calibration measuring equipment • hazards and control measures associated with inspection, including housekeeping • use and application of personal protective equipment • safe work practices and procedures

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Take responsibility for own quality	1.1. Concept of supplying product or service to meet the customer requirements (internal and external) is understood and applied. 1.2. Responsibility is taken for quality of own work.
2. Apply standard procedures of workplace quality to own job	2.1. Quality system procedures are followed. 2.2. Conformance to specifications is ensured.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • identifying and communicating instances of non-compliance to work specifications • following quality procedures including work instructions • conforming to product and process specifications • checking and clarifying task-related information
Required knowledge
Look for evidence that confirms knowledge of: • concepts of quality and the benefits of using specifications and standard operating procedures • quality procedures applying to own work • standard operating procedures • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply quality procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic

EVIDENCE GUIDE	
	workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying quality procedures or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit Descriptor

Unit descriptor	This unit covers planning and conducting interviews, participating in interviews and taking part in negotiations.

Application of the Unit

Application of the unit	This unit applies to effective communication in more formal on-site or small group situations where ideas are defined and specific outcomes are sought. The topics covered are often formally identified and records may be kept. Interviews could include job recruitment and progression, performance reviews, grievance, etc. This unit does not cover the skills needed for participation in formal group processes such as meetings which are covered by Unit MEM16001B (Give formal presentations and take part in meetings). For interviews associated with training and assessment, refer to the appropriate units. **Band**: **A** **Unit Weight**: **4**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and conduct interviews	1.1. Interview is planned and initiated to achieve a specified purpose. 1.2. Suitable questions appropriate to the purpose are used. 1.3. Discretion and confidentiality are exercised where appropriate.
2. Participate in interviews	2.1. Appropriate preparation is undertaken. 2.2. Active listening skills are employed. 2.3. Self-presentation is applied appropriate to the purpose. 2.4. Questions are asked where appropriate. 2.5. Follow-up activities are clarified and reported in accordance with standard operating procedure.
3. Take part in negotiations	3.1. Language appropriate to the other party is used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.2. Own and others' needs/wants are stated and clarified. 3.3. The views of fellow employees, including own group or team, are represented to others. 3.4. The appropriate communication medium is selected. 3.5. Follow-up activities are clarified and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and formatting interviews
- developing open and closed interview questions to gain required information
- building rapport
- maintaining discretion and confidentiality
- preparing for interviews
- using active listening skills
- identifying interview goals
- identifying selection/assessment criteria
- clarifying follow-up activities
- reporting follow-up activities
- using appropriate language to the other party(s)
- clarifying needs/wants of others
- representing the views of fellow team or group members during negotiations
- selecting appropriate communication media during the negotiations

Required knowledge

Look for evidence that confirms knowledge of:

- the purpose of the interview
- the assessment criteria for the interview
- the procedures to be followed in planning and conducting the interview
- the detail/information to be obtained from the interview
- questions appropriate to the detail/information to be obtained

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• active listening techniques that can be applied in interview situations • the effect(s) of the individual's presentation during the interview upon the interview • the effect(s) of the timing of questions on the interviewee • the need to follow-up issues raised during the interview and negotiations • the procedures for reporting the outcomes of follow-up activities • the parties to be involved in the negotiations • the reasons for using appropriate language • the reasons for maintaining confidentiality • the reasons for clarifying the needs/wants of others • the needs/wants of the individual • the views of fellow team or group members • a range of communication media • the appropriate communication medium • safe workplace practices

Unit Descriptor

Unit descriptor	This unit covers identifying a customer's relationship to the enterprise and the customer's requirements, acting on the customer's requirements, and promoting better customer service.

Application of the Unit

Application of the unit	This unit applies to the provision of comprehensive assistance to customers across a range of products and services. Situations covered would be beyond simple sales or enquiries and could include the taking of one-off or special orders requiring detailed descriptions, the handling of complaints referred for more detailed assistance than the initial point of contact, work as a designated liaison officer etc. Customers can be internal or external. Customer liaison can be undertaken through telephone, written, email or face-to-face contact. Typical applications of this unit would be found in warehouses, service and design departments. **Band**: **B** **Unit Weight**: **2**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify customer relationship to enterprise	1.1. For repeat customers, formal customer identification details are obtained and checked, for example, by order, requisition or account number according to standard operating procedures. 1.2. Customer is identified as a new or repeat customer.
2. Identify customer requirements	2.1. Customer requirements are identified from order or other verbal or written communication. 2.2. The degree to which customer requirements can be met is clearly communicated including details such as price, delivery date, quantity or quality. 2.3. Alternatives are proposed for any inability to completely satisfy customer requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Action customer requirements	3.1. Appropriate action to implement customer requirements is undertaken, for example by filling or entering of order, corrective action to resolve complaints, or repair or service to customer equipment. 3.2. Customer requirements not able to be met immediately are recorded, and follow-up checks are undertaken according to standard operating procedures.
4. Promote better customer service	4.1. Methods of improving customer service are identified and reported.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications and other applicable reference documents
- obtaining and checking customer identification details
- establishing rapport with the customer
- dealing with difficult or unsatisfied customers
- checking and clarifying information
- identifying and communicating the degree to which customer requirements can be met
- identifying alternative products and/or services
- taking appropriate action to meet customer requirements
- recording customer requirements including those not able to be immediately met
- following up unmet customer requirements
- reporting/recommending methods of improving customer service
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the procedures for identifying customers and defining customer relationships • service provision procedures for new/repeat customers • procedures for identifying customer requirements • the price of the required product or service • the quantities of the product available • the quality and characteristics of the product or service • the delivery date/requirements of the product or service • the procedures for informing the customer of the degree to which the customer's requirements can be met • the reasons for informing the customer promptly of the ability/inability to meet the customer's requirements • alternative products and/or services that may meet the customer's requirements • the procedures for actioning customer orders • the procedures for recording and managing customer complaints • the procedures for initiating repairs and/or service to customer equipment • the procedures for managing organisational errors in service provision • principles and practices of effective customer service • record keeping requirements of customer service interactions and transactions • the procedures for following up on unmet customer requirements • the procedures for reporting/recommending improvement to customer service • safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify team goals and processes	1.1. Team goals and requirements are identified. 1.2. Processes in place to assist in meeting team goals are identified. 1.3. Workflow and processes are described. 1.4. Roles and responsibilities of team members are identified. 1.5. Relationships within team and with other work areas are identified.
2. Communicate and cooperate with team members	2.1. Effective interpersonal skills are used to interact with team members and to contribute to activities and objectives. 2.2. Formal and informal forms of communication are used effectively to support team achievement. 2.3. Team members are assisted as required to ensure team achieves goals and requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4. Diversity is respected and valued in team functioning. 2.5. Views and opinions of other team members are understood and reflected accurately. 2.6. Workplace terminology is used correctly to assist communication.
3. Work as a team member	3.1. Tasks are performed in accordance with organisational and team requirements, specifications and workplace procedures. 3.2. Agreed reporting lines are followed using standard operating procedures.
4. Solve problems as a team member	4.1. Potential and real problems faced by team are identified. 4.2. Procedures for avoiding and managing problems are identified. 4.3. Problems are solved effectively and in a manner which supports team functioning.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- contributing to achievement of team goals
- communicating and cooperating with team members
- coordinating work effort with others
- applying effective interpersonal skills
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- solving problems

Required knowledge

Look for evidence that confirms knowledge of:

- effective interpersonal strategies and skills:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• effective listening • basic speaking skills • use of terminology and jargon • giving and receiving feedback • checking and clarifying task-related information • interpreting instructions • basic conflict resolution • selecting modes and methods of communication • identifying and resolving communication breakdowns and barriers • principles of effective communication • relationships and roles within team and with others • reporting relationships and procedures • own responsibilities with respect to products/services to be provided by team • skills and competencies of the individual and other employees performing interdependent activities • team goals, objectives and task requirements • sources of technical expertise/assistance • appropriate forms of communication • hazards and control measures associated with team activities, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to operate in a work-based team environment.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating in a work-based team environment or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment

REQUIRED SKILLS AND KNOWLEDGE
• relationships and roles within immediate group and with interdependent others • reporting relationships and procedures • own responsibilities with respect to products/services to be provided • skills and competencies of the individual and other employees performing interdependent activities • common goals, objectives and task requirements • sources of technical expertise/assistance • appropriate forms of communication • hazards and control measures associated with workplace activities, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to operate in a work-based team environment.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	with operating in a work-based team environment or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Effective interpersonal skills	Basic listening and speaking skills, use of terminology and jargon, giving and receiving feedback, interpreting instructions, verbal and non-verbal modes and methods of communication, communication breakdowns and barriers, basic principles of effective communication

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Nature and scope of task requirement are identified. 1.2. Information/data required to be accessed, input or stored is identified. 1.3. Source of information/data is identified.
2. Access information/data	2.1. Access procedures are followed. 2.2. Technology is navigated to find the required information/data. 2.3. Relevant software application menus, functions and commands are used to locate required information/data. 2.4. Information/data is retrieved using organisational procedures. 2.5. Information/data is checked for relevance to job requirements.
3. Input information/data	3.1. Relevant software menus, functions and commands are used to manipulate information/data. 3.2. Information/data is entered, changed, or removed as required.
4. Store	4.1. Data/files are saved following standard procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
information/data	prior to exiting the application. 4.2. Data output is produced as required. 4.3. Procedures for shutting down/logging off/exiting computing technology are followed.
5. Access assistance as required	5.1. Appropriate personnel are identified and consulted as required. 5.2. Manuals, online help and other reference materials are identified and used as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • ability to enter or retrieve data using appropriate software applications • reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • planning and sequencing operations • checking and clarifying task-related information • using numerical operations within the scope of this unit
Required knowledge
Look for evidence that confirms knowledge of: • functions and capabilities of various types of computing technology used in the workplace • functions of software applications • hazards and control measures associated with using computing technology, including housekeeping • safe work practices and procedures

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research information	1.1. Research requirements are identified and clarified with appropriate persons. 1.2. Sources of research data/information are identified and verified for currency and accuracy. 1.3. Information is compiled, recorded and stored using research techniques appropriate to the task requirements. 1.4. Information is sorted for relevance to research and analysis requirements. 1.5. Research is conducted within given timeframe, resource and quality constraints.
2. Analyse information	2.1. Scope, criteria and method for analysis are determined and verified, if necessary, with appropriate persons. 2.2. Information is accurately analysed according to established criteria. 2.3. Analysis is documented in an appropriate format according to workplace requirements.
3. Establish findings and conclusions	3.1. Findings are factual and accurately describe the results of the analysis 3.2. Conclusions are reached that are logical and based on objective analysis of available data.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.3. Research data, analysis, findings and conclusions are verified, if necessary, with appropriate persons.
4. Summarise and organise technical data	4.1. Information is recorded in suitable form according to workplace requirements. 4.2. Information is summarised and organised for ease of reference, using established communication principles. 4.3. Information is disseminated to others according to workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- questioning
- applying research techniques
- checking and clarifying information
- note-taking
- analysing information and data
- sorting and identifying relevant information/data
- establishing findings and conclusions based on analysis
- summarising and organising information and technical data
- preparing materials for dissemination to others
- planning and sequencing operations

Required knowledge

Look for evidence that confirms knowledge of:

- basic principles and methods of research and analysis
- effective communication principles with respect to research, analysis and organisation of technical data
- sources of research data/information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• use of internal/external databases • relevant personnel for consultation • relevant information/data • effect of variations in the information/data on the conclusions reached • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to research and analyse engineering information. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with researching and analysing engineering information or other units requiring the exercise of the skills and knowledge covered by this unit.

MEM16011A Communicate with individuals and small groups

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers communicating effectively across a range of communication networks in the workplace. Communication levels include interpersonal (one-to-one), person-to-group, and mediated (e.g. telephone, letter, memo).

Application of the Unit

Application of the unit	This unit applies where an individual is required to undertake a broad range of communication activities within a manufacturing or engineering organisation. The person would regularly use a variety of communication channels and media to communicate with others. To satisfy this unit, the person would need to exercise skills in verbal and non-verbal communication, along with demonstrating an understanding of communication principles and processes. Applications include common workplace activities such as facilitating small group discussions and meetings, writing memos or letters, making telephone calls, counselling co-workers, resolving issues or routine conflicts, talks or speeches. This unit includes written communication by letter, short memorandum or report etc. If research and/or structured report writing is required, Unit MEM16009A (Write reports) and/or Unit MEM16009A (Research and analyse engineering information) should be selected. **Band**: This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Plan and prepare	1.1. Communication types and networks within the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
communication	enterprise are identified. 1.2. Enterprise conventions, policies and procedures are followed when planning and preparing communication activities. 1.3. Communication channels and codes appropriate to objectives, circumstances and receiver/s are selected. 1.4. Communication is planned and structured to promote the accurate transfer of meaning. 1.5. Communication setting and climate is established appropriate to purpose and content of message. 1.6. Required resources are prepared and or obtained.
2. Communicate effectively in interpersonal, mediated and group settings	2.1. Effective communication skills, strategies and principles are applied to a variety of communication events. 2.2. Verbal and non-verbal language is used appropriate to the topic, sensitivities and technical understanding of the person/s being addressed. 2.3. Individual differences are respected and considered. 2.4. Purpose and objectives of communication are adhered to. 2.5. Participation in communication is encouraged. 2.6. Conventions, rules, policies and procedures are followed.
3. Evaluate communication	3.1. Feedback regarding the effectiveness of the communication activity is obtained. 3.2. Outcomes are assessed against communication objectives and selected channels and codes. 3.3. Communication barriers are identified and strategies for overcoming them are identified and implemented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Look for evidence that confirms skills in: • selecting and using various communication channels • coding and decoding verbal and non-verbal messages • giving and receiving feedback • identifying blockages, barriers and breakdowns in communication • applying principles of effective communication • applying speaking and listening skills to interpersonal and group situations • using writing skills to communicate technical and non-technical information using common verbal written channels • undertaking reading and comprehension of written workplace communications
Required knowledge
Look for evidence that confirms knowledge of: • communication process, stages and roles • communication types and networks • verbal and non-verbal channels - advantages and disadvantages • verbal and non-verbal codes - advantages and disadvantages • principles, strategies and conventions for interpersonal, mediated and group communication • communication skills for sender and receiver • communication blockages, barriers and breakdowns and strategies for overcoming them • individual differences between communicators and strategies for effective communication • establishing communication climate

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to communicate across a range of environments using different methods and techniques appropriate to the content and purpose of the communication. Competency

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Communication types	• Upward - examples: reporting, suggestions, grievances • Downward - examples: policy, procedure, job instruction, feedback, information • Horizontal - examples: task coordination, conflict resolution, discussion, problem solving, information sharing
Communication networks	• Hierarchies, patterns or clusters of personnel • Enterprise conventions, protocols and procedures for communication
Communication channels and codes	• Channels - defined here as the route a message takes through any of the three broad media: written verbal, spoken verbal and non-verbal • verbal channels involve visual and sound media. • non-verbal channels may involve visual, sound, touch, taste and smell and combinations of these • Codes - defined here as any system of language, symbols, signals, gestures etc. that gives mutual meaning to a message. Codes may be: • verbal (spoken or written language) • non-verbal e.g. symbols and emblems, body language
Effective communication skills, **strategies and principles**	• Questioning and clarifying • Speaking and conversation skills • Effective and active listening • Reading and comprehension skills • Giving and receiving feedback • Giving and interpreting verbal and non-verbal messages • Using the telephone and similar mediated channels

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Establishing communication climate • Basic conflict resolution • Seeking and acknowledging contribution • Agreeing on communication protocols • Clarifying the purpose of the communication activity • Principles and protocols for informal and formal meetings • Principles and protocols for speaking to a group • Group discussion strategies, principles and protocols • Interpersonal strategies and principles
Communication events	• Letters, memos, emails etc. • Telephone calls • Group talk • Meetings • Individual and group discussion • Task coordination • Information sharing
Individual differences	• Age, sex, ethnic origin, language • Status in the organisation • Level of expertise

MEM16012A Interpret technical specifications and manuals

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers identifying, accessing, interpreting and analysing technical information in an enterprise, including quality documentation, equipment manufacturer specifications, engineering data sheets and national standards. It also covers explaining and using the information, and identifying implications of changes to technical information.

Application of the Unit

Application of the unit	This unit goes beyond routine accessing and interpretation of technical information. This unit applies to the identification, access, interpretation and analysis of technical information to enable carrying out engineering or manufacturing activities. For routine accessing, organising and communication of information related to processes or tasks, MEM16006A Organise and communicate information should be regarded as sufficient. **Band**: **B** **Unit Weight**: **4**

Licensing/Regulatory Information

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify and locate technical information resources	1.1. Information needs are identified and confirmed with appropriate persons. 1.2. Workplace information resources are identified and their location is determined in the information system. 1.3. Appropriate technical information is obtained.
2. Access technical information	2.1. Relevant technical information is located using search techniques appropriate to the resource and information requirements. 2.2. Symbols, codes, legends, and abbreviations are interpreted correctly. 2.3. Technical information is accessed and relevant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	application is understood. 2.4. Clarification or further explanation of technical information is obtained, where required. 2.5. If applicable, the revision status of the technical information is verified to ensure current status.
3. Interpret and analyse technical information	3.1. Technical information/data appropriate to work requirements and/or application is checked for currency and authenticity. 3.2. Technical information is interpreted and analysed for use in given engineering or manufacturing applications. 3.3. Technical information is used according to the specific engineering or manufacturing application.
4. Explain and use information	4.1. Information and analyses is explained and distributed to appropriate personnel. 4.2. Information resources are used according to work requirements. 4.3. Where applicable, work is undertaken in accordance with acquired technical information.
5. Identify implications of changes to technical information	5.1. Technical information systems are monitored for changes. 5.2. Personnel affected by changes to internal or external specifications or other technical information are identified. 5.3. Means of distributing changed information are established. 5.4. Changes to technical information are documented according to enterprise procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • accessing, reading and following information on written job instructions,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • planning, sequencing operations • following oral/written instructions • checking and clarifying task-related information • checking for conformance to specifications • undertaking numerical operations and calculations/formulae within the scope of this unit • entering information onto workplace documents • accessing and using technical documentation • identifying and using correct specifications for process and/or systems • using components of system, where appropriate • completing formal documentation and reporting as required • adopting appropriate communication strategy, including confirmation of received information and distribution of instructions • communicating information in ways appropriate for the audience • maintaining appropriate records • identifying and analysing implications of changes to information systems
Required knowledge
Look for evidence that confirms knowledge of: • available industry information resources • uses and applications of information resources • range of formats that information can be presented • safe work practices and procedures • location and retrieval requirements of system information • correct process used to identify relevant specifications • quality improvement processes for information systems • interpretation of technical data and information • appropriate communication strategies • dissemination of information regarding information systems • a range of instructional techniques • implications of changes to technical information • procedures for responding to information changes • hazards and control measures associated with changes to technical information, including housekeeping • safe workplace practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to interpret and analyse information from specifications and manuals.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with interpreting and analysing information from specifications and manuals or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Information resources	Documented management system (manufacturing, quality, environmental, occupational health and safety), manufacturers' manuals, specifications, Australian and international standards, customer requirements, industry manuals, codes of practice, legislation etc. in hard and soft copy
Location	Reference libraries, workplace storage areas, internet, site
Information system	Internal and/or external. The system would typically have documentation tiers
Technical information	Technical information and data suitable and appropriate for advanced trade and technician applications within the enterprise. This unit does not cover documentation written for professional engineering or scientist applications
Search techniques	• Computer database and internet search/look-up • Standard techniques to identify relevant information including skimming and scanning, identifying key words/ideas, using index, table of contents, numbering and classification systems etc.
Analyses	Conclusions made from the analysis of technical information

MEM16013A Operate in a self-directed team

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers an individual effectively participating in a highly developed and self-directed team.

Application of the Unit

Application of the unit	This unit applies to participation in a formally established, developed or developing self-directed team. Examples are engineering production teams responsible for a product or process, maintenance teams and special-purpose project teams. Typically, team parameters, constraints and objectives would be determined by sources external to the team. The team would be responsible for all aspects of its designated function and members would have day-to-day responsibility for managing themselves and their work. Typical team tasks might include planning and scheduling activities, making production-related decisions and acting on problems. Where team parameters require adjustment as a result of team discussions or planning, then appropriate authorisation and approvals are established using standard operating procedures. Individual team participants would already be competent with technical aspects of team activities. This unit is intended to apply to participation within a formally established and recognised team. Where an individual works with others, such as within a section or department, unit MEM16007A (Work with others in a manufacturing, engineering or related environment) should be regarded as sufficient. This unit may be included in a Certificate II in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	Engineering - Production Technology or higher qualification. **Band**: This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V). **Unit Weight**: **2**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify team function and composition	1.1. Team purpose and scope are identified and understood. 1.2. Team composition, including role of self and team members, is understood. 1.3. Established parameters, rules and team norms are identified and understood.
2. Participate in team planning	2.1. Significant contribution is made to planning the team activities, based on the individual's technical skills, knowledge and competence. 2.2. Contribution is made to the allocation and performance of team tasks.
3. Function effectively as a team member	3.1. Interaction with team members is in accordance with established rules, conventions and procedures. 3.2. Tasks and responsibilities are performed effectively and in accordance with team objectives. 3.3. Real or perceived issues are resolved by effective and appropriate contributions from team member. 3.4. Significant contribution is made to team performance, based on member's own technical skills and application of established principles and practices for effective teamwork.
4. Monitor and review team performance	4.1. The team member participates effectively in the planning and development of team review process. 4.2. Relevant performance data is collected and analysed on an individual and team basis using standard enterprise procedures and methodology. 4.3. Results are used to evaluate own and team performance against established performance indicators and to assist determination of improvement requirements. 4.4. Principles/techniques for effective team development are used to identify own/team improvement strategies.
5. Implement team performance	5.1. Performance improvement processes and strategies are implemented on an individual and collective basis

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
improvements	using standard enterprise procedures. 5.2. Individual and team performance improvements are evaluated using standard enterprise procedures. 5.3. Adjustments to improvement strategies are made in accordance with team requirements and standard enterprise procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying team goals and objectives
- participating in team planning - shared and individual
- allocating tasks and sequencing activities
- communicating and interacting effectively with team members
- solving problems individually and with others
- resolving conflict
- performing various team behavioural functions - task and maintenance focused
- making individual and joint decisions
- coordinating effort with others to achieve common objectives
- collecting team performance data
- reviewing performance against indicators
- identifying strategies to improve team performance
- implementing performance improvement processes
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking and clarifying task-related information
- checking for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- team objectives
- team targets/goals, performance indicators

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• team member roles - task and behavioural • team processes, rules and conventions • scope of work for which the team is responsible • methods for planning team activities • team member technical skills, knowledge and competence, relevant to the tasks being planned • the person(s) responsible for team planning • impact of planning decisions on other teams, personnel and/or resources • procedures for obtaining resources • structure, formation and operation of teams • characteristics of effective teams • strategies for effective team development/functioning • effective team communication • forms of team leadership and decision-making • strategies for resolving conflict • techniques for team problem-solving • issues that may affect team performance • the sources of data relevant team performance indicators • reasons for reviewing team performance • methods/procedures to evaluate team performance • where appropriate, source(s) of approval to change team performance parameters • processes/strategies for improving team performance • hazards and control measures associated with operating in a self-directed team environment, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to operate within a self-directed team. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating within a self-directed team or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Team	• A highly developed and cohesive work group in which the individuals have a common aim, and in which the jobs and skills of each member fit in with those of others • Team members manage day-to-day activities within operating parameters and constraints • The team is typically characterised by interdependent and complementary effort, high cohesion and culture, conjunctive tasks, effective use of team resources and a focus on continuous improvement • The team may have a single leader or shared leadership
Principles and practices for effective teamwork	Relating to: • goals • problem solving • resolving conflict • team leadership • team decision making • team rules and norms • team roles and behaviours • team maintenance

MEM17001B Assist in development and deliver training in the workplace

Modification History

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	This unit covers planning for and delivering on the job training, and reviewing the training program. Training, which may structured or informal, is delivered in a one-to-one or small group situation.

Application of the Unit

Application of the unit	Training is delivered in a one-to-one or small group situation. The training may be structured or informal and based on cooperation between trainer and other training personnel. Both underpinning knowledge and practical skills are covered by the training. Training may be applied to technical, induction, OHS or other areas. Normal supervision of an apprentice is covered by Unit MEM17003A (Assist in the provision of on the job training). This unit does not cover assessment. Assessor skills are covered in Unit MEM17002B (Conduct workplace assessment). **Band:** This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V). **Unit Weight**: **2**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Plan for delivery of on the job training	1.1. Objectives of training and competency to be achieved are identified. 1.2. Role in provision of training is clarified.
2. Deliver on the job training	2.1. Training objectives are explained to trainee. 2.2. Training is carried out using appropriate techniques: logical presentation; sound communication methods; explanation, demonstration; practice; feedback. 2.3. Trainee progress is monitored and constructive

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	feedback is provided to trainee.
3. Review training program	3.1. Training program is evaluated according to standard operating procedures. 3.2. Training data is recorded according to standard operating procedures. 3.3. Training is reported according to standard operating procedures. 3.4. Training is promoted according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • communicating effectively with the trainee • applying training techniques appropriate to the trainee and training requirements • giving feedback • monitoring and recording trainee progress • evaluating training program • recording training data • completing reports on training completed and training required • promoting training within the workplace
Required knowledge
Look for evidence that confirms knowledge of: • competencies to be achieved through the training • role of the trainer in the provision of training • training techniques to be used in delivering the training • reasons for selecting the chosen training techniques • procedures for recording trainee progress • reasons for providing positive feedback • procedures for evaluating training programs • reasons for evaluating training programs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• training records to be kept • procedures for recording training data • procedures for preparing training reports • procedures for promoting training in the workplace • reasons for promoting training in the workplace

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to assist in development and delivery of training in the workplace.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with assisting in the development and delivery of training in the workplace or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be

MEM17003A Assist in the provision of on the job training

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers assisting in the provision of on the job training to others while undertaking normal duties.

Application of the Unit

Application of the unit	This unit may involve the replacement of normal duties with training duties for limited periods of time. The individual would not be expected to be solely responsible for the assessment or reporting of a trainee's progress. Typical applications could include the provision of on the job guidance by a tradesperson to apprentices/trainees or by a production worker to other production workers/trainees. Where development of training programs is involved see Unit MEM17001B (Assist in development and deliver training in the workplace). **Band**: **A** **Unit Weight**: **2**

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine role of on the job training	1.1. Objectives of training and role of on the job training are identified in consultation with team leaders or other appropriate personnel.
2. Provide on the job training	2.1. Training is conducted using learning methods appropriate to the training objectives and learner. 2.2. Trainee progress is monitored and feedback is provided appropriate to the learning outcomes.
3. Report on trainee performance	3.1. Trainee's progress is reported according to standard operating procedure.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant information with respect to the training to be provided
- applying suitable training methods
- providing feedback to the trainee throughout the training process
- reporting on the trainee's progress
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- training to be delivered
- personnel to be consulted with respect to the training to be provided
- the individual's role in the provision of training
- objectives of the training
- the person(s) to be trained
- procedures to be followed when training individuals
- training location(s)
- tools, equipment, procedures, materials and resources
- training delivery methods, their applications, advantages and disadvantages
- feedback techniques
- reasons for monitoring trainee progress
- reporting procedures
- hazards and control measures associated with assisting in the provision of on the job training, including housekeeping
- safe work practices and procedures

MEM18001C Use hand tools

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers using a range of hand tools for a variety of general engineering applications.

Application of the Unit

Application of the unit	Applications may include hand tools used for adjusting, dismantling, assembling and finishing of items or components, and the finishing, cutting, scraping of metallic and non-metallic material to size and shape. This includes simple tapping and threading and routine maintenance of hand tools. This unit should not be selected if the hand tool is dedicated to a single operation or machine and if only a machine specific/customised tool is used. When using hand held power tools or power tools used for hand held operations, refer to Unit MEM18002B (Use power tools/hand held operations). **Band**: **A** **Unit Weight**: **2**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Assess wheel condition	1.1. Rim/tyre designs, constructions, codes, balancing, fastening principles and terminology are understood. 1.2. Fastening components are correctly assessed for damage and security. 1.3. Abnormal tyre wear is recognised and cause of fault is correctly determined. 1.4. Unsafe tyre and/or wheel condition is recognised and remedial action is determined.
2. Rectify and maintain wheel	2.1. Safety procedures associated with tyre/wheel removal, handling, inflation, assembly and disassembly and fastening are understood and adhered to. 2.2. Wheels/tyres are safely removed and replaced using standard procedures and appropriate tools/equipment. 2.3. Tools and equipment are correctly applied and used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4. Ballasting and/or inflation of tyres is performed safely and to specification. 2.5. Static/dynamic balancing of wheels is performed to specification. 2.6. Rim/tyre/tube faults are rectified to specifications, regulations or codes. 2.7. Rectification activities are accurately recorded. 2.8. Wheel bearings are correctly lubricated to specification.

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents • planning and sequencing operations • checking task-related information • checking for conformance to specification • identifying damaged fastening components • identifying abnormal tyre wear • checking wheel fastening components for damage and security • identifying corrective action to be taken for unsafe tyre and wheel condition • removing and replacing wheels/tyres using appropriate tools and equipment • using tools and equipment correctly and appropriately • undertaking ballasting and/or inflation of tyres • balancing wheels to specification • identifying repairable rim, tyre and tube faults • repairing faults in rims/tyres/tubes to specification • recording work activities • lubricating wheel bearings in accordance with specification
Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Look for evidence that confirms knowledge of: • the design and construction of a variety of rims and tyres • the principles of fastening and balancing of wheels • the relevant codes and standards • the procedures for checking wheels for secure fastening • the reasons for checking fastening components for damage and security • the causes of abnormal tyre wear • examples and causes of unsafe tyre and wheel condition • the procedures for removing, handling, inflating, assembling/disassembling and fastening of tyres and wheels • the safety precautions to be taken when working with wheels and tyres • the tools, techniques and equipment required to carry out the above procedures • the procedures, tools, techniques and equipment for static and dynamic balancing of wheels • the reasons for selecting the chosen tools, techniques and equipment • the procedures, tools, techniques and equipment for repairing rim, tyre and tube faults • examples of unrepairable rim, tyre and tube faults • the procedures for recording repairs undertaken on rims, tyres and tubes • the procedures for lubricating wheel bearings • types of wheel bearing lubricant and their application • hazards and control measures associate with maintaining and rectifying wheels and tyres, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to maintain wheels and tyres. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and	Assessors must be satisfied that the candidate can

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
evidence required to demonstrate competency in this unit	competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with maintaining wheels and tyres, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different

MEM18045B Fault find/repair electrical equipment/components up to 250 volts single phase supply

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers locating and rectifying faults in equipment and components using up to 250 V single phase power where these are disconnected from the electrical supply.

Application of the Unit

Application of the unit	This unit covers the competencies required to locate and rectify faults in equipment and components using up to 250 V single phase power, where they are disconnected from their electrical supply. This would also typically cover plug-in appliances. Work is performed onsite. This unit also covers basic mechanical disconnection, dismantling and re-assembly of equipment components, enclosures, drives etc. This unit should not be selected if Unit MEM18046B (Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.) has been selected. When work involves disconnection and reconnection of fixed-wired equipment, Unit MEM18049C (Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.) must also be selected. **Band**: **A** **Unit Weight**: **4**

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Locate fault	1.1. Equipment/*component* function is determined by reference to circuit diagrams, schematics, manual and/or consultation with technical adviser. 1.2. Where required, equipment is correctly isolated from power supply. 1.3. Where appropriate, built-in fault indicators and error codes are examined and correctly interpreted, and results are recorded to standard operating procedures. 1.4. Equipment/component is checked and tested using correct and *appropriate techniques*, procedures, tools and *test equipment*. 1.5. Check and test results are correctly interpreted and, where required, verified. 1.6. Equipment/component fault is identified and localised. 1.7. Equipment/component fault/s are correctly recorded to standard operating procedures.
2. Rectify faults	2.1. Using correct and appropriate techniques, procedures, tools and equipment, equipment/component/s are repaired, replaced or adjusted to specification or manufacturers' requirements. 2.2. Equipment/component is checked and tested using correct and appropriate techniques, procedures, tools and equipment for compliance with site or manufacturers' specifications. 2.3. Where appropriate, rectifications report is recorded to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • obtaining circuit diagrams, specifications, schematics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- isolating electrical equipment/component from the power supply
- tagging and checking isolated electrical equipment/component
- locating and reading/recording built-in fault indicators
- checking and testing electrical equipment/component for correct operation
- verifying variations from specifications indicated by initial test results
- identifying and localising faults in electrical equipment/ components
- recording/reporting faults in the electrical equipment/components
- repairing, replacing or adjusting electrical equipment/components to specification
- referencing supplier catalogues
- confirming that the electrical equipment/components have been returned to specification
- recording rectification of the electrical equipment/ components

Required knowledge

Look for evidence that confirms knowledge of:

- operation and characteristics of active and passive components
- basic motor operation of various types
- function of the electrical equipment/component within the circuit
- hazards associated with the electrical equipment/component
- relevant regulatory requirements
- electrical equipment/component isolation procedures
- test equipment to be used to verify isolation of the electrical equipment/circuit
- errors indicated by built-in devices
- the procedures, tools, equipment and techniques to be used to test the operation of the electrical equipment/component
- reasons for selecting the chosen tools, equipment and techniques
- specifications of the electrical equipment/component
- variations between test results and specifications
- procedures for localising faults in electrical equipment/components
- procedures for recording/reporting faults in electrical equipment/components
- techniques/procedures for returning the electrical equipment/components to specification
- adjustments that can be made to electrical equipment/components
- procedures for confirming the electrical equipment/components have been returned to specification
- procedures for recording electrical equipment/component rectifications

MEM22015A Source and estimate engineering materials requirements

Modification History

Release 1 - New unit. Replaces MEM22006A, but not equivalent.

