

Metal and Engineering Training Package

National code identifier – MEM98

Policy document

*– for the manufacturing and engineering industry
and the boating industry*

– leading to New Apprenticeships

November 1998

This volume contains qualifications, assessment guidelines and national competency standards (part 1). Volumes 1, 2 and 3 contain national competency standards. This volume should not be used in isolation but in the context of the complete Training Package.

IMPORTANT

Training packages are not static documents. Changes are made periodically to reflect the latest industry practices.

Before commencing any form of training or assessment, you must ensure delivery is from the *current version* of the Training Package.

To ensure you are complying with this requirement :

- Check the Print Version Number just below the copyright statement on the imprint pages of your current Training Package.
- Access the ATP website (<http://www.atpl.net.au>) and check the latest Print Number.
- In cases where the Print Version Number is later than yours, the Print Version Modification History in the Training Package sample on the ATP website will indicate the changes that have been made.

The Modification History is also available on the website of the developer of the Training Package: Manufacturing, Engineering & Related Services Industry Training Advisory Board <http://www.mersitab.com.au>

The National Training Information Service (<http://www.ntis.gov.au>) also displays any changes in Units of Competency and the packaging of qualifications.

Modification History

MODIFICATION HISTORY – ENDORSED MATERIALS			
Please refer to the National Training Information Service for the latest version of Units of Competency and Qualification information (http://www.ntis.gov.au).			
MEM98 Metal and Engineering Training Package			Sheet: 1 of 1
Version	Date of Release	Authorisation:	Comments
4	20/08/03	NTQC	Inclusion of Marine Craft Construction, Boating Services and Jewellery Manufacture resulting in five new qualifications. Revised name of Certificate IV in Engineering, introduction of new and revised units as listed in the details table.
3.00	10/02/03	NTQC	Revised point weighting and introduction of new units as listed in following details table
2.00	01/12/96	NTFC	Details not available

Important

Training Packages are living documents. Changes are periodically made to reflect the latest industry practices.

As a user of the Training Package, and before commencing any form of training or assessment, you must ensure delivery is from the **current version**.

Ensure you are complying with this requirement by:

- checking the version identifier code of the version you currently have (located on the imprint page, just below the copyright statement)
- accessing the Australian Training Products (ATP) website and comparing the version identifier. This information is displayed in the first few pages of the Training Package.

Where the ATP website shows a different version, the Modification History, again shown on the ATP website in the first few pages of the Training Package, will display the changes made in versions. ATP website for version comparison: <http://www.atpl.net.au>

The Modification History is also visible on the website of the developer of the Training Package: <http://www.mersitab.com.au>

Changes in units of competency and packaging of qualifications are reflected on the National Training Information Service which displays only current information: <http://www.ntis.gov.au>

Introduction

The Metal and Engineering Training Package has been developed by the Manufacturing, Engineering and Related Services Industry Training Advisory Body Ltd. (MERS ITAB) to meet the training and skills recognition needs of the manufacturing and engineering industry in Australia. The Training Package was originally endorsed by the National Training Framework Committee on 10th November 1998.

The Metal and Engineering Training Package links the National Metal and Engineering Competency Standards through sound assessment processes to qualifications. The Training Package has been designed to cover all occupations in the industry, with qualifications from Certificate I to Diploma, including those covered by qualifications in boating services.

The Training Package is supported by a variety of non-endorsed components, including model training pathways and other learning strategy materials as well as assessment materials and professional development programs.

Background

Following the reforms of industry restructuring during the late 1980's, the National Metal and Engineering Training Board (NMETB) introduced a suite of national competency based training courses from 1990 to meet the training needs of the industry. The National Metal and Engineering Curriculum bank of competency based training modules was established to support this initiative. Draft competency standards were progressively developed from the early 1990's and a model implementation program was instigated to trial the introduction of the National Metal and Engineering Competency Standards in enterprises during 1995. The competency standards were refined as a result of this trial and were re-issued in December 1996. The standards have been further refined and expanded during the life of the Training Package.

MERS ITAB is a declared industry training advisory body by the Australian National Training Authority (ANTA). MERS ITAB was formed in January 1996 after a review of national industry training advisory bodies was undertaken by ANTA. MERS ITAB incorporates the NMETB as the national advisory body for the industry sector. The NMETB brings together representatives of large and small employers, key unions and government bodies with an interest in the industry. MERS ITAB operates as a national organisation with a network of state and territory ITABs and boards.

Scope

The Metal and Engineering Training Package (national identifier code MEM98) is designed to replace all existing national industry-supported training courses. The Training Package includes qualification outcomes from Certificate I to Diploma and will be extended to include an Advanced Diploma. The Training Package covers the skills and knowledge development and recognition requirements of people who use the workplace competencies covered by the National Metal and Engineering Competency Standards and specified Competency Standards from other NTQC endorsed training packages. The Metal and Engineering Training Package is designed to be flexible and can be linked to all types of employment arrangements including Australian Workplace Agreements, Certified Agreements as well as Federal and State Awards. It also complements the employment framework formally agreed to by all industrial parties.

Competency standards

All qualifications in the Training Package are based on the National Metal and Engineering Competency Standards and those units specified from other endorsed Training Packages. These standards focus on what is expected of people in workplaces rather than on the learning process. The standards reflect realistic workplace practices across a broad range of situations. This includes the specification of knowledge and skills and the application of that knowledge and skill in the workplace as well as the ability to transfer and apply the competency in new situations, environments and contexts.

The standards are set in a packaging framework designed to facilitate flexibility, multi-skilling and specialisation. The framework is based on the principle that individual units of competency, apart from the very small number of *Core* units, should not be exclusively related to a particular occupation or employment classification level.

Details on the structure of the competency standards are shown below (with the exception of boating services qualifications in which the *Foundation* and *Core* are combined and listed as compulsory core. See Attachment 4 for full listing). Reference must also be made to the Introduction section of the Competency Standards documentation for full details.

Fields

The competency standards are divided into 'fields' as convenient groupings of units to assist the organisation of the standards and to help users in the selection of relevant competency standards. The fields do not set up barriers to accessing any competency units in a field, or between fields.

The competency standards units and fields are divided into three categories:

- Foundation* units (field 1)
- Core* units (field 2)
- Specialisation* units (fields 3 onwards)

Foundation units

Foundation units describe competencies that are a necessary part of the skill profile of every job in the industry. *Foundation* competencies do not carry a points weighting, however they are necessary prerequisites to higher level units and will form part of the skills profile of all employees.

All qualifications in this Training Package include the *Foundation* units of competency. People who hold an existing industry qualification and wish to undertake one of the new Training Package qualifications are deemed to be competent against the *Foundation* units. New entrants to the industry will need to demonstrate competency against the *Foundation* units before being eligible for recognition in higher level competency units.

Core units

The *Core* units define competencies that are common and necessary in the industry. *Core* units have been determined for each qualification level within the Training Package and these *Core* units must be achieved as required for each qualification. The Key Competencies have been mapped against the *Foundation* and *Core* units and achievement of the Metal and Engineering units will also provide recognition against the Key Competencies. A mapping matrix is included in the competency standards to show this relationship.

Core units are allocated to ‘bands’ and the number of required Core units increases for each qualification level. Band 1 Core units apply to qualification outcomes up to Certificate III. For qualification outcomes at Certificate IV and Diploma, band 2 Core units apply as well as the band 1 Core units. Some band 2 Core units can be included in a Certificate III qualification and these are shown in Attachment 1.

Attachment 3 shows a summary of the *Foundation* and *Core* competency units.

Specialisation units

These units describe the diverse range of competencies needed across the industry. The Specialisation units are also divided into ‘bands’, with some overlap between them. The allocation of units to different specialisation bands recognises the inherent differences in the level of difficulty of skills used in the industry. For example, band B skills are more difficult than band A skills. At the same time the large range of units in each band allows enterprises a wide choice. Band E units are independent units developed for the boating services qualifications.

Some Specialisation units are regarded as both band A and band B units. Use of these dual band units is limited and this is shown in the requirements for each qualification. These units are identified in the index to the competency standards as well as in the units themselves by way of a note.

Note that some band A units only appear in qualifications at Certificate III and above as shown in Attachment 1.

Table showing availability of Core and Specialisation units for each qualification

Qualification title	Core units		Specialisation units		
	band 1	band 2	band A	band A/B	band B
Certificate I in Engineering	all	none	some	none	none
Certificate II in Engineering – Production	all	none	some	some	none
Certificate II in Engineering – Production Technology	all	one	some	some	none
Certificate III in Engineering – Production Systems	all	some	all	all	some
Certificate III in Engineering – Mechanical Trade	all	some	all	all	some
Certificate III in Engineering – Fabrication Trade	all	some	all	all	some
Certificate III in Engineering – Electrical/Electronic Trade	all	some	all	all	some
Certificate III in Engineering – Technician	all	all	all	all	all
Certificate III in Engineering – Jewellery	all	some	all	all	some
Certificate III in Marine Craft Construction	all	some	all	all	some
Certificate IV in Engineering	all	all	all	all	all
Diploma of Engineering	all	all	all	all	all

Pre-requisite units

Many competency units indicate whether other specific competencies are required as support in terms of pre-requisite skills and knowledge. Where there are options within the pre-requisites then separate combinations or pre-requisite paths are shown. Where multiple paths (path 1, path 2 etc) are shown then the most appropriate path should be chosen.

Unit weight points

Each unit of competency, with the exception of some of the 50 series units, has an allocated weight shown as ‘unit weight points’. Each qualification includes an identified number of points. The units selected for the qualification must have a combined points

value no less than the points value specified for the qualification. The combined points total also includes the points for any pre-requisite units involved. Note that the points for any particular unit can only be counted once in each qualification. For example, if a unit is selected to be part of a qualification and it is also a pre-requisite for another selected unit, then the points for that unit can only be counted once.

Maintenance of the competency standards

MERS ITAB has an established Metal and Engineering Competency Standards Review Group comprised of key industry stakeholders and ITAB staff. The group subjects the standards to a continuous improvement process whereby feedback on the standards is considered and changes made where appropriate. Feedback and comment is sought from enterprises, industry organisations and training organisations from across Australia.

Changes can include simple editing functions through to development of new units to meet particular industry needs. The standards are viewed as dynamic and changes are incorporated to improve the standards in terms of technical quality, usability, changes in workplace organisation and use of technology.

The competency standards will be progressively reviewed during and after the implementation phase of the Training Package as well as part of an ongoing maintenance function. The standards will be submitted for national endorsement where the changes are sufficient to warrant re-endorsement of the units. It is expected that this process will be dealt with on a cyclical basis, with the frequency determined by the extent of any proposed change.

The Metal and Engineering Training Package is undergoing a major review during the course of 2002-2003, with completion expected in late 2003

Customisation guidelines

MERS ITAB believes that the structure and composition of the Metal and Engineering Training Package provides sufficient flexibility to enable the training and skill recognition requirements of enterprises in the industry to be met. The qualifications in the Training Package are based on the content and structural rules of the Metal and Engineering Competency Standards. Where the needs of an enterprise cannot be met under the standard 'packaging' arrangements for each qualification, there is opportunity for further flexibility through the application of these customisation guidelines.

In general, it is the responsibility of Registered Training Organisations (RTOs) to undertake customisation where required, within the limits set by these guidelines. The guidelines deal with customisation of the competency standards as well as customisation of the qualifications.

Changes to competency standards units

Units of competency may be customised by either or both of the two methods shown below, provided the structure and overall outcome of the competency standards unit is **not changed**.

1. Enterprise specific context may be **added**, including enterprise specific language, terminology and procedures. MERS ITAB will provide advice on request as to the accuracy of any such enterprise specific overlay document.
2. The range of variables may be **changed** to incorporate the context of enterprise applications and procedures etc. For example, the range of machines or other equipment may be changed **provided** the level of skill required or expected is not increased or diminished. In most cases, the range of machines or equipment shown in the Metal and Engineering Competency Standards units is only indicative or illustrative and is not an exhaustive list.

Note that the unit number, title, pre-requisites and unit weight points value must not be changed. Elements and performance criteria cannot be changed except by the addition of detailed information.

Substitution of competency standards units

Provided that the integrity and level of outcome is retained, units of competency in the Metal and Engineering Training Package may be substituted by National Training Quality Council (NTQC) endorsed competency standards units from other industries and/or enterprises in the two situations shown below. Assessment against any substitute or replacement unit must be carried out according to the Assessment Guidelines in the Metal and Engineering Training Package.

Situation 1 – importing competencies from other Training Packages

Twenty percent of the *Specialisation* units (as measured by their points value) may be replaced by units from other NTQC endorsed Training Packages or competency standards. (Note that the *Foundation* and *Core* units cannot be replaced in this situation and that 'stream' rules must be met where applicable).

Situation 2 – substituting Metal and Engineering competencies with others

Where MERS ITAB has, in writing, formally recognised the proposed substitute unit/s as equivalent to the unit/s being replaced then the substitute unit/s may form part of a qualification in the Metal and Engineering Training Package. (Note that it is the proponent's responsibility to propose equivalence, including points weighting, and to provide relevant evidence for consideration by MERS ITAB).

Adding new units to the competency standards

An enterprise may find that, after application of the guidelines for changes to units and/or substitution of units, the competency standards still do not cover skills or processes unique to the enterprise. In these cases, they can ask MERS ITAB to develop or assist in the development of competency standards units to meet the needs of the enterprise.

Alternatively, the enterprise may choose to develop their own enterprise specific standards and seek their endorsement by the NTQC.

Customisation of qualifications by including additional units of competency

Additional units of competency may be added to a qualification under the two situations shown below.

1. Registered Training Organisations may face difficulty in matching MERS ITAB recommended learning strategy support material to the units of competency selected for the particular qualification, and so up to six extra points worth of competency standards units can be included in each of the qualifications in the Training Package. These extra points then form part of the total points for the particular qualification. That is, only the nominal points value of the qualification (without the extra points) can count for advanced standing or progression towards another qualification.

or

2. Additional units of competency may be added to a qualification beyond the minimum requirements specified for that qualification where the additional units are required to meet specific organisational needs of the enterprise and with the agreement of the enterprise. In this case, it should be noted that where the additional units could contribute towards the achievement of a higher level Metal and Engineering Training Package qualification then they should be separately identified in any qualification transcript or statement of attainment.

Customisation of qualifications by use of the packaging and stream rules

Each qualification in the Metal and Engineering Training Package can be customised under the packaging and stream rules through the selection of relevant and appropriate *Specialisation* units of competency.

Customisation of qualification titles

An additional descriptor may be added to any qualification title to illustrate a particular skills profile. This may be achieved by the addition of an occupation/functional stream after the endorsed title as shown on the qualification and/or transcript. This additional descriptor must be drawn from the list provided below and must be shown in brackets. For example Certificate III in Engineering – Mechanical Trade (Refrigeration). No other changes may be made to the qualification titles. Note that the addition of these descriptors to a qualification title does not change the formal title or unique code of the qualification.

MERS ITAB will consider applications from RTOs to extend the range of additional approved descriptors.

Approved descriptors

- Air-conditioning
- Casting and Moulding
- Jewellery
- Locksmithing
- Manufacturing
- Patternmaking
- Refrigeration
- Surface Finishing
- Toolmaking
- Watchmaking

Use of units from the National Metal and Engineering Competency Standards in other training packages or qualifications

Where units from the National Metal and Engineering Competency Standards are to be used in other Training Packages or in customised qualifications which draw on more than one Training Package, and equivalence is sought, then the following conditions apply:

1. Any changes to the units must be made according to these customisation guidelines.
2. Any pre-requisite unit/s must also be included.
3. The MERS ITAB content and structural rules (packaging) of the National Metal and Engineering Competency Standards must be taken into account.
4. Unless all the Metal and Engineering Training Package qualification requirements are met then the title of the customised qualification must be clearly distinguished from a MERS ITAB qualification and in particular the terms 'certificate (level) in engineering' or 'diploma of engineering' or 'advanced diploma of engineering' cannot be used.

It should also be noted that units in the National Metal and Engineering Competency Standards are not determined or established at a particular AQF level but are designed to span a range of AQF levels, depending on their use and application.

Assessment guidelines

Benchmarks for assessment

The current version of the National Metal and Engineering Competency Standards form the benchmarks for assessment in the Metal and Engineering Training Package. The competency standards have been endorsed by the National Training Quality Council (NTQC), MERS ITAB, unions and employer organisations as the national benchmarks for the recognition of skills in the industry. They contain evidence guides, which support, facilitate and focus the assessment process.

Role of Registered Training Organisations

Registered Training Organisations (RTOs) providing training and assessment services for the Metal and Engineering Training Package have the responsibility to ensure the quality of the outcomes. The RTO must make the final assessment decision, based on a judgment of the available evidence. They must ensure that a qualification is only issued when the candidate has satisfied all aspects and requirements of that qualification. RTOs must also ensure that appropriate assessment occurs and that ongoing records of assessment are kept.

Non-RTOs or other parties may use qualified assessors to carry out assessments against the Metal and Engineering Training Package, however the outcomes will only be recognised against the Metal and Engineering Training Package if the assessment is conducted under the auspices of a RTO authorised to deliver and/or assess against the Training Package.

The minimum level of reporting assessment outcomes is at the unit level. Assessment outcomes must primarily be *reported without grading* on the basis of the candidate being either *competent* or *not yet competent*. However this does not preclude supplementary reporting based on endorsed quality principles. Supplementary reporting of graded assessment may occur where there is *agreement* between the Registered Training Organisation and their client. Any supplementary reporting of graded assessment outcomes must be shown as additional information on any testamur or transcript and not detract or obscure the primary outcome report.

Assessment pathways

MERS ITAB defines assessment in accordance with the Assessment Principles adopted in principle by vocational education and training Ministers. Assessment made against the competency standards must ensure that competency can be demonstrated in a workplace situation. A workplace situation can be simulated in many cases, however a few units of competency indicate that assessment should be carried out in a workplace. In these cases, the RTO should arrange for appropriate assessment evidence to be gathered from the workplace so that an assessment decision can be made. This does not mean nor imply that RTO staff will need to attend the workplace to undertake workplace assessment activities. Workplace Assessors registered with MERS ITAB could be viewed as a valuable assessment resource for RTOs. In all cases, it is important that sufficient and appropriate authentic evidence is gathered to ensure that the assessment decision is fair, valid and reliable.

MERS ITAB considers that assessment of competency should be carried out as a process and not a single event. Where work is complex and high skill levels are expected, then demonstration of competency should occur across a range of situations and/or applications.

It should be noted that competency must be demonstrated in all elements of a competency standards unit as well as satisfying any pre-requisite requirements before 'competency' can be granted.

Other than for pre-requisite competencies, there is no specified order to the assessment of competencies. Assessors are encouraged to assess groups of units holistically and not adopt an atomised unit by unit approach. Holistic assessment should also be used wherever possible as one means of dealing with pre-requisite units.

Recognising prior learning

The industry views all learning prior to assessment as 'prior learning'. This includes relevant prior learning and competencies acquired through previous work, life and training or educational experiences and should be recognised during the assessment process. Assessing prior learning must be undertaken by a qualified assessor, using original evidence and other assessment tools as required to determine competency.

Assessor requirements

Assessments against competencies in the Training Package will be carried out in accordance with these endorsed guidelines and the specification included in the competency standards. The guidelines include the necessary qualifications for those conducting assessments and provide for those situations where more than one person may contribute to the assessment and where the required technical and assessment competencies may not all be held by any one person.

Assessor qualifications

Assessors must meet the three minimum requirements outlined below.

1. Competency in the following endorsed competency standards for assessment as included in the *Training Package for Assessment and Workplace Training BSZ98*:
 - Plan Assessment (BSZ401A)
 - Conduct Assessment (BSZ402A)
 - Review Assessment (BSZ403A)

Individuals can meet these requirements by completion of a recognised training program or have other qualifications and/or experience recognised through an approved process as equivalent to the above units. Note that these competency standards units replace the previous Assessment Competency Standards and Extension Unit.

2. Competency in the unit/s being assessed (note that more than one person may contribute to the assessment where the required technical and assessment competencies are not all held by any one person).
3. Familiarity with the National Metal and Engineering Competency Standards and the agreed industrial processes for their implementation in workplaces. MERS ITAB can provide a list of approved organisations that can provide an *Implementing Competency Standards Program* to assist assessors to meet the above requirement.

Using qualified assessors

Final assessment decisions must be made by qualified assessors who are either competent in the unit(s) being assessed or agree to work with others who have technical expertise. In these cases, the RTO should arrange for appropriate assessment evidence to be gathered from the technical expert so that an assessment decision can be made. The technical expert may be part of the RTO's resources, or located in the candidate's workplace, or otherwise available for the purpose.

Guidelines for designing assessment materials

The National Metal and Engineering Competency Standards form a basis for the design of assessment materials. Close attention must be paid to the performance criteria, range of variables and evidence guides. The 'Assessor guide' columns provide indications and guidance for assessors on the type of evidence required to be able to make a valid assessment decision. These columns provide the basis for assessors to prepare assessment tools to suit the candidate and the context of the assessment.

Assessors must use methods that enable the gathering of valid, sufficient, accurate, consistent, current and authentic evidence to allow for assessment decisions to be made. The process must also be valid, reliable, flexible, fair and cost effective. These terms will form the basic criteria for quality assurance measures to ensure the design effectiveness of assessment materials used in the industry and are explained below.

- valid** The assessment actually assesses what it claims to assess, integrating knowledge and skills with their practical application. Language and literacy requirements during assessment should be no greater than the levels required to demonstrate competency in the unit being assessed.
- reliable** The assessment process must be able to produce consistent results, no matter who does the assessment or when the assessment is done.
- flexible** The assessment should be able to be conducted in a variety of situations. It should allow for diversity in how, where and when competencies have been acquired.
- fair** The method chosen must not disadvantage (or advantage) any person, with reasonable adjustments made to assessment procedures and methods for people with special needs. Assessment tasks should be determined with the participation of the person being assessed. See also *Valid* above.
- cost effective** The process must be as cost effective as possible in terms of both time and money costs for enterprises and RTOs.

MERS ITAB will undertake ongoing review and maintenance of these Assessment Guidelines and is committed to ensuring that the assessment process does not place an undue cost burden on the industry and the training system. MERS ITAB will work closely with RTOs to assist in establishing ways of offsetting and minimising the costs of any workplace assessment activity.

The recommended assessment methods encompass a range of techniques, which include, but are not limited to, the use of:

- direct observation of performance
- simulations of workplace activities
- oral questioning
- practical exercises
- projects/assignments
- work portfolios

In the interests of both holistic approaches to assessment and cost-effective practices, assessors are encouraged to develop assessment methods that enable the measurement of a number of related competencies through one assessment process or event. For example, it is likely that all of the *Foundation* units and most *Core* units of competency will not require separate assessment or even separate training. It is more likely that both training and assessment for these units will be integrated with one or more *Specialisation* units.

Guidelines for conducting assessments

Before any assessment takes place at a workplace, employers, employees and any service provider need to establish an assessment process through consultation which meets the needs of the enterprise and is acceptable to all interested parties. Some workplaces use a training committee or a consultative committee for this purpose. When RTOs need to gather assessment evidence from the workplace they should have regard for any enterprise needs, practices and processes.

Assessment procedures must be transparent and address the key assessment principles of being valid, reliable, flexible, fair and cost effective (see above). Assessment should be conducted in a non-threatening atmosphere. The assessor needs to establish rapport with the assessment candidate, and provide timely feedback. The assessment process should foster communication between assessment candidates and assessors, and ensure that:

- the assessment candidate knows and agrees to the assessment procedures before assessment takes place
- assessments take place when the assessment candidate is ready to undertake the assessment. Before undertaking formal assessment tasks, assessment candidates should be encouraged to conduct self-assessment according to the agreed assessment criteria to test their own readiness
- wherever practicable, assessment evidence is gathered on a number of occasions and in a variety of contexts/situations
- during the assessment period, assessors and assessment candidates engage in feedback and discussion, and can seek assistance to have disagreements resolved expeditiously
- records of assessments remain confidential

Sources of information on assessment

MERS ITAB national and state/territory offices as well as the industry parties to MERS ITAB can provide additional information and guidance on assessment issues. Contact details are contained in the National Metal and Engineering Competency Standards Implementation Guide, 1997.

Qualifications

Overview of structure

Each qualification is comprised of units of competency combined in a packaging framework. The framework is based on the structure of the competency standards and follows simple rules.

In general, each qualification is comprised of the *Core* units of competency relevant to the qualification level as well as a selection of *Specialisation* units. The Engineering Trade, Engineering Production, Jewellery Manufacture and Marine Craft Construction qualifications at Certificate III also include *Specialisation* units in a 'stream' cluster. For these qualifications, a minimum of 40 points value of units must be selected from the appropriate list in Attachment 2 to obtain the particular stream outcome. As stated previously, the Boating Services qualifications are structured differently to the other qualifications covered by the Package and are covered in a discrete Boating Industry qualifications section.

MERS ITAB will monitor the implementation of the Metal and Engineering Training Package, including the use and application of the packaging framework for the qualifications. Part of this monitoring role will include the consideration of claims by Registered Training Organisations (RTOs) where they have a customer need that cannot be accommodated within the stream rules or customisation guidelines.

The qualifications have been designed to meet the training and skills recognition needs of the industry and are suited to New Apprenticeships.

Summary of Training Package qualifications

Qualification title	Minimum points required	Industrial 'C' level outcome
Certificate I in Engineering MEM10198	16	C13
Certificate II in Engineering – Production MEM20198	32	C12
Certificate II in Engineering – Production Technology MEM20298	64	C11
Certificate III in Engineering – Production Systems MEM30198	96	C10
Certificate III in Engineering – Mechanical Trade MEM30298	96	C10
Certificate III in Engineering – Fabrication Trade MEM30398	96	C10
Certificate III in Engineering – Electrical/Electronic Trade MEM30498	96	C10
Certificate III in Engineering – Technician MEM30598	Year 12 +40 ¹	C9
Certificate III in Jewellery Manufacture MEM30803	96	C10
Certificate III in Marine Craft Construction MEM30603	96	C10
Certificate IV in Engineering MEM40103	132 or AQF III + 36 ²	C7
Diploma of Engineering MEM50198	Year 12 + 80 ³ or AQF III + 60 ⁴	C5

Boating Services qualifications
Certificate I in Boating Services MEM10203
Certificate II in Boating Services MEM20303
Certificate III in Boating Services MEM30703
Certificate IV in Boating Services MEM40203

¹ Completion of Year 12 (or equivalent) with appropriate Maths and Science (some people may require additional bridging training). The 40 points are comprised of 14 points from the specified band 1 *Core* units, 6 points in units drawn from *Specialisation* band A units, and 20 points drawn from *Specialisation* band B units and/or band 2 *Core* units.

² Completion of units to meet the requirements of a Certificate III in Engineering – Trade plus 36 points in units drawn from *Specialisation* band A and/or band B units and/or band 2 *Core* units (maximum 24 points from band A).

³ Completion of Year 12 (or equivalent) with appropriate Maths and Science (some people may require additional bridging training). The 80 points are comprised of 14 points from the specified band 1 *Core* units, 16 points of band 2 *Core* units and 50 points of *Specialisation* band A and/or band B units (maximum 24 points from band A).

⁴ Completion of units to meet the requirements of a Certificate III in Engineering – Trade or Production plus 16 points in units drawn from band 2 *Core* units and 44 points of *Specialisation* band A and/or band B units (maximum 24 points from band A).

Note that up to 20 points of *Specialisation* band B units and/or band 2 *Core* units achieved in the *Certificate III in Engineering – Technician* qualification can be recognised for advanced standing in the *Diploma of Engineering*, that is a minimum of 40 additional points must be achieved.

⁵ Competency standards for this qualification are under development.

Schedule of requirements for Training Package qualifications

Certificate I in Engineering MEM10198	16 points total	C13 outcome
<ul style="list-style-type: none"> • all Foundation units, plus • 16 points in units drawn from Specialisation band A units other than those shown in Attachment 1 		
Certificate II in Engineering – Production MEM20198	32 points total	C12 outcome
<ul style="list-style-type: none"> • all Foundation units, plus • 2 points of band 1 Core units required for C12, plus • 30 points in units drawn from Specialisation band A units other than those shown in Attachment 1 		
Certificate II in Engineering – Production Technology MEM20298	64 points total	C11 outcome
<ul style="list-style-type: none"> • all Foundation units, plus • 10 points of required band 1 Core units for C11, plus • 54 points in units drawn from Specialisation band A units other than those shown in Attachment 1 		
Certificate III in Engineering – Production Systems MEM30198	96 points total	C10 outcome
<ul style="list-style-type: none"> • all Foundation units, plus • 20 points of band 1 Core units required for C10, plus • 40 points in units drawn from the 'Production' stream Specialisation band A units (see Attachment 2), plus • 36 points in units drawn from Specialisation band A units (including dual band A/band B units) 		
Certificate III in Engineering – Technician MEM30598	Year 12 +40 points or AQF III + 12	C9 outcome
<ul style="list-style-type: none"> • all Foundation units, plus • Completion of Year 12 (or equivalent) with appropriate Maths and Science (some people may require additional bridging training), plus • 14 points of band 1 Core units 2.1C12, 2.2C11, 2.3C11, 2.4C11, 2.5C11, 2.6C10, plus • 26 points in units drawn from Specialisation band A and/or band B units (including dual band A/band B units) and/or band 2 Core units (minimum of 20 points from band B/band 2 Core) <p>or</p> <ul style="list-style-type: none"> • Completion of units to meet the requirements of a Certificate III in Engineering – Trade or Production, plus • 12 points in units drawn from Specialisation band A and/or band B units and/or band 2 Core units (including dual band A/band B units) 		
Certificate III in Engineering – Mechanical Trade MEM30298	96 points total	C10 outcome
<ul style="list-style-type: none"> • all Foundation units, plus • 20 points of band 1 Core units required for C10, plus • 40 points in units drawn from the 'Mechanical' stream Specialisation band A units (see Attachment 2), plus • 36 points in units drawn from Specialisation band A units (including dual band A/band B units) 		

Certificate III in Engineering – Fabrication Trade MEM30398	96 points total	C10 outcome
<ul style="list-style-type: none"> • all Foundation units, plus • 20 points of band 1 Core units required for C10, plus • 40 points in units drawn from the 'Fabrication' stream Specialisation band A units (see Attachment 2), plus • 36 points in units drawn from Specialisation band A units (including dual band A/band B units) 		
Certificate III in Engineering – Electrical/Electronic Trade MEM30498	96 points total	C10 outcome
<ul style="list-style-type: none"> • all Foundation units, plus • 20 points of band 1 Core units required for C10, plus • 40 points in units drawn from the 'Electrical/electronic' stream Specialisation band A units (see Attachment 2), plus • 36 points in units drawn from Specialisation band A units (including dual band A/band B units) 		
Certificate III in Jewellery Manufacture MEM30803	96 points total	C10 outcome
<ul style="list-style-type: none"> • all Foundation units, plus • 20 points of band 1 Core units required for C10, plus • 40 points in units drawn from the 'Jewellery Manufacture' stream Specialisation band A units (see Attachment 2), plus • 36 points in units drawn from Specialisation band A units (including dual band A/band B units) 		
Certificate III in Marine Craft Construction MEM30603	96 points total	C?? outcome
<ul style="list-style-type: none"> • all Foundation units, plus • 20 points of band 1 Core units required for C10, plus • 40 points in units drawn from the 'Marine Craft Construction' stream Specialisation band A units (see Attachment 2), plus • 36 points in units drawn from Specialisation band A units (including dual band A/band B units) 		

Certificate IV in Engineering MEM40103	132 or AQF III + 36	C7 outcome
<ul style="list-style-type: none"> • all Foundation units, plus • 20 points of band 1 Core units required for C10, plus • 112 points in units drawn from Specialisation band A units and/or band B units (including dual band A/band B units) and/or band 2 Core units (minimum of 12 points from band B/band 2 Core) <p>or</p> <ul style="list-style-type: none"> • Completion of units to meet the requirements of Certificate III in Engineering – Trade, Certificate III in Engineering – Marine Craft Construction, Certificate III Marine (Installation), Certificate III Marine (Mechanics) or Certificate III in Jewellery Manufacture, plus • 36 points in units drawn from Specialisation band A and/or band B units (including dual band A/band B units) and/or band 2 Core units (maximum 24 points from band A) 		

Diploma of Engineering MEM50198	Year 12 + 80 points or AQF III + 60	C5 outcome
<ul style="list-style-type: none"> • all Foundation units, plus • Completion of Year 12 (or equivalent) with appropriate Maths and Science (some people may require additional bridging training), plus • 14 points of band 1 Core units 2.1C12, 2.2C11, 2.3C11, 2.4C11, 2.5C11, 2.6C10, plus • 16 points of band 2 Core units required for C5, plus • 50 points in units drawn from Specialisation band A and/or band B units (including dual band A/band B units) (maximum 24 points from band A) <p>or</p> <ul style="list-style-type: none"> • Completion of units to meet the requirements of a Certificate III in Engineering – Trade, Production, Jewellery Manufacture or Marine Craft Construction, plus • 16 points of band 2 Core units required for C5, plus • 44 points in units drawn from Specialisation band A and/or band B units (including dual band A/band B units) (maximum 24 points from band A) <p>or</p> <ul style="list-style-type: none"> • Completion of units to meet the requirements of a Certificate III in Engineering – Technician, plus • 16 points of band 2 Core units required for C5, plus • 44 points in units drawn from Specialisation band A and/or band B units (including dual band A/band B units) (maximum 24 points from band A) • Note that up to 20 points from Specialisation band B units and/or band 2 Core units achieved in the Certificate III in Engineering – Technician qualification can be recognised for advanced standing in the Diploma in Engineering, that is a minimum of 40 additional points must be achieved. 		

Boating Industry qualifications information

Introduction

New and revised Boating Industry qualifications were developed by MERS ITAB and submitted to the National Training Quality Council (NTQC) for endorsement as a variation to the MEM98 Metal and Engineering Training Package in February 2003.

These five new qualifications and one revised qualification are complemented by other existing Training Package qualifications from the Automotive and Light Manufacturing ITABs to meet the training and skills recognition needs of the boating industry, particularly the recreational sector in Australia from AQF I to AQF IV.

Background

The new and revised qualifications were a culmination of several years of research and development into the skills and training needs of the various sectors that collectively make up the boating industry.

The industry defines itself as 'incorporating all activities undertaken in or from Australia associated with the design, manufacture, maintenance, service and repair, transport, crewing, storage, marketing, management or retailing of boats and boating products for recreational purposes'.

The industry is typically dominated by small businesses operating around the coastal and inland waterways of the nation. The industry is not concentrated in the capital cities with many of the key locations geographically remote from major centres. There are also a number of larger enterprises within the industry, mostly involved in the manufacture, sales and export of luxury pleasure cruisers.

It should be noted that 'boats' includes marine vessels up to 50 tonnes. By ANZSIC definition vessels larger than 50 tonnes are 'ships'. MERS ITAB covers boatbuilding as well as shipbuilding and associated activities. Shipbuilding is already covered under the endorsed Metal and Engineering Training Package.

Historically, some of the 'boating' vocational areas have been able to access reasonable training arrangements via existing programs, generally linked to the trades such as boatbuilder or marine mechanic, whilst those with more diverse needs or distant from training facilities have encountered difficulties obtaining skills training. Much of the industry operates around marine facilities such as marinas, slipways, boatbuilding and storage facilities and charter bases in both tourist destinations and 'out of the way' locations.

To meet these needs, MERS ITAB has now developed a range of qualifications in Boating Services as well as a new trade qualification in Marine Craft Construction. These qualifications have been designed to meet the training and skills recognition needs of the Boating Industry and are suited to New Apprenticeships.

Scope of Boating Industry qualifications

The new 'boating' qualifications range from Certificate I to Certificate IV across the fields of Marine Craft Construction/Engineering and Boating Services.

These qualifications use a number of existing, endorsed training outcomes and competency standards drawn from related industries as well as offering boating specific skills for enterprises operating across a range of areas such as marinas, slipways, brokerage and charter bases. The qualifications and packaging rules can be found are contained herein. All of the qualifications covered are accessible through New Apprenticeship arrangements.

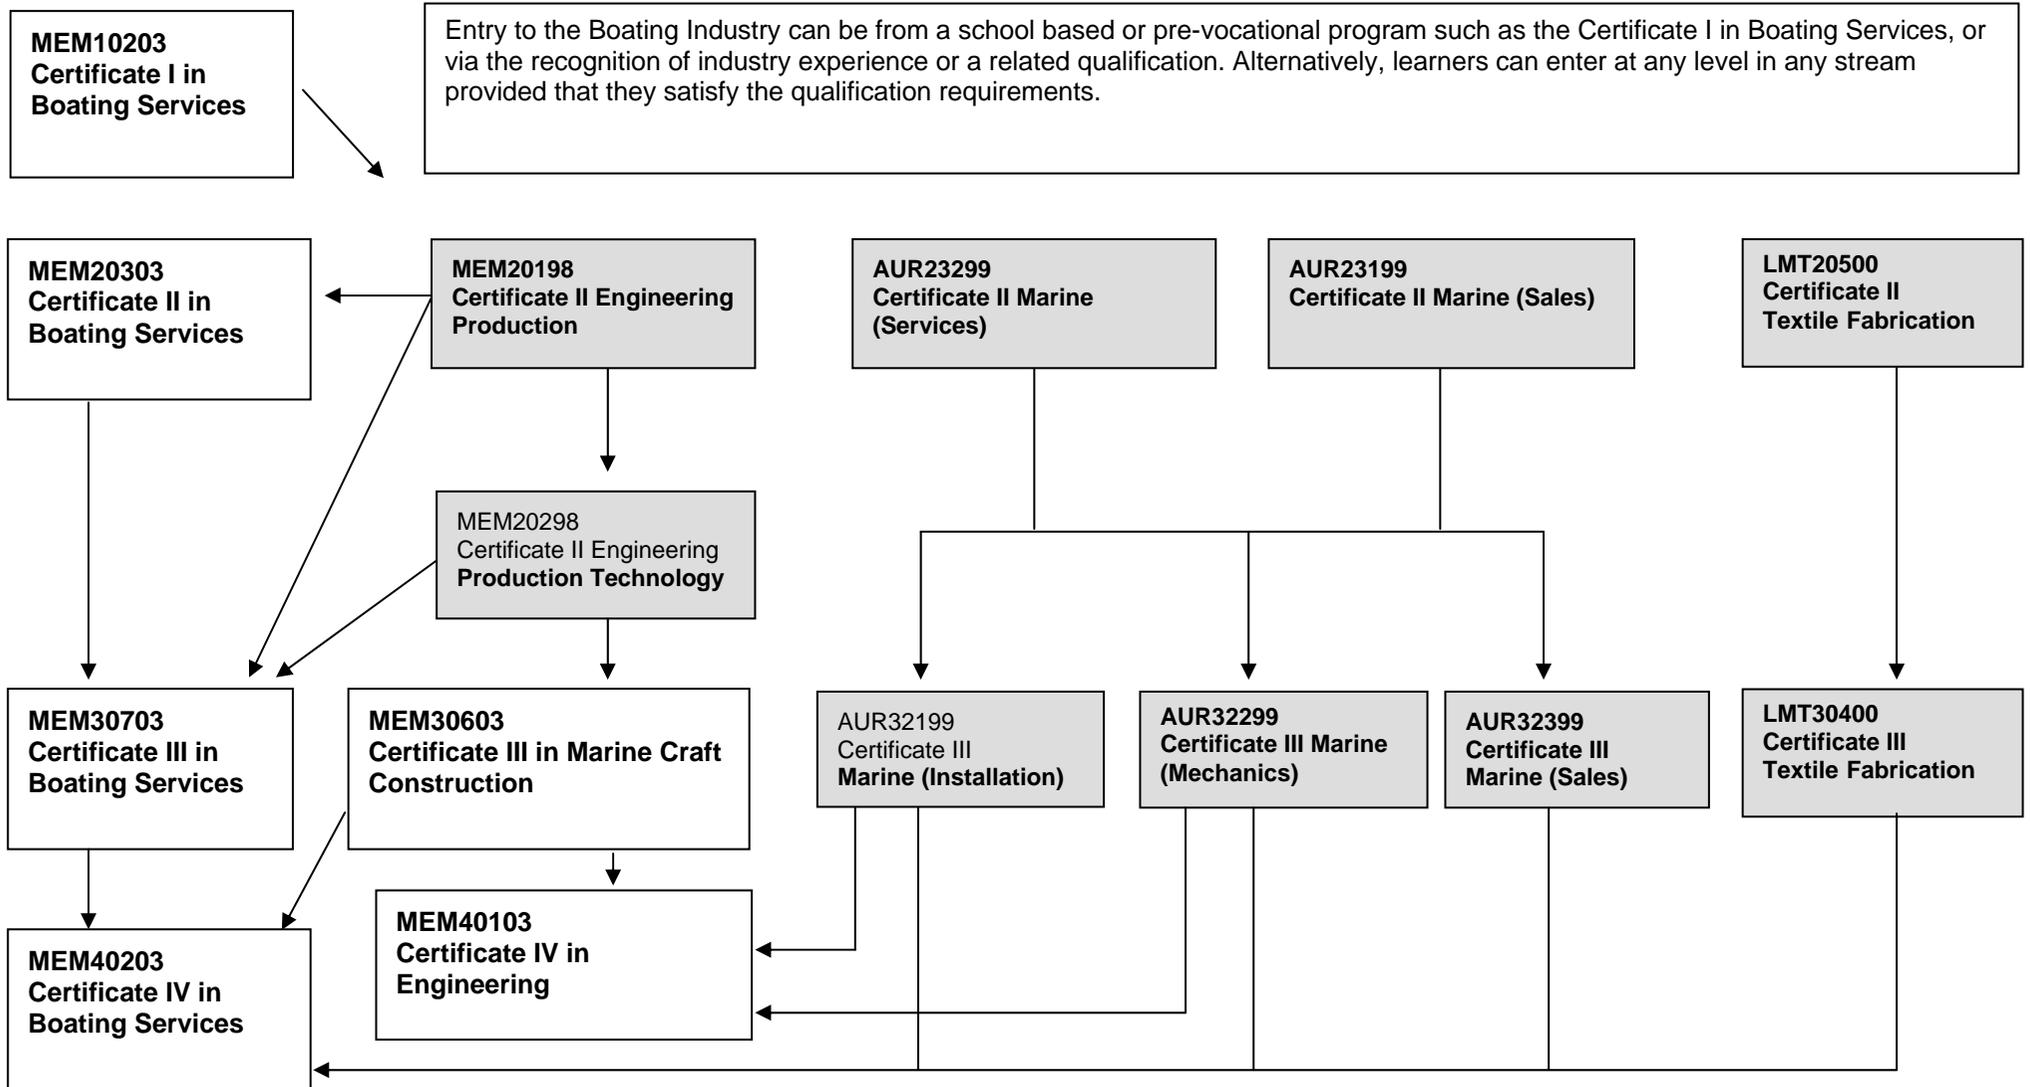

Overview of structure

Each qualification is comprised of units of competency combined in a packaging framework. The framework is based on the structure of the competency standards and follows simple rules.

In general, each of the Boating Services qualifications is comprised of core units of competency relevant to the qualification level as well as a selection of elective units (see Attachment 4 for listed units).

The Certificate III in Marine Craft Construction is comprised of *Core* units relevant to the qualification level as well as a selection of *Specialisation* units. Furthermore, the Certificate III in Marine Craft Construction qualification, as with other engineering qualifications, has an additional requirement of a minimum of 40 points value being selected from a prescribed list of competencies to obtain a stream outcome. The Certificate III in Marine Craft Construction articulates with the Certificate IV in Engineering (also see Schedule of Requirements in Metal and Engineering section), as do the Certificate III Marine (Installation) and Certificate III Marine (Mechanics).

Qualifications and pathways chart for the boating industry from AQF I to IV

Summary of Boating Industry qualifications

Qualification title	Minimum core units required	Minimum elective units required
Certificate I in Boating Services MEM10203	7	3
Certificate II in Boating Services MEM20303	9	6
Certificate III in Boating Services MEM30703	9	14
Certificate IV in Boating Services MEM40203	9	20

Summary of Marine Construction and related qualifications

Qualification title	Minimum points required	Industrial 'C' level outcome
Certificate I in Engineering MEM10198	16	C13
Certificate II in Engineering – Production MEM20198	32	C12
Certificate II in Engineering – Production Technology MEM20298	64	C11
Certificate III in Marine Craft Construction MEM30603	96	C10
Certificate IV in Engineering MEM40103	132 or AQF III + 36	C7

Schedule of requirements for Training Package qualifications

Certificate I in Boating Services MEM10203	7 core units	3 elective units
<ul style="list-style-type: none"> 10 units required in total (see Attachment 4 for details) 		
Certificate II in Boating Services MEM20303	9 core units	6 elective units
<ul style="list-style-type: none"> 15 units required in total (see Attachment 4 for details) 		
Certificate III in Boating Services MEM30703	9 core units	14 elective units
<ul style="list-style-type: none"> 23 units required in total (see Attachment 4 for details) 		
Certificate IV in Boating Services MEM40203	9 core units	20 elective units
<ul style="list-style-type: none"> 29 units required in total or Certificate III in Marine Craft Construction, Certificate III in Marine (Installation), Certificate III in Marine (Mechanics), Certificate III in Marine (Sales), Certificate III in Textile Fabrications, plus 8 units from specified list (see Attachment 4 for details) 		
Certificate III in Marine Craft Construction MEM30603	96 points total	C10 outcome
<ul style="list-style-type: none"> all Foundation units, plus 20 points of band 1 Core units required for C10, plus 40 points in units drawn from the 'Marine Craft Construction' stream Specialisation band A units (see qualification structure or Attachment 2), plus 36 points in units drawn from Specialisation band A units (including dual band A/band B units) <p>This qualification is covered in the Metal and Engineering section and Attachment 4</p>		
Certificate IV in Engineering MEM40103	132 points or AQF III + 36	C7 outcome
<ul style="list-style-type: none"> all Foundation units, plus 20 points of band 1 Core units required for C10, plus 112 points in units drawn from Specialisation band A units and/or band B units (including dual band A/band B units) and/or band 2 Core units (minimum of 12 points from band B/band 2 Core) or Completion of units to meet the requirements of Certificate III in Engineering – Trade, Certificate III in Engineering – Marine Craft Construction, Certificate III Marine (Installation) or Certificate III Marine (Mechanics), plus 36 points in units drawn from Specialisation band A and/or band B units (including dual band A/band B units) and/or band 2 Core units (maximum 24 points from band A) <p>Note - See Metal and Engineering section for articulation details.</p>		

Attachment 1 – Competency standards units which appear in Certificate III or higher qualifications

2.10C5	Write reports
2.11C5	Research and prepare presentations and reports
2.13C5	Perform mathematical computations
2.14C5	Use graphical techniques and perform simple statistical computations
2.15C5	Operate in an autonomous team environment (SEE NOTE BELOW)
4.10A	Develop and manufacture wood patterns
4.11A	Produce polymer patterns
4.12A	Assemble plated patterns
4.13A	Develop and manufacture polystyrene patterns
4.14A	Develop and manufacture production patterns
4.15A	Develop and manufacture vacuum forming moulds and associated equipment
4.16A	Develop and manufacture precision models
4.17A	Develop and manufacture gear, conveyor screws and propeller patterns
5.16A	Perform advanced welding using (MMAW)
5.18A	Perform advanced welding using (GMAW)
5.20A	Perform advanced welding using (GTAW)
5.22A	Perform advanced welding using (OAW)
5.36A	Repair/replace/modify fabrications
5.38A	Advanced geometric development – Cylindrical/Rectangular
5.39A	Advanced geometric development – Conical
5.40A	Advanced geometric development – Transitions
7.2A	Perform precision shaping/planing/slotting operations
7.9A	Perform precision jig boring operations
7.10A	Perform tool and cutter grinding operations
7.11A	Complex milling operations
7.12A	Complex grinding operations
7.21A	Perform complex lathe operations
7.23B	Program and set up CNC manufacturing cell
10.3A	Install and test electrical circuits up to 1000 volts AC to 1500 volts DC
10.4A	Enter and change programmable controller operational parameters
10.6A	Install machine/plant
12.3A	Precision mechanical measurement
12.4A	Precision electrical/electronic measurement
12.6A	Mark off/out (general engineering)
12.7A	Mark off/out structural fabrications and shapes
14.1B	Schedule material deliveries
14.3B	Undertake basic production scheduling
16.1B	Give formal presentations and take part in meetings
18.6A	Dismantle/repair/replace/assemble and fit engineering components
18.45A	Fault find/repair AC and DC elect. equip't/components up to 240 v single phase etc.
18.46A	Fault find/repair AC and DC elect. equip't/components up to 1000v AC to 1500v DC
18.48A	Fault find and repair/rectify basic electrical circuits
18.62A	Install, maintain and calibrate instrument sensors, transmitters & final control elements

NOTE – Competency unit 2.15C5 *Operate in an autonomous team environment* may be included in a Certificate II in Engineering – Production Technology or higher qualification.

Attachment 2 – Competency standards ‘stream’ units for Certificate III ‘Production’ and ‘Trade’ qualifications

Units of at least 40 points value must be drawn from the fields and/or units shown under each stream heading below to obtain the particular stream outcome.

Any combination of units may be selected from the ‘stream’ lists to make up the 40 points provided that any pre-requisite requirements are met.

Note that pre-requisite units for the selected ‘stream’ units may be included in the 40 ‘stream’ points, including where the pre-requisite units are from other fields not included in the chosen stream.

Production stream

Assembly field (all 3 series units)
 Surface finishing (all 8 series units)
 Materials handling field (all 11 series units)
 Quality field (all 15 series units)
 4.1A, 4.2A, 4.3A, 4.4A and 4.6A
 5.1A, 5.2A, 5.3A
 6.3A, 6.4A, 6.6A
 7.1A, 7.3A, 7.4A, 7.24A, 7.25A, 7.26A,
 7.27A, 7.28A
 9.2A
 12.1A, 12.2A
 13.3A, 13.4A
 18.1A, 18.2A

Electrical/Electronic stream

5.1A, 5.2A, 5.3A, 5.6A
 9.1A, 9.2A
 10.2A, 10.3A
 12.2A, 12.4A
 18.1A, 18.2A
 18.45A to 18.65A inclusive

Fabrication stream

Fabrication field (all 5 series units)
 Casting and moulding field (all 4 series units)
 Surface finishing field (all 8 series units)
 3.3A
 9.1A, 9.2A
 10.1A
 12.7A
 18.1A, 18.2A

Marine Craft Construction stream

Marine craft construction field (all 25 series units)
 4.18A
 8.11A, 8.14A
 9.21A
 10.13A
 12.7A
 50.2A, 50.3A, 50.4A, 50.9A

Mechanical stream

Machining field (all 7 series units)
 Maintenance and diagnostics field (all 18 series units)
 9.1A, 9.2A
 10.4A, 10.6A
 12.3A, 12.6A
 13.7A

Jewellery stream

Jewellery and horological field (all 19 series units)
 3.1A, 3.2A, 3.6A, 3.7A
 5.6A
 6.7A
 7.1A, 2.24A, 7.32A
 8.1A, 8.2A, 8.3A, 8.10A, 8.11A
 9.1A
 13.2A, 13.3A, 13.4A
 15.4A
 8.1A, 18.2A, 18.3A

Attachment 3 – *Foundation and Core competencies*

Foundation competency units

Unit code	Unit title	Points
MEM1.1FA	Undertake interactive workplace communication	0
MEM1.2FA	Apply principles of occupational health and safety in a work environment	0
MEM1.3FA	Apply quality procedures	0
MEM1.4FA	Plan to undertake a routine task	0

Core competency units - band 1

At Certificate II in Engineering – Production (C12), the Foundation units and the C12 Core unit is needed.

Unit code	Unit title	Points
MEM2.1C12A	Apply quality systems	2
Total Core points at C12		2

At Certificate II in Engineering – Production Technology (C11), the Foundation units, C12 Core unit and C11 Core units are required.

Unit code	Unit title	Points
MEM2.2C11A	Organise and analyse information	2
MEM2.3C11B	Operate in a work based team environment	2
MEM2.4C11A	Assist in the provision of on the job training	2
MEM2.5C11A	Measure with graduated devices	2
Add C12 Core points		<u>2</u>
Total Core points at C11		10

At Certificate III in Engineering – Trade/Production (C10) the Foundation units, C12 Core unit, C11 Core units and C10 Core units are required.

Unit code	Unit title	Points
MEM2.6C10A	Plan a complete activity	4
MEM2.7C10A	Perform computations – basic	2
MEM2.8C10A	Perform computations	2
MEM2.9C10A	Perform computer operations	2
Add C12 and C11 Core points		<u>10</u>
Total Core points at C10		20

Core competency units - band 2

Total of 16 points to be gained by C5 (see notes attached to qualifications above 96 points)

Unit code	Unit title	Points
MEM2.10C5A	Write reports	2
MEM2.11C5A	Research and prepare presentations and reports	2
MEM2.13C5A	Perform mathematical computations	4
MEM2.14C5A	Use graphical techniques and perform simple statistical computations	2
MEM2.15C5A	Operate in an autonomous team environment	2
MEM2.16C5A	Interpret quality specifications and manuals	4
Total Core points in band 2		16

Note 1) C12, C11, C10 & C5 refer to industrial classifications.

Note 2) Boating Services qualifications combine the *Foundation* and selected *Core* units as compulsory core for each qualification.

Attachment 4 – Boating Industry qualifications detail

MEM10203 Certificate I in Boating Services

The requirement for the awarding of a Certificate I in Boating Services is demonstrated competency in ten units of competency comprised of seven core units and three elective units. (Note: When selecting units any pre-requisite units must also be completed but can be counted towards the qualification total of twenty nine units.)

Compulsory core units (seven)

From:	Unit code	Unit title
MEM98	MEM1.1FA	Undertake interactive workplace communication
MEM98	MEM1.2FA	Apply principles of occupational health and safety in work environment
MEM98	MEM1.3FA	Apply quality procedures
MEM98	MEM1.4FA	Plan to undertake a routine task
MEM98	MEM50.1EA	Classify recreational boating technologies and features
MEM98	MEM50.2AA	Work safely on marine craft
MEM98	MEM50.3AA	Follow work procedures to maintain the marine environment

Elective units (select three)

From:	Unit code	Unit title
AUR99	AUR50318A	Dispose of waste and maintain a tidy work area
BSB01	BSBCMN212A	Handle mail
MEM98	MEM2.3C11A	Operate in a work based team environment
MEM98	MEM2.5C11B	Measure with graduated devices
MEM98	MEM9.1AA	Draw and interpret sketch
MEM98	MEM9.2AA	Interpret technical drawing
MEM98	MEM11.10AA	Operate mobile load shifting equipment
MEM98	MEM11.11AA	Perform manual handling
MEM98	MEM13.3AA	Work safely with industrial chemicals and materials
MEM98	MEM18.1AB	Use hand tools
MEM98	MEM18.2AA	Use power tools/hand held operations
MEM98	MEM50.5EA	Refuel vessels
MEM98	MEM50.6EA	Check operational capability of marine craft
MEM98	MEM50.7EA	Check operational capability of sails and sail operating equipment
MEM98	MEM50.8EA	Carry out trip preparation and planning
MEM98	MEM50.9AA	Safely operate a powered recreational boat
MEM98	MEM50.10EA	Respond to boating emergencies and incidents
PMB01	PMBHAN201A	Process orders and despatch orders
PMB01	PMBHAN202A	Load and unload goods
PRM98	PRMCL12A	Wash external surfaces to remove all visible dirt and grime
PUA00	PUAEME001A	Provide emergency care
PUA00	PUAEME002B	Manage injuries at emergency incident
PUA00	PUAEME003B	Administer oxygen in an emergency situation
SFI00	SFISHIP209A	Operate marine communications (vessel operations)
SFI00	SFISHIP212A	Take emergency action on board a vessel (vessel operations)
SRO99	SRXEMEO02A	Participate in the control of minor emergencies
THH02	THHCOR02B	Work in a socially diverse environment
THH02	THHGCS01B	Develop and update local knowledge
THH02	THHGGA03B	Source and present information
THT02	THTTCO01B	Develop and update tourism industry knowledge
WRR02	WRRCA1B	Operate retail equipment (clerical administration)
WRR02	WRRLP1B	Apply safe working practices (loss prevention)

MEM20303 Certificate II in Boating Services

The requirement for the awarding of a Certificate II in Boating Services is demonstrated competency in fifteen units of competency comprised of nine core units and six elective units. (Note: When selecting units any pre-requisite units must also be completed but can be counted towards the qualification total of twenty nine units.

Compulsory core units (nine)

From:	Unit code	Unit title
MEM98	MEM1.1FA	Undertake interactive workplace communication
MEM98	MEM1.2FA	Apply principles of occupational health and safety in work environment
MEM98	MEM1.3FA	Apply quality procedures
MEM98	MEM1.4FA	Plan to undertake a routine task
MEM98	MEM2.3C11A	Operate in a work based team environment
MEM98	MEM50.1EA	Classify recreational boating technologies and features
MEM98	MEM50.2AA	Work safely on marine craft
MEM98	MEM50.3AA	Follow work procedures to maintain the marine environment
MEM98	MEM50.4AA	Maintain quality of environment by following marina codes

Elective units (select six)

From:	Unit code	Unit title
AUR99	AUR50318A	Dispose of waste and maintain a tidy work area
AUR99	AUR18676B	Test, service and replace battery
AUR99	AUR37119A	Drive and manoeuvre trailer(s)
AUR99	AUR46335A	Launch and recover vessels from trailer
AUR99	AUR46435A	Launch and recover vessel from cranes, gantries and forklifts
AUR99	AUR46519A	Drive and manoeuvre motor driven vessels
AUR99	AUR46542A	Moor vessels
AUR99	AUR37271A	Service and repair trailers
AUR99	AUR46108A	Carry out minor hull repairs
AUR99	AUR46649A	Prepare (winterise) vessel systems
AUR99	AUR46660A	Recommission vessel systems
AUR99	AUR46749A	Prepare (winterise) engine systems
AUR99	AUR46760A	Recommission engine systems
AUR99	AUR46866A	Repair deck, hull, cabin equipment and fittings
AUR99	AUR46870A	Service deck, hull, cabin equipment and fittings
AUR99	AUR46927A	Identify the need for water testing vessels
AUR99	AUR46930A	Water test vessels
AUR99	AUR46975A	Water test engines in tanks
BSB01	BSBCMN205A	Use business technology
BSB01	BSBCMN206A	Process and maintain workplace information
BSB01	BSBCMN207A	Prepare and process financial/business documents
BSB01	BSBCMN212A	Handle mail
BSB01	BSBCMN213A	Produce simple word processed documents
MEM98	MEM2.5C11B	Measure with graduated devices
MEM98	MEM4.18AA	General woodworking machine operations
MEM98	MEM5.3AA	Soft soldering (basic)
MEM98	MEM5.5AA	Carry out mechanical cutting
MEM98	MEM5.7AB	Manual heating and thermal cutting
MEM98	MEM5.12AB	Perform routine manual metal arc welding
MEM98	MEM9.1AA	Draw and interpret sketch
MEM98	MEM9.2AA	Interpret technical drawing
MEM98	MEM11.10AA	Operate mobile load shifting equipment
MEM98	MEM11.11AA	Perform manual handling
MEM98	MEM12.6AA	Mark off/out (general engineering)
MEM98	MEM12.7AA	Mark off/out structural fabrications and shapes
MEM98	MEM13.3AA	Work safely with industrial chemicals and materials
MEM98	MEM18.1AB	Use hand tools

From:	Unit code	Unit title
MEM98	MEM18.2AA	Use power tools/hand held operations
MEM98	MEM18.3AB	Use tools for precision work
MEM98	MEM25.1AA	Apply fibre reinforced plastics
MEM98	MEM25.4AA	Fair and shape surfaces
MEM98	MEM25.7AA	Maintain marine vessel surfaces
MEM98	MEM50.5EA	Refuel vessels
MEM98	MEM50.6EA	Check operational capability of marine craft
MEM98	MEM50.7EA	Check operational capability of sails and sail operating equipment
MEM98	MEM50.8EA	Carry out trip preparation and planning
MEM98	MEM50.9AA	Safely operate a powered recreational boat
MEM98	MEM50.10EA	Respond to boating emergencies and incidents
PMB01	PMBHAN201B	Process orders and despatch orders
PMB01	PMBHAN202B	Load and unload goods
PMB01	PMBPROD315B	Produce polyurethane foam
PMB01	PMBPROD320B	Produce foam injected mouldings
PMB01	PMBPROD380B	Produce composites using chopper gun/depositor
PMB01	PMBFIN201B	Finish products and components
PMB01	PMBFIN202B	Fit attachments to products
PMB01	PMBFIN203B	Repair product imperfections
PMB01	PMBHAN204B	Package goods/materials
PMB01	PMBFIN205B	Hand decorate products
PRM98	PRMCL12A	Wash external surfaces to remove all visible dirt and grime
SFI00	SFISHIP209A	Operate marine communications (vessel operations)
SFI00	SFISHIP212A	Take emergency action on board a vessel (vessel operations)
SFI00	SFISHIP201A	Comply with organisational and legislative requirements
SFI00	SFISHIP202A	Contribute to safe navigating (vessel operations)
SFI00	SFISHIP203A	Maintain the safety and security of vessel (vessel operations)
SFI00	SFISHIP204A	Maintain marine vessels and equipment (vessel operations)
SFI00	SFISHIP205A	Maintain marine plant (vessel operations)
SFI00	SFISHIP206A	Operate a small vessel (vessel operations)
SFI00	SFISHIP207A	Operate and maintain outboard motors
SFI00	SFISHIP208A	Operate a low powered diesel engines (vessel operations)
SFI00	SFISHIP210A	Operate a marine plant and systems (vessel operations)
SFI00	SFISHIP211A	Prepare for maintenance (vessel operations)
SFI00	SFISHIP302A	Command and control manoeuvres (vessel operations)
SFI00	SFISHIP303A	Initial response to navigation emergencies (vessel operations)
SFI00	SFISHIP306A	Monitor and control navigation in an inshore area
PUA00	PUAEME001A	Provide emergency care
PUA00	PUAEME002B	Manage injuries at emergency incident
PUA00	PUAEME003B	Administer oxygen in an emergency situation
PUA00	PUAOPE002A	Operate communications systems and equipment
SRO99	SRXEMEO02A	Participate in the control of minor emergencies
SRO99	SROOPS001A	Implement minimal environmental impact practices
SRO99	SROOPS002A	Plan for minimal environmental impact
SRO99	SROOPS003A	Apply weather information
SRO99	SROOPS006A	Use and maintain a temporary overnight site
SRO99	SROORE001A	Prepare to participate in a supervised outdoor activity requiring basic skills
SRO99	SROORE002A	Participate in a supervised outdoor activity requiring basic skills
SRO99	SROORE003A	Prepare to participate in outdoor activities
SRO99	SROORE004A	Participate in outdoor activities
SRO99	SROYAC001A	Comply with maritime rules and regulations
SRO99	SROYSB001A	Use basic skills to sail a small boat in controlled conditions
SRO99	SRXEME003A	Respond to emergency situations
SRO99	SROOPS005A	Apply search and rescue skills
SRO99	SROYAC002A	Crew a ballasted yacht inshore
SRO99	SROYMC001A	Crew a motor cruiser inshore
SRO99	SROYSB002A	Sail a small boat in light to moderate conditions using enhanced skills
SRO99	SRXEME004A	Coordinate emergency response

From:	Unit code	Unit title
SRO99	SRXRES002A	Improve client awareness and implementation of environmental management practices
SRO99	SRXRES004A	Minimise waste and pollution and their environmental impact
SRO99	SRXRES008A	Conserve and re-establish natural systems
THH02	THHCOR02B	Work in a socially diverse environment
THH02	THHGCS01B	Develop and update local knowledge
THH02	THHGGA03B	Source and present information
THT02	THTTCO01B	Develop and update tourism industry knowledge
WRR02	WRRCA1B	Operate retail equipment (clerical administration)
WRR02	WRR1B	Perform stock control procedures (inventory)
WRR02	WRRLP1B	Apply safe working practices (loss prevention)
WRR02	WRRF1B	Balance register/terminal (finance)
WRR02	WRRF2B	Perform retail finance duties (finance)
WRR02	WRRCS2B	Apply point of sale handling procedures (service)
WRR02	WRRCS3B	Interact with customers
WRR02	WRR12B	Minimise theft (loss prevention)
WRR02	WRRLP6C	Apply retail food safety practices
WRR02	WRRM1B	Merchandise products (merchandising)
WRR02	WRRM2B	Perform routine housekeeping duties
WRR02	WRRS1B	Sell product and services (selling)
WRR02	WRRS2B	Advise on products and services (selling)

MEM30703 Certificate III in Boating Services

The requirement for the awarding of a Certificate III in Boating Services is demonstrated competency in twenty three units of competency comprised of nine core units and fourteen elective units. (Note: When selecting units any pre-requisite units must also be completed but can be counted towards the qualification total of twenty nine units.)