Unit Descriptor

This unit of competency covers the skills and knowledge required to locate and approve a materials source and estimate materials requirements against a specification or bill of materials for engineering-related operations. This includes consideration of quantities, quality and capacity of suppliers to supply in accordance with a supply plan.

Application of the Unit

The unit applies to sourcing and estimating within an engineering operation or along a value chain and can be applied to individual or team-based work. It is suitable for people working in engineering or related industries in planning, purchasing or quantity surveying functions.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

1	Participate in planning and budgeting for materials resourcing in engineering operation or project	1.1	Participate in planning for materials resourcing in the context of operations, project, strategic and business plans and budgets
		1.2	Contribute to management processes, such as costing and value engineering, feasibility studies, cost-benefit and break even analysis, consideration of contract law pertaining to supply arrangements and life cycle costing
		1.3	Evaluate sustainability implications of materials and components being sourced
		1.4	Participate in the selection or development of materials information systems
		1.5	Review suitability of software packages for materials estimation and sourcing and related purposes
2	Estimate quantities	2.1	Consult with operations and project teams regarding their materials needs
		2.2	Estimate quantities against operations or project specifications, drawings and bill of materials documents
3	Contribute to the development of supply chain relations	3.1	Contribute to supply chain requirements, evaluation and management
		3.2	Assist in developing tender and contract documents
4	Locate source and confirm material suppliers	4.1	Locate source and evaluate materials suppliers against specifications
		4.2	Evaluate supply agreements, quality and delivery parameters against operation or project requirements
		4.3	Coordinate approval of samples, testing and certification in accordance with specification requirements
		4.4	Confirm or recommend suppliers according to enterprise procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5	Monitor and review materials and supply chain	5.1	Participate in development of performance indicators or parameters for materials supply chain
		5.2	Consult, negotiate and cooperate with suppliers in relation to supply chain efficiency improvements
		5.3	Provide feedback on quality, efficiency and continuous improvement processes to supply chain members and internal stakeholders
		5.4	Identify and monitor work health and safety (WHS) and regulatory requirements related to materials supply, transport, handling, storage and processing
		5.5	Monitor sustainability of sourced materials and coordinate responses in accordance with sustainability policy and procedures
		5.6	Apply systems thinking, constraints and contingency management, as necessary, and continuous improvement techniques
6	Report and document outcomes	6.1	Provide reports on material sourcing in accordance with procedures
		6.2	Maintain documentation on estimations, sources of supply, supply chain analysis performance, continuous improvement and training, WHS and regulatory requirements, and risk assessment

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- planning for materials resourcing
- estimating quantities, sourcing and evaluating materials suppliers against operations or project, specifications, drawings and bill of materials
- cooperating, communicating and negotiating effectively within team and functional groups, customers and suppliers
- monitoring and evaluating purchasing budget, expenditure and cash flow, sourcing of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

materials, sustainability implications, supply agreements and suppliers for quality, capacity and flexibility, conformance to regulatory requirements and test procedures
- using materials sourcing and planning software packages
- contributing to organisational management processes and materials supply chain management
- developing or using materials supply tender and contract documents
- interpreting materials requirement and purchasing schedule, purchasing budgets, and performance indices for materials supply chain
- coordinating responses to budget and delivery supply threats related to materials purchases
- participating in setting and implementing supplier payment policies
- implementing systems thinking, concurrent engineering, continuous improvement, contingency and constraint management, problem solving and decision making
- determining implications for materials sourcing of WHS, risk management, codes of practice, and sustainability policy and requirements
- reporting and documenting results of evaluations, tender analysis, and so on

Required knowledge

Required knowledge includes:

- planning procedures for materials resourcing in the context of operations, project, strategic and business plans and budgets
- use of systems and software packages to assess materials requirements information, data processing, bill of materials, estimating, supplier database and purchasing budget control
- systems for cost estimation and planning, value engineering, feasibility studies, cost-benefit analysis, life cycle costing and valuation
- supply chain management and value analysis, performance indices or parameters, and monitoring processes
- tender and contract documents, supply agreements, quality and delivery parameters, and terms of payment
- supply chain communications, feedback on quality, supply chain efficiency and continuous improvement processes
- sustainability policy and procedures
- WHS, regulatory and risk management requirements with particular emphasis on handling and use of resources
- WHS and regulatory compliance requirements, material safety data sheets (MSDS), test results, and risk management related to handling and storage
- use of systems thinking, constraints and contingency management, problem solving and decision making, and continuous improvement techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to source and estimate materials for an engineering operation, including interacting with the supply chain. It includes planning and estimating supplies and integrating purchasing into operations. This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • plan for materials resourcing • estimate quantities, source and evaluate materials suppliers • develop tender and contract documents, materials requirement and purchasing schedule, purchasing budgets, and performance indices for materials supply chain • participate, communicate, cooperate, and negotiate with stakeholders on policy and procedures development and implementation • monitor supply of materials against contract requirements and key performance indicators (KPIs) • contribute to organisational management processes, and materials supply chain management.
Context of and specific resources for assessment	• This unit may be assessed on the job, or a combination of both on and off the job. The candidate should have access to a workplace where the engineering-related production or project processes and volume of materials used enable the materials sourcing skills covered by this unit to be realistically assessed. Where part of assessment occurs off the job a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Sustainability implications	Sustainability implications for sourcing and estimating materials in engineering or engineering-related operations may include taking account of: • resource consumption • energy consumption and conservation • processing needs • minimisation and processing of waste • transport • distribution • life cycle • reuse, recycle and disposal
Materials	Materials covered by this unit are those required for the ongoing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	production or performance of an engineering-related project or operation and must meet an engineering specification and for which the delivery must be coordinated with a production or project schedule. The materials will typically be subject to formal supplier agreements or contracts and delivery is to specified cost, times, quality and quantities
Supplier performance	Supplier performance may include: • cost • delivery reliability • conformance to quality and quantity specifications • conformance to contract and regulatory requirements • participation in efficiency improvement processes • flexibility
Software packages	Software packages may include: • spreadsheets • databases • word processor • presentation • project management and cost control • system control and data acquisition (SCADA), MRPII and enterprise resource planning (ERP)
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
Constraints and contingencies	Contingencies and constraints may include: • financial • sudden changes to schedules or delivery by a supplier • organisational, procedural or cultural • physical constraints, such as limits to resources, limits to site access or logistical limitations
Continuous improvement	Improvement processes may include techniques, such as: • balanced scorecard

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

implementation	• current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Standards and Codes	Standards and codes refer to all relevant Australian and international standards and applicable codes
MSDS	Organisations using or storing hazardous substances or dangerous goods are required to maintain a MSDS and dangerous goods register. Manufacturers or importers of hazardous substances are obliged to provide an MSDS whenever the substances are first supplied to a customer

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify opportunities for workplace layout improvement	1.1. Basic analysis of workplace data is undertaken to determine sources of waste. 1.2. Future capacity requirement is obtained in accordance with policy and procedures. 1.3. Productivity improvement areas are established in accordance with organisational policy and procedures. 1.4. Appropriate productivity measures are established in conjunction with supervisors and other appropriate personnel.
2. Develop basic layout options for workplace improvement	2.1. Operation process charts, flow charts, flow process charts, and string diagrams etc. are used to develop basic layout options. 2.2. Information on ergonomics, health and safety hazards is considered in accordance with policy and procedures. 2.3. Improvements are developed in consultation with users and supervisors and in accordance with policy and procedures. 2.4. Simple economic appraisals for proposed improvements are developed in accordance with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	policy and procedures. 2.5. Layout options are referred to a higher authority for approval in accordance with policy and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • communicating • analysing • documenting • reviewing • applying principles of ergonomics • applying productivity principles
Required knowledge

Look for evidence that confirms knowledge of:
• basic knowledge of workplace layout principles including at a basic level the degree to which workplace layout is affected by:
  • engineering processes and systems
  • materials flow patterns
  • types of production plant and machinery
  • materials handling methods
  • unit loads
  • types of production methods
• productivity:
  • definition and measures of productivity
  • factors affecting productivity
  • productivity and quality
  • value adding
• recording techniques:
  • flow charts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• activity relationship charts • outline process charts • flow process charts • multipurpose charts • string diagrams • basic principle of ergonomics • the concept of waste and its application to productivity improvements

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to assist in the design of basic workplace layout.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply functions of computer-aided design (CAD) software programs that are typically used in the production of detail drawings.

Application of the Unit

This unit is suitable for those working within a CAD or drafting work environment and may be applied across engineering and manufacturing environments. It covers competent use of a CAD program to perform basic drawing tasks used in the development of detail drawings. Drawings may include plans, diagrams, charts, circuits, systems or schematics.

This unit includes using computer equipment and selecting software functions in order to generate basic drawing elements.

Work is conducted under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Confirm drawing requirements	1.1	Confirm purpose, scope, and information and presentation requirements for drawing
		1.2	Review available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify computing equipment and software used in the organisation
		1.4	Identify work flow and procedures for work supervision
		1.5	Examine requirements for presentation of drawings
2	Identify key features of CAD software	2.1	Describe types of CAD software used for detail drafting, their key features and suitability for producing specific drawing outcomes
		2.2	Describe types of CAD software used for design drafting, their key features and suitability for producing specific drawing outcomes
		2.3	Identify differences in CAD process to generate 2-D drawings and 3-D models, and reasons for each presentation
		2.4	Identify differences in CAD process to generate single and multiple view drawings, and reasons for each presentation
		2.5	Identify CAD software used in the organisation and confirm compatibility with other software programs and peripheral equipment
		2.6	Identify software features for linked specifications, catalogues or materials ordering
3	Access software and set up for	3.1	Open software and navigate organisational filing and library system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	drawing work	3.2	Identify organisational and software templates and determine uses
		3.3	Identify organisational symbols, codes and standards to be applied in drafting work and how these are accessed and applied
		3.4	Apply workplace procedures to retrieve and manipulate required information and navigate computing technology
		3.5	Set up working environment
4	Produce basic drawing elements	4.1	Use CAD functions to produce basic drawing elements
		4.2	Use editing and transfer tools and methods to modify drawing elements
		4.3	Apply dimensions, text and symbols to drawing elements
		4.4	Import and export files into/out of working space
		4.5	Generate different views and perspectives
		4.6	Organise presentation of work
5	Complete CAD operations	5.1	Save and file drawing elements according to organisational procedures
		5.2	Print drawing elements and evaluate presentation
		5.3	Evaluate work and identify areas for improvement
		5.4	Close applications, perform CAD housekeeping and maintain organisational filing system

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read instructions for drawings work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and determine scaling and layout issues
- navigating software to:
  - manipulate drawing entities
  - modify dimension styles
  - create and use layers
  - manipulate the drawing origin
  - define and utilise symbol libraries
  - utilise grids/grid snaps and object snaps
  - display views at multiple scales
  - add title blocks/frame to layout a drawing for printing
  - prepare advanced drawings in plane orthogonal or equivalent
  - set up prototype drawings
  - define and extract attribute data
  - create bills of materials (BOM) utilising attribute data and third-party application software

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and occupational health and safety (OHS) issues associated with the tools and materials used for drawing
- quality assurance procedures
- CAD program capabilities and processes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to use CAD software to produce graphics commonly used in drafting work.
Critical aspects for assessment and evidence required to demonstrate competency in this	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

unit	knowledge, and be capable of applying the competency in new and different situations and contexts. Specifically the candidate must be able to: • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • identify drawing work requirements and determine appropriate software functions and features • identify features and uses of CAD software used in detail and design drafting • access and use computing equipment and CAD software functions to produce drawing elements.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Range Statement

CAD software	CAD software may include: • AutoCAD • Inventor • Revitt • Solidworks • ProSteel • XSteel • other programs
Key features	Key features may include: • 2-D • 3-D modelling • built-in specifications • file import/export • save • undo • scale
Specific drawing outcomes	Specific drawing outcomes may include • 2-D • 3-D modelling • drawings for specific engineering applications • orthographic/isometric/perspectives/schematics
Basic drawing elements	Basic drawing elements may include: • points, line angles, circles, arcs, planes, figures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	and solids • squares, rectangles and triangles • bisected lines and dividing lines • polygon, ellipse, spline, dimension and hatch
Editing and transfer tools and methods	Editing and transfer tools and methods may include: • delete, fillet, chamfer, erase, trim/extend, break, undo and redo commands • zooming and panning • moving, copying, rotating and mirroring • polar and rectangular duplication • object snaps • dimensions • selecting entities • dividing • scaling • measuring • grouping

MSFFM1002 Operate basic woodworking machines

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers operating basic woodworking machines used for sawing, planing, sanding and drilling in the production of furniture. It applies to a VET in Schools or pre-vocational program for new entrants to the furnishing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for work	1.1	Work instructions are used to identify job requirements, including quality, materials, equipment, and quantities
		1.2	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.3	Material for machining is selected and inspected for quality
		1.4	Machines, cutting tools and jigs are identified and checked for safe and effective operation
2	Operate machines	2.1	Safety equipment, including emergency stops, gauges, guards and controls are checked

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.2 Machine start-up procedure is carried out in accordance with manufacturer instructions
		2.3 Material is fed into machine in accordance with manufacturer instructions, safe handling procedures and standard workplace operating procedures
		2.4 Machine is operated in accordance with its designed capacity and purpose, tooling requirements and to manufacturer recommendations
		2.5 Machine operation is monitored to ensure product quality and output
		2.6 Waste quantities are minimised
		2.7 Items that do not meet quality requirements are recycled or discarded according to workplace procedures
		2.8 Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons
3	Clean up work area and maintain equipment	3.1 Material that can be re-used is collected and stored
		3.2 Waste and scrap are removed following workplace procedures
		3.3 Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures
		3.4 Unserviceable equipment is reported in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Basic woodworking machines include:

- cross cut saw
- rip saw
- band saw
- panel saw
- surface planer (buzzer/jointer)
- panel planer (thicknesser)
- bobbin sander
- disc sander
- belt sander (finisher) – stroke and linisher
- vertical drill press
- horizontal borer (single bit)

Tasks include:

- machine face
- machine edge
- off fence ripping
- freehand ripping
- freehand curve cutting
- parallel rip (oversize by 5 mm+)
- docking:
  - (oversize + 20 mm)
  - (accurate to +/- 0.25 mm)
  - square (no tolerance)
- cut flat panel board (off rip fence using scribe saw)
- cut flat panel board (off cross-cut fence using scribe saw)
- parallel plane width
- parallel plane thickness
- sand concave surface
- sand straight surface
- sand end grain and outside curve
- sand flat surfaces
- hinge boring
- drill holes to pre-determined depths vertically, selecting and replacing drill bits as required
- changing belts and blades
- drill holes to pre-determined depths horizontally (and to create a mortise)

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	procedures • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Materials to be machined include:	• solid timber and manufactured board
Personal protective equipment includes:	• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	• workplace procedures relating to the use of tools and equipment • work instructions, including job sheets, cutting lists, plans, drawings and designs • workplace procedures relating to reporting and communication • manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFFM1002B Operate basic woodworking machines.

Assessment Requirements for MSFFM1002 Operate basic woodworking machines

Modification History

Release 1 - New unit of competency

Performance Evidence

- Identify work requirements and materials used in the work process
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment and products
  - maintain required production output and product quality
- Operate and monitor the machines, including changing belts, blades and drill bits as required, and complete the tasks identified in the Range of Conditions for:
  - one (1) saw
  - one (1) planer
  - one (1) drill
  - one (1) sander
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Characteristics, uses and limitations of woodworking machines
- General workplace quality standards and procedures
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:
  - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
  - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to basic woodworking machinery, standard operating procedures and materials.

MSFFM2001 Use furniture making sector hand and power tools

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using hand and power tools in applications relating to furniture making.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify hand and power tools	1.1	Types of hand and power tools and their functions are identified
		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	Sources of power supply are recognised
2	Select and use hand tools	2.1	Hand tools selected are consistent with needs of the job, checked for serviceability and safety, and any faults reported to supervisor
		2.2	Equipment is selected to hold or support material for hand tools application where applicable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.3	Material is located and held in position for hand tool application
		2.4	Hand tools are safely and effectively used according to their intended use and safely located when not in immediate use
3	Select and use power tools	3.1	Power tools are selected consistent with needs of the job in accordance with conventional work practice, are visually checked for serviceability and safety in accordance with WHS requirements, and any faults reported to supervisor
		3.2	Equipment is selected to hold or support materials for power tool application as applicable
		3.3	Material is located and held in position for power tool application as applicable
		3.4	Power tools are safely and effectively used in application processes and safely located when not in use
4	Clean up work area and tools	4.1	All tools are cleaned, maintained and stored
		4.2	Equipment is cleaned, maintained and stored
		4.3	Work area is cleared and waste removed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Hand tools for furniture	• hand planes • chisels

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

making include:	• hand saws • spokeshave • hammers (claw, Warrington, tack and ball pein) • mallet • marking-out tools • files • rasps • scraper • screwdrivers and hand drills
Power tools for furniture making include:	• drop saw • circular power saw • planer • drill • jig saw • router • trimmer • biscuit machine • brad/nail and staple gun and sanders
Unit scope includes:	• individuals to demonstrate skill, accuracy and dexterity in the application of tools to perform work tasks which should include dressing materials, cutting joints, finishing surfaces, cutting straight and compound angles, jointing materials, edge trimming and the basic sharpening of cutting tools
Unit context includes:	• WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manufacturer' s specifications, manual handling procedures and organisation insurance requirements
Fault reporting includes:	• verbal or written reporting
Personal protective equipment includes:	• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	• workplace procedures relating to the use of tools and equipment • work instructions, including job sheets, cutting lists, plans, drawings and designs • workplace procedures relating to reporting and communication • manufacturer specifications and operational procedures

Assessment Requirements for MSFFM2001 Use furniture making sector hand and power tools

Modification History

Release 1 - New unit of competency

Performance Evidence

- Locate and apply relevant information related to hand and power tools
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, tools, equipment or products
  - maintain required production output and product quality
- Adopt and carry out correct procedures prior to and during use of the range of hand and power tools stipulated in the Range of Conditions
- Carry out operator maintenance on hand and power tools, including the grinding and sharpening of:
  - chisels
  - hard plane blades or irons
  - drill bits
- Use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise waste of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses, limitations and maintenance requirements of hand tools commonly used in furniture production
- Types, characteristics, uses, limitations and maintenance requirements of power tools commonly used in furniture production
- Workplace safety requirements and WHS legislation
- Work flow within the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
  - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
  - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to furniture making sector hand and power tools, and materials used in the manufacturing and/or installation of furnishing products.

MSFFM2002 Assemble furnishing components

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers assembling of timber components to produce furniture frames or furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for assembly	1.1	Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity
		1.2	Assembly sequence is planned
		1.3	Procedures are determined for checking quality at each stage of the process
		1.4	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.5	Suitable work area is selected for the task
		1.6	Tools and equipment suitable to the fixing method are

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			selected and checked for safe operation
		1.7	Components, hardware, fittings and attachments are collected
		1.8	Fixing and joining devices are selected in line with work instructions and type of materials to be joined
		1.9	Jigs are selected and checked for suitability of purpose
2	Assemble components	2.1	Components are laid out and joined using jigs and appropriate fastenings
		2.2	Hand and/or power tools and equipment are used as required
		2.3	Components are prepared, assembled and fitted in accordance with specifications
		2.4	Assembled component is checked for compliance with specifications
		2.5	Components which do not meet quality specifications are repaired or tagged for further processing or recycling/disposal
		2.6	Finished products are organised and stored in holding area
3	Clean work area and maintain equipment	3.1	Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures
		3.2	Waste and scrap are removed following workplace procedures
		3.3	Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures
		3.4	Equipment and work area clean-up is maintained in accordance with workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Furnishing components include:	• carcasses • doors • drawers • frames • shelves • ends • tops
Unit context includes:	• WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving in the assembly of furnishing components • competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Tools and equipment include:	• measuring tapes or rulers • hammers • mallets • squares • bevels • chisels • planes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• hand saws • power saws • power drills/screwdrivers • clamps/cramps • screwdrivers and/or spanners • pincers • pneumatic tools, compressor and spray equipment
Materials to be used include:	• timber • manufactured board • glues • screws • nails • dowels and knock-down fittings
Assembled component checking is to cover:	• squareness, alignment and wind • hardware, fittings and attachments • functionality and tolerances • conformity to work instruction and quality requirements
Storage requirements include:	• ensuring that there is no obstruction to traffic • components are not damaged in storage • incompatible items are not stored together • products are arranged to match the sequence of work
Personal protective equipment includes:	• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	• workplace procedures relating to the use of tools and equipment • work instructions, including job sheets, cutting lists, plans, drawings and designs • manufacturer specifications and operational procedures

Unit Mapping Information

Assessment Requirements for MSFFM2002 Assemble furnishing components

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment and products
  - maintain required production output and product quality
- Assemble at least four (4) furnishing components from the list in the Range Statement
- Use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of common furnishing components
- Interpretation of basic furniture plans
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
  - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
  - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
  - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to tools, equipment and materials required to assemble furnishing components.

MSFFM2003 Select and apply hardware

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers selecting and applying hardware to new and refurbished furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Plan and prepare work	1.1	Work instructions are used to determine job requirements, including design, colour, finish process and required hardware quality
		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	Types of hardware are identified and selected for the work
		1.4	Tools, equipment and accessories for application are identified and checked for safe and effective operation
		1.5	Surfaces are cleaned and prepared to enable accurate colour matching

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

2	Apply and/or fit and finish	2.1	Hardware items are laid out/placed in the required design
		2.2	Machinery is used in accordance with workplace procedures, including use of personal protective equipment
		2.3	Joining/securing process is undertaken according to workplace procedures
		2.4	Adhesives are applied according to workplace procedures and/or manufacturer instructions
		2.5	Work is checked against required quality standards
3	Finalise operation and maintain equipment	3.1	Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
		3.2	Machinery is cleaned and left in a safe mode
		3.3	Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
		3.4	Unused hardware is collected and stored for re-use or disposal following workplace procedures
		3.5	Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for MSFFM2003 Select and apply hardware

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
  - prevent damage to goods, equipment and products
  - maintain required production output and product quality
  - minimise the risk of injury to self or others
- Select and apply/fit six (6) different items of hardware
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of hardware
- Interpretation of plan representation of furniture design
- Preparation of drawings/set-outs
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
  - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
  - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, hand and/or power tools, equipment, hardware materials and woodworking machinery.

MSFFM2005 Join solid timber

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers joining solid timber required for the manufacture of solid timber flat surfaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare the work	1.1 Work instructions are used to determine job requirements, including process, materials, finish and quantity
	1.2 Work sequence is planned
	1.3 Procedures are determined for checking quality at each stage of the process
	1.4 Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
	1.5 Suitable work area is selected for the task
	1.6 Tools and equipment suitable for application are identified and checked for safe and effective operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

2	Lay out and prepare materials	2.1	Timbers are selected and checked for defects following work instructions
		2.2	Suitable joining processes are selected and prepared
		2.3	Timbers are prepared for joining and laid out
3	Join timber	3.1	Timbers are measured, marked and cut to size
		3.2	Machinery is used in accordance with workplace procedures, including use of personal protective equipment
		3.3	Adhesives are applied according to workplace procedures and/or manufacturer instructions
		3.4	Final trim and finishing are completed to specifications
		3.5	Work is checked against required quality standards
4	Finalise operation and maintain equipment	4.1	Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
		4.2	Machinery is cleaned and left in a safe mode
		4.3	Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
		4.4	Off-cuts and unused materials are collected and stored for re-use or disposal following workplace procedures
		4.5	Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Edge joining methods include:	• butt and dowel • moulded edge joint (finger-joint, tongue in groove and zig-zag) • biscuit joint • slip-tongue joint
Unit context includes:	• WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving in joining solid timber • competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Machines include:	• panel saw • cross-cut saw • rip saw • surface planers • panel planer • spindle moulder • sanders and vertical and horizontal drills
Tools and equipment include:	• measuring tapes or rulers • hammers • mallets • squares • bevels • chisels • planes • hand saws • power saws • power drills • biscuit machines • pneumatic tools, compressor and spray equipment • dowel jigs • hoses

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Materials include:	• clamps and pincers • adhesives • abrasives and cleaning materials
Personal protective equipment includes:	• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	• workplace procedures relating to the use and operation of tools and equipment • workplace instructions, including job sheets, plans, drawings and designs • workplace procedures relating to reporting and communications • manufacturer instructions for the use of equipment and materials

Unit Mapping Information

Supersedes and is equivalent to LMFFM2005B Join solid timber.

Assessment Requirements for MSFFM2005 Join solid timber

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self and others
  - prevent damage to goods, equipment and products
  - maintain required production output and product quality
- Join at least four (4) solid timber tops of a minimum of three (3) sections and using a minimum of four (4) different edge joining methods
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics (including cupping, expansion, twisting, bowing, spring and grain direction), uses and limitations of timbers
- Interpretation of plan representation of furniture design
- Joining techniques and their effect on timbers
- Types of sawing methods, including back sawn and quarter sawn, and the impact of these on joining
- Preparation of drawings/set-outs
- Identification of hand and/or power tools, materials, equipment, processes and procedures
- Work flow in relation to furniture production

Assessment Conditions

- Assessors must:
  - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
  - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to plans, hand and/or power tools, equipment, joining and finishing materials and woodworking machinery.

MSFSF1001 Produce basic soft furnishing accessories

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers producing basic soft furnishing accessories, such as basic cushions and other decorative items, following the requirements of patterns.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Identify work requirements	1.1	Job requirements are identified from work instructions and patterns
		1.2	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work
		1.3	Pattern is interpreted to determine tool, equipment and material requirements
		1.4	Instructions for sequencing of work and particular measurements or adjustments are interpreted
		1.5	Work sequence is planned, including quality checkpoints
2	Prepare for work	2.1	Suitable work area is selected for the tasks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.2	Materials are selected to match customer requirements, suitability for the purpose and work instructions
		2.3	Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material
		2.4	Required tools, equipment and materials are collected in the work area
3	Complete production	3.1	Soft furnishing accessories are produced following work instructions
		3.2	Work is checked against patterns and worksheets at the identified checkpoints
		3.3	Non-conformity with the required quality standards is rectified
4	Finalise operations	4.1	Completed work is checked against required quality standards
		4.2	Documentation is completed following workplace procedures
		4.3	Work area is cleaned, and tools and equipment are returned to storage
		4.4	Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

work environment.

Unit context includes:	• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving
Soft furnishing accessories include:	• basic cushions • bolsters • soft tableware and slip-on covers

Tools and equipment include:	• measuring and calculating equipment:
	  • tapes
	  • rulers
	  • calculators
	  • computers
	• fabric and general cutting and sewing tools:
	  • scissors
	  • saws
	  • drills
	  • staplers
	  • sewing machines
	  • hemming machines
	  • overlockers
	  • glue guns

Materials include:	• plain and patterned fabric • velvet • vinyl • piping cords • wadding • foam • zips and fasteners
Pattern interpretation includes:	• the determination of type of material specified, required tools and equipment for the task, number and type of soft furnishing accessories to be produced, and quality requirements
Personal protective	• that prescribed under legislation, regulations and enterprise policies and practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

equipment includes:

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF1001B Produce basic soft furnishing accessories.

MSFSF2001 Cut single layer fabrics

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers measuring out and cutting single layer fabrics for manufacture of curtains and soft furnishing accessories. It does not apply to cutting from patterns.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Plan work operations	1.1	Required fabrics, number of items to be cut and required equipment are identified
		1.2	Fabric sizes to be cut are identified from work order plus any required allowances
		1.3	Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work.
		1.4	Suitable work area is selected, tidied and cleaned of any contaminants
		1.5	Suitable scissors and/or blades are selected and checked prior to use for appropriate sharpness, set, operation and safe condition

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.6	Fabrics are selected in accordance with work order and laid out smooth and square
2	Prepare materials for cutting	2.1	Fabrics are inspected for flaws and appropriate finish
		2.2	Naps, direction, pattern matches and face of the materials are identified
		2.3	Tools and equipment are checked for operation
3	Complete cutting operations	3.1	Cutting is completed with cut out materials identified/labelled where required
		3.2	Any measurements for pleat lines, hems, headings and any special seam allowances are marked out using workplace approved methods
		3.3	Where required, fabrics are hung using appropriate protective covers and care label information is attached
		3.4	Cut lengths are despatched to next process following workplace procedures
		3.5	Unused materials are stored as required
		3.6	Workplace required documentation is completed following appropriate procedures
		3.7	Work area is cleaned and damaged tools tagged as required
		3.8	Waste is collected and bundled for recycling/re-use as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving

Tools and equipment include:	• cutting equipment, including scissors and cutting machines
	• measuring and calculating equipment:
	  • tapes
	  • rulers
	  • calculators and computers

Products to be constructed include:	• curtains • drapes • swags • cushions • upholstered furniture components
Personal protective equipment includes:	• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	• workplace procedures relating to the use of tools and equipment • work instructions, including job sheets, cutting lists, plans, drawings and designs • workplace procedures relating to reporting and communication • manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF2001B Cut single layer fabrics.

Assessment Requirements for MSFSF2001 Cut single layer fabrics

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment and products
  - maintain required production output and product quality
- Identify materials used and any special marking out requirements
- Measure accurately and cut fabric quantities to minimise waste and produce consistent quality items for at least five (5) different types of material or product
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work requirements, including workplace standards
- Fabric types, common faults and inspection procedures
- Design features of the finished items in relation to attractive use of fabric patterns
- Cutting equipment and techniques
- Effect of cutting on fabrics

Assessment Conditions

- Assessors must:
  - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
  - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to fabrics, including linings and interlinings, calculator and other workplace calculating and cutting equipment.

MSL915001 Provide information to customers

Modification History

Release 1. Supersedes and is equivalent to MSL915001A Provide information to customers

Application

This unit of competency covers the ability to respond to both internal and external inquiries of a specialised technical nature. The advice and information requested will require the gathering of information, such as trend analysis, collection of data and samples, confirmation of validity of results, and revision of plans or product advice additional to that on data sheets.

This unit of competency is applicable to technical assistants and officers in all industry sectors. All personnel that conduct sampling and testing are required to communicate appropriately with internal and external customers in order to respond effectively to requests of a specialised technical nature.

While no specific licensing or certification requirements apply to this unit at the time of publication, laboratory operations are governed by relevant legislation, regulations and/or external accreditation requirements. Local requirements should be checked.

Pre-requisite Unit

Nil

Competency Field

Communication/organisation

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Assess the request for information and/or advice**	1.1	Clarify and confirm the source, nature and priority of the request
		1.2	Redirect the request to the relevant section, department or person, if appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.3	Record the receipt of the request in accordance with workplace procedures
2	**Prepare response**	2.1	Locate and obtain required information if available
		2.2	If not available, decide whether to obtain or generate the required information given the priority and costs involved
		2.3	Seek required approval/authority to release information before proceeding
3	**Provide information and/or advice**	3.1	Ensure that information is accurate, relevant and complies with workplace/statutory requirements
		3.2	Keep the customer informed of progress when it is not possible to answer immediately
		3.3	Notify other relevant personnel of request and response in accordance with workplace procedures
		3.4	Use most appropriate communication method given priority, cost and customer facilities
		3.5	Provide information in a format suitable to customer
		3.6	Check that the response met the customer's needs and take appropriate actions if required
		3.7	Deal with customers politely, efficiently and appropriately, and in accordance with workplace procedures
4	**Record details of the request and response**	4.1	Record all information details accurately in accordance with workplace procedures
		4.2	Ensure that all written information is accurate and/or legible
		4.3	File all records in the designated place and in accordance with workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standards, codes, procedures and/or workplace requirements

Standards, codes, procedures and/or workplace requirements include the latest version of one or more of:

- Australian and international standards and codes relevant to the laboratory's operations and scope of testing, safety in laboratories, and quality and environmental management
- registration/licensing and/or National Association of Testing Authorities (NATA) accreditation requirements
- work health and safety (WHS) national standards and codes of practice
- workplace documents, such as equipment manuals, laboratory records, certified laboratory reports, and analysis report sheets (past and present)
- workplace procedures governing:
  - receipt of requests
  - release of information and results and confidentiality needs of clients and customers
  - sample collection protocols and techniques for preserving sample integrity
  - handling and collection of native fauna and flora (based on animal welfare legislation and codes of practice)
  - filing systems, databases and laboratory records

Items of equipment or systems

Items of equipment or systems include one or more of:

- telephone, email, intranet, internet and computer software applications (databases and spreadsheets)

Information sources

Information sources include one or more of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- personnel, such as scientists, engineers, technical experts, quality managers, laboratory and production personnel, and customers
- online technical information systems, databases and CD-ROMs
- organisational charts and information directories for staff access (personnel and telephone)

Customers

Customers include one or more of:

- internal and external customers
- members of the public
- other workplaces, such as regulatory authorities

Information provided

Information of a specialised technical nature includes one or more of:

- material classification and characteristics
- technical and/or manufacturing knowledge of procedures
- analysis and/or test results and their interpretation where authority permits
- risk assessment, monitoring and minimisation
- cost, quantity and time estimation
- contractual variations and claims
- site assessment and problems
- data analysis and statistical interpretation

Manufacturing and food processing sector variables

Manufacturing and food processing sector variables include:

- assessing requests for changes to formulations and alterations to production processes
- determining variations and their significance for compliance with relevant standards

Biomedical and environmental sector variables

Biomedical and environmental sector variables include:

- providing responses to inquiries regarding sample collection and protocols from patients, doctors, nurses and environmental health officers, collection staff and/or couriers

WHS and environmental management

WHS and environmental management requirements include:

- complying with WHS and environmental management

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

requirements	requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of samples • accessing and applying current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health, where relevant

Assessment Requirements for MSL915001 Provide information to customers

Modification History

Release 1. Supersedes and is equivalent to MSL915001A Provide information to customers

Performance Evidence

- Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:
- responding to both internal and external inquiries of a specialised technical nature
- correctly assessing and prioritising requests for information
- gathering information and data, such as trend analysis
- confirming the validity of results
- providing authorised information that is accurate, relevant and in the required format
- using technical terminology appropriate to the customer and avoiding jargon
- communicating in an efficient and polite manner, taking into account the needs of the customer
- maintaining security and confidentiality of information

recording and filing records of the request and information provided as required by workplace procedures.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- workplace procedures relating to:
  - customer service
  - communication protocols, including security and confidentiality, cultural and social contexts
  - work health and safety (WHS) and environmental regulations
- workplace business goals and key performance indicators as a basis for dealing with customers
- customer information about workplace products and services
- technical details of methods, data and sample collection and key features of laboratory results.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- This unit of competency is to be assessed in the workplace or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - MSL935003 Authorise the release of test results
- Holistic assessment methods include:
  - examination of written records of advice and information provided by the candidate to a range of internal and external customers
  - feedback from customers that information/advice provided by the candidate was accurate, timely and in an appropriate format
  - feedback from supervisors that workplace procedures for responding to requests for information are followed
- Access is required to instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - information directories and databases
  - workplace documents
  - information technology, including telephone and computer equipment, email and online information systems.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience.
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with a laboratory about performing the competency being assessed within the last twelve months.