Compulsory core units (nine)

From:	Unit code	Unit title
MEM98	MEM1.1FA	Undertake interactive workplace communication
MEM98	MEM1.2FA	Apply principles of occupational health and safety in work environment
MEM98	MEM1.3FA	Apply quality procedures
MEM98	MEM1.4FA	Plan to undertake a routine task
MEM98	MEM2.3C11A	Operate in a work based team environment
MEM98	MEM50.1EA	Classify recreational boating technologies and features
MEM98	MEM50.2AA	Work safely on marine craft
MEM98	MEM50.3AA	Follow work procedures to maintain the marine environment
MEM98	MEM50.4AA	Maintain quality of environment by following marina codes

Elective units (select fourteen)

From:	Unit code	Unit title
AUR99	AUR18676B	Test, service and replace battery
AUR99	AUR37119A	Drive and manoeuvre trailer(s)
AUR99	AUR37271A	Service and repair trailers
AUR99	AUR46108A	Carry out minor hull repairs
AUR99	AUR46335A	Launch and recover vessels from trailer
AUR99	AUR46435A	Launch and recover vessel from cranes, gantries and forklifts
AUR99	AUR46519A	Drive and manoeuvre motor driven vessels
AUR99	AUR46542A	Moor vessels
AUR99	AUR46649A	Prepare (winterise) vessel systems
AUR99	AUR46660A	Recommission vessel systems
AUR99	AUR46749A	Prepare (winterise) engine systems
AUR99	AUR46760A	Recommission engine systems
AUR99	AUR46866A	Repair deck, hull, cabin equipment and fittings
AUR99	AUR46870A	Service deck, hull, cabin equipment and fittings
AUR99	AUR46927A	Identify the need for water testing vessels
AUR99	AUR46930A	Water test vessels
AUR99	AUR46975A	Water test engines in tanks
AUR99	AUR50318A	Dispose of waste and maintain a tidy work area
BSB01	BSBCMN205A	Use business technology
BSB01	BSBCMN206A	Process and maintain workplace information
BSB01	BSBCMN207A	Prepare and process financial/business documents
BSB01	BSBCMN212A	Handle mail
BSB01	BSBCMN213A	Produce simple word processed documents
BSB01	BSBCMN306A	Produce business documents
BSB01	BSBCMN308A	Maintain financial records
BSB01	BSBADM308A	Process payroll
MEM98	MEM2.5C11B	Measure with graduated devices
MEM98	MEM4.18AA	General woodworking machine operations
MEM98	MEM5.3AA	Soft soldering (basic)
MEM98	MEM5.5AA	Carry out mechanical cutting
MEM98	MEM5.7AB	Manual heating and thermal cutting
MEM98	MEM5.12AB	Perform routine manual metal arc welding
MEM98	MEM9.1AA	Draw and interpret sketch
MEM98	MEM9.2AA	Interpret technical drawing
MEM98	MEM11.10AA	Operate mobile load shifting equipment
MEM98	MEM11.11AA	Perform manual handling
MEM98	MEM12.6AA	Mark off/out (general engineering)

From:	Unit code	Unit title
MEM98	MEM12.7AA	Mark off/out structural fabrications and shapes
MEM98	MEM13.3AA	Work safely with industrial chemicals and materials
MEM98	MEM18.1AB	Use hand tools
MEM98	MEM18.2AA	Use power tools/hand held operations
MEM98	MEM18.3AB	Use tools for precision work
MEM98	MEM25.1AA	Apply fibre reinforced plastics
MEM98	MEM25.4AA	Fair and shape surfaces
MEM98	MEM25.7AA	Maintain marine vessel surfaces
MEM98	MEM25.8AA	Repair marine vessel surfaces and structures
MEM98	MEM50.5EA	Refuel vessels
MEM98	MEM50.6EA	Check operational capability of marine craft
MEM98	MEM50.7EA	Check operational capability of sails and sail operating equipment
MEM98	MEM50.8EA	Carry out trip preparation and planning
MEM98	MEM50.9AA	Safely operate a powered recreational boat
MEM98	MEM50.10EA	Respond to boating emergencies and incidents
PMB01	PMBHAN201B	Process orders and despatch orders
PMB01	PMBHAN202B	Load and unload goods
PMB01	PMBPROD315B	Produce polyurethane foam
PMB01	PMBPROD320B	Produce foam injected mouldings
PMB01	PMBPROD380B	Produce composites using chopper gun/depositor
PMB01	PMBFIN201B	Finish products and components
PMB01	PMBFIN202B	Fit attachments to products
PMB01	PMBFIN203B	Repair product imperfections
PMB01	PMBHAN204B	Package goods/materials
PMB01	PMBFIN205B	Hand decorate products
PRM98	PRMCL12A	Wash external surfaces to remove all visible dirt and grime
SFI00	SFISHIP201A	Comply with organisational and legislative requirements
SFI00	SFISHIP202A	Contribute to safe navigating (vessel operations)
SFI00	SFISHIP203A	Maintain the safety and security of vessel (vessel operations)
SFI00	SFISHIP204A	Maintain marine vessels and equipment (vessel operations)
SFI00	SFISHIP205A	Maintain marine plant (vessel operations)
SFI00	SFISHIP206A	Operate a small vessel (vessel operations)
SFI00	SFISHIP207A	Operate and maintain outboard motors
SFI00	SFISHIP208A	Operate a low powered diesel engines (vessel operations)
SFI00	SFISHIP209A	Operate marine communications (vessel operations)
SFI00	SFISHIP210A	Operate a marine plant and systems (vessel operations)
SFI00	SFISHIP211A	Prepare for maintenance (vessel operations)
SFI00	SFISHIP212A	Take emergency action on board a vessel (vessel operations)
SFI00	SFISHIP302A	Command and control manoeuvres (vessel operations)
SFI00	SFISHIP303A	Initial response to navigation emergencies (vessel operations)
SFI00	SFISHIP304A	Manage the operation of auxiliaries and service plant outside normal parameters (vessel operations)
SFI00	SFISHIP305A	Manage the operation of low powered marine diesel engines outside normal parameters (vessel operations)
SFI00	SFISHIP306A	Monitor and control navigation in an inshore area
SFI00	SFISHIP307A	Plan maintenance for marine engineering systems (vessel operations)
SFI00	SFISHIP401A	Ensure the seaworthiness of the vessel (simplified stability criteria)
SFI00	SFISHIP403A	Monitor and control search and rescue operations
PUA00	PUAEME001A	Provide emergency care
PUA00	PUAEME002B	Manage injuries at emergency incident
PUA00	PUAEME003B	Administer oxygen in an emergency situation
PUA00	PUAOPE002A	Operate communications systems and equipment
SRO99	SROOPS001A	Implement minimal environmental impact practices
SRO99	SROOPS002A	Plan for minimal environmental impact
SRO99	SROOPS003A	Apply weather information
SRO99	SROOPS005A	Apply search and rescue skills
SRO99	SROOPS006A	Use and maintain a temporary overnight site
SRO99	SROORE001A	Prepare to participate in a supervised outdoor activity requiring basic

From:	Unit code	Unit title
		skills
SRO99	SROORE002A	Participate in a supervised outdoor activity requiring basic skills
SRO99	SROORE003A	Prepare to participate in outdoor activities
SRO99	SROORE004A	Participate in outdoor activities
SRO99	SROYAC001A	Comply with maritime rules and regulations
SRO99	SROYAC002A	Crew a ballasted yacht inshore
SRO99	SROYAC003A	Skipper a ballasted yacht inshore
SRO99	SROYMC001A	Crew a motor cruiser inshore
SRO99	SROYMC002A	Skipper a motor cruiser inshore
SRO99	SROYSB001A	Use basic skills to sail a small boat in controlled conditions

WRR02	WRRM1B	Merchandise products (merchandising)
WRR02	WRRM2B	Perform routine housekeeping duties
WRR02	WRRS1B	Sell product and services (selling)
WRR02	WRRS2B	Advise on products and services (selling)

MEM40203 Certificate IV in Boating Services

The requirement for the awarding of a Certificate IV in Boating Services is demonstrated competency in twenty nine units of competency comprised of nine core units and twenty elective units. (Note: When selecting units any pre-requisite units must also be completed but can be counted towards the qualification total of twenty nine units.)

Compulsory core units (nine)

From	Unit code	Unit title
MEM98	MEM1.1FA	Undertake interactive workplace communication
MEM98	MEM1.2FA	Apply principles of occupational health and safety in work environment
MEM98	MEM1.3FA	Apply quality procedures
MEM98	MEM1.4FA	Plan to undertake a routine task
MEM98	MEM2.3C11A	Operate in a work based team environment
MEM98	MEM50.1EA	Classify recreational boating technologies and features
MEM98	MEM50.2AA	Work safely on marine craft
MEM98	MEM50.3AA	Follow work procedures to maintain the marine environment
MEM98	MEM50.4AA	Maintain quality of environment by following marina codes

Elective units (twenty)

Select twenty units from the groups of elective units below, with:

- at least one unit from the list below, and

From:	Unit code	Unit title
MEM98	MEM50.5EA	Refuel vessels
MEM98	MEM50.6EA	Check operational capability of marine craft
MEM98	MEM50.7EA	Check operational capability of sails and sail operating equipment
MEM98	MEM50.8EA	Carry out trip preparation and planning
MEM98	MEM50.9AA	Safely operate a mechanically powered recreational boat
MEM98	MEM50.10EA	Respond to boating emergencies and incidents

- at least five units from the list below, and

From:	Unit code	Unit title
BSB01	BSBCMN408A	Report on financial activity
BSB01	BSBRKG301A	Control records
BSB01		any units from BSB41001 Certificate IV in Business (Frontline Management)
BSB01	BSBADM402A	Produce complex business documents
BSB01	BSBCMN406A	Maintain business technology
BSB01		any units from BSZ40198 Certificate IV in Assessment and Workplace Training
SFI00	SFISHIP501A	Control overall safety of navigation operations (vessel operations)
SFI00	SFISHIP502A	Ensure the seaworthiness of the vessel
SFI00	SFISHIP503A	Prepare and plan the voyage (vessel operations)
FNB99	FNBFIN71A	Prepare financial reports to meet statutory requirements

- the balance to be selected from the list below

From:	Unit code	Unit title
AUR99	AUR37271A	Service and repair trailers
AUR99	AUR46108A	Carry out minor hull repairs
AUR99	AUR46649A	Prepare (winterise) vessel systems
AUR99	AUR46660A	Recommission vessel systems
AUR99	AUR46749A	Prepare (winterise) engine systems
AUR99	AUR46760A	Recommission engine systems
AUR99	AUR46866A	Repair deck, hull, cabin equipment and fittings
AUR99	AUR46870A	Service deck, hull, cabin equipment and fittings
AUR99	AUR46927A	Identify the need for water testing vessels

From:	Unit code	Unit title
AUR99	AUR46930A	Water test vessels
AUR99	AUR46975A	Water test engines in tanks
BSB01	BSBCMN308A	Maintain financial records
BSB01	BSBADM308A	Process payroll
BSB01	BSBCMN206A	Process and maintain workplace information
BSB01	BSBCMN306A	Produce business documents
BSB01	BSBCMN205A	Use business technology
BSB01	BSBCMN408A	Report on financial activity
BSB01	BSBRKG301A	Control records
BSB01	BSBADM402A	Produce complex business documents
BSB01	BSBCMN406A	Maintain business technology
BSB01		any units from BSB4101 Certificate IV in Business (Frontline Management)
BSB01		any units from BSZ40198 Certificate IV in Assessment and Workplace Training
FNB99	FNBFIN71A	Prepare financial reports to meet statutory requirements
MEM98	MEM4.18AA	General woodworking machine operations
MEM98	MEM5.3AA	Soft soldering (basic)
MEM98	MEM5.5AA	Carry out mechanical cutting
MEM98	MEM5.7AB	Manual heating and thermal cutting
MEM98	MEM5.12AB	Perform routine manual metal arc welding
MEM98	MEM25.1AA	Apply fibre reinforced materials
MEM98	MEM25.4AA	Fair and shape surfaces
MEM98	MEM25.7AA	Maintain marine vessel surfaces
MEM98	MEM25.8AA	Repair marine vessel surfaces and structures
SFI00	SFISHIP302A	Command and control manoeuvres (vessel operations)
SFI00	SFISHIP303A	Initial response to navigation emergencies (vessel operations)
SFI00	SFISHIP306A	Monitor and control navigation in an inshore area
SFI00	SFISHIP304A	Manage the operation of auxiliaries and service plant outside normal parameters (vessel operations)
SFI00	SFISHIP305A	Manage the operation of low powered marine diesel engines outside normal parameters (vessel operations)
SFI00	SFISHIP307A	Plan maintenance for marine engineering systems (vessel operations)
SFI00	SFISHIP401A	Ensure the seaworthiness of the vessel (simplified stability criteria)
SFI00	SFISHIP403A	Monitor and control search and rescue operations
SFI00	SFISHIP501A	Control overall safety of navigation operations (vessel operations)
SFI00	SFISHIP502A	Ensure the seaworthiness of the vessel
SFI00	SFISHIP503A	Prepare and plan the voyage (vessel operations)
SRO99	SROOPS005A	Apply search and rescue skills
SRO99	SROYAC002A	Crew a ballasted yacht inshore
SRO99	SROYMC001A	Crew a motor cruiser inshore
SRO99	SROYSB002A	Sail a small boat in light to moderate conditions using enhanced skills
SRO99	SRXEME004A	Coordinate emergency response
SRO99	SRXRES002A	Improve client awareness and implementation of environmental management practices
SRO99	SRXRES004A	Minimise waste and pollution and their environmental impact
SRO99	SRXRES008A	Conserve and re-establish natural systems
SRO99	SROYAC003A	Skipper a ballasted yacht inshore
SRO99	SROYMC002A	Skipper a motor cruiser inshore
WRR02	WRRCA5B	Operate retail information technology systems
WRR02	WRR15A	Maintain and order stock
WRR02	WRRLP3B	Maintain store safety (loss prevention)
WRR02	WRRO1B	Manage merchandise and store presentation (merchandising)
WRR02	WRRO2B	Manage sales and service delivery (operations)
WRR02	WRRO3B	Provide a safe working environment (operations)
WRR02	WRRO4B	Control store security/loss (operations)
WRR02	WRRO5B	Control inventory (operations)

From:	Unit code	Unit title
WRR02	WRRO6B	Manage store facilities (operations)

Persons holding any of the following qualifications are recognised as having credit in a substantial part of the Certificate IV in Boating Services:

Certificate III in Marine Craft Construction – MEM30603

Certificate III in Marine (Installation) – AUR32199

Certificate III in Marine (Mechanics) – AUR32299

Certificate III in Marine (Sales) – AUR32399

Certificate III in Textile Fabrication – LMT30400

In addition to their Certificate III qualification, they need only complete eight additional units as specified below.

Compulsory core unit (one)

From:	Unit code	Unit title
MEM98	MEM50.1EA	Classify recreational boating technologies and features

Elective units (seven)

- one unit from the list below, and

From:	Unit code	Unit title
MEM98	MEM50.2AA	Work safely on marine craft
MEM98	MEM50.3AA	Follow work procedures to maintain the marine environment
MEM98	MEM50.4AA	Maintain quality of environment by following marina codes
MEM98	MEM50.5EA	Refuel vessels
MEM98	MEM50.6EA	Check operational capability of marine craft
MEM98	MEM50.7EA	Check operational capability of sails and sail operating equipment
MEM98	MEM50.8EA	Carry out trip preparation and planning
MEM98	MEM50.9AA	Safely operate a mechanically powered recreational boat
MEM98	MEM50.10EA	Respond to boating emergencies and incidents

- six units from the list below.

From:	Unit code	Unit title
BSB01	BSBCM408A	Report on financial activity
BSB01	BSBRKG301A	Control records
BSB01		any units from BSB4101 Certificate IV in Business (Frontline Management)
BSB01	BSBADM402A	Produce complex business documents
BSB01	BSBCM406A	Maintain business technology
BSB01		any units from BSZ40198 Certificate IV in Assessment and Workplace Training
SFI00	SFISHIP501A	Control overall safety of navigation operations (vessel operations)
SFI00	SFISHIP502A	Ensure the seaworthiness of the vessel
SFI00	SFISHIP503A	Prepare and plan the voyage (vessel operations)
FNB99	FNBFIN71A	Prepare financial reports to meet statutory requirements

MEM30603 Certificate III in Marine Craft Construction

As indicated in the earlier section of the Metal and Engineering Training Package qualifications, this qualification follows the same packaging rules as apply to the Engineering Certificate III 'Trade' qualifications (compulsory *Foundation* and *Core* units, plus 40 points of Stream units, plus 36 points of Specialisation elective units). The requirement for the awarding of a Certificate III in Marine Craft Construction is demonstrated competency in units to a minimum points value of 96 according to the following structure:

Compulsory units (20 points)

Unit code	Unit title	Points
MEM1.1FA	Undertake interactive workplace communication	0
MEM1.2FA	Apply principles of Occupational Health & Safety (OH&S) in work environment	0
MEM1.3FA	Apply quality procedures	0
MEM1.4FA	Plan to undertake a routine task	0
MEM2.1C12A	Apply quality systems	2
MEM2.2C11A	Organise and analyse information	2
MEM2.3C11A	Operate in a work based team environment	2
MEM2.4C11A	Assist in the provision of on the job training	2
MEM2.5C11B	Measure with graduated devices	2
MEM2.6C10A	Plan a complete activity	4
MEM2.7C10A	Perform computations – basic	2
MEM2.8C10A	Perform computations	2
MEM2.9C10A	Perform computer operations	2

Stream units - select 40 points in units drawn from the Marine Craft Construction units stream Specialisation band A units as follows (pre-requisite units points value may be included in the 40 'stream' points):

Unit code	Unit title	Points
MEM4.18AB	General woodworking machine operations	4
MEM8.11AA	Undertake surface preparation using solvents and/or mechanical means	2
MEM8.14AA	Apply protective coatings (basic)	4
MEM9.21AA	Interpret and produce curved 3-dimensional shapes	4
MEM10.13A	Assemble and install equipment and accessories/ancillaries	2
MEM12.7AA	Mark off/out structural fabrications and shapes	4
MEM25.1AA	Apply fibre-reinforced materials	2
MEM25.2AA	Form and integrate fibre-reinforced structures	4
MEM25.3AA	Set up marine vessel structures	4
MEM25.4AA	Fair and shape surfaces	2
MEM25.5AA	Construct and assemble marine vessel timber components	8
MEM25.6AA	Undertake marine sheathing operations	2
MEM25.7AA	Maintain marine vessel surfaces	4
MEM25.8AA	Repair marine vessel surfaces and structures	4
MEM25.9AA	Form timber shapes using hot processes	2
MEM25.10AA	Perform fitout procedures	4
MEM25.11AA	Install marine systems	8
MEM25.12AA	Install and test operations of marine auxiliary systems	6
MEM25.13AA	Produce three dimensional plugs/moulds	12
MEM25.14AA	Perform marine slipping operations	2
MEM50.2AA	Work safely on marine craft	1
MEM50.3AA	Follow work procedures to maintain the marine environment	1
MEM50.4AA	Maintain quality of environment by following marine codes	1
MEM50.9AA	Safely operate powered recreational boat	2

Specialisation electives units (select 36 points in units drawn from MEM98 *Specialisation* band A units (including dual band A/band B units). Note that pre-requisite units points value may be included in the 36 points for electives.

MEM98 Metals & Engineering Training Package – Volume One

Printed by: Document Printing Australia Pty Ltd

AESharenet Code: P

Print Version No: 4

20 August 2003

IMPORTANT

Training packages are not static documents. Changes are made periodically to reflect the latest industry practices.

Before commencing any form of training or assessment, you must ensure delivery is from the *current version* of the Training Package.

To ensure you are complying with this requirement :

- Check the Print Version Number just below the copyright statement on the imprint pages of your current Training Package.

Access the ATP website (<http://www.atpl.net.au>) and check the latest Print Number.

In cases where the Print Version Number is later than yours, the Print Version Modification History in the Training Package sample on the ATP website will indicate the changes that have been made.

The Modification History is also available on the website of the developer of the Training Package: Manufacturing, Engineering & Related Services Industry Training Advisory Body <http://www.mersitab.com.au>

The National Training Information Service (<http://www.ntis.gov.au>) also displays any changes in Units of Competency and the packaging of qualifications.

Modification History

MODIFICATION HISTORY – ENDORSED MATERIALS			
Please refer to the National Training Information Service for the latest version of Units of Competency and Qualification information (http://www.ntis.gov.au).			
MEM98 Metal and Engineering Training Package			Sheet: 1 of 1
Version	Date of Release	Authorisation:	Comments
4	20/08/03	NTQC	Inclusion of Marine Craft Construction, Boating Services and Jewellery Manufacture resulting in five new qualifications. Revised name of Certificate IV in Engineering, introduction of new and revised units as listed in the details table.
3.00	10/02/03	NTQC	Revised point weighting and introduction of new units as listed in following details table
2.00	01/12/99	NTFC	Details not available
1.00	21/11/98	NTFC	Primary Release
			Pre Training package, standards originally published 1995

19. Jewellery and horological				
MEM19.9A	A	Perform investment procedures for "lost wax" casting process	<i>minor title change</i>	1
MEM19.10A	A	Produce rubber moulds for "lost wax" casting process	<i>minor title change</i>	2
MEM19.11A	A	Perform wax injection of moulds for "lost wax" casting process	<i>minor title change</i>	2
MEM19.16A	A	Construct jewellery components	<i>new unit</i>	4
MEM19.17A	A	Fabricate jewellery items	<i>new unit</i>	6
MEM19.18A	A	*Repair jewellery items	<i>new unit</i>	6
MEM19.20A	A	Fault-find and maintain micro-mechanisms	<i>new unit</i>	4

National Metal and Engineering Industry Competency Standards

Unit code	V	Unit title	Change information	P
MEM19.21A	A	Diagnose and service micro-mechanisms	<i>new unit</i>	6
MEM19.22A	A	*Perform precision micro-mechanism diagnosis and servicing	<i>new unit</i>	6
25. Marine craft construction				
MEM25.1A	A	Apply fibre-reinforced materials	<i>new unit</i>	2
MEM25.2A	A	Form and integrate fibre-reinforced structures	<i>new unit</i>	4
MEM25.3A	A	Set up marine vessel structures	<i>new unit</i>	4
MEM25.4A	A	Fair and shape surfaces	<i>new unit</i>	2
MEM25.5A	A	Construct and assemble marine vessel timber components	<i>new unit</i>	8
MEM25.6A	A	Undertake marine sheathing operations	<i>new unit</i>	2
MEM25.7A	A	Maintain marine vessel surfaces	<i>new unit</i>	4
MEM25.8A	A	Repair marine vessel surfaces and structures	<i>new unit</i>	4
MEM25.9A	A	Form timber shapes using hot processes	<i>new unit</i>	2
MEM25.10A	A	Perform fitout procedures	<i>new unit</i>	4
MEM25.11A	A	Install marine systems	<i>new unit</i>	8
MEM25.12A	A	Install and test operations of marine auxiliary systems	<i>new unit</i>	6
MEM25.13A	A	*Produce three dimensional plugs/moulds	<i>new unit</i>	12
MEM25.14A	A	Perform marine slipping operations	<i>new unit</i>	2
50. Boating services				
MEM50.1E	A	Classify recreational boating technologies and features	<i>new unit</i>	n/a
MEM50.2A	A	Work safely on marine craft	<i>new unit</i>	1
MEM50.3A	A	Follow work procedures to maintain the marine environment	<i>new unit</i>	1
MEM50.4A	A	Maintain quality of environment by following marina codes	<i>new unit</i>	1
MEM50.5E	A	Refuel vessels	<i>new unit</i>	n/a
MEM50.6E	A	Check operational capability of marine craft	<i>new unit</i>	n/a
MEM50.7E	A	Check operational capability of sails and sail operating equipment	<i>new unit</i>	n/a
MEM50.8E	A	Carry out trip preparation and planning	<i>new unit</i>	n/a
MEM50.9A	A	Safely operate a mechanically powered recreational boat	<i>new unit</i>	2
MEM50.10E	A	Respond to boating emergencies and incidents	<i>new unit</i>	n/a

Table of Contents

Modification History.....	iv
1. Introduction	1
2. Brief description of the standards structure	1
3. Foundation and Core competencies	12
4. Competency standards at Certificate III and above	13
5. Key Competencies	14
6. Index of competency standards	15

1. Introduction

These competency standards have been produced by the Manufacturing, Engineering and Related Services Industry Training Advisory Body Ltd. (MERS ITAB) for the manufacturing, metal and engineering industry. The units printed in these volumes cover the Metal and Engineering Training Package qualifications from Certificate I to Diploma. They also satisfy Metal, Engineering and Associated Industries Award classification levels C12 to C5.

Each page of each competency standards unit is uniquely identified by a unit number, page number and version date. The unit numbers now include 'MEM' indicating that they can form part of the Metal and Engineering Training Package and they also include a version identifier (version 'A' is November 1998 – see page 6 for more details).

A brief description of the structure and use of the standards is included after this introduction and further details on how they should be used for training purposes are shown in the Metal and Engineering Training Package Policy Document. For industrial classification purposes, please refer to the Implementation Guide, a separate document agreed by the industry parties.

These competency standards are subject to continuous review and maintenance. In particular the review will focus on any new or significantly revised units. In all cases, all aspects of the units are subject to review including their technical adequacy, scope and application, and points weighting. The review process will be dealt with on a cyclical basis, with the frequency determined by the extent of any proposed change.

MERS ITAB has an established Metal and Engineering Competency Standards Review Group comprised of key industry stakeholders and ITAB staff. The group considers all feedback on the standards and changes are made where appropriate. Feedback and comment is sought from enterprises, industry organisations and training organisations from across Australia.

If you have any queries about the standards or their use, or any feedback, please contact MERS ITAB, the Australian Industry Group or the members of the Metal Trades Federation of Unions for further information.

Note that the points weightings for the electrical/electronic units are being reviewed as part of the Phase II Training Package Review 2002-3.

2. Brief description of the standards structure

This section provides information on:

- what the standards are
- the standards model
 - the fields
 - the Core and Specialisation competencies
- the format of individual competency standards
- how the standards may be applied.

What are competency standards?

National competency standards are a set of competency descriptions. The competency descriptions are called units and describe the level of skill and the depth of knowledge required to work competently at the various skill levels required by the industry.

These standards focus on what is expected of people in workplaces rather than on the learning process. The standards reflect realistic workplace practices across a broad range of situations. This includes the specification of knowledge and skills and the application of that knowledge and skill in the workplace as well as the ability to transfer and apply the competency in new situations, environments and contexts.

The National Metal and Engineering Competency Standards are a basis for the development of learning strategies for training programs as well as workplace recognition of skills. These standards have been endorsed by the National Training Quality Council (NTQC) of the Australian National Training Authority.

The standards framework

The framework used to develop competency standards for the metal and engineering industry is designed to facilitate flexibility and multiskilling as well as specialisation. It is based on the principle that individual units of competency, apart from the very small number of *Core* units, should not be exclusively related to a particular occupation or classification level.

For example, the competency unit 'interpret technical drawing' is available to all employees on a needs basis and is not exclusive to workers in the drafting areas. Similarly, the unit 'perform lathe operations' is not restricted to engineering tradespersons. Choices are, of course, subject to satisfaction of any skill prerequisites.

The 'fields'

The competency standards are divided into 'fields' as convenient groupings of units to assist the organisation of the standards and to help users in the selection of relevant competency standards units. The fields do not set up barriers to accessing any competency units in a field, or between fields.

The competency standards and fields are divided into three categories:

- *Foundation* units (field 1)
- *Core* units (field 2)
- *Specialisation* units (fields 3 onwards)

The following field numbers, groupings and titles have been used:

- 1 Foundation
- 2 Core
- 3 Assembly
- 4 Casting and moulding
- 5 Fabrication
- 6 Forging
- 7 Machine and process operations
- 8 Surface finishing
- 9 Drawing, drafting and design
- 10 Installation and commissioning
- 11 Materials handling
- 12 Measurement
- 13 Occupational health and safety
- 14 Planning
- 15 Quality
- 16 Communication
- 17 Training
- 18 Maintenance and diagnostics
- 19 Jewellery and horological
- 24 Non-destructive testing
- 25 Marine craft construction
- 50 Boating services

Types of competency standards

Foundation units

Foundation units describe competencies that are a necessary part of the skill profile of every job in the industry. *Foundation* competencies do not carry a points weighting, however they are necessary prerequisites to higher level units and will form part of the skills profile of all employees. Weighting points are explained further on in this document.

These units of competency should be achieved through a combination of secondary school education, induction training within an enterprise, and up to three months structured training required under the Award definition for C13. *Foundation* units are not subject to formal assessment for reclassification purposes.

Core units

The *Core* units define competencies that are common and necessary across a range of classifications and positions in the Metal and Engineering Industry. *Core* units have been fixed for Industrial Award Classifications C12, C11, C10, and the C9-C5 classification range as well as for each corresponding Training Package qualification. *Core* unit requirements for a particular level must be satisfied before progression to a higher classification or qualification level. The Key Competencies have been mapped against the *Foundation* and *Core* units and achievement of the Metal and Engineering units will also provide recognition in the Key Competencies (see section five).

Core units are allocated to 'bands' and the number of required *Core* units increases for each qualification level.

Band 1 *Core* units apply to qualification outcomes up to Certificate III (C10).

For qualification outcomes at Certificate IV (C7) and Diploma (C5), band 2 *Core* units apply as well as the band 1 *Core* units.

The groups of *Core* units are:

band 1 *Core* - C12 to C10 (*all* *Core* units for C12-C10 must be completed by C10)

band 2 *Core* - C9 to C5 (all *Core* units for C9-C5 must be completed by C5)

All band 1 *Core* units can be selected as *Specialisation* units in any classification/qualification level. Higher level *Core* units can be selected and included as *Specialisation* units below the level at which they are specified. Some band 2 *Core* units can be included in a Certificate III qualification and these are shown in the Training Package documents.

Core units have been included in the following areas:

- Mathematics/Computations
- Occupational Health and Safety
- Communication
- Work Organisation
- Quality Assurance
- Measurement
- Planning.

Specialisation units

These units describe the diverse range of competencies needed across the industry. The *Specialisation* units are also divided into four bands with some overlap between them.

The allocation of units to different *Specialisation* bands recognises the inherent differences in the level of difficulty of skills used in the industry, for example, band B skills are more difficult than band A skills. At the same time the large range of units in each band allows enterprises a wide choice.

The levels for *Specialisation* competency standards are as follows:

- band A - represents a range of competencies which may be used for career progression up to classification C8
- band B - represents a range of competencies which may be used for career progression between classifications C10 to C5, and must be used above C8.
- band E –is a limited range of competencies in the Boating Services field (50 series) which may only be used in Boating Services qualifications only, as indicated in the packaging rules for those qualification.

Some *Specialisation* units are regarded as both band A and band B units. Use of these dual band units is limited and this is also shown in the requirements for each Training Package qualification. These units are identified in the index to the competency standards as well as in the units themselves by way of a note.

Note: Some band A units can only be used in qualifications at Certificate III and above as shown in section four.

Availability of *Core* and *Specialisation* units for each qualification

Qualification title	Core units		Specialisation units		
	band 1	band 2	band A	band A/B	band B
Certificate I in Engineering	all	none	some	none	none
Certificate II in Engineering – Production	all	none	some	some	none
Certificate II in Engineering – Production Technology	all	one	some	some	none
Certificate III in Engineering – Production Systems	all	some	all	all	some
Certificate III in Engineering – Mechanical Trade	all	some	all	all	some
Certificate III in Engineering – Fabrication Trade	all	some	all	all	some
Certificate III in Engineering – Electrical/Electronic Trade	all	some	all	all	some
Certificate III in Engineering – Technician	all	all	all	all	all
Certificate III in Engineering – Jewellery	all	some	all	all	some
Certificate III in Marine Craft Construction	all	some	all	all	some
Certificate IV in Engineering	all	all	all	all	all
Diploma of Engineering	all	all	all	all	all

Note that band E units are not included in this table. These units only apply to Boating Services qualifications as shown in the packaging rules for those qualifications.

The Metal and Engineering Training Package documents and the Implementation Guide both provide additional information concerning the availability of competency units for use at particular levels.

The standards format

The unit code (numbering system) and title

The units in each field are identified by field and unit numbers as well as the national Training Package code identifier. The unit band is also included in the number. An example is on the following page:

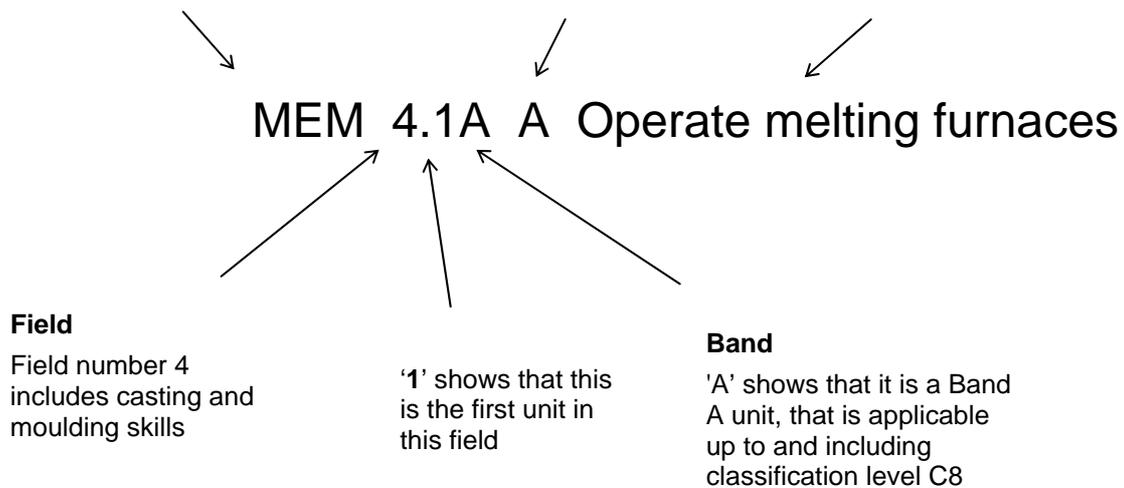

'MEM' shows that this unit is identified as part of the Metal and Engineering Training Package

Version identifier

'A' shows that this unit was endorsed in November 1998

Title

The unit title gives a direct statement of the activity covered by the unit

Notes

1. In this edition of the standards the letter 'C' refers to Core units. When further Specialisation units for Band C (C4 to C2) and Band D (C1) are developed the notation for Core units may be changed.
2. Further references to competency standards units in this introduction section will only include the number of the field, the unit number in the field and the band e.g 4.1A.

Pre-requisite units

The *pre-requisite* units indicate whether other specific competencies are required to support those included in that particular unit.

For example: A person must have the competencies included in the unit *MEM13.4AA Work safely with molten metals/glass* before they can acquire the competencies required by a number of other units in the Casting and Moulding field, such as *MEM4.1AA Operate melting furnaces*.

Where there are options within the pre-requisites then separate combinations or paths are shown. Where multiple paths (path 1, path 2 etc) are shown then the most appropriate path should be chosen.

Elements

The *elements* are statements identifying the components that go toward making up the unit of competence.

For example: '4.1A.1 Materials selected.'

Performance criteria

The *performance criteria* describe what has to be done to decide whether the requirements of the element are satisfied.

For example: '4.1A.1.2 Charge analysis is undertaken in accordance with standard operating procedures.'

Assessor guide

An *assessor guide* is provided for each criterion. It provides additional information and guidance for assessors to help them prepare appropriate assessment strategies and tools. It includes guidance on observation evidence to be gathered by an assessor as well as areas to confirm or clarify that the candidate has the required level of underpinning knowledge. Observation evidence may be gathered on a number of occasions when the candidate is undertaking the particular task. Confirming and clarifying underpinning skills and knowledge should be done in ways that are efficient and effective, such as oral questioning. Further details about assessment for each unit are included in the *evidence guide*.

Note: Competency must be demonstrated in all elements of a competency standards unit as well as any pre-requisite requirements before 'competency' can be granted.

Range statement

The *range statement* defines the context of the unit, gives further information about the level of autonomy, the equipment and materials that may be used and refers to legislative requirements or standards. Some range statements also provide 'signposts' to other competency units that may be more appropriate in some circumstances or should also be considered for particular applications of skill. Where lists of equipment, machinery, materials etc. are shown in the *range statement* then these are provided for illustrative purposes.

For example: 'This unit covers the use of singular or multi, coke, oil, gas fired or electric furnaces and a range of metals. All work is carried out to predetermined specifications and standards of quality, and so on.'

Evidence guide

The *evidence guide* includes information about recommended assessment context, critical aspects, conditions and special notes.

Unit weight

The *unit weight* assigns a value (standards points) to the unit. Other than the *Foundation* units, each unit of competency has been assigned a points value or 'weight'. When competency units are grouped to form a particular qualification or to describe a particular skills profile for a job or jobs within the enterprise, the unit weight points are totalled to show how that skills profile relates to an appropriate qualification in the Metal and Engineering Training Package or industrial classification structure. The weighting allocated to individual units acknowledges the fact that not all skills are equally complex and that it is unrealistic to develop standards in which each unit represents an equal 'amount' of competence.

The points allocated to individual units have been determined by consideration of a number of factors including the amount of formal and on the job training needed to gain that skill, the amount of underpinning knowledge and experience needed and the complexity of the skill.

For example: In the unit *Operate melting furnaces*: 'Unit weight 4'.

3. Foundation and Core competencies

Foundation competency units

Unit code	Unit title	Points
MEM1.1FA	Undertake interactive workplace communication	0
MEM1.2FA	Apply principles of occupational health and safety in a work environment	0
MEM1.3FA	Apply quality procedures	0
MEM1.4FA	Plan to undertake a routine task	0

Core competency units - band 1

At Certificate II in Engineering – Production (C12), the Foundation units and the C12 Core unit is needed.

Unit code	Unit title	Points
MEM2.1C12A	Apply quality systems	2
Total Core points at C12		2

At Certificate II in Engineering – Production Technology (C11), the Foundation units, C12 Core unit and C11 Core units are required.

Unit code	Unit title	Points
MEM2.2C11A	Organise and analyse information	2
MEM2.3C11B	Operate in a work based team environment	2
MEM2.4C11A	Assist in the provision of on the job training	2
MEM2.5C11A	Measure with graduated devices	2
Add C12 Core points		<u>2</u>
Total Core points at C11		10

At Certificate III in Engineering – Trade/Production (C10) the Foundation units, C12 Core unit, C11 Core units and C10 Core units are required.

Unit code	Unit title	Points
MEM2.6C10A	Plan a complete activity	4
MEM2.7C10A	Perform computations – basic	2
MEM2.8C10A	Perform computations	2
MEM2.9C10A	Perform computer operations	2
Add C12 and C11 Core points		<u>10</u>
Total Core points at C10		20

Core competency units - band 2

Total of 16 points to be gained by C5 (see notes attached to qualifications above 96 points)

Unit code	Unit title	Points
MEM2.10C5A	Write reports	2
MEM2.11C5A	Research and prepare presentations and reports	2
MEM2.13C5A	Perform mathematical computations	4
MEM2.14C5A	Use graphical techniques and perform simple statistical computations	2
MEM2.15C5A	Operate in an autonomous team environment	2
MEM2.16C5A	Interpret quality specifications and manuals	4
Total Core points in band 2		16

(Note that C12, C11, C10 and C5 refer to industrial award classifications.)

4. Competency standards at Certificate III and above

These units can only be used in qualifications at Certificate III and above – that is, they can be accessed at C11 classifications for progression to C10 and above

MEM2.10C5A	Write reports
MEM2.11C5A	Research and prepare presentations and reports
MEM2.13C5A	Perform mathematical computations
MEM2.14C5A	Use graphical techniques and perform simple statistical computations
MEM2.15C5A	Operate in an autonomous team environment (SEE NOTE BELOW)
MEM4.10AA	Develop and manufacture wood patterns
MEM4.11AA	Produce polymer patterns
MEM4.12AA	Assemble plated patterns
MEM4.13AA	Develop and manufacture polystyrene patterns
MEM4.14AA	Develop and manufacture production patterns
MEM4.15AA	Develop and manufacture vacuum forming moulds and associated equipment
MEM4.16AB	Develop and manufacture precision models
MEM4.17AA	Develop and manufacture gear, conveyor screws and propeller patterns
MEM5.16AB	Perform advanced welding using manual metal arc welding process
MEM5.18AB	Perform advanced welding using gas metal arc welding process
MEM5.20AB	Perform advanced welding using gas tungsten arc welding process
MEM5.22AB	Perform advanced welding using oxy acetylene welding process
MEM5.36AB	Repair/replace/modify fabrications
MEM5.38AA	Advanced geometric development – Cylindrical/Rectangular
MEM5.39AA	Advanced geometric development – Conical
MEM5.40AA	Advanced geometric development – Transitions
MEM7.2AA	Perform precision shaping/planing/slotting operations
MEM7.9AA	Perform precision jig boring operations
MEM7.10AA	Perform tool and cutter grinding operations
MEM7.11AA	Complex milling operations
MEM7.12AA	Complex grinding operations
MEM7.21AA	Perform complex lathe operations
MEM7.23BB	Program and set up CNC manufacturing cell
MEM10.3AA	Install and test electrical wiring and circuits (up to 1000vAC/1500vDC)
MEM10.4AA	Enter and change programmable controller operational parameters
MEM10.6AA	Install machine/plant
MEM12.3AA	Precision mechanical measurement
MEM12.4AA	Precision electrical/electronic measurement
MEM12.6AA	Mark off/out (general engineering)
MEM12.7AB	Mark off/out structural fabrications and shapes
MEM14.1BA	Schedule material deliveries
MEM14.3BA	Undertake basic production scheduling
MEM16.1BA	Give formal presentations and take part in meetings
MEM18.6AA	Dismantle/repair/replace/assemble and fit engineering components
MEM18.45AA	Fault find/repair electrical equipment/components which use up to 240v single phase supply
MEM18.46AA	Fault find/repair electrical equipment/components which use up to 1000vAC/1500vDC
MEM18.48AA	Fault find and repair/rectify basic electrical circuits
MEM18.62AA	Install, maintain and calibrate instrument sensors, transmitters & final control elements

Note:– *MEM2.15C5A Operate in an autonomous team environment* may be included in a Certificate II in Engineering – Production Technology or higher qualification, that is, accessed at C11 for progression to C10 and above.

5. Key Competencies

Recognition of competency in a Key Competency does not imply competency in any respective Metal and Engineering competency standards unit as shown on this map.

Competency Standards		Key Competencies																				
		Collecting, analysing and organising information			Communicating ideas and information			Planning and organising activities			Working with others and in teams			Using mathematical ideas and techniques			Solving problems			Using Technology		
		1	2	3	1	2	3	1	2	3	1	2	3	1	2	3	1	2	3			
Foundation units																						
MEM1.1FA	Undertake Interactive workplace communication	■			■						■											
MEM1.2FA	Apply principles of OH & S in work environment	■			■			■												■		
MEM1.3FA	Apply quality procedures	■						■														
MEM1.4FA	Plan to undertake a routine task	■						■								■						
Band 1 Core units																						
MEM2.1C12A	Apply quality systems	■			■						■											
MEM 2.2C11A	Organise and analyse information	■			■															■		
MEM 2.3C11B	Operate in work based team environment	■			■			■			■											
MEM 2.4C11A	Assist in the provision of on-the-job training	■				■					■						■					
MEM 2.5C11A	Measure with graduated devices							■						■						■		
MEM 2.6C10A	Plan a complete activity	■			■			■								■						
MEM 2.7C10A	Perform computations - basic													■								
MEM 2.8C10A	Perform computations	■												■						■		
MEM 2.9C10A	Perform computer operations	■												■							■	

6. Index of competency standards

Index of competency units

This issue is dated May 2003. The 'change information' highlights the most recent endorsed changes.

V = Version (A,B,C etc.)

P = Points (unit weighting)

* = Units marked with * have dual status and are to be regarded as both Specialisation band A units and Specialisation band B units for progression to C5 (AQF level V)

** = Units marked with ** have dual status and are to be regarded as both Specialisation band A units and Specialisation band B units for progression to C7 (AQF level IV)

Unit code	V	Unit title	Change information	P
1. Foundation units				
MEM1.1F	A	Undertake interactive workplace communication	no change	0
MEM1.2F	A	Apply principles of Occupational Health and Safety in work environment	<i>minor title change</i>	0
MEM1.3F	A	Apply quality procedures	no change	0
MEM1.4F	A	Plan to undertake a routine task	no change	0
2. Core units				
MEM2.1C12	A	Apply quality systems	no change	2
MEM2.2C11	A	Organise and analyse information	no change	2
MEM2.3C11	B	Operate in a work based team environment	no change	2
MEM2.4C11	A	Assist in the provision of on the job training	no change	2
MEM2.5C11	A	Measure with graduated devices	no change	2
MEM2.6C10	A	Plan a complete activity	no change	4
MEM2.7C10	A	Perform computations – basic	<i>minor title change</i>	2
MEM2.8C10	A	Perform computations	no change	2
MEM2.9C10	A	Perform computer operations	no change	2
MEM2.10C5	A	Write reports	no change	2
MEM2.11C5	A	Research and prepare presentations and reports	no change	2
MEM2.13C5	A	Perform mathematical computations	no change	4
MEM2.14C5	A	Use graphical techniques and perform simple statistical computations	no change	2
MEM2.15C5	A	Operate in an autonomous team environment	no change	2
MEM2.16C5	A	Interpret quality specifications and manuals	no change	4
3. Assembly				
MEM3.1A	A	Manual production assembly	no change	4
MEM3.2A	A	Precision assembly	no change	4

National Metal and Engineering Industry Competency Standards

Unit code	V	Unit title	Change information	P
MEM3.3A	A	Sheet and plate assembly	no change	4
MEM3.4A	A	Electronic/electrical assembly (production)	no change	8
MEM3.5A	A	Rework and repair (electrical/electronic production)	no change	8
MEM3.6A	A	Setting assembly stations	no change	2
MEM3.7A	A	Setting multistage continuous process lines	no change	6
4. Casting and moulding				
MEM4.1A	A	Operate melting furnaces	no change	4
MEM4.2A	A	Gravity die casting	no change	2
MEM4.3A	A	Operate pressure die casting machine	no change	4
MEM4.4A	A	Prepare and mix sand for metal moulding	no change	4
MEM4.5A	A	Produce moulds and cores by hand (jobbing)	no change	16
MEM4.6A	A	Operate sand moulding and core making machines	no change	8
MEM4.7A	A	Pour molten metal	no change	4
MEM4.8A	A	Fettle and trim metal castings/forgings	no change	4
MEM4.9A	B	Inspect/test castings/forgings	pre-requisite correction	6
MEM4.10A	A	Develop and manufacture wood patterns	no change	20
MEM4.11A	A	Produce polymer patterns	no change	8
MEM4.12A	A	Assemble plated patterns	no change	8
MEM4.13A	A	Develop and manufacture polystyrene patterns	no change	2
MEM4.14A	A	Develop and manufacture production patterns	no change	8
MEM4.15A	A	Develop and manufacture vacuum forming moulds and associated equipment	no change	6
MEM4.16A	B	Develop and manufacture precision models	pre-requisite correction	6
MEM4.17A	A	Develop and manufacture gear, conveyor screw and propeller patterns	no change	4
MEM4.18A	A	General woodworking machine operations	no change	4
MEM4.19A	A	Refractory installation and repair	no change	4
5. Fabrication				
MEM5.1A	A	Manual soldering/desoldering – electrical/electronic components	no change	4
MEM5.2A	A	High reliability soldering and desoldering	no change	4
MEM5.3A	A	Soft soldering (basic)	no change	2
MEM5.4A	B	Perform routine oxy acetylene welding	no change	2
MEM5.5A	A	Carry out mechanical cutting	no change	2
MEM5.6A	A	Perform brazing and/or silver soldering	no change	2
MEM5.7A	B	Manual heating and thermal cutting	no change	2
MEM5.8A	B	Advanced manual thermal cutting, gouging and shaping	no change	2
MEM5.9A	B	Automated thermal cutting	no change	2

National Metal and Engineering Industry Competency Standards

Unit code	V	Unit title	Change information	P
MEM5.10A	A	Undertake fabrication, forming, bending and shaping	no change	8
MEM5.11A	B	Assemble fabricated components	no change	8
MEM5.12A	B	Perform routine manual metal arc welding	no change	2
MEM5.13A	B	Perform manual production welding	no change	2
MEM5.14A	B	Monitor quality of production welding/fabrications	no change	2
MEM5.15A	B	Weld using manual metal arc welding process	no change	4
MEM5.16A	B	Perform advanced welding using manual metal arc welding process	no change	4
MEM5.17A	B	Weld using gas metal arc welding process	no change	4
MEM5.18A	B	Perform advanced welding use gas metal arc welding process	no change	4
MEM5.19A	B	Weld using gas tungsten arc welding process	no change	4
MEM5.20A	B	Perform advanced welding using gas tungsten arc welding process	no change	4
MEM5.22A	B	Perform advanced welding using oxy acetylene welding process	no change	6
MEM5.23A	B	Weld using submerged arc welding process	no change	4
MEM5.24B	A	Perform welding supervision	no change	12
MEM5.25B	B	Perform welding/fabrication inspection	no change	12
MEM5.26A	A	Apply welding principles	no change	4
MEM5.36A	B	Repair/replace/modify fabrications	no change	4
MEM5.37A	A	Geometric development	no change	6
MEM5.38A	A	Advanced geometric development – Cylindrical/Rectangular	minor title change	2
MEM5.39A	A	Advanced geometric development – Conical	minor title change	2
MEM5.40A	A	Advanced geometric development – Transitions	minor title change	4
MEM5.41A	A	Weld using powder flame spraying	no change	4
MEM5.42A	A	Perform welds to code standards using flux core arc welding process	no change	6
MEM5.43A	A	Perform welds to code standards using gas metal arc welding process	no change	6
MEM5.44A	A	Perform welds to code standards using gas tungsten arc welding process	no change	6
MEM5.45A	A	Perform pipe welds to code standards using manual metal arc welding process	no change	6
MEM5.46A	A	Perform welds to code standards using manual metal arc welding process	no change	6
MEM5.47A	A	Weld using flux core arc welding process	no change	4
MEM5.48A	A	Perform advanced welding using flux core arc welding process	no change	4
MEM5.49A	B	Perform routine gas tungsten arc welding	elements, assessor guide	2

National Metal and Engineering Industry Competency Standards

Unit code	V	Unit title	Change information	P
MEM5.50A	A	Perform routine gas metal arc welding	no change	2
6. Forging				
MEM6.1A	A	Hand forging	no change	4
MEM6.2A	A	Hammer forging	no change	4
MEM6.3A	B	Carry out heat treatment	no change	6
MEM6.4A	A	Select heat treatment processes and test finished product	no change	6
MEM6.5A	A	Drop and upset forging	no change	4
MEM6.6A	B	Spring repair	pre-requisite correction	4
MEM6.7A	A	Perform basic incidental heat/ quenching, tempering and annealing	no change	2
7. Machine and process operations				
MEM7.1A	A	Operational maintenance of machines/equipment	no change	2
MEM7.2A	A	Perform precision shaping/planing/slotting operations	no change	4
MEM7.3A	A	Setting machines (routine)	no change	4
MEM7.4A	A	Setting machines (complex)	no change	8
MEM7.5A	A	Perform general machining	no change	8
MEM7.6A	A	Perform lathe operations	no change	4
MEM7.7A	A	Perform milling operations	no change	4
MEM7.8A	B	Perform grinding operations	no change	4
MEM7.9A	A	Perform precision jig boring operations	no change	4
MEM7.10A	A	Perform tool and cutter grinding operations	no change	4
MEM7.11A	A	Complex milling operations	no change	4
MEM7.12A	A	Complex grinding operations	no change	4
MEM7.13A	A	Perform machining operations using horizontal and/or vertical boring machine	no change	4
MEM7.14A	A	Perform electro-discharge machining operations	no change	4
MEM7.15A	A	Set NC/CNC machines/process (basic)	minor title correction	2
MEM7.16A	B	**Set and edit NC/CNC machine/process	path 4 deleted	4
MEM7.18A	B	**Basic NC/CNC programming	path 4 deleted	4
MEM7.19A	B	**Program NC/CNC machining centre	path 4 deleted	2
MEM7.20A	B	**Program multiple spindle and/or multiple axis NC/CNC machining centre	path 4 deleted	2
MEM7.21A	A	Perform complex lathe operations	no change	4
MEM7.22A	B	**Advanced programming of CNC wire cut machines	path 4 deleted	2
MEM7.23B	B	Program and set up CNC manufacturing cell	path 4 deleted	6
MEM7.24A	A	Operate and monitor machine/process	no change	4
MEM7.25A	A	Advanced machine/process operation	no change	6
MEM7.26A	A	Advanced plastic processing	no change	6

National Metal and Engineering Industry Competency Standards

Unit code	V	Unit title	Change information	P
MEM7.27A	A	Advanced press operations	no change	6
MEM7.28A	A	Operate NC/CNC machine/process (basic)	no change	2
MEM7.29A	A	Perform routine sharpening/maintenance of production tools and cutters	no change	4
MEM7.30A	B	Perform metal spinning lathe operations (basic)	<i>pre-requisite removed</i>	6
MEM7.31A	B	Perform metal spinning lathe operations (complex)	<i>pre-requisite removed</i>	4
MEM7.32A	A	Use workshop machines for basic operations	no change	2
MEM7.33A	A	Operate and monitor basic boiler	no change	6
8. Surface Finishing				
MEM8.1A	A	Wire, jig and barrel load/unload work	no change	4
MEM8.2A	B	Pre-treat work for subsequent surface coating	<i>range statement</i>	4
MEM8.3A	B	Finish work using acidic/alkaline electroplating solutions	<i>all components of unit, points</i>	6
MEM8.4A	A	Finish work using wet, dry and vapour deposition methods	no change	4
MEM8.5A	A	Prepare and produce specialised coatings electrolytically	<i>title correction</i>	4
MEM8.6A	A	Produce clear and/or coloured and/or sealed anodised films on aluminium	no change	2
MEM8.7A	A	Control surface finish production and finished product quality	no change	4
MEM8.8A	A	Operate and control surface finishing waste treatment process	no change	3
MEM8.9A	B	Maintain basic solutions	<i>title, element, range statement</i>	2
MEM8.10A	A	Manually finish/polish materials	no change	6
MEM8.11A	A	Undertake surface preparation using solvents and/or mechanical means	no change	2
MEM8.12A	A	Prepare surfaces by abrasive blasting (basic)	no change	4
MEM8.13A	A	Prepare surfaces by abrasive blasting (advanced)	no change	4
MEM8.14A	A	Apply protective coatings (basic)	no change	4
MEM8.15A	A	Apply protective coatings (advanced)	no change	4
MEM8.16A	A	Control blast coating by-products, materials and emissions	no change	1
MEM8.18A	A	Electroplate engineering coatings	<i>new unit</i>	6
MEM8.19A	A	Electroplate protective finishes	<i>new unit</i>	6
MEM8.20A	A	Electroplate decorative finishes	<i>new unit</i>	6
9 Drawing, drafting and design				
MEM9.1A	A	Draw and interpret sketch	no change	2
MEM9.2A	A	Interpret technical drawing	no change	4
MEM9.3A	A	Prepare basic engineering drawing	no change	8

National Metal and Engineering Industry Competency Standards

Unit code	V	Unit title	Change information	P
MEM9.4B	A	Electrical/electronic detail drafting	no change	8
MEM9.5A	A	Basic engineering detail drafting	no change	8
MEM9.6B	A	Advanced engineering detail drafting	no change	4
MEM9.7B	A	Advanced mechanical detail drafting	no change	4
MEM9.8B	A	Advanced structural detail drafting	no change	4
MEM9.9B	B	Create 2D drawings using computer aided design system	no change	8
MEM9.10B	B	Create 3D models using computer aided design system	no change	4
MEM9.11A	A	Apply basic engineering design concepts	no change	6
MEM9.21A	A	Interpret and produce curved 3-dimensional shapes	new unit	4
10. Installation and commissioning				
MEM10.1A	B	Erect structures	no change	4
MEM10.2A	A	Terminate and connect electrical wiring	no change	3
MEM10.3A	A	Install and test electrical wiring and circuits (up to 1000vAC/1500vDC)	minor title change	8
MEM10.4A	A	Enter and change programmable controller operational parameters	no change	2
MEM10.5A	A	Commission programmable controller programs	no change	4
MEM10.6A	A	Install machine/plant	no change	4
MEM10.7B	B	Modification of control systems	pre-requisites and pathways corrected	6
MEM10.8B	A	Undertake commissioning procedures for plant and/or equipment	no change	4
MEM10.9A	A	Install refrigeration and air conditioning plant and equipment	no change	4
MEM10.10A	A	Install pipework and pipework assemblies	no change	4
MEM10.11A	A	Terminate and connect specialist cables	no change	2
MEM10.13A	A	Assemble and install equipment and accessories/ancillaries	new unit	2
11. Materials handling				
MEM11.1A	B	Erect/dismantle scaffolding and equipment	no change	4
MEM11.2A	B	Erect/dismantle complex scaffolding and equipment	no change	4
MEM11.3A	A	Coordinate erection/dismantling of complex scaffolding/equipment	no change	4
MEM11.4A	A	Undertake dogging/crane chasing	no change	4
MEM11.5A	A	Pick and process order	no change	4
MEM11.6A	A	Production packaging	no change	2
MEM11.7A	A	Administer inventory procedures	no change	4
MEM11.8A	A	Package materials (stores and warehouse)	no change	2
MEM11.9A	A	Handle/move bulk fluids/gases	no change	4
MEM11.10A	A	Operate mobile load shifting equipment	no change	4
MEM11.11A	A	Manual handling	no change	2

National Metal and Engineering Industry Competency Standards

Unit code	V	Unit title	Change information	P
MEM11.12A	A	Purchase materials	no change	6
MEM11.13A	A	Undertake warehouse receipt process	no change	4
MEM11.14A	A	Undertake warehouse despatch process	minor title change	4
MEM11.15A	A	Manage warehouse inventory system	no change	6
MEM11.16A	A	Order materials	no change	2
MEM11.17A	A	Organise and lead stocktakes	no change	4
MEM11.18A	A	Organise and maintain warehouse stock receipt and/or despatch system	no change	6
MEM11.19A	A	Undertake tool store procedures	no change	4
MEM11.20A	A	Perform advanced warehouse computer operations	no change	4
MEM11.21A	A	Advanced operation of load shifting equipment	no change	2
MEM11.22A	A	Operate fixed/movable load shifting equipment	no change	4
12. Measurement				
MEM12.1A	A	Use comparison and basic measuring devices	no change	2
MEM12.2A	A	Electrical/electronic measurement	no change	2
MEM12.3A	A	**Precision mechanical measurement	no change	2
MEM12.4A	A	**Precision electrical/electronic measurement	no change	4
MEM12.5B	A	Calibrating measuring equipment	no change	6
MEM12.6A	A	Mark off/out (general engineering)	no change	4
MEM12.7A	B	Mark off/out structural fabrications and shapes	element, range statement	4
MEM12.19A	A	Measure components using coordinate measuring machine	no change	4
MEM12.20A	A	Set and operate coordinate measuring machine	no change	2
MEM12.21A	A	Program coordinate measuring machine	no change	4
MEM12.22A	A	Program coordinate measuring machine (advanced)	no change	2
13. Occupational Health and Safety				
MEM13.1A	A	Perform emergency first aid	no change	1
MEM13.2A	A	Undertake Occupational Health & Safety activities in the workplace	minor title change	3
MEM13.3A	A	Work safely with industrial chemicals and materials	no change	2
MEM13.4A	A	Work safely with molten metals/glass	no change	2
MEM13.5B	A	Manage Occupational Health & Safety for a workplace or section of a workplace	minor title change	12
MEM13.6A	A	Monitor Occupational Health & Safety factors for an enterprise or section of an enterprise	minor title change	4
MEM13.7A	A	Maintain water cooling towers and treatment systems	no change	2

National Metal and Engineering Industry Competency Standards

Unit code	V	Unit title	Change information	P
MEM13.13A	A	Work safely with ionizing radiation	no change	4
14. Planning				
MEM14.1B	A	Schedule material deliveries	no change	8
MEM14.2B	A	Basic process planning	no change	8
MEM14.3B	A	Undertake basic production scheduling	no change	8
15. Quality				
MEM15.1A	A	Perform basic statistical quality control	no change	2
MEM15.3A	A	Use improvement processes in team activities	no change	4
MEM15.4A	A	Perform inspection (basic)	no change	2
MEM15.5A	A	Perform inspection (advanced)	no change	4
MEM15.7B	A	Conduct product and/or process capability studies	no change	6
MEM15.8B	A	Perform advanced statistical quality control	no change	2
MEM15.10B	A	Perform laboratory procedures	no change	8
MEM15.11B	A	Exercise external quality assurance	no change	6
MEM15.12B	A	Maintain/supervise application of quality procedures	no change	4
MEM15.15A	A	*Examine trading practices	no change	5
MEM15.16A	A	*Inspect pre-packed articles	no change	8
MEM15.17B	A	Use and maintain reference standards	no change	3
MEM15.18B	A	Investigate consumer complaints	no change	6
MEM15.19B	A	Conduct a field inspection	no change	12
MEM15.20B	B	Perform verification/certification or in-service inspection	<i>pre-requisite corrected</i>	12
MEM15.21B	B	Conduct audits of servicing licensees and public weighbridge licensees	<i>pre-requisite corrected</i>	4
MEM15.22A	A	*Verify reference standards	no change	8
16. Communication				
MEM16.1B	A	Give formal presentations and take part in meetings	no change	2
MEM16.2A	B	Participate in formal interviews and negotiations	no change	4
MEM16.3B	A	Advanced customer service	no change	2
MEM16.4A	A	Perform internal/external customer service	no change	2
17. Training				
MEM17.1A	A	*Assist in development and deliver training in the workplace	no change	2
MEM17.2A	A	*Conduct workplace assessment	no change	2
18. Maintenance and diagnostics				
MEM18.1A	B	Use hand tools	no change	2
MEM18.2A	A	Use power tools/hand held operations	no change	2
MEM18.3A	B	Use tools for precision work	no change	4

National Metal and Engineering Industry Competency Standards

Unit code	V	Unit title	Change information	P
MEM18.4A	A	Maintain and overhaul mechanical equipment	no change	4
MEM18.5A	A	Bearings – fault diagnosis installation and removal	no change	4
MEM18.6A	A	Dismantle/repair/replace/assemble and fit engineering components	no change	6
MEM18.7A	A	Maintain and repair mechanical drives and mechanical transmission assemblies	no change	4
MEM18.8A	A	Balance equipment	no change	2
MEM18.9A	A	Levelling and alignment of machines and engineering components	no change	4
MEM18.10A	B	*Equipment condition monitoring and recording	pre-requisites removed	4
MEM18.11A	B	**Shut down and isolate machines/equipment	no change	2
MEM18.12A	A	Mechanical seals – installation and removal	no change	2
MEM18.13A	A	Gland packing	no change	2
MEM18.14A	A	Tool, gauge and die manufacture	no change	8
MEM18.15A	A	Tool and die maintenance	no change	4
MEM 18.16B	A	Analyse plant and equipment condition monitoring results	no change	4
MEM18.17B	B	Modify mechanical system and equipment	minor title change, pre-requisite removed	8
MEM18.18A	B	Maintain pneumatic system components	no change	4
MEM18.19A	A	*Maintain and repair pneumatic systems	no change	4
MEM18.20A	B	Maintain hydraulic system components	no change	4
MEM18.21A	A	*Maintain and repair hydraulic systems	no change	4
MEM18.22A	A	*Maintain/repair/replace fluid power controls	no change	8
MEM18.23B	A	Modify fluid power system operation	no change	8
MEM18.24A	A	Maintain and repair engine cooling systems	no change	2
MEM18.25A	A	Service combustion engines	no change	2
MEM18.26A	B	Test compression ignition fuel systems	no change	4
MEM18.27A	B	Overhaul engine fuel system components	no change	8
MEM18.28A	B	Maintain and repair engine lubrication systems	no change	2
MEM18.29A	A	Tune diesel engine	no change	4
MEM18.30A	A	Diagnose and repair low voltage electrical systems	no change	8
MEM18.31A	A	Diagnose and repair low voltage starting systems	no change	2
MEM18.32A	A	Maintain and repair induction/exhaust systems	no change	4
MEM18.33A	A	Perform engine bottom-end overhaul	no change	4
MEM18.34A	A	Perform engine top-end overhaul	no change	8
MEM18.35A	A	Diagnose and repair braking systems	no change	6
MEM18.36B	A	Maintain and repair scientific analysis	no change	10

National Metal and Engineering Industry Competency Standards

Unit code	V	Unit title	Change information	P
		equipment		
MEM18.37A	A	Diagnose and repair low voltage charging systems	no change	2
MEM18.38A	A	Maintain and repair wheels and tyres	no change	2
MEM18.39A	A	Diagnose and repair track type undercarriage	no change	4
MEM18.40A	A	Maintain and repair suspension systems	no change	4
MEM18.41A	A	Maintain and repair steering systems	no change	4
MEM18.42A	B	Diagnose and repair manual transmissions	no change	4
MEM18.43A	B	Diagnose and repair automatic transmissions	no change	8
MEM18.44A	B	Diagnose and repair drive line and final drives	no change	4
MEM18.45A	A	Fault find/repair electrical equipment/components which use up to 240v single phase supply	minor title change	4
MEM18.46A	A	Fault find/repair electrical equipment/components which use up to 1000vAC/1500vDC	minor title change	6
MEM18.47A	A	Diagnose and maintain electronic controlling systems on mobile plant	no change	4
MEM18.48A	A	Fault find and repair/rectify basic electrical circuits	no change	10
MEM18.49A	A	**Disconnect/reconnect fixed wired equipment which use up to 1000vAC/1500vDC	minor title change	3
MEM18.50A	A	**Disconnect/reconnect fixed wired equipment over 1000vAC/1500vDC	no change	3
MEM18.51A	A	*Fault find and repair/rectify complex electrical circuits	no change	6
MEM18.52A	A	Maintain and repair fluid power systems for mobile plant	no change	4
MEM18.53B	A	Modify fluid power control systems	no change	6
MEM18.54A	A	**Fault find, test, calibrate instrumentation systems, equipment	no change	8
MEM18.55A	A	Dismantle, replace and assemble engineering components	no change	3
MEM18.56A	A	**Diagnose and repair analog equipment and components	no change	10
MEM18.57A	A	Maintain/service analog/digital electronic equipment	no change	6

Unit MEM 1.1F A Undertake interactive workplace communication

Band – Foundation

Field – Foundation

Unit Weight 0

Element 1.1F.1 Communicate information about tasks, processes, events or skills

Criteria 1.1F.1.1

An appropriate choice of communication techniques, eg: telephone, face to face, written report, sketches etc. are used.

Assessor guide: observe that –

Appropriate communication techniques are chosen as required by: - the information to be conveyed - the receiver of the communication - the context in which the communication takes place.

Assessor guide: confirm that –

The person can explain: - the advantages and disadvantages of different ways of communicating - why a particular communication technique was chosen for a particular situation.

Criteria 1.1F.1.2

Multiple operations involving several topics/areas are communicated.

Assessor guide: observe that –

Communication covering a variety of topics and content areas takes place so that the information is clearly understood by the receiver(s) of the message.

Assessor guide: confirm that –

Criteria 1.1F.1.3

Listening is undertaken without continuous interruptions of the speaker.

Assessor guide: observe that –

The person follows good listening techniques and listens in a variety of situations without interrupting the speaker. Situations covered might be listening to instructions, technical information, briefings, descriptions of faults and problems, and others.

Assessor guide: confirm that –

The person is able to describe good listening techniques and explain the importance of not interrupting the speaker.

Criteria 1.1F.1.4

Questions are used to gain extra information.

Assessor guide: observe that –

Questions are asked to clarify the message. The questions state clearly what their purpose is and identify information required. If necessary, follow up questions are used to gain further information or clarify the replies.

Assessor guide: confirm that –

The person is able to give examples of a number of different types of questions appropriate in particular situations.

Criteria 1.1F.1.5

Correct sources of information are identified.

Assessor guide: observe that –

Information is gained from appropriate sources for the outcome required. Examples might be technical manuals, job cards, orders, production schedules, clients, technical experts, and others.

Assessor guide: confirm that –

The person is able to give examples of a range of sources of information and explain which would be used in particular situations and why.

Criteria 1.1F.1.6

Information is selected and sequenced appropriately.

Assessor guide: observe that –

The information is selected to meet the purpose for which it is required in terms of level of detail, credibility accuracy and so on. Information gained is logically organised so that it can be used to fulfil the purpose for which it was required.

Assessor guide: confirm that –

The person can give reasons for selecting particular information and explain why they have organised the information in the way that they have.

Criteria 1.1F.1.7

Verbal and written reporting undertaken where required.

Assessor guide: observe that –

Oral or written reports are given as required. For example, describe the outcomes of a service call, explain or write an incident/accident report and others.

Assessor guide: confirm that –

The person should be able to explain why they are reporting back, what the purpose of the report is. Characteristics of a good report, oral or written, can be given.

Criteria 1.1F.1.8

Communication is demonstrated in both familiar and unfamiliar situations and to familiar and unfamiliar individuals and groups.

Assessor guide: observe that –

The person has communicated successfully in situations where they are dealing with people that they are familiar with and those that are not familiar with. The situations should include communication with individuals and groups.

Assessor guide: confirm that –

The person can describe strategies to follow when speaking to individuals and groups and in situations where they are familiar with the people and where they are not.

Element 1.1F.2 Take part in group discussion to achieve appropriate work outcomes**Criteria 1.1F.2.1**

Responses sought and provided to others in the group.

Assessor guide: observe that –

The person gives clear, accurate and appropriate responses to others in a group. Information is sought from others using questioning techniques appropriate for the person from whom the information is requested and giving feedback to the person supplying the information.

Assessor guide: confirm that –

Appropriate principles to guide communication in groups can be given, such as everyone should have an opportunity to speak, people should be listened to and not interrupted and so on a number of questioning techniques can be identified.

Criteria 1.1F.2.2

Constructive contributions are made in terms of the production process involved.

Assessor guide: observe that –

Contributions to the group discussions are constructive, for example, other members of the group are listened to, opinions and comments are given in positive terms.

Assessor guide: confirm that –

The characteristics of constructive input to a discussion can be described.

Criteria 1.1F.2.3

Goals and aims are communicated.

Assessor guide: observe that –

Goals and aims are identified. Appropriate methods of communicating goals and aims are selected. They are communicated to others so that they are understood, and the receiver of the communication is able to restate them accurately.

Assessor guide: confirm that –

Appropriate ways of communicating goals and aims can be listed. Reasons for use of a particular method can be given.

Element 1.1F.3 Represent views of group to others**Criteria 1.1F.3.1**

Views, opinions of others are understood and reflected accurately.

Assessor guide: observe that –

The person is able to restate accurately the views of others as they are expressed in a group discussion. Good listening techniques are used when others are expressing their opinions.

Assessor guide: confirm that –

The reasons why it is necessary to restate the view of others accurately can be given.

Range statement

This unit covers competencies needed for situations where employees must collectively undertake a task eg: three or four assemblers co-operating to assemble a product, a trades person who has to attend a service call, or a group of process workers who undertake a similar task in close proximity to each other. This unit assumes that the group has not been formally designated as a permanent cohesive work unit by management. The performance criteria assume that any of the following techniques could be used as the subject of communication in this unit, for example: sketches, drawings, production schedules; written machine or job instructions; client instructions. It is assumed that the application of this unit in most workplaces would require a basic level of ability in speaking, reading and writing English as well as basic numeracy. Basic numeracy means the ability to perform simple arithmetic using whole numbers applying the four basic rules of addition, subtraction, multiplication and division. The unit however does not refer to competence in English but in communication. English language ability should be professionally assessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The communication activities undertaken should be consistent with the individual's field of work and be based on interaction with others related to workplace tasks and procedures, tools, equipment, materials and documentation relevant to that field of work. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit should be assessed in conjunction with other specialisation or core units and not in isolation. The assessment should be linked with performance of normal workplace activities where the competency covered by this unit is demonstrated concurrently with other core or specialisation competencies. The communication tasks may be related to any aspect of the job, interacting with team members, receiving instructions, reporting and any other activity which requires communication with individuals or groups.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Perform the tasks described by this guide, within a time frame established between the candidate's supervisor/instructor and the assessor, prior to undertaking this assessment. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures.

Unit MEM 1.2F A Apply principles of occupational health and safety in work environment

Band – Foundation

Field – Foundation

Unit Weight 0

This unit covers the competencies needed to follow safe working practices in the workplace. Competencies include interpreting safety signs and symbols, identifying and reporting actual and potential hazards and following emergency procedures.

Element 1.2F.1 Follow safe work practices

Criteria 1.2F.1.1

Work is carried out safely and in accordance with company policy and company procedures and legislative requirements

Assessor guide: observe that –

Safe working practices are followed in carrying out all workplace activities

Assessor guide: confirm that –

Safety working practices relating to all the tasks being undertaken in the workplace can be described Company policy and legislative requirements relating to all workplace activities can be identified and the relevance to the individual's work described

Criteria 1.2F.1.2

Housekeeping is undertaken in accordance with company procedures

Assessor guide: observe that –

The workplace is maintained in a safe and clean condition, following company procedures

Assessor guide: confirm that –

The reasons for good housekeeping in the workplace can be given The company requirements can be described

Criteria 1.2F.1.3

Responsibilities and duties of employees are understood and demonstrated in day to day actions

Assessor guide: observe that –

Workplace activities are carried out in accordance with the responsibilities and duties of employees, such as working safely, not endangering others, following company and legislative requirements, following procedures for handling dangerous substances and so on

Assessor guide: confirm that –

Responsibilities and obligations of employees can be given

Criteria 1.2F.1.4

Personal protective equipment is worn and stored according to company procedures

Assessor guide: observe that –

Appropriate personal protective equipment for the task is selected Personal protective equipment according to company procedures is worn and stored appropriately after use

Assessor guide: confirm that –

Reasons for use of personal protective equipment can be given

Criteria 1.2F.1.5

All equipment and safety devices are used according to legislative requirements and company/manufacture's procedures

Assessor guide: observe that –

When carrying out workplace activities, all appropriate safety equipment and devices are used in accordance with legislative and company/manufacture's requirements

Assessor guide: confirm that –

Appropriate equipment and safety devices for particular workplace tasks and activities can be selected The reasons for using safety equipment and devices can be

Criteria 1.2F.1.6 Safety signs/symbols are identified and followed as per instruction	<i>Assessor guide: observe that –</i> Work is carried out in accordance with the information given by safety signs and symbols	<i>Assessor guide: confirm that –</i> The signs and symbols can be correctly interpreted The application of the signs and symbols to their own work activities can be described
Criteria 1.2F.1.7 All manual handling is carried out in accordance with legal requirements, company procedures and National Occupational Health & Safety Commission guidelines	<i>Assessor guide: observe that –</i> Manual handling is carried out in accordance with the principles laid down in legislation, company procedures and National Health and Safety Commission guidelines	<i>Assessor guide: confirm that –</i> Correct procedures for manual handling can be explained The situations in which these procedures apply to their own workplace activities can be identified
Criteria 1.2F.1.8 Emergency equipment identified and appropriate use demonstrated	<i>Assessor guide: observe that –</i> Correct use of emergency equipment can be demonstrated	<i>Assessor guide: confirm that –</i> Location of emergency equipment can be given The type of emergency equipment to be used in specific situations can be identified The reasons for selecting a particular type of equipment can be given
Element 1.2F.2 Report workplace hazards		
Criteria 1.2F.2.1 Workplace hazards identified during course of work and reported to appropriate person according to standard operating procedures	<i>Assessor guide: observe that –</i> Workplace hazards encountered in the course of daily activities are noted, and reported to personnel according to standard operating procedures	<i>Assessor guide: confirm that –</i> Hazards which may be encountered in the workplace can be listed Procedures for reporting hazards can be given
Element 1.2F.3 Follow emergency procedures		
Criteria 1.2F.3.1 Means of contacting the appropriate personnel and emergency services in the event of an accident demonstrated	<i>Assessor guide: observe that –</i> Procedures for contacting appropriate personnel and emergency services in the event of an accident are demonstrated	<i>Assessor guide: confirm that –</i> Persons or services to be contacted in the event of a range of accidents can be listed (burns, poisons, broken limbs, eye accidents, spills, explosions, falls, electrical accidents and so on) Means of communication with emergency personnel can be listed Procedures and reasons for adopting standard procedures can be given
Criteria 1.2F.3.2 Emergency and evacuation procedure understood and carried out when required	<i>Assessor guide: observe that –</i> Emergency and evacuation procedures are demonstrated Emergency and evacuation procedures followed if required	<i>Assessor guide: confirm that –</i> Reasons for following emergency procedures can be explained Emergency and evacuation procedures (including isolation of equipment, for example - electrical, mechanical, hydraulic, steam, water gas and so on) can be described
Criteria 1.2F.3.3 Company evacuation procedures followed in case of an emergency	<i>Assessor guide: observe that –</i> If an emergency occurs, emergency procedures are followed	<i>Assessor guide: confirm that –</i> Reasons for the company to establish standard evacuation procedures can be given Company evacuation procedures can be described

Range statement

This Occupational Health and Safety (OHS) unit applies to safe working practices as applied to all metal and engineering workplaces. Competencies would be demonstrated associated with performance of duties and use of specialist skills. Emergency procedures may include the isolation of electrical, mechanical, hydraulic, pneumatic and emergency steam and water equipment as appropriate. This unit and these standards do not cover the skills of emergency teams such as fire fighting, first aid officer etc.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. Aspects of this unit will need to be assessed in a work situation. The context in which the OH & S principles are applied should be consistent with the individual's field of work and relate to procedures, tools equipment, materials and documentation relevant to that field of work. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit should be assessed in conjunction with other specialisation or core units and not in isolation. The assessment should be linked with performance of normal workplace activities where the competency covered by this unit is demonstrated concurrently with other core or specialisation competencies required by the individual's field of work.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Perform the tasks described by this guide, within a time frame established between the candidate's supervisor/instructor and the assessor, prior to undertaking this assessment. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. - Satisfy the assessor that the candidate can competently and consistently perform all required tasks and has a genuine knowledge of all the required criteria in this unit.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work: - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification - use accepted engineering techniques, practices, processes and workplace

Unit MEM 1.3F A Apply quality procedures

Band – Foundation

Field – Foundation

Unit Weight 0

Element 1.3F.1 Take responsibility for own quality

Criteria 1.3F.1.1

Concept of supplying product or service to meet the customer requirements (internal and external) understood and applied.

Assessor guide: observe that –

Workplace activities undertaken to within an appropriate time frame and so that they meet the quality specification of the internal and external customers.

Assessor guide: confirm that –

The concept of internal and external customers can be explained. Internal customers can be identified and their requirements described. The effects of not meeting their needs can be explained. External customers can be identified and their requirements described. The effect of not meeting their needs can be explained.

Criteria 1.3F.1.2

Interprets taking responsibility for own quality as a practical concept eg: "right first time".

Assessor guide: observe that –

All workplace activities undertaken by the individual are performed to the standards of quality required by the enterprise. If workplace activities do not meet the quality requirements (right first time, produced within the timeframe and so on), appropriate steps are taken to remedy this situation.

Assessor guide: confirm that –

Quality requirements for the person's own job can be explained. The reasons for ensuring that their own work meets the quality requirements can be given. The effects on the company if workers do not take responsibility for their own quality can be explained.

Element 1.3F.2 Apply standard procedures of workplace quality to own job

Criteria 1.3F.2.1

Quality system procedures followed.

Assessor guide: observe that –

Quality procedures are followed in all tasks undertaken.

Assessor guide: confirm that –

Company quality system procedures can be described. Quality system procedures applying to their own job can be explained.

Criteria 1.3F.2.2

Conformance to specifications ensured.

Assessor guide: observe that –

All workplace activities are undertaken so that products and processes conform to specifications. All work is checked to see that it does meet specifications. If products or processes do not meet specifications, appropriate action is taken.

Assessor guide: confirm that –

Specifications for products and processes can be identified. Methods of checking that specifications are met, can be given. Reasons why it is important to meet specifications can be given. Appropriate actions to take in cases where specifications are not met can be listed (for example, action to remedy routine problems, reporting to appropriate person, and others).

Range statement

This competency is applied to an individual's own work position.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or using a combination of on and off the job assessment. Aspects of this unit need to be assessed in a work situation. The application of quality procedures should be to the individual's own work and relate to procedures, production, equipment, materials and documentation relevant to that field of work. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit should be assessed in conjunction with other specialisation or core units and not in isolation. The assessment should be linked with performance of normal workplace activities where the competency covered by this unit is demonstrated concurrently with other core or specialisation competencies. This unit could be assessed in with any core or specialisation unit in which quality procedures are applied to the individual's workplace tasks.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to : - Orally, or by other methods of communication, answer questions put by the assessor. - Perform the tasks described by this guide, within a time frame established between the candidate's supervisor/instructor and the assessor, prior to undertaking this assessment. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. - Satisfy the assessor that the candidate can, competently and consistently perform all required tasks and has a genuine knowledge of all required criteria in this unit.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures.

Unit MEM 1.4F A Plan to undertake a routine task

Band – Foundation

Field – Foundation

Unit Weight 0

Element 1.4F.1 Identify task requirements

Criteria 1.4F.1.1

Instructions as to procedures are obtained, understood and where necessary clarified.

Assessor guide: observe that –

Instructions for tasks are obtained from correct source of information (job card, supervisor, manager/team leader, computer, filing system and others). Clarification sought from appropriate personnel where necessary.

Assessor guide: confirm that –

Correct sources of information for a particular task are selected. Procedures for obtaining instructions and clarification procedures can be described.

Criteria 1.4F.1.2

Relevant specifications for task outcomes are obtained, understood and where necessary clarified.

Assessor guide: observe that –

Relevant specifications are identified from documentation, job cards, manager, or other information source. Specifications are clarified where necessary.

Assessor guide: confirm that –

Specifications for the job can be given based on the information obtained. The reasons why it is necessary to have correct specifications can be given.

Criteria 1.4F.1.3

Task outcomes are identified.

Assessor guide: observe that –

Task outcomes are identified from documentation, job cards, manager, or other information source. Task outcomes are clarified where necessary.

Assessor guide: confirm that –

Task outcomes can be accurately described from documentation or information obtained. Reasons why it is important to clarify task outcomes can be given.

Criteria 1.4F.1.4

Task requirements such as completion time and quality measures are identified.

Assessor guide: observe that –

Task requirements accessed from documentation, job cards, manager, or other information source. Requirements are clarified where necessary.

Assessor guide: confirm that –

The requirements, such as completion time, quantity, quality procedures and others, can be described based on the information obtained.

Element 1.4F.2 Plan steps required to complete task**Criteria 1.4F.2.1**

Based on instructions and specifications provided, the individual steps or activities required to undertake the task are understood and where necessary clarified.

Assessor guide: observe that –

Plans for tasks are prepared. Where necessary, requirements clarified from appropriate sources.

Assessor guide: confirm that –

Reasons for preparing a plan can be given. Steps or activities in the plan can be described.

Criteria 1.4F.2.2

Sequence of activities required to be completed is identified in plan.

Assessor guide: observe that –

Activities in the plan put in a logical sequence.

Assessor guide: confirm that –

Reasons for arranging the activities in that order can be given.

Criteria 1.4F.2.3

Planned steps and outcome are checked to ensure conformity with instructions and relevant specifications.

Assessor guide: observe that –

Planned steps and outcomes are checked against the instructions and specifications.

Assessor guide: confirm that –

Reasons why it is important to check the plan against the instructions and specifications can be given.

Element 1.4F.3 Review plan**Criteria 1.4F.3.1**

Outcomes are identified and compared with (planned) objectives, task instructions, specifications and task requirements.

Assessor guide: observe that –

Identified outcomes are compared with planned activities to ensure that activities are carried out in line with instructions, and that task requirements and specifications are complied with.

Assessor guide: confirm that –

Reasons for this final check of outcomes against requirements and specifications can be given.

Criteria 1.4F.3.2

If necessary, plan is revised to better meet objectives and task requirements.

Assessor guide: observe that –

Plan is revised if necessary.

Assessor guide: confirm that –

Reasons for changes to the plan can be given, and the person can explain why the changed plan better meets the objectives and task requirements.

Range statement

Instructions, such as standard operation sheets, are provided. Clear specifications and requirements, including quality and time allowances are also provided. The task and associated planning activity are carried out under supervision. The plan may or may not be documented. The task involves one or more steps or functions carried out routinely on a regular basis. The planning activity does not require the exercise of judgement as to priorities or time limitations, it requires that precise information provided in the instructions be accurately followed, steps in the process be completed in the appropriate sequence and that the time limits specified are met.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The planning should be consistent with the individual's field of work and relate to procedures, tools, equipment, materials and documentation relevant to that field of work. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit should be assessed in conjunction with other specialisation or core units and not in isolation. The assessment should be linked with performance of normal workplace activities where the competency covered by this unit is demonstrated concurrently with other core or specialisation competencies. The assessment of this competency may be associated with the assessment of core or specialist units that require planning for undertaking a routine task in the individual's field of work.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Perform the tasks described by this guide, within a time frame established between the candidate's supervisor/instructor and the assessor, prior to undertaking this assessment. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. - Satisfy the assessor that the candidate can competently and consistently perform all required tasks and has a genuine knowledge of all the required criteria in this unit.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures.

Unit MEM 2.1C12 A Apply quality systems

Band – Core

Field – Core

Unit Weight 2

Element 2.1C12.1 Understand and follow standard operational or specification requirements

Criteria 2.1C12.1.1

Follows instructions/performs duties within a quality improvement system.

Assessor guide: observe that –

Where appropriate, the job or work instructions are obtained in accordance with workplace procedures. The individual's work is carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The duties of the individual within the quality improvement system can be identified. The reasons for following the requirements of the quality improvement system can be explained. The procedures to be followed in undertaking the work can be identified.

Criteria 2.1C12.1.2

Ensures conformance to specifications.

Assessor guide: observe that –

Where appropriate, the specifications pertaining to the individual's work are obtained in accordance with workplace procedures. The individual's work conforms to specifications.

Assessor guide: confirm that –

The specifications to which the individual's work is to comply can be identified. The reasons for ensuring that the individual's work conforms to specification can be given.

Criteria 2.1C12.1.3

Defects detected and reported according to standard operating procedures.

Assessor guide: observe that –

Where appropriate, defects detected are reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting defects can be identified. Examples of common defects can be given.

Criteria 2.1C12.1.4

Performance of operation or quality of product or service to ensure customer satisfaction monitored.

Assessor guide: observe that –

Assessor guide: confirm that –

The individual's customers can be identified. The customers' requirements with respect to the operation or quality of the product or service can be identified. The ways in which customer satisfaction is determined can be given.

Element 2.1C12.2 Engages in quality improvement**Criteria 2.1C12.2.1**

Process improvement procedures participated in.

Assessor guide: observe that –

The individual's work is carried out in accordance with the process improvement procedures.

Assessor guide: confirm that –

The process improvement procedures can be identified. The reasons for following process improvement procedures can be given.

Criteria 2.1C12.2.2

Participates in the improvement of internal/external, customer/supplier relationships.

Assessor guide: observe that –

The individual's work is carried out in a manner consistent with the improvement of customer/supplier relationships.

Assessor guide: confirm that –

Examples of ways in which customer/supplier relationships can be improved can be given. The benefits of good customer/ supplier relationships can be given.

Range statement

Standards are applicable for any work within a quality improvement system either individually or in a team situation. The definition of customer is wide and applies to the next person or organisation receiving the production or service. Operation or specification requirements include quality inspection of own or other employee's work up to the level of the employees technical competence.

Range Name	Description
------------	-------------

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units associated with the individual's work or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 2.2C11 A Organise and analyse information

Band – Core

Field – Core

Unit Weight 2

Element 2.2C11.1 Access information and/or records

Criteria 2.2C11.1.1

Information requirements of tasks are determined and relevant information is accessed from a range of sources including computer terminals, tables, technical manuals and/or charts, operational instructions.

Assessor guide: observe that –

The relevant information is accessed from a range of sources in accordance with standard operating procedures.

Assessor guide: confirm that –

The information to be accessed can be identified. The source(s) from which the information is to be accessed can be given. The reasons for selecting the chosen source(s) of information can be given. The procedures for accessing the required information from the chosen source(s) can be given.

Criteria 2.2C11.1.2

Accessed information is interpreted correctly and/or recorded.

Assessor guide: observe that –

Where appropriate, the accessed information is recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The accessed information is interpreted correctly. Where appropriate, the procedures for recording the accessed information can be given.

Element 2.2C11.2 Give verbal and/or written reports

Criteria 2.2C11.2.1

Simple verbal or written reports prepared and given in accordance with workplace procedures.

Assessor guide: observe that –

Simple reports are prepared and given in accordance with workplace procedures.

Assessor guide: confirm that –

The topic(s) to be covered by the report can be identified. Where appropriate, the relevant forms/proformas to be used in the preparation of the report can be identified. The procedures for preparing/presenting simple reports in the work place can be given. The reasons for preparing and presenting the report can be given.

Criteria 2.2C11.2.2

Give verbal and/or written feedback.

Assessor guide: observe that –

The individual provides appropriate and timely feedback to those presenting reports or providing information.

Assessor guide: confirm that –

The reasons for providing feedback to those initiating reports and/or providing information can be given. The benefits of providing timely feedback to those initiating reports and/or providing information can be explained.

Range statement

This unit applies to the accessing and recording of information from a variety of sources including data associated with the operation of just-in-time and KANBAN systems. This unit also covers access and recording of electronically stored data where systems knowledge and judgement are not required eg. barcoding and simple keyboard operations. For access and recording of data requiring system knowledge and judgement see Unit 2.9C10 (Perform computer operations). Reports under element include breakdown reports, KANBAN cards, production/material problems, work improvement suggestions, quality circle participation suggestions/reports to clients, shift production schedules etc. A simple report would be a report on one or two topics. It would be short and it would not require in-depth analysis. It is assumed that the application of this unit in most workplaces would require a basic level of ability in speaking, reading and writing English as well as basic numeracy. The unit however does not refer to competence in English but in communication. English language ability should be professionally assessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the organisation and analysis of information or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 2.3C11 B Operate in a work based team environment

Band – Core

Field – Core

Unit Weight 2

Element 2.3C11.1 Determine team role and scope

Criteria 2.3C11.1.1

The role and scope of the team identified from available information.

Assessor guide: observe that –

Where appropriate, job or work instructions obtained in accordance with workplace procedures. Where appropriate, all relevant drawings, specifications, manuals, codes, standards, catalogues etc. are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The work to be undertaken by the team can be identified. The team's internal/external customers and suppliers can be identified. The products/service to be received from the team's suppliers can be identified. The products/service to be provided to the team's customers can be identified.

Criteria 2.3C11.1.2

Team parameters, reporting relationships and responsibilities identified from team discussions and appropriate external sources.

Assessor guide: observe that –

The individual participates in team discussions related to the team's work. Where appropriate, information relating to the team's responsibilities and reporting relationships is obtained from relevant sources external to the team.

Assessor guide: confirm that –

The team's reporting relationships can be identified. The team's responsibilities with respect to products/services to be provided can be identified. The limits within which the team is to operate can be identified. The sources external to the team from which information relevant to the team's work may be obtained can be identified. The sources of technical expertise/ assistance external to the team can be identified.

Element 2.3C11.2 Identify own role and responsibility within team

Criteria 2.3C11.2.1

Own role and responsibilities within the team environment identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The individual's role and responsibilities within the team can be given.

Criteria 2.3C11.2.2

Roles and responsibility of other team members identified and recognised.

Assessor guide: observe that –

Assessor guide: confirm that –

The roles and responsibilities of the other team members can be identified.

Criteria 2.3C11.2.3

Reporting relationships within team and external to team identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The reporting relationships within the team can be identified. The reporting relationships external to the team can be identified. The procedures for obtaining information and/or technical assistance from sources external to the team can be given.

Element 2.3C11.3 Plan team activities**Criteria 2.3C11.3.1**

Contribute to development of team work plans based on understanding of role and parameters of team and own skills and competencies.

Assessor guide: observe that –

The individual makes a contribution to the team's work planning procedures.

Assessor guide: confirm that –

The procedures for planning the team's work can be given. The skills and competencies of the individual and other team members can be identified. The effects on team performance of assigning tasks to team members without the appropriate skills and competencies required to carry out those tasks can be given.

Element 2.3C11.4 Operate as team member**Criteria 2.3C11.4.1**

Effective and appropriate forms of communication used and interactions undertaken with team members which contribute to known team activities and objectives.

Assessor guide: observe that –

The individual communicates effectively and appropriately with other team members.

Assessor guide: confirm that –

The team's activities and objectives can be identified. Examples of inappropriate forms of communication within the team can be given. The reasons for using appropriate forms of communication in a team environment can be explained.

Criteria 2.3C11.4.2

Effective and appropriate contributions made to complement team activities and objectives, based on own skills and competencies.

Assessor guide: observe that –

The individual demonstrates the full extent of skills and competencies held and required in performing assigned tasks within the team.

Assessor guide: confirm that –

The skills and competencies required to carry out specified tasks within the team can be identified.

Criteria 2.3C11.4.3

Team agreed reporting lines followed using standard operating procedure.

Assessor guide: observe that –

The individual follows agreed reporting lines in accordance with standard operating procedures.

Assessor guide: confirm that –

The reporting lines to be followed can be identified. The reporting procedures can be given.

Range statement

This unit applies to the skills necessary for participation in small and dedicated work team environments, including active participation in structured team meetings. Individual team members are not responsible for the overall performance of the team but contribute to team activities and objectives using their own existing technical competencies. Identification of own role and responsibilities within the team is based on predetermined, readily available information. Role of team is of a dedicated and predetermined nature and would have available external technical and management support.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the work of the team or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 2.4C11 A Assist in the provision of on the job training

Band – Core

Field – Core

Unit Weight 2

Element 2.4C11.1 Determine role of on the job training

Criteria 2.4C11.1.1

Objectives of training and role identified and understood in consultation with team leaders or other appropriate personnel.

Assessor guide: observe that –

All relevant information with respect to the training to be provided is obtained in accordance with work place procedures.

Assessor guide: confirm that –

The training to be delivered can be identified. The personnel to be consulted with respect to the training to be provided can be identified. The individual's role in the provision of training can be explained. The objectives of the training to be provided can be identified. The person(s) to be trained can be identified. The procedures to be followed when training individuals can be given.

Element 2.4C11.2 Provide on the job training

Criteria 2.4C11.2.1

Training conducted using suitable methods eg: explanation, demonstration using standard operating procedures.

Assessor guide: observe that –

Suitable training methods are used in providing the required training.

Assessor guide: confirm that –

The location(s) at which the training is to be provided can be identified. All tools, equipment, procedures, materials and resources required to achieve the training objectives can be identified. Examples of appropriate training delivery methods can be given. The reasons for selecting the chosen delivery method(s) can be explained.

Criteria 2.4C11.2.2

Trainee progress monitored and appropriate feedback provided using standard operating procedures.

Assessor guide: observe that –

Appropriate feedback is provided to the trainee throughout the training process in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for providing feedback to the trainee(s) can be given. The reasons for monitoring trainee progress can be explained. The reasons for giving positive feedback to the trainee at all times can be explained.

Element 2.4C11.3 Report on trainee performance**Criteria 2.4C11.3.1**

Trainee's progress reported according to standard operating procedure.

Assessor guide: observe that –

The trainee's progress is reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting trainee progress can be given. The skills satisfactorily achieved by the trainee can be identified. The skills requiring more practice by the trainee can be identified.

Range statement

This unit applies where an employee assists in the provision of on the job training to others while undertaking his/her own normal duties, this may involve the replacement of normal duties with training duties for limited periods of time. The individual would not be expected to be solely responsible for the assessment or reporting of a trainee's progress. Reporting procedures should include information about the skills satisfactorily achieved and those where further practice is required. Typical applications could include the provision of on-the-job guidance by a tradesperson to apprentices/trainees or by a production worker to other production workers/trainees. Where development of training programs is involved see Unit 17.1A (Assist in development and deliver training in the workplace).

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 2.5C11 A Measure with graduated devices

Band – Core

Field – Core

Unit Weight 2

Element 2.5C11.1 Use a range of graduated devices to measure/determine dimensions or variables

Criteria 2.5C11.1.1

Selects appropriate device or equipment to achieve required outcome.

Assessor guide: observe that –

The appropriate measuring device can be selected from a range of measuring devices for given measuring tasks.

Assessor guide: confirm that –

The correct application of a range of measuring devices can be identified. The reasons for selecting the chosen measuring device for each of a number of given measuring tasks can be given.

Criteria 2.5C11.1.2

Correct and appropriate measuring technique used.

Assessor guide: observe that –

For each measuring device selected the correct and appropriate measuring technique is used.

Assessor guide: confirm that –

The correct and appropriate measuring technique for a range of measuring devices can be identified. The consequences of not using the correct and appropriate measuring techniques for given measuring devices can be explained.

Criteria 2.5C11.1.3

Measures accurately to finest graduation of instrument.

Assessor guide: observe that –

All measurements taken are read accurately to the finest graduation of the selected measuring device.

Assessor guide: confirm that –

The accuracy to which a variety of measuring instruments can be read can be identified. The effect of using inappropriate measuring devices or measuring techniques on the accuracy of the measurements taken can be explained.

Element 2.5C11.2 Maintain graduated devices**Criteria 2.5C11.2.1**

Routine care and storage of devices undertaken to manufacturer's specification or standard operating procedure.

Assessor guide: observe that –

All measuring devices are handled and stored in accordance with manufacturers' specifications or standard operating procedures.

Assessor guide: confirm that –

The procedures for handling and storing a range of measuring devices can be given. The effect of inappropriate use, handling and/or storage on the accuracy of measuring devices can be explained.

Criteria 2.5C11.2.2

Checks and makes routine adjustments to devices eg: "zeroing".

Assessor guide: observe that –

All measuring devices are checked for zero before use in accordance with standard operating procedures. Where appropriate, routine adjustments are made to measuring devices in accordance with standard operating procedures.

Assessor guide: confirm that –

The routine adjustments that can be made to a range of measuring devices can be identified. The procedures for adjusting and zeroing a range of measuring devices can be given. The procedures for checking a range of measuring devices for accuracy and correct operation can be given.

Range statement

Work undertaken autonomously or part of team environment. Work undertaken in field, work station, workshops. This unit covers measurement skills requiring straightforward application of the measuring device and may utilise the full range of graduations of measuring device. Examples may include measurements using verniers, feeler gauges, micrometers, dial indicators, thermometers, and similar graduated devices. Measurements undertaken may include: length, squareness, flatness, angle, roundness, clearances or any other measurements that can be read off analog, digital or other graduated device. Electrical/electronic devices used are those not requiring the connection or disconnection of circuitry. Measurements may include metric and imperial measurement. All measurements undertaken to standard operating procedures. Adjustment of measuring devices is through external means and includes zero and linear adjustment. For straightforward use of comparison or basic measuring devices Unit 12.1A (Use comparison and basic measuring devices) should be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the use of graduated measuring devices or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 2.6C10 A Plan a complete activity

Band – Core

Field – Core

Unit Weight 4

Element 2.6C10.1 Identify activity requirements

Criteria 2.6C10.1.1

Instructions as to objectives and performance requirements are obtained, understood and where necessary clarified.

Assessor guide: observe that –

Instructions are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The tasks to be performed can be identified. The person(s) who can clarify the objectives/performance requirements can be identified.

Criteria 2.6C10.1.2

Relevant specifications for activity outcomes are obtained, understood and where necessary clarified.

Assessor guide: observe that –

Specifications relevant to the tasks to be performed are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The specifications relevant to the tasks to be performed can be identified. The person(s) who can clarify issues relating to specifications can be identified.

Criteria 2.6C10.1.3

Activity outcomes are identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The outcomes to be achieved at the completion of the activity can be identified.

Criteria 2.6C10.1.4

Activity requirements, including overall timeframe for activity, quality requirements and criteria for acceptable completion are identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The timeframe in which the activity is to be completed can be identified. The quality requirements of the product or service to be provided can be identified.

Element 2.6C10.2 Plan process to complete activity**Criteria 2.6C10.2.1**

Based on instructions as to objectives, performance requirements and specifications, the individual components of the activity are identified and prioritised.

Assessor guide: observe that –

A plan is prepared including sequential steps that will enable the activity to be completed.

Assessor guide: confirm that –

The priority of each step in the plan can be identified.
The reasons for the relative priority of each step can be given.

Element 2.6C10.3 Modify plan**Criteria 2.6C10.3.1**

Plan if necessary may be modified to overcome unforeseen difficulties or developments that occur as work progresses.

Assessor guide: observe that –

Where appropriate the plan is modified to take account of difficulties or developments that occur while following the prepared plan.

Assessor guide: confirm that –

Modifications to the plan to overcome a range of unforeseen situations can be given.

Range statement

Instructions may include timeframe, quality requirements, outcome requirements and performance requirements. Instructions carried out in accordance with established procedures. However, the activities may require a response and modification of procedures or choice of different procedures to deal with unforeseen developments. The activity may require prioritising of the individual components to facilitate the meeting of the objectives. Examples of activities to be planned may include: fault diagnosis and repair of an item of equipment, a modification of an established sequence of assembly tasks. Activities are normally performed by the individual undertaking the planned activity and associated reports are completed as required. Instructions refer to either formal or informal information about the task required. Planning will be related to familiar work tasks and environments and be performed to standard operating procedures. Where more extensive reporting requiring research and forming conclusions is required refer Unit 2.10 C5 (Write reports).

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with hand forging or other units requiring the exercise of skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 2.7C10 A Perform computations (basic)

Band – Core

Field – Core

Unit Weight 2

This unit covers the competencies for performing computations in relation to measurement, statistical application or interpretation of drawings and diagrams. Basic numeracy skills are assumed. (Basic numeracy means the ability to perform simple arithmetic using whole numbers applying the four basic rules of addition, subtraction, multiplication and division.)

Element 2.7C10.1 Applies four basic rules of calculation

Criteria 2.7C10.1.1

Simple calculations are performed using four basic rules, addition, subtraction, multiplication and division.

Assessor guide: observe that –

Calculations involving whole numbers can be correctly performed using all four basic rules.

Assessor guide: confirm that –

Examples of the application of each of the four rules of calculation performed in the workplace can be given.

Criteria 2.7C10.1.2

Understands concept of and performs simple calculations involving length, perimeter, area and volume.

Assessor guide: observe that –

Calculations involving length, perimeter, area and volume can be correctly performed.

Assessor guide: confirm that –

The formula applicable to the determination of perimeter, area and volume of simple geometric shapes can be identified from given information. The reasons for using dimensions with the same units when calculating length, perimeter, area and volume can be given. The concepts of perimeter, area and volume can be explained.

Element 2.7C10.2 Performs basic calculations involving fractions and decimals

Criteria 2.7C10.2.1

Simple calculations are performed involving fractions and mixed numbers using four basic rules.

Assessor guide: observe that –

Workplace calculations involving fractions and mixed numbers can be correctly performed using all four basic rules.

Assessor guide: confirm that –

Mixed numbers, fractions and whole numbers can be identified from a given list. The procedures for carrying out calculations involving fractions and using each of the four basic rules can be given.

Criteria 2.7C10.2.2

Simple calculations are performed involving decimal fractions and mixed numbers using four basic rules.

Assessor guide: observe that –

Workplace calculations involving decimals and mixed numbers can be correctly performed using all four basic rules.

Assessor guide: confirm that –

Mixed numbers, decimals and whole numbers can be identified from a given list. The procedures for carrying out calculations involving decimals and using each of the four basic rules can be given.

Range statement

Calculations may be performed using pen and paper or on a calculator. Computations performed in an appropriate application for the industry in which the person is working. Skills may be demonstrated in relation to measurement, statistical application or interpretation of drawings and diagrams. Basic numeracy skills below those described in this unit are not covered in these standards and are assumed to be held on entry to the industry. Basic numeracy means the ability to perform simple arithmetic using whole numbers applying the four basic rules of addition, subtraction, multiplication and division.

Evidence**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the computations being performed or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 2.8C10 A Perform computations

Band – Core

Field – Core

Unit Weight 2

Pre-requisite units - Path 1

2.7C10 Perform computations - basic

Element 2.8C10.1 Estimates approximate answers

Criteria 2.8C10.1.1

Check calculated answers by estimating techniques.

Assessor guide: observe that –

Calculated answers are checked for accuracy.

Assessor guide: confirm that –

An appropriate technique for estimating approximate answers can be identified.

Criteria 2.8C10.1.2

Performs simple rounding off operations when estimating.

Assessor guide: observe that –

Estimated answers are appropriately rounded off.

Assessor guide: confirm that –

The procedures for rounding off figures when estimating approximate answers can be given.

Element 2.8C10.2 Performs basic calculations involving percentages

Criteria 2.8C10.2.1

Simple calculations are performed to obtain percentages from information expressed in either fractional or decimal format.

Assessor guide: observe that –

Information presented in fractional or decimal format can be expressed as a percentage.

Assessor guide: confirm that –

The concept of percentage can be explained. The procedures to be followed in converting a decimal to a percentage can be given. The procedures to be followed on converting a fraction to a percentage can be given.

Element 2.8C10.3 Applies the four basic rules to algebraic expression

Criteria 2.8C10.3.1

Simple calculations are performed on algebraic expressions using the four basic rules - addition, subtraction, multiplication, division.

Assessor guide: observe that –

The appropriate formulae are selected for the given application. The correct values are substituted for each term in the relevant formulae. The appropriate mathematical operations are used to determine the required value. Where appropriate, the known values are converted to units consistent with the formulae selected.

Assessor guide: confirm that –

The sources of appropriate formulae can be given. The reasons for ensuring that the units of each term are consistent with the formulae selected can be given. The procedures for converting given units to those required for use in formulae can be given.

Element 2.8C10.4 Performs basic calculations involving proportions**Criteria 2.8C10.4.1**

Simple calculations are performed involving ratios and proportion using whole numbers, fractions and decimal fractions.

Assessor guide: observe that –

Calculations involving ratios or proportions can be correctly performed.

Assessor guide: confirm that –

The concepts of ratio and proportion can be explained. Given ratios can be expressed in terms of whole numbers, fractions and decimal fractions. Given proportions can be expressed in terms of whole numbers, fractions and decimal fractions.

Criteria 2.8C10.4.2

Information extracted from charts and graphs is used as a basis for decision making.

Assessor guide: observe that –

Assessor guide: confirm that –

Element 2.8C10.5 Interpret charts and graphs**Criteria 2.8C10.5.1**

Information extracted from charts and graphs is interpreted correctly.

Assessor guide: observe that –

The required information can be determined from appropriate charts or graphs.

Assessor guide: confirm that –

The scales applicable to the axes of the graphs or charts can be correctly identified. Three types of charts and/or graphs used in the individual's field of work can be identified.

Criteria 2.8C10.5.2

Information extracted from charts and graphs is used as a basis for decision making.

Assessor guide: observe that –

Assessor guide: confirm that –

Where appropriate, upper and lower limits of acceptability applicable to data entered on a graph or chart can be identified. Where appropriate, the trends indicated by the slope or gradient of a graph can be identified. Where appropriate, the action to be taken when given trends occur or set limits are approached on graphs or charts can be identified.

Element 2.8C10.6 Produces charts and graphs from given information**Criteria 2.8C10.6.1**

Information is used to produce simple charts and graphs as required.

Assessor guide: observe that –

Simple charts or graphs are produced from given information or observations made. Appropriate scales are selected and used in the production of charts and graphs. Appropriate limits are clearly marked on the graph or chart. The axes are appropriately and correctly labelled. The coordinates are clearly and accurately marked.

Assessor guide: confirm that –

Three types of graph can be identified. The procedures for drawing "lines of best fit" can be given. The trends indicated by the graphs or charts drawn can be identified.

Range statement

Calculations may be performed using pen and paper or on a calculator. All problems should have appropriate applications depending on the workplace. Interpretation of charts and graphs would usually extend to simple histograms, control charts, pie charts, etc. Data may be generated from readings taken or computer generated. Applications can include computation of pressure, volume, temperature, heat, speed, density, mass, force, efficiency etc.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The computations to be performed should be consistent with the individual's field of work and relate to procedures, tools, equipment, materials and documentation relevant to that field of work. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the computations being performed or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will access have to : - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference material. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 2.9C10 A Perform computer operations

Band – Core

Field – Core

Unit Weight 2

Element 2.9C10.1 Identify uses of computers in the workplace

Criteria 2.9C10.1.1

Principles of computer systems understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The hardware components of a computer system and their function can be identified. The functions of both hardware and software can be given.

Criteria 2.9C10.1.2

Application of computers in the workplace correctly identified.

Assessor guide: observe that –

Assessor guide: confirm that –

Four applications of computers in the metal and engineering industry can be given.

Element 2.9C10.2 Access information using computer

Criteria 2.9C10.2.1

Correct program/application selected based on knowledge of computer system in accordance with standard operating procedure.

Assessor guide: observe that –

The program/application containing the information required is accessed in accordance with work site procedures.

Assessor guide: confirm that –

The program/application containing the required information can be identified.

Criteria 2.9C10.2.2

Required information identified and retrieved.

Assessor guide: observe that –

A hard copy of the required information is obtained in accordance with work site procedures. The information obtained is checked for conformance with the information requirements.

Assessor guide: confirm that –

Two consequences of not checking that the information obtained is the information required can be given.

Element 2.9C10.3 Input data correctly into computer**Criteria 2.9C10.3.1**

Data entered into computer.

Assessor guide: observe that –

The appropriate program/application into which data is to be entered is accessed in accordance with work site procedures. The data is entered into the computer in accordance with work site procedures.

Assessor guide: confirm that –

The program/application into which the data is to be entered can be identified.

Criteria 2.9C10.3.2

Accuracy of information checked and information saved in accordance with standard operating procedures.

Assessor guide: observe that –

The entered data is checked for accuracy. The entered data is saved in accordance with work site procedures.

Assessor guide: confirm that –

Two consequences of not checking entered data for accuracy can be given. Two consequences of not saving entered data can be given.

Element 2.9C10.4 Output data using computer system**Criteria 2.9C10.4.1**

Data processed using computer programs.

Assessor guide: observe that –

The entered data is processed using appropriate software commands.

Assessor guide: confirm that –

The function of relevant software commands can be identified.

Criteria 2.9C10.4.2

Data printed out as required using computer hardware/peripheral devices in accordance with standard operating procedure.

Assessor guide: observe that –

The processed data is checked for accuracy/format/spelling/completeness as appropriate. The appropriate output device is selected for the hard copy to be produced. The data is presented in an appropriate hard copy format.

Assessor guide: confirm that –

The reasons for checking data prior to printing can be given. Two examples of devices used to produce hard copy printouts can be given.

Criteria 2.9C10.4.3

Files, data transferred between compatible systems as required using computer software, hardware/peripheral devices where conversion skills are not required and data transfer is in accordance with standard operating procedure.

Assessor guide: observe that –

The files/data to be transferred is checked for accuracy/format/spelling/completeness as appropriate. The appropriate data transfer device(s)/procedure(s) are selected. The data is transferred accurately.

Assessor guide: confirm that –

The reasons for checking data/files prior to transfer can be given. Two examples of devices/procedures used to transfer data between systems can be given.

Range statement

This unit applies to the application of the skills where an understanding of computer principles and application of programs is required. Skills may be demonstrated where program knowledge and judgement is exercised in relation to maintenance of enterprise records; tracking of jobs/orders through an enterprise; accessing of information relating to inventory stores/prices/availability of components; access to drawings held on CAD (computer aided design) systems; the accessing of CNC (computer numerical control) information; files transferred to disk; printing output. This unit also covers the skills for routine downloading of programmable logic controller (PLC), CNC or NC programs via disk, tape or direct means. Where this downloading requires program, data adjustment or checks against specification then Unit 10.4A (Enter and change programmable controller operational parameters) should be selected. For access and recording of electronically stored data where program knowledge and judgement is not required see Unit 2.2C11 (Organise and analyse information).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the computations being performed or other units requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant hardware and software manuals The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 2.10C5 A Write reports

Band – Core

Field – Core

Unit Weight 2

Notes - This unit can be regarded as a Specialisation band A unit from C11 onwards

Pre-requisite units - Path 1

2.6C10 Plan a complete activity

Element 2.10C5.1 Communicate concepts in writing

Criteria 2.10C5.1.1

Reports are written using appropriate terminology where required.

Assessor guide: observe that –

The terminology and language used in the report is appropriate to the target audience.

Assessor guide: confirm that –

The report's intended audience can be identified. The consequences of using inappropriate terminology and language can be given.

Criteria 2.10C5.1.2

Reports discuss alternatives, difficulties and suggestions when required.

Assessor guide: observe that –

Where appropriate, the report includes alternative views, approaches and suggestions for consideration by the reader.

Assessor guide: confirm that –

The benefits of providing alternative approaches in a report can be given.

Criteria 2.10C5.1.3

Reports are coherent and based on any analysis or research undertaken.

Assessor guide: observe that –

The report is coherent and logical. Any recommendations/suggestions made are based on documented analysis or research undertaken.

Assessor guide: confirm that –

The benefits of documenting evidence to support recommendations/suggestions included in the report can be given.

Criteria 2.10C5.1.4

Conclusions are based on the facts in the report and recommendations are made if required.

Assessor guide: observe that –

Any conclusions are based on the facts presented in the report. Where appropriate, recommendations are made.

Assessor guide: confirm that –

The benefits of presenting conclusions based on facts contained in the report can be given.

Criteria 2.10C5.1.5

Reports are completed within specified time.

Assessor guide: observe that –

The report is completed within the specified time.

Assessor guide: confirm that –

The timeframe for the preparation of the report and the deadline for completion can be identified.

Criteria 2.10C5.1.6

References are acknowledged as required.

Assessor guide: observe that –

Where appropriate, references are acknowledged in the report.

Assessor guide: confirm that –

The details required to appropriately acknowledge references used in the preparation of reports can be identified.

Range statement

Report is used to denote any required written communication that goes beyond a simple recording of facts (such as completion of a pro forma shift production schedule) to include a level of analysis and/or research. Reports may be of a technical or non-technical nature. If the report is technical, it should be based on the writer having technical knowledge. Conclusions and/or recommendations where required are based on research or analysis of data. Reports include graphs, charts, tables, etc. as required. The analysis and conclusions should be consistent with the level of skill and knowledge of an employee working at that level. Simple analysis and research would be required.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units applicable to the individual's work. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant text, periodicals, reports, etc. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operation procedures - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 2.11C5 A Research and prepare presentations and reports

Band – Core

Field – Core

Unit Weight 2

Notes - This unit can be regarded as a Specialisation band A unit from C11 onwards

Pre-requisite units - Path 1

2.2C11 Organise and analyse information

Element 2.11C5.1 Research information

Criteria 2.11C5.1.1

Research of existing materials is undertaken including reference books, tables, technical journals and internal/external databases.

Assessor guide: observe that –

Assessor guide: confirm that –

Relevant reference sources have been identified and accessed where appropriate. Relevant internal/external databases have been identified and accessed where appropriate. Relevant personnel have been consulted where appropriate.

Element 2.11C5.2 Analyse information

Criteria 2.11C5.2.1

Conclusions are reached that are logical and based on objective analysis of available data.

Assessor guide: observe that –

Conclusions are clearly stated and are consistent with the information/data contained in the report or presentation.

Assessor guide: confirm that –

The reasons for including information/data in the report or presentation can be given. All relevant information/data is included in the report or presentation. The effect of variations in the information/data obtained, on the conclusions reached can be identified.

Criteria 2.11C5.2.2

References are acknowledged as required.

Assessor guide: observe that –

References used in the preparation of the report or presentation are appropriately acknowledged.

Assessor guide: confirm that –

The reasons for acknowledging references utilised in the preparation of reports or presentations can be given. Appropriate methods of acknowledging references in reports or presentations can be identified.

Element 2.11C5.3 Summarise and organise technical data

Criteria 2.11C5.3.1

Materials and data prepared for presentation or report.

Assessor guide: observe that –

The materials required to support the presentation or report are prepared and of a standard and quality appropriate to the intended audience.

Assessor guide: confirm that –

Where appropriate, information and technical data to be presented have been summarised. The report or presentation is appropriately planned and sequenced.

Range statement

In this unit the employee may be preparing a presentation or report for another person or for themselves to deliver. Materials and documents mentioned are based on relevant knowledge of the employee competency level.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The report/presentation to be researched and prepared should relate to the individual's field of work and relate to equipment, procedures, processes, techniques and/or practices the individual is familiar with. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the subject of the report being researched and/or prepared for presentation or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 2.13C5 A Perform mathematical computations

Band – Core

Field – Core

Unit Weight 4

Notes - This unit can be regarded as a Specialisation band A unit from C11 onwards

Pre-requisite units - Path 1

2.7C10 Perform computations - basic

2.8C10 Perform computations

Element 2.13C5.1 Performs calculations involving the six trigonometrical ratios

Criteria 2.13C5.1.1

Calculations are performed to solve problems involving right angled triangles, using appropriate ratios.

Assessor guide: observe that –

The appropriate trigonometrical ratios are used to solve given problems involving right-angled triangles.

Assessor guide: confirm that –

The six trigonometrical ratios can be correctly identified. The trigonometrical ratios for given angles can be determined. The angles corresponding to given trigonometrical ratios can be determined.

Element 2.13C5.2 Applies the sine and cosine rule in the solution of problems

Criteria 2.13C5.2.1

Calculations are performed on non right-angled triangles utilising the sine and cosine rule.

Assessor guide: observe that –

The cosine rule and sine rule are used to solve given problems involving non right-angled triangles.

Assessor guide: confirm that –

The sine rule and cosine rule can be correctly identified.

Element 2.13C5.3 Performs simple algebraic operations

Criteria 2.13C5.3.1

Simple transposition of formulae is carried out to isolate the variable required, involving, addition, subtraction, multiplication, division.

Assessor guide: observe that –

Given formulae are transposed to isolate the required term. The four mathematical operations are correctly used in the transposition of formulae.

Assessor guide: confirm that –

The appropriate mathematical operation(s) to isolate the required term can be identified.

Criteria 2.13C5.3.2

Formulae is constructed to solve problems involving simple shapes or concepts.

Assessor guide: observe that –

Where appropriate, formulae are constructed to enable problems to be solved.

Assessor guide: confirm that –

The procedures for constructing formulae involving simple shapes or concepts can be identified.

Criteria 2.13C5.3.3

Simple equations are solved involving one unknown value.

Assessor guide: observe that –

Equations involving one unknown term are solved correctly.

Assessor guide: confirm that –

The reasons for checking the accuracy of the calculated answer can be given.

Element 2.13C5.4 Uses geometrical principles in the solution of problems**Criteria 2.13C5.4.1**

The solution to problems is facilitated by applying geometrical properties of angles, triangles and circles in the calculations.

Assessor guide: observe that –

The appropriate geometrical principles are used to solve problems involving angles, triangles and circles.

Assessor guide: confirm that –

The geometric properties of triangles can be identified. The geometric properties of circles can be given. The geometric properties of parallel lines intersected by an inclined line can be given.

Element 2.13C5.5 Calculates areas and volumes of complex shapes**Criteria 2.13C5.5.1**

Applies given formulae for the calculation of areas and volumes.

Assessor guide: observe that –

Assessor guide: confirm that –

The appropriate formulae are selected to determine the areas and volumes of given shapes. The formulae for determining the areas of plane figures including circles, rectangles, triangles and trapeziums can be identified. The formulae for determining the volumes of right prisms can be identified. The formulae for determining the volumes of right pyramids and cones can be identified. The formulae for determining the volume of a sphere can be identified. The formulae for determining the volume of non-right pyramids, cones and prisms can be identified.

Criteria 2.13C5.5.2

Calculates areas and volumes of composite shapes which may include conical sections.

Assessor guide: observe that –

The appropriate formulae are selected to determine the areas and volumes of complex shapes.

Assessor guide: confirm that –

The standard shapes that composite figures are constructed from can be identified. The appropriate mathematical operation to be applied to composite shapes involving holes can be identified.

Range statement

A variety of devices may be used to assist with calculations. Mathematical techniques may be applied in a variety of engineering contexts.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The computations to be performed should be consistent with the individual's field of work and relate to procedures, tools, equipment, materials and documentation relevant to that field of work. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the computations being performed or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 2.14C5 A Use graphical techniques and perform simple statistical computations

Band – Core

Field – Core

Unit Weight 2

Notes - This unit can be regarded as a Specialisation band A unit from C11 onwards

Pre-requisite units - Path 1

2.7C10 Perform computations - basic

2.8C10 Perform computations

Element 2.14C5.1 Reads and constructs graphs from given or determined data

Criteria 2.14C5.1.1

Complex information is extracted from graphical representation.

Assessor guide: observe that –

The required information is obtained by interpreting data presented in graphical form.

Assessor guide: confirm that –

The characteristics of straight line, parabolic and hyperbolic curves can be identified. The procedures for determining the slope/rate of change of a curve can be given.

Criteria 2.14C5.1.2

Data is analysed with respect to emerging trends.

Assessor guide: observe that –

The trend(s) indicated by the data presented in graphical form are correctly determined.

Assessor guide: confirm that –

The trend(s) indicated by changes in gradient of a graph can be identified.

Criteria 2.14C5.1.3

Graphs are constructed as required from data and drawn with respect to scale and accepted method.

Assessor guide: observe that –

Graphs are constructed to scale in accordance with standard procedures. The axes are appropriately labelled. The scales selected are appropriate to the purpose for which the graph is intended. Each coordinate is clearly and accurately plotted. Where appropriate, the upper and lower limits of acceptable outcomes are clearly marked on the graph.

Assessor guide: confirm that –

The procedures for drawing the line of best fit for the coordinates plotted can be identified.

Criteria 2.14C5.1.4

Significant features of graphical representation are understood such as limit lines, gradients (straight line graphs), intercepts, maximum and minimum values.

Assessor guide: observe that –

Assessor guide: confirm that –

The standard form of equations relating to straight lines and parabolic curves can be identified. The gradient, intercepts, maximum and minimum values and limit lines for straight line and parabolic curves can be identified.

Criteria 2.14C5.1.5

Constructs a wide variety of graphs as required including histograms, control charts, straight line graphs and parabolic graphs.

Assessor guide: observe that –

Histograms are constructed in accordance with standard procedures. Control charts are constructed in accordance with standard procedures. Straight line and parabolic graphs can be constructed from given formulae.

Assessor guide: confirm that –

The function of control charts can be identified.

Element 2.14C5.2 Performs basic statistical calculations**Criteria 2.14C5.2.1**

Calculates mean, median and mode from given data.

Assessor guide: observe that –

For a given set of data the mean, median and mode can be correctly determined.

Assessor guide: confirm that –

The meaning of the terms mean, median and mode can be given.

Criteria 2.14C5.2.2

Calculates standard deviation and understands the significance of 1, 2 and 3 sigma limits.

Assessor guide: observe that –

For a given set of data the standard deviation can be correctly determined.

Assessor guide: confirm that –

The meaning of the term standard deviation can be given. The significance of 1, 2 and 3 sigma limits can be identified.

Range statement

Graphs and charts may be applied to information from various work contexts, quality processes, production and market trends and other engineering applications. A range of devices may be used to assist with calculations.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The graphs to be constructed and computations to be performed should be consistent with the individual's field of work and relate to procedures, tools, equipment, materials and documentation relevant to that field of work. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with graphs being constructed and the computations being performed or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 2.15C5 A Operate in an autonomous team environment

Band – Core

Field – Core

Unit Weight 2

Notes - This unit can be regarded as a Specialisation band A unit from C12 onwards

Pre-requisite units - Path 1

2.3C11 Operate in a work based team environment

Element 2.15C5.1 Determine work roles of team members

Criteria 2.15C5.1.1

Team role and scope determined and understood using standard operating procedure.

Assessor guide: observe that –

Assessor guide: confirm that –

The role of the team can be identified. The scope of work for which the team is responsible can be identified.

Criteria 2.15C5.1.2

Role of self and team members understood and where appropriate clarified by all team participants.

Assessor guide: observe that –

Assessor guide: confirm that –

The individual's role within the team can be identified. The roles of the other team members can be identified. The procedures for clarifying the roles of team members can be identified.

Element 2.15C5.2 Participate in team planning

Criteria 2.15C5.2.1

Appropriate methods used to plan team activity or a number of related team activities.

Assessor guide: observe that –

Where appropriate, team planning meetings are scheduled in accordance with work site procedures.

Assessor guide: confirm that –

Appropriate methods of planning team activities can be identified. The activity(ies) to be planned can be identified.

Criteria 2.15C5.2.2

Planning activity is undertaken on an individual or shared basis, incorporating individual's technical skills, knowledge and competence.

Assessor guide: observe that –

Assessor guide: confirm that –

Each team member's technical skills, knowledge and competence, relevant to the tasks being planned, are accurately identified. The person(s) responsible for undertaking the planning activity can be identified.

Criteria 2.15C5.2.3

Effective and appropriate contributions are made to the total planning process.

Assessor guide: observe that –

The individual makes an effective and appropriate contribution to the planning process. The agreed plan, including where appropriate sequential steps and the roles and responsibilities of team members, is documented where appropriate in accordance with work site procedures.

Assessor guide: confirm that –

The impact of planning decisions on other teams, personnel and/or resources has been considered. The procedures for obtaining the necessary resources to carry out the plan can be identified. Where appropriate, input from non team members affected by the planning process have been sought. The resources necessary to carry out the plan can be identified.

Element 2.15C5.3 Operate as team member**Criteria 2.15C5.3.1**

Effective and appropriate forms of communication are used to liaise with team members.

Assessor guide: observe that –

Appropriate forms of communication are used to liaise with team members in accordance with work site procedures.

Assessor guide: confirm that –

A variety of appropriate means of communicating with team members can be identified. The reasons for selecting the means of communication used can be given.

Criteria 2.15C5.3.2

Contributes to determination of time lines, quality standards and production requirements for the team.

Assessor guide: observe that –

The individual makes an appropriate contribution to the determination of the production requirements, quality standards and/or timelines for the team.

Assessor guide: confirm that –

The production requirements of a given task can be correctly identified. The quality standards appropriate to a given task can be correctly identified. The factors affecting the time to undertake a given task can be identified.

Criteria 2.15C5.3.3

Real or perceived issues resolved by effective and appropriate contributions from team member.

Assessor guide: observe that –

Where appropriate, the individual makes an effective and appropriate contribution to the resolution of issues affecting team performance.

Assessor guide: confirm that –

The types of interpersonal issues that could affect team performance can be identified. Appropriate strategies for resolving given issues can be given.

Criteria 2.15C5.3.4

Effective and appropriate contributions made by team member to achieve team objectives, based on member's own technical skills, knowledge and competence.