MSL936001 Maintain quality system and continuous improvement processes within work or functional area

Modification History

Release 1. Supersedes and is equivalent to MSL936001A Maintain quality system and continuous improvement processes within work/functional area

Application

This unit of competency covers responsibility for the day-to-day operation of the work or functional area and ensuring that quality system requirements are met and continuous improvements are initiated.

This unit of competency is applicable to senior technical officers and laboratory supervisors working in all industry sectors. Quality audits and evaluations for the work area may be undertaken as an individual or as part of a team under broad direction from scientists/medical staff/engineers.

While no specific licensing or certification requirements apply to this unit at the time of publication, laboratory operations are governed by relevant legislation, regulations and/or external accreditation requirements. Local requirements should be checked.

Pre-requisite Unit

Competency Field

Quality

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Develop and maintain quality**	1.1	Distribute and explain information about the workplace's quality system to personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	framework within work area	1.2	Encourage personnel to participate in improvement processes and to assume responsibility for quality outputs
		1.3	Allocate responsibilities for quality within work area in accordance with quality system
		1.4	Provide coaching and mentoring to ensure that personnel are able to meet their responsibilities and quality requirements
2	**Maintain quality documentation**	2.1	Identify required quality documentation, including records of improvement plans and initiatives
		2.2	Prepare and maintain quality documentation and keep accurate data records
		2.3	Maintain document control system for work area
		2.4	Contribute to the development and revision of quality manuals and work instructions for the work area
		2.5	Develop and implement inspection and test plans for quality controlled products
3	**Provide training in quality systems and improvement processes**	3.1	Analyse roles, duties and current competency of relevant personnel
		3.2	Identify training needs in relation to quality system and continuous improvement processes
		3.3	Identify opportunities for skills development and/or training programs to meet needs
		3.4	Initiate and monitor training and skills development programs
		3.5	Maintain accurate training records
4	**Optimise and report performance**	4.1	Review performance outcomes to identify ways in which planning and operations could be improved
		4.2	Enhance customer service through the use of quality improvement techniques and processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.3	Adjust plans and communicate these to personnel involved in their development and implementation
5	**Evaluate relevant components of quality system**	5.1	Undertake regular audits of components of the quality system that relate to the work area
		5.2	Implement improvements in the quality system in accordance with own level of responsibility and workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standards, codes, procedures and/or workplace requirements

Standards, codes, procedures and/or workplace requirements include the latest version of one of more of:

- Australian and international standards, codes and guidelines covering the competence of testing and calibration laboratories, laboratory design and construction, laboratory safety, quality management systems, documentation and plans, environmental management, measurement management, accuracy of measurement methods and results, expression of uncertainty (GUM) and principles of good laboratory practice (GLP)
- national standards and codes of practice for work health and safety (WHS), and national environment protection measures
- national measurement regulations and guidelines
- registration/licensing and/or National Association of Testing Authorities (NATA) accreditation requirements
- industry-specific codes, guidelines, procedures and methods, such as:
  - National Health and Medical Research Council (NHMRC)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Guidelines
    - Association of Analytical Communities International (AOAC International) Official Methods of Analysis
    - Australian code of good manufacturing practice for medicinal products (GMP) and Therapeutic Goods Regulations
    - Australia New Zealand Food Standards (ANZFS) Code
    - gene technology regulations
    - animal welfare legislation and codes of practice
- workplace documents, such as standard operating procedures (SOPs); quality and equipment manuals; calibration and maintenance schedules; material safety data sheets (MSDS) and safety procedures; material, production and product specifications; production and laboratory schedules; workplace recording and reporting procedures; and waste minimisation and safe disposal procedures
- customer-specific product specifications and quality requirements

Quality audits

Quality audits include one or more of:

- regular checks of laboratory procedures
- daily and weekly checks of specimen reception, instrumentation and results for control and standard samples to identify non-conformance and problem areas
- maintenance of appropriate certified reference materials
- participation in external quality assurance programs

Communication

Communication includes one or more of:

- liaising with supervisors, managers and quality managers, laboratory and production staff, customers and suppliers
- providing information, coaching and/or training about quality systems and plans, standards, codes and work practices
- recording information and preparing reports
- liaising with auditors and reporting to regulating authorities

WHS and environmental management requirements

WHS and environmental management requirements include:

- complying with WHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- applying standard precautions relating to the potentially hazardous nature of samples
- accessing and applying current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health, where relevant

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSL936001A Maintain quality system and continuous improvement processes within work/functional area

Assessment Requirements for MSL936001 Maintain quality system and continuous improvement processes within work or functional area

Modification History

Release 1. Supersedes and is equivalent to MSL936001A Maintain quality system and continuous improvement processes within work/functional area

Performance Evidence

- Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:
- ensuring that the quality system requirements of day-to-day operations in the work area are met
- implementing, monitoring and evaluating quality system requirements and initiating continuous improvements within the work area
- applying effective problem identification, problem solving and quality improvement techniques
- gaining commitment of individuals and teams to apply quality principles and practices
- using quality improvement techniques to enhance internal and external customer service
- encouraging ideas and feedback from team members when developing and refining techniques and processes
- analysing training needs and implementing coaching and/or training programs to enhance the performance of individuals and teams
- communicating effectively with supervisors, managers, laboratory and/or production personnel and customers about quality requirements

preparing and maintaining quality and audit documentation.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- workplace business goals and key performance indicators (KPIs)
- workplace organisational structure, delegations and responsibilities, and information management systems
- relevant sections of national and international quality standards, codes and protocols that apply in work area
- workplace quality system, plans and documentation
- continuous/quality improvement techniques, such as Pareto charts; strengths, weakness, opportunities, threats (SWOT) analysis; and plan, do, check, act (PDCA)
- standard operating procedures (SOPs) for the technical work performed in work area
- workplace policy and procedure development processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace communication, recording and reporting procedures
- work health and safety (WHS) and environment requirements.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency must be assessed in a laboratory environment that either meets Australian standards for working laboratories or is accredited by the National Association of Testing Authorities (NATA) or the Royal College of Pathology, as appropriate.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - MSL915001 Provide information to customers
  - MSL916004 Maintain registration and statutory or legal compliance in work or functional area
  - MSL916001 Develop and maintain laboratory documentation
- Holistic assessment methods include:
  - review of quality documentation prepared and maintained by the candidate
  - review of verified reports of improvement initiatives and/or projects conducted by the candidate
  - review of audit processes and outcomes generated by the candidate
  - review of information and training resources prepared by the candidate for personnel in the work area
  - feedback from peers and team members about the candidates ability to encourage participation and provide useful information, coaching and training
  - feedback from supervisors, managers and/or customers that the quality system requirements of day-to-day operations are met in the work area
  - observation of the candidate leading a quality improvement team
  - questions to assess required knowledge of quality systems, documentation, quality tools, continuous improvement processes and relevant workplace procedures.
- Access is required to all instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - documentation, such as sampling plans, workplace quality manual, quality (certification or registration) requirements, quality and customer data, audit documents, performance plans and reports, and training records and/or plans
  - workplace procedures relating to WHS, equal opportunity, environmental legislative requirements, and industrial awards and workplace agreements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competence and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience.
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with a laboratory about performing the competency being assessed within the last twelve months.

MSL973001 Perform basic tests

Modification History

Release 1. Supersedes and is equivalent to MSL973001A Perform basic tests

Application

This unit of competency covers the ability to prepare samples and perform tests and measurements using standard methods with access to readily available advice from supervisors.

This unit of competency is applicable to laboratory/field assistants working in all industry sectors. In general, they do not calibrate equipment and make only limited adjustments to the controls. They do not interpret or analyse results or troubleshoot equipment problems.

While no specific licensing or certification requirements apply to this unit at the time of publication, laboratory operations are governed by relevant legislation, regulations and/or external accreditation requirements. Local requirements should be checked.

Pre-requisite Unit

Nil

Competency Field

Testing

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Interpret test requirements**	1.1 Review test request to identify samples to be tested, test method and equipment involved
		1.2 Identify hazards and workplace controls associated with the sample, preparation methods, reagents and/or equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

2	**Prepare sample**	2.1	Record sample description, compare with specification, record and report discrepancies
		2.2	Prepare sample in accordance with appropriate standard methods
3	**Check equipment before use**	3.1	Set up test equipment in accordance with test method
		3.2	Perform pre-use and safety checks in accordance with workplace procedures and manufacturer instructions
		3.3	Identify faulty or unsafe equipment and report to appropriate personnel
		3.4	Check calibration status of equipment and report any out-of-calibration items to appropriate personnel
4	**Perform tests on samples**	4.1	Identify, prepare and weigh or measure sample and standards to be tested
		4.2	Conduct tests in accordance with workplace procedures
		4.3	Record data in accordance with workplace procedures
		4.4	Perform calculations on data as required
		4.5	Identify and report out of specification or atypical results promptly to appropriate personnel
		4.6	Shut down equipment in accordance with operating procedures
5	**Maintain a safe work environment**	5.1	Use established safe work practices and personal protective equipment (PPE) to ensure personal safety and that of other laboratory personnel
		5.2	Minimise the generation of wastes and environmental impacts
		5.3	Ensure safe disposal of laboratory and hazardous wastes
		5.4	Clean, care for and store equipment and reagents as

required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standards, codes, procedures and/or workplace requirements

Standards, codes, procedures and/or workplace requirements include the latest version of one or more of:

- Australian and international standards covering the requirements for the competence of testing and calibration laboratories, laboratory safety and quality management
- national work health and safety (WHS) standards and codes of practice, and national measurement regulations and guidelines
- standard methods for basic tests
- workplace documents, such as standard operating procedures (SOPs); quality and equipment manuals; calibration and maintenance schedules; material safety data sheets (MSDS) and safety procedures; material, production and product specifications; production and laboratory schedules, workplace recording and reporting procedures; and waste minimisation and safe disposal procedures

Sample preparation

Sample preparation processes include one or more of:

- sub-sampling or splitting using procedures, such as riffling, coning and quartering, manual and mechanical splitters
- diluting samples
- physical treatments, such as ashing, dissolving, filtration, sieving, centrifugation and comminution
- moulding, casting or cutting specimens

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Typical basic tests carried out by laboratory/field assistants

Typical basic tests carried out by laboratory/field assistants include, but are not limited to, one or more of:

- visual/optical tests of appearance, such as colour, texture, identity, turbidity and refractive index (alcohol content and Baume/Brix)
- physical tests, such as:
  - density, specific gravity and compacted density
  - moisture content and water activity
  - particle size, particle shape and size distribution
- chemical tests, such as:
  - gravimetric, colorimetric, electrical conductivity (EC) and pH
  - specific ions using dipsticks and kits
  - nutrients (e.g. nitrates and orthophosphates) using kits
  - ashes, including sulphated ashes
- biological/environmental tests, such as:
  - pH, oxygen reduction potential (ORP), dissolved oxygen (DO) and EC
  - E coli using test kits, and surface hygiene/presence of microbes
- packaging tests, such as:
  - tearing resistance, bursting strength and impact resistance
  - permeability and/or leakage
- mechanical tests, such as:
  - Emerson class
  - concrete slump

Measurements

Measurements include, but are not limited to, one or more of:

- simple ground surveys
- meteorological parameters, such as wind direction/strength, rainfall, maximum/minimum temperature, humidity and solar radiation
- simple background radiation survey
- production/process parameters, such as temperature, flow and pressure
- gas levels in a confined space

WHS and environmental management

WHS and environmental management requirements include:

- complying with WHS and environmental management requirements at all times, which may be imposed through

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

requirements	state/territory or federal legislation. These requirements must not be compromised at any time • applying standard precautions relating to the potentially hazardous nature of samples • accessing and applying current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health, where relevant

Unit Mapping Information

Assessment Requirements for MSL973001 Perform basic tests

Modification History

Release 1. Supersedes and is equivalent to MSL973001A Perform basic tests

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- accurately interpreting workplace procedures and standard methods
- preparing samples using at least three (3) different processes
- performing at least five (5) basic tests or measurements using standard methods and procedures
- checking test equipment before use
- completing all tests within the required timeline without sacrificing safety, accuracy or quality
- demonstrating close attention to the accuracy and precision of measurements and the data obtained
- calculating simple quantities using appropriate equations, units, uncertainties and precision
- recording and presenting results accurately and legibly
- maintaining the security, integrity and traceability of all samples, data/results and documentation
- following procedures for working safely and minimising environmental impacts.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- concepts of metrology, including:
  - all measurements are estimates
  - measurements belong to a population of measurements of the measured parameters
  - precision, accuracy and significant figures
  - sources of error, uncertainty and repeatability
  - traceability
- international system of units (SI)
- purpose of tests performed as part of job role and principles of the standard methods/specifications used
- function of key components of the test equipment, pre-use equipment and safety checks
- sources of uncertainty in measurement and methods for control
- workplace and/or legal traceability requirements
- interpretation and recording of test result, including simple calculations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for recognising and reporting of unexpected or unusual results
- relevant hazards, work health safety (WHS) and environment requirements.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency is to be assessed in the workplace or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - MSL922001 Record and present data
- Holistic assessment methods include:
  - review of the quality of test data/results achieved by the candidate over time
  - inspection of records and workplace documentation completed by the candidate
  - observation of the candidate performing a range of basic tests
  - feedback from peers and supervisors
  - oral or written questioning to check required knowledge of basic test procedures.
- Access is required to instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
- a standard laboratory equipped with basic test equipment, common measuring instruments, materials, standard methods, workplace procedures, MSDS and equipment manuals.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competence and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience.
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with a laboratory about performing the competency being assessed within the last twelve months.

MSL974003 Perform chemical tests and procedures

Modification History

Release 1. Supersedes and is equivalent to MSL974003A Perform chemical tests and procedures

Application

This unit of competency covers the ability to interpret chemical test requirements, prepare samples, conduct pre-use and calibration checks on equipment and perform routine chemical tests/procedures. These tests will involve several measurement steps. The unit includes data processing and interpretation of results and tracking of obvious test malfunctions where the procedure is standardised. However, personnel are not required to analyse data, optimise tests/procedures for specific samples or troubleshoot equipment problems where the solution is not apparent.

This unit of competency is applicable to laboratory or technical assistants and instrument operators in all industry sectors.

While no specific licensing or certification requirements apply to this unit at the time of publication, laboratory operations are governed by relevant legislation, regulations and/or external accreditation requirements. Local requirements should be checked.

Pre-requisite Unit

Nil

Competency Field

Testing

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Interpret and schedule test**	1.1 Review test request to identify samples to be tested, test method and equipment and instruments involved

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	requirements	1.2	Identify hazards and workplace control measures associated with the sample, preparation and test methods, reagents and/or equipment
		1.3	Plan work sequences to optimise throughput of multiple samples
2	**Receive and prepare samples**	2.1	Log samples using standard operating procedures (SOPs)
		2.2	Record sample description, compare with specification and note and report discrepancies
		2.3	Prepare samples and standards in accordance with chemical testing requirements
		2.4	Ensure traceability of samples from receipt to reporting of results
3	**Check equipment before use**	3.1	Set up equipment and instruments in accordance with test method requirements
		3.2	Perform pre-use and safety checks in accordance with relevant workplace and operating procedures
		3.3	Identify faulty or unsafe components and equipment and report to appropriate personnel
		3.4	Check equipment calibration using specified standards and procedures
		3.5	Quarantine out-of-calibration equipment and instruments
		3.6	Ensure reagents required for the test are available and meet quality requirements
4	**Test samples to determine chemical species or properties**	4.1	Operate equipment and instruments in accordance with test method requirements
		4.2	Perform tests or procedures on all samples and standards in accordance with specified methods
		4.3	Shut down equipment and instruments in accordance with operating procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5	**Process and interpret data**	5.1	Record test data noting atypical observations
		5.2	Construct calibration graphs and compute results for all samples from these graphs
		5.3	Ensure calculated values are consistent with expectations
		5.4	Record and report results in accordance with workplace procedures
		5.5	Estimate and document uncertainty of measurement in accordance with workplace procedures
		5.6	Interpret trends in data and/or results and report out-of-specification or atypical results promptly to appropriate personnel
		5.7	Determine if obvious procedure or equipment problems have led to atypical data or results
6	**Maintain a safe work environment**	6.1	Use established safe work practices and personal protective equipment (PPE) to ensure personal safety and that of other laboratory personnel
		6.2	Minimise the generation of wastes and environmental impacts
		6.3	Ensure the safe collection of laboratory and hazardous waste for subsequent disposal
		6.4	Care for and store equipment and reagents as required
7	**Maintain laboratory records**	7.1	Enter approved data into laboratory information management system (LIMS)
		7.2	Maintain confidentiality and security of workplace information and laboratory data
		7.3	Maintain equipment and calibration logs in accordance with workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standards, codes, procedures and/or workplace requirements

Standards, codes, procedures and/or workplace requirements include the latest version of one or more of:

- Australian and international standards covering the requirements for the competence of testing and calibration laboratories, laboratory safety and quality management
- national work health and safety (WHS)standards and codes of practice, and national measurement regulations and guidelines
- standard methods for chemical analysis by gravimetric, titrimetric, spectrometric, chromatographic and electrochemical techniques
- specific codes, guidelines, procedures and methods, such as:
  - Association of Analytical Communities International (AOAC International) Official Methods of Analysis, Royal Australian Chemical Institute (RACI) and/or American Association of Cereal Chemists (AACC) methods for inorganic constituents
  - Australian code of good manufacturing practice for medicinal products (GMP), and principles of good laboratory practice (GLP)
- workplace documents, such as SOPs; quality and equipment manuals; calibration and maintenance schedules; material safety data sheets (MSDS) and safety procedures; material, production and product specifications; production and laboratory schedules; workplace recording and reporting procedures; and waste minimisation and safe disposal procedures

Sample preparation processes

Sample preparation processes include one or more of:

- grinding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- preparation of discs
- digestion, dissolving, refluxing and mulling
- precipitation, filtration, flocculation, evaporation and centrifugation
- washing, drying, tracting and ashing

Non-instrumental tests or procedures

Non-instrumental tests or procedures include one or more of:

- gravimetric analysis
- titrimetric analysis
- filtration, separation and solvent extraction techniques
- corrosion testing, cement content and accelerated weathering

Instrumental tests

Instrumental tests include:

- spectrometry, chromatography and electrochemistry

Types of instrumentation and instrumental techniques

Types of instrumentation and instrumental techniques include one or more of:

- colorimetric techniques, such as enzyme activity, chlorine in water, specific cations and anions
- infrared and ultraviolet-visible (UV-VIS) spectrophotometry
- other spectrometric techniques, such as fluorimetric analysis, flame atomic emission and flame atomic absorption spectrometry, and fourier transform infrared
- chromatographic techniques, such as column and thin layer analytical and preparative chromatography, gas or liquid chromatography, ion chromatography and gel filtration chromatography
- electrochemical techniques, such as pH, eH, conductivity and ion-selective electrodes
- electrophoretic techniques, such as for DNA patterns and determination of protein purity
- soil testing techniques, such as moisture content, organic matter content, specific anions and cations, auto-analysers for determination of total P, total Kjeldahl N, orthophosphate, nitrite/nitrate and ammonia

Chemical test methods

Chemical test methods include one or more of:

- control of starting materials, in-process materials and finished products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- environmental monitoring
- basic troubleshooting and/or problem solving within the scope of SOPs and workplace processes

Safe work practices

Safe work practices include:

- ensuring access to service shut-off points
- recognising and observing hazard warnings and safety signs
- labelling of samples and hazardous materials
- handling and storage for hazardous materials and equipment in accordance with labelling, MSDS and manufacturer instructions
- identifying and reporting operating problems or equipment malfunctions
- cleaning equipment and work areas regularly using workplace procedures
- using PPE, such as hard hats, hearing protection, gloves, safety glasses, coveralls and safety boots
- following established manual handling procedures
- reporting abnormal emissions, discharges and airborne contaminants, such as noise, light, solids, liquids, water/wastewater, gases, smoke, vapour, fumes, odour and particulates to appropriate personnel

WHS and environmental management requirements

WHS and environmental management requirements:

- complying with WHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time
- applying standard precautions relating to the potentially hazardous nature of samples
- accessing and applying current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health, where relevant

Assessment Requirements for MSL974003 Perform chemical tests and procedures

Modification History

Release 1. Supersedes and is equivalent to MSL974003A Perform chemical tests and procedures

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- safely performing at least two (2) different chemical tests or procedures involving several measurement steps
- safely conducting at least three (3) instrumental tests (the same or different)
- interpreting chemical test methods and procedures accurately
- preparing samples using at least three (3) different processes
- maintaining and evaluating reagents
- conducting pre-use and calibration checks on equipment, and quarantining out-of-calibration equipment and instruments
- safely operating test equipment and instruments to workplace standards and manufacturer specifications
- processing data, interpreting gross features of data/results and making relevant conclusions
- preparing calibration graphs and calculating results using appropriate equations, units, uncertainties and precision
- identifying atypical results as either out-of-normal range or an artefact
- tracing and sourcing obvious causes of artefacts, tracking obvious test malfunctions for standardised procedures, and troubleshooting basic equipment and methods
- communicating problems to a supervisor or outside service technician
- recording and communicating results in accordance with workplace procedures
- maintaining security, integrity and traceability of samples, sub-samples, test data, results and documentation
- following workplace safety procedures.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- relevant chemical principles and concepts, such as:
  - ions, atoms, molecules, bonding and links to chemical properties
  - Atomic Mass
  - Moles and Molarity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - chemical formulae and balancing equations
  - chemical reactions involving acid/base, redox, complex ion formation, solubility and equilibrium
  - energy levels and absorption/emission spectra
- purpose of the tests and/or procedures conducted
- concepts of metrology, principles and concepts related to equipment and instrument operation, tests and/or procedures
- function of key components of the equipment and instrument and reagents and effects of modifying equipment and instrument variables
- calibration and basic equipment and method troubleshooting procedures
- sample preparation procedures for the tests and/or procedures conducted
- workplace and/or legal traceability requirements
- relevant hazards, work health and safety (WHS) and environment requirements.

Assessment Conditions

- Judgment of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency is to be assessed in the workplace or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - MSL924001 Process and interpret data
  - MSL974001 Prepare, standardise and use solutions
- Holistic assessment methods include:
  - review of test data and results obtained by the candidate over a period of time to check accuracy, consistency and timeliness of results
  - review of test records and workplace documentation completed by the candidate
  - feedback from peers and supervisors
  - observation of the candidate conducting a range of sample preparations, chemical tests and procedures
  - oral or written questioning of chemical principles and concepts, test methods and workplace procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Access is required to instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - a standard laboratory equipped with appropriate sample preparation and test equipment, instruments, standards and reagents
  - workplace procedures and standard methods
  - records, including test and calibration results; equipment use, maintenance and servicing history, and faulty or unsafe equipment.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competence and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience.
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with a laboratory about performing the competency being assessed within the last twelve months.

MSMBLIC001 Licence to operate a standard boiler

Modification History

Release 1. Supersedes and is equivalent to MSABLIC001 Licence to operate a standard boiler.

Application

This unit specifies the outcomes required to operate a standard boiler safely. This includes boiler start-up, handover, monitoring, shutdown and storage of a boiler that uses a single fuel source and does not have an air pre-heater, feed water heater, superheater, attempurator or desuperheater, simultaneous dual fuel firing capability or economiser attached.

This unit also covers the preparation for inspection procedures as specified in manufacturer recommendations, identification of maintenance requirements and relevant risk control measures.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, High Risk Work, and meets Commonwealth, state and territory high risk work licensing requirements. Any alteration to the unit content or outcomes would result in a unit that is not acceptable to WHS/Occupational Health and Safety (OHS) regulators for the purpose of licensing.

Pre-requisite Unit

Nil

Competency Field

Unit Sector

Boiler operation (licensed)

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element
1	**Plan and prepare**	1.1 Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	for work	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify potential workplace hazards and appropriate risk control measures consistent with appropriate standards to ensure the safety of personnel and equipment
		1.4	Locate and review appropriate records to prepare for boiler operation
		1.5	Identify the type of boiler and plan boiler operations according to procedures
		1.6	Identify appropriate personal protective equipment (PPE) in accordance with SOPs
		1.7	Identify suitable communication methods and confirm with appropriate personnel
2	**Start up boiler**	2.1	Apply risk prevention and risk control measures to the work area according to procedures
		2.2	Select communication equipment and inspect for serviceability
		2.3	Select all necessary equipment and inspect for operational effectiveness according to procedures, including establishing water level
		2.4	Check boiler visually for any damage or defects and report and record any found according to procedures with appropriate action taken
		2.5	Vent boiler to atmosphere prior to start-up, as required
		2.6	Carry out pre-start up checks on the boiler and bring the boiler online safely according to procedures
		2.7	Start up boiler according to procedures
		2.8	Identify maintenance requirements and any visual faults and report according to procedures
		2.9	Confirm, complete and log all maintenance and/or repairs and associated isolations and make the equipment serviceable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	**Monitor boiler operation**	3.1	Diagnose operating status of the boiler
		3.2	Maintain operating log clearly and accurately according to procedures
		3.3	Monitor boiler, valves, fittings and pressure gauges according to procedures
		3.4	Blow boiler water level gauges through both steam and water sides
		3.5	Test standby plant and equipment according to procedures
		3.6	Conduct boiler water quality tests, where required, and record the results according to procedures
		3.7	Adjust boiler water chemicals after tests, where appropriate and required according to procedures and notify downstream users, if necessary
		3.8	Activate the automatic blowdown and, where required, boiler is blown down to adjust total dissolved solids (TDS) levels to recommendations
		3.9	Communicate handover information regarding boiler status and operation clearly to relevant personnel according to procedures
		3.10	Respond immediately to any boiler emergency in accordance with procedures
4	**Shut down boiler**	4.1	Shut down the boiler for inspection according to procedures, as required
		4.2	Identify maintenance requirements and report any visual faults according to procedures
		4.3	Complete isolations associated with in-service maintenance according to procedures
		4.4	Clean boiler internally and externally to manufacturer recommendations and procedures, where required
		4.5	Complete boiler operating log for shutdown

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5	**Store boiler in shutdown mode**	5.1	Identify storage time and condition of storage, where required
		5.2	Store boiler in safe condition for access in accordance with manufacturer recommendations and procedures
		5.3	Test stored boiler water and chemicals, where required, and handle in accordance with procedures, where storage is for extended periods

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Boiler includes:

Fixed and modulating combustion controls and a single heat source. Operation includes a battery of boilers and boilers that have a single thermal or solar heat source.

Note: Boilers meeting the definition of ‘advanced boiler’ are excluded.

Standard boiler includes:

- vessel or an arrangement of vessels and interconnecting parts in which steam and vapour is generated or in which water or other liquid is heated above that of the atmospheric pressure by the application of:
  - fire
  - the products of combustion
  - electrical power
  - similar means
- fixed and modulating combustion controls, fixed and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

modulated air supply, a single fuel source and will have:

- boiler piping
- supports
- mountings
- valves
- gauges
- fittings
- controls
- boiler settings and directly associated equipment

Type of boiler includes one or more of the following:

- fire tube
- water tube
- once through boilers
- waste heat
- electrically heated
- novel or unique

Hazards include one or more of the following:

- asbestos lagging
- chemical hazards
- thermal hazards
- manual handling hazards
- machinery guard requirements
- hot exposed steam pipe
- leakage of steam
- leakage of fuel
- odour of gas
- fumes from a liquid chemical spill
- faulty/broken ladder or hand rail
- working at heights
- flammable liquids
- fire and explosion
- electrical hazards
- work area, including:
  - illumination
  - excessive noise from machinery
  - spillage of oil
  - rubbish and combustibles
  - obstruction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Risk control methods include:	Risk control methods refer to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control: • elimination • substitution • isolation • engineering controls • administrative controls • personal protective equipment (PPE)
Appropriate standards include one or more of the following:	• legislation • codes of practice • manufacturer specifications • Australian Standards • technical standards (International) • industry standards (where applicable)
Procedures include one or more of the following:	• manufacturer guidelines (e.g. instructions, specifications or checklists) • industry operating procedures • workplace procedures (e.g. work instructions, operating procedures or checklists)
Equipment includes one or more of the following:	• gas monitoring equipment • water testing equipment • fire-fighting equipment • workplace first aid equipment • work platform and associated gear, including walkways
Communication methods include one or more of the following:	• verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Appropriate personnel includes one or more of the following:	• production workers • maintenance workers • supervisors and managers • other boiler operators • suppliers • colleagues
Records include one or more of the following:	• operating log books • maintenance records • records of faults and potential faults • isolation procedures • safe operating procedures • daily operating inspections • repairs carried out according to manufacturer recommendations and operating procedures • workplace record keeping requirements • details of any daily or periodic maintenance work • details of yearly programmed or additional maintenance work
Risk control measures include one or more of the following:	• barricades and controls • machine guarding • fall prevention • pedestrian controls • adequate illumination • noise controls • signage • PPE
PPE includes one or more of the following:	• thermally insulated gloves • hard hat protection • ear protection (muffs or plugs) • chemical resistant gloves and apron • respiratory devices • eye protection • working protective gloves • whole body fire-resistant clothing
Communication equipment includes one or more of the	• two-way radios • mobile phones

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

following:

- intercoms
- landline telephones
- pagers
- satellite phones
- computers

Pre-start up checks include:

- testing warning lamps or visual warning indicators
- control panel checks
- checks of feedwater supply system
- fuel supply/heat source system
- operation and position of boiler valves
- combustion air supply system
- boiler water level
- essential fittings and gauges
- selection of PPE
- inspection and location of inspection and explosion doors (where applicable)
- identification of hazards and management of risks and maintenance problems
- fire-fighting equipment
- manufacturer recommendations and checklists
- relevant records and logs

Start-up includes:

- purge boiler furnace
- heat input
- warm-up reticulation system
- venting the boiler of air, where required
- steam traps and steam line purge system operations
- reticulation line pressure
- steam usage and supply

Maintenance includes:

- leaking steam pipe
- pressure gauge accuracy
- exposed electrical wiring
- defective illumination in the workplace
- leaking fuel pump gland
- leaks in high pressure feed line
- leaking gauge glass mounting
- leaking safety valve
- isolation procedures, hardware and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Faults include one or more of the following:

- abnormal operating conditions
- boiler tube failure
- feedwater supply and/or other major auxiliary loss
- wet steam
- high dissolved oxygen
- pH of water
- high conductivity
- actuator or valve mechanical or electrical fault/failure
- instrument failure
- steam leak

Diagnosed includes one or more of the following:

- senses, including:
  - audio
  - smell
  - touch
  - visual
- remote or local indicators and recorders
- computers and alarms, including:
  - visible
  - audible

Operating log includes:

- date and time of checking
- each check, examination and results
- printed and signed name of person who performed the checks
- date and time of any lockout or equipment malfunction
- results of tests on boiler or feedwater
- changes in operation

Valves and fittings include one or more of the following:

- safety valves
- gauge glasses
- main steam stop valve
- feedwater stop valve
- feed check valve
- blowdown valve
- steam side/line drain valves
- flame failure detection device
- water level controller

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- boiler steam pressure gauge

Monitored includes:

- water supply system
- checks of steam reticulation line pressure
- usage and supply of steam
- quality of steam
- combustion/heat source system and management
- feedwater system
- fuel system
- combustion air supply
- water level
- boiler steam pressure
- boiler and steam manifold valves (where fitted)
- soot blowers (where fitted)
- operation of control/safety devices, including control panels

Tested includes one or more of the following:

- response checks
- standby plant ‘cut in’ tests
- valve operating checks
- hydrostatic tests
- performance tests
- alarm and protection tests

Tests include one or more of the following:

- pH levels
- conductivity
- oxygen
- TDS
- hardness
- other contaminants

Chemicals include one or more of the following:

- oxygen scavenger
- feedwater additives
- other chemicals
- hardness
- condensate chemicals
- pH buffers

Handover includes:

- previous load requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- maintenance issue, including equipment isolated for maintenance
- operational incidences
- read operating log
- general inspection of boiler to detect any defects
- accept responsibility of boiler
- noted equipment malfunctions
- required equipment tests

Emergencies include one or more of the following:

- tube failure
- loss of water level
- power failure
- inadequate housekeeping
- explosion
- fire
- bomb threat
- terrorism
- personal accidents
- chemical spills
- major steam leaks
- major water leaks and flooding
- natural disasters
- oil spills

Appropriate emergency response measures include one or more of the following:

- identification of emergency
- isolation of heat source
- selection and application of appropriate fire-fighting equipment and PPE
- notification of downstream users
- operation of boiler only when safe to do so
- notification of appropriate regulatory authorities, including Commonwealth, state, territory and boiler manufacturer

Shutdown includes:

- checks of water level
- cooling down process
- valve settings
- equipment isolation
- boiler pressure/vacuum
- fuel/heat source isolation in accordance with manufacturer recommendations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- boiler post-purge

Storage mode includes:

- wet and dry storing
- open or closed position

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSABLIC001 Licence to operate a standard boiler.