Assessor guide: observe that –

The individual appropriately applies skills and knowledge to achieve team objectives.

Assessor guide: confirm that –

The individual can identify the skills and knowledge to be applied to a given task(s). The team objectives can be identified.

Element 2.15C5.4 Monitor and review team performance**Criteria 2.15C5.4.1**

Participate effectively in the planning and development of team review process.

Assessor guide: observe that –

The individual makes an appropriate contribution to the planning and development of team review processes.

Assessor guide: confirm that –

The need to review team performance can be identified. Team targets/goals can be identified. Team performance indicators can be identified. The reasons for reviewing team performance can be given.

Criteria 2.15C5.4.2

Appropriate data is collected on an individual and team basis using standard operating procedure.

Assessor guide: observe that –

Team performance data is collected in accordance with standard operating procedure.

Assessor guide: confirm that –

The sources of data relevant to the team performance indicators can be identified.

Criteria 2.15C5.4.3

Data collected, analysed and used by team and individual team members to evaluate team performance and determine future strategies.

Assessor guide: observe that –

The individual makes an appropriate contribution to the determination of future strategies to improve team performance.

Assessor guide: confirm that –

The actual team performance against team performance targets can be determined. Where appropriate, the reasons for discrepancies between actual and target team performance can be identified. Where appropriate, source(s) of approval for changes to team performance parameters can be identified.

Element 2.15C5.5 Implement team performance improvements**Criteria 2.15C5.5.1**

Performance improvement processes appropriate to team activities implemented on a collective and individual basis using standard operating procedure.

Assessor guide: observe that –

Performance improvement processes are implemented in accordance with standard operating procedures.

Assessor guide: confirm that –

The processes aimed at improving team performance can be identified. Where appropriate, the changes to the individual's and team members' roles/responsibilities can be identified. Where appropriate, the changes to procedures can be identified. Where appropriate, the changed targets, goals and/or objectives can be identified.

Range statement

This unit applies the skills necessary for effective participation by an individual in an autonomous team environment. Team parameters, constraints and objectives are determined by sources external to the team. Where as a result of team discussions or planning, team parameters require adjustment, then appropriate authorisation and approvals are established using standard operating procedures. Individual team participants would be already competent with technical aspects of team activities.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. The individual would already be competent with the technical aspects of team activities.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with working in an autonomous team environment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 2.16C5 A Interpret quality specifications and manuals

Band – Core

Field – Core

Unit Weight 4

Element 2.16C5.1 Identify and access all documentation

Criteria 2.16C5.1.1

Documentation covering all of the tiers of quality within the enterprise identified and used.

Assessor guide: observe that –

Documentation is accessed and can be used. Evidence of indexing, references etc. being used.

Assessor guide: confirm that –

Knowledge of documentation location and/or retrieval can be described.

Element 2.16C5.2 Interpret documentation

Criteria 2.16C5.2.1

Quality specification for specific processes and systems related and interpreted.

Assessor guide: observe that –

Correct specifications for process and/or systems are used, including other related specifications.

Assessor guide: confirm that –

Correct process used to identify relevant specifications can be described. Specifications can be described "in other words".

Criteria 2.16C5.2.2

The enterprise quality improvement system related to the formal documentation understood and used according to standard operating procedures.

Assessor guide: observe that –

Components of system are correctly used where appropriate. Formal documentation completed according to procedural specifications and requirements.

Assessor guide: confirm that –

Sound understanding of quality improvement process is apparent.

Element 2.16C5.3 Explain documentation

Criteria 2.16C5.3.1

Documentation relating to quality control/assurance explained to appropriate personnel.

Assessor guide: observe that –

Appropriate communication strategy adopted, including confirmation of received information.

Assessor guide: confirm that –

Appropriate communication strategy can be identified for all workplace situations.

Criteria 2.16C5.3.2

Instructions based on documentation given to appropriate personnel.

Assessor guide: observe that –

Information is presented in ways appropriate for the audience.

Assessor guide: confirm that –

A range of instructional techniques can be used.

Element 2.16C5.4 Monitor quality processes/systems**Criteria 2.16C5.4.1**

Quality improvement system monitored and maintained.

Assessor guide: observe that –

Appropriate records are maintained and audited. Relevant forms and/or systems are available for reporting. Quality system is followed according to established procedures.

Assessor guide: confirm that –

Quality system is understood and that system can be described. Components of quality system such as forms etc. are used and understood in terms of purpose and function.

Range statement

This standard covers a wide range of processes/systems and enterprises. It covers the interpretation of all of the tiers of quality documentation from standards such as AS3900 - AS3904 through to manuals, procedures and work instructions. Interpretation of technical requirements for production should be accessed through other technical units eg: interpret technical drawing. Documentation is accessed and applied to the specific enterprise.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the supervision and maintenance of the application of quality procedures or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 3.1A A Manual production assembly

Band – Specialisation band A

Field – Assembly

Unit Weight 4

Element 3.1A.1 Read and understand job sheets

Criteria 3.1A.1.1

Job sheets and instructions understood and followed correctly.

Assessor guide: observe that –

Job sheets and/or instructions are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The tasks to be undertaken can be identified. The sequence in which the tasks are to be performed can be identified.

Element 3.1A.2 Select assembly equipment and components

Criteria 3.1A.2.1

Assembly equipment is selected and used in accordance with instructions or job sheets to standard operating procedures.

Assessor guide: observe that –

The assembly equipment is selected in accordance with instructions or job sheets. The assembly equipment is used in accordance with standard operating procedures.

Assessor guide: confirm that –

The equipment to be used in the assembly process can be identified.

Criteria 3.1A.2.2

Components/sub-assemblies are obtained and arranged for assembly.

Assessor guide: observe that –

The correct components/sub-assemblies are obtained. The components/sub-assemblies are set out ready for assembly in accordance with standard operating procedures.

Assessor guide: confirm that –

The components/sub-assemblies to be assembled can be identified. The sources of the component/sub-assemblies can be identified.

Criteria 3.1A.2.3

Equipment or tools are used in a safe manner.

Assessor guide: observe that –

The assembly equipment and/or tools are used safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety precautions to be taken with assembly equipment and/or tools can be identified.

Element 3.1A.3 Assembles components

Criteria 3.1A.3.1

Assembly produced following correct sequence of operations using selected equipment as appropriate to standard operating procedures.

Assessor guide: observe that –

The correct sequence of operations is followed during the assembly process. The selected assembly equipment is used in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 3.1A.3.2

Records/inputs production data using standard operating procedure.

Assessor guide: observe that –

The production data is recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The production data to be recorded can be identified.

Element 3.1A.4 Performs tests**Criteria 3.1A.4.1**

Assembly tested/checked for compliance with job sheet requirements using standard operating procedures as required.

Assessor guide: observe that –

The assembly is tested/checked for compliance with job sheet requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The tests/checks to be applied to the assembly can be identified. The action to be taken if an assembly does not comply with the job sheet requirement can be identified.

Element 3.1A.5 Protects assembly from damage**Criteria 3.1A.5.1**

Components and/or assembly are handled and stored in a safe manner least likely to cause damage using standard operating procedure.

Assessor guide: observe that –

The components and/or assembly are handled and stored in a safe manner in accordance with standard operating procedures.

Assessor guide: confirm that –

The safe handling and storage procedures applicable to components and/or assemblies can be identified. The damage that can be done to components and/or assemblies through the use of inappropriate handling and storage procedures can be identified.

Range statement

Assembly process can be carried out autonomously or in a team environment. This unit applies to assembly operations that are essentially manual in nature and which do not require complex adjustments. This unit should not be selected when Unit 18.55A (Dismantle, replace and assemble engineering components) has already been selected. Where the selection and use of tools is required as part of the assembly process see Unit 18.1A (Use hand tools) and Unit 18.2A (Use power tools/hand held operations) as appropriate.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the assembly process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 3.2A A Precision assembly

Band – Specialisation band A

Field – Assembly

Unit Weight 4

Pre-requisite units - Path 1

18.1A Use hand tools

Element 3.2A.1 Read and understand job sheets

Criteria 3.2A.1.1

Job sheet or equivalent instructions interpreted correctly.

Assessor guide: observe that –

Job sheets and/or instructions are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The tasks to be undertaken can be identified.

Criteria 3.2A.1.2

All components/parts checked against job sheet, assembly list or equivalent instructions.

Assessor guide: observe that –

All component parts are checked against the job sheet, assembly list or instructions.

Assessor guide: confirm that –

The component parts can be identified.

Criteria 3.2A.1.3

Fitting requirements and sequential assembly planning carried out where applicable.

Assessor guide: observe that –

Where appropriate, a sequential assembly plan is prepared.

Assessor guide: confirm that –

Where appropriate, the fitting requirements can be identified.

Element 3.2A.2 Select and use assembly tools and equipment

Criteria 3.2A.2.1

Tools, equipment and components/parts selected to meet job requirements.

Assessor guide: observe that –

Tools and equipment are selected in accordance with job requirements. The components/parts are selected in accordance with job requirements.

Assessor guide: confirm that –

The tools and equipment required to carry out the assembly can be identified.

Element 3.2A.3 Assemble engineering components**Criteria 3.2A.3.1**

Defective or faulty parts identified and processed according to standard operating procedure.

Assessor guide: observe that –

Defective or faulty parts are identified and processed according to standard operating procedures.

Assessor guide: confirm that –

Common part faults or defects can be identified. The procedures for dealing with faulty or defective parts can be given.

Criteria 3.2A.3.2

Parts/components correctly prepared for assembly.

Assessor guide: observe that –

Where appropriate parts/components are correctly prepared for assembly.

Assessor guide: confirm that –

Where appropriate the preparation requirements of parts prior to assembly can be identified.

Criteria 3.2A.3.3

Appropriate technique and principles applied in assembly activity.

Assessor guide: observe that –

The components are assembled using appropriate techniques and principles in accordance with standard operating procedures.

Assessor guide: confirm that –

The assembly requirements of components/parts can be identified.

Criteria 3.2A.3.4

Appropriate records/data maintained or processed.

Assessor guide: observe that –

The appropriate records are kept/ maintained in accordance with standard operating procedures.

Assessor guide: confirm that –

The records to be kept/maintained can be identified.

Criteria 3.2A.3.5

Component parts of assembly fitted to ensure correct positioning and conformance with specifications.

Assessor guide: observe that –

The component parts are fitted to ensure correct positioning and conformance to specifications.

Assessor guide: confirm that –

Where appropriate the positioning requirements of components can be identified. Where appropriate the fitting specifications of the components can be identified.

Criteria 3.2A.3.6

Assembly tested to ensure that components interface/interact according to operational specifications.

Assessor guide: observe that –

The assembly is tested for conformance to operational specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational specifications of the assembly can be identified.

Element 3.2A.4 Adjust mechanical assemblies**Criteria 3.2A.4.1**

Final adjustments performed on assembly to ensure alignment with operational specifications.

Assessor guide: observe that –

Where appropriate, the assembly is adjusted to ensure conformance with operational specifications, in accordance with standard operating procedures.

Assessor guide: confirm that –

The adjustments that can be made to the assembly can be identified. The effects of adjustments to the assembly on the operation of the assembly can be identified.

Criteria 3.2A.4.2

Faulty assemblies identified for rework by operator or where fault is outside scope of work station, processed according to standard operating procedure.

Assessor guide: observe that –

Where appropriate, faulty assemblies are identified in accordance with standard operating procedures.

Assessor guide: confirm that –

The faults that can be rectified by the operator can be identified. The faults that cannot be rectified by the operator can be identified. The procedures for dealing with faults outside the scope of the operator's work station can be given.

Criteria 3.2A.4.3

Assembly correctly marked/tagged/identified where appropriate.

Assessor guide: observe that –

Where appropriate, the assembly is correctly marked/tagged/identified as faulty in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for marking/tagging/ identifying faulty assemblies can be given.

Element 3.2A.5 Protects assembly from damage**Criteria 3.2A.5.1**

Components and/or assembly are handled and stored in a manner least likely to cause damage using standard operating procedure.

Assessor guide: observe that –

The components and/or assembly are handled and stored in a safe manner in accordance with standard operating procedures.

Assessor guide: confirm that –

The safe handling and storage procedures applicable to components and/or assemblies can be identified. The damage that can be done to components and/or assemblies through the use of inappropriate handling and storage procedures can be identified.

Range statement

Assembly process can be carried out autonomously or in a team environment. This unit applies to assembly operations that are essentially manual in nature and require the application of accepted engineering principles and practices. Assembly activities typically involve build-to-order work and/or low volume and/or complex assemblies and/or long assembly time frames. Work may involve manual adjustments to correct eg: clearances, mesh, tension, level, alignment, etc. using predetermined standards of quality and safety. Applications of this unit may also require varying levels of measurement competencies, where this is the case refer to Units 2.5C11 (Measure with graduated devices) or 12.3A (Precision mechanical measurement). This unit should not be selected when Unit 18.55A (Dismantle, replace and assemble engineering components) is/has been also selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision assembly or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 3.3A A Sheet and plate assembly

Band – Specialisation band A

Field – Assembly

Unit Weight 4

Pre-requisite units - Path 1

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 3.3A.1 Read and understand job sheets

Criteria 3.3A.1.1

Job sheets/instruction correctly interpreted and followed.

Assessor guide: observe that –

Job sheets and/or instructions are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The tasks to be undertaken can be identified. The sequence in which the tasks are to be performed can be identified.

Element 3.3A.2 Select and use sheet and plate assembly equipment

Criteria 3.3A.2.1

Assembly equipment is selected in accordance with instructions on job sheet.

Assessor guide: observe that –

The assembly equipment is selected in accordance with instructions or job sheets. The assembly equipment is used in accordance with standard operating procedures.

Assessor guide: confirm that –

The equipment to be used in the assembly process can be identified.

Criteria 3.3A.2.2

Equipment is used in a safe manner according to standard operating procedure.

Assessor guide: observe that –

The assembly equipment and/or tools are used safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety precautions to be taken with the assembly equipment and/or tools can be identified.

Element 3.3A.3 Assembles fabrications

Criteria 3.3A.3.1

Assembly produced following correct sequence of operations.

Assessor guide: observe that –

The correct sequence of operations is followed during the assembly process. The selected assembly/joining equipment is used in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 3.3A.3.2

Assemblies/fabrications joined according to specification using appropriate techniques.

Assessor guide: observe that –

The components/fabrications are joined using appropriate techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The joining technique to be used can be identified. The procedures to be followed when joining sheet, plate and/or fabrications can be given.

Criteria 3.3A.3.3

Assembly tested/checked for compliance with job sheet requirements using standard operating procedures.

Assessor guide: observe that –

The assembly is tested/checked for compliance with job sheet requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The tests/checks to be applied to the assembly can be identified. The action to be taken if an assembly does not comply with the job sheet requirement can be identified.

Element 3.3A.4 Protects assembly from damage**Criteria 3.3A.4.1**

Assemblies/fabrications are handled and stored in a safe manner least likely to cause damage using standard operating procedures.

Assessor guide: observe that –

The components, fabrications and/or assembly are handled and stored in a safe manner in accordance with standard operating procedures.

Assessor guide: confirm that –

The safe handling and storage procedures applicable to components, fabrications and/or assemblies can be identified. The damage that can be done to components, fabrications and/or assemblies through the use of inappropriate handling and storage procedures can be identified.

Range statement

This unit covers production assembly of pre-fabricated/formed components. Applications of this unit may include manufacture of white goods, appliances, electrical cabinets, etc; metal furniture, cladding and shelving, box trailer bodies, ductwork and other sheet and plate assemblies. Joining processes may include seaming, bonding, riveting, etc. Assembly equipment covers jigs, fixtures and other appropriate tools. Assembly process can be carried out autonomously or in a team environment using predetermined standards of quality and safety. Where production welding skills are required refer to Unit 5.13A (Perform manual production welding). Where measurement skills are required refer to Unit 2.5C11 (Measure with graduated devices) or Unit 12.3A (Precision mechanical measurement).

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the assembly of sheet and plate or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 3.4A A Electronic/electrical assembly (production)

Band – Specialisation band A

Field – Assembly

Unit Weight 8

Element 3.4A.1 Read and understand job sheets

Criteria 3.4A.1.1

Job sheets and instructions understood and followed correctly.

Assessor guide: observe that –

Job sheets and instructions are obtained in accordance with work site procedures. The job sheet and instructions are followed correctly throughout the assembly process.

Assessor guide: confirm that –

The job requirements can be identified.

Element 3.4A.2 Select assembly equipment

Criteria 3.4A.2.1

Assembly equipment is selected and used in accordance with instructions or job sheets to standard operating procedures.

Assessor guide: observe that –

Appropriate tools and equipment are selected in carrying out assembly tasks to standard operating procedures.

Assessor guide: confirm that –

Items of assembly equipment and their application can be identified.

Criteria 3.4A.2.2

Equipment is used in a safe manner.

Assessor guide: observe that –

All tools and equipment are used in a safe manner.

Assessor guide: confirm that –

The hazards associated with the misuse of tools and equipment can be identified.

Element 3.4A.3 Identify electronic/electrical components

Criteria 3.4A.3.1

Identify by name, appearance, colour, common electronic and electrical components.

Assessor guide: observe that –

Specified electronic and electrical components can be correctly selected from a range of components.

Assessor guide: confirm that –

Common electronic and electrical components can be identified by name, colour and appearance.

Criteria 3.4A.3.2

Identify polarity indicators on components.

Assessor guide: observe that –

Assessor guide: confirm that –

The polarity indicators on common electronic and electrical components can be identified. The consequences of connecting electronic and electrical components with incorrect polarity can be given.

Element 3.4A.4 Assemble components**Criteria 3.4A.4.1**

Selects correct components by code/colour or other identification methods.

Assessor guide: observe that –

The correct components are selected for assembly in accordance with instructions and work site procedures.

Assessor guide: confirm that –

The components to be assembled can be identified from the job instructions.

Criteria 3.4A.4.2

Prepares components/devices for soldering or other termination methods.

Assessor guide: observe that –

The components/devices are correctly prepared for soldering and termination in accordance with instructions and work site procedures.

Assessor guide: confirm that –

A range of termination methods can be identified. The preparation requirements for components/devices to be soldered can be identified. The preparation requirements for components/devices that are to be terminated using non-soldering techniques can be identified.

Criteria 3.4A.4.3

Connect cables to a variety of plug and socket combinations as required.

Assessor guide: observe that –

Cables are connected to plugs/sockets in accordance with instructions and work site procedures.

Assessor guide: confirm that –

The connection requirements of a variety of plugs and sockets can be identified.

Criteria 3.4A.4.4

Components are safely handled and stored using appropriate anti-static handling procedures and techniques in accordance with standard operating procedure.

Assessor guide: observe that –

All components are safely handled and stored in accordance with work site procedures. Where appropriate anti-static handling procedures and techniques are used in accordance with work site procedures.

Assessor guide: confirm that –

Anti-static procedures and techniques can be identified. The safe handling and storage requirements of electrical and electronic components can be identified.

Criteria 3.4A.4.5

Produces assembly following correct sequence of operations.

Assessor guide: observe that –

Correct sequence of operation is followed.

Assessor guide: confirm that –

The consequences of not following the correct sequence of operations can be given.

Element 3.4A.5 Performs tests**Criteria 3.4A.5.1**

Assembly tested/checked for compliance with job sheet requirements using standard operating procedures.

Assessor guide: observe that –

All work is checked for conformance to specification in accordance with work site procedures and instructions.

Assessor guide: confirm that –

The specifications against which the assembly is to be checked/tested can be identified. The appropriate test/check procedures can be identified.

Criteria 3.4A.5.2

Records and inputs production data as required.

Assessor guide: observe that –

All production records and reports are completed in accordance with work site procedures.

Assessor guide: confirm that –

The data to be recorded and the frequency of recording can be identified.

Range statement

Given a range of workstations, is able to assemble components and be responsible for own quality. Assembly can be carried out autonomously or in a team environment across a range of industries. This unit is applied to assembly of electronic/electrical components or equipment to pre-determined specification and following pre-determined procedures including automatic wave soldering machines. Soldering skills, if required, are covered by Unit 5.1A (Manual soldering/desoldering - electrical/electronic components) or Unit 5.2A (High reliability soldering and desoldering). If measurement skills are required then Unit 12.2A (Electrical/electronic measurement) should also be selected. Where the selection and use of tools is required as part of the assembly process, see Units 18.1A (Use hand tools) and 18.2A (Use power tools/hand held operations) as appropriate.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the rework and repair of electrical and electronic products/components, or other competencies requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documents required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training relating to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 3.5A A Rework and repair (electrical/electronic production)

Band – Specialisation band A

Field – Assembly

Unit Weight 8

Pre-requisite units - Path 1

3.4A Electronic/electrical assembly (production)

5.1A Manual soldering/desoldering - electrical/electronic components

18.1A Use hand tools

Element 3.5A.1 Performs tests

Criteria 3.5A.1.1

Assembly tested for functional requirements from job sheet.

Assessor guide: observe that –

The appropriate job sheet is obtained in accordance with work site procedures. Appropriate tests are conducted on the assembly in accordance with work site procedures.

Assessor guide: confirm that –

The functional requirements of the assembly can be identified. The tests to be performed on the assembly can be identified.

Criteria 3.5A.1.2

Identifies faults in assembly or soldering.

Assessor guide: observe that –

The assembly or soldering fault(s) is identified in accordance with work site procedures.

Assessor guide: confirm that –

Examples of faults in connections and components and their symptoms can be given.

Element 3.5A.2 Diagnoses cause of fault problems and rectifies fault

Criteria 3.5A.2.1

Cause of fault identified using standard operating procedure.

Assessor guide: observe that –

The cause of the fault is identified in accordance with work site procedures.

Assessor guide: confirm that –

Causes of faults in connections and components can be given.

Criteria 3.5A.2.2

Repair and/or rework completed and instructions from job cards, drawings, assembly specification.

Assessor guide: observe that –

All information relevant to the repair and/or rework to be undertaken is obtained in accordance with work site procedures. The repair and/or rework is completed to specification in accordance with instructions and work site procedures.

Assessor guide: confirm that –

The repair or rework to be undertaken to return the assembly to specification can be identified.

Criteria 3.5A.2.3

Components are safely handled and stored using appropriate anti-static handling procedures and techniques.

Assessor guide: observe that –

All components are safely handled and stored in accordance with work site procedures. Where appropriate, anti-static handling procedures and techniques are used in accordance with work site procedures.

Assessor guide: confirm that –

The dangers of static electricity to electrical and electronic components can be identified. Anti-static procedures and techniques can be identified. The safe handling and storage requirements of electrical and electronic components can be identified.

Range statement

Given a range of components and printed circuit boards, the worker is able to carry out diagnosis of faults in accordance with established procedures, rework and repair and be responsible for own quality. Work may be carried out in a team or autonomously. Applications of this unit may also require varying levels of measurement competencies.

Evidence guide**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documents required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training relating to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the rework and repair of electrical and electronic products/components, or other competencies requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 3.6A A Setting assembly stations

Band – Specialisation band A

Field – Assembly

Unit Weight 2

Notes - Note: Unit 3.3A (Sheet & plate assembly) if selected also has a prerequisite Unit 18.2A (Use power tools/hand held operations).

Pre-requisite units - Path 1

3.1A Manual production assembly

18.1A Use hand tools

Pre-requisite units - Path 2

3.3A Sheet and plate assembly

18.1A Use hand tools

18.2A Use power tools/hand held operations

Pre-requisite units - Path 3

3.4A Electronic/electrical assembly (production)

18.1A Use hand tools

Element 3.6A.1 Identify job requirements

Criteria 3.6A.1.1

Job sheets/instructions interpreted and understood.

Assessor guide: observe that –

Job sheets and/or instructions obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The tasks to be undertaken can be identified.

Element 3.6A.2 Select and use a range of hand tools and equipment

Criteria 3.6A.2.1

Hand tools and equipment are used in a safe manner in accordance with instructions and legislative requirements.

Assessor guide: observe that –

Hand tools and equipment are used safely in accordance with instructions, legislative requirements and standard operating procedures.

Assessor guide: confirm that –

The safety precautions to be taken with hand tools and equipment can be identified.

Element 3.6A.3 Sets assembly station

Criteria 3.6A.3.1

Assembly station is set up in accordance with defined procedures.

Assessor guide: observe that –

The assembly station is set up in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed in setting up assembly stations can be identified.

Criteria 3.6A.3.2

Safe working practices are observed and implemented.

Assessor guide: observe that –

Safe working practices are followed throughout the setting up process.

Assessor guide: confirm that –

Any safety hazards associated with the assembly station and/or its setting up can be identified.

Criteria 3.6A.3.3

Assembly station is adjusted to meet specifications and operational requirements.

Assessor guide: observe that –

Where appropriate, the assembly station is adjusted to meet specifications and operational requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications applicable to the assembly station can be identified. The operational requirements of the assembly station can be identified. The effect of various adjustments that can be made to the assembly station, on the specifications and operational requirements of the assembly station can be given.

Criteria 3.6A.3.4

Assembly station is tested for correct operation.

Assessor guide: observe that –

The appropriate tests are carried out on the assembly station to ensure its correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The tests applicable to the operation of the assembly station can be identified.

Element 3.6A.4 Maintains equipment**Criteria 3.6A.4.1**

Carries out routine maintenance according to standard operating procedures.

Assessor guide: observe that –

Routine maintenance is carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The routine maintenance tasks to be carried out can be identified. The frequency at which the routine maintenance tasks are to be carried out can be identified.

Criteria 3.6A.4.2

Worn or damaged components identified and changed.

Assessor guide: observe that –

Worn or damaged components are changed in accordance with standard operating procedures.

Assessor guide: confirm that –

Worn or damaged components can be correctly identified. The effect of worn or damaged components on the operational requirements and specifications of the assembly station can be given.

Range statement

This unit covers the setting up of a range of jobbing assembly stations and may include ensuring that appropriate jigs, fixtures, die sets, stores and tooling etc. are in place as required to meet the production order or schedules. Assembly stations may be used for operations such as riveting, pressing, screwing, tensioning etc. and processes such as testing, gluing, identification, numbering or simple hot stamping etc. of components/assemblies. For setting of automated assembly processes Unit 3.7A (Setting multistage continuous process lines) should be selected as appropriate. Machine setting skills are covered by Unit 7.3A (Setting machines (routine)) and Unit 7.4A (Setting machines (complex)). Where measurement skills are required then Unit 2.5C11 (Measure with graduated devices) should also be considered.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the setting of assembly stations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 3.7A A Setting multistage continuous process lines

Band – Specialisation band A

Field – Assembly

Unit Weight 6

Pre-requisite units - Path 1

7.24A Operate and monitor machine/process

18.1A Use hand tools

Element 3.7A.1 Determine process

Criteria 3.7A.1.1

Job sheets/instructions interpreted and understood.

Assessor guide: observe that –

Job sheets/instructions are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The tasks to be undertaken can be identified.

Element 3.7A.2 Select and use a range of hand tools and equipment

Criteria 3.7A.2.1

Hand tools and equipment are used in a safe manner in accordance with standard operating procedures.

Assessor guide: observe that –

Hand tools and equipment are safely used in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety precautions to be taken when using hand tools and equipment associated with the process line to be set can be identified.

Element 3.7A.3 Set process line

Criteria 3.7A.3.1

Process line is set up to specifications in accordance with standard operating procedure.

Assessor guide: observe that –

The process line is set to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications applying to the process line can be identified.

Criteria 3.7A.3.2

All sensors, process links, displays, monitors, feedback loops etc. are set up to specifications using standard operating procedures.

Assessor guide: observe that –

All sensors, process links, displays, monitors, feedback loops etc. are set to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

All sensors, process links, displays, monitors, feedback loops etc. incorporated in the process line can be identified. The specifications applicable to the sensors, process links, displays, monitors, feedback loops etc. incorporated in the process line can be identified.

Criteria 3.7A.3.3

All safety apparatus is in place and checked for correct operation.

Assessor guide: observe that –

All safety apparatus is in place and checked for correct operation.

Assessor guide: confirm that –

The function of all safety apparatus incorporated in the process line can be given. The correct operation and specification for all safety apparatus incorporated in the process line can be identified.

Criteria 3.7A.3.4

Process line is run to meet predetermined production and quality requirements.

Assessor guide: observe that –

The process line is operated in accordance with standard operating procedures. The product is checked for conformance to quality requirements and specifications. The process line operation is checked for conformance to production requirements.

Assessor guide: confirm that –

The product specifications and quality requirements can be identified. The production requirements can be identified

Criteria 3.7A.3.5

Process line is adjusted to meet specifications and operational requirements.

Assessor guide: observe that –

Where appropriate, the process line is adjusted to meet specifications and operational requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The effect of process line adjustments on product and operational specifications can be given.

Criteria 3.7A.3.6

Operator(s) instructed as required.

Assessor guide: observe that –

Where appropriate, operators are instructed on the operational requirements of the process line.

Assessor guide: confirm that –

The requirements of operators in the operation and monitoring of the continuous process line can be identified.

Range statement

This unit applies to the setting of a wide range of continuous process lines where operations are performed by machines and equipment that are sequentially linked. This may include mechanical assembly operations, electrical/electronic assembly operations and processes such as welding, testing, insertion, filling, printing, hot stamping etc. Work may be carried out autonomously or as part of a work team. All work is carried out to predetermined standards of quality, safety and specifications. Where setting or adjustment of NC/CNC or PLC controls is required, then appropriate units should be selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the setting of multistage continuous process lines or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.1A A Operate melting furnaces

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 4

Pre-requisite units - Path 1

13.4A Work safely with molten metals/glass

Element 4.1A.1 Materials selected

Criteria 4.1A.1.1

Requisitions completed as required according to standard operating procedures.

Assessor guide: observe that –

The quantities of materials required are ordered in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate materials ordering/requisitioning procedures can be identified. The person(s) responsible for authorising/approving materials orders/requisitions can be identified.

Criteria 4.1A.1.2

Charge analysis is undertaken in accordance with standard operating procedures.

Assessor guide: observe that –

The charge analysis is achieved in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate sources of information on charge analysis can be identified. The material to be loaded into the furnace can be identified. The percentage composition of each component material required to achieve the metal specification can be identified.

Criteria 4.1A.1.3

The charge analysis is converted to furnace charge weight using standard operating procedures.

Assessor guide: observe that –

The quantities of materials required to achieve the specified charge weight are correctly determined in accordance with work site procedures.

Assessor guide: confirm that –

The sources of information relating to materials and composition to produce specified metals can be identified.

Criteria 4.1A.1.4

Charge is weighed according to standard operating procedures.

Assessor guide: observe that –

Weight of charge is correctly determined in accordance with work site procedures.

Assessor guide: confirm that –

The sources of information for determining correct charge weight can be identified.

Element 4.1A.2 Start up furnace**Criteria 4.1A.2.1**

Inspect furnace for any defects or damage.

Assessor guide: observe that –

Furnace inspected for any defects or damage in accordance with work site procedures.

Assessor guide: confirm that –

The sources of information relating to identifying defects or damage to furnace can be identified.

Criteria 4.1A.2.2

Routine operational maintenance of furnace undertaken to standard operating procedures.

Assessor guide: observe that –

Routine operational maintenance of the furnace is undertaken in accordance with work site procedures.

Assessor guide: confirm that –

The routine maintenance to be carried out on the furnace can be identified.

Criteria 4.1A.2.3

Start up furnace according to standard operating procedures.

Assessor guide: observe that –

Start up of the furnace is undertaken in accordance with work site procedures.

Assessor guide: confirm that –

The sources of information for the starting up of the furnace can be identified.

Criteria 4.1A.2.4

Report faults using standard operating procedures.

Assessor guide: observe that –

Faults identified during start up of the furnace reported in accordance with work site procedures.

Assessor guide: confirm that –

The sources of information for the reporting of faults can be identified.

Element 4.1A.3 Charge furnace**Criteria 4.1A.3.1**

Emergency/safety procedures identified and followed as necessary.

Assessor guide: observe that –

Appropriate safety clothing and apparatus is used at all times.

Assessor guide: confirm that –

Safety clothing and apparatus and their applications can be identified. The hazards associated with feeding materials into a furnace can be identified. The precautions to be taken to avoid/overcome hazards associated with feeding of materials into a furnace can be given.

Criteria 4.1A.3.2

Materials are preheated if required according to standard operating procedures.

Assessor guide: observe that –

The materials are preheated in accordance with work site procedures.

Assessor guide: confirm that –

The sources of information for preheating materials can be identified.

Criteria 4.1A.3.3

Materials are charged into furnace using standard operating procedures.

Assessor guide: observe that –

The materials are fed into the furnace safely and at the appropriate rate in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate feed rate for materials to produce a required metal can be identified. The source of information on feed rates for production of specific metals can be identified.

Criteria 4.1A.3.4

Suitable areas for emergency unloading of molten metal are identified and kept available.

Assessor guide: observe that –

Suitable areas for emergency unloading of molten metal are kept available.

Assessor guide: confirm that –

The appropriate areas for emergency unloading of molten metal can be identified.

Element 4.1A.4 Monitor furnace**Criteria 4.1A.4.1**

Furnace is maintained at optimum operating condition to standard operating procedure.

Assessor guide: observe that –

The furnace is maintained at the optimum operating temperatures throughout the process in accordance with work site procedures.

Assessor guide: confirm that –

The optimum operating temperature of the furnace to produce a specified metal can be identified. The source of information on optimum furnace operating temperatures can be identified.

Criteria 4.1A.4.2

Chemical analysis is taken and remedial action applied as required to standard operating procedure.

Assessor guide: observe that –

The chemical analysis is taken and remedial action applied as required in accordance with work site procedures.

Assessor guide: confirm that –

The sources of information on chemical analysis can be identified. The material to be input to the furnace can be identified. The percentage of each material required to achieve the metal specification can be identified.

Criteria 4.1A.4.3

Furnace is drossed and/or degassed to standard operating procedure.

Assessor guide: observe that –

The furnace is drossed/degassed in accordance with work site procedures.

Assessor guide: confirm that –

The stage and frequency at which the furnace is to be drossed/degassed can be identified. The function of the dross in the production of metals can be given.

Element 4.1A.5 Tap or unload the furnace**Criteria 4.1A.5.1**

Quantity of the required metal is identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The sources of information relating to the correct quantity of the required metal can be identified.

Criteria 4.1A.5.2

Tap rate is carried out to standard operating procedure.

Assessor guide: observe that –

The metal is tapped from the furnace safely and at the appropriate rate in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate tap rate for the required metal can be identified. The source of information on tap rates for specific metals can be identified.

Criteria 4.1A.5.3

Tapping or unloading undertaken and completed safely according to standard operating procedure.

Assessor guide: observe that –

The furnace is tapped or unloaded safely in accordance with work site procedures.

Assessor guide: confirm that –

The source of information for tapping or unloading the furnace can be identified.

Element 4.1A.6 Shutdown furnace**Criteria 4.1A.6.1**

Shut-down of furnace completed to standard operating procedure.

Assessor guide: observe that –

The furnace is shut-down safely in accordance with work site procedures.

Assessor guide: confirm that –

The source of information for shutting down the furnace can be identified.

Criteria 4.1A.6.2

Routine operational maintenance of furnace undertaken to standard operating procedure.

Assessor guide: observe that –

Routine operational maintenance of the furnace is undertaken in accordance with work site procedures.

Assessor guide: confirm that –

The routine maintenance to be carried out on the furnace can be identified. The frequency with which routine maintenance is to be carried out can be given.

Range statement

This unit covers singular or multi, coke, oil, gas fired or electric furnaces and a range of metals. All work is carried out to predetermined specifications and standards of quality, safety, regulatory and legislative requirement. Work may be undertaken as part of a workteam. Operational maintenance may extend to routine lubrication, cleaning, routine repair/repointing of refractory. Furnaces would primarily be used for continuous or staged bulk melting/smelting of metals, holding of hot liquids, or the melting of metals for production processes eg. drawing, casting/moulding, galvanising, extrusion etc. This unit would not normally be selected in a toolmaking or other one-off environment. Simple heat treatment processes like annealing, heating or quenching processes undertaken as incidental to trade work (eg. toolmaking) are covered by Unit 6.7A (Perform basic incidental heat/quenching, tempering and annealing).

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the operation of furnaces or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.2A A Gravity die casting

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 2

Pre-requisite units - Path 1

13.4A Work safely with molten metals/glass

Element 4.2A.1 Prepare equipment

Criteria 4.2A.1.1

Die coat mixed in correct proportion.

Assessor guide: observe that –

The die coat is mixed in the correct proportions in accordance with standard operating procedures.

Assessor guide: confirm that –

The purpose of the die coat in the gravity die casting process can be identified. The materials to be used in the preparation of the die coat can be identified. The proportions of the materials comprising the die coat can be identified. The function(s) of the die coat in gravity die casting can be identified. The procedures for mixing the die coat can be given.

Criteria 4.2A.1.2

Die temperatures lifted to, or maintained, at the correct level.

Assessor guide: observe that –

The die is maintained at the correct temperature in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for raising the temperature of the die to the correct level and then maintaining that temperature can be given. Where appropriate, the reasons for raising the temperature of the die can be given. The correct operating temperatures for a range of gravity die casting applications can be given.

Criteria 4.2A.1.3

Appropriate safety clothing and apparatus used.

Assessor guide: observe that –

The appropriate personal protective clothing and equipment is worn and correctly used at all times during the gravity die casting process.

Assessor guide: confirm that –

The hazards associated with the gravity die casting process can be identified. The appropriate safety equipment and personal protective clothing to be used in conjunction with the gravity die casting process can be identified.

Criteria 4.2A.1.4

Die coat applied in correct sequence and in a safe manner according to standard operating procedures.

Assessor guide: observe that –

The die coat is applied safely in the correct sequence in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for applying the die coat can be given. The hazards associated with the application of the die coat can be identified. The equipment to be used in the application of the die coat can be identified.

Criteria 4.2A.1.5

Die correctly located and closed.

Assessor guide: observe that –

The two halves of the die are correctly aligned and closed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for aligning and closing the die can be given. The method of locking/securing the die halves together can be identified.

Element 4.2A.2 Carry out manual pouring**Criteria 4.2A.2.1**

Pour made in manner to reduce porosity and lamination.

Assessor guide: observe that –

The molten metal is poured so as to minimise porosity and lamination in the casting.

Assessor guide: confirm that –

The procedures to be followed when pouring molten metal can be given. The causes of porosity and lamination in castings produced by the gravity die casting process can be identified.

Criteria 4.2A.2.2

Conditions identified that contribute to inferior or rejects.

Assessor guide: observe that –

Assessor guide: confirm that –

Common defects in castings produced by the gravity die casting process can be identified. The causes of those defects can be given. The procedures to be followed to minimise the number of inferior or reject castings produced can be given.

Criteria 4.2A.2.3

Allowance is made for adequate curing time.

Assessor guide: observe that –

Adequate curing time is allowed before subsequent steps in the casting process are undertaken.

Assessor guide: confirm that –

The reasons for allowing the casting to cure can be explained. The sources of information on curing times for castings of various volumes and materials can be identified. The curing times for a range of given casting situations can be identified.

Criteria 4.2A.2.4

Pour made are continuous and at appropriate rate.

Assessor guide: observe that –

The molten metal is poured at a continuous and appropriate rate.

Assessor guide: confirm that –

The reasons for ensuring that pours are continuous and at an appropriate rate can be given. The effects of non-continuous pours and/or inappropriate pouring rates on casting quality and personal safety can be identified.

Criteria 4.2A.2.5

Monitoring of die condition carried out and re-spraying occurs as required.

Assessor guide: observe that –

The condition of the die is checked prior to each pour. Where appropriate, the die coat is repaired/replaced in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for checking the die prior to each pour can be given. The procedures for repairing/replacing the die coat can be given. The effect on casting quality of an incomplete die coat can be identified.

Element 4.2A.3 Remove materials**Criteria 4.2A.3.1**

Parts removed and stored in a manner that minimises damage.

Assessor guide: observe that –

All castings are removed and stored in a manner that minimises damage and in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing castings from the die and storing them can be given. The damage that can be caused to castings through inappropriate handling and storage can be identified. The hazards associated with removing castings from the die can be identified.

Element 4.2A.4 Clean die**Criteria 4.2A.4.1**

Shot blaster operated in a safe manner and according to standard operating procedures.

Assessor guide: observe that –

The shot blaster is operated safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed when using a shot blaster can be given. The reasons for shot blasting the die can be given.

Criteria 4.2A.4.2

Chemical analysis is taken and remedial action applied as required to standard operating procedure.

Assessor guide: observe that –

The appropriate safety clothing and equipment is used correctly throughout the shot blasting process.

Assessor guide: confirm that –

The hazards associated with the shot blasting process can be identified. The personal safety clothing and equipment to be used in conjunction with the shot blasting process can be identified.

Criteria 4.2A.4.3

Furnace is drossed and/or degassed to standard operating procedure.

Assessor guide: observe that –

The die coat is cleaned from the body of the die in conformance to specifications and in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing die coat from the body of the die can be given. The specifications to be achieved in removing the die coat from the die can be identified.

Criteria 4.2A.4.4

Work area cleaned of coating and shot residue to appropriate standard.

Assessor guide: observe that –

All coating and shot residue is removed from the work area in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing shot and die coat residue from the work area can be given. The tools and equipment necessary to clean the work area can be identified. The storage requirements of the residue removed from the work area can be identified.

Range statement

This unit applies to gravity casting into permanent die. All work is carried out to predetermined specifications and standards of quality and safety. Work is carried out autonomously or as part of a workteam. Metals used in this area may include aluminium, aluminium alloys and other non-ferrous and ferrous metals.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with gravity die casting or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: -all tools, equipment, materials and documentation required the candidate will be permitted to refer to the following documents: -any relevant workplace procedures -any relevant product and manufacturing specifications - any relevant codes, standards, manuals and reference materials the candidate will be required to: - orally, or by other methods of communication, answer questions put by the assessor -identify colleagues who can be approached for the collection of competency evidence where appropriate - present evidence of credit for any off-job training related to this unit Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment - take responsibility for the quality of their own work - plan tasks in all situations and review task requirements as appropriate - perform all tasks in accordance with standard operating procedures - perform all tasks to specification - use accepted engineering techniques, practices, processes and workplace procedures Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 4.3A A Operate pressure die casting machine

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 4

Pre-requisite units - Path 1

13.4A Work safely with molten metals/glass

Element 4.3A.1 Conduct pre-operational checks

Criteria 4.3A.1.1

Start up procedure conducted according to the standard operating procedures.

Assessor guide: observe that –

All relevant work instructions, etc. are obtained in accordance with work place procedures. All pre start-up checks are carried out in accordance with standard operating procedures. The die casting machine is started in accordance with standard operating procedures.

Assessor guide: confirm that –

The pre start checks to be undertaken can be identified. The procedures for carrying out pre start checks can be given. The procedures for starting up the die casting machine can be given. The adjustments that can be made to the die casting machine to ensure correct operation of the machine can be identified.

Criteria 4.3A.1.2

If necessary, shot size adjusted.

Assessor guide: observe that –

Where appropriate, the shot size is adjusted in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting the shot size can be given. The effects of incorrect shot size on the quality of the die casting can be identified.

Criteria 4.3A.1.3

If applicable, nitrogen and/or vacuum systems checked.

Assessor guide: observe that –

Where appropriate, nitrogen and/or vacuum systems are checked for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The function of nitrogen and vacuum systems in the die casting process can be identified. The procedures for checking/ adjusting nitrogen and/or vacuum systems can be given.

Criteria 4.3A.1.4

If applicable, functional check made of picking robot and component gripper adjusted as necessary.

Assessor guide: observe that –

Where appropriate, the picking robot and component gripper are checked for correct operation. Where appropriate, the picking robot is adjusted in accordance with standard operating procedures.

Assessor guide: confirm that –

The correct function of a picking robot and the component gripper can be described. The procedures for adjusting the picking robot can be given. The effects of the adjustments on robot performance can be explained.

Criteria 4.3A.1.5

Die spray nozzles adjusted as necessary.

Assessor guide: observe that –

Where appropriate, the die spray nozzles are adjusted in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for spraying the die can be given. The procedures for adjusting the die spray nozzles can be given.

Criteria 4.3A.1.6

Planning carried out that ensures efficient flow of finished product ie: breaking of runners, stacking baskets, bins, conveyors.

Assessor guide: observe that –

The sequence of operations to be performed on the die cast product is planned to ensure efficient product flow.

Assessor guide: confirm that –

The operations to be performed subsequent to the die casting of the product can be identified. The tools and equipment necessary to carry out those operations can be identified. The locations at which those operations are to be carried out can be identified. The appropriate means of transporting/conveying the die cast product between those locations can be identified. The reasons for selecting the chosen transporting/conveying method can be given.

Element 4.3A.2 Operate all functions on machine control panel**Criteria 4.3A.2.1**

Appropriate knowledge of die casting process applied in the operation, adjustment and monitoring of machine functions.

Assessor guide: observe that –

Die cast products are produced to specification using all functions of the machine control panel in accordance with standard operating procedures.

Assessor guide: confirm that –

The die casting process can be correctly described. The effect of adjusting each control on the machine control panel on the quality of the die casting produced can be explained. The procedures for adjusting the operation of the die casting machine can be given.

Element 4.3A.3 Operate machine to produce castings

Criteria 4.3A.3.1

Machine operated to standard operating procedures including maintenance of liquid metal and die operating conditions.

Assessor guide: observe that –

The die casting machine is operated in accordance with standard operating procedures. The liquid metal is maintained in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for operating the die casting machine can be given. The appropriate quantity of liquid level to be maintained can be identified. The operating parameters to be maintained during the die casting process can be identified.

Criteria 4.3A.3.2

Runners broken off.

Assessor guide: observe that –

The runners are broken off from the casting in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing runners from the die casting can be given.

Criteria 4.3A.3.3

Castings are visually inspected for porosity, cracks, tears, splits, sinks, cold shuts, tinning and surface crazing according to standard operating procedures.

Assessor guide: observe that –

The castings produced are visually checked for conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for inspecting die castings can be given. The common faults to be found in die castings can be identified. The probable causes of each type of fault can be given.

Criteria 4.3A.3.4

Castings handled in a manner that minimises risk of damage.

Assessor guide: observe that –

All castings are handled in a manner that minimises damage to the casting in accordance with standard operating procedures.

Assessor guide: confirm that –

The damage that can be caused to castings through inappropriate handling and storage can be identified.

Criteria 4.3A.3.5

First-off castings produced, visually inspected and submitted for checking against specifications.

Assessor guide: observe that –

The first-off castings produced are submitted for checking against specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking first-off castings for conformance to specification can be given. The specifications of the die cast product can be identified.

Element 4.3A.4 Monitor furnace

Criteria 4.3A.4.1

Furnace is maintained at optimum operating condition to standard operating procedure.

Assessor guide: observe that –

The die casting machine is shut down in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for shutting down the die casting machine can be given. The hazards associated with the shutting down of the die casting machine can be identified.

Range statement

This unit applies to all pressure die casting machines. All work is carried out to predetermined specifications and standards of quality and safety. Work may be carried out autonomously or as part of a work team.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the operation of pressure die casting machinery or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.4A A Prepare and mix sand for metal moulding

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 4

Element 4.4A.1 Load mixer (mill/muller)

Criteria 4.4A.1.1

All pre start-up checks performed safely and according to standard operating procedures.

Assessor guide: observe that –

All relevant job instructions, specifications and procedures are obtained in accordance with work site procedures. All start checks are carried out in accordance with work site procedures.

Assessor guide: confirm that –

The pre start checks to be undertaken prior to mixing the sand can be identified. The procedures for starting the mixer can be given.

Criteria 4.4A.1.2

Formula for sand mix is determined according to standard operating procedure.

Assessor guide: observe that –

Assessor guide: confirm that –

The composition of the sand mix can be identified. The proportions of each component of the sand mix can be identified.

Criteria 4.4A.1.3

Materials measured and loaded according to formula specification.

Assessor guide: observe that –

All materials are loaded into the mixer in the correct proportions in accordance with work site procedures.

Assessor guide: confirm that –

The procedure for loading the mixer can be given. The hazards associated with the loading of the mixer can be identified.

Element 4.4A.2 Mix sand

Criteria 4.4A.2.1

Sand mixed for correct time according to specifications.

Assessor guide: observe that –

The sand is mixed for the correct time in accordance with work site procedures.

Assessor guide: confirm that –

The time for which the sand is to be mixed can be identified. The source(s) of information for a variety of sand formulas can be identified. The procedure for mixing the sand can be given.

Criteria 4.4A.2.2

Monitor performance of mixer and the condition of the sand.

Assessor guide: observe that –

The mixer is monitored for correct operation in accordance with work site procedures.

Assessor guide: confirm that –

Factors which may inhibit the correct operation of the mixer can be identified.

Criteria 4.4A.2.3

Maintain material supply, eg: water, chemicals, sand.

Assessor guide: observe that –

An adequate supply of raw materials is maintained throughout the mixing process.

Assessor guide: confirm that –

The procedures for obtaining raw materials can be given.

Criteria 4.4A.2.4

Report faults.

Assessor guide: observe that –

Where appropriate, all faults detected are reported in accordance with work site procedures.

Assessor guide: confirm that –

The procedures for reporting faults in the mixer/mixing process can be given. The authority to whom faults are reported can be identified. Common faults in the mixing process can be identified, and probable causes can be given.

Element 4.4A.3 Take and test samples**Criteria 4.4A.3.1**

Extract sample correctly.

Assessor guide: observe that –

Samples are extracted from the mixer in accordance with work site procedures.

Assessor guide: confirm that –

The procedure for taking samples from the mixer can be given. The hazards associated with taking samples from the mixer can be identified.

Criteria 4.4A.3.2

Test applied in accordance with standard operating procedure.

Assessor guide: observe that –

Sand samples are tested using appropriate tools, equipment and techniques in accordance with work site procedures.

Assessor guide: confirm that –

Tests to be performed on the sand samples taken can be identified. The procedures to be followed when testing samples can be given. The tools and equipment required to test the sand can be identified.

Criteria 4.4A.3.3

Compare test results against specification.

Assessor guide: observe that –

Test results are compared against specifications of the sand mixture.

Assessor guide: confirm that –

Criteria 4.4A.3.4

Adjustments to formula/mix made as required in accordance with standard operating procedures.

Assessor guide: observe that –

Where appropriate the recipe/mixture is adjusted to ensure that the sand conforms to specifications in accordance with work site procedures.

Assessor guide: confirm that –

Where the sand mix does not comply with the specification, the adjustments to be made to the recipe/mixture can be identified. The reasons for making the adjustments identified can be given. The effects of varying each component material on the characteristics of the sand mixture can be explained. The procedure for adjusting the sand mix can be given.

Element 4.4A.4 Discharge mixture**Criteria 4.4A.4.1**

Load discharged correctly according to standard operating procedure.

Assessor guide: observe that –

The mixture is discharged from the mixer safely in accordance with work place procedures.

Assessor guide: confirm that –

The procedure for discharging the sand mixture from the mixer can be given. The hazards associated with discharging the mixed sand can be identified.

Criteria 4.4A.4.2

Unwanted treated sand is disposed of according to standard operating procedure.

Assessor guide: observe that –

The unwanted treated sand is disposed of in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for disposing of unwanted treated sand can be explained. The environmental hazards associated with disposing of unwanted treated sand incorrectly can be explained.

Element 4.4A.5 Clean mixer**Criteria 4.4A.5.1**

Mixer is shut down to standard safety and operating procedures.

Assessor guide: observe that –

The mixer is shut down safely in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for shutting down the mixer can be explained.

Criteria 4.4A.5.2

Mixer cleaned according to standard operating procedures.

Assessor guide: observe that –

The mixer is left in a safe and clean condition.

Assessor guide: confirm that –

The reason for cleaning mixer after use can be given.

Range statement

This unit applied to the mixing of sand in continuous and batch type mills. All work is carried out to predetermined specifications and standards of quality and safety. Work is carried out autonomously or as part of a team and in accordance with legislative and statutory requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the preparation and mixing of sand for metal moulding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.5A A Produce moulds and cores by hand (jobbing)

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 16

Pre-requisite units - Path 1

9.2A Interpret technical drawing

18.1A Use hand tools

Element 4.5A.1 Determine job requirements

Criteria 4.5A.1.1

Drawing, instructions and specifications interpreted and understood.

Assessor guide: observe that –

All relevant specifications, drawings, instructions and procedures are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The specifications to be achieved can be identified. A variety of pattern types and their application can be identified. The features of a sand mould and their function can be identified. A variety of core types and their application can be identified.

Element 4.5A.2 Determine sequence of operation

Criteria 4.5A.2.1

Sequence of operation including job set up is determined for maximum efficiency and to meet job specifications.

Assessor guide: observe that –

The sequence of operation including job set up is determined in accordance with work place procedures.

Assessor guide: confirm that –

The tasks to be undertaken can be identified. The procedures to be followed in producing moulds and cores by hand can be described.

Criteria 4.5A.2.2

Appropriate material selected.

Assessor guide: observe that –

The appropriate materials for producing moulds and cores selected and obtained in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for obtaining the materials for producing moulds and cores can be identified.

Element 4.5A.3 Select inspect and prepare pattern equipment

Criteria 4.5A.3.1

Pattern equipment correctly identified from specifications according to standard operating procedure.

Assessor guide: observe that –

The pattern equipment correctly identified from specifications in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for obtaining patterns can be identified. All parts of the patterns can be identified.

Criteria 4.5A.3.2

Pattern equipment inspected to specifications and damaged patterns are identified for repair or replacement to standard operating procedure.

Assessor guide: observe that –

The pattern is checked for conformance to specifications in accordance with work place procedures.

Assessor guide: confirm that –

The most appropriate measuring devices for checking patterns can be identified. The procedures for checking patterns can be identified. The procedures for repair or replacement of damaged patterns can be identified.

Criteria 4.5A.3.3

Pattern is assembled to specification.

Assessor guide: observe that –

The pattern is assembled to specifications in accordance with work place procedures.

Assessor guide: confirm that –

The procedure for assembling the pattern can be identified.

Criteria 4.5A.3.4

Pattern equipment set up to specification according to standard operating procedure.

Assessor guide: observe that –

The pattern and all necessary mould features are appropriately positioned in the moulding box in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for setting up the pattern equipment can be identified. The procedures for preparing two and three box moulds can be given. The reason for choosing the selected position and size of each mould feature can be explained.

Element 4.5A.4 Make mould and core

Criteria 4.5A.4.0

Core positioned in prints utilising chaplets and chills as required and vented to specification according to standard operating procedure.

Assessor guide: observe that –

The core is positioned in prints utilising chaplets and chills, vented in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for positioning the core in prints and venting can be identified. The use of chaplets and chills can be explained.

Criteria 4.5A.4.1

Select and position appropriate moulding/core-making equipment according to standard operating procedure.

Assessor guide: observe that –

The moulding/core-making equipment are appropriately positioned in the moulding box in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for setting up the moulding/core-making equipment can be identified. The reason for choosing the selected position and size of each mould/core can be explained.

Criteria 4.5A.4.1

Mould closed and checked for compliance to component specification in accordance with standard operating procedure.

Assessor guide: observe that –

The mould closed and checked for compliance to component specification in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for closing the mould, and checking for compliance to component specification can be explained.

Criteria 4.5A.4.2

Select appropriate moulding media to produce mould and core to specification.

Assessor guide: observe that –

The appropriate moulding media for producing moulds and cores selected and obtained in accordance with work place procedures.

Assessor guide: confirm that –

A range of moulding media and their applications can be given. The appropriate moulding media for the object to be cast can be identified. The reasons for selecting the chosen moulding media can be given.

Criteria 4.5A.4.2

Mould secured according to standard operating procedure.

Assessor guide: observe that –

The mould secured in accordance with work place procedures.

Assessor guide: confirm that –

The procedures and equipment required for securing the mould can be explained.

Criteria 4.5A.4.3

Pouring basin is selected or manufactured to specification and positioned in accordance with standard operating procedure.

Assessor guide: observe that –

The pouring basin is selected and/or manufactured to specification, and positioned in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for selecting and positioning the pouring basin can be explained. The procedures, tools and equipment necessary to manufacture and repair damaged pouring basins can be identified.

Criteria 4.5A.4.3

Use moulding media to produce mould and core according to standard operating procedure.

Assessor guide: observe that –

The pattern and all necessary mould features are packed with moulding media in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for packing the mould boxes with moulding media can be given.

Criteria 4.5A.4.4

Mould and cores rammed up with joints and drawbacks as required to standard operating procedure.

Assessor guide: observe that –

The mould and cores rammed up with joints and drawbacks in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for ramming up moulds and cores with joints and drawbacks can be given.

Criteria 4.5A.4.5

Parting and stripping systems are utilised in accordance with standard operating procedure.

Assessor guide: observe that –

The most appropriate mould parting and stripping system is selected and used in accordance with work place procedures.

Assessor guide: confirm that –

A range of parting and stripping systems and their applications can be given. The reasons for selecting the chosen parting and stripping systems can be given.

Criteria 4.5A.4.6

Loose pieces, vents, risers and runners positioned and secured as required to standard operating procedure.

Assessor guide: observe that –

The loose pieces, vents, risers and runners positioned and secured in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for positioning and securing loose pieces, vents, risers and runners can be given.

Criteria 4.5A.4.7

Pattern and loose pieces removed from mould and core box in a safe manner least likely to cause damage to the pattern and in accordance with standard operating procedure.

Assessor guide: observe that –

The loose pieces, vents, risers and runners removed in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for removing loose pieces, vents, risers and runners can be given. The precautions to be taken during removing loose pieces, vents, risers and runners to minimise damage to the mould can be given.

Criteria 4.5A.4.8

Mould is inspected and repaired as required.

Assessor guide: observe that –

The mould is visually inspected for conformance to specifications and where appropriate, the mould is repaired in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for repairing moulds can be given. The tools and equipment necessary to repair damage moulds can be identified. Common mould defects and their causes can be identified. Mould defects which are repairable can be identified.

Criteria 4.5A.4.9

Mould and core cleaned and painted according to specification using standard operating procedure.

Assessor guide: observe that –

The mould and core is cleaned and painted in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for cleaning and painting moulds and cores can be identified.

Element 4.5A.5 Clean and restore work area**Criteria 4.5A.5.1**

All materials/debris cleared and work site cleaned and left in a safe state.

Assessor guide: observe that –

The work site cleaned of all materials/debris and left in a safe state in accordance with work place procedures.

Assessor guide: confirm that –

The hazards associated with working in a moulding environment can be identified. The housekeeping procedures to be employed to minimise hazards in the moulding environment can be explained.

Criteria 4.5A.5.2

Unwanted treated sand is disposed of according to standard operating procedure.

Assessor guide: observe that –

The unwanted treated sand is disposed of in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for disposing of unwanted treated sand can be explained. The environmental hazards associated with disposing of unwanted treated sand incorrectly can be explained.

Range statement

This unit applies to the production of sand moulds and cores by manual (jobbing) methods. All work is carried out to predetermined specifications and standards of quality and safety. Work may be done autonomously or in a team environment. The types of patterns may include flatback and plated patterns, multi-joint, strickle, consumable, split patterns, loose piece patterns, patterns requiring odd sides, cored moulds, drag and cope mould etc. A range of moulding media such as, green sand, shell sand, chemically bonded media etc. may be used. Unwanted treated moulding/core sand is disposed of according to legislative and statutory requirements. Where lifting and moving moulds and cores requires the use of mobile load shifting equipment or overhead cranes appropriate manual handling units should also be selected. Where the securing of moulds requires welding skills, see unit 5.12A (Perform routine manual metal arc welding) and Unit 5.50 (Perform routine gas metal arc welding) as appropriate.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the production of moulds and cores or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.6A A Operate sand moulding and core making machines

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 8

Element 4.6A.1 Determine job requirements

Criteria 4.6A.1.1

Instructions and specifications interpreted and understood.

Assessor guide: observe that –

All relevant specifications, drawings, instructions and procedures are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The tasks to be undertaken can be identified. The specifications to be achieved can be identified. The procedures to be followed in producing moulds and cores by machine can be described. A variety of pattern types and their application can be identified. The features of a sand mould and their function can be identified. A variety of core types and their application can be identified.

Element 4.6A.2 Conduct pre-operational checks

Criteria 4.6A.2.1

Pattern/core box selected and inspected to specifications and cleaned as required. Damaged patterns/core boxes are identified for repair or replacement to standard operating procedure.

Assessor guide: observe that –

The pattern/core is correctly set up in the bolster in accordance with standard operating procedures. The core box is correctly located in the machine in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for setting up the pattern/core in the bolster can be given. The correct method of locating the core box in the machine can be identified.

Criteria 4.6A.2.2

Pattern/core box is set up in bolster and core box according to standard operating procedures.

Assessor guide: observe that –

The pattern is checked for conformance to specification and inspected for signs of damage in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking patterns for conformance to specifications can be given. The appropriate measuring devices to be used to check the pattern for conformance to specification can be identified. Examples of damage to patterns and their effect on casting quality can be given.

Element 4.6A.3 Operate machine to produce mould/cores**Criteria 4.6A.3.1**

Select appropriate moulding media to produce mould and core to specification.

Assessor guide: observe that –

The appropriate moulding media for producing moulds and cores selected and obtained in accordance with workplace procedures.

Assessor guide: confirm that –

A range of moulding media and their applications can be given. The appropriate moulding media for the object to be cast can be identified. The reasons for selecting the chosen moulding media can be given.

Criteria 4.6A.3.2

Moulds/cores filled to specification according to standard operating procedures.

Assessor guide: observe that –

The pattern and all necessary mould features are filled with moulding media in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for filling the mould boxes with moulding media can be given.

Criteria 4.6A.3.3

Machine is operated in accordance with standard operating procedures.

Assessor guide: observe that –

The machine is operated safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for operating the moulding/core making machine can be given. The hazards associated with the operation of moulding/core making machines can be given.

Criteria 4.6A.3.4

Machine is unloaded safely to standard operating procedures.

Assessor guide: observe that –

The machine is unloaded safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for unloading the moulding/core making machine can be given.

Criteria 4.6A.3.5

Moulds/cores are stripped, inspected and painted as required according to standard operating procedures.

Assessor guide: observe that –

The moulds/cores are stripped in accordance with standard operating procedure. The moulds/cores are visually inspected for conformance to specification. The moulds/cores are repaired in accordance with standard operating procedure. Where appropriate moulds/cores are painted with the appropriate medium in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for stripping the mould can be given. The precautions to be taken during mould stripping to minimise damage to the mould can be identified. The procedures for repairing the moulds and cores can be given. The tools and equipment necessary to repair damaged moulds and cores can be identified. Common mould/core defects and their causes can be identified. Those defects that are repairable can be recognised. The purpose of painting moulds/cores can be given. The procedures for painting moulds/cores can be given. The appropriate painting medium can be identified. The reasons for selecting the chosen painting medium can be explained.

Element 4.6A.4 Assemble moulds/cores**Criteria 4.6A.4.1**

Moulds/cores are dried, glued and vented as required to specification and closed in accordance with standard operating procedures.

Assessor guide: observe that –

Where appropriate, the core(s) are assembled and vented in conformance to specifications. Where appropriate, the mould is closed and secured against lift in accordance with standard operating procedure.

Assessor guide: confirm that –

The specification for the core(s) can be identified. The method of core assembly and venting can be identified. The procedures for closing and securing the mould boxes can be given. The methods of securing the mould against lift can be identified. The causes of lift in the moulding process can be explained.

Criteria 4.6A.4.2

Runner bush is set to specification as required.

Assessor guide: observe that –

The runner bush is set for pouring in accordance with standard operating procedure.

Assessor guide: confirm that –

The function of the runner bush can be explained. The procedures for setting the runner bush can be given.

Element 4.6A.5 Clean and restore work area**Criteria 4.6A.5.1**

All materials/debris cleared and work site cleaned and left in a safe state.

Assessor guide: observe that –

The work site cleaned of all materials/debris and left in a safe state in accordance with workplace procedures.

Assessor guide: confirm that –

The hazards associated with working in a moulding environment can be identified. The housekeeping procedures to be employed to minimise hazards in the moulding environment can be explained.