Assessment Requirements for MSMBLIC001 Licence to operate a standard boiler

Modification History

Release 1. Supersedes and is equivalent to MSABLIC001 Licence to operate a standard boiler.

Performance Evidence

Evidence of competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include demonstration of:

- following work instructions, SOPs and safe work practices
- complying with Commonwealth, state and territory work health and safety (WHS) legislation and regulations
- complying with Australian and industry standards, organisation workplace standards, policies and relevant codes of practice requirements at all times
- planning and preparing for work, including identifying potential hazards and implementing appropriate risk control measures
- identifying the type of standard boiler
- reading and interpreting maintenance records, operating logs and safety data sheets (SDS)
- conducting the appropriate pre-start up checks, including identifying all maintenance requirements and visual faults
- using appropriate tools, equipment and PPE in accordance with procedures
- completing all maintenance and rectification requirements in accordance with manufacturers' and workplace procedures, including recording/reporting requirements
- completing the start-up procedures and bringing the boiler online
- monitoring the boiler, including conducting relevant tests and activities and adjusting boiler water quality in accordance with procedures
- interpreting boiler operation tables and figures
- communicating handover of boiler status to appropriate personnel
- demonstrating emergency operating procedures
- identifying all boiler energy sources required to be isolated and made safe for maintenance, inspection and repairs
- applying boiler cleaning and storage techniques.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of PPE
- Commonwealth, state and territory WHS/OHS legislation and approved codes of practice relevant to standard boiler operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Australian and industry standards relevant to standard boiler operation
- basic principles of heat transfer and thermodynamics in relation to boiler operations
- boiler steam equipment operating principles and operating methods
- types and characteristics of feedwater systems and treatment
- types and use of equipment and fittings for operation and maintenance of boilers
- function, purpose and operation of main steam stop valve
- boiler auxiliary equipment characteristics and capabilities
- essential fittings required where more than one boiler is installed (e.g. battery of boilers)
- processes for confirming operational status of a boiler
- workplace communication techniques and procedures
- responsibilities for checking and testing boilers
- location and inspection procedures and techniques for inspection and explosion doors
- steam and boiler hazards for cold start and handover
- hierarchy of risk control
- type and limitations of corrective action and/or adjustments that can be made in response to routine boiler operation problems and emergencies
- various harmful energy sources in boiler operation and the means to effectively isolate these energy sources and make them safe
- modes of boiler storage and procedures for storing boiler in open or closed condition
- SDS and safe chemical handling and storage methods for boiler operation and cleaning
- procedures for cleaning boilers internally and externally, as required
- procedures for recording, reporting and maintenance of workplace records and information.

Assessment Conditions

- Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessments must be conducted in the English language.
- Where possible, assessment of performance should be undertaken in the workplace and/or under realistic workplace conditions that typically reflect:
  - the use of full-scale equipment
  - performing tasks/activities within timelines that would be expected in a workplace
  - standard and authorised work practices, safety requirements and environmental constraints.
- Where this is not possible or where personal safety, plant operation or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Accredited assessors are responsible for ensuring that candidates have access to all tools, equipment, PPE, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

MSMBLIC002 Licence to operate an advanced boiler

Modification History

Release 1. Supersedes and is equivalent to MSABLIC002 Licence to operate an advanced boiler

Application

This unit specifies the outcomes required to operate an advanced boiler safely. This includes boiler start-up, handover, monitoring, shutdown and storage of a boiler.

This unit also covers the preparation for inspection procedures as specified in manufacturer recommendations, identification of maintenance requirements and relevant risk control measures.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, High Risk Work, and meets Commonwealth, state and territory high risk work licensing requirements. Any alteration to the unit content or outcomes would result in a unit that is not acceptable to WHS/Occupational Health and Safety (OHS) regulators for the purpose of licensing.

			maintenance according to procedures
		4.5	Complete boiler operating log for shutdown
5	**Store boiler in shutdown mode**	5.1	Identify storage time and condition of storage, where required
		5.2	Store boiler and associated equipment in safe condition for access in accordance with manufacturer recommendations and procedures
		5.3	Test stored boiler water and chemicals, where required, and handle in accordance with procedures, where storage is for extended periods

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Boiler includes: Boilers covered by this unit are standard boilers and advanced boilers, including boilers defined in *AS 2593:2004 Safety management and supervision systems* and *AS 3873:2001 Pressure equipment – Operation and maintenance* and typically have a modulating combustion air supply and heat source.

Standard boiler includes:

- vessel or an arrangement of vessels and interconnecting parts in which steam and vapour is generated or in which water or other liquid is heated above that of the atmospheric pressure by the application of:
  - fire
  - the products of combustion

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- electrical power
- similar high temperature means

- fixed and modulating combustion controls, fixed and modulated air supply, a single fuel source and will have:
  - boiler piping
  - supports
  - mountings
  - valves
  - gauges
  - fittings
  - controls
  - boiler settings and associated equipment

Advanced boiler includes:

- vessel or an arrangement of vessels and interconnecting parts in which steam and vapour is generated or in which water or other liquid is heated above that of the atmospheric pressure by the application of:
  - fire
  - the products of combustion
  - electrical power
  - similar high temperature means
- fixed and modulating combustion controls, fixed and modulated air supply, multiple fuel sources, pre-heaters, superheaters and economisers and will have:
  - boiler piping
  - supports
  - mountings
  - valves
  - gauges
  - fittings
  - controls
  - boiler settings and directly associated equipment

Hazards include one or more of the following:

- asbestos lagging
- chemical hazards
- thermal hazards
- manual handling hazards
- machinery guard requirements
- hot exposed steam pipe
- leakage of steam

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- leakage of fuel
- odour of gas
- fumes from a liquid chemical spill
- faulty/broken ladder or hand rail
- working at heights
- flammable liquids
- fire and explosion
- electrical hazards
- work area, including:
  - illumination
  - excessive noise from machinery
  - spillage of oil
  - rubbish and combustibles
  - obstruction

Risk control methods include:

Risk control methods refer to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control:

- elimination
- substitution
- isolation
- engineering controls
- administrative controls
- personal protective equipment (PPE)

PPE includes one or more of the following:

- thermally insulated gloves
- hard hat protection
- ear protection (muffs or plugs)
- chemical resistant gloves and apron
- respiratory devices
- eye protection
- working protective gloves
- whole body fire-resistant clothing

Appropriate standards include one or more of the following:

- legislation
- codes of practice
- manufacturer specifications
- Australian Standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• technical standards (International) • industry standards (where applicable)
Procedures include one or more of the following:	• manufacturer guidelines (e.g. instructions, specifications or checklists) • industry operating procedures • workplace procedures (e.g. work instructions, operating procedures or checklists)
Equipment includes one or more of the following:	• gas monitoring equipment • water testing equipment • fire-fighting equipment • workplace first aid equipment • work platform and associated gear, including walkways
Communication methods include one or more of the following:	• verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Appropriate personnel includes one or more of the following:	• production workers • maintenance workers • supervisors and managers • other boiler operators • suppliers • colleagues
Records include one or more of the following:	• operating log books • maintenance records • records of faults and potential faults • isolation procedures • safe operating procedures • daily operating inspections • repairs carried out according to manufacturer recommendations and operating procedures • workplace record keeping requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• details of any daily or periodic maintenance work • details of yearly programmed or additional maintenance work
Risk control measures include one or more of the following:	• barricades and controls • machine guarding • fall prevention • pedestrian controls • adequate illumination • noise controls • signage • PPE
Communication equipment includes one or more of the following:	• two-way radios • mobile phones • intercoms • landline telephones • pagers • satellite phones • computers
Pre-start up checks include:	• testing warning lamps or visual warning indicators • control panel checks • checks of feedwater supply system • fuel supply/heat source systems • operation and position of boiler valves • combustion air supply system • boiler water level • essential fittings and gauges • selection of personal protective equipment • inspection and location of inspection and explosion doors (where applicable) • identification of hazards and management of risks and maintenance problems • fire-fighting equipment • manufacturer recommendations and checklists • relevant records and logs
Associated equipment includes one or more of	• multiple fuel sources • pre-heater • superheater

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

the following:

- economiser
- superheater safety valves
- economiser relief valves
- air heater
- feedwater heater
- attemperator
- main steam stop valve

Start-up includes:

- purge boiler furnace
- heat input
- warm-up reticulation system
- venting the boiler of air, as required
- steam traps and steam line purge system operations
- reticulation line pressure
- steam usage and supply
- superheater
- air heater
- feedwater heater
- economiser

Maintenance includes:

- leaking steam pipe
- pressure gauge accuracy
- exposed electrical wiring
- defective illumination in the workplace
- leaking fuel pump gland
- leaks in high pressure feed line
- leaking gauge glass mounting
- leaking safety valve
- isolation procedures, hardware and equipment

Faults include one or more of the following:

- abnormal operating conditions
- boiler tube failure
- feedwater supply and/or other major auxiliary loss
- wet steam
- high dissolved oxygen
- pH of water
- high conductivity
- actuator or valve mechanical or electrical fault/failure
- instrument failure
- steam leak

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- associated equipment failure

Diagnosed includes one or more of the following:

- senses, including:
  - audio
  - smell
  - touch
  - visual
- remote or local indicators and recorders
- computers and alarms, including:
  - visible
  - audible

Operating log includes:

- date and time of checking
- each check, examination and results
- printed and signed name of person who performed the checks
- date and time of any lockout or equipment malfunction
- results of tests on boiler or feedwater
- changes in operation

Valves and fittings include one or more of the following:

- safety valves
- gauge glasses
- main steam stop valve
- feedwater stop valve
- feed check valve
- blowdown valve
- steam side/line drain valves
- flame failure detection device
- water level controller
- boiler steam pressure gauge
- economiser relief valve
- superheater safety valve

Monitored includes:

- water supply system
- checks of steam reticulation line pressure
- usage and supply of steam
- quality of steam
- combustion/heat source system and management
- feedwater system and condensate returns
- fuel system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- combustion air supply
- water level
- boiler steam pressure
- boiler and steam manifold valves
- soot blowers
- operation of control/safety devices, including control panels

Tested includes one or more of the following:

- response checks
- standby plant ‘cut in’ tests
- valve operating checks
- hydrostatic tests
- performance tests
- alarm and protection tests

Tests include one or more of the following:

- pH levels
- conductivity
- oxygen
- TDS
- hardness
- other contaminants

Chemicals include one or more of the following:

- oxygen scavenger
- feedwater additives
- other chemicals
- hardness
- condensate chemicals
- pH buffers

Handover includes:

- previous load requirements
- maintenance issue, including equipment isolated for maintenance
- operational incidences
- read operating log
- general inspection of boiler to detect any defects
- accept responsibility of boiler
- noted equipment malfunctions
- required equipment tests

Emergencies include one

- tube failure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

or more of the following:	• loss of water level • power failures • inadequate housekeeping • explosion • fire • bomb threat • terrorism • personal accidents • chemical spills • major steam leaks • major water leaks and flooding • natural disasters • oil spills
Appropriate emergency response measures include one or more of the following:	• identification of emergency • isolation of heat source • selection and application of appropriate fire-fighting equipment and PPE • notification of downstream users • operation of boiler only when safe to do so • notification of appropriate regulatory authorities, including Commonwealth, state, territory and boiler manufacturer
Shutdown includes:	• checks of water level • cooling down process • valve settings • equipment isolation • boiler pressure/vacuum • fuel/heat source isolation in accordance with manufacturer recommendations • boiler post-purge
Storage mode includes:	• wet and dry storing • open or closed position

Assessment Requirements for MSMBLIC002 Licence to operate an advanced boiler

Modification History

Release 1. Supersedes and is equivalent to MSABLIC002 Licence to operate an advanced boiler

Performance Evidence

Evidence of competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include demonstration of:

- following work instructions, SOPs and safe work practices
- complying with Commonwealth, state and territory work, health and safety (WHS) legislation and regulations
- complying with Australian and industry standards, organisation workplace standards, policies, relevant codes of practice requirements at all times
- planning and preparing for work, including identifying potential hazards and implementing appropriate risk control measures
- identifying the type of standard or advanced boiler and associated equipment
- reading and interpreting maintenance records, operating logs and safety data sheets (SDS)
- conducting the appropriate pre-start up checks, including identifying all maintenance requirements and visual faults
- using appropriate tools, equipment and PPE in accordance with procedures
- completing all maintenance and rectification requirements in accordance with manufacturers' and workplace procedures, including recording/reporting requirements
- completing the start-up procedures and bringing the boiler online
- monitoring the boiler and associated equipment, including conducting relevant tests and activities and adjusting boiler water quality in accordance with procedures
- interpreting advanced boiler operation tables and figures
- communicating handover of boiler status and associated equipment to appropriate personnel
- demonstrating emergency operating procedures
- identifying all boiler energy sources required to be isolated and made safe for maintenance, inspection and repairs
- applying advanced boiler cleaning and storage techniques.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of PPE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Commonwealth, state and territory WHS/OHS legislation and approved codes of practice relevant to standard and advanced boiler operation
- Australian and industry standards relevant to standard and advanced boiler operation
- basic principles of heat transfer and thermodynamics in relation to standard and advanced boiler operation
- standard and advanced boiler operation steam equipment operating principles and operating methods
- types and characteristics of multiple fuel systems for standard and advanced boilers
- types and characteristics of feedwater systems and treatment, including de-aerator
- types and use of equipment and fittings for operation and maintenance of boilers
- function, purpose and operation of the following:
  - pre-heater
  - superheater
  - economiser
  - air heater
  - feedwater heater
  - attemperator
  - superheater safety valves
  - economiser relief valves
  - main steam stop valve
- standard and advanced boiler and auxiliary equipment characteristics and capabilities
- essential fittings required where more than one boiler is installed (e.g. battery of boilers)
- processes for confirming operational status of a boiler
- workplace communication techniques and procedures
- responsibilities for checking and testing advanced boilers
- location and inspection procedures and techniques for inspection and explosion doors
- steam and boiler hazards for cold start and handover
- hierarchy of risk control
- type and limitations of corrective action and/or adjustments that can be made in response to routine boiler operation problems and emergencies
- various harmful energy sources in standard and advanced boiler operation and the means to effectively isolate these energy sources and make them safe with particular consideration to advanced boilers
- modes of standard and advanced boiler storage and procedures for storing boiler in open or closed condition
- SDS and safe chemical handling and storage methods for boiler operation and cleaning
- procedures for cleaning boilers internally and externally, where required
- procedures for recording, reporting and maintenance of workplace records and information.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessments must be conducted in the English language.
- Where possible, assessment of performance should be undertaken in the workplace and/or under realistic workplace conditions that typically reflect:
  - the use of full-scale equipment
  - performing tasks/activities within timelines that would be expected in a workplace
  - standard and authorised work practices, safety requirements and environmental constraints.
- Where this is not possible or where personal safety, plant operation or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Accredited assessors are responsible for ensuring that candidates have access to all tools, equipment, PPE, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

MSMENV172 Identify and minimise environmental hazards

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP172A Identify and minimise environmental hazards

Application

This unit of competency covers the skills and knowledge required to identify activities and/or materials that present an environmental threat and to take the appropriate action according to procedures.

This unit of competency applies to all personnel who are required to work within environmental regulatory requirements which are reflected in the organisation's policies and procedures.

It applies to an individual working alone or as part of a team or group and working in liaison with other team members and supervisors.

This unit of competency applies to all plants and areas of operation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	Identify environmental threats	1.1	Recognise the type and severity of environmental threat posed by the materials and processes used for own work
		1.2	Identify ways materials used may enter the environment
		1.3	Identify sensitive features of the local environment and their impact on work practice and procedures
		1.4	Recognise abnormal or unacceptable emission levels
2	Identify workplace procedures and policies to minimise environmental threats	2.1	Identify workplace policy for environmental protection
		2.2	Identify environmental protection measures within standard operating procedures (SOPs) relevant to work
		2.3	State contact procedures for personnel involved in environmental response teams
3	Follow procedures to minimise environmental threats	3.1	Implement environmental protection measures in relevant procedures
		3.2	Report abnormal emissions/environmental issues to appropriate personnel
		3.3	Apply containment procedures in accordance with SOPs, where appropriate
		3.4	Implement waste management procedures and practices
		3.5	Follow safety procedures and use personal protective equipment (PPE)

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- SOPs
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Tools and equipment

Tools and equipment include:

- personal protective equipment (PPE)
- spill kits

Emissions

Abnormal or unacceptable emission levels include one of more of the following:

- excessive noise
- light
- odours
- gases/vapours
- visible smoke/vapour
- liquid and solids

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- particulates
- fumes

Assessment Requirements for MSMENV172 Identify and minimise environmental hazards

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP172A Identify and minimise environmental hazards

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- recognise and report environmental threats
- communicate using in-plant reporting systems (verbal, electronic or written)
- select and use containment equipment
- select and use personal protective equipment (PPE).

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - environmental protection and reporting requirements
  - safety, emergency and hazard controls
- type and severity of environmental threats, including contribution to climate change and other macro threats that can arise from materials and work processes used
- environmental protection measures required to minimise threats
- types of emissions relevant to job role and permissible levels.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMENV272 Participate in environmentally sustainable work practices

Modification History

Release 1. Supersedes and is equivalent to MSAENV272B Participate in environmentally sustainable work practices

Application

This unit of competency covers the skills and knowledge required to effectively find out current resource use and carry out improvements, in own work area, including those that reduce the negative environmental impacts of work practices.

This unit of competency applies to operators/team members who are required to follow procedures to work in an environmentally sustainable manner. This maximises the environmental performance of the process and the organisation, ensures regulatory compliance, and aims to minimise environmental risks and impacts.

This unit of competency applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office and warehouse. This unit will need to be contextualised for the industry sector, organisation and section.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Identify current resource use and environmental issues**	1.1	Identify workplace environmental and resource efficiency issues
		1.2	Identify resources used in own work role
		1.3	Find out current usage of resources
2	**Comply with environmental regulations**	2.1	Read and follow environmental policies and procedures to ensure compliance with federal, state/territory and local government laws, by-laws, regulations and mandated codes of practice, and codes and standards that the organisation applies voluntarily
		2.2	Ask questions and seek clarification relating to environmental work requirements
		2.3	Identify incidents, including breaches or potential breaches of environmental regulations and occurrences outside of standard procedures, and report to appropriate personnel
		2.4	Report environmental incidents using workplace forms and procedures
3	**Seek opportunities to improve environmental practices and resource efficiency**	3.1	Follow workplace procedures to improve environmental practices and resource efficiency
		3.2	Make suggestions for improvements to environmental workplace practices and work plans

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Environmental and resource efficiency issues

Environmental and resource efficiency issues include minimisation of environmental risks and maximisation of opportunities to improve business environmental performance and to promote more efficient

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

production and consumption of natural resources. They include one or more of the following:

- minimisation of waste through implementation of the waste management hierarchy
- contribution to climate change and other macro threats that can arise from materials and work processes used
- efficient and effective use of energy and other resources
- seeking alternative sources of energy
- efficient use of materials and appropriate disposal of waste
- use of controls to minimise the risk of environmental damage from hazardous substances
- efficient water use
- reducing emissions
- life cycle analysis applied to issues, such as energy supply, materials, transport and production

Assessment Requirements for MSMENV272 Participate in environmentally sustainable work practices

Modification History

Release 1. Supersedes and is equivalent to MSAENV272B Participate in environmentally sustainable work practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and must include the ability to:

- find out resources used in own job, including one or more of:
  - making simple measurements, consistent with the job
  - counting the number of items entering/leaving a work area
  - reading indicators in the work area
  - obtaining relevant information from support personnel
- follow environmental policies and identify potential breaches of environmental regulations
- suggest improvements within the limit of own authority.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- a basic understanding of:
  - sustainability
  - the contribution to climate change and other macro threats that can arise from materials and work processes used
- the environmental hazards/risks, resource use and inefficiencies associated with own workplace and job
- the relevant environmental and resource efficiency policies and procedures for own work area
- the impact of laws and regulations at a level relevant to the work context.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor /third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - will typically include the use of appropriate tools, equipment and documents
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMENV472 Implement and monitor environmentally sustainable work practices

Modification History

Release 1. Supersedes and is equivalent to MSAENV472B Implement and monitor environmentally sustainable work practices

Application

This unit of competency covers the skills and knowledge required to effectively analyse the workplace in relation to environmentally sustainable work practices, and to implement improvements and monitor their effectiveness.

This unit of competency applies to those who have responsibility for a specific area of work or who lead a work group or team. It addresses the knowledge, processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools.

It includes identifying areas for improvement, developing plans to make improvements, and implementing and monitoring improvements in environmental performance.

This unit of competency applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office and warehouse. This unit will need to be appropriately contextualised as it is applied across an organisation and across different industry sectors.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Investigate current practices in relation to resource usage**	1.1	Identify environmental regulations applying to the enterprise
		1.2	Assess procedures for assessing compliance with environmental regulations
		1.3	Collect information on environmental and resource efficiency systems and procedures and provide to the work group, as required
		1.4	Measure and record current resource usage by members of the work group
		1.5	Analyse and record current purchasing strategies
		1.6	Analyse current work processes to access information and data, and assist in identifying areas for improvement
2	**Set targets for improvements**	2.1	Seek input from stakeholders, key personnel and specialists
		2.2	Access external sources of information and data as required
		2.3	Evaluate alternative solutions to workplace environmental issues
		2.4	Set efficiency targets
3	**Implement performance**	3.1	Source and use techniques/tools to assist in achieving targets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	improvement strategies	3.2	Apply continuous improvement strategies to own work area of responsibility, and communicate ideas and possible solutions to the work group and management
		3.3	Integrate environmental and resource efficiency improvement plans for own work group with other operational activities and implement them
		3.4	Seek suggestions and ideas about environmental and resource efficiency management from stakeholders and act upon them where appropriate
		3.5	Implement costing strategies to fully value environmental assets
4	**Monitor performance**	4.1	Document outcomes and communicate reports on targets to key personnel and stakeholders
		4.2	Evaluate strategies and environmental performance, including breaches or potential breaches of regulations and occurrences outside of standard procedure which may lead to lower environmental performance
		4.3	Set new targets and investigate and apply new tools and strategies
		4.4	Promote successful strategies and reward participants where possible

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for MSMENV472 Implement and monitor environmentally sustainable work practices

Modification History

Release 1. Supersedes and is equivalent to MSAENV472B Implement and monitor environmentally sustainable work practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- investigate/analyse resource usage
- evaluate improvement alternatives and set targets
- implement improvements within the limit of own authority
- monitor the performance of improvements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- relevant environmental and resource efficiency issues, specific to industry practices, including:
  - contribution to climate change and other macro threats that can arise from materials and work processes used
  - regulated environmental issues
  - issues relevant to licencing conditions
- best practice environmental approaches relevant to own area of responsibility
- methods for measuring and calculating resource usage.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

MSMENV672 Develop workplace policy and procedures for environmental sustainability

Modification History

Release 1. Supersedes and is equivalent to MSAENV672B Develop workplace policy and procedures for environmental sustainability

Application

This unit of competency covers the skills and knowledge required to develop and implement a workplace sustainability policy, including the modification of the policy to suit changed circumstances.

This unit of competency applies to team leaders/supervisors/managers who are required to develop approaches to environmental sustainability within workplaces, including the development and implementation of policy.

It includes communicating with relevant stakeholders, developing and monitoring sustainability policies and reviewing and improving sustainability policies.

This unit of competency applies to all sectors of the manufacturing industry. It may also be applied to all sections of an organisation, including the office and warehouse. This unit will need to be appropriately contextualised as it is applied across an organisation and across different industry sectors.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

- develop a workable implementation strategy
- ensure policy implementation is monitored, reviewed and modified where

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- relevant policy development and implementation processes and practices
- principles, practices and available tools and techniques of sustainability management relevant to the particular industry context.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMOPS100 Use equipment

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS100A Use equipment

Application

This unit of competency covers the skills and knowledge required to use an item of equipment which is operated with limited application of knowledge.

This unit of competency applies to all persons who have the responsibility for using equipment where they are not required to have any significant understanding of the equipment or the process. Where greater levels of understanding and interaction are required, then the appropriate *MSMOPS2# series* operations unit of competency should be used.

In a typical situation the operator may be using, for example, a packaged chilled water refrigeration unit to supply chilled water to the plant. The operator uses simple controls and responds to fault alarms built into the equipment. Even though the equipment may be very sophisticated (e.g. using high-speed compressors and computerised monitoring and control equipment) the operator interface is relatively simple. The operator is expected to simply regard this equipment as a black box – they may know what it does, but little detail on how it does it.

This unit of competency has been written to apply to fluids as well as solids and may be applied wherever ‘black box’ equipment is used.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Follow workplace procedures	1.1	Find out what is required for the job
		1.2	Identify and follow appropriate procedures
		1.3	Complete all reporting as required.
		1.4	Recognise and report hazards and anything unusual
2	Monitor and use the equipment/ process	2.1	Turn the equipment on and off as required by procedure
		2.2	Monitor equipment throughout the job using measurements, readings and senses as appropriate.
		2.3	Recognise routine problems
		2.4	Take appropriate corrective action

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures All operations must be performed in accordance with relevant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Equipment

Equipment includes one or more of the following:

- compressors (packaged plant)
- refrigeration (packaged plant)
- fans
- blowers
- portable generators
- air conditioning units
- other equipment with similar operating requirements

Hazards

Hazards include one or more of the following:

- slip/trip hazards
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- flammability and explosivity
- hazardous products and materials
- sharp edges, protrusions or obstructions, swarf and scrap
- extreme weather
- other hazards that might arise

Hazard controls

Hazard controls include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- use of personal protective equipment (PPE)
- ensuring equipment is in safe condition
- reporting potential hazards to appropriate personnel

Routine problems

Routine problems must be reported and corrective action taken according to relevant procedures.

Routine problems include one or more of the following:

- deviations from standard/desired conditions
- alarms

Corrective actions

Corrective actions include one or more of the following:

- reporting to an appropriate person
- taking action specified in the procedure

Appropriate personnel

Appropriate personnel include one or more of the following:

- supervisor
- more senior operator
- other designated personnel

Reporting methods

Reporting methods include one or more of the following:

- verbal
- written

Using equipment

Using equipment includes monitoring, adjusting/changing the equipment as required, by one or more of the following:

- manually in the plant
- using local controller in the plant
- using the process control system in the control room

Assessment Requirements for MSMOPS100 Use equipment

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS100A Use equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and demonstrate the ability to:

- recognise and control hazards
- monitor key variables as relevant to the equipment, including one or more of:
  - equipment production outputs
  - equipment operating conditions
- recognise deviations and/or abnormal operating conditions and take specified action/alert the appropriate individuals
- identify routine problems and report or take corrective action, where appropriate.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards and hazard controls specific to the work area
- correct methods of operating and controlling the equipment
- process parameters, limits and alarms (e.g. temperature, pressure, flow and pH) to the extent relevant to operating this equipment

routine problems that may arise in the job/work environment and corrective action appropriate to the problem cause.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMOPS101 Make measurements

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS101A Make measurements

Application

This unit of competency covers the skills and knowledge required to use physical and/or chemical measuring equipment to make or take routine measurements and keep records related to the measurements.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all routine measurements within manufacturing and similar environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

	measurements		required
		1.3	Check measuring equipment is in calibration
2	**Perform measurements**	2.1	Identify and take account of relevant external factors
		2.2	Perform measurements using appropriate techniques
		2.3	Compare measurements against the range of expected results
		2.4	Self-check numerical information for accuracy and correctness
3	**Record measurements as required**	3.1	Accurately record the result in the appropriate format
		3.2	Record the result to the appropriate level of detail
4	**Respond to routine problems in accordance with procedures**	4.1	Recognise known problems that occur during the measurement
		4.2	Identify and take action on causes of routine problems
		4.3	Log problems as required
		4.4	Identify non-routine problems and report to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of

the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Measuring equipment

Measuring equipment includes one or more of the following:

- gauges
- dip-sticks
- thermometers
- weighing scales
- length/thickness measuring devices

Measurements

Measurements include one or more of the following:

- extent
- dimension
- quantity
- mass
- capacity
- capability

Routine problems

Routine problems must be reported and corrective action taken according to relevant procedures.

Routine problems include one or more of the following:

- measuring instrument not fit for use (e.g. not within calibration)
- appropriate measuring device not available
- deviations from normal range of readings
- effect of temperature on material properties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Corrective actions

Corrective actions include one or more of the following:

- reporting to an appropriate person
- taking action specified in the procedure

Appropriate personnel

Appropriate personnel includes one or more of the following:

- supervisor
- more senior operator
- other designated personnel

Assessment Requirements for MSMOPS101 Make measurements

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS101A Make measurements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- select appropriate measuring device
- check equipment is within calibration
- take accurate measurements
- check accuracy of own work and complete workplace forms
- report routine problems and take corrective action, where appropriate.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- basic units of measurement, such as
  - kilogram
  - metre
  - second
- types and application of measuring devices, including range of results that may be obtained
- the need for calibration
- methods of checking equipment is within calibration
- routine problems that may arise in the job/work environment and corrective action appropriate to the problem cause.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - 'what ifs'.

MSMOPS102 Perform tasks to support production

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS102A Perform tasks to support production

Application

This unit of competency covers the skills and knowledge required to perform tasks in support of the production process working under close supervision.

This competency applies to personnel who are not operating equipment but are making products or contributing to the production process through predominantly manual tasks. These tasks might be referred to as 'fetch and carry' type tasks.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate. It might also apply to a more experienced operator working outside their field of expertise and under close supervision.

The competency applies to all sectors of the manufacturing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Tools and equipment

Tools and equipment include one or more of the following:

- cleaning equipment
- detergents and other chemicals
- simple hand and power tools
- hand trolleys pallet trucks

Note that production equipment and complex equipment, such as forklifts, overhead cranes or front-end loaders, are not covered by this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Loading and unloading aids

Loading and unloading aids include equipment other than regulated load shifting equipment.

Loading and unloading aids must conform to materials handling requirements, safe work practices and manual handling techniques and workplace procedures.

Hazards

Hazards include one or more of the following:

- manual handling injuries
- slip/trip hazards
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Routine problems

Routine problems must be reported and corrective action taken according to relevant procedures.

Routine problems include one or more of the following:

- difficult access to the work area
- awkward work spaces
- tool failures or breakages
- defective equipment
- incorrect or defective materials
- wrong quantities of materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Corrective actions	Corrective actions include one or more of: • reporting to an appropriate person • taking action specified in the procedure
Appropriate personnel	Appropriate personnel includes one or more of: • supervisor • more senior operator • other designated personnel

Assessment Requirements for MSMOPS102 Perform tasks to support production

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS102A Perform tasks to support production

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- follow procedures to work safely, including:
  - selecting and using personal protective equipment (PPE)
  - locating and transporting materials and products
  - selecting and using equipment and tools
  - undertaking basic tasks to meet standards
  - identifying hazards and applying control measures
- clarify and confirm tasks and procedures
- recognise labels and signs
- identify routine problems and take corrective action, where appropriate
- complete forms and documentation.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including:
- safety, emergency and hazard control
- relevant organisation standard operating procedures (SOPs)
- hazards that may arise in the job/work environment, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- types and application of PPE relevant to job/work environment
- safe handling of materials relevant to job
- types and application of equipment and criteria for determining good working condition
- routine problems that may arise in the job/work environment and corrective action appropriate to the problem cause
- reporting procedures.

MSMOPS200 Operate equipment

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS200A Operate equipment

Application

This unit of competency covers the skills and knowledge required to operate a single unit operation/plant item/item of equipment. It is for items of equipment/plant items/unit operations which are not otherwise covered in this Training Package and may be organisation specific.

This unit of competency applies to a person who has the responsibility for undertaking the routine operation of an individual unit of equipment or a plant item. Typically the person will be an ‘outside’ or ‘field’ operator; however, the unit may also be applied to ‘panel’ or ‘control room’ operators.

The operator will be required to operate to organisation requirements, resolve routine problems in accordance with procedures and meet quality standards and other workplace requirements.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency requires a detailed knowledge about the item being operated and some knowledge about related items and processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Prepare for work**	1.1	Receive and give shift handover
		1.2	Identify and clarify work requirements
		1.3	Identify and control hazards
		1.4	Coordinate with appropriate personnel
		1.5	Check for recent work undertaken on plant item
		1.6	Note any outstanding/incomplete work
		1.7	Check operational status of equipment/plant item
2	**Operate equipment/ plant item**	2.1	Identify the types of equipment/plant item and its duty
		2.2	Complete routine checks, logs and paperwork taking appropriate action on unexpected readings
		2.3	Adjust equipment/plant item as required, appropriate to type of equipment/plant item and duty
		2.4	Change rate, grade or specification smoothly as required
		2.5	Charge/discharge equipment/plant item as required
3	**Recognise and take appropriate action on abnormal situations**	3.1	Monitor equipment/plant item frequently and critically throughout shift using measured/indicated data and senses as appropriate
		3.2	Identify impacts of any changes upstream and downstream
		3.3	Identify impacts of upstream/downstream changes on the equipment/plant item
		3.4	Recognise situations which may require action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.5	Resolve routine problems
		3.6	Take appropriate actions on other abnormal situations to make safe and have the situation resolved
4	**Isolate and de-isolate equipment/plant item in accordance with procedures**	4.1	Complete any required pre-start checks
		4.2	Start up/shut down/changeover equipment/plant item according to the equipment/plant type and duty in liaison with other personnel
		4.3	Isolate equipment/plant item
		4.4	Make equipment/plant item safe for required work
		4.5	Check equipment/plant item is ready to be returned to service
		4.6	Prepare equipment/plant item for return to service

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Operate Operate includes monitoring, adjusting/changing the equipment/plant item to meet requirements by one or more of the following:

- manually in the plant
- using local controller in the plant
- using the process control system in the control room

Hazards Hazards include one or more of the following:

- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Routine problems Routine problems must be resolved by applying known solutions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults
- mould/tooling problems

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures

Product

Product includes one or more of the following:

- output from a process which is feed for another process
- output from a process which is feed/stock for another organisation
- output from a process which goes to a final customer

Release 1. Supersedes and is equivalent to MSAPMOPS200A Operate equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- confirm personal work requirements for shift
- identify hazards and apply relevant hazard controls
- monitor equipment operation and product quality
- recognise situations requiring action and take the appropriate action
- apply known solutions to routine problems
- communicate effectively with team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- principles of operation of equipment/plant:
  - impact of type and duty
  - potential effects of variations in raw materials and equipment operation in relation to quality of product
  - factors which may affect product quality or production output and appropriate remedies
- reasons for checking process control panels and reporting readings which do not conform to the work instructions.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include the use of an appropriate industrial item of equipment requiring demonstration of operation, start-up and shutdown procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMOPS201 Cut polymer materials

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS201A Cut polymer materials

Application

This unit of competency covers the skills and knowledge required to prepare and operate specialised equipment and apply procedures to cut polymer materials, such as sheet, pipe or rod, to size, shape or to a pattern.

The operator will be required to make products to meet quality standards and workplace requirements and resolve routine problems according to procedures.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

	requirements	1.2	Identify product, materials and equipment requirements for job
		1.3	Identify and control hazards
		1.4	Check with supervisor/appropriate person if requirements are not in accordance with usual practice
2	Conduct pre-cutting operations in accordance with procedures	2.1	Check raw materials are correct
		2.2	Mark out/lay out job for cutting taking account of directional properties in materials as appropriate
		2.3	Undertake other pre-cutting requirements in accordance with procedures
3	Cut to requirements	3.1	Cut materials using cutting tools/equipment in accordance with procedures
		3.2	Monitor dimensions, shape, quality and quantity of cuts
		3.3	Collect material which is able to be recycled or reused, separate and dispose of waste and scrap
4	Resolve routine problems	4.1	Identify likely problems during the operation/task
		4.2	Resolve routine problems in accordance with procedures
		4.3	Take appropriate action on other problems
		4.4	Complete required records in accordance with procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Work requirements

Work requirements will be determined from one or more of the following:

- job/shop orders
- plans/specifications
- procedures
- directions from authorised persons
- meeting (e.g. toolbox meeting)
- any similar instructions provided for the smooth running of the plant.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Tools and equipment

Tools and equipment include one or more of the following:

- guillotines

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- power saws
- jig saws
- band saws
- thermal cutting devices
- hand tools
- controllers, such as programmable logic controller (PLC), for tools and equipment fitted

Hazards

Hazards include one or more of the following:

- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- fire and explosion
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- incorrect pattern and marking errors
- equipment wear and breakage, temperature variations, loss of power or drives, controller sequence and timer issues
- sequencing problems

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to relevant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

procedures.

Records Records include one or more of the following:

- log books/sheets
- electronic records
- job/work sheets
- other records used for the smooth running of the plant.

Assessment Requirements for MSMOPS201 Cut polymer materials

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS201A Cut polymer materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- set up and operate equipment according to procedures
- identify hazards and apply relevant hazard controls
- monitor equipment operation and product quality
- identify and take action on problems in accordance with procedures
- cut polymer materials to correct size, shape or pattern
- apply known solutions to routine problems
- complete workplace forms.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- potential effects of variations in raw materials and equipment operation in relation to quality of product
- factors which may affect product quality or production output and appropriate remedies
- directional properties of polymers as relevant to the job
- different types of materials and their behaviour when cut
- different cutting equipment and suitability for materials
- controls of cutting equipment.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor /third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - will typically include the use of an appropriate industrial item of equipment requiring demonstration of operation and responding to problems
  - may use industry based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMOPS202 Fabricate polymer products

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS202A Fabricate polymer materials

Application

This unit of competency covers the skills and knowledge required to fabricate products using polymer materials to a specified shape and resolve routine problems using defined procedure.

This unit of competency applies to operators who are involved in the fabrication of polymer materials, typically sheet, pipe or rod, into specified shapes, and applies to an individual working alone or as part of a team or group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Work requirements Work requirements will be determined from one or more of the following:

- job/shop orders
- plans/specifications
- procedures
- other processes used in an enterprise

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Polymer fabrication Polymer fabrication includes one or more of the following:

- forming processes, such as bending, heating, holding in a jig fixture or other methods of achieving the required shape
- mechanical, chemical, thermal or other fixing methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Tools and equipment

Tools and equipment include one or more of the following:

- power saws, jig saws and thermal cutting devices
- drilling, riveting, bolting and stitching
- hand tools
- relevant personal protective equipment (PPE)

Hazards

Hazards include one or more of the following:

- heat, smoke, dust or other atmospheric hazards
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions, swarf and scrap
- slippery surfaces, spills or leaks
- extreme weather
- fibres (airborne and handled)
- manual handling
- power tools, leads and power supplies
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- pattern incorrect
- marking errors
- wear and breakage
- loss of power or drives
- controller sequence and timer issues
- sequencing problems

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

relevant procedures.

Assessment Requirements for MSMOPS202 Fabricate polymer products

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS202A Fabricate polymer materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and demonstrate the ability to:

- check the requirements of the job
- identify hazards associated with the job/work environment and apply appropriate hazard controls
- prepare for the fabrication as required
- complete the fabrication to specification
- apply known solutions to routine problems.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards and hazard controls specific to the types of fabrication undertaken
- different types of materials used and their behaviour when joined
- different forming and joining equipment used and suitability for materials
- types and causes of known problems for the types of fabrication undertaken
- corrective action appropriate to the problem cause.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - will typically include the use of appropriate industrial equipment and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMOPS212 Use organisation computers or data systems

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS212A Use organisation computers or data systems

Application

This unit of competency covers the skills and knowledge required to use organisation computers or data systems in order to work effectively.

The operator will be required to select correct programs, save and retrieve data, and produce documents and spreadsheets relevant to operational or administrative functions within the organisation.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- privacy and intellectual property (IP)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- organisation procedures relevant to data systems, data security, record keeping, privacy, internet usage and IP
- manufacturers' manuals
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the organisation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Computers or data systems

Computers or data systems are used for one or more of the following:

- electronic documents (typically Word, Excel, email and similar)
- safety, safety data and injury reporting
- orders, purchasing, stock levels and scheduling
- stock control, stores, warehousing and logistics
- materials hazards, labelling, materials identification and material safety data sheets (MSDSs)
- batch data, schedules, production planning and operations planning
- product quality, statistical control, production trends and quality control
- maintenance, maintenance planning, procedures and spare parts

Equipment

Equipment includes one or more of the following:

- computers and stationary terminals/kiosks (stand alone and/or networked)
- mobile terminals and handheld devices
- smartphones and tablets
- printers
- mouse and keyboard
- facsimile equipment
- onboard terminals
- scanners
- bar coders

Software applications

Software applications include one or more of the following:

- email
- internet or intranet
- word processing, database and/or spreadsheet programs
- company/process-specific software

Documents

Documents include one or more of the following:

- work orders
- work instructions/SOPs
- email
- faxes
- memos
- tables
- standard letters

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standard reports

Hazards

Hazards include one or more of the following:

- ergonomics and posture
- repetition strain injuries
- glare from monitor screens
- damaged cables or connections
- strains or injuries moving computer equipment
- other hazards that might arise in the job/work environment

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- software problems, such as unable to access file, find correct page, send mail or input data
- loose or disconnected cables
- 'frozen' screens
- faulty monitors
- keyboard problems

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMOPS212 Use organisation computers or data systems

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS212A Use organisation computers or data systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- use computers or data systems to locate and access information and/or data to meet job requirements
- edit information and/or input data electronically using one or more of:
  - keyboard
  - mouse
  - stylus
  - touchscreen
- check that edits/data entry are accurate and complete
- locate files (in file directory) or generate reports (within software) relevant to job
- apply procedures, as required, for:
  - log in/log out (and password protection)
  - back-up
  - security (e.g. anti-virus)
  - intellectual property (IP)/security
- apply known solutions to routine problems.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including those covering:
  - data systems and data security
  - record keeping
  - privacy
  - IP
  - use of internet
  - safety, emergency and hazard control
  - relevant organisation standard operating procedures (SOPs)
- ergonomics of using computers and related equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- scope and range of available data relevant to work role
- routine problems that may arise and how to identify causes
- types and application of software relevant to work role.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations and provide for demonstration of responding to problems
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment, data and documentation
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMOPS244 Lay out and cut materials

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS244A Layout and cut materials

Application

This unit of competency covers the skills and knowledge required to cut materials to shape. It applies to materials used in plastics fabrication, rubber and other manufacturing industries.

This unit of competency applies to an operator who is involved in the fabrication of materials which first need to be cut into specified shapes. The operator will be required to lay out and cut materials to meet quality standards and workplace requirements and resolve routine problems according to procedures.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

		3.2	Place material ready to be cut and apply pattern
		3.3	Allow for grain or other directionality in material to suit product
		3.4	Cut material to pattern, marking points for further processes
		3.5	Collect material which is able to be recycled or reused, separate and dispose of waste and scrap
4	Resolve routine problems	4.1	Recognise problems that occur
		4.2	Resolve routine problems
		4.3	Take appropriate action on other problems

4.4 Complete required records in accordance with procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Work requirements

Work requirements will be determined from one or more of the following:

- job/shop orders
- plans/specifications
- procedures
- directions from authorised persons
- meetings (e.g. toolbox meeting)
- any similar instructions provided for the smooth running of the plant

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- fire
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- pattern incorrect
- marking errors
- wear and breakage
- loss of power or drives
- controller sequence, timer issues
- sequencing problems

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to according to relevant procedures

Tools and equipment

Tools and equipment include one or more of the following:

- guillotines
- power saws

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- jig saws
- band saws
- thermal cutting devices
- hand tools
- relevant personal protective equipment (PPE)

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSAPMOPS244A Layout and cut materials

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=d1287d36-dff4-4e9f-ad2c-9d6270054027

Assessment Requirements for MSMOPS244 Lay out and cut materials

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS244A Layout and cut materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- set up and operate equipment according to procedures
- select and prepare materials to meet job specifications
- identify hazards and apply relevant hazard controls
- lay out and cut one (1) complex shape, or multiple simple shapes which demonstrate at least two (2) of:
  - product with a simple 3-D shape
  - material with directional properties
- cut material requiring marking for future processing
- read and interpret typical product specifications, job sheets, procedures, basic machine control panels, material labels and safety information as provided to operators
- apply known solutions to routine problems
- complete workplace forms.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment and their controls
- factors which may affect product quality or production output and appropriate remedies
- different cutting, forming and joining equipment and suitability for materials
- controls of cutting equipment
- routine problems their cause and resolution.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMOPS301 Treat corrosion

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS301A Treat corrosion

Application

This unit of competency covers the skills and knowledge required to examine an object for corrosion, confirm the appropriateness of any corrosion treatment and monitor the treatment process.

The object may be any type of plant, equipment or structure in any service environment, such as a plant/factory area, a well head, an item of major infrastructure or a pipeline covering thousands of kilometres. This unit applies to situations where the corrosion is treated using a surface coating.

Corrosion typically refers to any electrochemical process leading to the decay of metal but also includes decay processes in non-metals.

This unit of competency applies to technicians. The technician will be required to examine substrates and the design of the object to be treated to determine the preparation and protection which might need to be applied and confirm that the treatment specification is appropriate and to monitor that treatment process.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Determine nature of corrosion	1.1	Inspect object
		1.2	Observe service environment and note likely causes of, and vulnerability to, corrosion
		1.3	Identify the type of corrosion present or likely to occur
2	Interpret surface preparation and coating specification	2.1	Examine specified surface preparation method
		2.2	Examine specification for prepared surface
		2.3	Examine specified surface protection method
		2.4	Examine specification for finished surface protection
		2.5	Identify critical aspects of specifications
3	Confirm appropriateness of surface preparation and coating specification	3.1	Compare specification with existing or likely corrosion situation
		3.2	Confirm that the specification is appropriate for the situation
		3.3	Clarify any discrepancies between specification and expected treatment and take appropriate action
		3.4	Complete any required documentation
4	Monitor treatment process	4.1	Identify hazards arising from the preparation and protection treatments
		4.2	Specify appropriate hazard controls and ensure they are implemented
		4.3	Monitor the progress of the treatment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.4 Recognise situations which might require a change to hazard controls or specifications

4.5 Take the required actions to resolve the identified situations

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- heat, smoke, dust or other atmospheric hazards
- structural hazards
- industrial (machinery, equipment and product)
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Appropriate actions

Appropriate actions include one or more of the following:

- determining problems needing action
- determining possible fault causes
- developing solutions to problems which do not have a known solution
- following through items initiated until final resolution has occurred
- reporting problems outside area of responsibility to designated person

Non-routine problems

Non-routine problems are unexpected problems, or variations of previous problems and include one or more of the following:

- plant/process condition makes intended approach inappropriate
- weather affects intended approach
- surface preparation reveals hidden issues
- work is not conforming to specification
- permit conditions change or are inappropriate for work to be undertaken

Operational

Operational knowledge includes one or more of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

knowledge

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSAPMOPS301A Treat corrosion

Assessment Requirements for MSMOPS301 Treat corrosion

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS301A Treat corrosion

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- observe and inspect service environment to identify:
  - type of corrosion present
  - likely causes of corrosion
  - vulnerability to corrosion
- identify hazards and apply relevant hazard controls
- read and interpret product specifications, job sheets, procedures, material labels and safety information
- analyse proposed treatment for appropriateness
- complete workplace forms/reports
- communicate effectively with team/work group, supervisors and other personnel
- apply operational knowledge to non-routine problems.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- duty of care obligations
- relevant organisational procedures
- physics and chemistry relevant to corrosion in metals and non-metals
- relevant coating/lining types and application methods
- hazards that may arise in the job/work environment, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- costs and hazards of corrosion
- impacts of preparation and coating variables, including:
  - blast media type/size/shape
  - temperature during/after application
  - pressure of spray
  - pH
- non-routine problems that may arise, the range of possible causes and processes to develop solutions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- major preparation and protection methods, their typical applications and how to troubleshoot problems.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMOPS363 Organise on-site work

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS363A Organise on site work

Application

This unit of competency covers the skills and knowledge required to organise and prepare for on-site work in a field situation, such as a remote mine site or large industrial complex where extensive permit or clearance systems exist.

The operator will be required to plan the work, ensure permits and other arrangements are in place to allow the on-site work to proceed safely, and set-up the tools, equipment and materials at the site.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Operations

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Plan the work	1.1	Review the requirements of the work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.2	Arrange all necessary permits and permissions for site inspections and work
		1.3	Examine the site where the work will take place
		1.4	Identify plant and equipment isolations
		1.5	Identify hazards and risk controls
		1.6	Plan to minimise downtime, economically use materials and meet quality specifications
		1.7	Plan work, including sequences, times, process stages, engineering controls and personal protective equipment (PPE) requirements
		1.8	Prepare all necessary documentation and finalise the permissions and approvals for conducting the work
2	Prepare equipment, tools and materials	2.1	Identify equipment, tools and materials required
		2.2	Arrange for supply of all tools, equipment and materials
		2.3	Arrange for transport to site of all equipment, tools and materials
3	Set up work location	3.1	Assemble and check materials and tools for suitability for purpose
		3.2	Establish required communication with site personnel
		3.3	Establish a safe work area
		3.4	Establish isolations and tag/lock out as required
		3.5	Check tools, equipment and materials against site situation and conditions

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work permits
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Work requirements

Work requirements are determined from one or more of the following:

- work orders
- specifications
- job descriptions
- designs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- other documents

On-site work

On-site work is done in situ, not in a factory or workshop, and includes one or more of the following:

- conveyor belt splicing and repairs
- rubber lagging of conveyor drums
- rubber lining of tanks
- polymer piping systems installation or repairs
- polymer constructions (e.g. fume cupboards or signs)
- refractory lining
- concrete casting

Isolations

Isolations include one or more of the following:

- power supply
- tag locations
- process materials
- energy sources and
- equipment isolation system

Safe work area

Safe work area includes areas for one or more of the following:

- scaffolding
- lifting gear
- lay down area
- work area
- other equipment in appropriate locations

Tools and equipment

Tools and equipment include one or more of the following:

- manual handling aids
- hand winches
- portable power generators and vulcanising equipment
- knives and other cutting instruments
- portable hoists/lifting equipment not requiring any special permits or licences
- spanners, wrenches and hammers
- power operated hand tools, such as drills, cutting disks and sanders
- specialised tools for the job
- relevant PPE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Hazards

Hazards include one or more of the following:

- manual handling hazards
- hand tools and handheld power tools (e.g. knife, cutting and grinding disk hazards)
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Non-routine problems

Routine problems must be resolved by applying known solutions.

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Non-routine problems are unexpected problems, or variations of previous problems and include one or more of:

- lack of accessibility
- equipment isolations
- logistics of materials and equipment to work site
- variations in materials and/or contamination of materials

Operational knowledge includes one or more of:

- procedures
- training
- technical information such as journals, engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Unit Mapping Information

Assessment Requirements for MSMOPS363 Organise on-site work

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS363A Organise on site work

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- identify job requirements and site conditions and plan the work
- sequence and schedule work tasks and stages to maximise efficiency and meet quality specifications
- select and arrange all equipment and materials for the site and set up tools, equipment and materials on site
- identify hazards and apply relevant hazard controls
- read and interpret work specifications, work orders, job sheets and material labels
- communicate effectively with team/work group and other personnel at the site
- apply operational knowledge to non-routine problems.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including:
  - work permit systems
  - safety, emergency and hazard control
  - relevant organisation standard operating procedures (SOPs)
- hazards that may arise in the job/work environment, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- hierarchy of controls
- work flow sequences and materials demand
- factors and potential effects of variations in raw materials and equipment operation in relation to quality of product
- planning process, including breaking the work down into steps and stages
- products, materials and material characteristics.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
  - The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMOPS400 Optimise process/plant area

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS400A Optimise process/plant area

Application

This unit of competency covers the skills and knowledge required to optimise the process performance of a complete process, plant area or system. It requires optimising a more significant portion of a plant than would be required for one of the PMAOPS3## series. It also requires a more strategic approach to the optimisation than the routine, day-to-day optimisation undertaken as a routine part of plant operation. The optimisation may, or may not involve capital expenditure.

It includes ensuring that the process/plant area complies with health, safety and environment (HSE) requirements, that process, plant and equipment improvement is planned and carried out, and that problems are solved to meet operational needs and ensure that production of finished goods meets customer requirements. It includes all items of equipment and unit operations which form part of the production process of a complete area.

This unit of competency requires the application of detailed operational and process knowledge, including the principles of operation of equipment, and the chemistry and/or physics and/or biology/biochemistry of changes to materials occurring during processing. It embodies a significant breadth and depth of technical knowledge and process understanding which is applied to process improvement.

This competency is typically performed by a senior operator, team leader or frontline manager.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Analyse and evaluate current plant, equipment and processes	1.1	Compare actual process, plant and equipment performance with requirements and/or historical data/records and/or design performance
		1.2	Identify abnormal or sub-optimal process, plant and equipment performance
		1.3	Identify hazards associated with the plant and equipment
		1.4	Collect and evaluate product, materials and/or process records to determine possible causes for sub-optimal performance
		1.5	Use appropriate techniques to rank possible causes from most to least probable cause
2	Develop plan for corrective and/or optimisation action	2.1	Analyse causes to determine appropriate corrective action
		2.2	Predict the impact of a change in one unit/area on other related plant units/areas
		2.3	Predict the impact of a change on HSE performance
		2.4	Develop measurable objectives and evaluate alternatives
		2.5	Identify requirements to implement change
		2.6	Consult with stakeholders regarding planned changes and impacts
		2.7	Develop optimisation plan taking account of hazards identified and HSE implications and communicate to appropriate personnel
		2.8	Evaluate optimisation action to determine measures of effectiveness

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Coordinate corrective and/ or optimisation action plan	3.1	Coordinate all appropriate unit areas and operations in order to rectify problem causes in process, plant and equipment performance
		3.2	Initiate and/or implement all required corrective/optimisation actions
		3.3	Communicate corrective/optimisation outcomes to all relevant personnel
		3.4	Record and maintain log of all relevant information
4	Develop continuous improvement strategies	4.1	Identify opportunities to continuously improve performance of process/plant area
		4.2	Develop recommendations for continual improvement of process, plant and equipment effectiveness
		4.3	Consult with appropriate personnel and implement continuous improvement strategies
		4.4	Document implementation of continuous improvement strategies

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- equipment start-up, operation and shutdown procedures
- calibration and maintenance schedules
- quality manuals and procedures
- organisation recording and reporting procedures
- material, production and product specifications
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Process optimisation

Process optimisation requires application of detailed operational and process knowledge to address one or more of the following:

- starting material quality
- yield maximisation
- throughput maximisation
- energy efficiency
- use of utilities
- labour utilisation
- overall cost
- efficient use of equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- reducing downtime
- minimisation of waste and rework
- improved workplace layout and work flow

Assessment Requirements for MSMOPS400 Optimise process/plant area

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS400A Optimise process/plant area

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- identify and interpret information from a range of internal and external sources
- use analytical techniques to identify cause of a complex problem
- determine corrective actions to optimise the condition of the process, plant and equipment
- plan and coordinate corrective/optimisation actions and related changes that may be required
- develop written plans
- complete documentation
- identify and control hazards by applying the hierarchy of control as part of the optimisation process
- distinguish between:
  - optimum and marginal performance of the plant
  - effective and marginal performance corrections and actions
- communicate and consult with stakeholders at all levels
- read and interpret technical information and relevant regulatory requirements
- develop and implement continuous improvement strategies.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- relevant technical theory of the plant area
- an in depth understanding of plant and process across the entire plant area being optimised
- process parameters and limits, including:
  - temperature
  - pressure
  - flow
  - pH

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- effects of variations in process conditions and materials
- functions and principles of operation of equipment in the production process
- chemistry and/or physics and/or biology/biochemistry relevant to changes to materials during processing.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- It is desirable that this evidence comes from implemented optimisation projects. However, where the project does not receive sanction to be implemented, or is otherwise not implemented, then sufficient evidence may be able to be obtained from a detailed implementation plan and a simulated implementation.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or practical, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements

MSMOPS401 Trial new process or product

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS401A Trial new process or product

Application

This unit of competency covers the skills and knowledge required to take a lead technical role in the trialling of a new or significantly altered product or process. The new/changed product/process has been independently developed and its development is not part of this unit.

The unit of competency applies to a person in a technician role in a plant or a similar role. The technician is expected already to be a technical expert in that part of the plant/process where the trial is being conducted and be able to operate and control all equipment required for the trial. The technician is often the most technically competent member of an operational team. As such, they may not have the 'hands on' role of operating items of equipment; but they are required to have the competence to direct the operation of equipment as appropriate throughout the trial.

Typically the technician will be part of a team during the trial and will work in conjunction with a process/product development expert, such as a chemist or engineer and liaise and cooperate with other members of the team.

Trialling refers to the scale-up and other development steps required to take a new product or process from its design/laboratory trials to full commercial operation on a plant. Trialling may be done on a pilot plant where available and/or on a full scale plant.

This unit of competency does not apply to minor modifications to existing products or processes. Similarly it does not apply to a technician or operator taking part in such trials and/or who is simply following directions from a technician, chemist, engineer, supervisor or manager.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Operations

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Contribute to the selection of equipment/ process conditions	1.1	Liaise with appropriate technical experts
		1.2	Interpret properties of materials and desired product characteristics
		1.3	Interpret technical specifications/drawings of plant requirements
		1.4	Recommend equipment/ancillary equipment appropriate for the materials, products and conditions
		1.5	Recommend process conditions appropriate for the equipment, materials and product characteristics
		1.6	Recommend feed rates/order/condition appropriate to the process conditions, equipment, materials and product characteristics
		1.7	Ensure hazard identification and analysis procedures are completed, including consultation with stakeholders, and findings included in plan
		1.8	Ensure recommendations meet the identified need
2	Prepare for trials	2.1	Determine the availability of resources required, such as materials, equipment, people and skills
		2.2	Estimate time required for trial
		2.3	Liaise with relevant stakeholders
		2.4	Schedule trial at a convenient time

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.5	Develop documentation for the trial
		2.6	Identify potential hazards and required hazard control procedures by applying the hierarchy of control
		2.7	Determine permit and other authorisation requirements and special safety and storage requirements
		2.8	Verify decisions with appropriate experts/stakeholders
		2.9	Ensure people with adequate skills are available for the trial
3	Conduct trials	3.1	Ensure hazard controls are implemented prior to commencement
		3.2	Run trials
		3.3	Maintain communication with all relevant personnel
		3.4	Closely monitor critical parameters
		3.5	Recognise actual and potential problems
		3.6	Make adjustments to process conditions as required during trial
		3.7	Sample and test product as required
		3.8	Record and report performance data
		3.9	Ensure all materials, products and waste are handled correctly
		3.10	Leave plant in a condition suitable for routine production to recommence
4	Evaluate results and identify modifications	4.1	Interpret data from trial
		4.2	Identify factors which might be related to low rates or low charge amounts
		4.3	Recommend modifications and improvements required
		4.4	Develop and check standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.5 Complete documentation and report to appropriate personnel

4.6 Ensure all relevant staff have required skill levels for the introduction of the new process

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- emergency procedures
- work instructions
- SOPs
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Technical experts

Technical experts include one or more of the following:

- manufacturers
- chemists
- engineering personnel
- designers
- WHS advisors
- maintenance personnel
- potential customers

Non-routine problems

Routine problems must be resolved by applying known solutions.

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Non-routine problems are unexpected problems, or variations of previous problems and include one or more of the following:

- mixing is poor
- materials do not behave as expected
- process/reaction does not proceed/proceeds too slowly
- process/reaction proceeds too quickly/runs away
- yield is low
- quality is out of specification
- process is unstable
- instrumentation is not sufficiently sensitive/too sensitive

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- variable catalyst activity
- surging flow/pressure

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Hazard analysis procedures

Hazard analysis procedures must be undertaken, however, it is not required that the candidate conducts the procedures. Hazard analysis procedures include one or more of the following:

- job safety analysis (JSA)/job hazard analysis (JHA)
- hazard and operability (HAZOP) studies
- hazard analysis (HAZAN) studies
- similar company specified procedures

Assessment Requirements for MSMOPS401 Trial new process or product

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS401A Trial new process or product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- analyse technical information from a range of sources
- determine recommendations for new process or product, including:
  - materials
  - equipment
  - process and process conditions
  - required variations in process variables
- plan the trials
- conduct trials
- communicate and liaise with people at a range of levels about technical matters
- write technical documentation, including specifications and procedures required for the trial
- ensure formal hazard analysis procedures are undertaken
- recognise early warning signs of equipment/processes or potential problems needing attention
- isolate the causes of problems to an item of equipment within the plant system
- identify any additional skills needs.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures
- relevant technical theory of the plant area
- chemistry and/or physics and/or biology/biochemistry relevant to changes to materials during processing
- effects of variations in process conditions and materials
- routine and non-routine problems that may arise, the range of possible causes and processes to develop solutions
- methods of changing rate and the advantages and disadvantages of each
- methods of controlling other process variables and the advantages and disadvantages of each.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- The trial may, or may not be a success.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible or practical, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent, process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMOPS601 Design equipment and system modifications

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS601A Design equipment and system modifications

Application

This unit of competency covers the skills and knowledge required to design equipment and system modifications in a manufacturing situation. This unit is typically performed by high-level staff working as part of a design, development and implementation team and taking a lead technical role.

It does not include the design of equipment requiring specialist engineering skills or regulatory licensing, although it may include working with a person with this skill/licence.

This unit of competency applies to people who design modifications to equipment or systems, typically used for production. The modification may be to improve productivity, improve reliability, reduce waste (muda), reduce cost or other reasons. The competency can apply to the design of equipment/system modifications associated with product changes or improvements and/or establishment of a new production line/product. Typically it will be to meet a specified end use. This will involve working closely with a range of management and operations personnel and requires balancing the business, operational and technical sides of the modified equipment/system. This unit of competency applies to the technical expert. The competency is applied under limited guidance in line with a broad plan, budget or strategy. It will typically involve capital expenditure.

This unit competency is typically performed by senior technologists working in liaison with other technical experts, operations management, operators and other relevant people with whom they would work as part of a (possibly ad hoc) team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Assess requirements	1.1	Establish modification or design requirement
		1.2	Establish design concepts
		1.3	Establish design limitations
		1.4	Consult with specialists/experts as required
2	Evaluate options	2.1	Define options
		2.2	Determine most appropriate modification
		2.3	Confirm selected option with appropriate personnel in accordance with workplace procedures
3	Design modifications	3.1	Design modification to meet end use specifications/standards and all legislative or regulatory requirements
		3.2	Verify design in accordance with enterprise procedures
		3.3	Check the modifications will not compromise health, safety and environment (HSE) performance
		3.4	Determine required outcome tests and results to establish conformance to requirements
4	Coordinate design implementation and testing in accordance with enterprise	4.1	Initiate implementation of the design/modification
		4.2	Coordinate implementation of the design/modification
		4.3	Assess design outcome test results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	requirements	4.4	Assess any required variations to the design
		4.5	Prepare documentation to meet enterprise requirements
5	Maintain records	5.1	Maintain records of design and modification outcomes in accordance with enterprise procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- relevant Australian design standards
- workers' compensation legislation and regulation

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

other form, and include one or more of the following:

- all work instructions
- standard operating procedures (SOPs)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant
- good operating practice as may be defined by industry codes of practice (e.g. Responsible Care)

Modification/design requirements

Modification/design requirements include consideration of the following factors:

- production requirements
- facility requirements
- HSE requirements
- sustainability requirements
- other factors relevant to the job/work environment

Design concepts

Design concepts include at a minimum:

- process
- material
- quantity
- cost
- outcome

Design limitations

Design limitations will be determined through consideration of:

- codes
- regulations
- technical documentation
- other factors relevant to the job/work environment.

Design

The design is to be for the modification of process plant/equipment.

Design must include:

- design research and consultation with internal or external specialists

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- assessment and evaluation of design concepts
- design implementation and testing of modifications

Unit Mapping Information

Assessment Requirements for MSMOPS601 Design equipment and system modifications

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS601A Design equipment and system modifications

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and demonstrate the ability to:

- interpret design requirements
- evaluate design options against modification/design requirements
- assess and evaluate design concepts
- implement and test modifications
- apply technical skills, including performing technical calculations
- conduct tests and prepare drawings/documentation
- communicate effectively within the workplace, including liaising with other departments and consultation with internal or external specialists
- establish or interpret procedures, where required
- determine report requirements and present information in appropriate formats.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- appropriate design techniques
- relevant Australian (or other) design standards
- relevant regulatory requirements and codes of practice
- HSE considerations in relation to equipment/system design
- workplace requirements
- reporting/recording processes
- internal and external stakeholders and sources of expertise
- enterprise production processes, facility and materials and how they relate to equipment/system design.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- It is desirable that this evidence comes from implemented design projects. However, where the project does not receive sanction to be implemented, or is otherwise not implemented, then sufficient evidence may be able to be obtained from a detailed implementation plan and a simulated implementation.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMPCI101 Adapt to work in industry

Modification History

Release 1. Supersedes and is equivalent to MSAPCI101A Adapt to work in industry

Application

This unit covers the fundamental knowledge and skills needed to adapt to the workplace when taking up employment within the manufacturing industry. It includes following industry and workplace guidelines and procedures in a day-to-day work context, as well as appropriate work behaviour.