Criteria 4.6A.5.2

Unwanted treated sand is disposed of according to standard operating procedures.

Assessor guide: observe that –

The unwanted treated sand is disposed of in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for disposing of unwanted treated sand can be explained. The environmental hazards associated with disposing of unwanted treated sand incorrectly can be explained.

Range statement

This unit applies to the operation of a range of automatic and semi-automatic sand moulding and core making machines. Work may be carried out autonomously or as part of a work team. Work is carried out to predetermined specification and safety standards of quality and safety. A range of moulding media such as green sand, shell sand, chemically bonded media etc. may be used. Unwanted treated moulding/core sand is disposed of according to legislative and statutory requirements. Where lifting and moving moulds and cores requires the use of mobile load shifting equipment or overhead cranes appropriate materials handling units should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the operation of moulding and core making machines or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.7A A Pour molten metal

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 4

Pre-requisite units - Path 1

13.4A Work safely with molten metals/glass

Element 4.7A.1 Prepare for pouring molten metal

Criteria 4.7A.1.1

Condition of mould checked according to standard operating procedures.

Assessor guide: observe that –

All relevant work instructions, specifications and procedures obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The tasks to be undertaken can be identified. The specifications of the liquid metal to be poured can be identified. The appropriate pouring sequence can be identified. The reasons for choosing the selected pouring sequence can be given. Any hazards associated with the selected pouring sequence can be identified. The temperature at which the liquid metal is to be poured can be identified.

Criteria 4.7A.1.2

Condition of ladle checked according to standard operating procedure.

Assessor guide: observe that –

Where appropriate, relevant personnel are consulted with respect to quantities of liquid metal required.

Assessor guide: confirm that –

The quantity of liquid metal to be poured is identified from available information. Where appropriate, personnel to be consulted with respect to the quantities of liquid metal required can be identified.

Criteria 4.7A.1.3

Temperature of molten metal checked for conformance to specification and pouring method sequenced to standard operating procedures.

Assessor guide: observe that –

The condition of the ladle is checked for conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The ladle specifications can be identified. The procedures for checking the ladle can be given. Common ladle defects/non-conformances can be identified. The procedures for rectifying common ladle defects/non-conformances can be given.

Criteria 4.7A.1.4

Capacity of the required pour is identified against specification according to standard operating procedures.

Assessor guide: observe that –

The capacity of the ladle is checked against the required pour in accordance with standard operating procedures.

Assessor guide: confirm that –

The consequences of undersizing the ladle can be identified.

Element 4.7A.2 Preheat or prepare ladle**Criteria 4.7A.2.1**

Ladle is preheated/prepared to receive molten metal.

Assessor guide: observe that –

The ladle is preheated to the appropriate temperature to receive the liquid metal in accordance with standard operating procedures.

Assessor guide: confirm that –

The temperature to which the ladle is to be preheated can be identified. The procedures for preparing the ladle to receive hot metal can be given. The possible consequences of pouring liquid metal into an inappropriately preheated/prepared ladle can be explained.

Element 4.7A.3 Transfer ladle to furnace**Criteria 4.7A.3.1**

Safety clips checked according to standard operating procedures.

Assessor guide: observe that –

The safety clips are checked for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The purpose of the safety clips can be explained. The procedures for checking the correct operation of the safety clips can be given.

Criteria 4.7A.3.2

Ladle filled and transferred to pouring area in accordance with standard operating procedures.

Assessor guide: observe that –

The ladle is filled safely from the furnace in accordance with standard operating procedures. The ladle is transferred safely to the pouring area in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for filling the ladle can be given. The hazards associated with the filling of the ladle with liquid metal can be identified. The procedures for transferring the ladle to the pouring area can be given. The hazards associated with transferring liquid metal in a ladle can be identified. The safety precautions to be taken during filling and transfer of the ladle can be identified.

Criteria 4.7A.3.3

Additives determined from specification and added to molten metal as required.

Assessor guide: observe that –

Assessor guide: confirm that –

Element 4.7A.4 Maintain quality of metal as required

Criteria 4.7A.4.1

Slag/dross removed where necessary.

Assessor guide: observe that –

Where appropriate, the slag/dross is safely removed from the ladle in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing slag/dross from the ladle can be given. The safety precautions to be taken when removing slag/dross from the ladle can be identified.

Criteria 4.7A.4.2

Temperature monitored as required.

Assessor guide: observe that –

Where appropriate, the temperature of the liquid metal in the ladle is monitored in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedure for monitoring the temperature of liquid metal in the ladle can be given. The appropriate measuring device for monitoring the temperature of liquid metal in the ladle can be identified.

Criteria 4.7A.4.3

Chemical analysis is taken and remedial action applied as required to standard operating procedures.

Assessor guide: observe that –

Where appropriate, a chemical analysis of the liquid metal in the ladle is taken in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate remedial action required to maintain the chemical analysis in accordance with standard operating procedure can be identified.

Element 4.7A.5 Pour molten metal

Criteria 4.7A.5.1

Personnel in immediate area of the metal pour informed that pour is to take place and appropriate safety clothing and equipment is used as specified in standard operating procedures.

Assessor guide: observe that –

The characteristics of the mould are checked for conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking moulds prior to pouring can be given. The characteristics of the mould to be checked can be identified. The consequences of pouring liquid metal into a mould whose characteristics do not conform to specifications can be explained.

Criteria 4.7A.5.2

Metal is poured safely to specification and in accordance with standard operating procedures.

Assessor guide: observe that –

A test bar is poured in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for pouring test bars can be given. The reasons for pouring test bars can be explained.

Criteria 4.7A.5.3

Metal is poured at an appropriate and continuous rate.

Assessor guide: observe that –

The liquid metal is poured so as to minimise porosity and lamination in the casting in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed when pouring liquid metal into moulds can be given. The causes of porosity and lamination in castings can be identified.

Criteria 4.7A.5.4

Test bar is poured in accordance with standard operating procedures as required.

Assessor guide: observe that –

The liquid metal is poured at a continuous and appropriate rate in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for ensuring that pours are continuous and at an appropriate rate can be given. The effects of non-continuous pours and/or inappropriate pouring rates on casting quality and personal safety can be identified.

Element 4.7A.6 Empty excess metal from ladle**Criteria 4.7A.6.1**

Pigs poured and tagged.

Assessor guide: observe that –

Any unused liquid metal is poured into pigs and correctly tagged in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for pouring pigs can be given. The reasons for pouring pigs and tagging them can be explained.

Element 4.7A.7 Return ladle**Criteria 4.7A.7.1**

Ladle emptied, cleaned and maintained according to standard operating procedures.

Assessor guide: observe that –

The ladle is emptied, cleaned and maintained in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for emptying, cleaning and maintaining ladles can be given. The tools and equipment necessary to clean and maintain ladles can be identified. The safety precautions to be taken when cleaning and maintaining ladles can be identified.

Range statement

This unit applies to manual pouring of molten metal as part of foundry processes. Work may be carried out autonomously or as part of a work team and to predetermined specifications and standards of quality and safety. This unit should not be selected for one-off pouring of molten metal undertaken for sample castings in toolmaking manufacturing and maintenance of wires, ropes and slings, re-metalling of bearings, etc. Operational maintenance of ladles may include routine lubrication of ladles as well as repairs and cleaning of refractory. Where lifting and moving of ladles requires the use of overhead cranes appropriate materials handling units should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the pouring of liquid metal or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.8A A Fettle and trim metal castings/forgings

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 4

Pre-requisite units - Path 1

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 4.8A.1 Determine job requirements

Criteria 4.8A.1.1

Job instructions and specifications interpreted and understood.

Assessor guide: observe that –

Job instructions/specifications are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The tasks to be undertaken can be identified. The specifications to be achieved can be identified.

Criteria 4.8A.1.2

Correct mouldings and/or castings/forgings located and arranged for efficient processing.

Assessor guide: observe that –

The correct castings are located. The castings are arranged for efficient processing in accordance with standard operating procedures.

Assessor guide: confirm that –

Element 4.8A.2 Observe safety requirements

Criteria 4.8A.2.1

Personal protection equipment selected and used correctly.

Assessor guide: observe that –

The excess metal to be removed is correctly identified. The casting is visually checked for suitability for further processing in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for removing excess metal can be given. Casting defects that cannot be rectified by fettling or trimming can be identified. The reasons for not proceeding with the processing of castings with visually detected defects can be given.

Criteria 4.8A.2.2

Castings/forgings handled using appropriate manual or mechanical handling procedures.

Assessor guide: observe that –

The appropriate handling procedure is carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate handling procedure can be identified.

Criteria 4.8A.2.3

Castings/forgings are stored or positioned in a safe manner.

Assessor guide: observe that –

All casting and forging are positioned safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The standard operating procedure for safely positioning castings/forging can be identified.

Element 4.8A.3 Identify excess material for removal**Criteria 4.8A.3.1**

Remove casting from mould and/or remove sand media from casting as required.

Assessor guide: observe that –

Where appropriate, hand tools are correctly selected and used in accordance with standard operating procedures.

Assessor guide: confirm that –

Hand tools and their application to fettling and trimming processes can be identified.

Criteria 4.8A.3.2

Castings/forgings visually checked as suitable for further processing and excess metal correctly identified in accordance with standard operating procedures.

Assessor guide: observe that –

Where appropriate, power tools are correctly selected and used in accordance with standard operating procedures.

Assessor guide: confirm that –

Power tools and their application to fettling and trimming processes can be identified. The grades of grinding disks/belts and their application can be given.

Element 4.8A.4 Select correct tools and equipment**Criteria 4.8A.4.1**

Appropriate cleaning method selected. Rumbling/shot blast/sand blast equipment set to specification and used in accordance with standard operating procedures as required.

Assessor guide: observe that –

Excess metal is removed using appropriate methods and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Appropriate combinations of tools and equipment can be identified to remove excess metal efficiently and achieve specified surface finishes.

Criteria 4.8A.4.2

Appropriate hand tools selected and used eg: files, chisels, hammers etc.

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 4.8A.4.3

Appropriate power tools and accessories selected and used eg: saws, croppers, grinding disks/belts (including grades), swing and pedestal grinders etc.

Assessor guide: observe that –

Assessor guide: confirm that –

Element 4.8A.5 Remove excess material**Criteria 4.8A.5.1**

Excess metal (eg: runners, risers and flashing) removed using appropriate methods and equipment in accordance with standard operating procedures.

Assessor guide: observe that –

The appropriate personal protection equipment is selected and worn. All equipment safety guards are in place and used correctly.

Assessor guide: confirm that –

The hazards associated with fettling and trimming metal can be identified. Personal protective equipment and its application can be identified.

Criteria 4.8A.5.2

Excess metal suitable for recycling identified in accordance with standard operating procedures.

Assessor guide: observe that –

Castings are handled in accordance with legal requirements, company procedures and National Occupational Health and Safety Commission Guidelines. Where appropriate, mechanical handling equipment is used safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for safe lifting and manual handling of castings can be given. The mechanical handling devices available at the work site and their application can be identified.

Criteria 4.8A.5.3

Excess metallic materials are identified from specifications and isolated as required according to standard operating procedures.

Assessor guide: observe that –

The excess material to be trimmed is identified in accordance with standard operating procedures.

Assessor guide: confirm that –

Element 4.8A.6 Castings/forgings quality assessed**Criteria 4.8A.6.1**

Castings/forgings visually checked for conformance with specifications following standard operating procedures.

Assessor guide: observe that –

Castings are visually checked for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 4.8A.6.2

Castings/forgings rejected or set aside and identified for further consideration or remedial action in accordance with standard operating procedures.

Assessor guide: observe that –

Where appropriate, castings are rejected, set aside for further consideration or remedial action in accordance with standard operating procedures.

Assessor guide: confirm that –

The casting defects that can be remedied by further work can be identified. The casting defects that cannot be remedied by further work can be identified.

Criteria 4.8A.6.3

Faults reported/recorded as required using standard operating procedures.

Assessor guide: observe that –

Where appropriate, casting defects are reported/recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The reporting/recording requirements for casting defects detected can be identified.

Element 4.8A.7 Protects castings/forgings from damage**Criteria 4.8A.7.**

Assessor guide: observe that –

Assessor guide: confirm that –

Range statement

This unit is intended to apply to the skills used in the dressing of castings/forgings formed by a variety of processes. Work is carried out autonomously or as part of a work team. Equipment used may include saws, croppers, grinders, rumbling equipment etc. Flame and air arc cutting equipment is covered by another unit. For preparation of surfaces using blasting processes including hydro-blast, refer to Unit 8.11A (Undertake surface preparation using solvents and/or mechanical means). Where lifting and moving moulds and/or castings/forgings requires the use of mobile loadshifting equipment or overhead cranes, appropriate materials handling units should also be selected. Where production packaging and labelling of the finished product is required Unit 11.6A (Production packaging) should also be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fettling and trimming of metal castings, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.9A B Inspect/test castings/forgings

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 6

This unit covers the competencies required to inspect castings and forgings including assessing the quality of the casting/forging, identifying defects, testing the castings/forging and instigating corrective action.

Pre-requisite units - Path 1

4.2A Gravity die casting

9.2A Interpret technical drawing

13.4A Work safely with molten metals/glass

Pre-requisite units - Path 2

4.3A Operate pressure die casting machine

9.2A Interpret technical drawing

13.4A Work safely with molten metals/glass

Pre-requisite units - Path 3

4.5A Produce moulds and cores by hand (jobbing)

9.2A Interpret technical drawing

18.1A Use hand tools

Pre-requisite units - Path 4

6.1A Hand forging

9.2A Interpret technical drawing

18.1A Use hand tools

Pre-requisite units - Path 5

6.2A Hammer forging

9.2A Interpret technical drawing

Element 4.9A.1 Assess castings/forgings

Criteria 4.9A.1.1

Drawings correctly interpreted

Assessor guide: observe that –

All relevant drawings, instructions and specifications are obtained in accordance with workplace procedures

Assessor guide: confirm that –

The key features and specifications of the castings/forgings can be correctly identified

Criteria 4.9A.1.2

Measuring equipment correctly selected and used casting/forging for conformance to specification

Assessor guide: observe that –

The appropriate measuring equipment is used to check the features of the casting/forging can be identified The

Assessor guide: confirm that –

The appropriate measuring equipment to measure the key reasons for selecting the chosen measuring equipment can be given

Element 4.9A.2 Identify casting/forging defects

Criteria 4.9A.2.1

Correct sampling procedure applied according to standard operating procedures

Assessor guide: observe that –

The correct sampling procedure is used to check castings/forgings for defects in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for sampling castings/forgings can be given The frequency with which castings/forgings are to be checked for defects can be identified

Criteria 4.9A.2.2

Defective castings/forgings are correctly identified and isolated

Assessor guide: observe that –

Where appropriate, defective castings/forgings are identified and isolated in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for isolating defective castings/forgings can be given The defects for which castings/forgings are to be tested can be identified The reasons for carrying out tests for each of these types of defect can be explained

Criteria 4.9A.2.3

Possible causes of defects identified

Assessor guide: observe that –

Assessor guide: confirm that –

The possible causes for each type of casting/forging defect identified can be given

Element 4.9A.3**Test castings/forgings****Criteria 4.9A.3.1**

Appropriate testing carried out to assess surface defects using standard operating procedures

Assessor guide: observe that –

Castings/forgings are tested for surface defects using appropriate tools, equipment and techniques in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for testing castings/forgings for surface defects can be given The methods of testing for surface defects can be identified The tools, equipment and techniques necessary for testing surface defects can be identified The reasons for selecting the chosen test method can be explained

Criteria 4.9A.3.2

Appropriate testing carried out to assess bend, tension, hardness, tensile, strength etc. as required using standard operating procedures

Assessor guide: observe that –

The physical properties of the cast metal are tested using appropriate tools, equipment and techniques in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for testing the physical properties of the cast metal can be given The methods of testing for each of the physical properties of the cast metal can be identified The tools, equipment and techniques necessary for testing the physical properties of the cast metal can be identified The reasons for selecting the chosen test methods can be explained

Criteria 4.9A.3.3

Non-destructive testing is carried out to assess internal defects as required using standard operating procedures

Assessor guide: observe that –

Castings/forgings are tested for cracks and internal defects using appropriate non-destructive tests in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for carrying out non-destructive tests on castings/forgings for cracks and internal defects can be given Non-destructive testing methods and their application can be given The tools, equipment and techniques required to carry out each of the non-destructive tests can be identified The reasons for selecting the chosen non-destructive test(s) can be explained

Criteria 4.9A.3.4

If applicable, pressure testing of castings/forgings is performed

Assessor guide: observe that –

Where appropriate, castings/forgings are pressure tested using appropriate tools, techniques and equipment in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for pressure testing castings/forgings can be given The safety precautions to be taken when pressure testing castings/forgings can be identified The tools, techniques and equipment necessary to pressure test castings/forgings can be identified

Criteria 4.9A.3.5

All test results are accurately recorded and/or reported to appropriate authority using standard operating procedures

Assessor guide: observe that –

All test results are accurately recorded in accordance with standard operating procedures Where appropriate, test results are reported to the appropriate authority in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for recording and reporting test results can be given The person to whom test results are to be reported can be identified The reasons for accurately recording all test results can be explained

Element 4.9A.4 Instigate corrective action**Criteria 4.9A.4.1**

Knowledge of casting/forging process is applied in the alteration of the process to eliminate identified faults

Assessor guide: observe that –

All test results are obtained in accordance with standard operating procedures Proposed changes to the casting/forging process are reported to the appropriate authority/instigated in accordance with standard operating procedures

Assessor guide: confirm that –

Any defects detected in the casting/forging can be identified Any physical properties of the cast metal not conforming to specification can be identified The probable causes of any defects or non-conformances detected can be given Changes to the casting/forging process are proposed to eliminate the identified defects/non-conformances The reasons for the proposed alterations to the casting/forging process can be explained The person to whom proposed changes are to be reported can be identified The procedures for reporting/instigating proposed changes to the casting/forging process can be given

Range statement

This unit applies to persons required to respond to quality problems in a range of castings/forgings. The acceptance/inspection of first off products may also be required. Testing activities will be in accordance with standard operating procedure and may include where required, dimensional inspection, crack detection, dye/penetrant inspection, magnetic particle, x-ray and ultrasound etc. Work is carried out autonomously or as part of a work team, to predetermined specifications and standards of quality and safety. Where knowledge of the casting/forging process is not required and inspection skills are needed Unit 15.4A (Perform inspection (basic)) may be considered instead of this unit.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the inspection of castings or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.10A A Develop and manufacture wood patterns

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 20

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

2.13C5 Perform mathematical computations

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

2.7C10 Perform computations - basic

4.18A General woodworking machine operations

12.6A Mark off/out (general engineering)

2.8C10 Perform computations

9.1A Draw and interpret sketch

18.1A Use hand tools

Element 4.10A.1 Determine job requirements

Criteria 4.10A.1.1

Job instructions and specifications interpreted and understood.

Assessor guide: observe that –

All relevant written instructions, sketches or drawings have been received and used.

Assessor guide: confirm that –

Those instructions, sketches or drawings have been interpreted correctly.

Criteria 4.10A.1.2

Moulding/casting techniques and foundry processes are applied to determine type of wood pattern required.

Assessor guide: observe that –

The pattern/corebox will meet the requirements for the predetermined moulding/casting techniques and foundry process.

Assessor guide: confirm that –

The moulding/casting techniques and foundry process can be identified.

Criteria 4.10A.1.3

Appropriate timber/timber composites selected to meet specification.

Assessor guide: observe that –

The appropriate timber has been selected for ease of working, stability, durability and strength, to suit the predetermined moulding/casting techniques and foundry process.

Assessor guide: confirm that –

The consequences of selecting inappropriate materials, can be identified.

Element 4.10A.2 Develop and lay out wood patterns

Criteria 4.10A.2.1

Calculate pattern parameters eg: angles, tapers, clearances, contractions etc. to specification.

Assessor guide: observe that –

The calculations necessary for manufacturing the pattern and corebox have been carried out, i.e. contraction, taper, clearances, etc.

Assessor guide: confirm that –

The calculus necessary to carry out those calculations can be identified.

Criteria 4.10A.2.2

Lay out pattern showing tapers, machining allowances, core prints and method of construction to specification.

Assessor guide: observe that –

The pattern/corebox has been laid out showing contraction, tapers, machining allowance, core prints, clearances, pattern/corebox construction, and conforms to drawings, sketches, tolerances and to the predetermined specifications.

Assessor guide: confirm that –

The consequences of not laying out the pattern in detail and with all known specifications can be identified.

Criteria 4.10A.2.3

Develop and manufacture jigs and fixtures to aid wood pattern manufacture as required.

Assessor guide: observe that –

Any jigs and fixtures required for manufacture have been developed and manufactured.

Assessor guide: confirm that –

The reasons why those particular manufacturing aids are required, and their use identified.

Element 4.10A.3 Manufacture wood patterns**Criteria 4.10A.3.1**

Materials marked out and construction developed to meet specification.

Assessor guide: observe that –

The construction of the patterns/corebox will meet the requirements for the predetermined moulds/casting technique and foundry process.

Assessor guide: confirm that –

The reason why that particular construction has been used and that other methods can be identified and the consequences of using those methods.

Criteria 4.10A.3.2

Using acceptable wood pattern making techniques, procedures and utilising appropriate hand and hand held power tools, pattern or pattern component parts are produced to size and shape and checked for compliance to specifications.

Assessor guide: observe that –

The completed pattern/corebox, complies with the pattern layout, drawings, sketches and contraction, predetermined specifications and the chosen moulding/ casting technique. Split patterns and coreboxes are accurately located, one half to the other by using appropriate dowels or location techniques. Turned patterns are either built up with segments or laminated in such a manner as to reduce timber shrinkage and distortion. Solid patterns, where necessary, are set up on a joint board for ease of moulding, and that the joint line does not develop knife edges of sand, and that all pockets are mouldable. The surface finish is mouldable, tapers are true and straight radii and fillets are true and where necessary, lifting devices are in place. The necessary checking procedures have been carried out.

Assessor guide: confirm that –

The appropriate hand, and hand held power tools and necessary machinery can be identified. The consequences of split patterns turned between centres, not being correctly centred, and the methods of centring can be identified. The reason why that particular type of pattern has been manufactured. Other types of patterns can be identified, and the consequences of using those types. The meaning of mouldable can be identified i.e. surface finish is smooth, tapers are flat, not concave or convex, there are no undercuts, etc. The necessary checking devices have been used and identified. The necessary checking procedures have been carried out.

Criteria 4.10A.3.3

Using acceptable wood pattern making techniques and procedures, pattern component parts are joined or fixed as required and checked for compliance to specification.

Assessor guide: observe that –

The component parts required to manufacture the patterns/corebox are joined/fixed to the main body by using appropriate fixing techniques, eg: glue, nails, screws, dovetails, double round and straight keys, spigot, dowels, butt joints, half lap, spline, etc.

Assessor guide: confirm that –

The various joining and fixing techniques can be identified and the reason why that particular fixing has been used.

Criteria 4.10A.3.4

Pattern correctly marked, colour coded or tagged in compliance with specifications or standard operational procedures.

Assessor guide: observe that –

The completed pattern/corebox has been marked with any necessary identification numbers, colour coded to identify the casting area, core prints, loose pieces, stop off, etc.

Assessor guide: confirm that –

The necessary colour coding can be identified and the consequences of wrong colour code being used.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. All specifications interpreted from drawings, technical sketches and/or customer requirements. Tasks undertaken utilise appropriate wood pattern making principles and techniques, designated procedures, correct and appropriate tools and equipment. This unit covers the manufacture of all types of solid, split and turned wood patterns and wood pattern component parts, including but is not limited to general engineering patterns, master patterns with multiple contraction, skeleton, frame and strickle, wheels, pulleys, chain sheaves, impellers etc. Patterns may be constructed by laminating timber and timber composites, stave and lag, box or frame construction or any alternative method that minimises timber shrinkage, warpage and achieves required strength and a full range of timber and timber composites may be used. Solid patterns may be set up on a regular or irregular joint, turned patterns are manufactured using tools and machines appropriate for shaping wood. If patterns are set up on pattern plates see Unit 4.12A (Assemble plated patterns). For the development and manufacture of marine propellers, conveyor screws, cast gears etc. Unit 4.17A (Develop and manufacture gear, conveyor screw and propeller patterns) should also be considered; where precision measurement is required, Unit 12.3A (Precision mechanical measurement) should also be considered. This unit should not be selected when Unit 18.14A (Tool, gauge and die manufacture) has already been selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the development and manufacture of wood patterns or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.11A A Produce polymer patterns

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

7.5A Perform general machining

9.2A Interpret technical drawing

13.3A Work safely with industrial chemicals and materials

18.1A Use hand tools

Element 4.11A.1 Inspect and prepare patterns and cores

Criteria 4.11A.1.1

Patterns or cores inspected for appropriate surface finish and set up on jointline or flat board to specification.

Assessor guide: observe that –

The patterns or cores are sealed with appropriate surface finish and are set up with necessary locations, datums, stripping devices, frames and any special foundry requirements, eg; anticrush, fillets, sand traps, etc. Ensure that datum boards or joint boards are flat and the patterns or cores are securely attached and are flat on the board.

Assessor guide: confirm that –

The consequences of the pattern or core not being surface finished or set up correctly, can be identified.

Criteria 4.11A.1.2

Appropriate parting agent selected and applied to polymer specifications.

Assessor guide: observe that –

The parting agent has been applied evenly and it covers the complete area to be covered with polymer.

Assessor guide: confirm that –

The appropriate parting agent has been used, that other parting agents can be identified and the consequences of using those parting agents.

Element 4.11A.2 Manufacture moulds, patterns, tooling aids etc.

Criteria 4.11A.2.1

Appropriate polymer materials selected to specification.

Assessor guide: observe that –

The appropriate polymer has been selected for that type of pattern, corebox, tooling aid or master mould.

Assessor guide: confirm that –

The complete range of polymers used in the field of pattern making can be identified and the consequences of selecting an inappropriate polymer can be identified.

Criteria 4.11A.2.2

Polymer and hardener mixed to correct ratios and specifications using standard safety and operating procedures.

Assessor guide: observe that –

The polymer and hardener has been mixed thoroughly with minimum air entrapment.

Assessor guide: confirm that –

The correct ratio of polymer to hardener has been used and that any calculations required to determine that ratio have been carried out correctly Identify the consequences of the wrong ratio or incorrect weight measurements being used.

Criteria 4.11A.2.3

Polymer applied to specification and using predetermined methods, ensuring that air is not entrapped in application, excessive heat is not generated and delamination does not occur in final use.

Assessor guide: observe that –

The polymer is applied evenly, that vertical walls are not thinly coated and that no excessive build-up of polymer occurs in pockets. Ensure that air is not trapped while polymer is applied and that the time between applying successive layers is not excessive.

Assessor guide: confirm that –

The reasons for excessive heat generation, air pockets and delamination can be identified and the consequences of those problems explained.

Criteria 4.11A.2.4

Pattern/core box stripped, inspected, cleaned and repaired as required.

Assessor guide: observe that –

The pattern/corebox or tooling aid is stripped using lifting devices to obtain an even lift and in a manner to not damage the equipment. Parting agent has been removed and the equipment has been cleaned. Any repairs have been carried out in a manner to ensure that it has been securely adhered or keyed.

Assessor guide: confirm that –

Various methods of stripping and repairs can be identified.

Criteria 4.11A.2.5

Faces of polymer pattern are machined and finished to specifications.

Assessor guide: observe that –

Those patterns/coreboxes or tooling aids require machining have been machined to drawing/sketches or verbal instruction.

Assessor guide: confirm that –

The various machines used, and their operation can be identified.

Criteria 4.11A.2.6

Appropriate method of location applied to patterns and core boxes.

Assessor guide: observe that –

Where pattern/coreboxes require location, ensure the location is appropriate for that type of equipment and the correct line up has been obtained.

Assessor guide: confirm that –

The various types of location can be identified.

Criteria 4.11A.2.7

Polymer tooling checked for compliance with specifications as required.

Assessor guide: observe that –

The necessary checking procedures have been carried out.

Assessor guide: confirm that –

The measuring devices can be identified. The equipment conforms to drawings/sketches and specifications.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workplace procedures. All specifications interpreted from drawings, technical sketches and/or customer requirements. Tasks undertaken utilise appropriate polymer pattern making principles, techniques, designated procedures, correct and appropriate tools, equipment and covers the manufacture of polymer patterns, core boxes, tooling aids, jigs and checking fixtures etc. using various methods of construction including but not limited to solid polymer, sand filled, laminated fibreglass or metal inserts etc.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the production of polymer patterns or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.12A A Assemble plated patterns

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

2.13C5 Perform mathematical computations

9.1A Draw and interpret sketch

18.1A Use hand tools

2.7C10 Perform computations - basic

4.10A Develop and manufacture wood patterns

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

2.8C10 Perform computations

4.18A General woodworking machine operations

12.6A Mark off/out (general engineering)

Element 4.12A.1 Determine job requirements

Criteria 4.12A.1.1

Job instructions and specifications interpreted and understood.

Assessor guide: observe that –

All relevant written instructions, sketches or drawings have been received and used.

Assessor guide: confirm that –

Those instructions, sketches or drawings have been interpreted correctly.

Element 4.12A.2 Inspect and layout patterns

Criteria 4.12A.2.1

Pattern(s) inspected to ensure size and surface finish conforms to specifications, location dowels are tight and pattern halves are correctly aligned.

Assessor guide: observe that –

The surface finish complies to the predetermined moulding process. The tapers are straight and true. The location dowels are tight. There is no mismatch or cross joining.

Assessor guide: confirm that –

The necessary checking devices have been used and the necessary checking procedures have been carried out.

Criteria 4.12A.2.2

Lay out pattern and runner system to specifications from drawings, sketches or verbal instructions.

Assessor guide: observe that –

The patterns and runner systems have been laid out to the predetermined instructions, drawings or sketches.

Assessor guide: confirm that –

The reason for using that particular layout and runner system can be identified. The various types of pattern plates can be identified, eg: cope and drag, double sided, core mould etc.

Element 4.12A.3 Mount pattern on plates**Criteria 4.12A.3.1**

Cope and drag patterns/double sided match plate patterns are attached to pattern plate/s according to specification.

Assessor guide: observe that –

Those patterns mounted on either cope and drag plates, or double sided match plates, are securely attached to the pattern plate or to one another through the pattern plate, by using appropriate screws/fixing techniques.

Assessor guide: confirm that –

The various methods of fixing and drilling techniques can be identified.

Criteria 4.12A.3.2

Cope and drag patterns/double sided match plate patterns are inspected for security and alignment.

Assessor guide: observe that –

The patterns are flat on the plate, located correctly on their location dowels and lined up from cope to drag, in relation to the moulding box pin-centres.

Assessor guide: confirm that –

The techniques for determining cross jointing or mismatch of the pattern and their relationship to the pin-centres can be identified. The consequences if these problems are not identified.

Element 4.12A.4 Mount runner system**Criteria 4.12A.4.1**

Volume of runner system and area of in-gates calculated to conform to specification and manufactured as required.

Assessor guide: observe that –

The runner system has been manufactured to drawings/sketches and specifications.

Assessor guide: confirm that –

The runner system volume and the area of in-gates are correctly calculated to the predetermined specifications.

Criteria 4.12A.4.2

Runner components attached to pattern plates using appropriate fixing and joining techniques to specification.

Assessor guide: observe that –

The runner components have been attached securely to the pattern plate by using appropriate screw/fixing techniques and that any joint/gaps are filled and filleted.

Assessor guide: confirm that –

The consequences of poorly fitted runner system can be identified.

Element 4.12A.5 Inspect plated pattern assembly**Criteria 4.12A.5.1**

Surface and mouldability of plated pattern assembly inspected for compliance with specifications.

Assessor guide: observe that –

Both the pattern and the runner system complies to the predetermined pattern plate layout. The surface finish on both patterns and runners are mouldable. The pattern plates have the necessary pins or bushes and any other necessary pattern plate fixing holes required to suit the predetermined moulding/casting process.

Assessor guide: confirm that –

The various types of pattern plates can be identified. The meaning of mouldable can be identified, i.e. surface finish is smooth, tapered faces are flat, not convex or concave, there are no undercuts, etc.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. All specifications interpreted from drawings, technical sketches and/or customer requirements. Tasks undertaken utilise appropriate pattern making principles and techniques, designated procedures, correct and appropriate tools and equipment and covers the manufacture of all types of plated patterns utilising a range of materials such as, timber, timber composite and metal. It covers the manufacture (when appropriate) and mounting of runner systems. This unit does not address machining competencies if these are required appropriate units should also be accessed. For cast aluminium plates see Unit 4.14A (Develop and manufacture production patterns). Where the manufacture of polymer plated patterns is required Unit 4.11A (Produce polymer patterns) should also be accessed. Where precision measurement is required, Unit 12.3A (Precision mechanical measurement) should also be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the assembly of plated patterns or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.13A A Develop and manufacture polystyrene patterns

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 2

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

2.13C5 Perform mathematical computations

9.1A Draw and interpret sketch

18.1A Use hand tools

2.7C10 Perform computations - basic

4.10A Develop and manufacture wood patterns

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

2.8C10 Perform computations

4.18A General woodworking machine operations

12.6A Mark off/out (general engineering)

Element 4.13A.1 Determine job requirements

Criteria 4.13A.1.1

Drawings, instructions and specifications interpreted and understood.

Assessor guide: observe that –

All relevant written instructions, sketches or drawings have been received and used.

Assessor guide: confirm that –

Those instructions, sketches or drawings have been interpreted correctly.

Criteria 4.13A.1.2

Appropriate grade/type of polystyrene selected to meet specifications.

Assessor guide: observe that –

The polystyrene selected is appropriate for that type of pattern or foundry process.

Assessor guide: confirm that –

The various types of polystyrene can be identified.

Element 4.13A.2 Mark out pattern

Criteria 4.13A.2.1

Perform appropriate calculations to determine contraction allowance etc.

Assessor guide: observe that –

Those calculations necessary for the pattern manufacture have been carried out, eg: contraction etc.

Assessor guide: confirm that –

The calculus necessary to perform those calculations can be identified.

Criteria 4.13A.2.2

Mark out pattern/pattern components to meet specifications.

Assessor guide: observe that –

The polystyrene has been marked out to meet the pattern and pattern component manufacturing requirements and conforms to specifications.

Assessor guide: confirm that –

The marking out tools and devices can be identified. The reason why taper or cores are not required, can be identified.

Element 4.13A.3 Manufacture pattern**Criteria 4.13A.3.1**

Pattern components are correctly jointed and secured using appropriate adhesives.

Assessor guide: observe that –

The type of adhesive used is correct for the job. The method of joining and securing the various component parts.

Assessor guide: confirm that –

The various types of adhesive can be identified and the consequences of the wrong adhesive being used.

Criteria 4.13A.3.2

Appropriate tools selected and techniques used to manufacture polystyrene patterns to specification.

Assessor guide: observe that –

The tools selected to shape and manufacture the patterns are appropriate.

Assessor guide: confirm that –

All the various tools used in the manufacture of polystyrene patterns can be identified.

Criteria 4.13A.3.3

Pattern is checked for compliance with specifications and correctly marked for identification.

Assessor guide: observe that –

The completed pattern has been checked using the necessary checking procedure and checking devices to determine that the pattern conforms to specifications. The pattern has been marked for identification.

Assessor guide: confirm that –

The checking procedure and checking devices can be identified.

Element 4.13A.4 Protect pattern from damage**Criteria 4.13A.4.1**

Patterns are handled and stored in a safe manner least likely to cause damage using standard operating procedures.

Assessor guide: observe that –

Care has been taken in handling and storing the completed pattern.

Assessor guide: confirm that –

The consequences of rough handling and incorrect storage can be identified.

Range statement

This unit covers all patterns using polystyrene, including patterns for the Lost Foam Process and for those areas on a wood pattern and core box where polystyrene is required. Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. All specifications interpreted from drawings, technical sketches and/or customer requirements. Where holes are required in the final casting they are built into the pattern as specified. Allowances are made for contraction and machining. Where precision measurement is required, Unit 12.3A (Precision mechanical measurement) should also be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the development and manufacture of polystyrene patterns or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.14A A Develop and manufacture production patterns

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
 2.13C5 Perform mathematical computations
 4.18A General woodworking machine operations
 9.2A Interpret technical drawing
 18.2A Use power tools/hand held operations

2.7C10 Perform computations - basic
 4.10A Develop and manufacture wood patterns
 7.5A Perform general machining
 12.6A Mark off/out (general engineering)

2.8C10 Perform computations
 4.12A Assemble plated patterns
 9.1A Draw and interpret sketch
 18.1A Use hand tools

Element 4.14A.1 Determine job requirements

Criteria 4.14A.1.1

Drawings, instructions and specifications interpreted and understood.

Assessor guide: observe that –

All relevant written instructions, sketches, drawings or sample components have been received and used.

Assessor guide: confirm that –

Those instructions, sketches or drawings have been interpreted correctly.

Criteria 4.14A.1.2

Pattern type and design conceptualised and planned with reference to customer's specification (written or verbal) for number, layout, runner system and core box design.

Assessor guide: observe that –

The number of patterns, pattern layout, runner system and core box design, have been planned with reference to customer requirements and the predetermined moulding/casting process.

Assessor guide: confirm that –

The predetermined moulding/casting and core making process can be identified.

Criteria 4.14A.1.3

Pattern design is interpreted and visualised from drawings, prints or plans and checked against customer requirements.

Assessor guide: observe that –

Where metal patterns and coreboxes are fully machined without the use of pattern aids, i.e CAD/CNC. That the pattern equipment has been visualised and interpreted correctly from drawings, customer instructions and foundry requirements.

Assessor guide: confirm that –

The programming and machining process/processes, can be identified.

Criteria 4.14A.1.4

Plan developed for sequence of manufacture for either a high or low volume foundry production pattern.

Assessor guide: observe that –

A planned sequence of manufacture has been developed for high volume tooling, eg: pre-matching, datum tooling holes pantographing, copy mill, handwork, finish machining, venting, etc. A planned sequence of manufacture has been developed for low volume tooling, eg: joint line either sanded or milled, dowelled, handwork, etc.

Assessor guide: confirm that –

The developed sequence of manufacture can be identified for both higher and low volume tooling, and the consequences of not following that developed sequence of manufacture can be identified.

Element 4.14A.2 Develop pattern equipment**Criteria 4.14A.2.1**

Appropriate materials selected and obtained to meet requirements of strength, durability and component finish etc.

Assessor guide: observe that –

The materials selected meet with the requirements for the predetermined moulding/casting process for strength, durability and surface finish.

Assessor guide: confirm that –

The various materials used for the manufacture of metal patterns and core boxes, can be identified and the reason for their use.

Criteria 4.14A.2.2

Calculations appropriate to establishing pattern parameters are performed, including angles, tapers, contraction, etc. where applicable.

Assessor guide: observe that –

Those calculations necessary to establish contraction tapers, clearances etc., have been carried out.

Assessor guide: confirm that –

The calculus necessary to perform those calculations are understood.

Element 4.14A.3 Perform machining operations**Criteria 4.14A.3.1**

Appropriate machines and machining process selected to shape/produce production patterns and core boxes to specification.

Assessor guide: observe that –

The range of machine tools selected is appropriate for the manufacture of the equipment to size and specifications, i.e. mills, pantographs, copymill, lathe etc.

Assessor guide: confirm that –

The range of machine tools and their operation can be identified.

Element 4.14A.4 Use hand and hand held power tools**Criteria 4.14A.4.1**

A range of hand and hand held power tools are selected to fashion/manufacture production patterns and core boxes to specification.

Assessor guide: observe that –

The range of hand and hand held power tools is appropriate for the manufacture of the equipment to size and specification.

Assessor guide: confirm that –

The range of hand and hand held power tools and their correct use, identified.

Criteria 4.14A.4.2

Production patterns and core boxes checked to specification and surface finish checked for mouldability.

Assessor guide: observe that –

The pattern/core box equipment has been checked using the necessary checking procedures and the necessary checking devices to determine that the equipment conforms to drawings/sketches, specifications and the predetermined moulding/casting process. The surface finish is suitable for sand moulding and that all tapers, fillets and radii are true and mouldable.

Assessor guide: confirm that –

The necessary checking procedures and checking devices can be identified. The hand work has been carried out accurately without the loss of size or shape. The consequences of inaccurate and poorly finished hand work can be identified. The meaning of mouldable can be identified, i.e. surface finish is smooth, tapered faces are flat, not concave or convex, there are no undercuts.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. All specifications interpreted from drawings, technical sketches and/or customer requirements. Tasks undertaken utilise appropriate pattern making principles and techniques, designated procedures, correct and appropriate tools and equipment and covers the manufacture of all types of metal patterns, core boxes and associated equipment including cast plates etc. Patterns may be loose, integral with the plate or mounted to the plates with gating, depending upon specifications production core boxes also may be loose or mounted into core box rigs etc, depending upon specifications. Patterns and core boxes are manufactured from a range of ferrous, non-ferrous and alloy materials using conventional metal cutting machines, including pantograph and copy mills etc. Patterns and core boxes are finished using appropriate hand working equipment. Where the manufacture of polymer production patterns is required, Unit 4.11A (Produce polymer patterns) should be considered. Where precision measurement is required, Unit 12.3A (Precision mechanical measurement) should also be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the development and manufacture of production patterns or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.15A A Develop and manufacture vacuum forming moulds and associated equipment

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 6

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
 2.13C5 Perform mathematical computations
 4.12A Assemble plated patterns
 7.5A Perform general machining
 12.6A Mark off/out (general engineering)
 18.2A Use power tools/hand held operations

2.7C10 Perform computations - basic
 4.10A Develop and manufacture wood patterns
 4.14A Develop and manufacture production patterns
 9.1A Draw and interpret sketch
 13.3A Work safely with industrial chemicals and materials

2.8C10 Perform computations
 4.11A Produce polymer patterns
 4.18A General woodworking machine operations
 9.2A Interpret technical drawing
 18.1A Use hand tools

Element 4.15A.1 Determine job requirements

Criteria 4.15A.1.1

Drawings, instructions and specifications interpreted and understood.

Assessor guide: observe that –

All relevant written instructions, sketches or drawings have been received and used.

Assessor guide: confirm that –

Those instructions or drawings have been interpreted correctly.

Criteria 4.15A.1.2

Vacuum forming processes are applied to determine the design of vacuum forming moulds and associated equipment to be constructed.

Assessor guide: observe that –

The type of vacuum forming moulds and associated equipment will meet requirements for the predetermined vacuum forming process.

Assessor guide: confirm that –

The various types of vacuum forming processes can be identified. The equipment to suit those processes can be identified.

Criteria 4.15A.1.3

Appropriate material selected to meet specifications.

Assessor guide: observe that –

The material selected for that particular vacuum forming process is suitable and will meet customer requirements.

Assessor guide: confirm that –

The various materials used in vacuum forming processes can be identified. The consequences of using incorrect materials, identified.

Element 4.15A.2 Develop/mark out vacuum forming equipment**Criteria 4.15A.2.1**

Perform appropriate calculations to establish the equipment parameters, taking into account plastic sheet thickness and shrinkage etc.

Assessor guide: observe that –

The calculations necessary for the manufacturing of that particular vacuum form equipment have been carried out, and that the shrinkage and plastic sheet thickness has been taken into account.

Assessor guide: confirm that –

The calculus necessary to carry out those calculations can be identified.

Criteria 4.15A.2.2

Mark out vacuum forming equipment showing size and position of air evacuation and of the moulded form.

Assessor guide: observe that –

The predetermined die design and vacuum forming process has been marked out, laid out, including size and position of air evacuation holes.

Assessor guide: confirm that –

The reasons for the importance of the position and size of the air evacuation holes can be identified.

Element 4.15A.3 Manufacture vacuum forming equipment**Criteria 4.15A.3.1**

Appropriate machines and machining process selected to shape/produce vacuum forming equipment to specification.

Assessor guide: observe that –

The vacuum forming equipment has been manufactured using a range of machine tools appropriate for shaping/sizing, to specification.

Assessor guide: confirm that –

Arrange of machine tools and their operation can be identified.

Criteria 4.15A.3.2

A range of hand and hand held power tools are selected and used to fashion/manufacture vacuum forming equipment to specification.

Assessor guide: observe that –

The vacuum forming equipment has been surface finished using various hand held power tools.

Assessor guide: confirm that –

The various hand and hand held power tools and their correct use, can be identified, and used, using normal safety standards.

Criteria 4.15A.3.3

Constructed vacuum forming equipment checked to specification.

Assessor guide: observe that –

The complete vacuum forming equipment complies with the predetermined vacuum forming process, and customer specifications.

Assessor guide: confirm that –

The necessary checking devices have been used and can be identified. The necessary checking procedures have been carried out. The surface finish meets requirements.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. All specifications interpreted from drawings, technical sketches and/or customer requirements. Tasks undertaken utilise appropriate pattern making principles and techniques, designated procedures, correct and appropriate tools and equipment and cover the manufacture of all types of vacuum forming equipment including vacuum bagging, utilising a range of materials such as, timber, composites, polymer, metal etc. Where precision measurement is required, Unit 12.3A (Precision mechanical measurement) should also be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the development and manufacture of vacuum forming moulds and associated equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.16A B Develop and manufacture precision models

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 6

This unit covers the competencies required for laying out and manufacturing and finishing precision models. Appropriate tools and techniques are used to manufacture models such as flow models, viewing models, prototype and development models using a wide range of materials (for example timber, metal plastic, fibreglass composites) and processes.

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
 2.13C5 Perform mathematical computations
 4.12A Assemble plated patterns
 4.15A Develop and manufacture vacuum forming moulds and associated equipment
 9.1A Draw and interpret sketch
 12.6A Mark off/out (general engineering)
 18.2A Use power tools/hand held operations

2.7C10 Perform computations - basic
 4.10A Develop and manufacture wood patterns
 4.13A Develop and manufacture polystyrene patterns
 4.18A General woodworking machine operations
 9.2A Interpret technical drawing
 13.3A Work safely with industrial chemicals and materials

2.8C10 Perform computations
 4.11A Produce polymer patterns
 4.14A Develop and manufacture production patterns
 7.5A Perform general machining
 12.3A Precision mechanical measurement
 18.1A Use hand tools

Element 4.16A.1 Determine job requirements

Criteria 4.16A.1.1

Drawings, instructions and specifications interpreted and understood

Assessor guide: observe that –

All relevant written instructions, drawings have been received and used

Assessor guide: confirm that –

Those instructions, drawings etc. have been interpreted correctly

Criteria 4.16A.1.2

Appropriate material selected to meet specifications

Assessor guide: observe that –

The materials have been selected for ease of working, stability and can be worked accurately

Assessor guide: confirm that –

The consequences of selecting inappropriate materials can be identified

Element 4.16A.2 Layout model

Criteria 4.16A.2.1

Finished model design conceptualised and planned with reference to customer's specifications (written or verbal) for finish, quality and form known processes

Assessor guide: observe that –

The type of model has been visualised and determined by using the instructions, drawings and the knowledge of the predetermined process i.e. high volume foundry tooling, injection moulding, pressure die casting etc.

Assessor guide: confirm that –

The various processes requiring models, can be identified

Criteria 4.16A.2.2

Calculate contractions allowances, clearances, tapers etc. to establish model parameters

Assessor guide: observe that –

The calculations necessary for manufacture have been carried out

Assessor guide: confirm that –

The calculus necessary to carry out calculations can be identified

Criteria 4.16A.2.3

Design and manufacture datum boards, jigs and fixtures as required

Assessor guide: observe that –

All necessary datum boards, datum holes or datum faces etc. required for accurate manufacture, have been developed and manufactured Any jigs and fixtures required for manufacture have been developed and manufactured

Assessor guide: confirm that –

The reason why datum boards, datum holes or datum faces are required for manufacture and their use identified The reason why those particular manufacturing aids are required and their use identified

Element 4.16A.3 Manufacture model**Criteria 4.16A.3.1**

Determine sequence of manufacture, including build-up on datum board, establishing datum's mark out of model and areas to be NC/CNC machined

Assessor guide: observe that –

A planned sequence of manufacture has been developed eg: model built upon datum boards, datums developed, areas required to be accurately manufactured by NC/CNC have been identified, etc.

Assessor guide: confirm that –

The developed sequence of manufacture can be identified The consequence of not following that developed sequence of manufacture, can be identified

Criteria 4.16A.3.2

Appropriate machines and machining process selected to shape/produce model to specifications

Assessor guide: observe that –

The range of machines and machining processes selected is appropriate for manufacturing the model accurately to size, tolerance and specifications

Assessor guide: confirm that –

The range of machines and machining processes and their operations can be identified

Criteria 4.16A.3.3

A range of hand and hand held power tools are selected and used utilising acceptable techniques and procedures to fashion/manufacture model to fine tolerances according to specifications, ensuring that surface finish is appropriate to the type of model

Assessor guide: observe that –

The range of hand and hand held power tools is appropriate for the manufacture of the model, accurately, to size, tolerance and specifications The surface finish is appropriate

Assessor guide: confirm that –

The range of hand and hand held power tools, and their correct use, can be identified

Criteria 4.16A.3.4

Appropriate measurement/calculations undertaken to check specifications, including coordinate measuring, machine checking as required

Assessor guide: observe that –

The necessary checking procedures have been carried out The checking devices are appropriate for checking to the predetermined accuracy and fine tolerances

Assessor guide: confirm that –

The various checking procedures, can be identified The necessary checking devices, including CMM, can be identified

Criteria 4.16A.3.5

Where necessary, all deviations or modifications to original tooling design, prints or plans, recorded and reported consistent with standard operating procedure

Assessor guide: observe that –

Assessor guide: confirm that –

Any deviation or modification to original drawings or specifications has been recorded

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. All specifications interpreted from complex drawings and Mylar drawings, technical sketches and/or customer requirements. Tasks undertaken utilise appropriate model making principles and techniques, designated procedures, correct and appropriate tools and equipment and cover the development and manufacture of flow models, viewing models, prototype and development models and the inspection and completion of items made in the stereo lithography process etc. Utilising a wide variety of materials including but not limited to timber, metal, plastic, fibreglass, composites etc. and where accurate and complicated models are required to assist in the development and manufacture of production of tooling for a wide variety of processes, such as, blow moulding, metal forming, vacuum forming, rotational moulding, gravity die casting, pressure die casting, low pressure die casting, complex ferrous and non-ferrous castings, plastic injection moulding, etc. When the programming of coordinate measurement machines and/or NC/CNC machines are required see appropriate machine

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the development and manufacture precision models or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.17A A Develop and manufacture gear, conveyor screw and propeller patterns

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

2.13C5 Perform mathematical computations

4.18A General woodworking machine operations

12.6A Mark off/out (general engineering)

2.7C10 Perform computations - basic

4.10A Develop and manufacture wood patterns

9.1A Draw and interpret sketch

18.1A Use hand tools

2.8C10 Perform computations

4.12A Assemble plated patterns

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

Element 4.17A.1 Determine job requirements

Criteria 4.17A.1.1

Drawings, instructions and specifications interpreted and understood.

Assessor guide: observe that –

All relevant written instructions, sketches or drawings have been received and used.

Assessor guide: confirm that –

Those instructions, sketches or drawings have been interpreted correctly.

Criteria 4.17A.1.2

Appropriate material selected to meet specifications.

Assessor guide: observe that –

The appropriate materials have been selected for ease of working, stability, durability and strength to suit the predetermined moulding/casting techniques and foundry process.

Assessor guide: confirm that –

The consequences of selecting inappropriate materials can be identified.

Criteria 4.17A.1.3

Moulding, cast techniques and foundry processes are applied in determining the type of pattern required.

Assessor guide: observe that –

The type of pattern will meet the requirements for the predetermined moulding/casting technique and foundry process.

Assessor guide: confirm that –

The reason why that particular type of pattern is to be manufactured, and other types can be identified and the consequence of using those types. The predetermined mould/casting technique and foundry process can be identified.

Element 4.17A.2 Layout pattern**Criteria 4.17A.2.1**

Calculate pattern parameters such as pitch circles, pressure angles, tooth form, left and right hand flight helix, pitch axial dimensions, angles, tapers, clearances, contraction allowances etc. appropriate to developing various types of gear, conveyor and propeller forms etc.

Assessor guide: observe that –

The calculations necessary for the development and manufacture of either cast gears, conveyor screws or marine propellers, have been carried out.

Assessor guide: confirm that –

The calculus necessary to carry out those calculations can be identified.

Criteria 4.17A.2.2

Layout pattern showing tapers, machining allowances, core prints and method of construction etc. to specification.

Assessor guide: observe that –

The pattern has been laid out fully and conforms to drawings, sketches, predetermined specifications and tolerances, etc.

Assessor guide: confirm that –

The consequences of not laying out the pattern in detail, and with all known specifications, can be identified.

Criteria 4.17A.2.3

Develop and manufacture jigs and fixtures to aid the manufacture of the pattern form as required.

Assessor guide: observe that –

Any jigs and fixtures required for manufacture have been developed and manufactured.

Assessor guide: confirm that –

The reasons why those particular manufacturing aids are required, and they can be identified.

Element 4.17A.3 Manufacture pattern**Criteria 4.17A.3.1**

Materials marked out and construction developed to meet specifications.

Assessor guide: observe that –

The material has been marked out to suit the development/construction of cast gears, conveyor screws or marine propellers.

Assessor guide: confirm that –

The process of developing gears, screws and propellers can be identified.

Criteria 4.17A.3.2

Using acceptable wood pattern making techniques, procedures and utilising appropriate hand and hand held power tools, pattern or pattern component parts are produced to size and shape and checked for compliance with specifications.

Assessor guide: observe that –

The completed pattern complies with the pattern layout, drawings, sketches, predetermined specifications and the chosen moulding/casting technique. The surface finish is mouldable, tapers are true and straight, radii and fillets are true and where necessary, lifting devices are in place.

Assessor guide: confirm that –

The appropriate hand and hand held tools and necessary machinery can be identified. The necessary checking devices can be identified. The various checking procedures can be identified. The meaning of mouldable can be identified, i.e. surface finish is smooth, tapered faces are flat, not concave or convex, there are no undercuts.

Criteria 4.17A.3.3

Using acceptable pattern making techniques and procedures, pattern component parts are joined or fixed as required, according to specifications.

Assessor guide: observe that –

The component parts required to manufacture the pattern are jointed/fixed to the main body by using appropriate fixing techniques, eg: glue, nails, screws, dovetails, double round and straight keys, spigots, dowels, butt joints, half lap, spline, etc.

Assessor guide: confirm that –

The various jointing techniques can be identified and the reason why that particular fixing was used.

Criteria 4.17A.3.4

Pattern correctly marked, colour coded and/or tagged in compliance with specifications or standard operating procedure.

Assessor guide: observe that –

The completed pattern has been marked with any necessary identification numbers, colour coded to identify casting area, core prints, loose pieces etc.

Assessor guide: confirm that –

The necessary colour coding can be identified and the consequences of the wrong coding being used.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. All specifications interpreted from drawings, technical sketches and/or customer requirements. Tasks undertaken utilise appropriate wood pattern making principles and techniques, designated procedures, calculations, appropriate tools, equipment and cover the development and manufacture of patterns for all types of cast gears, conveyor screws, marine propellers etc. utilising the full range of timbers and composites. Gear patterns may be segmented or any other method to minimise timber shrinkage or warpage and to achieve the required strength. Conveyor and marine screws may be built up using predetermined thickened timber, either over a mandrel or a layout. Patterns may be set up on a joint board or plated for ease of moulding. Where precision measurement is required, Unit 12.3A (Precision mechanical measurement) should also be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the development and manufacture gear, conveyor screw and propeller patterns or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.18A A General woodworking machine operations

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

18.1A Use hand tools

Element 4.18A.1 Determine job requirements

Criteria 4.18A.1.1

Job instructions and specifications interpreted and understood.

Assessor guide: observe that –

Any written instructions or sketches have been received and used.

Assessor guide: confirm that –

Those instructions or sketches have been interpreted correctly.

Criteria 4.18A.1.2

Appropriate woodworking machine selected to meet specifications.

Assessor guide: observe that –

The machine selected is appropriate for that machining operation.

Assessor guide: confirm that –

The range of woodworking machines and their operations can be identified.

Element 4.18A.2 Set up woodworking machine

Criteria 4.18A.2.1

Tools/cutters are selected where appropriate.

Assessor guide: observe that –

The tools/cutters selected are appropriate for that operation.

Assessor guide: confirm that –

The range of tools/cutters for different purposes can be identified.

Criteria 4.18A.2.2

Cutting tools are sharpened and/or shaped to meet specifications.

Assessor guide: observe that –

The cutter/cutter blades etc. have been sharpened or shaped to the correct set or cutting angles.

Assessor guide: confirm that –

The consequences of incorrect set or cutting angles can be identified.

Criteria 4.18A.2.3

Tools/cutters are correctly installed using standard operating procedures.

Assessor guide: observe that –

The tool holder, tools, and cutters etc., are held in by using the correct bolting/attachments, to suit the machine.

Assessor guide: confirm that –

The consequences of tool holders, tools and cutters etc., being incorrectly secured, can be identified.

Criteria 4.18A.2.4

Appropriate guards/stops are set and adjusted as required.

Assessor guide: observe that –

Guards and stops have been set correctly.

Assessor guide: confirm that –

The consequences of not using guards etc., can be identified.

Element 4.18A.3 Operate woodworking machines**Criteria 4.18A.3.1**

Material to be machined is positioned and secured.

Assessor guide: observe that –

The material has been positioned correctly on the machine and that it has been securely clamped and that the clamps will not interfere with the machining operations.

Assessor guide: confirm that –

The various methods and manner of clamping can be identified.

Criteria 4.18A.3.2

Woodworking machine is operated to cut materials to specification using standard operating procedures.

Assessor guide: observe that –

The machines used either to machine the material in a clamped position, e.g. pattern mills, or while the material is held by hand eg: buzzers, sanders, routers, etc. or while the cutting tool is being held by hand, e.g. lathe, are correctly operated, using all necessary safety measures.

Assessor guide: confirm that –

The operation of various woodworking machines can be identified. Various safety problems can be identified eg: material too short, direction of the grain, fingers are well clear of cutter, etc.

Criteria 4.18A.3.3

Material is used in most economical way.

Assessor guide: observe that –

Assessor guide: confirm that –

The various methods of using the material in the most economical way can be identified.

Element 4.18A.4 Check finished component**Criteria 4.18A.4.1**

Machined component checked against specifications and predetermined finish.

Assessor guide: observe that –

The finished component is checked for size against specifications. The finished machine surface is acceptable.

Assessor guide: confirm that –

The necessary checking procedures have been carried out. The reason for a poorly finished surface, can be identified.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. This unit covers all woodworking machines used by Engineering Patternmakers and involves the use of various machines including but not limited to, band saws, buzzers, thicknesser, disk sander, bobbin sander, pattern mill, wood lathe, pedestal router and drill etc. and covers the sharpening of blades and cutters. This unit is not appropriate for those using specialised woodworking machines etc. (Cabinet makers etc.) For hand held/power tools use Unit 18.2A (Use power tools/hand held operations).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the general wood working machine operations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 4.19A A Refractory installation and repair

Band – Specialisation band A

Field – Casting & moulding

Unit Weight 4

Pre-requisite units - Path 1

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 4.19A.1 Inspect refractory

Criteria 4.19A.1.1

Specification interpreted and understood.

Assessor guide: observe that –

All relevant instruction and specifications are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

Instructions and specifications can be correctly interpreted and understood.

Criteria 4.19A.1.2

Specific areas of the refractory identified for repair or replacement.

Assessor guide: observe that –

The refractory inspected and faults identified for repair or replacement in accordance with standard operating procedures.

Assessor guide: confirm that –

Indicators of need for replacement can be described.

Element 4.19A.2 Knockout refractory

Criteria 4.19A.2.1

Sequence of operations to remove refractory is determined to meet the job specification.

Assessor guide: observe that –

A work plan is prepared identifying the sequence for refractory removal in accordance with standard operating procedures.

Assessor guide: confirm that –

Work plan can be prepared for a variety of situations.

Criteria 4.19A.2.2

Appropriate tools and equipment selected to safely remove damaged refractory.

Assessor guide: observe that –

Appropriate tools and equipment selected in accordance with workplace procedures.

Assessor guide: confirm that –

Tools and equipment appropriate for the job can be identified.

Criteria 4.19A.2.3

Damaged refractory is removed and disposed of safely.

Assessor guide: observe that –

The damaged refractory is safely removed and disposed of in accordance with standard operating procedures.

Assessor guide: confirm that –

There is an awareness of OHS issues.

Element 4.19A.3 Prepare refractory materials**Criteria 4.19A.3.1**

Appropriate refractory materials selected to meet specifications.

Assessor guide: observe that –

The appropriate refractory materials selected to meet specifications accordance with standard operating procedures.

Assessor guide: confirm that –

Different refractory materials can be identified.

Criteria 4.19A.3.2

Refractory media is mixed to specification.

Assessor guide: observe that –

The refractory media is mixed to in accordance with standard operating procedures.

Assessor guide: confirm that –

The impact of incorrect mixing ratios and methods is understood.

Element 4.19A.4 Install refractory**Criteria 4.19A.4.1**

Sequence of operations to install refractory is determined to meet the job specification.

Assessor guide: observe that –

A work plan is prepared identifying the sequence for installing refractory in accordance with standard operating procedures.

Assessor guide: confirm that –

Work plan can be prepared for a variety of situations.

Criteria 4.19A.4.2

Refractory is installed using appropriate techniques and tools and equipment to meet the job specification.

Assessor guide: observe that –

The refractory is installed to the correct wall thickness and surface finish in accordance with standard operating procedures.

Assessor guide: confirm that –

The effect of incorrect wall thickness and/or surface finish is understood.

Element 4.19A.5 Cure refractory**Criteria 4.19A.5.1**

Refractory cured to specifications using appropriate techniques and equipment to meet the job specification.

Assessor guide: observe that –

The refractory is cured to specifications using appropriate techniques and equipment selected in accordance with standard operating procedures.

Assessor guide: confirm that –

The importance of any specified curing is understood.

Range statement

This unit covers the repairs and replacement of all types of refractory, including relining furnaces, treatment vessels, ladles and launders, and covers material which can be machine rammed, hand rammed, forked or vibrated. This includes refractory bricks and their replacement. Work is carried out autonomously or in a team to predetermined standards of quality and safety. For operational maintenance such as routine repair/repointing of refractory see Units 4.1A (Operate melting furnace) and/or Unit 4.7A (Pour molten metal).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with furnace/kiln operations, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.1A A Manual soldering/desoldering - electrical/electronic components

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Element 5.1A.1 Prepare materials for soldering

Criteria 5.1A.1.1

Materials preparation instructions understood and followed.

Assessor guide: observe that –

Materials are prepared for soldering in accordance with instructions and work site procedures.

Assessor guide: confirm that –

The preparation requirements of materials prior to soldering can be identified. The consequences of incorrect material preparation prior to soldering can be given.

Criteria 5.1A.1.2

Materials prepared using correct soldering tools, equipment, materials and procedures.

Assessor guide: observe that –

Appropriate tools are used in the preparation of materials for soldering in accordance with work site procedures.

Assessor guide: confirm that –

The correct application of a range of soldering tools and equipment can be given. The applications of different solders and fluxes with respect to the materials to be soldered can be identified.

Criteria 5.1A.1.3

Materials prepared to specifications using instruction or standard operating procedures.

Assessor guide: observe that –

The materials to be soldered are prepared to specification and in accordance with work site procedures.

Assessor guide: confirm that –

The material preparation requirements can be identified.

Element 5.1A.2 Solder materials

Criteria 5.1A.2.1

Correct soldering techniques, procedures, materials and soldering tools selected.

Assessor guide: observe that –

An appropriate soldering technique is selected in accordance with work site procedures. The correct tools and materials are selected in accordance with work site procedures.

Assessor guide: confirm that –

Examples of alternative soldering techniques and their application can be given.