This unit applies to learners seeking practical skills that are relevant and useful to the area in which the learner hopes to gain employment, is currently working, and/or as a pathway to further study.

This unit applies to a learning and assessment environment where access to normal production operations is not available. Typically this will be a VET in Schools delivery environment but it may be another simulated or trial manufacturing environment where a high degree of supervision exists. Students may be on work placement.

The unit has application in qualifications for all occupations in the manufacturing industry and it should be regarded as an integrating unit. When delivered/assessed as part of a qualification, this unit must be customised to ensure its relevance to the real or simulated work activities and related workplaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Manage own learning	1.1	Consider and articulate own personal goals or vision
		1.2	Identify opportunities for learning new ideas and techniques in relation to personal goals
		1.3	Recognise personal learning needs and skill gaps
		1.4	Identify opportunities for skills development activities in liaison with relevant personnel
		1.5	Access and apply learning tools and practices to the job
		1.6	Take advantage of on-the-job and off-the-job learning opportunities
2	Adapt to and demonstrate appropriate work practice	2.1	Identify and interpret work requirements with advice from appropriate persons
		2.2	Use appropriate dress and behaviour in the workplace
		2.3	Identify and balance work and personal priorities
		2.4	Apply time management strategies to work duties
		2.5	Tailor interactions with others to take into account different backgrounds, cultures and languages
3	Work within organisational requirements	3.1	Identify organisational requirements and key activities of the workplace
		3.2	Identify and apply relevant workplace policies and guidelines to work undertaken, including work health and safety (WHS) requirements
		3.3	Interpret the range of organisational values and cultural norms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.4	Discuss and clarify any uncertainties with key personnel
4	Identify the sectors of the industry	4.1	Identify the main sectors of the manufacturing industry, their key activities and the way in which they interrelate
		4.2	Clarify the roles and responsibilities of the manufacturing industry
		4.3	Identify key industry representatives and their roles
		4.4	Identify current issues or events impacting on the industry
5	Identify industry sector products and services	5.1	Identify the products provided by the industry sector
		5.2	Identify the services provided by the industry sector
		5.3	Identify appropriate standards of service across the industry sector
		5.4	Clarify quality standards for products and services as identified by the industry

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Skill gaps	Skills gaps relevant to work place requirements include one or more of the following: • physical capacity skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace technology skills, such as business equipment, computer technology, machinery, hand tools, and security systems
- numeracy and literacy skills
- customer service skills
- communication skills, such as listening and understanding, speaking clearly/directly, reading and writing
- technical skills

Skill development activities

Skill development activities include one or more of the following:

- information technology (IT) courses
- human resources programs
- coaching and mentoring programs
- having the chance to learn a new task or to operate a new piece of equipment or workplace technology
- participating in external or internal training programs
- guided workplace experience

Learning tools and practices

Learning tools and practices include one or more of the following:

- note taking
- reviewing manuals and training guides
- discussion
- practice
- observation
- trial and error
- a combination of any of these

On-the-job opportunities

On-the-job opportunities include one or more of the following:

- filling in for a co-worker in a new area
- attending talks or seminars arranged by the workplace
- shadowing another co-worker in a different area
- receiving on-the-job training and supervised practice

Off-the-job opportunities

Off-the-job opportunities include one or more of the following:

- taking a course with a training provider
- attending conferences or seminars

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- attending site visits with a supervisor
- participating in workplace social events
- participating in community events

Appropriate **dress and behaviour**

Appropriate dress and behaviour includes:

- personal dress and presentation
- demeanour and attitude displayed to customers and fellow employees

Time management strategies

Time management strategies include one or more of the following:

- being punctual
- goal setting
- balancing work and personal priorities or agendas
- prioritisation of required tasks or activities
- planning daily or weekly work
- overcoming procrastination
- dealing with interruptions (contingency planning)
- organising own work environment

Organisational requirements

Organisational requirements include:

- organisational policies and guidelines
- common organisational practices
- performance plans
- WHS policies, procedures and programs

Workplace policies and guidelines

Workplace policies and guidelines include, but are not limited to:

- attendance
- punctuality
- standards for health and fitness
- obeying orders
- confidentiality
- dress codes
- alcohol and drug restrictions
- personal safety and duty of care related to WHS
- terms and conditions of employment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Organisational values

Organisational values include one or more of the following:

- innovation
- community responsibility
- environment responsibility

Cultural norms

Cultural norms include:

- manners
- meanings specific to the language of the workplace
- history
- workplace etiquette

Main sectors of the industry

Main sectors of industry include:

- textiles, clothing and footwear
- furniture
- chemical manufacturing
- plastics and rubber products manufacturing
- maintenance and engineering
- manufacture of glass or concrete products

Roles and responsibilities of the industry

The roles and responsibilities of the industry include:

- providing quality products and services
- providing quality customer service
- providing proper training to those in the industry

Key industry representatives

Key industry representatives include:

- industry associations
- enterprises
- unions
- legislative bodies

Current issues or events include

Current issues or events include:

- economic
- environmental
- political

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- technological
- supply and demand

Industry products

Industry products are the outcomes of manufacturing processes and include one or more of the following:

- clothing and footwear
- concrete and glass products
- tyres and plastic car components
- electronic components
- metal products

Industry services

Industry services include one or more of:

- customer support
- product advice
- health and diet advice
- delivery services
- consulting services
- warrantees and/or guarantees

Service standards

Service standards include one or more of the following:

- developing and maintaining product and service knowledge
- identifying customer needs and expectations correctly
- meeting reasonable needs and request of customers within acceptable time frames
- taking opportunities to enhance the quality of products and services
- dealing with conflict situations
- responding to customer complaints
- maintaining a positive and cooperative manner
- establishing relationships with customers
- following appropriate hygiene and safety procedures
- referring difficult complaints to appropriate persons

Quality standards

Quality standards include one or more of the following:

- consistency standards
- quality specifications
- time requirements
- meeting customer requirements

Assessment Requirements for MSMPCI101 Adapt to work in industry

Modification History

Release 1. Supersedes and is equivalent to MSAPCI101A Adapt to work in industry

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and demonstrate the ability to:

- consistently apply required knowledge and skills when adapting to different workplace requirements, contexts and environments
- follow workplace work health and safety (WHS) and environmental protection procedures and responsibilities
- consistently follow relevant workplace procedures, policies, instructions and regulations, including relevant manufacturer's guidelines relating to the operation and use of equipment
- complete work systematically with required time management and attention to detail without damage to goods, equipment or personnel
- recognise limitations, ask for help and seek clarification or information about work requirements and procedures
- take prompt action to report and/or rectify any workplace problems in accordance with workplace procedures
- recognise and adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others
- identify and interpret information on sectors in the manufacturing industries
- articulate own goals and vision and identify skills gaps and ways they may be addressed
- identify and interpret information on the range of products and services produced by manufacturing industries
- identify and take advantage of learning opportunities in the workplace
- use literacy skills in regard to written and verbal communication in the workplace
- use basic interpersonal and communication skills, including listening and questioning and receiving feedback
- use workplace technology skills where appropriate or required.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- current events, activities, products and services of the manufacturing industry
- workplace policies, procedures and guidelines
- time management strategies and appropriate workplace etiquette

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace equipment, tools and other technologies used in the manufacturing industry and where and how to obtain information and instructions on their safe use and basic care and servicing
- sources of information on the industry sector and skills development activities.

Assessment Conditions

- Assessment must occur in a simulated environment or a workplace.
- This unit must always be assessed in holistically in conjunction with other units of competency that form part of a specified job function.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Performance must be demonstrated consistently over a period of time and for a range of manufacturing contexts.
- Assessors must:
  - satisfy the Standards for Registered Training Organisations 2015 assessor requirements
  - have vocational competency in the manufacturing industry at least to the level being assessed, with broad industry knowledge and experience, usually combined with a relevant industry qualification
  - be familiar with the current skills and knowledge used and have relevant, current experience in the manufacturing industry.

MSMPCI102 Apply effective work practices

Modification History

Release 1. Supersedes and is equivalent to MSAPCI102A Apply effective work practices

Application

This unit of competency covers the knowledge and skills needed to apply effective work practices in an industry. It includes planning, organising and completing work, communicating effectively, working with others, solving problems and adapting to change.

This unit applies to learners seeking practical skills that are relevant and useful to the area in which the learner hopes to gain employment, is currently working, and/or as a pathway to further study.

This unit applies to a learning and assessment environment where access to normal production operations is not available. Typically this will be a VET in Schools delivery environment but it may be another simulated or trial manufacturing environment where a high degree of supervision exists. Students may be on work placement.

This unit has application in qualifications for all occupations in the manufacturing industry and it should be regarded as an integrating unit. When delivered/assessed as part of a qualification, this unit must be customised to ensure its relevance to real or simulated work activities and related workplaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Plan, organise and complete daily work	1.1	Identify and interpret work instructions and priorities in consultation with supervisor
		1.2	Determine and map out an appropriate work plan or daily routine
		1.3	Determine, collect and organise materials, resources and information needed to complete work, including work health and safety (WHS) requirements
		1.4	Complete work tasks within designated timelines, quality standards and instructions
2	Communicate effectively	2.1	Identify appropriate lines of communication with supervisors, colleagues and customers
		2.2	Use effective communication skills and numeracy skills to gather and convey information
		2.3	Demonstrate appropriate non-verbal behaviour and communication
3	Work with others	3.1	Identify work roles of self and others in the workplace
		3.2	Undertake individual responsibilities and duties in a positive manner and in a range of situations to promote cooperation and good relationships
		3.3	Respect customers and colleagues who have diverse backgrounds
4	Use workplace technology	4.1	Select appropriate workplace technology and use according to workplace and manufacturer guidelines and instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.2	Inspect workplace technology is to ensure it is not damaged and is working properly and take precautions to reduce risks
		4.3	Take appropriate action when problems with workplace technology occur
		4.4	Care for workplace technology according to workplace and manufacturer guidelines and instructions
5	Solve work problems	5.1	scope of individual responsibility to rectify them
		5.2	Ask for assistance from key personnel when appropriate
		5.3	Report workplace problems, as required, using appropriate workplace procedures
6	Adapt to change	6.1	Identify, clarify and adapted to new work requirements or situations
		6.2	Consider and apply possible practical or creative options to deal with workplace challenges
		6.3	Demonstrate a willingness to be open to and trial new ideas and techniques

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Work instructions Work instructions include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- job sheets
- patterns
- plans
- drawings
- designs
- verbal directions
- customer orders

Effective communication skills

Effective communication skills include one or more of the following:

- listening and understanding
- speaking clearly and directly
- reading independently
- writing to audience needs
- group interaction
- the chain of command in which to report
- questioning to obtain information and/or clarify information and understanding
- routine oral reporting
- routine written reporting
- participation in routine meetings in the workplace
- basic recording of discussions

Numeracy skills

Numeracy skills are those which related to the job or specific task and involve the operations of multiplication, division, addition, subtraction, percentages and/or fractions, and include those related to one or more of the following:

- estimates of the quantities of materials and resources required to complete a work task
- money (e.g. cost, invoices and change)
- volume
- weight
- time
- length and distance
- speed
- area
- perimeter

Diverse backgrounds

Diverse backgrounds include, but are not limited to, one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- ages
- genders
- culture
- personal values or beliefs
- race
- religion
- political persuasion

Workplace technology

Workplace technology includes one or more of the following:

- business equipment, such as fax machines, telephones, photo copiers, cutting machines, cameras and voice recorders
- computer technology, such as laptops, PCs, digital cameras, zip drives, modems, scanners and printers
- other technology, such as machinery, hand tools, lifts and security systems

Workplace technology precautions

Workplace technology precautions include, one or more of the following:

- routine checking of equipment
- regular back-ups of data
- keeping a log book of detected faults
- checking that repairs have been carried out
- using appropriate clothing

Appropriate actions

Appropriate actions include one or more of the following:

- contacting a supervisor, manager
- contacting the manufacturer
- contacting a service provider
- reporting and documenting the problem

Key **personnel**

Key personnel include one or more of the following:

- supervisor
- manager
- fellow colleagues
- team members

Workplace

Workplace procedures include, but are not limited to, one or more of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

procedures the following:

- organisational policies and guidelines
- common organisational practice
- performance plans
- WHS policies, procedures and programs
- relevant legislative requirements in areas such as WHS, privacy, anti-discrimination, environmental protection and trade practices
- relevant licence requirements and related regulations

Work instructions Work instructions include one or more of the following:

- job sheets
- patterns
- plans
- drawings
- designs
- verbal directions
- customer orders

Assessment Requirements for MSMPCI102 Apply effective work practices

Modification History

Release 1. Supersedes and is equivalent to MSAPCI102A Apply effective work practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and demonstrate the ability to:

- plan a daily routine to complete required workplace tasks
- follow workplace work health and safety (WHS) and environmental protection procedures and responsibilities
- apply relevant workplace procedures, policies, instructions and regulations
- identify and correctly use equipment, tools and other technology required to complete workplace tasks
- complete work systematically with required time management and attention to detail without damage to goods, equipment or personnel
- complete work activities in collaboration with others in accordance with instructions, procedures and applicable regulations
- work cooperatively and collaboratively with others to complete tasks
- apply relevant ethical practices and codes of practice in the course of work activities
- recognise limitations, ask for help and seek clarification or information about work requirements and procedures
- take prompt action to report and/or rectify any workplace problems in accordance with workplace procedures
- recognise and adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others
- use literacy skills in regard to written and verbal communication in the workplace
- use basic interpersonal and communication skills, including listening and questioning and receiving feedback
- adapt and modify activities depending on differing workplace contexts and environment
- carry out calculations that are required when completing work tasks, including the four basic mathematical operations
- keep required records of workplace activities
- apply relevant industrial or other legislative requirements.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- workplace procedures, policies and instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace structures and the roles and responsibilities of individuals and team/group members
- typical problems in the workplace and appropriate action and solutions
- systems and equipment used in the workplace and the instructions, processes and precautions for their use
- basic principles of teamwork in the workplace.

Assessment Conditions

- Assessment must occur in a simulated environment or a workplace.
- This unit must always be assessed in holistically in conjunction with other units of competency that form part of a specified job function. Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Performance must be demonstrated consistently over a period of time and for a range of manufacturing contexts.
- Assessors must:
  - as a minimum, satisfy the Standards for Registered Training Organisations 2015 assessor requirements
  - have vocational competency in the manufacturing industry at least to the level being assessed, with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the manufacturing industry.

MSMPCI103 Demonstrate care and apply safe practices at work

Modification History

Release 1. Supersedes and is equivalent to MSAPCI103A Demonstrate care and apply safe practices at work

Application

This unit of competency covers the knowledge and skills needed to understand, apply and satisfy safe work practices in an industry. It includes identifying and following work procedures for hazards and risks, monitoring and maintaining cleanliness and tidiness at work, and reporting hazards and risks in appropriate ways. It applies to work health and safety (WHS) requirements and internal workplace policies and procedures.

This unit applies to learners seeking practical skills that are relevant and useful to the area in which the learner hopes to gain employment, is currently working, and/or as a pathway to further study.

This unit applies to a learning and assessment environment where access to normal production operations is not available. Typically this will be a VET in Schools delivery environment but it may be another simulated or trial manufacturing environment where a high degree of supervision exists. Students may be on work placement.

The unit has application in qualifications for all occupations in the manufacturing industry and it should be regarded as an integrating unit. When delivered/assessed as part of a qualification, the unit must be customised to ensure its relevance to real or simulated work activities and related workplaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Follow workplace OHS procedures	1.1	Identify, interpret and apply relevant WHS, workplace hazard control procedures and safe work practices
		1.2	Identify and adhere to workplace procedures for reporting hazards promptly and efficiently
		1.3	Undertake all work activities in a safe manner according to WHS guidelines, enterprise policies and procedures
		1.4	Assess the work area regularly and follow procedures to report, remove or minimise potential hazards
		1.5	Use personal protective equipment (PPE) correctly in accordance with established safety and workplace procedures
2	Maintain personal wellbeing in the workplace	2.1	Identify risks to personal wellbeing which may affect safe performance in the workplace and use strategies to prevent and manage them
		2.2	Identify, interpret and follow procedures for maintaining a tidy and clean personal work area
3	Identify and report on safety of self and others	3.1	Identify and correct or report situations which may endanger self or other workers
		3.2	Report incidents and injuries to self or others on the job to appropriate persons and deal with them in a timely manner
		3.3	Contribute to participative arrangements to foster safe working practices, as appropriate
4	Take action in	4.1	Recognise emergency situations and take action within

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

emergency situations		scope of individual responsibility
	4.2	Follow emergency procedures in accordance with organisational procedures
	4.3	Seek assistance from colleagues and/or other authorities, where appropriate

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hazard control procedures

Hazard control procedures include one or more of the following:

- emergency, fire and accident procedures
- hazard identification and removal or, if this is not possible, establish a hazard control
- use of PPE
- relevant manufacturer guidelines relating to the operation and use of equipment
- WHS regulations
- safe use of mechanical, pneumatic, hydraulic and/or electrical equipment
- safe use of chemicals and toxic substances

Workplace hazards

Workplace hazards include, but are not limited to, one or more of the following:

- untidy work conditions, including poor and unnecessary obstacles and equipment in work areas
- sharp instruments or equipment
- excessive noise
- hot substances and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- electricity and water
- electrical equipment
- being careless when using cutting equipment or dealing with heat or hot surfaces
- damaged equipment
- moving machinery
- materials handling
- gases and liquids under pressure
- working at heights
- confined spaces
- inappropriate lifting practices
- dangerous floor surfaces
- movements of equipment, goods and vehicles
- chemicals and other harmful substances, including fumes and dust
- toxic substances
- damaged packing material and containers
- inflammable materials and fire hazards
- unavailable waste management and disposal procedures
- extremes in weather conditions
- unsuitable lighting levels
- water hazards
- dangerous storage areas

Safe work practices

Safe work practices include, but are not limited to, one or more of the following:

- manual handling procedures
- correct posture
- safe lifting and bending
- using appropriate PPE

Risks to personal wellbeing

Risk to personal wellbeing include, but are not limited to, one or more of the following:

- smoking, alcohol and drug use
- lack of sleep
- poor diet
- lack of exercise
- stress
- not using appropriate methods when lifting or moving heavy objects

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- not wearing proper PPE

PPE

PPE includes, but is not limited to, one or more of the following:

- gloves
- masks
- uniform
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Appropriate persons

Appropriate persons include one or more of the following:

- workplace personnel
- supervisors
- team leaders
- management
- WHS personnel
- other persons authorised or nominated by the organisation

Emergency situations

Emergency situations include, but are not limited to, one or more of the following:

- accidents
- overheating equipment
- injuries, such as cuts, scalds and burns
- health conditions, such as fainting, asthma attacks and allergic reactions
- spills and leakages of harmful gas and liquids
- structural failures and breakages
- robbery
- fire
- flooding
- power failures or shorts

Participative arrangements

Participative arrangements include one or more of the following:

- workplace meetings
- suggestion schemes
- regular communications with team leaders
- information sessions

Assessment Requirements for MSMPCI103 Demonstrate care and apply safe practices at work

Modification History

Release 1. Supersedes and is equivalent to MSAPCI103A Demonstrate care and apply safe practices at work

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and demonstrate the ability to:

- follow relevant workplace procedures, policies, instructions and regulations, including work health and safety (WHS) regulations and hazard prevention policies and procedures, environment protection, and manufacturer guidelines relating to the operation and use of equipment
- follow workplace procedures for hazard identification and risk control
- use relevant personal protective equipment (PPE)
- complete work systematically with required attention to detail without damage to goods, equipment or personnel
- use appropriate written and verbal communication in the workplace
- use basic interpersonal and communication skills, including listening and questioning, and receiving feedback
- promptly report workplace hazards and WHS incidents and take appropriate action
- solve or report problems identified when dealing with safety hazards and applying appropriate hazard control procedures
- recognise limitations, ask for help and seek clarification or information about work requirements and procedures.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- procedures related to WHS to be followed in the work area concerned
- workplace hazards and ways to minimise or remove them
- workplace equipment, materials, housekeeping equipment and the processes and precautions for their use
- PPE relevant to the job and job context
- appropriate hygiene and safety standards.

Assessment Conditions

- Assessment must occur in a simulated environment or a workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- This unit must always be assessed in holistically in conjunction with other units of competency that form part of a specified job function.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Performance must be demonstrated consistently over a period of time.
- Assessors must:
  - as a minimum, satisfy the Standards for Registered Training Organisations 2015 assessor requirements
  - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
  - have vocational competency in the manufacturing industry at least to the level being assessed, with broad industry knowledge and experience, usually combined with a relevant industry qualification
- Be familiar with the current skills and knowledge used and have relevant, current experience in the manufacturing industry.

MSMPCII295 Operate manufacturing equipment

Modification History

Release 1. Supersedes and is equivalent to MSAPCII295A Operate manufacturing equipment

Application

This unit of competency covers the skills and knowledge required to operate production equipment, and to the resolve routine problems in a simulated or trial manufacturing environment where there is a high degree of direct supervision. This competency is intended to be applied to any item of routine production equipment.

This unit of competency applies to learners seeking practical skills that are relevant and useful to the area in which the learner hopes to gain employment, is currently working, and/or as a pathway to further study.

This unit can be performed by operators working either independently or as part of a work team.

This unit of competency applies to a learning and assessment environment where access to normal production operations is not available. Typically this will be a VET in Schools delivery environment but it may be another simulated or trial manufacturing environment where a high degree of supervision exists. Students may be on work placement.

When delivered/assessed as part of a qualification the unit must be customised to ensure its relevance to real or simulated work activities and related workplaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Check job requirements	1.1	Identify workplace requirements by following established procedures and practices, including work health and safety (WHS) requirements
		1.2	Identify product, materials and equipment requirements for job, including personal protective equipment (PPE)
2	Control hazards	2.1	Identify hazards in the production work area
		2.2	Assess the risks arising from those hazards
		2.3	Implement measures to control or avoid those risks in line with procedures and duty of care to fellow workers
3	Prepare equipment for operation as required	3.1	Perform pre-start checks
		3.2	Report suspected unusual or non-standard product, materials and equipment to an appropriate person
		3.3	Notify other team members, if required, on the intended equipment function and start-up
		3.4	Check/supply materials to equipment as required
		3.5	Start up the item of equipment as required
		3.6	Bring equipment to specified conditions and build the operating rate steadily, checking expected performance at various stages in accordance with procedures
4	Operate equipment	4.1	Monitor equipment operating conditions
		4.2	Monitor product characteristics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.3	Recognise conditions and characteristics which indicate a problem or a potential problem
		4.4	Take appropriate action in response to problem or potential problem
		4.5	Maintain supply of materials and removal of products as required
		4.6	Complete required records
		4.7	Keep equipment and work area in a clean, organised and safe condition
5	Prepare equipment for shutdown	5.1	Perform emergency pause, stop or shutdown as required
		5.2	Ensure equipment is free of product or purged as required
		5.3	Shut down equipment in accordance with procedures
		5.4	Make sure equipment and area is left in a safe condition and ready for restart, maintenance or medium /long-term shutdown

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures Procedures may be written, verbal computer-based, or in some other form and include one or more of the following:

- work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standard operating procedures (SOPs)
- formulas/recipes
- batch sheets
- temporary instructions and similar instructions provided for the smooth running of equipment and processes

For the purposes of this Training Package, ' procedures' also includes good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.

Equipment

Equipment for the purposes of this unit covers routine or common manufacturing equipment suitable for students operating in a simulated or trial manufacturing environment where there is a high degree of direct supervision. examples includes, but is not limited to, one or more of the following:

- guillotines
- bending and folding machines
- non-computer numerically controlled (CNC) lathes, especially bench and training lathes
- soldering equipment
- pedestal drills
- bench grinders

Workplace hazards

Workplace hazards include, but are not limited to, one or more of the following:

- hazardous materials
- gases and liquids under pressure
- moving machinery
- cutting edges
- electrical equipment
- materials handling
- environments subject to heat, noise, dusts or vapours

Pre-start checks

Pre-start checks include one or more of the following:

- visual checks
- completing checklists
- checking that safety guards, gates and so on, are in position and are operational

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- other checks required by SOPs and manufacturer instructions

Equipment operating conditions

Equipment operating conditions will be monitored using a range of techniques including:

- monitoring of measured or indicated data as shown by gauges and charts (e.g. speed, hours on line, pressure, temperature, flow and vibration)
- the senses of smell, sight, sound and feel, as appropriate

Product characteristics

Product characteristics include one or more of the following:

- product quality
- production rate
- defect rate

Problem/potential problems

Problem/potential problems include, but are not limited to, one or more of the following:

- changes to operating conditions
- adverse changes to product characteristics
- adverse changes to waste

Appropriate actions

Appropriate actions include one or more of the following:

- making adjustments in accordance with procedures
- stopping the equipment in accordance with procedures
- reporting to appropriate person

Records

Records include one or more of the following:

- log sheets/books
- job/work sheets
- electronic/paper records
- verbal/voicemail/email reports

Assessment Requirements for MSMPCII295 Operate manufacturing equipment

Modification History

Release 1. Supersedes and is equivalent to MSAPCII295A Operate manufacturing equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and demonstrate the ability to:

- carry out the day-to-day operation of a routine piece of production equipment, meeting the demands of productivity and quality while resolving routine problems
- follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment or products
  - achieve required production output and product quality
  - modify activities to cater for variations in workplace contexts and environment
- use hand tools and power equipment correctly and safely
- perform normal operator maintenance of work area to enable work to be conducted safely and efficiently
- check specifications and work requirements
- recognise early warning signs of equipment/processes needing attention, including changes to operating conditions, product quality and amount of waste
- make pre-start visual checks, including completing checklists and checking that safety guards and gates are in position and are operational
- use start-up and shutdown processes
- monitor equipment operation as shown by gauges and charts (e.g. speed, hours on line, pressure, temperature, flow and vibration)
- monitor equipment using the senses of smell, sight, sound and feel, as appropriate
- monitor product quality, production rate and defect rate
- report process variations to ensure process conditions are maintained within limits
- respond signals and alarms immediately
- check product for quality and conformity to specifications
- address non-conforming products/materials in accordance with procedures
- identify and rectify/report routine process problems
- complete proforma production logs and reports
- communicate and work effectively and safely with others
- comply with work health and safety (WHS) requirements and safety instructions
- apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment (PPE)
- collect, organise and understand information related to equipment operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- use mathematical ideas and techniques for measuring product specifications and estimating materials requirements
- follow instructions and specifications and ask for help where needed
- prepare and plan the work
- modify activities to cater for variations in workplace contexts and environment.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- major components and functions of the equipment
- principles of equipment operation
- equipment operating parameters
- equipment and product variables and their interactions
- critical material properties, settings and readings
- impact of materials and properties
- construction and limitations of the equipment
- out-of-specification situations
- distinguishing between causes of faults, including:
  - raw materials
  - instrument failure/malfunction
  - electrical failure/malfunction
  - mechanical failure/malfunction
  - variations in product parameters (temperature, flows, pressure and levels).

Assessment Conditions

- Assessment must occur in a simulated environment or a workplace on an operating item of production equipment.
- Workplace for this unit covers a manufacturing environment specifically established for learning introductory manufacturing skills. It may be:
  - a school classroom or workshop equipped to teach manufacturing principles and practices
  - RTO premises equipped to teach manufacturing principles and practices with access to an operating item of production equipment over an extended time
  - an enterprise environment where above average supervision exists and training is occurring. The normal production imperatives have been modified to take into account the training being delivered.
- This unit must always be assessed holistically in conjunction with other units of competency that form part of a specified job function.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Performance must be demonstrated consistently over a period of time.
- Materials and equipment must include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - workplace procedures such as work instructions, standard operating procedures (SOPs), batch sheets. They may be written, verbal, computer based or in some other form.
  - routine or common manufacturing equipment suitable for students operating in a simulated or trial manufacturing environment where there is a high degree of direct supervision.
- Equipment / materials include but are not limited to one or more of the following:
  - guillotines
  - bending and folding machines
  - non CNC lathes, especially bench and training lathes
  - soldering equipment
  - pedestal drills
  - bench grinders
  - records including log sheets/books, job/work sheets, electronic/paper records, verbal/voicemail/email reports
- Assessors must:
  - as a minimum, satisfy the Standards for Registered Training Organisations 2015 assessor requirements
  - have vocational competency in the manufacturing industry at least to the level being assessed, with broad industry knowledge and experience, usually combined with a relevant industry qualification
  - be familiar with the current skills and knowledge used and have relevant, current experience in the manufacturing industry.

MSMPCII296 Make a small furniture item from timber

Modification History

Release 1. Supersedes and is equivalent to MSAPCII296A Make a small furniture item from timber

Application

This unit of competency covers the skills and knowledge required to make a small timber furniture item in accordance with the requirements of an established design. The unity of competency applies in a simulated or trial manufacturing environment where there is a high degree of direct supervision. The work may or may not involve electrical machinery.

This unit of competency applies to learners seeking practical skills that are relevant and useful to the area in which the learner hopes to gain employment, is currently working, and/or as a pathway to further study.

This unit of competency applies to a learning and assessment environment where access to normal production operations is not available. Typically this will be a VET in Schools delivery environment but it may be another simulated or trial manufacturing environment where a high degree of supervision exists. Students may be on work placement.

The unit of competency should be applied to a specific 'project' or task which has a defined beginning, middle and end, occurs over an extended period of time, and is relevant to the furniture manufacturing industry.

When delivered/assessed as part of a qualification the unit must be customised to ensure its relevance to real or simulated work activities and related workplaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Manufacturing pathways

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify job requirements	1.1	Identify specifications for a small furniture item from work instructions
		1.2	Interpret the design to determine tools, equipment and materials, space and work health and safety (WHS) requirements
		1.3	Identify the cutting, joining and finishing requirements
2	Prepare for work	2.1	Select a suitable work area for the task
		2.2	Prepare the work area to meet WHS and ergonomic requirements
		2.3	Select appropriate tools, equipment and materials, including personal protective equipment (PPE), in accordance with specifications
		2.4	Clean, check and adjust equipment and machinery in accordance with workplace procedures
		2.5	Identify potential hazards associated with the use of tools, equipment and materials, and take appropriate safety precautions and/or report to supervisor
		2.6	Keep records in accordance with workplace requirements
3	Produce work	3.1	Cut timber according to specifications and WHS requirements
		3.2	Prepare edges and surfaces according to specifications and WHS requirements
		3.3	Join timber pieces according to item specifications and WHS requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.4	Check work against specifications at the identified checkpoints
		3.5	Rectify any non-conformity with required specifications and quality standards
		3.6	Finish work according to specifications and quality standards
4	Complete work	4.1	Check completed work against specifications and quality standards
		4.2	Return unused materials to storage, and dispose of waste and scrap following workplace procedures
		4.3	Clean the work area and return the tools and equipment to storage
		4.4	Complete and file documentation following workplace procedures and communicate with the supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Small furniture item from timber	A small furniture item from timber includes one or more of the following: • small decorative box, with or without a lid • wooden photo album • simple stool/chair • shelving

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- CD rack
- chopping board
- simple table

Work instructions

Work instructions include one or more of the following:

- job sheets
- patterns
- plans
- drawings and sketches
- verbal or illustrated directions from supervisor
- number and type of objects to be produced
- quality requirements
- WHS requirements
- environmental requirements

WHS requirements

WHS requirements include one or more of the following:

- equipment safety instructions
- hazardous and dangerous goods codes
- local safe operating procedures
- specific workplace rules regarding PPE

Suitable work area

A suitable work area includes one or more of the following:

- workbench
- desk or table
- workshop
- shed
- floor suitable for layout and assembly

Appropriate tools, equipment and materials

Appropriate tools, equipment and materials include, but are not limited to one or more of the following:

- manual saw
- jigsaw
- hacksaw
- clamp
- hammer
- mallet
- screw driver

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- punch
- pliers and pincers
- file
- miter cutter
- 90 degree angle
- staple gun
- paintbrush
- rags
- measuring tapes/ rulers
- spirit level
- bevel
- chisel
- electric saw
- electric sander
- electric screw driver
- power drills
- panel laners
- horizontal borers
- vertical drill presses
- pedestal grinders
- pencils and marking devices
- blades
- lathes
- timber
- manufactured boards
- adhesives
- screws
- nails
- bolts
- glue
- hinges and metal fasteners
- steel
- plastics
- sandpapers
- primers
- paints and stains

Potential hazards

Potential hazards include one or more of the following:

- broken or faulty equipment
- unnoticed sharp objects
- poor lighting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- inadequate ventilation
- inadequate attention to the activities of others
- electrical shortages and power overload
- disorganised or cluttered workspace (poor housekeeping)
- poor attention when dealing with tools and equipment
- environmental chemicals, heat, dust, noise, gas and oil

Workplace records

Workplace records include one or more of the following:

- plant and maintenance records
- job cards
- check sheets
- reporting requirements
- documenting equipment and/or material defects
- workplace procedures relating to the use of tools and equipment
- equipment booking forms and records
- attendance records

Specifications

Specifications include one or more of the following:

- measurements and dimensions
- shape
- joining methods
- surface finish, for example paint and varnish
- quality standards
- materials to be used

Preparing edges and surfaces

Preparing edges and surfaces include one or more of the following:

- filing
- sanding
- bevelling

Joining timber

Joining timber includes one or more of the following:

- nails
- screws
- glue
- staples

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Rectifying non-conformities	Rectifying non-conformities includes one or more of the following: • disassembly of the furniture item • reshaping, resizing or re-cutting component materials • reassembly
Finishing work	Finishing work includes one or more of the following: • sanding • priming • painting • sealing • staining • decorating
Documentation	Documentation includes one or more of the following: • completing necessary paperwork • communicating with supervisor that you have completed the task • photographing the finished piece • filing necessary paperwork

Assessment Requirements for MSMPCII296 Make a small furniture item from timber

Modification History

Release 1. Supersedes and is equivalent to MSAPCII296A Make a small furniture item from timber

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and demonstrate the ability to:

- construct, assemble and finish at least one (1) basic furniture item from timber
- follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment or products
  - achieve required production output and product quality
  - modify activities to cater for variations in workplace contexts and environment
- use hand and power tools and equipment correctly and safely
- perform normal operator maintenance of work area to enable work to be conducted safely and efficiently
- communicate and work effectively and safely with others
- comply with work health and safety (WHS) requirements and safety instructions
- apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment (PPE)
- collect, organise and understand information related to basic plans
- use mathematical ideas and techniques for measuring and calculating areas and estimating materials requirements
- follow instructions and specifications and ask for help where needed.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- workplace procedures and work instructions
- quality requirements
- terms used in furniture construction
- types and uses of tools, equipment and materials
- types of plans, drawings and specifications
- safety precautions for hazardous materials and equipment
- the organisational or workplace structure
- evaluation and review procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- creative thinking techniques
- enterprise/site safety and emergency procedures
- relevant standards and procedures.

Assessment Conditions

Assessment should occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.

This unit must always be assessed holistically in conjunction with other units of competency that form part of a specified job function.

Foundation skills are integral to competent performance of the unit and should not be assessed separately.

Performance must be demonstrated consistently over a period of time.

Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

Assessors must:

- as a minimum, satisfy the Standards for Registered Training Organisations 2015 assessor requirements
- have vocational competency in the manufacturing industry at least to the level being assessed, with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the manufacturing industry.

MSMPCII297 Make an object from cloth using an existing pattern

Modification History

Release 1. Supersedes and is equivalent to MSAPCII297A Make an object from cloth using an existing pattern

Application

This unit of competency covers the skills and knowledge required to make an object from cloth (such as basic decorative items or clothing) following the requirements of an identified pattern. It may or may not require machinery and does not require complex sewing or finishing or the development of a pattern.

This unit applies to learners seeking practical skills that are relevant and useful to the area in which the learner hopes to gain employment, is currently working, and/or as a pathway to further study.

This unit applies to a learning and assessment environment where access to normal production operations is not available. Typically this will be a VET in Schools delivery environment but it may be another simulated or trial manufacturing environment where a high degree of supervision exists. Students may be on work placement.

The unit should be applied to a specific 'project' or task which has a defined beginning, middle and end, occurs over an extended period of time, and is relevant to the manufacturing industry.

When delivered/assessed as part of a qualification the unit must be customised to ensure its relevance to real or simulated work activities and related workplaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify job requirements	1.1	Identify job requirements for making the object from cloth from work instructions
		1.2	Apply instructions for designing and sequencing work
		1.3	Interpret and map out particular measurements or adjustments
		1.4	Consider, plan for and observe work health and safety (WHS) requirements
2	Prepare for work	2.1	Select a suitable work area for the task
		2.2	Select appropriate tools, equipment and materials, including personal protective equipment (PPE), in accordance with specifications
		2.3	Identify potential hazards associated with the use of tools, equipment and materials, and take appropriate safety precautions and/or report to supervisor
		2.4	Lay out required tools and materials in sequence according to job requirements and work instructions
		2.5	Check and adjust equipment in accordance with workplace procedures
3	Create work	3.1	Measure, cut and lay out fabric according to specifications
		3.2	Secure or sew fabric according to quality requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.3	Check work against patterns and worksheets at the identified checkpoints
		3.4	Rectify non-conformity with the required pattern or quality standard
4	Complete work	4.1	Check completed work against the required quality standards
		4.2	Complete documentation following workplace reporting procedures
		4.3	Clean work area and return tools and equipment to storage
		4.4	Return unused materials to storage and deal with waste and scrap following workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

An object from cloth

An object from cloth includes one or more of the following:

- basic cushions
- soft tableware, such as placemats or serviettes
- basic clothing, such as a scarf, simple cloth hat not requiring blocking or a circle skirt
- a basic carry bag
- handkerchief
- tea towel
- wall hanging

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- pencil case
- BBQ cover
- external awning

Work instructions

Work instructions include one or more of the following:

- job sheets including number and type of objects to be produced
- patterns for making an object from cloth
- plans
- drawings and sketches
- operating instructions for equipment including safety procedures
- designer instructions
- quality requirements
- verbal directions from a supervisor or instructor

WHS requirements

WHS requirements include one or more of the following:

- legislation
- regulations
- material handling instructions, including hazardous and dangerous goods codes
- local safe operating procedures
- specific workplace rules and regulations regarding personal protective equipment (PPE)

Suitable work area

A suitable work area includes one or more of the following:

- a bench top or desk
- a sewing or layout table
- a sewing table with a sewing machine

Tools, **equipment and materials**

Tools, equipment and materials include one or more of the following:

- measuring equipment, such as tapes and rulers
- calculating equipment, such as calculators and computers
- general cutting and sewing tools, including scissors, drills, sewing machines, hemming machines and glue guns
- PPE
- plain and patterned fabric

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- velvet
- threads
- wadding
- foam
- tape
- fasteners, including buttons and hooks

Potential hazards

Potential hazards include one or more of the following:

- broken or faulty equipment
- damaged needles
- a lack of lighting
- untidy working conditions
- wet or slippery floors
- improperly secured sewing machines
- damaged or frayed electrical cables and connections

Reporting procedures

Reporting procedures include:

- completing necessary paperwork
- communicating with a supervisor or key person that you completed the task
- reporting, accidents, injuries and faulty equipment or materials
- filing necessary paperwork

Assessment Requirements for MSMPCII297 Make an object from cloth using an existing pattern

Modification History

Release 1. Supersedes and is equivalent to MSAPCII297A Make an object from cloth using an existing pattern

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and demonstrate the ability to:

- construct, assemble and finish at least one (1) object made from cloth
- follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment or products
  - achieve required production output and product quality
  - modify activities to cater for variations in workplace contexts and environment
- identify appropriate materials for use in making cloth items, and any special sewing or handling requirements for those materials
- interpret work order and locate and apply relevant information
- use patterns, and select and use tools and equipment appropriate to the task
- prevent damage to goods, equipment or products
- maintain required production output and product quality
- use hand tools and power equipment correctly and safely
- perform normal operator maintenance of work area to enable work to be conducted safely and efficiently
- report process or materials faults, damaged products or equipment
- communicate and work effectively and safely with others
- comply with work health and safety (WHS) requirements and safety instructions
- apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment (PPE)
- collect, organise and understand information related to basic plans
- use mathematical ideas and techniques for measuring and calculating areas and estimating materials requirements
- follow instructions and specifications and ask for help where needed.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- workplace procedures and work instructions
- organisational structure

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify job requirements	1.1	Identify specifications for metal item from work instructions
		1.2	Interpret design to determine the process, tools, equipment and materials required
		1.3	Consider and apply work health and safety (WHS) requirements for the job
2	Prepare for work	2.1	Select a suitable work area for the task
		2.2	Prepare the work area according to WHS and ergonomic requirements
		2.3	Select appropriate tools, equipment and materials, including personal protective equipment (PPE), in accordance with specifications
		2.4	Clean, check and prepare equipment and machinery for operation in accordance with WHS requirements and workplace procedures
		2.5	Identify potential hazards associated with the use of tools, equipment and materials, and take appropriate safety precautions and/or report to supervisor
		2.6	Keep records in accordance with workplace requirements
3	Produce work	3.1	Transfer dimensions from job specifications and/or drawings or sketches and mark out material to conform to specifications and templates using appropriate machinery or tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.2	Prepare edges and surfaces according to specifications
		3.3	Join components according to project requirements
		3.4	Check work for conformance with specifications
		3.5	Rectify non-conformity with specifications or quality standards
		3.6	Finish work according to specifications and quality standards
4	Complete work	4.1	Check completed work against required quality standards
		4.2	Return unused materials to storage and deal with waste and scrap following workplace procedures
		4.3	Clean work area and return tools and equipment to storage
		4.4	Complete documentation and records and maintain them following workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Metal

Metal includes one or more of the following:

- mild steel
- galvanised steel
- stainless steel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- aluminium
- brass

Metal object

A metal object includes one or more of the following:

- a small decorative box, with or without a lid
- desk pencil holder
- metallic photo album
- cabinet
- shelving
- CD rack
- metallic picture frame

Work instructions

Work instructions include one or more of the following:

- job sheets
- patterns
- plans
- drawings and sketches
- verbal or illustrated directions from supervisor
- number and type of objects to be produced
- quality requirements
- WHS requirements
- environmental requirements

WHS requirements

WHS requirements include one or more of the following:

- legislative requirements
- hazardous and dangerous goods codes
- safe operating procedures
- specific workplace rules regarding PPE, such as disposable overalls, dust mask, eye and ear protection, and gloves

Suitable work area

A suitable work area includes one or more of the following:

- workbench
- desk or table
- workshop
- shed
- durable space

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Appropriate tools, equipment and materials

Appropriate tools, equipment and materials include one or more of the following:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels
- chisels
- files
- planes
- hand saws
- cordless drills/screwdrivers
- fixing and joining devices
- jigs
- clamping devices
- pincers
- power saws
- power drills
- band saws
- vertical drill presses
- PPE
- metal
- adhesives
- screws
- nuts
- bolts
- hinges and metal fasteners
- pencils and markers
- paints

Potential hazards

Potential hazards include one or more of the following:

- broken or faulty equipment
- unnoticed sharp objects
- poor lighting
- inadequate ventilation
- inadequate attention to the activities of others
- electrical shortages and power overload
- disorganised or cluttered workspace (poor housekeeping)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- poor attention when dealing with tools and equipment
- environmental chemicals, heat, dust, noise, gas and oil

Workplace records

Workplace records include one or more of the following:

- plant and maintenance records
- job cards
- check sheets
- reporting requirements
- documenting equipment and/or material defects
- workplace procedures relating to the use of tools and equipment

Specifications

Specifications include one or more of the following:

- measurements and dimensions
- joining methods
- quality standards
- materials to be used

Preparing edges and surfaces

Preparing edges and surfaces includes one or more of the following:

- filing
- sanding
- cleaning
- grinding
- polishing

Joining metal pieces

Joining metal pieces includes one or more of the following

- screws, rivets, nuts and bolts
- hinging
- soldering

Rectifying non-conformities

Rectifying non-conformities includes one or more of the following:

- deconstructing the assembled pieces
- reshaping, resizing or re-cutting elements
- reassembling elements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Finishing work	Finishing work includes one or more of the following: • filing • polishing • grinding • painting and decorating

Assessment Requirements for MSMPCII298 Make an object from metal

Modification History

Release 1. Supersedes and is equivalent to MSAPCII298A Make an object from metal

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and demonstrate the ability to:

- construct, assemble and finish at least one (1) basic object from metal
- follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment or products
  - achieve required production output and product quality
  - modify activities to cater for variations in workplace contexts and environment
- use routine workplace tools, equipment, materials and measuring devices correctly and safely
- apply pre-checking and quality techniques to anticipate construction problems, avoid reworking and avoid wastage
- perform normal operator maintenance of work area to enable work to be conducted safely and efficiently
- communicate and work effectively and safely with others
- comply with work health and safety (WHS) requirements and safety instructions
- apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment (PPE)
- collect, organise and understand information related to basic plans
- use mathematical ideas and techniques for measuring and calculating areas and estimating materials requirements
- follow instructions and specifications and ask for help where needed.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- the concept of work flow and its relation to manufacture of objects
- WHS standards and requirements
- relevant statutory requirements and codes of practice
- hand and portable power tools and their application
- mechanical cutting techniques
- fabrication and shaping techniques
- types of paints, sealants and glues

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- types of jigs and templates
- workshop plant and equipment
- manufacture and assembly techniques
- common materials used in the manufacture of metal objects.

Assessment Conditions

- Assessment should occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.
- This unit must always be assessed in holistically in conjunction with other units of competency that form part of a specified job function.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Performance must be demonstrated consistently over a period of time.
- Workplace for this unit means a manufacturing environment specifically established for learning introductory manufacturing skills. It may be:
  - a school classroom or workshop equipped to teach manufacturing principles and practices
  - RTO premises equipped to teach manufacturing principles and practices
  - an enterprise environment where above average supervision exists and training is occurring. The normal production imperatives have been modified to take into account the training being delivered.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including work instructions, specifications, hand and/or power tools, metal working machinery, workplace records and a suitable work area.
- Assessors must:
  - as a minimum, satisfy the Standards for Registered Training Organisations 2015 assessor requirements
  - have vocational competency in the manufacturing industry at least to the level being assessed, with broad industry knowledge and experience, usually combined with a relevant industry qualification
  - be familiar with the current skills and knowledge used and have relevant, current experience in the manufacturing industry.

MSMPCII299 Make an object from plastic

Modification History

Release 1. Supersedes and is equivalent to MSAPCII299A Make an object from plastic

Application

This unit of competency covers the skills and knowledge required to make a component from plastic in accordance with the requirements of an established design in a simulated or trial manufacturing environment where there is a high degree of supervision. The work may or may not involve plastics processing machinery.

This unit of competency applies to learners seeking practical skills that are relevant and useful to the area in which the learner hopes to gain employment, is currently working, and/or as a pathway to further study.

This unit of competency applies to a learning and assessment environment where access to normal production operations is not available. Typically this will be a VET in Schools delivery environment but it may be another simulated or trial manufacturing environment where a high degree of supervision exists. Students may be on work placement.

The unit should be applied to a specific 'project' or task which has a defined beginning, middle and end, occurs over an extended period of time, and is relevant to the manufacturing industry.

When delivered/assessed as part of a qualification the unit must be customised to ensure its relevance to real or simulated work activities and related workplaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify job requirements	1.1	Identify specifications for plastic product from work instructions
		1.2	Interpret product specification to determine the process, tools, equipment and materials required
		1.3	Identify assembly and finishing requirements
		1.4	Identify work health and safety (WHS) and environmental hazards, and implement hazard control measures
		1.5	Identify materials, housekeeping, waste management requirements and personal protective equipment (PPE)
2	Prepare for work	2.1	Check equipment requirements and adjust equipment to appropriate process settings
		2.2	Check and adjust material requirements
		2.3	Keep records according to workplace requirements
		2.4	Complete pre-start checks of equipment
3	Operate equipment to produce component	3.1	Start up equipment following workplace and hazard control procedures
		3.2	Monitor the process to ensure quality
		3.3	Monitor the product quality
		3.4	Identify and rectify quality and other problems
4	Complete work	4.1	Assemble the product according to specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.2 Check completed work against specifications and customer requirements

4.3 Return unused materials to storage and deal with waste and scrap following workplace procedures

4.4 Clean the work area and return tools and equipment to storage

4.5 Complete documentation following workplace procedures.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

A plastic product

A plastic product includes one or more of the following:

- small container
- picture frame
- toys
- tool box
- automotive plastic products
- household items
- electrical goods
- playground equipment
- small boat
- any other product made from polymers

Plastic processing techniques

Plastic processing techniques include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- injection moulding
- blow moulding
- thermo forming
- composite
- extrusion
- fabrication
- rotational moulding
- other plastic processing methods

Work instructions

Work instructions include one or more of the following:

- job sheets
- patterns
- plans
- drawings and sketches
- verbal or illustrated directions from supervisor
- number and type of objects to be produced
- quality requirements
- WHS requirements

WHS requirements

WHS requirements include one or more of the following:

- equipment safety instructions
- hazardous and dangerous goods codes
- local safe operating procedures
- specific workplace rules regarding personal protective wear and equipment
- environmental controls
- risk assessment
- emergency procedures

Suitable work area

A suitable work area includes one or more of the following:

- on-site host company maintenance or tooling workshop
- simulated workshop in Registered Training Organisation (RTO)
- on-site production facilities

Appropriate tools, equipment and materials

Appropriate tools, equipment and materials include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- manual saw
- jigsaw
- hacksaw
- clamp
- hammer
- mallet
- screw driver
- punch
- pliers and pincers
- file
- miter cutter
- 90 degree angle
- staple gun
- paintbrush
- rags
- measuring tapes/ rulers
- spirit level
- bevel
- chisel
- rollers/scissors
- electric saw
- electric sander
- electric screw driver
- power drills
- vertical drill presses
- pedestal grinders
- plastics processing equipment
- plastics welders such as hot air guns, ultrasonic
- injection moulders/blow moulders/rotational moulding equipment/thermoforming equipment
- plastics raw material
- extruded plastic sheeting (e.g. Perspex, acrylic and polycarbonate)
- adhesives
- screws
- bolts
- glue
- hinges and metal fasteners
- sandpapers
- primers
- paints

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Potential hazards

Potential hazards include one or more of the following:

- broken or faulty equipment
- unnoticed sharp objects
- poor lighting
- inadequate ventilation
- inadequate attention to the activities of others
- electrical shortages and power overload
- disorganised or cluttered workspace (poor housekeeping)
- poor attention when dealing with tools and equipment
- environmental chemicals, heat, dust, noise, gas and oil
- hot equipment and materials
- cuts
- back strain

Workplace records

Workplace records include one or more of the following:

- plant and maintenance records
- set-up, date, batch and materials
- check sheets
- reporting requirements
- documenting equipment and/or material defects
- workplace procedures relating to the use of tools and equipment
- equipment booking forms and records
- attendance records
- quality reports
- production reports
- log sheets

Specifications

Specifications include one or more of the following:

- measurements and dimensions
- shape
- joining methods
- quality standard
- materials to be used
- appearance
- colour/finish

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Joining plastic	Joining plastic includes one or more of the following: • glue • ultrasonic/hot air welding • clips • metal fasteners (e.g. screws, bolts andrivets)
Rectifying non-conformities	Rectifying non-conformities includes one or more of the following • disassembly of the item • reshaping, resizing or re-cutting component materials • reassembly • refinishing • adjusting process conditions
Finishing work	Finishing work includes one or more of the following: • sanding • priming • painting • decorating • assembly • polishing • trimming

Assessment Requirements for MSMPCII299 Make an object from plastic

Modification History

Release 1. Supersedes and is equivalent to MSAPCII299A Make an object from plastic

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and demonstrate the ability to:

- construct, assemble and finish at least one (1) basic plastic object using one (1) plastic processing technique
- follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment or products
  - achieve required production output and product quality
  - modify activities to cater for variations in workplace contexts and environment
- use hand and power tools correctly and safely
- perform normal operator maintenance of work area to enable work to be conducted safely and efficiently
- communicate and work effectively and safely with others
- comply with work health and safety (WHS) requirements and safety instructions
- apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment (PPE)
- collect, organise and understand information related to basic plans
- use mathematical ideas and techniques for measuring and calculating areas and estimating materials requirements
- follow instructions and specifications and ask for help where needed.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- workplace procedures and work instructions
- quality requirements
- plastics industry terminology
- tool, equipment and material types and uses
- plans, drawings and specifications
- safety precautions with hazardous materials and equipment
- organisational or workplace structure
- evaluation and review procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- creative thinking techniques.

Assessment Conditions

- Assessment should occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.
- This unit must always be assessed holistically in conjunction with other units of competency that form part of a specified job function.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Performance must be demonstrated consistently over a period of time.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including work instructions, specifications, hand and/or power tools, machinery, workplace records and a suitable work area.
- Assessors must:
  - as a minimum, satisfy the Standards for Registered Training Organisations 2015 assessor requirements
  - have vocational competency in the manufacturing industry at least to the level being assessed, with broad industry knowledge and experience, usually combined with a relevant industry qualification
  - be familiar with the current skills and knowledge used and have relevant, current experience in the manufacturing industry.

MSMPER200 Work in accordance with an issued permit

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER200C Work in accordance with an issued permit

Application

This unit of competency covers the skills and knowledge required to work in accordance with an issued permit. It aims to ensure that people working under a permit to work understand the system, know the limitations of the permit under which they are working and comply with all the requirements of the permit. The people to whom this unit applies may be called 'permit recipients' or 'permit holders' by some organisations. Some organisations call 'permits' 'clearances'.

This unit of competency applies to persons who are required to conduct work activities under the authority of an issued permit to work and within the context and requirements of that permit. This typically applies to all work done by maintenance staff and contractors and also to any other non-process work performed on the plant.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other team members, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Work Control Systems

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Apply for permit**	1.1	Confirm the scope and location of the work to be done
		1.2	Identify the need for a work permit for the work to be carried out
		1.3	Identify the type of work permit required
		1.4	Collate information required for the issue of the permit
		1.5	Apply for the permit following the organisation's requirements
2	**Identify the scope of the permit**	2.1	Check that work to be done complies with the permit type
		2.2	Check that the scope and location of work comply with the permit issued
		2.3	Identify hazards and check that the hazard controls specified on the permit are consistent with the hazard analysis
		2.4	Check that preparations specified on the permit have been completed
		2.5	Sign onto/receive the permit
3	**Prepare for permitted work**	3.1	Maintain safe working conditions and environment by using available isolation procedures and safety equipment
		3.2	Monitor plant conditions and hazards to ensure work under the permit remains safe
		3.3	Ensure that appropriate personal protective equipment (PPE) is selected and worn, and emergency equipment is available, as required by the permit and relevant procedures
		3.4	Inspect work area to ensure safety and compliance with permit requirements and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Work in accordance with an issued permit**	4.1	Use required hazard reduction/control measures
		4.2	Comply with requirements of the permit, including safety observer if required
		4.3	Display issued permit on work site as required
		4.4	Ensure compliance with scope, location and timeframe specified in the permit.
		4.5	Seek variation to permit/new permit if job or work environment vary from that specified in the permit
		4.6	Suspend job and make worksite safe before leaving job
		4.7	Formally seek and receive authorised extensions to the permit when required
		4.8	Give end-of-day status report to permit issuer
5	**Complete permit to work**	5.1	Obtain new permit or have existing permit revalidated before work is recommenced
		5.2	Check the work conducted against the issued permit to ensure that all the nominated work requirements have been satisfied
		5.3	Monitor general housekeeping to ensure that the site has been left in a clean and safe condition
		5.4	Ensure personal lock outs/tag outs/isolations are removed in accordance with procedures
		5.5	Communicate status of the work conducted and the results of the permit to relevant personnel
		5.6	Complete documentation as required and have permit signed off when job is completed

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided

Work permits

Work permits include one or more of the following:

- cold work/general permit to work
- excavation
- hot work
- vehicle entry
- minor repairs
- working at heights
- confined space entry
- other special permits where there is an appropriate sign-off as required

Information required for

Information required for the issue of the permit includes one or more of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

permit

the following:

- work description
- tools to be used
- process/methods of work/SOPs

Where hazardous materials are being used relevant material safety data sheets (MSDS) will also be required.

Hazards

Hazards include one or more of the following:

- slips and trips
- emergency equipment is unavailable
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- work where a fall by a person from one level to another is reasonably likely to cause injury
- working in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions, swarf and scrap
- spills or leaks
- extreme weather
- other hazards that might arise
- unsafe conditions developing through failure to conform with the provisions of a work permit
- hazards created by the nature or location of the work
- hazards created by the proximity of the work to other work or normal operations

Display issued

The permit holder must keep the issued permit with them on site. It must

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

permit	be displayed or ready to be shown as required by the site/job requirements, including one or more of the following: • displayed in a mounting provided by the site • accessible in a folder which is on the worksite • carried in overall pockets in a manner which allows it to be readily shown on request

Unit Mapping Information

Assessment Requirements for MSMPER200 Work in accordance with an issued permit

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER200C Work in accordance with an issued permit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and demonstrate the ability to:

- identify type and scope of permit relevant to the job
- interpret and implement permit conditions
- identify changes to conditions which may lead to the permit being revoked before the job is completed
- monitor hazards and hazard controls.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- different types of permits and the work they cover, including three (3) or more of:
  - cold work/general permit to work
  - excavation
  - hot work
  - vehicle entry
  - minor repairs
  - working at heights
  - confined space entry
  - other permit types as used on site
- the impact of the regulatory framework and organisation procedures under which the permit operates upon the particular job requiring the permit
- hazards associated with tasks covered by the permit and related hazard controls
- types of tests/inspections required for the issue of work permits including one (1) or more of:
  - atmospheric, oxygen/breathability
  - temperature
  - humidity
  - combustibles, oxygen, enriched or reduced
  - electricity
  - stored pressure/energy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- flammability/explosivity
- toxicity
- electricity
- stored energy/pressure.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job, appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMPER201 Monitor and control work permits

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER201A Monitor and control work permits

Application

This unit of competency covers the skills and knowledge required to monitor a work situation in which the activity is conducted under a permit to work. The individual will be required to monitor the work situation for conformance to the permit and immediately intervene if the parameters of the permit are not met or work proceeds outside the boundaries set by the permit.

This role is typically carried out by the plant operator for that area or other suitably qualified person.

The role of ‘hole watcher’ and ‘fire watcher’ are covered by MSMPER202 Observe permit work

This unit of competency carries a high level of responsibility and the level and area of responsibility of the role is typically prescribed by the permit process.

This unit of competency applies to the activities and functions associated with work carried out in a hazard controlled environment.

Not all sites/plants will have all permits. Some sites will call permits by other names, e.g. clearances.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify and monitor permit conditions	1.1	Identify permit requirements
		1.2	Monitor conditions to ensure that the work being conducted conforms to the issued permit requirements
		1.3	Identify and communicate changes in the operating conditions or requirements of the permit to permit holders to ensure they are kept aware of any hazards
2	Control work permit systems	2.1	Check and verify the permit holder's knowledge of the issued permit and its requirements before allowing any work to be undertaken
		2.2	Control work activities to comply with the work permit system and safety procedures
		2.3	Undertake site inspections to ensure that the work to be undertaken is in sequence and completed in a safe and coordinated manner
		2.4	Identify hazards, and confirm with those undertaking the permitted work that control measures, as defined in the permit, are established
3	Identify and action non-compliance	3.1	Identify conditions of active permits
		3.2	Take corrective action upon incidences of non-compliance with permit conditions through the withdrawal or suspension of the issued permit
		3.3	Report and record incidents of non-compliance according to procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	Confirm compliance with permit	4.1	Complete checklists in accordance with standard procedures
		4.2	Document and communicate findings to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirement
- Dangerous Goods regulations
- Hazardous substances regulations
- Hazardous Substances Information System
- Major hazard facility requirements, if relevant
- Australian Standard AS 2865-2009 Confined spaces
- Australian Standard AS 1674 Set-2007 Safety in welding and allied processes (covers all hot work)
- Australian Standard AS 4024.1-2014 Series - Safety of machinery
- Australian Standard AS/NZ 1715:2009 Selection use and maintenance of respiratory protective equipment
- National Standard for Plant [NOHSC:1010 (1994)]
- National exposure standards for atmospheric contaminants in the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

occupational environment [NOHSC:1003 (1995)]

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- permit control system
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Work permits

Work permits include one or more of the following:

- cold work
- excavation
- vehicle entry
- minor repairs
- working at heights
- hot work
- confined space
- electrical
- increased hazard
- permits covering a single plant item or plant area, such as might be an operator's scope of responsibility
- other relevant permits

The work control (permit) system

The work permit system includes:

- types of permits
- legislative/regulatory/standards framework
- roles and responsibilities of parties under the permit system
- specifications for undertaking the work covered by a permit
- alternative ways of conducting a job

Work

Work specifications include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

specifications

- any requirements for testing of atmospheric conditions and ventilation
- safety structures and control measures
- communications
- incident response
- equipment which can and cannot be used

Safety structures and control measures

Safety structures and control measures include one or more of the following:

- isolations
- lockout/tag out
- barriers and signage
- emergency response
- gas testing/atmosphere monitoring
- standby person
- other measures specified in the permit

Monitor

Monitor includes observing conditions of the workplace at a frequency appropriate to the risk and work practices, and includes one or more of the following:

- supervision/monitoring of contractors and/or employees
- verification of permits, licences and tests
- document control
- checking work activities against permit conditions, site-specific safety procedures and requirements and relevant legislation/codes
- identifying non-compliances
-

Tools and equipment

Tools and equipment include one or more of the following:

- locks and tags
- blinds/blanks
- blind/blank list
- gas testers and monitors
- barricades
- signage
- communications equipment
- process and equipment drawings
-

Hazards

Hazards include one or more of:

- process isolations incomplete

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- mechanical and electrical isolations not in place
- atmospheric testing incomplete and atmosphere not safe
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working where a fall is reasonably likely, in restricted or confined spaces, or in environments subjected to heat, noise, dusts, smoke, darkness, vapours or other atmospheric hazards
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Assessment Requirements for MSMPER201 Monitor and control work permits

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER201A Monitor and control work permits

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- identify activities requiring a permit and type of permit required
- monitor the conditions of work under the permit
- identify changes in work and site circumstances that affect permit
- communicate effectively with team/work group and other personnel to:
  - explain the requirements of the permit
  - explain and verify complex issues and requirements relevant to permit conditions
  - withdraw or cause work to cease outside permit conditions
  - explain and implement safety and incident response procedures
- identify and report any non-conformance with permit conditions
- speak clearly and unambiguously in the language of the worksite
- complete workplace forms and reports
- differentiate between acceptable and unacceptable conditions

identify hazards and apply relevant hazard controls.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - work permit systems
  - safety, emergency and hazard control
  - incident response
  - plant isolation and preparation requirements
  - relevant organisation procedures
- hazards that may arise in the job and plant, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- functions and components of a permit system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- types of permits, what they cover, limitations and associated hazards.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - must include the use of typical permits
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMPER202 Observe permit work

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER202A Observe permit work

Application

This unit of competency covers the skills and knowledge required to undertake the safety observer role for permits requiring a safety observer. This role may also be called a hole watcher or a fire watcher.

Safety observers can stop permit work, but do not have the authority to restart it.

This unit of competency applies to a member of the work team or an operator who performs this role.

Where the person is safety observer for confined space permit they should also be competent in confined space entry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	Prepare for the job	1.1	Check the permit issued is appropriate and sufficient for the work to be done
		1.2	Prepare a rescue/incident response plan in accordance with procedures
		1.3	Check plan is workable within the approved job procedures and issued permit
		1.4	Request revision of job procedures and/or permit to ensure rescue/incident response plan is practical
2	Control the permit site	2.1	Interpret the hazard controls required by the permit
		2.2	Check all hazard controls are operational and complied with at all times
		2.3	Maintain constant communication with workers as relevant to the job and permit
		2.4	Control entry to and exit from the worksite in accordance with the requirements of the permit
		2.5	Monitor the environment of the worksite and adjacent areas
		2.6	Monitor scope and location of work as defined by the permit
		2.7	Withdraw permit and shut down worksite if conditions vary from those required by the permit
3	Take appropriate action for potential incident	3.1	Ensure all required first response equipment is in the location specified by the permit and is in working condition
		3.2	Ensure all required monitoring is carried out as required by the permit
		3.3	Withdraw permit and shut down worksite in the event of an alarm or monitoring failure
		3.4	Raise the alarm in the event of an incident
		3.5	Implement rescue/incident response plan as required by procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	Complete safety observer role	4.1	Hand over to oncoming safety observer before leaving role
		4.2	Complete all required documentation and reports

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- Dangerous Goods regulations
- Hazardous substances regulations
- Hazardous Substances Information System
- Major hazard facility requirements if relevant
- AS 2865-2009 Confined spaces
- AS 1674 Set-2007, Safety in welding and allied processes (covers all hot work)
- AS/NZ 1715:2009 Selection use and maintenance of respiratory protective equipment
- National exposure standards for atmospheric contaminants in the occupational environment [NOHSC:1003 (1995)]

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- permit control system
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Work permits

Work permits include one or more of the following:

- cold work
- excavation
- vehicle entry
- minor repairs
- working at heights
- hot work
- confined space
- electrical
- increased hazard
- permits covering a single plant or plant area such as might be an operator's scope of responsibility
- other relevant permits

The work permit system

The work permit system includes:

- types of permits
- legislative/regulatory/standards framework
- roles and responsibilities of parties under the permit system
- specifications for undertaking the work covered by a permit
- alternative ways of conducting a job

Work specifications

Work specifications include:

- any requirements for testing of atmospheric conditions and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ventilation
- safety structures and control measures
- communications
- incident response
- equipment which can and cannot be used

Safety structures and control measures

Safety structures and controls measures include one or more of the following:

- isolations
- lockout/tag out
- barriers and signage
- emergency response
- gas testing/atmosphere monitoring
- standby person
- other measures specified in the permit

Hazards

Hazards include one or more of the following:

- process isolations incomplete
- mechanical and electrical isolations not in place
- atmospheric testing incomplete and atmosphere unsafe
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- extreme weather
- other hazards that might arise

Assessment Requirements for MSMPER202 Observe permit work

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER202A Observe permit work

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret the safety and hazard control requirements of permit conditions
- prepare a rescue/incident response plan in accordance with procedures
- ensure workable rescue/incident response plan is in place and aligns with procedures and permit conditions
- ensure first response equipment is available and in working condition
- observe safety and hazard aspects of work activities under the permit and monitor conformance to permit conditions
- communicate effectively with team/work group and other personnel to:
  - explain and implement safety and incident response procedures
  - explain the requirements of the permit
  - withdraw or cause work to cease outside permit conditions
  - control entry to and exit from the job site
  - handover to oncoming safety observer
- speak clearly and unambiguously in the language of the worksite
- complete workplace forms and reports.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - work permit systems
  - safety, emergency and hazard control
  - incident response
  - relevant organisation procedures
- hazards that may arise in the job and plant, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- types of permits, what they cover and associated hazards
- scope and limitations of own role and responsibilities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - must include the use of typical permits and situations
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMPER205 Enter confined space

Modification History

Release 2. Adjustment to Assessment Requirements to meet industry requirements. Equivalent outcomes.