<p>Criteria 5.1A.2.2 Materials to be jointed, mounted, shaped to specification using standard operating procedures.</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, materials to be jointed are aligned, clamped and mounted as necessary prior to soldering, in accordance with work site procedures.</p>	<p><i>Assessor guide: confirm that –</i> The required relationship between the parts to be joined can be identified.</p>
<p>Criteria 5.1A.2.3 Solder applied using correct and appropriate techniques.</p>	<p><i>Assessor guide: observe that –</i> An appropriate soldering technique is used to apply solder to the materials to be jointed, in accordance with work site procedures.</p>	<p><i>Assessor guide: confirm that –</i></p>
<p>Criteria 5.1A.2.4 Where appropriate, excess material removed using correct and appropriate tools and techniques.</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, excess solder is removed in accordance with work site procedures.</p>	<p><i>Assessor guide: confirm that –</i> Methods of solder removal and their application can be identified.</p>
<p>Criteria 5.1A.2.5 Procedures for the protection of components observed according to standard operating procedure.</p>	<p><i>Assessor guide: observe that –</i> Work site procedures for the protection of components are followed.</p>	<p><i>Assessor guide: confirm that –</i> Component protection procedures can be described.</p>
<p>Element 5.1A.3 Inspect solder joints</p>		
<p>Criteria 5.1A.3.1 Inspection procedure undertaken to standard operating procedures.</p>	<p><i>Assessor guide: observe that –</i> Work site inspection procedures are followed.</p>	<p><i>Assessor guide: confirm that –</i> The inspection procedures for soldered joints can be identified.</p>
<p>Criteria 5.1A.3.2 Inspection results reported/recorded to standard operating procedures as required.</p>	<p><i>Assessor guide: observe that –</i> Inspection results are recorded/reported in accordance with work site procedures.</p>	<p><i>Assessor guide: confirm that –</i> The information to be recorded and the frequency of recording can be identified.</p>

Element 5.1A.4 Undertake desoldering**Criteria 5.1A.4.1**

Correct and appropriate techniques, procedures, desoldering tools and equipment selected.

Assessor guide: observe that –

Appropriate desoldering tools and equipment are selected in accordance with work site procedures.

Assessor guide: confirm that –

Desoldering techniques and procedures can be identified. The applications of different desoldering techniques/procedures can be given.

Criteria 5.1A.4.2

Materials/components de-soldered using correct procedure minimising damage to materials, components.

Assessor guide: observe that –

Materials/components are de-soldered in accordance with work site procedures. Damage to materials/components is minimised through the application of appropriate work site procedures.

Assessor guide: confirm that –

Methods of minimising damage to materials/components can be identified.

Criteria 5.1A.4.3

Material/device removed and cleaned to specifications using standard operating procedures.

Assessor guide: observe that –

The material/device is removed and cleaned in accordance with work site procedures.

Assessor guide: confirm that –

The methods of cleaning solder from materials/devices can be identified. The applications of different cleaning methods can be given.

Range statement

This unit covers manual soldering/desoldering for the installation and fabrication of electrical/electronic components. Work undertaken in a production or maintenance environment using predetermined standards of quality, safety and work procedures. Component protection procedures are predetermined. Correct and appropriate soldering tools and equipment may include all types of soldering irons, cutters, brushes, files, soldering tips, solder syringes, holding devices etc. Correct and appropriate materials may include solder (solid resin cord and paste), flux (resin or powder) etc. All materials and procedures specified via job instructions. Inspections carried out using visual, mechanical or electric techniques with pre setup equipment. All work undertaken to legislative and regulatory requirements. Depending on the actual soldering job, hand and power tools and measuring skills may be required. These are covered by other units such as Unit 18.1A (Use hand tools), Unit 18.2A (Use power tools/hand held operations) and appropriate measurement units. Handling refers to methods of physical handling and stress relief methods of preventing damage caused by electrostatic discharge. This may include wrist straps and anti-static work areas and practices. This unit does not include skills in silver soldering or brazing skills. These skills are covered in Unit 5.6A (Perform brazing and/or silver soldering). Where soldering and desoldering is limited to the straightforward termination, disconnection or reconnection of electrical wiring then see Unit 10.2A (Terminate and connect electrical wiring). Advanced specification and high reliability soldering associated with the installation of electrical/electronic components, in areas where reliability of connections is critical, is covered by Unit 5.2A (High reliability soldering and desoldering).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with manual soldering and desoldering or other competencies requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will be provided with: - All tools, equipment, material and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specifications; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 5.2A A High reliability soldering and desoldering

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Pre-requisite units - Path 1

5.1A Manual soldering/desoldering - electrical/electronic components

Element 5.2A.1 Determine job requirements

Criteria 5.2A.1.1

Job specification determined using data sheets, specifications, technical drawings or via consultation with technical experts.

Assessor guide: observe that –
All relevant data sheets, specifications, instructions and technical drawings are obtained in accordance with workplace procedures. Where appropriate, technical experts are consulted as to the job specifications.

Assessor guide: confirm that –
The work to be undertaken can be identified. The specifications pertaining to the work to be done can be identified.

Criteria 5.2A.1.2

Correct and appropriate tools, equipment and material selected.

Assessor guide: observe that –

Assessor guide: confirm that –
The appropriate tools, equipment and materials to carry out the work can be identified. The reasons for selecting the chosen tools, equipment and materials can be given.

Element 5.2A.2 Prepare for soldering

Criteria 5.2A.2.1

Material/device cut, shaped and/or drilled to specification.

Assessor guide: observe that –
Where appropriate, the material/ device to be soldered is cut, shaped and/or drilled to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –
The procedures for cutting, shaping and/or drilling materials/devices to be soldered can be given. The specifications to which the material/device is to be cut, shaped and/or drilled can be identified. The tools and equipment to be used to cut, shape and/or drill the material/device can be identified. The reasons for selecting the chosen tools and equipment can be given.

Criteria 5.2A.2.2

Materials/devices cleaned to specifications using correct and appropriate materials and procedures.

Assessor guide: observe that –

The material/device to be soldered is cleaned in conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for cleaning materials/devices prior to soldering can be given. The materials to be used to clean the materials/devices to be soldered can be identified. The safety precautions to be taken when cleaning materials and devices to be soldered can be identified.

Criteria 5.2A.2.3

Correct and appropriate set up and/or mounting techniques used.

Assessor guide: observe that –

The materials/devices to be soldered are correctly set up and/or mounted in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for setting up and mounting materials/devices to be soldered can be given. The tools, techniques and equipment to be used when setting up and mounting materials/devices to be soldered can be identified.

Element 5.2A.3 Solder materials**Criteria 5.2A.3.1**

Material/device mounted to specifications using correct and appropriate tools and techniques.

Assessor guide: observe that –

The materials/devices to be soldered are mounted in conformance with specifications.

Assessor guide: confirm that –

The specifications pertaining to the mounting of the materials/devices to be soldered can be identified.

Criteria 5.2A.3.2

Soldering undertaken using correct and appropriate techniques including appropriate use of flux.

Assessor guide: observe that –

The materials/devices are soldered using appropriate techniques and fluxes in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for soldering materials/devices can be given. The tools, equipment and techniques to be used to solder materials/devices can be identified. The reasons for using fluxes when soldering can be explained. The reasons for selecting the chosen flux can be given.

Criteria 5.2A.3.3

Necessary techniques undertaken to protect materials/devices from heat damage.

Assessor guide: observe that –

The materials/devices being soldered are protected from heat damage using appropriate techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for protecting materials/devices from heat damage can be given. The tools and techniques to be used to minimise heat damage to materials/devices being soldered can be identified. The consequences of not protecting materials/devices from heat damage can be given.

Criteria 5.2A.3.4

Printed circuit boards, assemblies and components are handled in such a way as to prevent electrostatic discharge or mechanical damage.

Assessor guide: observe that –

Printed circuit boards, assemblies and components are handled so as to prevent electrostatic discharge or mechanical damage.

Assessor guide: confirm that –

The procedures for handling printed circuit boards, assemblies and components to prevent electrostatic discharge can be given. The precautions to be taken to prevent mechanical damage to printed circuit boards, assemblies and components can be identified. The tools, techniques and equipment to be used to prevent electrostatic discharge can be identified. The consequences of inappropriate handling of printed circuit boards, assemblies and components can be explained.

Element 5.2A.4 Test/inspect soldered joints**Criteria 5.2A.4.1**

Visual inspection carried out to ensure compliance with specifications.

Assessor guide: observe that –

All soldered joints are visually inspected to ensure compliance with specifications in accordance with standard operating procedures. Where appropriate, joints not complying with specifications are marked for rework or repair in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for inspecting soldered joints can be given. The specifications of the soldered joint can be identified. The procedures for marking items for rework or repair can be given.

Criteria 5.2A.4.2

Where required, mechanical/electrical tests undertaken using correct and appropriate techniques and equipment to ensure compliance with specifications.

Assessor guide: observe that –

Where appropriate, soldered joints are mechanically and/or electrically tested for compliance with specifications, using appropriate techniques and equipment, in accordance with standard operating procedures. Where appropriate, joints not complying with specifications are marked for rework or repair in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for conducting mechanical and electrical tests on soldered joints can be given. The tools, techniques and equipment necessary to carry out the mechanical and electrical tests on the soldered joints can be identified. The precautions to be taken when testing soldered joints can be identified. The specifications of the soldered joint can be identified.

Element 5.2A.5 Rework/repair faulty joints including desoldering**Criteria 5.2A.5.1**

Rework/repair carried out to ensure compliance with specifications.

Assessor guide: observe that –

The faulty joint(s) are reworked/ repaired in conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reworking/ repairing faulty joints can be given. The precautions to be taken when reworking/repairing faulty joints can be given.

Criteria 5.2A.5.2

Repair/rework inspected and tested.

Assessor guide: observe that –

The repaired/reworked soldered joints are inspected and tested for conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for inspecting and testing reworked/repared soldered joints can be given. The precautions to be taken when inspecting and testing reworked/ repaired soldered joints can be identified.

Range statement

This unit covers soldering/desoldering for the installation and fabrication of electrical/electronic components to advanced or military specifications, or where the reliability of electrical connections is critical. It also covers the soldering of electronic components where prevention of damage through electrostatic discharge or other means is required. Work undertaken autonomously using predetermined standards of quality, safety and work procedures. This unit has limited application and should be confined to work undertaken on equipment where continuous performance is critical and this may include work to military specifications. This unit can also cover the soldering of electronic Surface Mount Devices (SMD). Work is undertaken in a workshop, laboratory or in situ. Correct and appropriate tools and equipment may include all types of irons, pliers, side cutters, brushes, files, soldering tips, solder syringes, holding devices etc. Appropriate handling includes correct methods to avoid damage due to electrostatic discharge, manual handling or heat damage to components. Correct and appropriate materials may include solder (solid, resin cord and paste), flux (resin or powder) etc. All materials and procedures determined from specifications, manufacturer's data sheets, standard operating procedures or in consultation with a technical expert. Tests and inspections carried out using visual, mechanical or electrical techniques. All work undertaken to legislative and regulatory requirements. If precision electro measurement is required it is covered by another unit. Depending on the actual soldering job, hand and power tools and drawing interpretation skills may be required. These are covered by Unit 18.1A (Use hand tools), Unit 18.2A (Use power tools/hand held operations) and Unit 9.2A (Interpret technical drawing). Manual soldering for the installation and fabrication of electrical/electronic components, where reliability of connections is not critical, is covered by Unit 5.1A (Manual soldering/desoldering - electrical/electronic components).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with high reliability soldering and desoldering or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.3A A Soft soldering (basic)

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

Element 5.3A.1 Identify job requirements

Criteria 5.3A.1.1

Soldering requirements identified and correctly understood from job sheets or instructions.

Assessor guide: observe that –
Job sheets and/or instructions obtained in accordance with work site procedures.

Assessor guide: confirm that –
The tasks to be undertaken can be identified. The soft soldering requirements can be identified.

Element 5.3A.2 Undertake soft soldering

Criteria 5.3A.2.1

Correct and appropriate tools, equipment and consumables assembled and prepared for use as required.

Assessor guide: observe that –
The necessary tools, equipment and consumables are prepared for use in accordance with standard operating procedures.

Assessor guide: confirm that –
The appropriate tools and equipment to carry out soft soldering operations can be identified. The consumables associated with soft soldering operations can be identified. The effect of material to be soft soldered on the selection of consumables can be given.

Criteria 5.3A.2.2

Materials to be soldered are prepared, arranged and checked as required, to ensure solder joint meets specifications.

Assessor guide: observe that –
The materials to be soldered are prepared for soldering in accordance with standard operating procedures.

Assessor guide: confirm that –
The preparation requirements of the materials to be soldered can be identified. The reasons for preparing surfaces prior to soldering can be given.

Criteria 5.3A.2.3

Correct and appropriate techniques used to apply soft solder in accordance with standard operating procedures.

Assessor guide: observe that –
Soft solder is applied in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –
A variety of soldering techniques and their application can be identified.

Criteria 5.3A.2.4

Solder joint cleaned and checked for compliance with specifications using standard operating procedures.

Assessor guide: observe that –
The soldered joint is cleaned in accordance with standard operating procedures. The soldered joint is checked for conformance to specifications.

Assessor guide: confirm that –
Appropriate methods of cleaning soldered joints can be identified. Defects in soldered joints can be identified. The procedures for rectifying defects in soldered joints can be given.

Range statement

This unit applies to soft soldering applications of ferrous and non ferrous materials such as sheet metal etc. using straightforward techniques, where heat damage to components or finish of soldered joint is not critical. All work is undertaken to predetermined standards of quality, safety and procedures. Techniques of applying soft solder may include the use of soldering irons (all types) and direct flame or other heating devices. Maintenance of soldering irons is limited to the replacement and/or cleaning of soldering tips. Preparation of materials includes cleaning, deburring, twisting of conductors and fluxing. This unit should not be selected if Unit 5.1A (Manual soldering/desoldering - electrical/electronic components) or Unit 10.2A (Terminate and connect electrical wiring) has already been selected. Depending on the actual soldering job, hand and power tools and drawing and interpretation skills may be required. These are covered by units 18.1A (Use hand tools), 18.2A (Use power tools/hand held operations) and 9.1A (Draw and interpret sketch).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the soft soldering of joints or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.4A B Perform routine oxy acetylene welding

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

Element 5.4A.1 Prepare materials for welding

Criteria 5.4A.1.1

Weld requirements are determined in accordance with job specifications.

Assessor guide: observe that –

All appropriate specifications and drawings are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The weld requirements can be identified. The weld specifications can be identified. The location and size of welds can be identified.

Criteria 5.4A.1.2

Material is cleaned and prepared using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: observe that –

The materials to be welded are cleaned and prepared using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The materials preparation required prior to welding can be identified. The tools and techniques appropriate to the preparation of materials to be welded can be identified.

Element 5.4A.2 Assemble and set up welding equipment

Criteria 5.4A.2.1

Welding equipment including cylinders and regulators are assembled and set up safely and correctly in accordance with standard operating procedures.

Assessor guide: observe that –

The welding equipment is correctly assembled and set up in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for assembling and setting up oxyacetylene/fuel gas welding equipment can be given. The safety precautions to be taken when assembling and setting up oxyacetylene/fuel gas welding equipment can be identified.

Element 5.4A.3 Select welding equipment, settings, and consumables**Criteria 5.4A.3.1**

Welding tips, settings and consumables selected against job requirements, welding procedures, in accordance with standard operating procedures.

Assessor guide: observe that –

The appropriate oxygen and acetylene (or appropriate fuel gas) settings are set in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate settings for the given task and the selected welding tips and consumables can be identified. The application of a variety of filler rods and fluxes can be given. The appropriate filler rod and flux for the given task can be identified. The reasons for selecting the chosen welding tip, filler rod and flux can be given.

Element 5.4A.4 Perform routine welding using fuel gas process**Criteria 5.4A.4.1**

Weld undertaken safely and to prescribed procedure.

Assessor guide: observe that –

All welds are performed safely and in accordance with standard operating procedure.

Assessor guide: confirm that –

The hazards associated with welding processes can be identified. Appropriate personal protection equipment and its function can be identified. The appropriate ventilation/extraction requirements can be identified.

Criteria 5.4A.4.2

Welds cleaned in accordance with standard operating procedures.

Assessor guide: observe that –

All welds are cleaned in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The weld cleaning requirements can be identified. The appropriate tools/equipment for cleaning welds can be identified.

Range statement

Oxy acetylene welding (OAW) in this unit is intended to apply in a manufacturing or maintenance environment where welding is not required to meet Australian Standards or equivalent codes, and/or licensing requirements. The term "oxy-acetylene" is used here to describe a range of fuel gases, including acetylene, LPG, hydrogen etc. The person would work autonomously or within a team environment using predetermined standards of quality, safety, work and welding procedures. Materials welded may include low carbon steel, cast iron, etc. Preparation of materials would be minimal and include preheating, setting up jigs, fixtures, clamps, etc. Setting up may include the correct connection of hoses, blowpipes, regulators, etc., and correct settings of gas mixtures.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with routine oxyacetylene welding (fuel gas welding) or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.5A A Carry out mechanical cutting

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

Pre-requisite units - Path 1

18.1A Use hand tools

Element 5.5A.1 Determine job requirements

Criteria 5.5A.1.1

Job specification requirements determined from job sheets and/or instructions.

Assessor guide: observe that –

Job sheets and/or instructions are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The tasks to be undertaken can be identified. The specifications relating to the tasks can be identified.

Criteria 5.5A.1.2

Appropriate method/machine selected to meet specifications.

Assessor guide: observe that –

Assessor guide: confirm that –

Four different cutting methods/ machines can be identified. The appropriate cutting method/ machine to meet the cutting specifications can be identified.

Criteria 5.5A.1.3

Machine loaded and adjusted appropriately for operation consistent with standard operating procedures.

Assessor guide: observe that –

The cutting machine is loaded and adjusted in accordance with standard operating procedures.

Assessor guide: confirm that –

Element 5.5A.2 Select/set up machine tooling

Criteria 5.5A.2.1

Most appropriate tooling is selected.

Assessor guide: observe that –

The most appropriate machine tooling is selected.

Assessor guide: confirm that –

The material to be cut can be identified. The effect of the material to be cut on the machine tooling to be used can be given.

Criteria 5.5A.2.2

Tooling is correctly installed using standard operating procedures.

Assessor guide: observe that –

The cutting tool is correctly installed in accordance with standard operating procedures.

Assessor guide: confirm that –

Tooling defects can be identified. The operational requirements of the cutting tool can be identified. The safety precautions to be observed while installing the cutting tool can be identified.

Criteria 5.5A.2.3

Machine set up and adjusted using standard operating procedures.

Assessor guide: observe that –

The cutting machine is set up and adjusted in accordance with standard operating procedures.

Assessor guide: confirm that –

The adjustments that can be made to ensure optimum cutting performance can be identified.

Element 5.5A.3 Operate mechanical cutting machine**Criteria 5.5A.3.1**

Appropriate stops and guards are set and adjusted as required.

Assessor guide: observe that –

The appropriate stops and guards are set and adjusted.

Assessor guide: confirm that –

The stops to be set can be identified. All guards and their function can be identified.

Criteria 5.5A.3.2

Material secured and correctly positioned using measuring equipment as necessary.

Assessor guide: observe that –

The material is secured and correctly positioned in accordance with standard operating procedures.

Assessor guide: confirm that –

The dimensions of the part to be cut can be identified.

Criteria 5.5A.3.3

Machine started and stopped safely to standard operating procedures.

Assessor guide: observe that –

The machine is started and stopped safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety procedures to be followed during machine start up and stopping can be identified.

Criteria 5.5A.3.4

Machine is operated to cut/hole material to specifications using standard operating procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The material is cut to size and specification in accordance with standard operating procedures.

Element 5.5A.4 Check material for conformance to specification**Criteria 5.5A.4.1**

Material is checked against specification. Machine and/or tooling adjusted as required and in process adjustments carried out as necessary.

Assessor guide: observe that –

Where appropriate, the cutting machine and/or tooling is adjusted in accordance with standard operating procedures, to ensure cut material conforms to specifications.

Assessor guide: confirm that –

The adjustments that can be made to the machine and/or tooling can be identified. The effect of those adjustments on the dimensions of the cut material can be given.

Criteria 5.5A.4.2

Material is cut and/or holed to within workplace tolerances.

Assessor guide: observe that –

The material is cut and/or holed to specification.

Assessor guide: confirm that –

The tolerances applicable to the dimensions of the cut material can be identified.

Criteria 5.5A.4.3

Material used in most economical way.

Assessor guide: observe that –

The material is used in the most economical way.

Assessor guide: confirm that –

Where appropriate, the material to be cut is marked out to ensure minimum wastage of material.

Criteria 5.5A.4.4

Codes and standards observed.

Assessor guide: observe that –

Where appropriate, relevant codes and standards are complied with.

Assessor guide: confirm that –

Any relevant codes and/or standards applicable to the work being undertaken can be identified. The requirements of those codes in terms of cut material can be identified.

Range statement

This unit may cover the operation of a number of the following activities: sawing, shearing, cropping and/or holing. Materials may include ferrous and non-ferrous metals and non-metallic products. This unit includes the set up and operation of a range of mechanical cutting and holing equipment. Examples of machines that could be covered include guillotines, croppers, cold saws, band saws, automatic saws etc. This unit does not cover hand or hand held power tools used for cutting purposes eg: circular saws, nibblers and side grinder. These skills are covered by other units, see Unit 18.1A (Use hand tools) and Unit 18.2A (Use power tools/hand held operations). Typical applications of this unit may include cutting for manufacture, production cutting and cutting of materials selected from stores in a maintenance environment. Work is undertaken autonomously or as part of a team environment to predetermined standards of quality, safety and workshop procedure. This unit does not include the skills required for operational maintenance of the equipment used, these skills are covered by Unit 7.1A (Operational maintenance of machines/equipment). For repair and welding of band saw blades where blade repair unit is not attached to the machine, refer to Unit 5.13A (Perform manual production welding).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the mechanical cutting of materials or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.6A A Perform brazing and/or silver soldering

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

Element 5.6A.1 Prepare materials and equipment

Criteria 5.6A.1.1

Job requirements determined from specifications and/ or instructions.

Assessor guide: observe that –

All relevant drawings, specifications and instructions are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The brazing/silver soldering requirements can be identified. The specifications of the joint to be brazed/silver soldered can be identified. The location and size of the joint to be brazed/silver soldered can be identified.

Criteria 5.6A.1.2

Materials correctly prepared using appropriate tools and techniques.

Assessor guide: observe that –

The materials to be brazed/silver soldered are cleaned and prepared using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The materials preparation required prior to brazing/silver soldering can be identified. The tools and techniques appropriate to the preparation of materials to be brazed/silver soldered can be identified.

Criteria 5.6A.1.3

Materials correctly assembled/aligned to meet specifications as required.

Assessor guide: observe that –

The materials to be brazed/silver soldered are assembled/aligned to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The method of assembling/aligning the materials to be brazed/silver soldered can be identified. The reasons for selecting the chosen method of assembly/alignment can be given.

Criteria 5.6A.1.4

Distortion prevention measures identified and appropriate action taken as required.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for minimising distortion of the materials being brazed/silver soldered can be given. The action to be taken to minimise distortion during the brazing/silver soldering process can be identified. The reasons for selecting the chosen action can be given.

Criteria 5.6A.1.5

Heating equipment assembled and set up safely and correctly in accordance with standard operating procedures.

Assessor guide: observe that –

The heating equipment is correctly and safely assembled and set up in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate heating equipment for the given task can be identified. The procedures for assembling and setting up the chosen heating equipment can be given. The reasons for selecting the chosen heating equipment can be given. The safety precautions to be taken when assembling and setting up the heating equipment can be identified.

Criteria 5.6A.1.6

Correct and appropriate consumables selected and prepared.

Assessor guide: observe that –

Assessor guide: confirm that –

The appropriate consumables for the brazing/silver soldering process can be identified. The reasons for selecting the chosen consumables can be given.

Criteria 5.6A.1.7

Test run undertaken and verified as required.

Assessor guide: observe that –

Where appropriate, a test run is undertaken and checked for conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for undertaking test runs can be explained. The procedures for checking test runs against specifications can be given. The tools, equipment and techniques to be used in checking test runs for conformance with specifications can be identified.

Element 5.6A.2 Braze and/or silver solder**Criteria 5.6A.2.1**

Correct and appropriate process selected to meet specifications.

Assessor guide: observe that –

Assessor guide: confirm that –

Typical applications of brazing and silver soldering processes can be given. The most appropriate process for the given task can be identified. The reasons for selecting the chosen process can be given.

Criteria 5.6A.2.2

Materials preheated as required.

Assessor guide: observe that –

The materials to be joined are preheated in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for preheating the materials to be joined can be given. The precautions to be taken when preheating materials to be joined can be identified.

Criteria 5.6A.2.3

Consumables applied using correct and appropriate techniques.

Assessor guide: observe that –

The jointing material and flux are applied to the joint using correct and appropriate techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures and techniques for applying flux and jointing material to the joint can be given. The effects of the use of inappropriate techniques on the performance of the jointed materials can be given.

Criteria 5.6A.2.4

Jointing material applied correctly and in appropriate quantities to meet job/specifications.

Assessor guide: observe that –

The jointing material is applied correctly and in appropriate quantities to conform to specifications.

Assessor guide: confirm that –

The joint specifications can be identified. The effect of inappropriate quantities of jointing material on the performance of the jointed materials can be given.

Criteria 5.6A.2.5

Material temperatures normalised using correct and appropriate techniques.

Assessor guide: observe that –

The temperatures of the jointed materials are normalised using correct and appropriate techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for normalising the temperature of jointed materials can be given. The consequences of using inappropriate techniques to normalise the temperature of the joint can be explained.

Element 5.6A.3 Inspect joints**Criteria 5.6A.3.1**

Excess jointing materials removed using correct and appropriate techniques.

Assessor guide: observe that –

Where appropriate, excess jointing materials are removed using correct and appropriate techniques.

Assessor guide: confirm that –

The procedures for removing excess jointing material can be given. The tools and techniques to be used to remove excess jointing materials can be identified.

Criteria 5.6A.3.2

Inspection of joints undertaken to standard operating procedures.

Assessor guide: observe that –

The brazed/silver soldered joint is inspected for conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for inspecting brazed/silver soldered joints can be given. The equipment and techniques to be used to inspect the joint for conformance to specifications can be identified.

Criteria 5.6A.3.3

Inspection results reported/recorded using standard operating procedures as required.

Assessor guide: observe that –

Where appropriate, the inspection results are reported/recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording/ reporting the inspection results can be given.

Range statement

Work undertaken in a production or maintenance environment using predetermined standards of quality, safety and work procedures. Work may be undertaken autonomously or within a team environment. Heating medium can include oxyacetylene and fuel gas. Correct and appropriate consumables may include fluxes (resin or powder), all types of silver solder and brazing grades, etc. Correct and appropriate assembly of heating equipment may include cylinders, connections, hoses, tips and nozzles. All work undertaken to legislative and regulatory requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with brazing and/or silver soldering or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.7A B Manual heating and thermal cutting

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

Element 5.7A.1 Assemble/disassemble plant, equipment for manual heating and thermal cutting

Criteria 5.7A.1.1

Appropriate cutting process and/or procedure for material is selected.

Assessor guide: observe that –

All relevant job sheets, drawings and instructions are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The material to be cut can be identified. The most appropriate cutting process for the material to be cut can be identified. The reasons for selecting the chosen cutting process can be given.

Criteria 5.7A.1.2

Accessories and equipment correctly selected and assembled.

Assessor guide: observe that –

The selected equipment and accessories are correctly assembled in accordance with standard operating procedures.

Assessor guide: confirm that –

The tools, equipment and techniques required to carry out the chosen cutting process can be identified. The reasons for selecting the chosen equipment and accessories can be given. The procedures for assembling the selected equipment and accessories can be given.

Element 5.7A.2 Operate heating and thermal cutting equipment

Criteria 5.7A.2.1

All safety procedures observed.

Assessor guide: observe that –

All safety procedures are followed throughout the heating and cutting processes.

Assessor guide: confirm that –

The hazards associated with manual heating and thermal cutting can be identified. The appropriate personal protective clothing and equipment can be identified.

Criteria 5.7A.2.2

Equipment start up procedures followed correctly to standard operating procedures.

Assessor guide: observe that –

The equipment is started up safely in accordance with standard operating procedures. All necessary pre-start checks are carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for starting up the equipment can be given. The pre-start checks to be undertaken can be identified.

Criteria 5.7A.2.3

Equipment adjustments made correctly using standard operating procedures.

Assessor guide: observe that –

Where appropriate, the equipment is adjusted to operating specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting the equipment for correct operation can be given. The adjustments that can be made to the equipment can be identified. The effect of those adjustments on the operation/performance of the equipment can be explained.

Criteria 5.7A.2.4

Appropriate cutting allowances made.

Assessor guide: observe that –

Appropriate cutting allowances are made when carrying out cutting processes.

Assessor guide: confirm that –

The dimensions/specifications of the cut material can be identified. The cutting allowance to be applied to ensure the cut material conforms to specification can be identified. The source(s) of cutting allowance information can be identified. The reasons for applying cutting allowances to the material to be cut can be explained.

Criteria 5.7A.2.5

Material used in the most economical way.

Assessor guide: observe that –

The material from which the object(s) are to be cut is used in the most economical way. Where appropriate, the material to be cut is marked out to ensure minimum wastage of material.

Assessor guide: confirm that –

The procedures for minimising waste material when cutting objects from sheet or plate can be given. The reasons for minimising waste material can be explained.

Criteria 5.7A.2.6

Defects recognised and corrective action taken to standard operating procedures.

Assessor guide: observe that –

Where appropriate, cutting defects are recognised and appropriate corrective action taken in accordance with standard operating procedures.

Assessor guide: confirm that –

Examples of cutting defects and their cause can be given. The procedures for correcting cutting defects can be given. The tools, equipment and techniques required to correct cutting defects can be identified.

Criteria 5.7A.2.7

Material heated and cut to specification.
Shape/size/length to accepted workplace standards.

Assessor guide: observe that –

The material is heated and cut to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications to which the heating and cutting to be carried out is to conform can be identified. The procedures for undertaking the heating and cutting of the material can be given.

Range statement

Work is undertaken autonomously or as part of a team. Predetermined standards of quality and safety are observed and work is carried out following standard operating procedures. Manual, straight line cutting standards observed. Manual or automatic processes used to cut and heat to specifications. Cutting may include flame gouging by hand.

All work carried out to legislative and regulatory requirements. Cutting may be applied to material of various thicknesses and types including ferrous, non-ferrous and non-metallic materials by a variety of methods which may include fuel gas, oxy fuel gas and air fuel gas. Cutting may include use of hand held and self-propelled straight line cutters. Heating may be applied to material of various thicknesses and types including ferrous, non-ferrous and non-metallic materials by a variety of methods which may include fuel gas, oxy fuel gas and air fuel gas.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with manual heating, thermal cutting and gouging or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.8A B Advanced manual thermal cutting, gouging and shaping

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

Pre-requisite units - Path 1

5.7A Manual heating and thermal cutting

Element 5.8A.1 Assemble/disassemble plant, equipment for manual thermal cutting, gouging and shaping

Criteria 5.8A.1.1

Appropriate cutting process and procedure for material being worked is selected.

Assessor guide: observe that –

All relevant job sheets, drawings, instructions and procedures are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The material to be cut can be identified. The most appropriate cutting process for the material to be cut can be identified. The reasons for selecting the chosen cutting process can be given. The shapes and sizes to be produced can be identified. The specifications for surface finish to be achieved can be identified.

Criteria 5.8A.1.2

Accessories and equipment correctly selected and assembled.

Assessor guide: observe that –

The selected equipment and accessories are correctly assembled in accordance with standard operating procedures.

Assessor guide: confirm that –

The tools, equipment and techniques required to carry out the chosen cutting process can be identified. The reasons for selecting the chosen equipment and accessories can be given. The procedures for assembling the selected equipment and accessories can be given.

Element 5.8A.2 Select equipment settings and consumables

Criteria 5.8A.2.1

Correct equipment settings and consumables selected from the appropriate standard operating procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The equipment settings can be identified. The consumables to be used can be identified. The sources of information on equipment settings and consumables to be used can be identified.

Element 5.8A.3 Operate hand held thermal cutting and shaping equipment

Criteria 5.8A.3.1

All safety procedures observed.

Assessor guide: observe that –

All safety procedures are followed throughout the heating/cutting/gouging processes.

Assessor guide: confirm that –

The hazards associated with manual heating, thermal cutting and gouging can be identified. The appropriate personal protective clothing and equipment can be identified.

Criteria 5.8A.3.2

Equipment start up procedures followed correctly to standard operating procedures.

Assessor guide: observe that –

The equipment is started up safely in accordance with standard operating procedures. All necessary pre-start checks are carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for starting up the equipment can be given. The pre-start checks to be undertaken can be identified.

Criteria 5.8A.3.3

Material cut to specification Shape/profile/surface finish to accepted workplace standards.

Assessor guide: observe that –

The material is cut to specifications and in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications to which the cutting is to conform can be identified. The procedures for undertaking the cutting of the material can be given.

Criteria 5.8A.3.4

Cutting defects recognised and corrective action taken to standard operating procedures.

Assessor guide: observe that –

Where appropriate, cutting defects are recognised and appropriate corrective action taken in accordance with standard operating procedures.

Assessor guide: confirm that –

Examples of cutting defects and their cause can be given. The procedures for correcting cutting defects can be given. The tools, equipment and techniques required to correct cutting defects can be identified.

Criteria 5.8A.3.5

Material removed with minimum loss of sound metal.

Assessor guide: observe that –

The material from which the object(s) are to be cut is used in the most economical way. Where appropriate, the material to be cut is marked out to ensure minimum wastage of material.

Assessor guide: confirm that –

The procedures for minimising waste material when cutting objects from sheet or plate can be given. The reasons for minimising waste material can be explained.

Range statement

Work is undertaken autonomously or as part of a team. Predetermined standards of quality and safety are observed and work is carried out following standard operating procedures. The manual thermal cutting process is used to produce complex internal and external profiles which satisfy predetermined shape, size and surface finish specifications. Items are cut, shaped or gouged by a variety of methods which may include: oxyacetylene, oxy/hydrogen, plasma, thermal lance, carbon arc, etc.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the thermal cutting, gouging and shaping of materials or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.9A B Automated thermal cutting

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

Element 5.9A.1 Set up material

Criteria 5.9A.1.1

Material is set up including correct procedures for stack cutting and nesting to minimise waste.

Assessor guide: observe that –

All relevant job instructions, specifications and procedures are obtained in accordance with work place procedures. The material is set up correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The material to be cut can be identified. The material set-up procedures can be given. The reasons for minimising waste can be given. The advantages of stack cutting and nesting can be given. The tools, equipment and techniques to be used to set up the material for cutting can be given.

Element 5.9A.2 Set up and use automated cutting machine

Criteria 5.9A.2.1

Appropriate cutting medium selected and set to specification.

Assessor guide: observe that –

The appropriate cutting medium is set to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate cutting medium can be identified. The reasons for selecting the chosen cutting medium can be given. The procedures for setting cutting media can be given. The sources of the specifications to which the cutting media are to be set can be identified.

Criteria 5.9A.2.2

Process requirements determined from specifications or instructions.

Assessor guide: observe that –

Assessor guide: confirm that –

The process requirements can be identified.

Criteria 5.9A.2.3

Machine set up safely to specifications using standard operating procedures.

Assessor guide: observe that –

The machine is set up safely in conformance to specifications and in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for setting up the machine can be given. The specifications to which the machine is to be set can be identified. The hazards associated with the setting of automated thermal cutting machines can be identified. The tools, techniques and equipment necessary to set up the machine can be identified.

Criteria 5.9A.2.4

Correct program selected and loaded to standard operating procedure.

Assessor guide: observe that –

The correct program is selected and loaded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for loading the program into the machine can be given. The correct program for the work to be undertaken can be identified. The reasons for selecting the chosen program can be given.

Criteria 5.9A.2.5

Machine datums established to specifications.

Assessor guide: observe that –

The machine datums are established in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for establishing machine datums can be given. The specifications for the machine datums can be identified.

Element 5.9A.3 Use automated thermal cutting machine**Criteria 5.9A.3.1**

Where required cutting medium is ignited following standard operating procedures.

Assessor guide: observe that –

Where appropriate, the cutting medium is ignited in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for igniting cutting media can be given. The hazards associated with igniting cutting media can be identified.

Criteria 5.9A.3.2

Machine started using correct sequence and procedure.

Assessor guide: observe that –

The machine is started up safely in the correct sequence in accordance with standard operating procedures.

Assessor guide: confirm that –

The pre-start checks to be undertaken can be identified. The procedures for starting the machine can be given. The starting sequence can be identified. The safety precautions to be taken when starting the machine can be identified.

Criteria 5.9A.3.3

Powder marking and other tracing devices used as required to standard operating procedure.

Assessor guide: observe that –

Where appropriate, powder marking or other tracing devices are used in accordance with standard operating procedures.

Assessor guide: confirm that –

The function of powder marking and other tracing devices can be explained. The procedures for using tracing devices can be given. The safety precautions to be taken when using tracing devices can be identified.

Criteria 5.9A.3.4

Correct shut down procedure observed in accordance with standard operating procedures.

Assessor guide: observe that –

The machine is shut down safely in the correct sequence in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for shutting down the machine can be given. The shut down sequence can be identified. The safety precautions to be taken during machine shut downs can be identified.

Range statement

Use of single or multi-head machines. Use in heavy engineering for plate and pipe cutting. Person would work autonomously or as part of a team. A range of material would be used. Cutting media would include fuel gases, oxy acetylene, plasma arc, laser etc. Powder marking and magnetic, photoelectric tracing devices or numerically controlled (NC) machines may be used. Programs on numerically controlled (NC) machines are selected and loaded according to predetermined instructions.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with automated thermal cutting or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.10A A Undertake fabrication, forming, bending and shaping

Band – Specialisation band A

Field – Fabrication

Unit Weight 8

Pre-requisite units - Path 1

9.2A Interpret technical drawing

18.1A Use hand tools

Element 5.10A.1 Select and set up forming/shaping equipment for a specific operation

Criteria 5.10A.1.1

Most appropriate tools and equipment selected.

Assessor guide: observe that –

The most appropriate tools and equipment are selected.

Assessor guide: confirm that –

A variety of hot and cold forming/ shaping processes can be identified. The machines, tools and/or equipment required to perform those forming/shaping processes can be identified. The forming/shaping processes to be applied to the given task can be identified. The reasons for selecting the chosen tools, equipment and process(es) can be given.

Criteria 5.10A.1.2

Equipment correctly set up and adjusted for operation to standard operating procedure.

Assessor guide: observe that –

The equipment is set up and adjusted in accordance with standard operating procedures.

Assessor guide: confirm that –

The adjustments that can be made to the equipment and the effect of the adjustments on the object being formed/shaped can be identified.

Criteria 5.10A.1.3

Allowances for shrinkage, thickness, inside/outside measurements correctly made.

Assessor guide: observe that –

Where appropriate, all allowances are calculated correctly. All measurements made take account of the relevant allowances.

Assessor guide: confirm that –

The allowances to be determined when forming/shaping materials can be identified. The sources of data relating to those allowances can be identified.

Element 5.10A.2 Operate forming/shaping equipment

Criteria 5.10A.2.1

Machine safely started up and shut down to standard operating procedure.

Assessor guide: observe that –

Where appropriate, the machine is started up and shut down in accordance with standard operating procedures.

Assessor guide: confirm that –

The start up and shut down procedures, where appropriate, can be identified.

Criteria 5.10A.2.2

Material and safety guards correctly positioned.

Assessor guide: observe that –

The material is correctly positioned in the machine/equipment in accordance with standard operating procedures. All safety guards are correctly positioned before the machine/equipment is operated in accordance with standard operating procedures.

Assessor guide: confirm that –

The material positioning/feeding requirements can be identified. The location and function of all safety guards can be identified.

Criteria 5.10A.2.3

Equipment correctly operated and adjusted.

Assessor guide: observe that –

Assessor guide: confirm that –

The machine/equipment is correctly operated and adjusted where appropriate in accordance with standard operating procedures. The adjustments that can be made to the machine/equipment can be identified. The effect of those adjustments on the object to be formed/shaped can be given.

Element 5.10A.3 Form and shape material**Criteria 5.10A.3.1**

Material levelled, straightened, rolled, pressed or bent to specifications/drawings.

Assessor guide: observe that –

Drawings and/or specifications are obtained in accordance with work site procedures. The material is formed/shaped to size and specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The tasks to be undertaken can be identified. The specifications relating to those tasks can be identified.

Criteria 5.10A.3.2

Correct hot or cold forming procedures followed.

Assessor guide: observe that –

The most appropriate forming/shaping process to achieve the required size and specification is utilised in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed in the forming/shaping process to be utilised can be given.

Criteria 5.10A.3.3

Final form/shape checked for compliance to specification and adjusted as necessary to standard operating procedure.

Assessor guide: observe that –

The final form/shape of the object is checked for conformance with specifications. Where appropriate, the object is reworked in accordance with standard operating procedure to ensure conformance with specifications.

Assessor guide: confirm that –

Defects in formed/shaped materials can be identified. Those defects that can be rectified by further work/adjustment can be identified.

Range statement

Work may be undertaken autonomously or as part of a team. Predetermined standards of quality and safety are observed and work is carried out following standard operating procedures. Forming, shaping and bending operations conducted on either plate, section or sheet including tube. A wide range of shapes and products are formed which may include pipework chamfers, cylinders, cones, angles, hoppers, ductwork, "square to round", "transitions," "lobster backs" and all forms of tubular shapes, including hand rails, reticulation pipework, mufflers etc. Materials may include ferrous and non ferrous and non-metallic substances. A variety of tools and equipment may be used including presses, shapers, benders, drop hammers etc. If heating or thermal cutting is required, Unit 5.7A (Manual heating and thermal cutting) should be accessed. Where mark off/out skills are required then Unit 12.7A (Mark off/out structural fabrications and shapes) should be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the forming and shaping of fabricated components or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.11A B Assemble fabricated components

Band – Specialisation band A

Field – Fabrication

Unit Weight 8

Notes - Where welds are required to meet legislative or regulatory requirements then appropriate welding units should also be selected.

Pre-requisite units - Path 1

5.5A Carry out mechanical cutting

5.15A Weld using manual metal arc welding process

18.2A Use power tools/hand held operations

5.7A Manual heating and thermal cutting

9.2A Interpret technical drawing

5.12A Perform routine manual metal arc welding

18.1A Use hand tools

Pre-requisite units - Path 2

5.5A Carry out mechanical cutting

5.49A Perform routine gas tungsten arc welding

18.2A Use power tools/hand held operations

5.7A Manual heating and thermal cutting

9.2A Interpret technical drawing

5.19A Weld using gas tungsten arc welding process

18.1A Use hand tools

Pre-requisite units - Path 3

5.4A Perform routine oxy acetylene welding

5.22A Perform advanced welding using oxy acetylene welding process

18.2A Use power tools/hand held operations

5.5A Carry out mechanical cutting

9.2A Interpret technical drawing

5.7A Manual heating and thermal cutting

18.1A Use hand tools

Pre-requisite units - Path 4

5.5A Carry out mechanical cutting

5.50A Perform routine gas metal arc welding

18.2A Use power tools/hand held operations

5.7A Manual heating and thermal cutting

9.2A Interpret technical drawing

5.17A Weld using gas metal arc welding process

18.1A Use hand tools

Element 5.11A.1 Identify assembly method and construct jigs if required

Criteria 5.11A.1.1

Method identified and jigs constructed from engineering drawings or according to workshop practice.

Assessor guide: observe that –

Where appropriate, engineering drawings and/or specifications are obtained in accordance with work site procedures. Where appropriate, jigs are constructed to meet the requirements of the assembly process in accordance with standard operating procedures.

Assessor guide: confirm that –

A variety of methods for assembling fabricated components can be identified. The assembly method most appropriate to the components to be assembled can be identified. Any jigs required to facilitate the assembly of the components can be identified.

Criteria 5.11A.1.2

Distortion prevention/control techniques correctly applied.

Assessor guide: observe that –

Distortion prevention/control techniques are correctly applied in accordance with standard operating procedures.

Assessor guide: confirm that –

The effects of distortion of fabricated components can be identified. Distortion prevention techniques can be identified.

Element 5.11A.2 Ensure all components for assembly are available**Criteria 5.11A.2.1**

All components checked against drawings and material list.

Assessor guide: observe that –

All components required for the assembly are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The components contained in the drawing and material list can be identified. Where appropriate, the procedures for obtaining components required for the assembly can be identified.

Element 5.11A.3 Select tools and fixtures for fabrication assembly**Criteria 5.11A.3.1**

Most appropriate equipment selected.

Assessor guide: observe that –

The most appropriate equipment for fabrication assembly is obtained, or access to the equipment organised in accordance with standard operating procedures.

Assessor guide: confirm that –

The most appropriate equipment for fabrication assembly can be identified.

Element 5.11A.4 Assemble fabricated components**Criteria 5.11A.4.1**

Material and/or fabricated components correctly positioned.

Assessor guide: observe that –

The components to be assembled are correctly positioned in accordance with drawing/specifications.

Assessor guide: confirm that –

The relative position/location of each component in the completed assembly can be identified.

Criteria 5.11A.4.2

Jigs, fixtures, tools and measuring equipment correctly adjusted and applied.

Assessor guide: observe that –

All jigs, fixtures, tools and equipment are appropriately used and adjusted in accordance with standard operating procedures.

Assessor guide: confirm that –

<p>Criteria 5.11A.4.3 Datum line correctly determined if necessary.</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, the datum line is correctly marked to facilitate assembly.</p>	<p><i>Assessor guide: confirm that –</i> The function of datum lines can be explained.</p>
<p>Criteria 5.11A.4.4 Assembled components checked for position including squareness, level and alignment to specification.</p>	<p><i>Assessor guide: observe that –</i> The position of all assembled components is checked for conformance with specifications.</p>	<p><i>Assessor guide: confirm that –</i> The position requirements of the assembled components in terms of squareness, level, alignment, can be identified.</p>
<p>Criteria 5.11A.4.5 Fixing/joining techniques applied as necessary according to standard operating procedure.</p>	<p><i>Assessor guide: observe that –</i> Appropriate fixing/joining techniques are used to assemble the components in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> A variety of fixing/joining techniques can be identified. The most appropriate fixing/joining technique for the components to be assembled can be identified.</p>
<p>Criteria 5.11A.4.6 Assembly checked for compliance with drawing.</p>	<p><i>Assessor guide: observe that –</i> The assembly is checked visually and dimensionally for conformance to drawings and specifications.</p>	<p><i>Assessor guide: confirm that –</i> Defects associated with the assembly of fabricated components can be identified. Those defects that can be rectified by rework or adjustments can be identified.</p>
<p>Criteria 5.11A.4.7 Codes/standards interpreted and applied.</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, the assembly, assembly process and technique are checked for conformance to the requirements of the relevant codes/ standards.</p>	<p><i>Assessor guide: confirm that –</i> Where appropriate, the relevant codes/standards applying to the assembly of fabricated components can be identified. Where appropriate, the requirements of the codes/standards on the assembly process and/or techniques can be identified.</p>

Range statement

All work would be carried out in accordance with legislative and regulatory requirements. Work would be undertaken using general fabricated components in either plate, pipe and section or sheet. Typical applications are transitions, pipeworks and structural fabrication, ductwork, general jobbing work, fired and unfired pressure vessels. Standards for lifting equipment are defined elsewhere. Work may be undertaken in plant or on-site. Work would be undertaken as part of a team in many instances in co-operation with those with rigging/dogging skills where necessary. In this unit alignment refers to typical structural alignment and levelling using planes and line straight edges, spirit levels, line levels, squares, etc. This unit does not cover the skills required for the assembly of fabricated engineering components, these skills are covered by the Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components). Assembly using pre-constructed jigs is covered by Unit 3.1A (Manual production assembly) or Unit 3.3A (Sheet and plate assembly).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the assembly of fabricated components or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.12A B Perform routine manual metal arc welding

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

Element 5.12A.1 Identify weld requirements

Criteria 5.12A.1.1

Weld requirements are identified from job instructions.

Assessor guide: observe that –

Appropriate instructions, specifications and drawings are obtained and weld requirements identified in accordance with work site procedures.

Assessor guide: confirm that –

The weld requirements for performing routine MMAW can be given.

Criteria 5.12A.1.2

Location of welds are identified in accordance with standard operating procedures and job specifications.

Assessor guide: observe that –

Location of required weld(s) identified for given tasks.

Assessor guide: confirm that –

Location of weld can be determined from standard operating procedures and job specifications.

Element 5.12A.2 Prepare materials for welding

Criteria 5.12A.2.1

Materials are cleaned and prepared ready for welding.

Assessor guide: observe that –

The materials to be welded are cleaned and prepared using appropriate tools and techniques.

Assessor guide: confirm that –

The materials preparation required prior to welding can be identified. The tools and techniques appropriate to the preparation of materials to be welded can be identified.

Element 5.12A.3 Prepare equipment for welding

Criteria 5.12A.3.1

Welding equipment is set up correctly.

Assessor guide: observe that –

Welding leads are correctly attached. Current setting is appropriate for the size and type of electrode and for position of weld.

Assessor guide: confirm that –

Different current settings can be given to suit typical situations and electrodes.

Criteria 5.12A.3.2

Correct electrodes are selected.

Assessor guide: observe that –

The correct electrode flux type and size is selected to produce the weld required and ,where applicable, according to job instructions/drawings/work specifications.

Assessor guide: confirm that –

Different electrodes can be identified and related to a typical range of welding outcomes.

Element 5.12A.4 Perform routine welding using MMAW**Criteria 5.12A.4.1**

Safe welding practices are applied.

Assessor guide: observe that –

All welds are performed in a safe manner with regard to the operator and other personnel. Precautions are taken to protect the welder and other personnel from hazards associated with welding process.

Assessor guide: confirm that –

Safe welding practices and precautions can be given. Typical hazards can be identified.

Criteria 5.12A.4.2

Materials are welded to job requirements.

Assessor guide: observe that –

Welds are produced with a minimum number of major defects. Appropriate action taken to report defects. Cause of major defects identified and required adjustments to settings/ electrodes/welding technique identified.

Assessor guide: confirm that –

Major defects and their causes relating to MMAW can be given.

Criteria 5.12A.4.3

Welds cleaned in accordance with standard operating procedures.

Assessor guide: observe that –

All welds are cleaned to specification. Standard operating procedures are followed, where applicable.

Assessor guide: confirm that –

The weld cleaning requirements can be identified. The appropriate tools/equipment for cleaning welds can be identified.

Range statement

Routine MMAW in this unit is intended to apply in a manufacturing or maintenance environment where welding is not required to meet Australian Standards or other welding codes, licensing requirements, Occupational Health and Safety regulations relating to certificated/coded welding. Fillet and butt welds in all positions would typically be performed on low carbon/mild steels. Weld preparation would be minimal and generally restricted to cleaning, using files and grinders. In circumstances where welding is required to meet Australian Standard 1554 General Purpose or equivalent codes, Occupational Health and Safety regulations and/or licensing requirements then Unit 5.15A (Weld using manual metal arc welding process) should be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with routine manual arc welding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 5.13A B Perform manual production welding

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

Element 5.13A.1 Tack and/or weld material using appropriate welding process

Criteria 5.13A.1.1

Material is prepared for the process to be used following standard operating procedures.

Assessor guide: observe that –

The materials to be welded are prepared in accordance with standard operating procedures.

Assessor guide: confirm that –

The material preparation to be undertaken prior to welding can be identified. The tools and/or equipment to be used in preparing the material(s) can be identified.

Criteria 5.13A.1.2

Material is aligned (if required) using dedicated jigs and fixtures.

Assessor guide: observe that –

Where appropriate, jigs and fixtures are used to align materials to be welded in accordance with standard operating procedures.

Assessor guide: confirm that –

The positional relationships of parts to be welded can be identified. Where appropriate, the jigs and/or fixtures to be used to align the materials to be welded can be identified. The function of jigs and fixtures in production welding can be given.

Criteria 5.13A.1.3

Weld is carried out using appropriate welding processes to accepted workplace standards.

Assessor guide: observe that –

The tack and/or weld is performed safely in accordance with standard operating procedures.

Assessor guide: confirm that –

Weld requirements can be identified. The welding process to be used can be identified. The hazards associated with the welding process can be identified. The appropriate personal protection equipment and its function can be identified.

Range statement

Production welding, including spot, resistance, hot air, ultrasonic welding is undertaken on one of a range of metallic and non-metallic materials including low carbon steels. Guidance may be required with respect to equipment settings, choice of consumables, gas mixture and pressures. For performing automated/production welding, Unit 7.24A (Operate and monitor machine/process) or Unit 7.25A (Advanced machine/process operation) should be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with manual production welding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 5.14A B Monitor quality of production welding/fabrications

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

Pre-requisite units - Path 1

5.12A Perform routine manual metal arc welding
18.2A Use power tools/hand held operations

5.15A Weld using manual metal arc welding process

18.1A Use hand tools

Pre-requisite units - Path 2

5.17A Weld using gas metal arc welding process
18.2A Use power tools/hand held operations

5.50A Perform routine gas metal arc welding

18.1A Use hand tools

Pre-requisite units - Path 3

5.19A Weld using gas tungsten arc welding process
18.2A Use power tools/hand held operations

5.49A Perform routine gas tungsten arc welding

18.1A Use hand tools

Pre-requisite units - Path 4

5.4A Perform routine oxy acetylene welding
18.2A Use power tools/hand held operations

5.7A Manual heating and thermal cutting

18.1A Use hand tools

Element 5.14A.1 Monitor quality of welded products

Criteria 5.14A.1.1

Weld requirements identified from specifications and/or drawings.

Assessor guide: observe that –

Drawings and/or specifications are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The weld requirements can be identified.

Criteria 5.14A.1.2

Inspection procedures carried out in accordance with standard operating procedures.

Assessor guide: observe that –

The weld inspection procedures are carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The weld inspection procedures can be identified.

Criteria 5.14A.1.3

Non-conforming welds are reported and corrective action initiated in accordance with standard operating procedures.

Assessor guide: observe that –

Where appropriate, non-conforming welds are reported in accordance with standard operating procedures. Where appropriate, corrective action is initiated in accordance with standard operating procedures.

Assessor guide: confirm that –

Weld defects can be identified. Those weld defects that can be rectified by further work/rework can be identified.

Criteria 5.14A.1.4

Preset gauges used to monitor quality of welded product.

Assessor guide: observe that –

Preset gauges are used correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The preset gauges appropriate to the welded product can be identified. The function of the preset gauges can be identified.

Element 5.14A.2 Initiate testing when required**Criteria 5.14A.2.1**

Implement test requirements in accordance with standard operating procedures and any legislative or regulatory requirements.

Assessor guide: observe that –

Where appropriate, weld tests are initiated in accordance with standard operating procedures and legislative/regulatory requirements.

Assessor guide: confirm that –

Test requirements appropriate to the welded product can be identified. Where appropriate, legislative and/or regulatory requirements of the welded product can be identified. The procedures for initiating weld tests can be given.

Element 5.14A.3 Undertake procedures' reporting**Criteria 5.14A.3.1**

Data collected according to standard operating procedure.

Assessor guide: observe that –

All relevant welding data is collected in accordance with standard operating procedures.

Assessor guide: confirm that –

The weld data to be collected can be identified.

Criteria 5.14A.3.2

Prepare reports as required.

Assessor guide: observe that –

Where appropriate, weld reports are prepared in accordance with standard operating procedures.

Assessor guide: confirm that –

The weld reporting requirements can be identified. The person for whom the reports are prepared can be identified.

Range statement

This unit applies to those whose duties include the basic inspection of completed or partly completed welded fabrications produced by others in a production environment. Work would be carried out in a team environment using predetermined standards of quality, safety and standard operating procedures and to established welding procedures. Duties to be carried out in consultation with appropriately qualified supervisor or engineer. This competency would be used in a production welding environment, monitoring the quality of production fabrication work where knowledge of the welding techniques and testing procedures is required. This unit should not be selected where Unit 15.4A (Perform inspection (basic)) has already been selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with monitoring the quality of welded products or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.15A B Weld using manual metal arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Pre-requisite units - Path 1

5.12A Perform routine manual metal arc welding

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 5.15A.1 Prepare materials for welding

Criteria 5.15A.1.1

Material is correctly prepared.

Assessor guide: observe that –

All appropriate specifications and drawings are obtained.

Assessor guide: confirm that –

The weld requirements can be identified.

Criteria 5.15A.1.2

Material is correctly prepared.

Assessor guide: observe that –

Appropriate tools and techniques are used to prepare material for welding in accordance with work site procedures.

Assessor guide: confirm that –

The material preparation requirements can be identified.

Element 5.15A.2 Select welding machine components

Criteria 5.15A.2.1

Welding machine and electrodes identified.

Assessor guide: observe that –

Correct welding machine and electrodes for given task is identified against pre-determined welding procedures and specifications and/or technical drawings.

Assessor guide: confirm that –

The application of a variety of welding machines can be given. The application of the electrodes classification system can be given.

Element 5.15A.3 Assemble and set up welding equipment

Criteria 5.15A.3.1

Welding equipment assembled and set up.

Assessor guide: observe that –

Welding equipment is correctly assembled and set up to safety and work site procedures.

Assessor guide: confirm that –

The relationships between amperage, electrode and material can be given. The appropriate settings for the given applications and the selected equipment/electrodes can be identified.

Element 5.15A.4 Minimise and rectify distortion**Criteria 5.15A.4.1**

Appropriate distortion prevention measures are selected.

Assessor guide: observe that –

Appropriate distortion prevention measures are undertaken during the welding process.

Assessor guide: confirm that –

Methods of preventing distortion of welded materials can be given. The appropriate distortion prevention method for the given application can be identified.

Criteria 5.15A.4.2

Distortion is rectified.

Assessor guide: observe that –

Where appropriate, distortion of welded materials is rectified in accordance with work site procedures.

Assessor guide: confirm that –

Methods of rectifying distortion of welded materials and their applications can be given.

Element 5.15A.5 Weld to job specification using MMAW**Criteria 5.15A.5.1**

Weld deposit is to specification.

Assessor guide: observe that –

Welds are deposited according to job requirements.

Assessor guide: confirm that –

The weld requirements for similar applications can be identified.

Criteria 5.15A.5.2

Joints cleaned to specifications.

Assessor guide: observe that –

The welded joint is cleaned using appropriate tools and techniques in accordance with work site procedures.

Assessor guide: confirm that –

Methods of cleaning welded joints can be given.

Element 5.15A.6 Ensure weld conformance**Criteria 5.15A.6.1**

Defects removed with minimum loss of sound metal using correct and appropriate techniques and tools.

Assessor guide: observe that –

Where appropriate, weld defects are removed in accordance with work site procedures. A minimum amount of sound metal is removed with the defect.

Assessor guide: confirm that –

Methods of weld defect removal and their application can be given.

Criteria 5.15A.6.2

Weld joints visually inspected for conformance to specifications.

Assessor guide: observe that –

Visual defects in welded joints are identified.

Assessor guide: confirm that –

Weld discontinuities detectable visually can be given.

Element 5.15A.7 Maintain weld records

Criteria 5.15A.7.1

Weld records are completed correctly.

Assessor guide: observe that –

Weld records are accurately completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The weld records to be kept can be identified. The frequency at which weld details are to be recorded can be identified. The reasons for keeping weld records can be given.

Range statement

Work undertaken autonomously or within a team environment using predetermined standards of quality, safety, work and welding procedures and the skills applied to a range of fabrication activities. A range of material suitable to heavy or light fabrication is used. Fillet and butt welds in all positions on a range of materials that may include carbon steel or stainless steel, etc. As a guide, welds produced to the standard of this unit would typically conform to Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Remedial action using thermal processes may include oxyacetylene and air arc equipment. Grinding devices may also be used. Where thermal processes, hand and/or power tools are required the appropriate specialisation units should be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the manual metal arc welding process or other competencies requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any drawings, specifications, catalogues, manuals, codes, standards and information relevant to the work. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 5.16A B Perform advanced welding using manual metal arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Pre-requisite units - Path 1

5.7A Manual heating and thermal cutting
9.2A Interpret technical drawing

5.12A Perform routine manual metal arc welding
18.1A Use hand tools

5.15A Weld using manual metal arc welding process
18.2A Use power tools/hand held operations

Element 5.16A.1 Prepare welding materials and equipment

Criteria 5.16A.1.1

Welding equipment is prepared.

Assessor guide: observe that –

Appropriate machine settings and electrodes determined from relevant documentation and instructions.

Assessor guide: confirm that –

The elements of a welding procedure can be identified and the purpose given. The purpose of pre and/or post welding heating and the methods of application can be given. The appropriate ventilation/extraction requirements can be identified.

Criteria 5.16A.1.2

Appropriate welding equipment is assembled and adjusted correctly and safely.

Assessor guide: observe that –

Welding equipment is set up safely with correct settings in accordance with standard operating procedures.

Assessor guide: confirm that –

Settings, electrodes and related equipment set-up can be given for materials and weld requirements. The purpose for the correct size of welding cable, handpiece and equipment capacity is given.

Criteria 5.16A.1.3

Materials are prepared to achieve required weld specification.

Assessor guide: observe that –

Weld and material preparation requirements are identified from given specifications. Materials are prepared correctly, using appropriate tools and techniques.

Assessor guide: confirm that –

All weld and preparation requirements to achieve code specification can be given.

Element 5.16A.2 Weld joints to code requirements using MMAW**Criteria 5.16A.2.1**

Weld requirements are interpreted correctly.

Assessor guide: observe that –

Instructions, symbols, specifications interpreted correctly, including bead size, bead placement, reinforcement, etc., and in accordance with weld procedure sheet, if available, and standard operating procedures.

Assessor guide: confirm that –

The weld requirements of nominated code can be identified. The location and size of the weld(s) to be deposited can be identified.

Criteria 5.16A.2.2

Welds are deposited correctly to specifications.

Assessor guide: observe that –

Fillet and butt welds are deposited correctly as per code requirements. Where appropriate, distortion prevention techniques are used in accordance with work site procedures. The welded joint is cleaned using appropriate tools and techniques in accordance with work site procedures.

Assessor guide: confirm that –

Methods and conditions for obtaining fillet and butt weld deposits to code requirements can be given. Distortion prevention techniques can be given.

Element 5.16A.3 Assess weld quality and rectify faults**Criteria 5.16A.3.1**

Weld joints visually inspected against specifications.

Assessor guide: observe that –

Weld are inspected against the nominated code and discontinuities identified. Decision is made as to acceptability of discontinuity as per code requirements.

Assessor guide: confirm that –

Various weld discontinuities that are detectable visually and do not conform to the code requirements can be explained. The causes of the discontinuities are given.

Criteria 5.16A.3.2

Discontinuities are removed using appropriate methods.

Assessor guide: observe that –

Where identified and does not meet code requirements, discontinuities are removed. A minimum amount of sound metal is removed with the defect. The weld conforms to the requirements of the job specification.

Assessor guide: confirm that –

Discontinuities can be identified in relation to code requirements.

Criteria 5.16A.3.3

Weld records are correctly completed and maintained.

Assessor guide: observe that –

Weld identification is applied appropriately and documentation completed correctly.

Assessor guide: confirm that –

Different welder identification systems can be given, such as numbering, bar coding, paint coding, letter stamps.

Range statement

Advanced MMAW undertaken autonomously or in a team environment using predetermined standards of quality, safety and welding procedures. Work is carried out on a range of structural sections and/or plate and/or pipe for general fabrication and may include low carbon steel, stainless steel, low alloy steel, etc. As a guide, welds produced to the standard of this unit would typically conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent. Welds are fillet and butt in all positions. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Where advanced manual thermal cutting, gouging and shaping is carried out, Unit 5.8A (Advanced manual thermal cutting, gouging and shaping) should also be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the manual metal arc welding process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.17A B Weld using gas metal arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Pre-requisite units - Path 1

5.50A Perform routine gas metal arc welding

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 5.17A.1 Prepare materials for gas metal arc welding

Criteria 5.17A.1.1

Weld requirements identified from specifications and/or drawings.