Release 1. Supersedes and is equivalent to MSAPMPER205C Enter confined space

Application

This unit of competency is required by persons who are required to enter a confined space, as defined by the Australian Standard *AS 2865-2009 Confined spaces*, or its authorised update or replacement.

This unit of competency covers the skills and knowledge required for safe entry to confined spaces under a work permit and for maintaining safety while working in the confined space. The term ‘work permit’ (or ‘permit’) includes all written authorities as defined by *AS 2865-2009 Confined spaces*. It applies to persons required to enter confined spaces for any purpose, including maintenance, cleaning, inspection or other reasons.

Work in/entry to confined spaces shall conform to relevant legislation and *AS 2865-2009 Confined spaces*, or its authorised update or replacement.

AS 2865-2009 Confined spaces defines a confined space as:

'An enclosed or partially enclosed space that is not intended or designed primarily for human occupancy, within which there is a risk of one or more of the following:

(a) An oxygen concentration outside the safe oxygen range.

(b) A concentration of airborne contaminant that may cause impairment, loss of consciousness or asphyxiation.

(c) A concentration of flammable airborne contaminant that may cause injury from fire or explosion.

(d) Engulfment in a stored free-flowing solid or a rising level of liquid that may cause suffocation or drowning.'

Entry to a confined space is defined by *AS 2865-2009 Confined spaces* as: 'when a person's head or upper body is within the boundary of the confined space’.

NOTE: Inserting an arm for the purpose of atmospheric testing is not considered as entry to a confined space.'

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSMPER200 Work in accordance with an issued permit

Competency Field

Work control systems

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Assess confined space for entry	1.1	Confirm the purpose of the required entry
		1.2	Check the documented risk assessment associated with the entry to the confined space
		1.3	Identify and assess hazards within/around the confined space
		1.4	Identify hazard controls and check they are functional and appropriate.
		1.5	Check the incident/emergency response plan is appropriate to the job
		1.6	Rehearse own role in an incident/emergency response
		1.7	Confirm and verify that the conditions of the permit reflect the risk assessment
		1.8	Ensure the confined space is ready for entry
2	Use safety	2.1	Secure the worksite

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	equipment and personal protective equipment (PPE)	2.2	Select, fit and wear designated PPE
		2.3	Select, test and use required instruments and monitors
		2.4	Challenge test atmosphere/atmospheric monitoring instrument if required before entry
		2.5	Confirm test/monitoring results show entry is safe
3	Work in accordance with confined space requirements	3.1	Enter confined space safely
		3.2	Work in compliance with permit requirements
		3.3	Arrange re-authorisation/reissue of permits as required
		3.4	Complete confined space working documentation
		3.5	Maintain communications with all relevant personnel
		3.6	Monitor atmosphere within the confined space as required by the permit
		3.7	Monitor environment around the confined space for relevant changes
		3.8	Take appropriate action if there is a change in risk/work environment
4	Conclude confined space operations in accordance with procedures	4.1	Recover, clean, service and store equipment
		4.2	Complete required final documentation
		4.3	Report any issues

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- *AS 2865-2009 Confined spaces*

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- permit to work system
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Confined space permit

The confined space permit must meet the requirements of *AS 2865-2009 Confined spaces*, its authorised replacement or other

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

appropriate standard.

Conditions of the permit include:

- hazard controls
- PPE
- instruments and monitors to be used
- re-authorisation/reissue requirements
- other specifications for the work

Ready for entry

Checking the confined space is ready for entry includes checking:

- isolations are complete and appropriate
- isolation complies with regulations, standards and procedures
- atmosphere is safe (or if necessary relevant measures are in place to ensure safe entry into an unsafe atmosphere)
- safe entry and exit methods are in place
- other items to ensure compliance with procedures, permits, relevant legislation and *AS 2865-2009 Confined spaces*.

Where the confined space is not ready for entry appropriate steps must be taken, including reporting deficiencies and/or refusing to enter the space.

Secure worksite

Securing the worksite includes selecting and erecting/deploying one or more of the following:

- signs
- barriers
- other requirements as defined in the confined space entry permit requirements, *AS 2865-2009 Confined spaces* and other relevant requirements

Tools and equipment

Tools and equipment include one or more of the following:

- instruments and monitors:
- instruments used for pre-entry testing appropriate to the hazards
- continuous monitors appropriate for the hazards
- other devices used to test the confined space atmosphere
- PPE, such as:
  - eye protection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- ear protection
- gloves
- clothing
- respiratory protection
- helmets
- safety footwear
- lifelines and harnesses
- personal monitors and alarms
- other relevant PPE

- communication equipment
- voice/visual contact
- lifeline communication
- radio communication
- other relevant communication aids

Re-authorisation/reissue of permits

Requirements for re-authorisation/reissue of permits are required by one or more of the following situations:

- there is any change to work scope or method
- the work situation/workplace conditions changes
- there are deviations from permit conditions
- there is a gap in work continuity
- other site rules require it

Working documentation

Working documentation includes one or more of the following:

- entry/exit/re-entry logs
- other documentation required by *AS 2865-2009 Confined spaces* (e.g. Section 2.9)
- other documentation required by the permit
- other documentation required by the site

Appropriate action if there is a change in risk

Where there is a change in risk/work environment appropriate action includes one or more of the following:

- seeking revalidation of the permit
- evacuating the confined space
- instigating/undertaking testing
- raising the alarm
- initiating the emergency/incident response plan
- other relevant action defined in permit conditions or site procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Final documentation

Final documentation includes one or more of the following:

- signing-off of permit
- documentation related to equipment used
- other required records

Reporting of issues

Reporting of issues includes:

- feedback about the work and methods of improving the work process
- signs and symptoms of operational stress
- equipment malfunctions
- wear and tear of equipment and tools
- condition of safety/rescue equipment
- observations about the condition of the confined space
- other issues that might arise

Hazards

Hazards include one or more of the following:

- heat, smoke, dust or other atmospheric hazards
- sharp edges, protrusions or obstructions
- limited head spaces or overhangs
- equipment or product mass
- slippery surfaces, spills or leaks
- noise, rotational equipment or vibration
- high/low oxygen content
- hazardous atmospheres (e.g. combustible and toxic)
- entrapment
- engulfment
- heat stress
- claustrophobia
- external hazards that may impact on the safety of those working in the confined space (e.g. exhaust fume or other hazardous vapours being drawn into the confined space by ventilation fans)
- other hazards as identified in *AS 2865-2009 Confined spaces*
- electricity
- gases and liquids under pressure
- structural hazards/collapse
- equipment failures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- industrial (machinery, equipment and product)
- equipment or product mass
- working where there is a reasonable risk of a fall
- flammability and explosivity
- unauthorised personnel
- extreme weather
- other hazards that might arise

Unit Mapping Information

Release 2. Adjustment to Assessment Requirements to meet industry requirements. Equivalent outcomes.

Release 1. Supersedes and is equivalent to MSAPMPER205C Enter confined space

Assessment Requirements for MSMPER205 Enter confined space

Modification History

Release 2. Adjustment to Assessment Requirements to meet industry requirements. Equivalent outcomes.

Release 1. Supersedes and is equivalent to MSAPMPER205C Enter confined space

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- identify hazards and apply relevant hazard controls
- undertake all checks and preparation in accordance with permit conditions and site procedures
- check that hazard controls are in place and operational
- confirm the permit conditions reflect risk assessment and confined space is ready for entry
- enter the confined space and carry out actions specified in the permit/standard procedures, including all safety procedures
- monitor the conditions of work under the permit
- interpret and respond to gas test/monitoring results
- initiate incident/emergency response plan
- select, use and maintain equipment, including:
  - instruments and monitors
  - personal protective equipment (PPE)
- use communication equipment and processes applicable to confined space work
- communicate effectively with team/work group and other personnel in the language of the workplace
- complete required workplace forms.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - work permit systems
  - safety, emergency and hazard controls
  - incident response
- hazards that may arise in relation to the confined space, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- communication protocols relevant to confined space requirements
- tests relevant to confined space entry and the interpretation of test results, including at least one (1) of:
  - atmospheric/oxygen/breathability
  - flammability/explosivity
  - toxicity
  - temperature
  - humidity.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job appropriate supervision and safety precautions must be provided.
- It is appropriate to train and assess the prerequisite unit *MSMPER200 Work in accordance with an issued permit* concurrently. It may also be appropriate to cluster other related units and deliver and assess concurrently.
- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence will require a 'practical assessment' which:
  - requires entry, compliant with Section 3.4.29 of *AS 2865-2009 Confined spaces*, on more than one occasion into confined spaces which are reasonable facsimiles of an industrial confined space
  - requires the conduct of a simple task ('work'), while within each confined space
  - requires the entry to be under a confined space entry permit, the permitting system and the permit itself to be reasonable facsimiles of industrial permits and systems
  - requires the person to undertake all checks and complete all documentation that is required for the confined space entry.
- The confined space used should be a reasonable facsimile of an industrial confined space. The use of breathing apparatus and black out goggles is not required for this unit.
- Assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMPER300 Issue work permits

Modification History

Release 2. Addition of information missing from the Assessment Requirements. Equivalent.

Release 1. Supersedes and is equivalent to MSAPMPER300C Issue work permits

Application

This unit of competency covers the skills and knowledge required to issue work permits. It covers an understanding of the permit system and the limitations of each permit, and making decisions regarding the need for and correct use of each permit. This unit includes the issue of any and all permits. Permits are called ‘clearances’ by some organisations.

This unit of competency applies to personnel who are required to issue appropriate permits to work to persons conducting a variety of activities in workplace environments in which hazards exist or specific procedures need to be followed and monitored to protect the safety of personnel and the integrity of plant or process.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSMWHS201 Conduct hazard analysis

Competency Field

Work control systems

Unit Sector

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

essential outcomes		demonstrate achievement of the element	
1	Identify need for work permit	1.1	Identify work permit needed from job scope
		1.2	Confirm with appropriate personnel the need for work permit
2	Ensure job site is prepared for authorised work	2.1	Inspect the job site
		2.2	Identify work health and safety (WHS) and environmental requirements
		2.3	Conduct hazard identification and risk assessment
		2.4	Ensure job site is prepared in accordance with specified work permit conditions
		2.5	Check permit conditions and report to appropriate personnel
		2.6	Conduct job site testing in accordance with procedures
3	Raise and issue work permits	3.1	Ensure conditions are documented on permit
		3.2	Ensure appropriate testing is carried out and results documented in accordance with procedures
		3.3	Determine an appropriate validity period
		3.4	Check that permit conditions are met (i.e. validate permit)
		3.5	Complete and authorise permit
		3.6	Ensure recipient is advised of and agrees to abide by the requirements of the permit
		3.7	Ensure recipient signs permit
4	Monitor work for compliance	4.1	Ensure regular job site inspections are done
		4.2	Monitor conditions and work progress and respond

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			appropriately to changing conditions and circumstances
		4.3	Ensure permit currency and revalidate as required
		4.4	Ensure permit is displayed in accordance with procedures
		4.5	Identify and act on incidences of non-compliance and report promptly to relevant personnel
		4.6	Withdraw/cancel permit if conditions warrant it
		4.7	Report any issues which arise with regard to work under the permit in accordance with procedures
5	Receive end of day report	5.1	Receive end of day report from permit recipients
		5.2	Confirm job progress and status.
		5.3	Revalidate/arrange for revalidation of permit as required
		5.4	Confirm work area has been left safe
		5.5	Handover ongoing permits and status of suspended permits to oncoming shift
6	Close work permit	6.1	Inspect job status
		6.2	Check that work undertaken satisfies permit conditions
		6.3	Ensure that work site is ready for a safe return to working conditions
		6.4	Check required returns to work status have been completed
		6.5	Sign off documentation and close permit in accordance with procedures
		6.6	Communicate worksite and process status to relevant personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- Dangerous Goods regulations
- Hazardous substances regulations
- Hazardous Substances Information System
- Australian Standard AS 2865 2009 Confined spaces
- Australian Standard AS 1674 Set-2007, Safety in welding and allied processes (covers all hot work)
- Australian Standard AS 4024.1-2014 Series - Safety of machinery
- Australian Standard AS/NZ 1715:2009 Selection use and maintenance of respiratory protective equipment
- National Standard for Plant [NOHSC:1010 (1994)]
- National exposure standards for atmospheric contaminants in the occupational environment [NOHSC:1003 (1995)]

Procedures

All operations are must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- company policy and permit control systems

Work permits

Work permits include one or more of the following:

- cold work
- excavation
- vehicle entry
- minor repairs
- working at heights
- hot work
- confined space
- electrical
- increased hazard
- permits covering a single plant or plant area, such as might be an operator's scope of responsibility
- other relevant permits

The work permit system

The work permit system includes:

- types of permits
- legislative/regulatory/standards framework
- roles and responsibilities of parties under the permit system
- specifications for undertaking the work covered by a permit
- alternative ways of conducting a job

Work specifications

Work specifications include:

- any requirements for testing of atmospheric conditions and ventilation
- safety structures and control measures
- communication
- incident response
- equipment which can and cannot be used

Safety structures and control measures

Safety structures and control measures include one or more of the following:

- isolations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- lockout/tag out
- barriers and signage
- emergency response
- gas testing/atmosphere monitoring
- standby person
- other measures specified in the permit

Confined space

AS 2865 2009 Confined spaces definition given for confined space is used in this Training Package, i.e.:

'An enclosed or partially enclosed space that is not intended or designed primarily for human occupancy, within which there is a risk of one or more of the following:

(a) An oxygen concentration outside the safe oxygen range

(b) A concentration of airborne contaminant that may cause impairment, loss of consciousness or asphyxiation

(c) A concentration of flammable airborne contaminant that may cause injury from fire or explosion

(d) Engulfment in a stored free-flowing solid or a rising level of liquid that may cause suffocation or drowning'

Hot work

Hot work includes:

- any activity which has the potential to be or cause a source of ignition

Hazards

Hazards include one or more of the following:

- slip/trip hazards
- PPE unavailable and not functional
- emergency equipment unavailable
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment in unsafe condition with hazard controls not functional
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions, swarf and scrap
- spills or leaks
- extreme weather
- unsafe conditions developing through failure to conform with the provisions of a work permit
- hazards created by the nature or location of the work
- hazards created by the proximity of the work to other work or normal operations
- other hazards that might arise

Modification History

Release 2. Addition of information missing from the Assessment Requirements. Equivalent.

Release 1. Supersedes and is equivalent to MSAPMPER300C Issue work permits

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and demonstrate the ability to:

- recognise types of work permits required for different situations
- undertake and interpret hazard analysis
- conduct and interpret tests/inspections for gas or other hazards, including one or more of:
  - atmospheric, including explosivity
  - flammability
  - toxicity
  - temperature
  - humidity
  - combustibles, oxygen, enriched or reduced
  - electricity
  - stored pressure/energy
- ensure correct preparation of worksite is undertaken, including one or more of:
  - mechanical, electrical and other energy sources, and process isolations
  - de-energising all sources of energy/pressure
  - purging of plant
  - ventilation of plant
  - lockout/tag out procedures
  - blinding/blanking lines
  - other hazard controls
- ensure supervision/monitoring of people working under the permit
- speak clearly and unambiguously in the language of the worksite.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- the organisation's work control system
- types of permits and their application
- hazards of the area for which permit is being issued

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hazards that may be created by the interactions of the permit, the job, the process and the plant area
- focus of operation of work systems and equipment.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
- should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - will require the issuing of example permits for realistic case study situations
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMPER400 Coordinate permit process

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER400A Coordinate permit process

Application

This unit of competency covers the skills and knowledge required for the issuing and auditing of any and all permits across multiple plant areas or an entire site. It covers both the issuing of permits directly and also the coordination of permits issued by others. It focuses on potential conflicts between work being undertaken as well as checking that the permit system is being used correctly.

This unit of competency requires the application of detailed operational and process knowledge which is applied to coordinating permits, overseeing plant preparations and testing for permit work.

This competency is typically performed by a senior process technician. This may be a routine job, a role in part of a job or a temporary role in a shut down or similar.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSMPER300 Issue work permits

Competency Field

Work control systems

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	Assess planned work for conflicts	1.1	Identify all work planned for a time period
		1.2	Determine the scope and health safety and environment (HSE) impacts of each planned job
		1.3	Confirm hazard analysis and controls for each planned job
		1.4	Compare hazard profiles for each planned job
		1.5	Identify conflicts between planned jobs
		1.6	Negotiate a solution between conflicts
		1.7	Communicate results of negotiations to relevant stakeholders
2	Issue required permits	2.1	List those jobs which will be allowed to proceed in the time period
		2.2	Confirm hazard controls required for these jobs
		2.3	Identify jobs which have impacts across plant areas
		2.4	Ensure controls and communications are adequate
		2.5	Issue/cause to be issued required permits
		2.6	Report as required by procedures
3	Audit live permits	3.1	Audit plant preparations.
		3.2	Audit permit issuing process
		3.3	Check appropriate controls have been specified
		3.4	Audit handover/sign-on process
		3.5	Audit work in progress for conformance to permit conditions
		3.6	Audit work completion and hand back/close out process
		3.7	Audit deisolation and return to work preparations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.8	Take immediate and appropriate action on any problems found
		3.9	Report on audit as required by procedures
4	Audit past permits	4.1	Obtain relevant paper work
		4.2	Check for conformance to procedures
		4.3	Check for appropriateness of specified hazard controls
		4.4	Identify any non-conformance
		4.5	Identify systemic non-conformances
		4.6	Take any immediate action which is appropriate
		4.7	Report on audit as required by procedures
5	Analyse audit findings	5.1	Identify improvements to the permit system
		5.2	Identify improvements to the implementation of the permit system
		5.3	Suggest improvements to the permit system as appropriate
		5.4	Suggest improvements to hazard analysis processes
		5.5	Suggest improvements to the plant preparation/return to operations processes
		5.6	Suggest improvements to hazard controls
		5.7	Suggest training required as appropriate

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- Dangerous Goods regulations
- Hazardous substances regulations
- Hazardous Substances Information System
- AS 2865 2009 Confined spaces
- AS 1674 Set-2007, Safety in welding and allied processes (covers all hot work)
- AS 4024.1-2014 Series - Safety of machinery
- AS/NZ 1715:2009 Selection use and maintenance of respiratory protective equipment
- National Standard for Plant [NOHSC:1010 (1994)]
- National exposure standards for atmospheric contaminants in the occupational environment [NOHSC:1003 (1995)]

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- permit control system
- emergency procedures
- work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Work permits

Work permits include one or more of the following:

- cold work
- excavation
- vehicle entry
- minor repairs
- working at heights
- hot work
- confined space
- electrical
- increased hazard
- other relevant permits

The work permit system

The work permit system includes:

- types of permits
- legislative/regulatory/standards framework
- roles and responsibilities of parties under the permit system
- specifications for undertaking the work covered by a permit
- alternative ways of conducting a job

Under a work permit system a 'competent person' is a person who has, through a combination of training, education or experience, acquired knowledge and skills enabling that person to correctly perform a specified task.

Work specifications

Work specifications include:

- any requirements for testing of atmospheric conditions and ventilation
- safety structures and control measures
- communication
- incident response
- equipment which can and cannot be used
- re-authorisation/reissue requirements
- revalidation requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Safety structures and control measures Safety structures and control measures include one or more of the following:

- isolation
- barriers
- lockout/tag out signs and procedures
- automatic plant shutdown buttons
- cords/lanyards
- alarms
- barriers
- guards
- earth leakage devices
- warning lights

Live permits Live permits are permits that apply to work currently being done

Past permits Past permits are permits that have been handed back/closed out

Audit permits Auditing of permits requires one or more of the following:

- selecting an individual permit and following it through
- spot checking key aspects of permits
- intensively checking one aspect of the process with all permits on issue

Unit Mapping Information

Assessment Requirements for MSMPER400 Coordinate permit process

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER400A Coordinate permit process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- prepare and issue at least one (1) permit from three (3) different permit types
- analyse and resolve two (2) or more jobs with the potential to have conflict
- prepare at least one (1) audit report on live permits and one (1) on past permits, including the analysis of the audit findings
- analyse all current and proposed work to determine hazard controls and permit requirements
- coordinate the issue of permits for planned jobs
- ensure that issued permits specify appropriate conditions
- plan and undertake audits of live and past permits
- analyse audit results and identify improvements
- identify non-conformances and take appropriate action
- communicate effectively with team/work group and other personnel.

Knowledge Evidence

- Evidence must be provided that demonstrates knowledge of:
- organisation work control system procedures
- the operations of the plant and each major unit in it
- hazards that may arise in plant materials, processes and process conditions, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
  - hierarchy of control
- plant preparation and isolation procedures

auditing principles.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRV310 Fit recreational vehicle floor

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to fit a floor in a recreational vehicle. The work will be carried out in a recreational vehicle manufacturing facility.

This unit of competency covers the preparation for, laying of and clean-up after the laying of a floor, including fixing to the chassis and laying vinyl, carpet or other covering.

The operator will be required to work to procedures, and follow plans/specifications for what is required.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Plan the work**	1.1	Review the requirements of the work
		1.2	Check required tools and jigs are available at the worksite
		1.3	Check required materials are available at the worksite
		1.4	Identify any hazards and the related hazard controls
		1.5	Check the hazard controls are in place and operational
		1.6	Query any items that are different to usual and clarify requirements
2	**Fix the floor in accordance with procedures**	2.1	Use relevant hazard controls, including personal protective equipment (PPE)
		2.2	Place the floor/floor components and align in the required position
		2.3	Clamp/hold floor in place as required
		2.4	Drill holes/make any penetrations required
		2.5	Fix floor to chassis or other support as required
3	**Lay floor covering**	3.1	Apply adhesive as required
		3.2	Locate covering in correct position
		3.3	Fix covering to floor in accordance with procedures
4	**Finish floor fit**	4.1	Check floor has been fitted correctly and make any required adjustments
		4.2	Clean up recreational vehicle and work area, leaving it ready for the next job
		4.3	Segregate and handle waste in accordance with procedures
		4.4	Complete any required documentation/records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults
- tooling problems

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Unit Mapping Information

Assessment Requirements for MSMRV310 Fit recreational vehicle floor

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- fit/refit floor on at least three (3) recreational vehicles
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- fitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations that include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults
- tooling problems

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMRV312 Fit water systems in a recreational vehicle

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- fit water systems on at least three (3) recreational vehicles
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- fitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRV313 Fit 12 V cable systems in a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to fit 12 V cable systems in a recreational vehicle. The work will be carried out in a recreational vehicle manufacturing facility.

This unit of competency covers the preparation for, fitting of and clean-up after the fitting of the 12 V cable system.

The operator will be required to work to procedures, and follow plans/specifications for what is required.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Plan the work**	1.1	Review the requirements of the work
		1.2	Check required tools and jigs are available at the worksite
		1.3	Check required cable is available at the worksite
		1.4	Check the 12 V installations/appliances have been installed
		1.5	Identify any hazards and the related hazard controls
		1.6	Check the hazard controls are in place and operational
		1.7	Query any items that are different to usual and clarify requirements
2	**Fit the 12 V cable system in accordance with procedures**	2.1	Use relevant hazard controls, including personal protective equipment (PPE)
		2.2	Run cable from supply to installation/appliance
		2.3	Run cable to/from circuit breakers
		2.4	Terminate cable as required
		2.5	Drill holes/make any penetrations required in frame
		2.6	Fix all cables in position as required
		2.7	Complete fitting of cable as required
3	**Finish 12 V cable system fit**	3.1	Check 12 V cable system has been fitted correctly and make any required adjustments
		3.2	Clean up recreational vehicle and work area, leaving it ready for the next job
		3.3	Segregate and handle waste in accordance with procedures
		3.4	Complete any required documentation/records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- hazardous products and materials

Assessment Requirements for MSMRV316 Fit appliances in a recreational vehicle

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- fit appliances in at least three (3) recreational vehicles
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with team/work group and supervisors.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine supervision and to solve routine problems, including:

- hazards that may arise in the job/work environment
- fitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor (third party) report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRV317 Install solar equipment on a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to install, program and test solar equipment on a recreational vehicle. The work will be carried out in a recreational vehicle manufacturing facility.

This unit of competency covers the preparation for, fitting of, and clean-up after the fitting of the solar equipment.

The operator will be required to work to procedures, and follow plans/specifications for what is required.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Plan the work**	1.1	Review the requirements of the work
		1.2	Check required tools and jigs are available at the worksite
		1.3	Check required equipment and components are available at the worksite
		1.4	Identify any hazards and the related hazard controls
		1.5	Check the hazard controls are in place and operational
		1.6	Query any items that are different to usual and clarify requirements
2	**Install the equipment in accordance with procedures**	2.1	Use relevant hazard controls, including personal protective equipment (PPE)
		2.2	Place the equipment in the required position
		2.3	Clamp/hold equipment in place as required
		2.4	Drill holes/make any penetrations required
		2.5	Fix equipment to structure as required
		2.6	Complete fitting of equipment as required
3	**Program and test solar equipment in accordance with procedures**	3.1	Identify programs and tests required
		3.2	Program the equipment to meet customer requirements following manufacturer directions
		3.3	Run required tests and record results as required
		3.4	Make adjustment in response to test results
4	**Finish solar equipment installation**	4.1	Check equipment has been fitted correctly and make any required adjustments
		4.2	Clean up recreational vehicle and work area, leaving it ready for the next job
		4.3	Segregate and handle waste in accordance with

procedures

4.4 Complete any required documentation/records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults
- tooling problems

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMRV317 Install solar equipment on a recreational vehicle

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- install solar equipment on at least three (3) recreational vehicles
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- fitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRV318 Fit cladding to a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to fit side cladding and roof skin to a recreational vehicle. The work will be carried out in a recreational vehicle manufacturing facility.

This unit of competency covers the preparation for, fitting of, and clean-up after the fitting of cladding and roof skin.

The operator will be required to work to procedures, and follow plans/specifications for what is required.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

MSMRV321 Fit required external items to a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to fit external items, such as corner mouldings, trunk doors, wheel spats, picnic tables and awnings, to a recreational vehicle. The work will be carried out in a recreational vehicle manufacturing facility.

This unit of competency covers the preparation for, fitting of, and clean-up after the fitting of external items.

The operator will be required to work to procedures, and follow plans/specifications for what is required.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Plan the work**	1.1	Review the requirements of the work
		1.2	Check required tools and jigs are available at the worksite
		1.3	Check required materials and components are available at the worksite
		1.4	Identify any hazards and the related hazard controls
		1.5	Check the hazard controls are in place and operational
		1.6	Query any items that are different to usual and clarify requirements
2	**Fit the external items in accordance with procedures**	2.1	Use relevant hazard controls, including personal protective equipment (PPE)
		2.2	Place the item in the required position
		2.3	Clamp/hold item in place as required
		2.4	Drill holes/make any penetrations required
		2.5	Fix item as required
		2.6	Trim as required
		2.7	Complete fitting of items as required
3	**Fit the seals in accordance with procedures**	3.1	Use relevant hazard controls, including PPE
		3.2	Place seals in the required position
		3.3	Clamp/hold seals in place as required
		3.4	Drill holes/make any penetrations required
		3.5	Fix seal as required
		3.6	Trim seal as required
		3.7	Complete fitting of seal as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Finish fitting the external items**	4.1	Check items have been fitted correctly and make any required adjustments
		4.2	Clean up recreational vehicle and work area, leaving it ready for the next job
		4.3	Segregate and handle waste in accordance with procedures
		4.4	Complete any required documentation/records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults
- tooling problems

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMRV321 Fit required external items to a recreational vehicle

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- fit external items and seals on at least three (3) recreational vehicles
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- fitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRV322 Fit required external electrical components to a recreational vehicle

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to fit external electrical components, such as power inlet/outlet, speakers, antenna and side/marker lights, to a recreational vehicle. The work will be carried out in a recreational vehicle manufacturing facility.

This unit of competency covers the preparation for, fitting of, and clean-up after the fitting of external electrical components.

The operator will be required to work to procedures, and follow plans/specifications for what is required.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults
- tooling problems

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMRV325 Fabricate a chassis and suspension for a recreational vehicle

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- fabricate at least three (3) recreational vehicle chassis and assemble the suspension on the chassis
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- fitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMRV350 Remove and replace a recreational vehicle roof

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to remove and replace the fixed roof of a recreational vehicle. The same roof may be replaced, or the removed roof may be replaced with a different roof. The work will be carried out in a recreational vehicle service and repair facility.

This unit of competency covers the preparation for, removal of, replacement of, and clean-up after the removal and replacement of a roof.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Plan the work**	1.1	Review the requirements of the work, including insurance requirements and customer needs
		1.2	Examine roof and determine what needs to be done and how to do it
		1.3	Check required tools and jigs are available at the worksite
		1.4	Check required materials and components are available at the worksite
		1.5	Identify any hazards and the related hazard controls
		1.6	Check the hazard controls are in place and operational
		1.7	Query any items which are different to usual and clarify requirements
2	**Remove roof/skin in accordance with devised procedures**	2.1	Use relevant hazard controls, including personal protective equipment (PPE)
		2.2	Remove roof/skin maximising the potential for reuse
		2.3	Segregate and handle waste in accordance with procedures
		2.4	Temporarily store roof/skin and components which are to be reused
3	**Refurbish roof frame as required**	3.1	Use relevant hazard controls, including PPE
		3.2	Examine exposed roof frame
		3.3	Identify any additional damage revealed and decide how it can be made good
		3.4	Negotiate with customer over any changes in job scope and cost
		3.5	Make good/replace roof frame as required
		3.6	Ensure roof frame is fixed to wall/frame as appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Replace roof/skin in accordance with devised procedures**	4.1	Use relevant hazard controls, including PPE
		4.2	Replace roof/skin in accordance with the devised procedure
		4.3	Trim as required
		4.4	Ensure roof/skin is attached as required
		4.5	Ensure roof seals as required
5	**Finish removal and replacement of roof**	5.1	Check roof has been refitted correctly and make any required adjustments
		5.2	Clean up recreational vehicle and make ready for hand back to customer
		5.3	Clean up work area, leaving it ready for the next job
		5.4	Segregate and handle waste in accordance with procedures
		5.5	Complete any required documentation/records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- falls
- other hazards that might arise

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- product faults

MSMRV351 Remove and replace a recreational vehicle floor

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to remove and replace the floor of a recreational vehicle. The same floor may be replaced, or the removed floor may be replaced with a different floor. This unit also covers the overlaying of an existing floor. The work will be carried out in a recreational vehicle service and repair facility.

This unit of competency covers the preparation for, removal of, replacement of, and clean-up after the removal and replacement of a floor.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

MSMRV352 Remove and replace a recreational vehicle sidewall cladding

Modification History

Release 1 - New unit.

Application

This unit of competency covers the skills and knowledge required to remove and replace the side wall cladding of a recreational vehicle. The same cladding may be replaced, or the removed cladding may be replaced with a different cladding. This unit includes the removal and replacement of a single strip of cladding up to an entire sidewall cladding. The work will be carried out in a recreational vehicle service and repair facility.

This unit of competency covers the preparation for, removal of, replacement of, and clean-up after the removal and replacement of a floor.

The operator will be required to work to procedures, and follow plans/specifications, insurance requirements and customer needs.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members.

		4.4	Ensure cubicle is attached as required
		4.5	Seal cubicle as required
5	**Finish removal and replacement of cubicle**	5.1	Check cubicle has been refitted correctly and make any required adjustments
		5.2	Clean up recreational vehicle and make ready for hand back to customer
		5.3	Clean up work area, leaving it ready for the next job
		5.4	Segregate and handle waste in accordance with procedures
		5.5	Complete any required documentation/records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory The latest version of all legislation, regulations, industry codes of practice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

framework and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards Hazards include one or more of the following:

- heat, dust or other atmospheric hazards
- electricity
- gas
- equipment failures
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- other hazards that might arise

Routine problems Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of the following:

- equipment/plant/machine malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- product faults
- tooling problems

Known solutions are drawn from one or more of the following:

- procedures
- training
- remembered experience

Non-routine problems must be reported according to relevant procedures.

Assessment Requirements for MSMRV353 Remove and replace a recreational vehicle shower cubicle

Modification History

Release 1 - New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- remove and refit a shower cubicle in at least three (3) recreational vehicles
- refurbish the substructure in at least three (3) recreational vehicles
- interpret requirements and plan work
- identify hazards and apply relevant hazard controls
- recognise situations requiring action and take the appropriate action
- communicate effectively with customers, team/work group and supervisors.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment
- removal, refurbishment and refitting procedures and the reasons for those procedures
- materials and tools to be used and their correct usage
- checks and adjustments to be made.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