Assessor guide: observe that –

All appropriate specifications and drawings are obtained.

Assessor guide: confirm that –

The weld requirements for GMAW can be identified.

Criteria 5.17A.1.2

Material is correctly prepared.

Assessor guide: observe that –

Appropriate tools and techniques are used to prepare material for welding in accordance with work site procedures.

Assessor guide: confirm that –

The material preparation requirements can be identified.

Criteria 5.17A.1.3

Materials assembled/aligned to specification where required.

Assessor guide: observe that –

The materials to be welded are aligned, located and clamped to specification in accordance with work site procedures.

Assessor guide: confirm that –

Examples of material holding devices and their application can be given. The required relationship between the parts to be welded can be identified. The appropriate work holding method for the application can be identified.

Element 5.17A.2 Select welding components**Criteria 5.17A.2.1**

Welding machine settings accessories and consumables identified.

Assessor guide: observe that –

Correct welding machine, settings, gas and electrode for given task selected against pre-determined welding procedures and specifications and/or technical drawings.

Assessor guide: confirm that –

The application of weld metal transfer (short arc, spray, etc.) can be given. The application of a variety of welding machines can be given. The appropriate gas can be identified given the range of weld requirements. The appropriate electrode is selected using the electrode classification system. The appropriate welding machine for the given task can be identified. Appropriate size of contact tip and drive rollers is given. Appropriate type of liner for the task is given.

Element 5.17A.3 Assemble and set up welding equipment**Criteria 5.17A.3.1**

Welding equipment assembled and set up.

Assessor guide: observe that –

Welding equipment is correctly assembled and set up to safety and work site procedures.

Assessor guide: confirm that –

The relationships between amperage, gas flow, electrode, contact tip and roller, feed rate and material can be given. The appropriate settings for the given applications and the selected equipment/consumables can be identified.

Element 5.17A.4 Minimise and rectify distortion**Criteria 5.17A.4.1**

Appropriate distortion prevention measures are selected.

Assessor guide: observe that –

Appropriate distortion prevention measures are undertaken during the welding process.

Assessor guide: confirm that –

Methods of preventing distortion of welded materials can be given. The appropriate distortion prevention method for the given application can be identified.

Criteria 5.17A.4.2

Distortion is rectified.

Assessor guide: observe that –

Where appropriate, distortion of welded materials is rectified in accordance with work site procedures.

Assessor guide: confirm that –

Methods of rectifying distortion of welded materials and their applications can be given.

Element 5.17A.5 Weld to job specification using GMAW**Criteria 5.17A.5.1**

Weld deposit is to specification.

Assessor guide: observe that –

Welds are deposited according to job requirements.

Assessor guide: confirm that –

The weld requirements for similar GMAW applications can be identified.

Criteria 5.17A.5.2

Joints cleaned to specifications.

Assessor guide: observe that –

The welded joint is cleaned using appropriate tools and techniques in accordance with work site procedures.

Assessor guide: confirm that –

Methods of cleaning welded joints can be given.

Element 5.17A.6 Ensure weld conformance**Criteria 5.17A.6.1**

Weld joints visually inspected for conformance to specifications.

Assessor guide: observe that –

Visual defects in welded joints are identified.

Assessor guide: confirm that –

Weld discontinuities detectable visually can be given.

Criteria 5.17A.6.2

Defects removed with minimum loss of sound metal using correct and appropriate techniques and tools.

Assessor guide: observe that –

Where appropriate, weld defects are removed in accordance with work site procedures. A minimum amount of sound metal is removed with the defect.

Assessor guide: confirm that –

Methods of weld defect removal and their application can be given.

Element 5.17A.7 Maintain weld records**Criteria 5.17A.7.1**

Weld records are completed correctly.

Assessor guide: observe that –

Weld records are accurately completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The weld records to be kept can be identified. The frequency at which weld details are to be recorded can be identified. The reasons for keeping weld records can be given.

Range statement

GMAW undertaken autonomously or within a team environment using predetermined standards of quality, safety, work and welding procedures and the skills applied to a range of fabrication activities. A range of material suitable to heavy or light fabrication is used. Fillet and butt welds in all positions on a range of materials that may include carbon steel or stainless steel, etc. As a guide, welds produced to the standard of this unit would typically conform to Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Remedial action using thermal processes may include oxyacetylene and air arc equipment. Grinding devices may also be used. Where thermal processes, hand and/or power tools are required the appropriate specialisation units should be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the gas metal arc welding process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.18A B Perform advanced welding using gas metal arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Pre-requisite units - Path 1

5.7A Manual heating and thermal cutting
9.2A Interpret technical drawing

5.17A Weld using gas metal arc welding process
18.1A Use hand tools

5.50A Perform routine gas metal arc welding
18.2A Use power tools/hand held operations

Element 5.18A.1 Prepare welding materials and equipment

Criteria 5.18A.1.1

Welding equipment is prepared.

Assessor guide: observe that –

Appropriate machine settings and electrodes determined from relevant documentation and instructions.

Assessor guide: confirm that –

The elements of a welding procedure can be identified and the purpose given. The purpose of pre and/or post welding heating and the methods of application can be given. The appropriate ventilation/extraction requirements can be identified.

Criteria 5.18A.1.2

Appropriate welding equipment is assembled and adjusted correctly and safely.

Assessor guide: observe that –

Welding equipment is set up safely with correct settings in accordance with standard operating procedures.

Assessor guide: confirm that –

Settings, electrodes and related equipment set-up can be given for materials and weld requirements. The purpose for the correct size of welding cable, handpiece and equipment capacity is given.

Criteria 5.18A.1.3

Materials are prepared to achieve required weld specification.

Assessor guide: observe that –

Weld and material preparation requirements are identified from given specifications. Materials are prepared correctly, using appropriate tools and techniques.

Assessor guide: confirm that –

All weld and preparation requirements to achieve code specification can be given.

Element 5.18A.2 Weld joints to code requirements using GMAW**Criteria 5.18A.2.1**

Weld requirements are interpreted correctly.

Assessor guide: observe that –

Instructions, symbols, specifications interpreted correctly, including bead size, bead placement, reinforcement, etc., and in accordance with weld procedure sheet, if available, and standard operating procedures..

Assessor guide: confirm that –

The weld requirements of nominated code can be identified. The location and size of the weld(s) to be deposited can be identified.

Criteria 5.18A.2.2

Welds are deposited correctly to specifications.

Assessor guide: observe that –

Fillet and butt welds are deposited correctly as per code requirements. Where appropriate, distortion prevention techniques are used in accordance with work site procedures. The welded joint is cleaned using appropriate tools and techniques in accordance with work site procedures.

Assessor guide: confirm that –

Methods and conditions for obtaining fillet and butt weld deposits to code requirements can be given. Distortion prevention techniques can be given.

Element 5.18A.3 Assess weld quality and rectify faults**Criteria 5.18A.3.1**

Weld joints visually inspected against specifications.

Assessor guide: observe that –

Weld are inspected against the nominated code and discontinuities identified. Decision is made as to acceptability of discontinuity as per code requirements.

Assessor guide: confirm that –

Various weld discontinuities that are detectable visually and do not conform to the code requirements can be explained. The causes of the discontinuities are given.

Criteria 5.18A.3.2

Discontinuities are removed using appropriate methods.

Assessor guide: observe that –

Where identified and does not meet code requirements, discontinuities are removed. A minimum amount of sound metal is removed with the defect. The weld conforms to the requirements of the job specification.

Assessor guide: confirm that –

Discontinuities can be identified in relation to code requirements.

Criteria 5.18A.3.3

Weld records are correctly completed and maintained.

Assessor guide: observe that –

Weld identification is applied appropriately and documentation completed correctly.

Assessor guide: confirm that –

Different welder identification systems can be given, such as numbering, bar coding, paint coding, letter stamps.

Range statement

Advanced GMAW undertaken autonomously or in a team environment using predetermined standards of quality, safety and welding procedures. Work is carried out on a range of structural sections and/or plate and/or pipe for general fabrication and may include low carbon steel, stainless steel, low alloy steel, etc. As a guide, welds produced to the standard of this unit would typically conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent. Welds would be fillet and butt in all positions. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Where advanced manual thermal cutting, gouging and shaping is carried out, Unit 5.8A (Advanced manual thermal cutting, gouging and shaping) should also be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the manual metal arc welding process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.19A B Weld using gas tungsten arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Pre-requisite units - Path 1

5.49A Perform routine gas tungsten arc welding

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 5.19A.1 Prepare materials for GTAW welding

Criteria 5.19A.1.1

Weld requirements identified from specifications and/or drawings.

Assessor guide: observe that –

All appropriate specifications and drawings are obtained.

Assessor guide: confirm that –

The weld requirements for GTAW can be identified.

Criteria 5.19A.1.2

Material is correctly prepared.

Assessor guide: observe that –

Appropriate tools and techniques are used to prepare material for welding in accordance with work site procedures.

Assessor guide: confirm that –

The material preparation requirements can be identified.

Criteria 5.19A.1.3

Materials are assembled/aligned to specification where required.

Assessor guide: observe that –

The materials to be welded are aligned, located and clamped to specifications in accordance with work site procedures.

Assessor guide: confirm that –

Examples of material holding devices and their application can be given. The required relationship between parts to be welded can be identified. The appropriate work holding method for a given application can be identified.

Element 5.19A.2 Select welding machine components

Criteria 5.19A.2.1

Welding machine settings accessories and consumables are identified.

Assessor guide: observe that –

Correct welding machine settings, gas and electrodes for given task is identified against pre-determined welding procedures and specifications and/or technical drawings.

Assessor guide: confirm that –

The application of a variety of welding machines can be given. The application of the electrodes classification system can be given.

Element 5.19A.3 Assemble and set up welding equipment**Criteria 5.19A.3.1**

Welding equipment assembled and set up.

Assessor guide: observe that –

Welding equipment is correctly assembled and set up to safety and work site procedures.

Assessor guide: confirm that –

The relationships between amperage, gas flow, electrode, contact tip and roller, feed rate and material can be given. The appropriate settings for the given applications and the selected equipment/electrodes can be identified.

Element 5.19A.4 Minimise and rectify distortion**Criteria 5.19A.4.1**

Appropriate distortion prevention measures are selected.

Assessor guide: observe that –

Appropriate distortion prevention measures are undertaken during the welding process.

Assessor guide: confirm that –

Methods of preventing distortion of welded materials can be given. The appropriate distortion prevention method for the given application can be identified.

Criteria 5.19A.4.2

Distortion is rectified.

Assessor guide: observe that –

Where appropriate, distortion of welded materials is rectified in accordance with work site procedures.

Assessor guide: confirm that –

Methods of rectifying distortion of welded materials and their applications can be given.

Element 5.19A.5 Weld to job specification using GTAW**Criteria 5.19A.5.1**

Weld deposit is to specification.

Assessor guide: observe that –

Welds are deposited according to job requirements.

Assessor guide: confirm that –

The weld requirements for similar GTAW applications can be identified.

Criteria 5.19A.5.2

Joints cleaned to specifications.

Assessor guide: observe that –

The welded joint is cleaned using appropriate tools and techniques in accordance with work site procedures.

Assessor guide: confirm that –

Methods of cleaning welded joints can be given.

Element 5.19A.6 Ensure weld conformance**Criteria 5.19A.6.1**

Defects removed with minimum loss of sound metal using correct and appropriate techniques and tools.

Assessor guide: observe that –

Where appropriate, weld defects are removed in accordance with work site procedures. A minimum amount of sound metal is removed with the defect.

Assessor guide: confirm that –

Methods of weld defect removal and their application can be given.

Criteria 5.19A.6.2

Weld joints visually inspected for conformance to specifications.

Assessor guide: observe that –

Visual defects in welded joints are identified.

Assessor guide: confirm that –

Weld discontinuities detectable visually can be given.

Element 5.19A.7 Maintain weld records**Criteria 5.19A.7.1**

Weld records are completed correctly.

Assessor guide: observe that –

Weld records are accurately completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The weld records to be kept can be identified. The frequency at which weld details are to be recorded can be identified. The reasons for keeping weld records can be given.

Range statement

GTAW undertaken autonomously or within a team environment using predetermined standards of quality, safety, work and welding procedures and the skills applied to a range of fabrication activities. A range of material suitable to heavy or light fabrication is used. Fillet and butt welds in all positions on a range of materials that may include carbon steel or stainless steel, etc. As a guide, welds produced to the standard of this unit would typically conform to Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Remedial action using thermal processes may include oxyacetylene and air arc equipment. Grinding devices may also be used. Where thermal processes, hand and/or power tools are required the appropriate specialisation units should be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the gas tungsten arc welding process or other competencies requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any drawings, specifications, catalogues, manuals, codes, standards and information relevant to the work. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 5.20A B Perform advanced welding using gas tungsten arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Pre-requisite units - Path 1

5.7A Manual heating and thermal cutting
9.2A Interpret technical drawing

5.19A Weld using gas tungsten arc welding process
18.1A Use hand tools

5.49A Perform routine gas tungsten arc welding
18.2A Use power tools/hand held operations

Element 5.20A.1 Prepare welding materials and equipment

Criteria 5.20A.1.1

Welding equipment is prepared.

Assessor guide: observe that –

Appropriate machine settings and electrodes determined from relevant documentation and instructions.

Assessor guide: confirm that –

The elements of a welding procedure can be identified and the purpose given. The purpose of pre and/or post welding heating and the methods of application can be given. The appropriate ventilation/extraction requirements can be identified.

Criteria 5.20A.1.2

Appropriate welding equipment is assembled and adjusted correctly and safely.

Assessor guide: observe that –

Welding equipment is set up safely with correct settings in accordance with standard operating procedures.

Assessor guide: confirm that –

Settings, electrodes and related equipment set-up can be given for materials and weld requirements. The purpose for preparing the electrode tip is given. The purpose for the various gas shrouds is given. The appropriate handpiece for given welding current ranges and weld applications can be given.

Criteria 5.20A.1.3

Materials are prepared to achieve required weld specification.

Assessor guide: observe that –

Weld and material preparation requirements are identified from given specifications. Materials are prepared correctly, using appropriate tools and techniques.

Assessor guide: confirm that –

All weld and preparation requirements to achieve code specification can be given.

Element 5.20A.2 Weld joints to code requirements using GTAW**Criteria 5.20A.2.1**

Weld requirements are interpreted correctly.

Assessor guide: observe that –

Instructions, symbols, specifications interpreted correctly, including bead size, bead placement, reinforcement, etc., and in accordance with weld procedure sheet, if available, and standard operating procedures.

Assessor guide: confirm that –

The weld requirements of nominated code can be identified. The location and size of the weld(s) to be deposited can be identified.

Criteria 5.20A.2.2

Welds are deposited correctly to specifications.

Assessor guide: observe that –

Fillet and butt welds are deposited correctly as per code requirements. Where appropriate, distortion prevention techniques are used in accordance with work site procedures. The welded joint is cleaned using appropriate tools and techniques in accordance with work site procedures.

Assessor guide: confirm that –

Methods and conditions for obtaining fillet and butt weld deposits to code requirements can be given. Distortion prevention techniques can be given.

Element 5.20A.3 Assess weld quality and rectify faults**Criteria 5.20A.3.1**

Weld joints visually inspected against specifications.

Assessor guide: observe that –

Weld are inspected against the nominated code and discontinuities identified. Decision is made as to acceptability of discontinuity as per code requirements.

Assessor guide: confirm that –

Various weld discontinuities that are detectable visually and do not conform to the code requirements can be explained. The causes of the discontinuities are given.

Criteria 5.20A.3.2

Discontinuities are removed using appropriate methods.

Assessor guide: observe that –

Where identified and does not meet code requirements, discontinuities are removed. A minimum amount of sound metal is removed with the defect. The weld conforms to the requirements of the job specification.

Assessor guide: confirm that –

Discontinuities can be identified in relation to code requirements.

Criteria 5.20A.3.3

Weld records are correctly completed and maintained.

Assessor guide: observe that –

Weld identification is applied appropriately and documentation completed correctly.

Assessor guide: confirm that –

Different welder identification systems can be given, such as numbering, bar coding, paint coding, letter stamps.

Range statement

Advanced GTAW undertaken autonomously or in a team environment using predetermined standards of quality, safety and welding procedures. Work is carried out on a range of structural sections and/or plate and/or pipe for general fabrication and may include low carbon steel, stainless steel, low alloy steel, etc. As a guide, welds produced to the standard of this unit would typically conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent. Welds are fillet and butt in all positions. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Where advanced manual thermal cutting, gouging and shaping is carried out, Unit 5.8A (Advanced manual thermal cutting, gouging and shaping) should also be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the gas tungsten arc welding process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.22A B Perform advanced welding using oxy acetylene welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 6

Pre-requisite units - Path 1

5.4A Perform routine oxy acetylene welding
18.1A Use hand tools

5.7A Manual heating and thermal cutting
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing

Element 5.22A.1 Select welding equipment and consumables

Criteria 5.22A.1.1

Correct welding equipment and consumables are selected from weld procedure specifications.

Assessor guide: observe that –

All relevant job instructions, drawings, specifications etc. are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The appropriate welding equipment and consumables for the given task can be identified. The appropriate settings for the given oxyacetylene welding task can be identified. The appropriate ventilation/extraction requirements can be identified. The work holding requirements can be identified. Where appropriate, pre and/or post- welding heating requirements can be identified. The purpose of pre and post-welding heating of the weld materials can be given. Examples of materials requiring pre and post-welding heating can be given.

Element 5.22A.2 Assemble welding equipment

Criteria 5.22A.2.1

Welding equipment, including cylinders, regulators, hoses, torches and tips is assembled and set up safely in accordance with standard operating procedures.

Assessor guide: observe that –

The welding equipment is correctly assembled and set up in accordance with standard operating procedures. Where appropriate, jigs, fixtures, clamps etc. are used correctly and safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate settings for the given task and the selected equipment/consumables can be identified.

Element 5.22A.3 Weld joints to Australian Standard 1554 SP or equivalent**Criteria 5.22A.3.1**

Materials welded to Australian Standard 1554 SP or equivalent in all positions.

Assessor guide: observe that –

Fillet and butt welds are deposited correctly and to 1554 SP or equivalent in accordance with standard operating procedures in each of the following positions: - horizontal - vertical - overhead. Where appropriate, distortion prevention techniques are used in accordance with work site procedures. The welded joint is cleaned using appropriate tools and techniques in accordance with work site procedures.

Assessor guide: confirm that –

The weld requirements of 1554 SP (or equivalent) can be identified.

Criteria 5.22A.3.2

Instructions, symbols, specifications interpreted correctly including bead size, bead placement, reinforcement etc. and in accordance with weld procedure sheet, if available, and standard operating procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The location and size of the weld(s) to be deposited can be identified. The purpose of reinforcing areas to be welded can be given. Where appropriate, the reinforcement to be incorporated into the given weld(s) can be identified.

Element 5.22A.4 Inspect welds**Criteria 5.22A.4.1**

Weld joints visually inspected against specifications.

Assessor guide: observe that –

Welded joints are visually inspected for defects.

Assessor guide: confirm that –

Common weld defects detectable visually can be identified.

Criteria 5.22A.4.2

Weld defects identified.

Assessor guide: observe that –

Where applicable, weld defects are identified.

Assessor guide: confirm that –

Element 5.22A.5 Correct faults**Criteria 5.22A.5.1**

Defects removed with minimum loss of sound metal using correct and appropriate techniques and tools to Australian Standard 3992 or equivalent.

Assessor guide: observe that –

Where appropriate, weld defects are removed in accordance with work site procedures. A minimum amount of sound metal is removed with the defect. The weld conforms to the requirements of AS3992 or equivalent.

Assessor guide: confirm that –

The methods of weld defect removal and their application can be given.

Element 5.22A.6 Maintain weld records**Criteria 5.22A.6.1**

Weld records maintained in accordance with specifications and standard operating procedures.

Assessor guide: observe that –

Weld records are accurately completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The weld records to be kept can be identified. The frequency at which weld details are to be recorded can be identified. The reasons for keeping weld records can be given.

Range statement

Advanced oxy acetylene welding carried out using a range of materials for general fabrication. The term "oxy-acetylene" is used here to describe a range of fuel gases, including acetylene, LPG, hydrogen etc. The person would work autonomously or in a team environment using predetermined standards of quality, safety and welding procedures. Weld would be applied to meet Australian Standard 1554 SP, appropriate industrial standards, or equivalent outcomes. Welds would be fillet and butt in all positions. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps etc. Materials may include low carbon steel, plate, pipe, tube and round bar. Where welds comply with one of the certificates covered by Australian Standard 1796, then Unit 5.26A (Apply welding principles) should also be selected. Where advanced manual thermal cutting, gouging and shaping is carried out, Unit 5.8A (Advanced manual thermal cutting, gouging and shaping) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with oxyacetylene welding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.23A B Weld using submerged arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Element 5.23A.1 Prepare materials for welding

Criteria 5.23A.1.1

Weld requirements identified from specifications and/or drawings.

Assessor guide: observe that –

All appropriate specifications and drawings are obtained.

Assessor guide: confirm that –

The weld requirements can be identified.

Criteria 5.23A.1.2

Material is correctly prepared using appropriate tools and techniques.

Assessor guide: observe that –

Appropriate tools and techniques are used to prepare material for welding in accordance with work site procedures.

Assessor guide: confirm that –

The material preparation requirements can be identified.

Criteria 5.23A.1.3

Materials assembled/aligned to specifications where required.

Assessor guide: observe that –

The materials to be welded are aligned, located and clamped to specification in accordance with work site procedures.

Assessor guide: confirm that –

Examples of material holding devices and their application can be given. The required relationship between the parts to be welded can be identified. The appropriate work holding method for the application can be identified.

Element 5.23A.2 Select welding machine settings and consumables**Criteria 5.23A.2.1**

Welding machine settings and consumables identified against job requirements, welding procedures and specifications and/or technical drawings.

Assessor guide: observe that –

Assessor guide: confirm that –

The application of a variety of welding machines can be given. The application of a variety of consumables can be given. The appropriate welding machine for the given task can be identified. The appropriate consumables for the given task can be identified. The appropriate ventilation/extraction requirements can be identified.

Element 5.23A.3 Assemble and set up welding equipment**Criteria 5.23A.3.1**

Welding equipment assembled and set up safely and correctly in accordance with standard operating procedures.

Assessor guide: observe that –

Welding equipment is correctly assembled and set up in accordance with safety and work site procedures.

Assessor guide: confirm that –

The relationships between amperage, electrode and material thickness can be given. The appropriate settings for the given task and the selected equipment and consumables can be identified.

Criteria 5.23A.3.2

Test runs undertaken and verified in accordance with specifications.

Assessor guide: observe that –

Test welds are performed in accordance with work site procedures. Test welds are checked for conformance to specifications in accordance with work site procedure. Where appropriate, adjustments are made to settings to ensure conformance to specifications.

Assessor guide: confirm that –

The weld specifications to be achieved can be identified. The actions to be undertaken when test runs do not conform to specifications can be described.

Element 5.23A.4 Identify distortion prevention methods**Criteria 5.23A.4.1**

Distortion prevention measures identified.

Assessor guide: observe that –

Assessor guide: confirm that –

Methods of preventing distortion of welded materials can be given. The appropriate distortion prevention method for the given application can be identified.

Criteria 5.23A.4.2

Appropriate action taken to minimise and rectify distortion.

Assessor guide: observe that –

Appropriate distortion prevention measures are undertaken during the welding process. Where appropriate, distortion of welded materials is rectified in accordance with work site procedures.

Assessor guide: confirm that –

Methods of rectifying distortion of welded materials and their application can be given.

Element 5.23A.5 Weld joints using submerged arc by correct process**Criteria 5.23A.5.1**

Pad, butt and fillet welds deposited correctly in flat, and fillet welds in horizontal position, to specification.

Assessor guide: observe that –

Welds are deposited correctly and to AS1554 GP or equivalent in accordance with work site procedures in each of the following positions: - flat - horizontal. Where appropriate, distortion prevention techniques are used in accordance with work site procedures.

Assessor guide: confirm that –

The weld requirements of AS1554 GP (or equivalent) can be identified.

Criteria 5.23A.5.2

Joints cleaned to specifications using correct and appropriate techniques and tools.

Assessor guide: observe that –

The welded joint is cleaned using appropriate tools and techniques in accordance with work site procedures.

Assessor guide: confirm that –

Methods of cleaning welded joints can be given.

Element 5.23A.6 Inspect welds**Criteria 5.23A.6.1**

Weld joints visually inspected against specifications.

Assessor guide: observe that –

Welded joints are visually inspected for defects.

Assessor guide: confirm that –

Common weld defects detectable visually can be identified.

Criteria 5.23A.6.2

Weld defects identified.

Assessor guide: observe that –

Where applicable, weld defects are identified.

Assessor guide: confirm that –

Element 5.23A.7 Correct faults**Criteria 5.23A.7.1**

Take remedial action where required.

Assessor guide: observe that –

Where appropriate, weld defects are removed in accordance with work site procedures.

Assessor guide: confirm that –

Methods of weld defect removal and their application can be given.

Criteria 5.23A.7.2

Defects removed with minimum loss of sound metal using correct and appropriate techniques and tools.

Assessor guide: observe that –

A minimum amount of sound metal is removed with the defect.

Assessor guide: confirm that –

The tools, techniques and equipment to be used in removing weld defects can be identified.

Element 5.23A.8 Maintain weld records**Criteria 5.23A.8.1**

Weld records maintained in accordance with specifications and standard operating procedures.

Assessor guide: observe that –

Weld records are accurately completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The weld records to be kept can be identified. The frequency at which weld details are to be recorded can be identified. The reasons for keeping weld records can be given.

Range statement

This work would be carried out using a range of material for heavy or light fabrication. The person would work autonomously or within a team environment using predetermined standards of quality, safety, work and welding procedures and the skills applied to a range of fabrication activities. Weld quality meets a standard up to Australian Standard 1554 General Purpose or equivalent. Materials used may include carbon steel or stainless steel. Preparation of materials would include preheating, setting up of jigs, fixtures, clamps etc. Remedial action using thermal processes may include oxyacetylene and air arc equipment. Grinding devices may also be used. Where thermal processes and/or hand and power tools are required, appropriate units should be selected. Where welds comply with one of the certificates covered by Australian Standard 1796, then Unit 5.26A (Apply welding principles) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the submerged arc welding process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.24B A Perform welding supervision

Band – Specialisation band B

Field – Fabrication

Unit Weight 12

Pre-requisite units - Path 1

5.26A Apply welding principles

Element 5.24B.1 Prepare and determine welding procedure

Criteria 5.24B.1.1

Instruction of welders carried out to procedure.

Assessor guide: observe that –

Welders are instructed in the welding procedure(s) to be followed. All relevant job instructions, drawings, specifications, codes, standards and information are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The welding procedures to be followed in carrying out specified welds can be identified. The welders to be involved in the particular welding process can be identified. The reporting and recording requirements with reference to the particular welding process can be identified.

Criteria 5.24B.1.2

Welding parameters are determined in accordance with procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for determining the welding parameters can be given. The welding parameters applicable to the particular welding process can be identified. The effects of varying welding parameters on the quality of the welds produced can be explained. The reasons for selecting the chosen welding parameters can be given.

Criteria 5.24B.1.3

Variables and sequence checks are planned against documentation.

Assessor guide: observe that –

The welding procedures are planned and documented in accordance with the relevant codes and/or standards.

Assessor guide: confirm that –

The procedures for planning welding procedures can be given. The relevant codes and/or standards can be identified. The variables to be checked during the welding process can be identified. The sequence of checks to be undertaken can be identified. The reasons for selecting the chosen sequence of checks on the welding process and variables can be explained.

Criteria 5.24B.1.4

Appropriate documentation prepared for record keeping.

Assessor guide: observe that –

The welding procedures are documented in accordance with the relevant codes and/or standards. The welding records to be completed are prepared and authorised in accordance with standard operating procedures.

Assessor guide: confirm that –

The welding records to be kept can be identified. The procedures for preparing and authorising welding records can be given. The procedures for documenting welding procedures can be given.

Element 5.24B.2 Qualify welders to required procedures**Criteria 5.24B.2.1**

Welders trained regarding procedures.

Assessor guide: observe that –

Welders are trained in the welding procedures in accordance with standard operating procedures.

Assessor guide: confirm that –

The objectives of the training can be given. The procedures for training welders can be given. All necessary materials and equipment for the welding procedures to be undertaken can be identified. The competencies to be achieved by the welders can be identified.

Criteria 5.24B.2.2

Welders tested regarding procedures.

Assessor guide: observe that –

Welders are tested in the welding procedures for which they are being trained.

Assessor guide: confirm that –

The testing procedures can be identified.

Criteria 5.24B.2.3

Reports on the welder's performance regarding procedures are maintained.

Assessor guide: observe that –

The performance of welders being trained in the welding procedures is reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting welder performance during training can be given. The competencies to be reported on can be identified.

Element 5.24B.3 Monitor/maintain quality assurance and safety procedures**Criteria 5.24B.3.1**

Internal QA plan monitored.

Assessor guide: observe that –

The welding processes are monitored in accordance with standard operating procedures.

Assessor guide: confirm that –

The internal quality assurance plan can be described. The weld monitoring requirements of the quality assurance plan can be identified. The procedures for monitoring the welding process can be given.

Criteria 5.24B.3.2

Traceability of materials ensured.

Assessor guide: observe that –

The materials used in a nominated weld can be traced to their source in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for tracing weld materials throughout the welding process can be given. The records to be kept to ensure that all materials can be traced through the welding process to their source can be identified. The reasons for ensuring weld materials can be traced can be explained.

Criteria 5.24B.3.3

Welding supervised to ensure compliance with prescribed specifications and/or documented procedures and/or safety procedures.

Assessor guide: observe that –

The welding process is supervised to ensure that the welds are produced in compliance with specifications in accordance with the documented welding and safety procedures.

Assessor guide: confirm that –

The safety procedures to be followed when carrying out the welding process can be given. The specifications of the weld to be produced can be identified. The reasons for supervising the welding process can be explained.

Element 5.24B.4 Prepare documents**Criteria 5.24B.4.1**

Recording of the procedure against pre-qualifying procedures carried out.

Assessor guide: observe that –

The welding procedures are recorded in accordance with the relevant codes, standards and procedures.

Assessor guide: confirm that –

The pre-qualifying procedures can be given. The recording requirements for welding procedures can be identified.

Criteria 5.24B.4.2

Findings on internal QA plan recorded.

Assessor guide: observe that –

The results obtained with respect to welds undertaken are recorded in accordance with the internal quality assurance plan.

Assessor guide: confirm that –

The weld recording requirements of the internal quality assurance plan can be identified. The results of the weld checks and tests carried out as part of the internal quality assurance plan can be identified.

Element 5.24B.5 Arrange for non-destructive testing and destructive testing**Criteria 5.24B.5.1**

Conducting of appropriate testing is ensured.

Assessor guide: observe that –

Appropriate weld tests are initiated in accordance with the welding procedures.

Assessor guide: confirm that –

The weld tests to be carried out can be identified. A variety of weld testing procedures can be identified. The purpose of each weld test can be given. The procedures for initiating the testing of welds by internal/external personnel can be identified. The tests to be conducted for compliance with the welding procedures can be identified.

Criteria 5.24B.5.2

Verify that non-destructive testing/destructive testing reports conform to requirements.

Assessor guide: observe that –

The reports of the weld testing carried out in accordance with the weld procedures are obtained from the appropriate testing authority.

Assessor guide: confirm that –

The authority responsible for testing the welds can be identified. The information to be recorded for each weld test can be identified. Any discrepancies between the weld test report and the reporting/ recording requirements can be identified. The consequence of incomplete or inappropriate reporting of weld tests can be explained. The procedures for dealing with incomplete/inappropriate weld test records can be given.

Range statement

Competencies in this unit are based on wide knowledge of welding science, processes, procedures and technical requirements. Individuals working in this field would hold at least one certificate satisfying the requirements of Australian Standard 1796 Certificate 1 - 9. Competencies and procedures are determined by recognised codes and standards such as Australian Standard 2214 and Australian Standard 1796 Certificate 10. All work would be conducted in accordance with job requirements, technical specifications and legislative and regulatory requirements.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the supervision of welding processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.25B B Perform welding/fabrication inspection

Band – Specialisation band B

Field – Fabrication

Unit Weight 12

Pre-requisite units - Path 1

5.26A Apply welding principles

Element 5.25B.1 Select and organise/conduct appropriate non-destructive test procedures or verify previous test procedures

Criteria 5.25B.1.1

Appropriate non-destructive test or tests selected and organised/conducted in accordance with standard operating procedures or job specifications.

Assessor guide: observe that –

All relevant job instructions, specifications, codes, standards and procedures are obtained in accordance with workplace procedures. Where appropriate, the testing of welds is initiated in accordance with standard operating procedures. Where appropriate, the welds are tested in accordance with welding and standard operating procedures.

Assessor guide: confirm that –

A variety of non-destructive tests and their application can be identified. The weld specifications can be identified. The welding procedures for the given weld can be identified. The tests to be conducted can be identified. The procedures for initiating the weld tests can be given. The procedures for conducting a variety of non-destructive tests can be given. The reasons for selecting the chosen tests can be given.

Criteria 5.25B.1.2

Results of previous testing procedures verified.

Assessor guide: observe that –

The results of previous weld tests are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for obtaining previous weld tests can be given. Any discrepancies between previous and current weld tests can be identified. The reasons for any discrepancies identified can be given. The effects of testing procedures on test results can be explained. The procedures for verifying/ amending previously established weld test procedures can be given.

Element 5.25B.2 Establish welding procedure**Criteria 5.25B.2.1**

Joint design specification is interpreted.

Assessor guide: observe that –

All relevant weld design data is obtained in accordance with standard workplace procedures.

Assessor guide: confirm that –

The specifications of the welded joint can be identified.

Criteria 5.25B.2.2

Parameters are described.

Assessor guide: observe that –

Assessor guide: confirm that –

The parameters affecting the performance of the weld with respect to specifications can be identified and described.

Criteria 5.25B.2.3

Variables are checked.

Assessor guide: observe that –

The variable weld parameters are checked for conformance to specification in accordance with welding and standard operating procedures.

Assessor guide: confirm that –

The variables affecting the performance of the weld can be identified. The tools, equipment and techniques necessary to check each variable can be identified.

Criteria 5.25B.2.4

Procedures are documented.

Assessor guide: observe that –

The welding procedures are documented in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for documenting welding procedures can be given.

Element 5.25B.3 Validate welding procedures**Criteria 5.25B.3.1**

Organise preparation of a test piece.

Assessor guide: observe that –

A test piece is produced in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for preparing a weld test piece can be given.

Criteria 5.25B.3.2

Prescribed tests are arranged or conducted.

Assessor guide: observe that –

Where appropriate, the prescribed tests are conducted in accordance with standard operating procedures. Where appropriate, the prescribed tests are initiated in accordance with standard operating procedures.

Assessor guide: confirm that –

The prescribed tests can be identified. The procedures for conducting the prescribed tests can be given. The tools, equipment and techniques necessary to carry out the prescribed tests can be identified. The procedures for initiating prescribed tests can be given.

Criteria 5.25B.3.3

Test results are interpreted and report prepared identifying required action.

Assessor guide: observe that –

Test results are obtained in accordance with standard operating procedures. The test report is prepared in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for obtaining test results can be given. The procedures for reporting test results can be given. The test results are checked against weld specifications. Any discrepancies between the test results and weld specifications are identified. The reasons for any discrepancies detected can be given. The action to be taken to return the welds produced to specification can be identified. The reasons for proposing such action can be explained.

Element 5.25B.4 Ensure quality assurance procedures are carried out**Criteria 5.25B.4.1**

Material identification checked.

Assessor guide: observe that –

The material to be welded is checked for conformance to specifications.

Assessor guide: confirm that –

The specifications of the material to be welded can be identified. The methods of identifying weld materials can be given. The reasons for correctly marking/ identifying weld materials can be explained.

Criteria 5.25B.4.2

Movement of material through workshop in-site is documented.

Assessor guide: observe that –

The movement of material through the workshop is recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for documenting/ recording the movement of material through the workshop can be given. The reasons for documenting/ recording the movement of material through the workshop can be explained.

Criteria 5.25B.4.3

Transferring material test certification numbers is witnessed.

Assessor guide: observe that –

The transfer of material test certification numbers from the parent material to a part cut from the parent material is witnessed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for transferring material test certification numbers can be given. The person(s) who can witness the transfer of material test certification numbers can be identified. The reasons for witnessing the transfer of material test certification numbers can be explained.

Criteria 5.25B.4.4

Identification of consumables in accordance with welding procedures is performed.

Assessor guide: observe that –

Consumables are marked for identification in accordance with welding procedures.

Assessor guide: confirm that –

The procedures for identifying consumables can be given. The reasons for marking consumables for identification purposes can be explained.

Criteria 5.25B.4.5

Storage and use of consumables are monitored.

Assessor guide: observe that –

Welding consumables are used and stored in accordance with manufacturers' recommendations or standard operating procedures.

Assessor guide: confirm that –

The procedures for using and storing consumables can be given. The consequences of inappropriate use and/or storage of consumables can be given. The storage life of consumables can be identified.

Criteria 5.25B.4.6

Maintain and review quality records to ensure compliance with requirements.

Assessor guide: observe that –

Welding quality records are maintained in accordance with standard operating procedures. The welding records are checked for conformance with welding quality requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for maintaining welding quality records can be given. The welding quality requirements of the relevant code, standard and/or welding procedure can be identified.

Element 5.25B.5 Monitor procedures in process**Criteria 5.25B.5.1**

Material forming is checked.

Assessor guide: observe that –

Where appropriate, the form of the material to be welded is checked for conformance with specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking the form of materials to be welded can be given. The tools, techniques and equipment necessary to check the form of the materials to be welded can be identified.

Criteria 5.25B.5.2

Dimensional checks carried out.

Assessor guide: observe that –

The dimensions of the welded components are checked for conformance to specifications.

Assessor guide: confirm that –

The specifications of the welded object can be identified. The tools, techniques and equipment necessary to check the dimensions of the welded components can be identified.

Criteria 5.25B.5.3

Final inspection against specifications.

Assessor guide: observe that –

The welds are checked for conformance to specifications in accordance with the welding procedures.

Assessor guide: confirm that –

The specifications of the weld can be identified. The tests/checks to be undertaken on the weld in accordance with the welding procedures can be identified. The tools, equipment and techniques required to test/check the welds for conformance to specifications can be identified.

Range statement

All work is undertaken in accordance with legislative and regulatory requirements. Test procedures and the range of this standard are determined by the code requirements relating to welding inspection procedures eg: Australian Standard 1210, Australian Standard 1554, Welding Technology Institute of Australia specifications or equivalent. Competencies used in this unit are based on knowledge of welding science and metallurgy, mechanical properties of welded joints, heat treatment procedures and national and technical standards. Examples of test procedures include dye penetrant magnetic particle, radiographic or ultrasound tests.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with welding inspection or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.26A A Apply welding principles

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Notes - This unit is to be assessed in conjunction with one of the competency units which recognises certificates covered by Australian Standard 1796 - see range statement.

Element 5.26A.1 Apply all statutory and regulatory requirements to welding procedures

Criteria 5.26A.1.1

Statutory and safety requirements applied to welding.

Assessor guide: observe that –

All welding is carried out in accordance with the relevant statutory and safety requirements.

Assessor guide: confirm that –

The relevant statutory and safety requirements can be identified with respect to welding processes. The hazards associated with welding can be identified. The personal protective clothing and equipment to be used in conjunction with welding processes can be identified.

Element 5.26A.2 Interpret all welding terms, codes and symbols

Criteria 5.26A.2.1

Welding terms and symbols correctly interpreted.

Assessor guide: observe that –

Assessor guide: confirm that –

The meanings of a wide variety of given welding terms and symbols can be correctly given. The reasons for using welding symbols can be explained.

Element 5.26A.3 Determine the effects of heat treatment on metal in relation to welding**Criteria 5.26A.3.1**

Reasons for performing heat treatment are identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The reasons for heat treating metal in relation to welding can be explained. Applications of each of the following heat treatment processes can be given: - pre-welding heat treatment - post-welding heat treatment - stress relieving - normalising - annealing. For given welding situations the appropriate heat treatment process to be applied can be identified. The reasons for selecting the chosen heat treatment process can be given.

Criteria 5.26A.3.2

Processes used such as pre/post heat treatment, stress relieving, normalising, annealing appropriately applied.

Assessor guide: observe that –

Where appropriate, the heat treatment process applicable to the welding undertaken is correctly applied in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedure for carrying out each of the above heat treatment processes can be given. The tools, equipment and techniques necessary to carry out the heat treatment processes can be identified.

Element 5.26A.4 Identify the logical sequence of events involved in planning a welding operation**Criteria 5.26A.4.1**

Principles of planning and setting up welding appropriately applied.

Assessor guide: observe that –

Assessor guide: confirm that –

The sequence of operations in performing a weld in accordance with AS1796 can be identified. The reasons for planning a welding operation can be given. The procedures for setting up welding and safety equipment can be given.

Criteria 5.26A.4.2

Where specified, appropriate preparation undertaken for testing of welds.

Assessor guide: observe that –

Where appropriate, welds are prepared for testing in accordance with welding procedures.

Assessor guide: confirm that –

The procedures for preparing welds for testing can be given. The tools, equipment and techniques to be used in preparing welds for testing can be identified.

Range statement

This unit describes the underpinning knowledge required to satisfy Australian Standard 1796. It should be assessed in combination with one of the units satisfying the Australian Standard 1796 Certificate 1 - 9 or other welding codes: Unit 5.16A (Perform advanced welding using manual metal arc welding process), Unit 5.18A (Perform advanced welding using gas metal arc welding process), Unit 5.20A (Perform advanced welding using gas tungsten arc welding process), Unit 5.22A (Perform advanced welding using oxyacetylene welding process) and Unit 5.23A (Weld using submerged arc welding process). Welding, planning and set up principles for a range of materials and processes are applied to satisfy Australian Standard 1796.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with welding in accordance with AS1796 Certificates 1-9 inclusive, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.36A B Repair/replace/modify fabrications

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Pre-requisite units - Path 1

- 5.5A Carry out mechanical cutting
- 5.12A Perform routine manual metal arc welding
- 9.2A Interpret technical drawing

- 5.7A Manual heating and thermal cutting
- 5.15A Weld using manual metal arc welding process
- 18.1A Use hand tools

- 5.11A Assemble fabricated components
- 9.1A Draw and interpret sketch
- 18.2A Use power tools/hand held operations

Pre-requisite units - Path 2

- 5.5A Carry out mechanical cutting
- 5.17A Weld using gas metal arc welding process
- 9.2A Interpret technical drawing

- 5.7A Manual heating and thermal cutting
- 5.50A Perform routine gas metal arc welding
- 18.1A Use hand tools

- 5.11A Assemble fabricated components
- 9.1A Draw and interpret sketch
- 18.2A Use power tools/hand held operations

Pre-requisite units - Path 3

- 5.4A Perform routine oxy acetylene welding
- 5.11A Assemble fabricated components

- 5.5A Carry out mechanical cutting
- 5.22A Perform advanced welding using oxy acetylene welding process

- 5.7A Manual heating and thermal cutting
- 9.1A Draw and interpret sketch

- 9.2A Interpret technical drawing

- 18.1A Use hand tools

- 18.2A Use power tools/hand held operations

Pre-requisite units - Path 4

- 5.5A Carry out mechanical cutting
- 5.19A Weld using gas tungsten arc welding process
- 9.2A Interpret technical drawing

- 5.7A Manual heating and thermal cutting
- 5.49A Perform routine gas tungsten arc welding
- 18.1A Use hand tools

- 5.11A Assemble fabricated components
- 9.1A Draw and interpret sketch
- 18.2A Use power tools/hand held operations

Element 5.36A.1 Assess and process repair/replacement/modification requirement

Criteria 5.36A.1.1

Work requirement determined from job sheet, instruction or visual inspection.

Assessor guide: observe that –

Where appropriate, a visual inspection of the work to be done is carried out in accordance with work site procedures. All relevant job sheets and instructions are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The work to be done can be identified.

Criteria 5.36A.1.2

Specifications and drawings obtained, interpreted and understood where required.

Assessor guide: observe that –

All codes, standards, specifications and drawings relevant to the work to be done are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The specifications applying to the work to be done can be identified. Any codes or standards applying to the work to be done can be identified.

Criteria 5.36A.1.3

Fabrication inspected and suitability for repair/replacement/modification determined.

Assessor guide: observe that –

The fabrication is inspected for defects, faults and compliance with specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

Any faults, defects and/or non-compliance with specifications that can be rectified by rework or additional work can be identified. Any faults, defects and/or non-compliance with specifications that can be rectified by replacement of components/materials can be identified. The effects of any proposed modifications on the fabrication can be given. The effects of any proposed modifications on the fabrication's specifications, operation or function can be given. The most appropriate action to be taken with respect to the fabrication (repair/replace/modify) can be identified. Appropriate reasons for the proposed action can be given.

Element 5.36A.2 Assess and process material requirements**Criteria 5.36A.2.1**

Material requirements are assessed in accordance with relevant codes, manufacturer's specifications and standard operating procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The type, quantity and size(s) of materials required to undertake the work can be identified. The reasons for selecting the chosen materials can be explained.

Criteria 5.36A.2.2

Materials are obtained/requisitioned in accordance with standard operating procedures.

Assessor guide: observe that –

The necessary materials are obtained/requisitioned in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for procuring materials can be identified.

Criteria 5.36A.2.3

Tool and equipment requirements are assessed and obtained, where required, in accordance with standard operating procedures.

Assessor guide: observe that –

Where appropriate, the tools, equipment and consumables required are obtained/requisitioned in accordance with standard operating procedures.

Assessor guide: confirm that –

The tools, equipment and consumables required to carry out the work can be identified.

Element 5.36A.3 Prepare materials**Criteria 5.36A.3.1**

Fabrication for repair/replacement and/or modification prepared in accordance with specifications using acceptable workplace practices, tools and equipment.

Assessor guide: observe that –

The fabrication is appropriately prepared for the work to be undertaken in accordance with standard operating procedures. All precautions are taken to ensure the safety of those undertaking, or in the vicinity of the repair/replacement/modification being carried out.

Assessor guide: confirm that –

The work to be done in preparation for the repair/replacement/ modification of the fabrication can be identified. The safety procedures to be followed before, during and after the repair/replacement/modification can be identified.

Criteria 5.36A.3.2

Materials marked out and prepared to specifications with minimum wastage using correct principles, tools, equipment and procedures.

Assessor guide: observe that –

Materials are checked for conformance to specifications. Materials are marked out using appropriate tools, equipment and principles in accordance with standard operating procedures. Material wastage is minimised.

Assessor guide: confirm that –

The appropriate marking out principles can be identified.

Criteria 5.36A.3.3

Material or item for repair, replacement and/or modification is cut, bent, rolled, shaped or formed to specifications using appropriate fabrication techniques/procedures, tools and equipment.

Assessor guide: observe that –

The material is cut, bent, rolled, shaped or formed to specification in accordance with standard operating procedures. Appropriate techniques, procedures, tools and equipment are used to carry out the material preparation processes.

Assessor guide: confirm that –

The necessary material preparation processes can be identified. The procedures for accessing the necessary equipment can be identified.

Criteria 5.36A.3.4

Where required, items are marked for identification.

Assessor guide: observe that –

Where appropriate, prepared materials are marked for identification in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for marking prepared materials for identification can be given. Where appropriate, the procedures for identifying prepared materials can be identified.

Element 5.36A.4 Repair/replacement or modification carried out

Criteria 5.36A.4.1

Using appropriate clamping methods, equipment, jigs and fixtures, materials are positioned and clamped for welding.

Assessor guide: observe that –

Materials are correctly positioned and clamped for welding. Appropriate clamping methods, equipment, jigs and fixtures are used to hold the materials to be welded.

Assessor guide: confirm that –

A range of clamping methods and their application can be given. The most appropriate clamping method(s) can be identified for the welds to be undertaken. The relative position/location of all materials to be welded can be identified.

Criteria 5.36A.4.2

Pre-tack checks undertaken and compliance with specifications determined prior to tack welding in position.

Assessor guide: observe that –

All pre-welding/tacking checks are undertaken in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 5.36A.4.3

Welding equipment is prepared and settings adjusted according to requirements.

Assessor guide: observe that –

Welding equipment is set up and adjusted in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The weld specifications can be identified. The equipment, consumables and settings required to achieve the weld specification can be identified.

Criteria 5.36A.4.4

Immediate work site environment is checked to ensure compliance with safety requirements and procedures.

Assessor guide: observe that –

The work site is checked for conformance with safety requirements and standard operating procedures.

Assessor guide: confirm that –

The safety requirements applicable to the work to be undertaken can be identified. The safety procedures to be followed can be identified.

Criteria 5.36A.4.5

Material or item tack welded using appropriate distortion minimisation techniques and procedures.

Assessor guide: observe that –

The materials are tack welded in accordance with standard operating procedures. Distortion of materials is minimised.

Assessor guide: confirm that –

The appropriate distortion minimisation procedures can be identified.

Criteria 5.36A.4.6

Material or item is checked against specifications prior to welding.

Assessor guide: observe that –

The materials/fabrications tack welded, are checked visually and dimensionally for conformance to specifications.

Assessor guide: confirm that –

Criteria 5.36A.4.7

Material or item is welded to specifications using appropriate techniques and procedures.

Assessor guide: observe that –

The material/fabrication is welded in accordance with standard operating procedures. The welds comply with all relevant specifications. Material distortion is minimised and where appropriate rectified.

Assessor guide: confirm that –

The weld specifications can be identified. Appropriate methods for rectifying any distortion of materials that has occurred during the welding process can be given.

Element 5.36A.5 Repair, replacements and/or modification finished and inspected**Criteria 5.36A.5.1**

Repair, replacement and/or modification cleaned and finished to specifications using appropriate workplace practices.

Assessor guide: observe that –

Materials/fabrication cleaned and finished to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

Material cleaning and finishing processes and their application can be given. The most appropriate cleaning and finishing process for the given repair/replacement/modification can be identified.

Criteria 5.36A.5.2

Welds visually inspected to assess weld quality against predetermined specifications.

Assessor guide: observe that –

Welds are visually inspected for conformance to specification. Where appropriate, non-conforming welds are returned to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 5.36A.5.3

Completed repair, replacement and/or modification assessed against specifications.

Assessor guide: observe that –

The repair/replacement/modification is checked for conformance to specifications. Where appropriate the repair/replacement/modification is returned to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 5.36A.5.4

Maintenance report prepared and lodged in accordance with standard operating procedures.

Assessor guide: observe that –

Maintenance reports are prepared and lodged in accordance with standard operating procedures.

Assessor guide: confirm that –

The maintenance reporting requirements can be identified. The reasons for completing reports on repairs/replacements/modifications can be given.

Range statement

This unit should be selected where an integrated level of skills in fabrication maintenance and repair is required. This unit is intended to build on skills covered by the specialist prerequisites. If individual skills are required specialist units only should be selected. Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workplace procedures in the repair, replacement and/or modification of fabrications. Work may be carried out in workshop or on-site environments utilising welding and fabrication techniques, processes, tools, equipment and procedures on a range of materials. Processes may involve the simple mark out of materials, setting up and operation of a variety of welding and cutting plant/equipment. Where additional or more complex marking out skills are required, refer to Unit 12.7A (Mark off/out structural fabrications and shapes). If machines and equipment for forming, bending or shaping are required, Unit 5.10A (Undertake fabrication, forming, bending and shaping) should also be selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the repair, replacement and/or modification of fabrications or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.37A A Geometric development

Band – Specialisation band A

Field – Fabrication

Unit Weight 6

Pre-requisite units - Path 1

2.7C10 Perform computations - basic

9.2A Interpret technical drawing

Element 5.37A.1 Transfer dimensions from a detail drawing to work

Criteria 5.37A.1.1

Specifications and work requirements determined and understood using correct and appropriate calculations.

Assessor guide: observe that –

Job instructions and specifications are obtained in accordance with work site procedures. All necessary calculations are performed correctly and accurately.

Assessor guide: confirm that –

The work to be undertaken can be identified. The specifications applicable to the work to be done can be identified.

Criteria 5.37A.1.2

Development carried out to specifications or standard operating procedures using appropriate tools and equipment.

Assessor guide: observe that –

The development is carried out accurately using appropriate techniques, procedures and equipment.

Assessor guide: confirm that –

The tools and equipment to be used in the preparation of the development can be identified.

Criteria 5.37A.1.3

Datum points correctly established.

Assessor guide: observe that –

All datum points are correctly established and appropriately marked.

Assessor guide: confirm that –

The datum points can be identified.

Element 5.37A.2 Make templates as required

Criteria 5.37A.2.1

Appropriate template material chosen.

Assessor guide: observe that –

Assessor guide: confirm that –

Materials that can be used for the preparation of templates and their application can be given. The appropriate template material for the given development/application can be identified.

Criteria 5.37A.2.2

Templates produced to specification.

Assessor guide: observe that –

The template is produced to specification in accordance with standard operating procedures. All manufacturing allowances are correctly and accurately calculated.

Assessor guide: confirm that –

The manufacturing allowances that have to be considered when developing patterns can be identified.

Criteria 5.37A.2.3

Correct storage procedures followed including labelling and identification to standard operating procedures.

Assessor guide: observe that –

Templates are labelled and stored in accordance with standard operating procedures.

Assessor guide: confirm that –

Template labelling and identification procedures can be identified. The appropriate storage requirements of templates can be identified.

Element 5.37A.3 Develop patterns as required**Criteria 5.37A.3.1**

Parallel line, radial line and triangulation development methods chosen and applied.

Assessor guide: observe that –

Patterns are developed using the appropriate method(s) in accordance with standard operating procedures.

Assessor guide: confirm that –

The three development methods and their application can be identified. The appropriate method(s) of development of a range of given objects can be identified.

Criteria 5.37A.3.2

Allowances for fabrication and assembly correctly determined and transferred.

Assessor guide: observe that –

Fabrication and assembly allowances are correctly determined and transferred to the pattern.

Assessor guide: confirm that –

The appropriate fabrication and assembly allowances can be identified. The effects of material type and thickness on fabrication and assembly allowances can be identified. The sources of data on fabrication and assembly allowances can be identified.

Element 5.37A.4 Interpret relevant codes, standards and symbols**Criteria 5.37A.4.1**

Relevant standards/codes and symbols interpreted.

Assessor guide: observe that –

Assessor guide: confirm that –

All relevant standards and codes can be identified. The meaning of symbols used in the standards/codes can be given.

Criteria 5.37A.4.2

Requirements of standards/codes interpreted and applied to materials and processes.

Assessor guide: observe that –

Where applicable, the requirements of the codes/standards are correctly applied during the geometric development process.

Assessor guide: confirm that –

The requirements of the codes/ standards applicable to the work to be done can be identified.

Element 5.37A.5 Estimate quantities of materials from detail drawings**Criteria 5.37A.5.1**

Materials correctly identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The material(s) from which the component/assembly is to be manufactured can be identified.

Criteria 5.37A.5.2

Quantities estimated from drawings.

Assessor guide: observe that –

Material and component quantities are correctly determined from drawings and job specifications.

Assessor guide: confirm that –

Criteria 5.37A.5.3

Material wastage minimised.

Assessor guide: observe that –

Material wastage is minimised during the development of patterns/ templates.

Assessor guide: confirm that –

The benefits of minimising material wastage can be given.

Range statement

This unit applies to marking out of general fabrications using geometric development. Work is undertaken autonomously using predetermined standards of quality, safety and workshop procedures. The task may be performed in the workshop or in situ. Marking out is undertaken using appropriate tools and equipment, and templates and patterns are produced as required. This unit is not intended to cover the skills required for marking out activities associated with general engineering and maintenance functions. For these skills, see Units 12.6A (Mark off/out (general engineering)), 7.5A (Perform general machining), 18.6A (Dismantle/repair/replace/assemble and fit engineering components) and 18.14A (Tool, gauge and die manufacture).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the preparation of geometric developments or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.38A A Advanced geometric development - cylindrical/rectangular

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

This unit applies to marking out of complex cylindrical/rectangular fabrications. Fabrications may include hoppers, chutes and involve compound bends and double offsets. This unit requires advanced skills in parallel line developments.

Pre-requisite units - Path 1

2.7C10 Perform computations - basic
5.37A Geometric development

2.8C10 Perform computations
9.2A Interpret technical drawing

2.13C5 Perform mathematical computations

Element 5.38A.1 Mark off/out

Criteria 5.38A.1.1

Specifications and work requirements determined and understood using correct and appropriate calculations

Assessor guide: observe that –
Job instructions and specifications are obtained in accordance with work site procedures All necessary calculations are performed correctly and accurately

Assessor guide: confirm that –
The work to be undertaken can be identified The specifications applicable to the work to be done can be identified

Criteria 5.38A.1.2

Development carried out to specifications or standard operating procedures using appropriate tools and equipment

Assessor guide: observe that –
The development is carried out accurately using appropriate techniques, procedures and equipment

Assessor guide: confirm that –
The tools and equipment to be used in the preparation of the development can be identified

Criteria 5.38A.1.3

Datum points correctly established and indicated

Assessor guide: observe that –
All datum points are correctly established and appropriately marked

Assessor guide: confirm that –
The datum points can be identified

Criteria 5.38A.1.4

Allowances are correctly determined and marked (thickness, bend, pitch, angle, circumference, perimeter)

Assessor guide: observe that –
All allowances are calculated correctly and transferred to the material being marked out

Assessor guide: confirm that –
The reasons for making the following allowances when marking out can be given: - thickness - bend - pitch - angle - circumference - perimeter The method of calculating each allowance can be demonstrated

Element 5.38A.2 Make templates as required

Criteria 5.38A.2.1

Appropriate template material chosen

Assessor guide: observe that –

Assessor guide: confirm that –
Materials that can be used for the preparation of templates and their application can be given The appropriate template material for the given development/application can be identified

Criteria 5.38A.2.2 Templates produced	<i>Assessor guide: observe that –</i> The template is produced to specification in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The manufacturing allowances that have to be considered when developing patterns can be identified
Criteria 5.38A.2.3 Allowances determined and transferred	<i>Assessor guide: observe that –</i> All manufacturing allowances are correctly and accurately calculated	<i>Assessor guide: confirm that –</i>
Criteria 5.38A.2.4 Templates for rolling, bending, pressing, drilling and profiling accurately produced	<i>Assessor guide: observe that –</i> Where appropriate, templates for rolling, bending, pressing, drilling and profiling are accurately produced in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The procedures for making templates can be given The reasons for making templates for specific manufacturing operations can be explained The tools, equipment and techniques to be used to produce templates can be identified
Criteria 5.38A.2.5 Correct storage procedures followed including labelling and identification to standard operating procedures	<i>Assessor guide: observe that –</i> Templates are labelled and stored in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> Template labelling and identification procedures can be identified The appropriate storage requirements of templates can be identified
Element 5.38A.3 Develop patterns as required		
Criteria 5.38A.3.1 Most appropriate development method chosen and applied	<i>Assessor guide: observe that –</i> Patterns are developed using the appropriate method(s) in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The three development methods and their application can be identified The appropriate method(s) of development of a range of given objects can be identified
Criteria 5.38A.3.2 Allowances correctly determined and transferred	<i>Assessor guide: observe that –</i> Fabrication and assembly allowances are correctly determined and transferred to the pattern	<i>Assessor guide: confirm that –</i> The appropriate fabrication and assembly allowances can be identified The effects of material type and thickness on fabrication and assembly allowances can be identified The source of data on fabrication and assembly allowances can be identified
Element 5.38A.4 Interpret relevant codes, standards and symbols		
Criteria 5.38A.4.1 Relevant standards/codes and symbols interpreted	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i> All relevant standards and codes can be identified The meaning of symbols used in the standards/codes can be given

Criteria 5.38A.4.2 Requirements of standards/codes interpreted and applied to materials and processes	<i>Assessor guide: observe that –</i> Where applicable, the requirements of the codes/standards are correctly applied during the geometric development process	<i>Assessor guide: confirm that –</i> The requirements of the codes/ standards applicable to the work to be done can be identified
Element 5.38A.5 Estimate quantities of materials from engineering drawings		
Criteria 5.38A.5.1 Materials correctly identified	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i> The material(s) from which the components/assembly is to be manufactured can be identified
Criteria 5.38A.5.2 Quantities estimated from drawings	<i>Assessor guide: observe that –</i> Material and component quantities are correctly determined from drawings and job specifications	<i>Assessor guide: confirm that –</i>
Criteria 5.38A.5.3 Material wastage minimised	<i>Assessor guide: observe that –</i> Material wastage is minimised during the development of patterns/ templates	<i>Assessor guide: confirm that –</i> The benefits of minimising material wastage can be given

Range statement

This unit applies to marking out of complex cylindrical/rectangular fabrications. Fabrications may include hoppers, chutes and involve compound bends and double offsets. This unit requires advanced skills in parallel line developments. All work undertaken in compliance with legislative and regulatory requirements to previously determined standards of safety, quality and standard operating procedures. Individuals may work autonomously or in a team environment. This unit is not intended to cover the skills required for marking out activities associated with general engineering and maintenance functions. For these skills, see Units 12.6A (Mark off/out (general engineering)), 7.5A (Perform general machining), 18.6A (Dismantle/repair/replace/assemble and fit engineering components) and 18.14A (Tool, gauge and die manufacture).

Evidence**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the geometric development of cylinders and rectangles or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.39A A Advanced geometric development - conical

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

This unit applies to the marking out of complex conical fabrications using advanced geometric development. Fabrications may include hoppers with round/rectangular branch intersections. This unit requires advanced skills for the calculation of cutting, bending lines and developments.

Pre-requisite units - Path 1

2.7C10 Perform computations - basic
5.37A Geometric development

2.8C10 Perform computations
9.2A Interpret technical drawing

2.13C5 Perform mathematical computations

Element 5.39A.1 Mark off/out

Criteria 5.39A.1.1

Specifications and work requirements determined and understood using correct and appropriate calculations

Assessor guide: observe that –
Job instructions and specifications are obtained in accordance with work site procedures All necessary calculations are performed correctly and accurately

Assessor guide: confirm that –
The work to be undertaken can be identified The specifications applicable to the work to be done can be identified

Criteria 5.39A.1.2

Development carried out to specifications or standard operating procedures using appropriate tools and equipment

Assessor guide: observe that –
The development is carried out accurately using appropriate techniques, procedures and equipment

Assessor guide: confirm that –
The tools and equipment to be used in the preparation of the development can be identified

Criteria 5.39A.1.3

Datum points correctly established and indicated

Assessor guide: observe that –
All datum points are correctly established and appropriately marked

Assessor guide: confirm that –
The datum points can be identified

Criteria 5.39A.1.4

Allowances are correctly determined and marked (thickness, bend, pitch, angle, circumference,

Assessor guide: observe that –
All allowances are calculated correctly and transferred to the material being marked out

Assessor guide: confirm that –
The reasons for making the following allowances when marking out can be given: - thickness - bend - pitch - angle - circumference - perimeter The method of calculating each allowance can be demonstrated

Element 5.39A.2 Make templates as required

Criteria 5.39A.2.1

Appropriate template material chosen

Assessor guide: observe that –

Assessor guide: confirm that –
Materials that can be used for the preparation of templates and their application can be given The appropriate template material for the given development/application can be identified

Criteria 5.39A.2.2 Templates produced	<i>Assessor guide: observe that –</i> The template is produced to specification in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The manufacturing allowances that have to be considered when developing patterns can be identified
Criteria 5.39A.2.3 Allowances determined and transferred	<i>Assessor guide: observe that –</i> All manufacturing allowances are correctly and accurately calculated	<i>Assessor guide: confirm that –</i>
Criteria 5.39A.2.4 Templates for rolling, bending, pressing, drilling and profiling accurately produced	<i>Assessor guide: observe that –</i> Where appropriate, templates for rolling, bending, pressing, drilling and profiling are accurately produced in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The procedures for making templates can be given The reasons for making templates for specific manufacturing operations can be explained The tools, equipment and techniques to be used to produce templates can be identified
Criteria 5.39A.2.5 Correct storage procedures followed including labelling and identification to standard operating procedures	<i>Assessor guide: observe that –</i> Templates are labelled and stored in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> Template labelling and identification procedures can be identified The appropriate storage requirements of templates can be identified
Element 5.39A.3 Develop patterns as required		
Criteria 5.39A.3.1 Most appropriate development method chosen and applied	<i>Assessor guide: observe that –</i> Patterns are developed using the appropriate method(s) in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The three development methods and their application can be identified The appropriate method(s) of development of a range of given objects can be identified
Criteria 5.39A.3.2 Allowances correctly determined and transferred	<i>Assessor guide: observe that –</i> Fabrication and assembly allowances are correctly determined and transferred to the pattern	<i>Assessor guide: confirm that –</i> The appropriate fabrication and assembly allowances can be identified The effects of material type and thickness on fabrication and assembly allowances can be identified The sources of data on fabrication and assembly allowances can be identified
Element 5.39A.4 Interpret relevant codes, standards and symbols		
Criteria 5.39A.4.1 Relevant standards/codes and symbols interpreted	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i> All relevant standards and codes can be identified The meaning of symbols used in the standards/codes can be given

<p>Criteria 5.39A.4.2 Requirements of standards/codes interpreted and applied to materials and processes</p>	<p><i>Assessor guide: observe that –</i> Where applicable, the requirements of the codes/standards are correctly applied during the geometric development process</p>	<p><i>Assessor guide: confirm that –</i> The requirements of the codes/ standards applicable to the work to be done can be identified</p>
<p>Element 5.39A.5 Estimate quantities of materials from engineering drawings</p>		
<p>Criteria 5.39A.5.1 Materials correctly identified</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i> The material(s) from which the component/assembly is to be manufactured can be identified</p>
<p>Criteria 5.39A.5.2 Quantities estimated from drawing</p>	<p><i>Assessor guide: observe that –</i> Material and component quantities are correctly determined from drawings and job specifications</p>	<p><i>Assessor guide: confirm that –</i></p>
<p>Criteria 5.39A.5.3 Material wastage minimised</p>	<p><i>Assessor guide: observe that –</i> Material wastage is minimised during the development of patterns/ templates</p>	<p><i>Assessor guide: confirm that –</i> The benefits of minimising material wastage can be given</p>

Unit MEM 5.40A A Advanced geometric development - transitions

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

This unit applies to the marking out of complex fabrications using geometric development. Fabrications may include hoppers, chutes, elliptical shapes, curves, spirals etc.

Patterns may include complex and irregular shapes. This unit requires advanced skills for the calculation of cutting, bending lines and developments.

Pre-requisite units - Path 1

2.7C10 Perform computations - basic
5.37A Geometric development

2.8C10 Perform computations
9.2A Interpret technical drawing

2.13C5 Perform mathematical computations

Element 5.40A.1 Mark off/out

Criteria 5.40A.1.1

Specifications and work requirements determined and understood using correct and appropriate calculations

Assessor guide: observe that –
Job instructions and specifications are obtained in accordance with work site procedures All necessary calculations are performed correctly and accurately

Assessor guide: confirm that –
The work to be undertaken can be identified The specifications applicable to the work to be done can be identified

Criteria 5.40A.1.2

Development carried out to specifications or standard operating procedures using appropriate tools and equipment

Assessor guide: observe that –
The development is carried out accurately using appropriate techniques, procedures and equipment

Assessor guide: confirm that –
The tools and equipment to be used in the preparation of the development can be identified

Criteria 5.40A.1.3

Datum points correctly established and indicated

Assessor guide: observe that –
All datum points are correctly established and appropriately marked

Assessor guide: confirm that –
The datum points can be identified

Criteria 5.40A.1.4

Allowances are correctly determined and marked eg: (thickness, bend, pitch, angle, circumference, contraction, etc.)

Assessor guide: observe that –
All allowances are calculated correctly and transferred to the material being marked out

Assessor guide: confirm that –
The reasons for making the following allowances when marking out can be given: - thickness - bend - pitch - angle - circumference - perimeter The method of calculating each allowance can be demonstrated

Element 5.40A.2 Make templates as required

Criteria 5.40A.2.1

Appropriate template material chosen

Unit MEM 5.41A A Weld using powder flame spraying

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Pre-requisite units - Path 1

5.4A Perform routine oxy acetylene welding

9.1A Draw and interpret sketch

Element 5.41A.1 Prepare work for spray welding

Criteria 5.41A.1.1

Identify spray weld requirements from specifications and/or drawings.

Assessor guide: observe that –

Spray weld requirements determined from specifications and drawings.

Assessor guide: confirm that –

The appropriate spray weld specifications can be identified.

Criteria 5.41A.1.2

Prepare work using appropriate tools and techniques.

Assessor guide: observe that –

Work is prepared using tools and techniques in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for preparing various materials can be identified.

Criteria 5.41A.1.3

Assemble/align work to specifications as required.

Assessor guide: observe that –

Work assembled/aligned to specification in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for assembling/aligning various materials can be given.

Element 5.41A.2 Select spray welding equipment and powders

Criteria 5.41A.2.1

Select appropriate spray welding equipment and consumables for work requirements.

Assessor guide: observe that –

Spray welding equipment selected for work requirements in accordance with workplace procedures.

Spray welding consumables selected for work requirements in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for selecting for spray welding equipment can be identified.

The procedures for selecting spray welding consumables can be identified.

Element 5.41A.3 Set up spray welding equipment**Criteria 5.41A.3.1**

Adjust gas setting on spray welding equipment to task requirement.

Assessor guide: observe that –

Spray welding equipment gas setting adjusted to task requirements in accordance with workplace procedures.

Assessor guide: confirm that –

The procedure for adjusting the spray weld gas settings to task requirements can be given.

Criteria 5.41A.3.2

Make test runs to verified spray weld meets specifications.

Assessor guide: observe that –

Test run made in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for making test runs can be given.

Element 5.41A.4 Implement distortion prevention/control measures**Criteria 5.41A.4.1**

Identify distortion prevention/control measures.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for determining the appropriate distortion prevention/control can be identified.

Criteria 5.41A.4.2

Apply appropriate to distortion prevention/control measures minimise and rectify distortion.

Assessor guide: observe that –

Distortion prevention/control measures applied in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for eliminating/reducing distortion can be given.

Element 5.41A.5 Spray weld material**Criteria 5.41A.5.1**

Deposit spray weld correctly to specification.

Assessor guide: observe that –

Spray weld deposited in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for depositing spray welds can be identified.

Element 5.41A.6 Inspect spray weld**Criteria 5.41A.6.1**

Visually inspect weld area/joints against specification.

Assessor guide: observe that –

Weld areas/joints visually inspected in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for visually inspecting weld areas/joints can be identified.

Criteria 5.41A.6.2

Remove defects detected with minimum loss of sound material.

Assessor guide: observe that –

Defects removed with minimum sound material loss in accordance with workplace procedures.

Assessor guide: confirm that –

The reasons for removing defective material with minimal sound material loss can be given.

Range statement

This unit covers powder spraying using hot and/or cold process, on a range of heavy or light materials. Powders are fed into the oxyacetylene flame and are deposited onto the surface to be built up or joined. Work is carried out autonomously or within a team environment using predetermined standards of quality, safety, work and welding procedures, and applies to a range of reclamation activities. Spray weld quality would meet the integrity of the work piece, dependent on the performance requirement of the work piece and the spray weld. Consumables (powders) cover a wide range of applications to suit steels, carbon steels, cast iron, etc or non-metallic materials (plastic/nylon) etc. Preparation of materials would include pre-heat, post-heat, set up of jigs, fixtures, clamps etc. Setting includes the correct settings of gas mixtures and flow rates. For remedial action using machining processes other than grinding with grinding wheels (ceramic or other) the appropriate machining units should also be accessed.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fuel gas welding or cutting, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.42A A Perform welds to code standards using flux core arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 6

Pre-requisite units - Path 1

5.7A Manual heating and thermal cutting

5.47A Weld using flux core arc welding process

5.48A Perform advanced welding using flux core arc welding process

5.50A Perform routine gas metal arc welding

9.2A Interpret technical drawing

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 5.42A.1 Maintain welding equipment

Criteria 5.42A.1.1

Routine maintenance is performed on welding equipment.

Assessor guide: observe that –

Welding equipment including handpiece, cable, lead etc checked and serviceability determined.
Ventilation/extraction equipment checked and determined to be working satisfactorily. Repairs if undertaken as required.

Assessor guide: confirm that –

Maintenance requirements for handpiece, cable, leads can be given.

Element 5.42A.2 Prepare welding materials and equipment for FCAW welding to code standard

Criteria 5.42A.2.1

Weld requirements for welding to code standards are determined.

Assessor guide: observe that –

Weld outcomes, consumables and settings are determined from welding procedure specification.

Assessor guide: confirm that –

Weld requirements of the nominated code can be given, including required weld size, bead placement, weld shape and reinforcement consumables and settings can be selected to suit code requirements.

Criteria 5.42A.2.2

Materials are prepared to produce weld to code standard.

Assessor guide: observe that –

Weld outcomes, consumables and settings are determined from welding procedure specification. Materials are suitably prepared ready for welding.

Assessor guide: confirm that –

Methods for preparing materials for code standard welding can be given. Pre and post welding heating methods and requirements for welds to code standard can be given.

Criteria 5.42A.2.3

Welding equipment is set up.

Assessor guide: observe that –

Equipment consumables and settings are selected as per welding procedure specification.

Assessor guide: confirm that –

Equipment consumables and settings appropriate to code standard welding in relevant situations can be given.

Element 5.42A.3 Weld joints using FCAW to procedure specifications**Criteria 5.42A.3.1**

Materials welded as per weld procedure specification.

Assessor guide: observe that –

Welds are produced to procedure specification. Weld size, bead placement, weld shape and reinforcement, etc are in accordance with weld procedure specification. Distortion prevention techniques are used. The welded joint is cleaned using appropriate tools and technique.

Assessor guide: confirm that –

Weld size, bead placement, weld shape and reinforcement, etc can be assessed against requirements of the nominated code.

Element 5.42A.4 Ensure weld quality**Criteria 5.42A.4.1**

Discontinuities are rectified to ensure conformance to code requirements.

Assessor guide: observe that –

Welded joints are visually inspected for conformity using appropriate techniques. Where discontinuities are identified as a defect, the defect is repaired. The weld conforms to code requirements.

Assessor guide: confirm that –

Techniques for inspecting welds, rectifying defects to code standard can be given.

Criteria 5.42A.4.2

Weld records maintained in accordance with standard operating procedures.

Assessor guide: observe that –

Weld records are accurately completed in accordance with standard operating procedures.

Assessor guide: confirm that –

Requirements for maintaining weld records to code standard can be given.

Range statement

FCAW to code standard carried out using a range of materials. The person would work autonomously or in a team environment using predetermined standards of quality, safety and welding procedures. Butt and fillet welds are produced in all positions. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Materials used may include carbon/manganese steel, low alloy steel etc. on plate, pipe and rolled steel sections. Welds produced to the standard of this unit would typically conform to Australian Standard 1210, AS 4140, American Society of Mechanical Engineers (ASME) IX or equivalent. This unit, in conjunction with Unit 5.26 A (Apply welding principles), may satisfy the requirements of AS 1796 Certificate 8F Where advanced manual thermal cutting, gouging and shaping is carried out, Unit (5.8A Advanced manual thermal cutting, gouging and shaping) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with flux core arc welding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for an off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 5.43A A Perform welds to code standards using gas metal arc welding process

Band – Specialisation band A

Field – Fabrication

Pre-requisite units - Path 1

5.7A Manual heating and thermal cutting

5.17A Weld using gas metal arc welding process

5.18A Perform advanced welding using gas metal arc welding process

5.50A Perform routine gas metal arc welding

9.2A Interpret technical drawing

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 5.43A.1 Maintain welding equipment

Criteria 5.43A.1.1

Routine maintenance is performed on welding equipment.

Assessor guide: observe that –

Welding equipment including welding gun, cable, lead etc checked and serviceability determined.
Ventilation/extraction equipment checked and determined to be working satisfactorily. Repairs if undertaken as required.

Assessor guide: confirm that –

Maintenance requirements for welding gun, cable, leads can be given.

Element 5.43A.2 Prepare welding materials and equipment for GMAW welding to code standard

Criteria 5.43A.2.1

Weld requirements for GMAW welding to code standards are determined.

Assessor guide: observe that –

Weld outcomes, consumables and settings are determined from welding procedure specification.

Assessor guide: confirm that –

Weld requirements of the nominated code can be given, including requirement weld size, bead placement, weld shape and reinforcement consumables and settings can be selected to suit code requirements.

Criteria 5.43A.2.2

Materials are prepared to produce weld to code standard.

Assessor guide: observe that –

Weld outcomes, consumables and settings are determined from welding procedure specification. Materials are suitably prepared ready for welding.

Assessor guide: confirm that –

Methods for preparing materials for code standard welding can be given. Pre and post welding heating methods and requirements for welds to code standard can be given.

Criteria 5.43A.2.3

Welding equipment is set up.

Assessor guide: observe that –

Equipment consumables and settings are selected as per welding procedure specification.

Assessor guide: confirm that –

Equipment consumables and settings appropriate to code standard welding in relevant situations can be given.

Element 5.43A.3 Weld joints using GMAW to procedure specifications**Criteria 5.43A.3.1**

Materials welded as per weld procedure specification.

Assessor guide: observe that –

Welds are produced to procedure specification. Weld size, bead placement, weld shape and reinforcement, etc are in accordance with weld procedure specification. Distortion prevention techniques are used. The welded joint is cleaned using appropriate tools and technique.

Assessor guide: confirm that –

Weld size, bead placement, weld shape and reinforcement, etc can be assessed against requirements of the nominated code.

Element 5.43A.4 Ensure weld quality**Criteria 5.43A.4.1**

Discontinuities are rectified to ensure conformance to code requirements.

Assessor guide: observe that –

Welded joints are visually inspected for conformity using appropriate techniques. Where discontinuities are identified as a defect, the defect is repaired. The weld conforms to code requirements.

Assessor guide: confirm that –

Techniques for inspecting welds, rectifying defects to code standard can be given.

Criteria 5.43A.4.2

Weld records maintained in accordance with standard operating procedures.

Assessor guide: observe that –

Weld records are accurately completed in accordance with standard operating procedures.

Assessor guide: confirm that –

Requirements for maintaining weld records to code standard can be given.

Range statement

GMAW to code standard carried out using a range of materials. The person would work autonomously or in a team environment using predetermined standards of quality, safety and welding procedures. Butt and fillet welds are produced in the flat, horizontal, vertical and overhead positions. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Materials used may include carbon/manganese steel, low alloy steel and aluminium materials, etc. on plate, pipe and rolled steel sections. Welds produced to the standard of this unit would typically conform to Australian Standard 1210, AS 4140, American Society of Mechanical Engineers (ASME) IX or equivalent. This unit, in conjunction with Unit 5.26 A Apply welding principles, may satisfy the requirements of AS 1796 Certificate 8G. Where advanced manual thermal cutting, gouging and shaping is carried out, Unit 5.8A (Advanced manual thermal cutting, gouging and shaping) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with gas metal arc welding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for an off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 5.44A A Perform welds to code standards using gas tungsten arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 6

Pre-requisite units - Path 1

5.7A Manual heating and thermal cutting

5.19A Weld using gas tungsten arc welding process

5.20A Perform advanced welding using gas tungsten arc welding process

5.49A Perform routine gas tungsten arc welding

9.2A Interpret technical drawing

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 5.44A.1 Maintain welding equipment

Criteria 5.44A.1.1

Routine maintenance is performed on welding equipment.

Assessor guide: observe that –

Welding equipment including handpiece, cable, lead etc checked and serviceability determined.
Ventilation/extraction equipment checked and determined to be working satisfactorily.

Assessor guide: confirm that –

Maintenance requirements for handpiece, cable, leads can be given.

Element 5.44A.2 Prepare welding materials and equipment for GTAW welding to code standard

Criteria 5.44A.2.1

Weld requirements for GTAW welding to code standards are determined.

Assessor guide: observe that –

Weld outcomes, consumables and settings are determined from welding procedure specification.

Assessor guide: confirm that –

Weld requirements of the nominated code can be given, including required weld size, bead placement, weld shape and reinforcement consumables and settings can be selected to suit code requirements.

Criteria 5.44A.2.2

Materials are prepared to produce weld to code standard.

Assessor guide: observe that –

Weld outcomes, consumables and settings are determined from welding procedure specification. Materials are suitably prepared ready for welding.

Assessor guide: confirm that –

Methods for preparing materials for code standard welding can be given. Pre and post welding heating methods and requirements for welds to code standard can be given.

Criteria 5.44A.2.3

Welding equipment is set up.

Assessor guide: observe that –

Equipment consumables and settings are selected as per welding procedure specification.

Assessor guide: confirm that –

Equipment consumables and settings appropriate to code standard welding in relevant situations can be given.

Element 5.44A.3 Weld joints using GTAW to procedure specifications**Criteria 5.44A.3.1**

Materials welded as per weld procedure specification.

Assessor guide: observe that –

Welds are produced to procedure specification. Weld size, bead placement, weld shape and reinforcement, etc are in accordance with weld procedure specification. Distortion prevention techniques are used. The welded joint is cleaned using appropriate tools and technique.

Assessor guide: confirm that –

Weld size, bead placement, weld shape and reinforcement, etc can be assessed against requirements of the nominated code.

Element 5.44A.4 Ensure weld quality**Criteria 5.44A.4.1**

Discontinuities are rectified to ensure conformance to code requirements.

Assessor guide: observe that –

Welded joints are visually inspected for conformity using appropriate techniques. Where discontinuities are identified as a defect, the defect is repaired. The weld conforms to code requirements.

Assessor guide: confirm that –

Techniques for inspecting welds, rectifying defects to code standard can be given.

Criteria 5.44A.4.2

Weld records maintained in accordance with standard operating procedures.

Assessor guide: observe that –

Weld records are accurately completed in accordance with standard operating procedures.

Assessor guide: confirm that –

Requirements for maintaining weld records to code standard can be given.

Range statement

GTAW to code standard carried out using a range of materials. The person would work autonomously or in a team environment using predetermined standards of quality, safety and welding procedures. Butt and fillet welds are produced in the flat, horizontal, vertical and overhead positions. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Materials used may include carbon/manganese steel, low alloy steel and aluminium materials, etc. on plate, pipe and rolled steel sections. Welds produced to the standard of this unit would typically conform to Australian Standard 1210, AS 4140, American Society of Mechanical Engineers (ASME) IX or equivalent. This unit, in conjunction with Unit 5.26 A Apply welding principles, may satisfy the requirements of AS 1796 Certificate 7. Where advanced manual thermal cutting, gouging and shaping is carried out, Unit 5.8A (Advanced manual thermal cutting, gouging and shaping) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with gas tungsten arc welding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for an off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 5.45A A Perform pipe welds to code standards using manual metal arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 6

Pre-requisite units - Path 1

5.7A Manual heating and thermal cutting

5.12A Perform routine manual metal arc welding

5.15A Weld using manual metal arc welding process

5.16A Perform advanced welding using manual metal arc welding process

9.2A Interpret technical drawing

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 5.45A.1 Maintain welding equipment

Criteria 5.45A.1.1

Routine maintenance is performed on welding equipment.

Assessor guide: observe that –

Welding equipment including handpiece, cable, lead etc checked and serviceability determined.

Ventilation/extraction equipment checked and determined to be working satisfactorily. Repairs if undertaken as required.

Assessor guide: confirm that –

Maintenance requirements for handpiece, cable, leads can be given.

Element 5.45A.2 Prepare welding materials and equipment for MMAW pipe welding to code standards

Criteria 5.45A.2.1

Weld requirements for welding to code standards are determined.

Assessor guide: observe that –

Weld outcomes, consumables and settings are determined from welding procedure specification.

Assessor guide: confirm that –

Weld requirements of the nominated code can be given, including required weld size, bead placement, weld shape and reinforcement consumables and settings can be selected to suit code requirements.

Criteria 5.45A.2.2

Welding equipment is set up.

Assessor guide: observe that –

Equipment consumables and settings are selected as per welding procedure specification.

Assessor guide: confirm that –

Equipment consumables and settings appropriate to code standard pipe welding in relevant situations can be given.

Criteria 5.45A.2.3

Materials are prepared to produce pipe weld to code standard.

Assessor guide: observe that –

Weld outcomes, consumables and settings are determined from welding procedure specification.
Pipe is suitably prepared ready for welding.

Assessor guide: confirm that –

Methods for preparing pipe for code standard welding can be given. Pre and post welding heating methods and requirements for pipe welding to code standard can be given.

Element 5.45A.3 Weld pipe using MMAW to procedure specifications**Criteria 5.45A.3.1**

Materials welded as per weld procedure specification.

Assessor guide: observe that –

Welds are produced to procedure specification. Weld size, bead placement, weld shape and reinforcement, etc are in accordance with weld procedure specification. Distortion prevention techniques are used. The welded joint is cleaned using appropriate tools and technique.

Assessor guide: confirm that –

Weld size, bead placement, weld shape and reinforcement, etc can be assessed against requirements of the nominated code.

Element 5.45A.4 Ensure weld quality**Criteria 5.45A.4.1**

Discontinuities are rectified to ensure conformance to code requirements.

Assessor guide: observe that –

Welded joints are visually inspected for conformity using appropriate techniques. Where discontinuities are identified as a defect, the defect is repaired. The weld conforms to code requirements.

Assessor guide: confirm that –

Techniques for inspecting pipe welds, rectifying defects to code standard can be given.

Criteria 5.45A.4.2

Weld records maintained in accordance with standard operating procedures.

Assessor guide: observe that –

Weld records are accurately completed in accordance with standard operating procedures.

Assessor guide: confirm that –

Requirements for maintaining weld records to code standard can be given.

Range statement

MMAW to code standard carried out using a range of materials. The person would work autonomously or in a team environment using predetermined standards of quality, safety and welding procedures. Butt and fillet welds are produced on pipe with the axis horizontal, vertical and/or askew. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Materials used may include carbon/manganese steel, low alloy steel and aluminium materials, etc. Welds produced to the standard of this unit would typically conform to Australian Standard 1210, AS 4140, American Society of Mechanical Engineers (ASME) IX or equivalent. This unit, in conjunction with Unit 5.26 A (Apply welding principles), may satisfy the requirements of AS 1796 Certificates 2 and 4. Where advanced manual thermal cutting, gouging and shaping is carried out, Unit 5.8A (Advanced manual thermal cutting, gouging and shaping) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with manual metal arc welding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for an off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 5.46A A Perform welds to code standards using manual metal arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 6

Pre-requisite units - Path 1

5.7A Manual heating and thermal cutting

5.12A Perform routine manual metal arc welding

5.15A Weld using manual metal arc welding process

5.16A Perform advanced welding using manual metal arc welding process

9.2A Interpret technical drawing

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 5.46A.1 Maintain welding equipment

Criteria 5.46A.1.1

Routine maintenance is performed on welding equipment.

Assessor guide: observe that –

Welding equipment including handpiece, cable, lead etc checked and serviceability determined.

Ventilation/extraction equipment checked and determined to be working satisfactorily. Repairs if undertaken as required.

Assessor guide: confirm that –

Maintenance requirements for handpiece, cable, leads can be given.

Element 5.46A.2 Prepare welding materials and equipment for MMAW welding to code standard

Criteria 5.46A.2.1

Weld requirements for welding to code standards are determined.

Assessor guide: observe that –

Weld outcomes, consumables and settings are determined from welding procedure specification.

Assessor guide: confirm that –

Weld requirements of the nominated code can be given, including required weld size, bead placement, weld shape and reinforcement consumables and settings can be selected to suit code requirements.

Criteria 5.46A.2.2

Materials are prepared to produce weld to code standard.

Assessor guide: observe that –

Weld outcomes, consumables and settings are determined from welding procedure specification. Materials are suitably prepared ready for welding.

Assessor guide: confirm that –

Methods for preparing materials for code standard welding can be given. Pre and post welding heating methods and requirements for welds to code standard can be given.

Criteria 5.46A.2.3

Welding equipment is set up.

Assessor guide: observe that –

Equipment consumables and settings are selected as per welding procedure specification.

Assessor guide: confirm that –

Equipment consumables and settings appropriate to code standard welding in relevant situations can be given.

Element 5.46A.3 Weld joints using MMAW to procedure specifications**Criteria 5.46A.3.1**

Materials welded as per weld procedure specification.

Assessor guide: observe that –

Welds are produced to procedure specification. Weld size, bead placement, weld shape and reinforcement, etc are in accordance with weld procedure specification. Distortion prevention techniques are used. The welded joint is cleaned using appropriate tools and technique.

Assessor guide: confirm that –

Weld size, bead placement, weld shape and reinforcement, etc can be assessed against requirements of the nominated code

Element 5.46A.4 Ensure weld quality**Criteria 5.46A.4.1**

Discontinuities are rectified to ensure conformance to code requirements.

Assessor guide: observe that –

Welded joints are visually inspected for conformity using appropriate techniques. Where discontinuities are identified as a defect, the defect is repaired. The weld conforms to code requirements.

Assessor guide: confirm that –

Techniques for inspecting welds, rectifying defects to code standard can be given.

Criteria 5.46A.4.2

Weld records maintained in accordance with standard operating procedures.

Assessor guide: observe that –

Weld records are accurately completed in accordance with standard operating procedures.

Assessor guide: confirm that –

Requirements for maintaining weld records to code standard can be given.

Range statement

MMAW to code standard carried out using a range of materials. The person would work autonomously or in a team environment using predetermined standards of quality, safety and welding procedures. Butt and fillet welds are produced in the flat, horizontal, vertical and overhead positions. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Materials used may include carbon/manganese steel, low alloy steel and aluminium materials, etc. Welds produced to the standard of this unit would typically conform to Australian Standard 1210, AS 4140, American Society of Mechanical Engineers (ASME) IX or equivalent. This unit, in conjunction with Unit 5.26 A (Apply welding principles), may satisfy the requirements of AS 1796 Certificates 1, 1E, 3 and 3E. Where advanced manual thermal cutting, gouging and shaping is carried out, Unit 5.8A (Advanced manual thermal cutting, gouging and shaping) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with manual metal arc welding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for an off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 5.47A A Weld using flux core arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Pre-requisite units - Path 1

5.50A Perform routine gas metal arc welding

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 5.47A.1 Prepare materials for flux core arc welding

Criteria 5.47A.1.1

Weld requirements identified from specifications and/or drawings.

Assessor guide: observe that –

All appropriate specifications and drawings are obtained.

Assessor guide: confirm that –

The weld requirements for FCAW can be identified.

Criteria 5.47A.1.2

Material is correctly prepared.

Assessor guide: observe that –

Appropriate tools and techniques are used to prepare material for welding in accordance with work site procedures.

Assessor guide: confirm that –

The material preparation requirements can be identified.

Criteria 5.47A.1.3

Materials are assembled/aligned to specification where required.

Assessor guide: observe that –

The materials to be welded are aligned, located and clamped to specifications in accordance with work site procedures.

Assessor guide: confirm that –

Examples of material holding devices and their application can be given. The required relationship between parts to be welded can be identified. The appropriate work holding method for a given application can be identified.

Element 5.47A.2 Select welding machine components**Criteria 5.47A.2.1**

Welding machine settings accessories and consumables identified.

Assessor guide: observe that –

Correct welding machine, settings, gas and electrode for given task selected against pre-determined welding procedures and specifications and/or technical drawings.

Assessor guide: confirm that –

The application of weld metal transfer can be given. The application of a variety of welding machines can be given. The appropriate gas can be identified given the type of electrode, its application and the weld requirements. The electrode classification system can be explained (gas and gasless). The appropriate welding machine for the given task can be identified. Appropriate size of contact tip and drive rollers is given.

Element 5.47A.3 Assemble and set up welding equipment**Criteria 5.47A.3.1**

Welding equipment assembled and set up.

Assessor guide: observe that –

Welding equipment is correctly assembled and set up to safety and work site procedures.

Assessor guide: confirm that –

The relationships between amperage, gas flow, electrode, contact tip and roller, feed rate and material can be given. The appropriate settings for the given applications and the selected equipment/electrodes can be identified.

Element 5.47A.4 Minimise and rectify distortion**Criteria 5.47A.4.1**

Appropriate distortion prevention measures are selected.

Assessor guide: observe that –

Appropriate distortion prevention measures are undertaken during the welding process.

Assessor guide: confirm that –

Methods of preventing distortion of welded materials can be given. The appropriate distortion prevention method for the given application can be identified.

Criteria 5.47A.4.2

Distortion is rectified.

Assessor guide: observe that –

Where appropriate, distortion of welded materials is rectified in accordance with work site procedures.

Assessor guide: confirm that –

Methods of rectifying distortion of welded materials and their applications can be given.

Element 5.47A.5 Weld to job specification using FCAW**Criteria 5.47A.5.1**

Weld deposit is to specification.

Assessor guide: observe that –

Welds are deposited according to job requirements.

Assessor guide: confirm that –

The weld requirements for similar FCAW applications can be identified.

Criteria 5.47A.5.2

Joints cleaned to specifications.

Assessor guide: observe that –

The welded joint is cleaned using appropriate tools and techniques in accordance with work site procedures.

Assessor guide: confirm that –

Methods of cleaning welded joints can be given.

Element 5.47A.6 Ensure weld conformance**Criteria 5.47A.6.1**

Defects removed with minimum loss of sound metal using correct and appropriate techniques and tools.

Assessor guide: observe that –

Where appropriate, weld defects are removed in accordance with work site procedures. A minimum amount of sound metal is removed with the defect.

Assessor guide: confirm that –

Methods of weld defect removal and their application can be given.

Criteria 5.47A.6.2

Weld joints visually inspected for conformance to specifications.

Assessor guide: observe that –

Visual defects in welded joints are identified.

Assessor guide: confirm that –

Weld discontinuities detectable visually can be given.

Element 5.47A.7 Maintain weld records**Criteria 5.47A.7.1**

Weld records are completed correctly.

Assessor guide: observe that –

Weld records are accurately completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The weld records to be kept can be identified. The frequency at which weld details are to be recorded can be identified. The reasons for keeping weld records can be given.

Range statement

FCAW undertaken autonomously or within a team environment using predetermined standards of quality, safety, work and welding procedures and the skills applied to a range of fabrication activities. A range of material suitable to heavy or light fabrication is used. Fillet and butt welds in all positions on common materials. As a guide, welds produced to the standard of this unit would typically conform to Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc. Remedial action using thermal processes may include oxyacetylene and air arc equipment. Grinding devices may also be used. Where thermal processes, hand and/or power tools are required the appropriate specialisation units should be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the flux core arc welding process or other competencies requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any drawings, specifications, catalogues, manuals, codes, standards and information relevant to the work. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 5.48A A Perform advanced welding using flux core arc welding process

Band – Specialisation band A

Field – Fabrication

Unit Weight 4

Pre-requisite units - Path 1

5.7A Manual heating and thermal cutting
9.2A Interpret technical drawing

5.47A Weld using flux core arc welding process
18.1A Use hand tools

5.50A Perform routine gas metal arc welding
18.2A Use power tools/hand held operations

Element 5.48A.1 Prepare welding materials and equipment

Criteria 5.48A.1.1

Welding equipment is prepared.

Assessor guide: observe that –

Appropriate machine settings and electrodes determined from relevant documentation and instructions.

Assessor guide: confirm that –

The elements of a welding procedure can be identified and the purpose given. The purpose of pre and/or post welding heating and the methods of application can be given. The appropriate ventilation/extraction requirements can be identified.

Criteria 5.48A.1.2

Appropriate welding equipment is assembled and adjusted correctly and safely.

Assessor guide: observe that –

Welding equipment is set up safely with correct settings in accordance with standard operating procedures.

Assessor guide: confirm that –

Settings, electrodes and related equipment set-up can be given for materials and weld requirements. The purpose for the correct size of welding cable, handpiece and equipment capacity is given. The purpose for the replacing worn liners, drive rolls, contact tip and gas shrouds is given. The purpose of changing welding current polarity is given.

Criteria 5.48A.1.3

Materials are prepared to achieve required weld specification.

Assessor guide: observe that –

Weld and material preparation requirements are identified from given specifications. Materials are prepared correctly, using appropriate tools and techniques.

Assessor guide: confirm that –

All weld and preparation requirements to achieve code specification can be given.

Element 5.48A.2 Weld joints to code requirements using FCAW**Criteria 5.48A.2.1**

Weld requirements are interpreted correctly.

Assessor guide: observe that –

Instructions, symbols, specifications interpreted correctly, including bead size, bead placement, reinforcement, etc., and in accordance with weld procedure sheet, if available, and standard operating procedures.

Assessor guide: confirm that –

The weld requirements of nominated code can be identified. The location and size of the weld(s) to be deposited can be identified.

Criteria 5.48A.2.2

Welds are deposited correctly to specifications.

Assessor guide: observe that –

Fillet and butt welds are deposited correctly as per code requirements. Where appropriate, distortion prevention techniques are used in accordance with work site procedures. The welded joint is cleaned using appropriate tools and techniques in accordance with work site procedures.

Assessor guide: confirm that –

Methods and conditions for obtaining fillet and butt weld deposits to code requirements can be given. Distortion prevention techniques can be given.

Element 5.48A.3 Assess weld quality and rectify faults**Criteria 5.48A.3.1**

Weld joints visually inspected against specifications.

Assessor guide: observe that –

Weld are inspected against the nominated code and discontinuities identified. Decision is made as to acceptability of discontinuity as per code requirements.

Assessor guide: confirm that –

Various weld discontinuities that are detectable visually and do not conform to the code requirements can be explained. The causes of the discontinuities are given.

Criteria 5.48A.3.2

Discontinuities are removed using appropriate methods.

Assessor guide: observe that –

Where identified and does not meet code requirements, discontinuities are removed. A minimum amount of sound metal is removed with the defect. The weld conforms to the requirements of the job specification.

Assessor guide: confirm that –

Discontinuities can be identified in relation to code requirements.

Criteria 5.48A.3.3

Weld records are correctly completed and maintained.

Assessor guide: observe that –

Weld identification is applied appropriately and documentation completed correctly.

Assessor guide: confirm that –

Different welder identification systems can be given, such as numbering, bar coding, paint coding, letter stamps.

Range statement

Advanced FCAW undertaken autonomously or in a team environment using predetermined standards of quality, safety and welding procedures. Work is carried out on a range of structural sections and/or plate and/or pipe for general fabrication and may include low carbon steel, stainless steel, low alloy steel, etc. As a guide, welds produced to the standard of this unit would typically conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent. Welds would be fillet and butt in all positions. Preparation of materials may include preheating, setting up of jigs, fixtures, clamps, etc.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the flux core arc welding process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 5.49A B Perform routine gas tungsten arc welding

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

This unit covers the competencies required for identifying welding requirements from instructions, preparing the materials and carrying out routine GTAW . This unit applies in a maintenance or manufacturing environment where the welding is not required to meet the Australian Standard 1554 General Purpose. The materials used would typically be low carbon and mild steels.

Element 5.49A.1 Identify weld requirements

Criteria 5.49A.1.1

Weld requirements are identified from job instructions.

Assessor guide: observe that –

Appropriate instructions, specifications and drawings are obtained and weld requirements identified in accordance with work site procedures.

Assessor guide: confirm that –

The weld requirements for performing routine GTAW can be given.

Criteria 5.49A.1.2

Location of welds are identified in accordance with standard operating procedures and job specifications.

Assessor guide: observe that –

Location of required weld/s identified for given tasks.

Assessor guide: confirm that –

Location of weld can be determined from standard operating procedures and job specifications.

Element 5.49A.2 Prepare materials for welding

Criteria 5.49A.2.1

Materials are cleaned and prepared ready for welding.

Assessor guide: observe that –

The materials to be welded are cleaned and prepared using appropriate tools and techniques.

Assessor guide: confirm that –

The materials preparation required prior to welding can be identified. The tools and techniques appropriate to the preparation of materials to be welded can be identified.

Element 5.49A.3 Prepare equipment for welding

Criteria 5.49A.3.1

Welding equipment is set up correctly.

Assessor guide: observe that –

The welding leads, gas regulators and hoses are correctly attached. Correct electrode and gas types for current use are selected.

Assessor guide: confirm that –

Different current types and examples of application can be given. Machine controls and their functions can be identified and explained.

Criteria 5.49A.3.2

Settings and consumables are selected to suit application.

Assessor guide: observe that –

Correct gas flow rate is set. The welding machine is set for the electrode diameter to produce the weld required. The range of variables is appropriate for the weld required. Appropriate current range for electrode diameter is set.

Assessor guide: confirm that –

Different current settings for electrode diameter and current types can be given.

Element 5.49A.4 Perform routine welding using GTAW**Criteria 5.49A.4.1**

Safe welding practices are applied.

Assessor guide: observe that –

All welds are performed in a safe manner with regard to the operator and other personnel. Precautions are taken to protect the welder and other personnel from hazards associated with welding process.

Assessor guide: confirm that –

Safe welding practices and precautions can be given. Typical hazards can be identified.

Criteria 5.49A.4.2

Materials are welded to job requirements.

Assessor guide: observe that –

Welds are produced with a minimum number of major defects. Appropriate action taken to report defects. Cause of major defects identified and required adjustments to settings/ welding technique identified.

Assessor guide: confirm that –

Major defects and their causes relating to GTAW can be given.

Criteria 5.49A.4.3

Welds cleaned in accordance with standard operating procedures.

Assessor guide: observe that –

All welds are cleaned to specification. Standard operating procedures are followed, where applicable.

Assessor guide: confirm that –

The weld cleaning requirements can be identified. The appropriate tools/equipment for cleaning welds can be identified.

Range statement

Routine GTAW in this unit is intended to apply in a manufacturing or maintenance environment where welding is not required to meet Australian Standards or other welding codes, Occupational Health and Safety regulations relating to certificated/coded welding and/or licensing requirements. Fillet and butt welds in all positions would typically be performed on low carbon/mild steels. Weld preparation would be minimal and generally restricted to cleaning, using files and grinders. In circumstances where welding is required to meet Australian Standard 1554 General Purpose or equivalent codes, Occupational Health and Safety regulations and/or licensing requirements Unit 5.19A (Weld using gas tungsten arc welding process) should be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with routine gas tungsten arc welding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference manuals. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 5.50A A Perform routine gas metal arc welding

Band – Specialisation band A

Field – Fabrication

Unit Weight 2

Element 5.50A.1 Identify weld requirements

Criteria 5.50A.1.1

Weld requirements are identified from job instructions.

Assessor guide: observe that –

Appropriate instructions, specifications and drawings are obtained and weld requirements identified in accordance with work site procedures.

Assessor guide: confirm that –

The weld requirements for performing routine GMAW can be given.

Criteria 5.50A.1.2

Location of welds are identified in accordance with standard operating procedures and job specifications.

Assessor guide: observe that –

Location of required weld/s identified for given tasks.

Assessor guide: confirm that –

Location of weld can be determined from standard operating procedures and job specifications.

Element 5.50A.2 Prepare materials for welding

Criteria 5.50A.2.1

Materials are cleaned and prepared ready for welding.

Assessor guide: observe that –

The materials to be welded are cleaned and prepared using appropriate tools and techniques.

Assessor guide: confirm that –

The materials preparation required prior to welding can be identified. The tools and techniques appropriate to the preparation of materials to be welded can be identified.

Element 5.50A.3 Prepare equipment for welding

Criteria 5.50A.3.1

Welding equipment is set up correctly.

Assessor guide: observe that –

The welding leads, gas regulators and hoses are correctly attached. Clean and correct liner and contact tip selected.

Assessor guide: confirm that –

Different liners and tips can be given to suit typical situations. Machine controls and their functions can be identified and explained.

Criteria 5.50A.3.2

Settings and consumables are selected to suit

Assessor guide: observe that –

Correct gas flow rate is set. The welding machine is set for the electrode wire diameter to produce the weld required. The range of variables is appropriate for the weld required. Appropriate current and voltage range for the weld required are set.

Assessor guide: confirm that –

Different current & voltage settings, gas flow rates wire diameters and other variables can be given to suit typical situations.

Element 5.50A.4 Perform routine welding using GMAW**Criteria 5.50A.4.1**

Safe welding practices are applied.

Assessor guide: observe that –

All welds are performed in a safe manner with regard to the operator and other personnel. Precautions are taken to protect the welder and other personnel from hazards associated with welding process.

Assessor guide: confirm that –

Safe welding practices and precautions can be given. Typical hazards can be identified.

Criteria 5.50A.4.2

Materials are welded to job requirements.

Assessor guide: observe that –

Welds are produced with a minimum number of major defects. Appropriate action taken to report defects. Cause of major defects identified and required adjustments to settings/ welding technique identified.

Assessor guide: confirm that –

Major defects and their causes relating to GMAW can be given.

Criteria 5.50A.4.3

Welds cleaned in accordance with standard operating procedures.

Assessor guide: observe that –

All welds are cleaned to specification. Standard operating procedures are followed, where applicable.

Assessor guide: confirm that –

The weld cleaning requirements can be identified. The appropriate tools/equipment for cleaning welds can be identified.

Range statement

Routine GMAW in this unit is intended to apply in a manufacturing or maintenance environment where welding is not required to meet Australian Standards or other welding codes, Occupational Health and Safety regulations relating to certificated/coded welding and/or licensing requirements. Fillet and butt welds in all positions would typically be performed on low carbon/mild steels. Weld preparation would be minimal and generally restricted to cleaning, using files and grinders. In circumstances where welding is required to meet Australian Standard 1554 General Purpose or equivalent codes, Occupational Health and Safety regulations and/or licensing requirements Unit 5.17A (Weld using gas metal arc welding process) should be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with routine gas metal arc welding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference manuals. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 6.1A A Hand forging

Band – Specialisation band A

Field – Forging

Unit Weight 4

Pre-requisite units - Path 1

18.1A Use hand tools

Element 6.1A.1 Use hand tools and formers

Criteria 6.1A.1.1

Hand tools and formers correctly selected for specific forging techniques.

Assessor guide: observe that –

The relevant job instructions, drawings, procedures etc are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The task(s) to be performed can be identified. The range of hand tools and formers used in hand forging and their application can be identified. The hand tools and formers to be used to produce a variety of given articles can be identified. The reasons for selecting the chosen hand tools and formers can be given. The techniques to be used when hand forging given articles can be described.

Criteria 6.1A.1.2

Hand tools and formers used correctly.

Assessor guide: observe that –

A wide range of hand tools and formers are used correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for hand forging articles can be given.

Element 6.1A.2 Apply hand forging techniques

Criteria 6.1A.2.1

Knowledge of drawing, swaging, bending, upsetting, spreading, punching and drifting techniques applied to produce articles to specification.

Assessor guide: observe that –

Articles are produced to specification using appropriate hand forging techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The following hand forging techniques and procedures can be described: - drawing - swaging - bending - upsetting - spreading - punching - drifting. The reasons for selecting the chosen hand forging technique(s) to produce the given article can be explained. The specifications of the article to be produced can be identified.

Criteria 6.1A.2.2

Forging temperatures and heat specifications adhered to for various materials.

Assessor guide: observe that –

The hand forging of articles is carried out at the correct forging temperature and within the heat specifications of the material being forged.

Assessor guide: confirm that –

The source of information on forging temperatures and heat specifications for various materials can be identified. The forging temperatures and heat specifications for a range of materials can be identified.

Criteria 6.1A.2.3

Allowance made for material shrinkage and oxidation.

Assessor guide: observe that –

Appropriate allowance for material shrinkage and oxidation is made when hand forging articles.

Assessor guide: confirm that –

The effects of material shrinkage and oxidation on the dimensions of the forged article can be given. The methods of overcoming/allowing for the effects of shrinkage and oxidation when hand forging articles can be explained.

Criteria 6.1A.2.4

Appropriate forging technique selected and applied.

Assessor guide: observe that –

The appropriate hand forging technique is applied to produce given articles in accordance with standard operating procedures.

Assessor guide: confirm that –

Element 6.1A.3 Operate heating equipment**Criteria 6.1A.3.1**

Heating equipment set up and operated correctly.

Assessor guide: observe that –

The appropriate heating equipment is set up and operated correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

A range of heating equipment and its application can be identified. The procedures for operating each type of heating equipment can be given. The procedures for setting up each type of heating equipment can be given. The most appropriate heating equipment for a given forging task can be identified. The reasons for selecting the chosen heating equipment can be given.

Criteria 6.1A.3.2

Equipment operated in a manner that minimises oxidation.

Assessor guide: observe that –

The heating equipment is operated in a manner that will minimise oxidation of the material to be forged in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 6.1A.3.3

Heat controlled to specified areas.

Assessor guide: observe that –

Heat is applied and controlled in specified areas of the material to be forged in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for controlling the application of heat to specified areas of the material to be forged can be given. The reasons for concentrating the heat in specified areas can be explained.

Range statement

This unit refers to the hand forging of low to medium carbon and alloy steels using various techniques, tools, formers and heating devices. Heating devices include diesel, electric and gas furnaces; coke fires and gaseous oxygen/fuel equipment. Work approach is determined using specifications, instructions and drawings. For simple manual heating and bending see Unit 5.7A (Manual heating, thermal cutting and gouging).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with hand forging or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 6.2A A Hammer forging

Band – Specialisation band A

Field – Forging

Unit Weight 4

Element 6.2A.1 Use hammer tools and formers

Criteria 6.2A.1.1

Hammer tools and formers correctly selected for specific forging technique.

Assessor guide: observe that –

Assessor guide: confirm that –

A wide range of hammer tools and formers and their application can be identified. A variety of hammer forging techniques can be described. The appropriate tools, formers and techniques can be selected to produce a range of hammer forged articles. The reasons for selecting the chosen tools, formers and techniques can be given.

Criteria 6.2A.1.2

Hammer tools and formers used correctly.

Assessor guide: observe that –

The appropriate hammer tools and formers are used correctly to produce given articles in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for hammer forging given articles can be identified.

Criteria 6.2A.1.3

Forging machine set up and operated correctly.

Assessor guide: observe that –

The forging machine is set up and operated in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for setting up and operating forging machines can be given. The tools, equipment and techniques necessary to set up the forging machine can be identified.

Element 6.2A.2 Apply hammer forging techniques

Criteria 6.2A.2.1

Appropriate hammer forging technique selected and applied.

Assessor guide: observe that –

The relevant job instructions, drawings, specifications and procedures are obtained in accordance with workplace procedures. The article is produced to specification using appropriate hammer forging techniques, tools and formers in accordance with standard operating procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The specifications of the article to be hammer forged can be identified. The appropriate hammer forging technique, tools and formers can be identified. The reasons for selecting the chosen technique, tools and formers can be explained.

Criteria 6.2A.2.2

Defects recognised and appropriate rectification action taken.

Assessor guide: observe that –

Where appropriate, forging defects are detected and rectified in accordance with standard operating procedures.

Assessor guide: confirm that –

Common defects in hammer forged articles and their causes can be identified. Those defects that can be rectified and the method of rectification of the defect can be given.

Criteria 6.2A.2.3

Correct techniques applied to the handling of hot metal with regard to balancing and pivoting.

Assessor guide: observe that –

The hot metal is handled safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The techniques for handling hot metal with respect to balancing and pivoting can be given. The hazards associated with handling hot metal can be identified. The appropriate personal protective clothing and equipment and its use can be identified. The procedures for handling hot metal can be given.

Criteria 6.2A.2.4

Correct heating procedure applied.

Assessor guide: observe that –

The material being forged is heated correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for heating material to be hammer forged can be given.

Element 6.2A.3 Select material**Criteria 6.2A.3.1**

Material calculations made using volumes and weights that include provision for oxidation and shrinkage.

Assessor guide: observe that –

The volume and weight of material required to produce a given article to specification is correctly calculated in accordance with standard operating procedures.

Assessor guide: confirm that –

The allowances to be made for oxidation and shrinkage of the material to be forged can be given. The reasons for making those allowances can be explained. The procedures and formulae for determining the volume and weight of material required to produce an article to specification can be given.

Criteria 6.2A.3.2

Material correctly selected for use with specific tools and formers.

Assessor guide: observe that –

The appropriate tools and formers for the material to be hammer forged are used in accordance with standard operating procedures.

Assessor guide: confirm that –

The material specifications can be identified. The hammer tools and formers to be used with a variety of different materials can be identified. The reasons for selecting specific tools and formers for use with different materials can be explained.

Range statement

This unit refers to hammer forging operations on carbon and alloy steels using various techniques, tools, formers, power hammers and heating devices. Heating devices include diesel, electric and gas furnaces; coke fires and gaseous oxygen/fuel equipment. Work approach is determined using specifications, instructions and drawings. Equipment range does not include drop and upset machinery, vacuum furnaces or rolling and extruding mill machinery.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with hammer forging or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 6.3A B Carry out heat treatment

Band – Specialisation band A

Field – Forging

Unit Weight 6

Element 6.3A.1 Determine requirements of job

Criteria 6.3A.1.1

Job requirements determined from engineering drawings, job sheet or verbal instructions from metallurgist or supervisor.

Assessor guide: observe that –

Job instructions, drawings and specifications obtained in accordance with work site procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The specifications pertaining to the work to be done can be identified.

Element 6.3A.2 Select heat treatment equipment

Criteria 6.3A.2.1

Appropriate equipment for heat treatment application selected.

Assessor guide: observe that –

Assessor guide: confirm that –

The equipment to be used with a variety of heat treatment applications can be identified. The most appropriate equipment to carry out the required heat treatment process can be identified.

Element 6.3A.3 Set up equipment

Criteria 6.3A.3.1

Equipment set up according to standard operating procedures and manufacturer's instructions.

Assessor guide: observe that –

The appropriate equipment is correctly set up for the required heat treatment process in accordance with standard operating procedures and manufacturer's instructions.

Assessor guide: confirm that –

Element 6.3A.4 Work safely with hot metals**Criteria 6.3A.4.1**

Appropriate safety clothing and personal protection equipment used correctly as specified in standard operating procedures.

Assessor guide: observe that –

Appropriate safety clothing and personal protection equipment is used in accordance with standard operating procedures.

Assessor guide: confirm that –

The hazards associated with the heat treatment process can be identified. The safety clothing and personal protection equipment to be worn can be identified.

Criteria 6.3A.4.2

Emergency procedures identified and demonstrated according to approved safety instructions.

Assessor guide: observe that –

Emergency procedures can be correctly demonstrated.

Assessor guide: confirm that –

Emergency procedures to be followed in the event of an emergency can be identified.

Criteria 6.3A.4.3

Safety signs and symbols identified and understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The meaning of all safety signs and symbols can be given.

Criteria 6.3A.4.4

Equipment used according to specifications and standard operating procedures.

Assessor guide: observe that –

Standard operating procedures and specifications are followed at all times during the heat treatment process.

Assessor guide: confirm that –

The standard operating procedures for the heat treatment process(es) can be identified.

Element 6.3A.5 Heat treat material**Criteria 6.3A.5.1**

Material is treated to achieve required result and may include processes of preparation eg: coatings and packings; preheating; soaking; quenching; tempering; annealing; normalising; carburizing; sintering.

Assessor guide: observe that –

The required heat treatment process(es) are carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The heat treatment process to be carried out can be identified. The preparation requirements of the material to be heat treated can be identified. The quenching requirements of the material to be heat treated can be identified. The preheating requirements of the material to be heat treated can be identified. The condition of the material to be achieved via the heat treating process can be identified.

Criteria 6.3A.5.2

Material piece or batch loaded and unloaded using equipment appropriate to the situation in accordance with standard operating procedures.

Assessor guide: observe that –

The furnace is loaded safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The equipment to be used in batch and/or piece loading of furnaces can be identified. The procedures for the safe loading of furnaces can be identified.

Criteria 6.3A.5.3

Correct temperature is maintained in accordance with standard operating procedures.

Assessor guide: observe that –

The correct temperature is maintained in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The temperature applicable to the heat treatment process can be identified. The time for which the temperature must be maintained can be identified.

Element 6.3A.6 Identify hazardous conditions**Criteria 6.3A.6.1**

Hazards identified and planning undertaken to maintain a safe work environment.

Assessor guide: observe that –

All work is undertaken safely in accordance with standard operating procedures. Where appropriate, hazards are reported to the appropriate person.

Assessor guide: confirm that –

The hazards associated with working in a heat treatment environment can be identified. The precautions to be undertaken to ensure a safe working environment is maintained can be identified. The procedures for reporting identified hazards can be given.

Range statement

This unit applies to heat treatment of ferrous and non-ferrous metals. Equipment range may include salt baths, vacuum furnace, induction heating, kilns, gas fired furnaces, etc. and may incorporate overhead lifting apparatus. Simple heat treatment applications like annealing and/or heat/quench processes undertaken as incidental to trade work eg. toolmaking are covered by Unit 6.7A (Perform heat/quenching, tempering and annealing).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the carrying out of heat treatment processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 6.4A A Select heat treatment processes and test finished product

Band – Specialisation band A

Field – Forging

Unit Weight 6

Pre-requisite units - Path 1

6.3A Carry out heat treatment

Element 6.4A.1 Determine requirements of job

Criteria 6.4A.1.1

Process to achieve specified result determined using reference material, metallurgist's report, consultation or technical specialists or other appropriate personnel.

Assessor guide: observe that –

All relevant information is obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The characteristics of the material to be achieved through heat treatment of the material can be identified. The sources of information on material characteristics, heat treatment processes and equipment can be identified.

Criteria 6.4A.1.2

Knowledge of metal composition and effects of heat and cooling applied to selection of appropriate process.

Assessor guide: observe that –

Assessor guide: confirm that –

Six heat treatment processes can be identified. The effect on material characteristics of the heat treatment processes identified can be given. The appropriate heat treatment process to achieve the required material characteristics can be identified. For the material characteristics to be achieved via the selected heat treatment process the following can be identified: - any material preparation requirements - any quenching requirements - any preheating requirements - the temperature to be achieved - the time for which the temperature is to be maintained. The effect of variations in material composition on the above parameters can be identified.

Element 6.4A.2 Maintain documentation of jobs**Criteria 6.4A.2.1**

All relevant information recorded in accordance with standard operating procedures.

Assessor guide: observe that –

All relevant information on material characteristics is recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The material characteristics to be recorded and the frequency at which they are to be recorded can be identified.

Criteria 6.4A.2.2

Information relating to heat treatment equipment and processes recorded and kept up to date as required.

Assessor guide: observe that –

All relevant information relating to the heat treatment equipment and its use is recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The data relating to equipment usage to be recorded and the frequency of recording can be identified.

Element 6.4A.3 Test material**Criteria 6.4A.3.1**

Material prepared for testing as required.

Assessor guide: observe that –

Where appropriate, materials are appropriately prepared for testing in accordance with standard operating procedures.

Assessor guide: confirm that –

The types of destructive testing and their application can be given. The types of non-destructive testing and their application can be given. The material preparation requirements for each test can be identified.

Criteria 6.4A.3.2

Properties of material tested using appropriate testing equipment as required.

Assessor guide: observe that –

Where appropriate, the physical properties of the heat treated materials are tested using the appropriate equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The physical properties of materials that are to be tested can be identified. The equipment to be used in determining each of the physical properties of material can be identified. The appropriate tests and equipment for the work to be undertaken can be identified.

Criteria 6.4A.3.3

Heat treatment faults identified and reported if appropriate.

Assessor guide: observe that –

Where appropriate, heat treatment faults are identified. Where appropriate, heat treatment faults are reported in accordance with standard operating procedures.

Assessor guide: confirm that –

Common heat treatment faults can be identified. The procedures to be followed if heat treatment faults are detected can be identified.

Criteria 6.4A.3.4

Heat treatment faults rectified where possible.

Assessor guide: observe that –

Where appropriate, heat treatment faults are rectified in accordance with standard operating procedures.

Assessor guide: confirm that –

Heat treatment faults that can be rectified can be identified. The procedures for rectifying those faults can be given.

Range statement

This unit applies to heat treatment of ferrous and non-ferrous metals. Equipment range may include salt baths, vacuum furnace, induction heating, kilns, gas fired furnaces etc. and may incorporate overhead lifting equipment. Advice may be given as to selection of appropriate material to provide required product outcome. Testing may include destructive and non-destructive testing methods.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the selection of heat treatment processes and/or the testing of heat treated products or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 6.5A A Drop and upset forging

Band – Specialisation band A

Field – Forging

Unit Weight 4

Pre-requisite units - Path 1

6.2A Hammer forging

Element 6.5A.1 Identify and select drop and upset forging equipment and tools for specific operation

Criteria 6.5A.1.1

Appropriate equipment selected which accounts for size of material and procedures.

Assessor guide: observe that –

The relevant job instructions, drawings, specifications and procedures are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The specifications of the work to be done can be identified. The drop or upset forging procedures to be used to carry out the specific operations required can be given. The appropriate drop/upset forging equipment to be used to carry out the work can be identified. The reasons for selecting the chosen equipment can be given.

Criteria 6.5A.1.2

Dies and punches correctly selected for specific operations and equipment.

Assessor guide: observe that –

Assessor guide: confirm that –

The dies and punches required to carry out the specific operations required in the selected equipment can be identified. The reasons for selecting the chosen dies and punches can be given.

Criteria 6.5A.1.3

Die replacement correctly determined with regard to relief allowances, cracking, dimensions, etc.

Assessor guide: observe that –

The die is inspected for defects and conformance to specifications in accordance with standard operating procedures. Where appropriate, the die is replaced in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking dies for defects/conformance to specification can be given. The tools, techniques and equipment required to inspect dies can be identified. The procedures for replacing defective/out of specification dies can be given. The tools, techniques and equipment required to replace dies can be identified.

Element 6.5A.2 Set up and operate drop and upset forging equipment**Criteria 6.5A.2.1**

Equipment correctly and safely set up, adjusted and operated.

Assessor guide: observe that –

The drop/upset forging equipment is safely set up, adjusted and operated in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety precautions to be taken when setting, adjusting and operating forging equipment can be identified. The procedures for setting, adjusting and operating forging equipment can be given. The tools, techniques and equipment required to set and adjust forging equipment can be identified.

Criteria 6.5A.2.2

Correct die setting techniques applied in setting correct die and punch alignment.

Assessor guide: observe that –

The dies and punches are correctly aligned in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The consequences of incorrect alignment of dies and punches can be identified. The procedures for ensuring correct alignment of dies and punches can be given.

Criteria 6.5A.2.3

Correct die preheating procedures applied.

Assessor guide: observe that –

The die is preheated to the correct temperature in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for preheating the dies can be given. The procedures for preheating dies can be given. The temperature to which the die is to be preheated for the specific operation can be identified.

Element 6.5A.3 Prepare material**Criteria 6.5A.3.1**

Materials correctly prepared and heated in accordance with job requirements and/or specifications.

Assessor guide: observe that –

The material to be forged is correctly prepared and heated in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The material to be forged can be identified. The preparation and heating requirements of the material can be identified. The source of preparation and heating requirements of different materials can be identified. The procedures for preparing and heating the material to be forged can be given.

Element 6.5A.4 Drop and upset forge material**Criteria 6.5A.4.1**

Drop forge material using correct procedures and techniques.

Assessor guide: observe that –

The material is drop/upset forged to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures and techniques for drop/upset forging of material can be given.

Criteria 6.5A.4.2

Correct lubricant applied for die wear and forging release.

Assessor guide: observe that –

The appropriate lubricant is applied to the die in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for lubricating the die can be given. The procedures for lubricating the die can be given. The appropriate lubricant for the die/material being forged can be identified.

Criteria 6.5A.4.3

Correct grain flow determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The grain flow to be achieved in the forging can be identified. The consequences of grain flow not conforming to specifications can be given.

Criteria 6.5A.4.4

Galls, folds and cracks identified and corrected.

Assessor guide: observe that –

Where appropriate, galls, folds and cracks in drop/upset forged articles are identified and corrected in accordance with standard operating procedures.

Assessor guide: confirm that –

The causes of galls, folds and cracks in drop/upset forged articles can be identified. The procedures for correcting defects in drop/upset forged articles can be given.

Criteria 6.5A.4.5

Correct removal of flash or fin.

Assessor guide: observe that –

Where appropriate, flash or fins are removed from drop/upset forged articles in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing flash and fins from drop/upset forged articles can be given. The tools, techniques and equipment required to remove flash and fins can be identified.

Criteria 6.5A.4.6

Material amounts calculated with allowance for heat wastage and flash or fin.

Assessor guide: observe that –

The weight and volume of material required to produce a specific article by drop/upset forging is correctly calculated in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures and formulae for calculating material volume and weight to produce the specified forging can be given. The source of data on allowances to be made for different materials can be identified. The reasons for making allowances for heat wastage, flash and fin can be explained.

Range statement

This unit refers to drop and upset forging operations conducted on a range of metals. Material forged is to specified dimensional accuracy and finish. Equipment range includes drop forging and upset forging equipment and cold upset forging equipment. For routine, repetitive cold upset forging see Unit 7.24A (Operate and monitor machine/process).

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drop and upset forging or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 6.6A B Spring repair

Band – Specialisation band A

Field – Forging

Unit Weight 4

This unit covers the competencies required to assess the spring condition, set and reset springs for repair, set up and operate spring forming equipment, form and shape material and test components. Materials typically include spring and stainless steels.

Pre-requisite units - Path 1

6.1A Hand forging

6.3A Carry out heat treatment

18.1A Use hand tools

Element 6.6A.1 Assess spring condition

Criteria 6.6A.1.1

Knowledge of annealing, hardening, tempering, soaking, spring operation and setting applied in determining defects and correct action

Assessor guide: observe that –

Springs are checked for correct operation or malfunction in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for testing springs for correct operation/malfunction can be given The tools, techniques and equipment required to test springs can be identified The specifications of the spring being tested can be determined Deviations of spring performance from specification can be identified The causes of the deviation from specification/defect in the spring can be identified The effects of annealing, hardening, tempering, soaking and setting on spring operation can be identified

Criteria 6.6A.1.2

Springs suitable for rework correctly identified

Assessor guide: observe that –

Springs suitable for rework can be correctly identified from a given sample of springs

Assessor guide: confirm that –

Spring defects that can be rectified by rework can be identified The rework procedures for a range of spring defects can be given

Criteria 6.6A.1.3

Repair procedure correctly identified

Assessor guide: observe that –

Assessor guide: confirm that –

The appropriate repair procedure for given repairable springs can be identified The reasons for selecting the chosen repair procedure can be given

Element 6.6A.2 Set and reset springs for repair

Criteria 6.6A.2.1

Correct stripping procedure applied

Assessor guide: observe that –

Springs for repair are stripped in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for stripping springs prior to repair can be given The reasons for stripping springs prior to repair can be explained

Criteria 6.6A.2.2 Setting tolerances allowed for in set/reset of springs to specification	<i>Assessor guide: observe that –</i> Springs are set/reset to specification in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The setting specifications of the spring to be set/reset can be identified The procedures for setting/resetting springs can be given
Criteria 6.6A.2.3 Correct temperature controlled for setting/resetting springs	<i>Assessor guide: observe that –</i> Springs are set/reset at the correct temperature for the spring material in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The temperature at which springs are to be set/reset can be identified The source of information on setting temperatures for different spring materials can be given
Element 6.6A.3 Set up and operate spring forming equipment		
Criteria 6.6A.3.1 Equipment safely set up and correctly utilised	<i>Assessor guide: observe that –</i> Spring forming equipment is safely and correctly set up in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The procedures for setting up spring forming equipment can be given The hazards associated with the set up and operation of spring forming equipment can be identified The precautions to be taken when setting up and operating spring forming equipment can be identified
Criteria 6.6A.3.2 Material correctly and safely positioned	<i>Assessor guide: observe that –</i> The material to be formed is safely and correctly positioned in the spring forming equipment in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The procedures for positioning material in the spring forming equipment can be given
Criteria 6.6A.3.3 Forming equipment and tools correctly selected and utilised for application	<i>Assessor guide: observe that –</i> The appropriate forming tools and equipment are used to form springs in accordance with specifications and standard operating procedures	<i>Assessor guide: confirm that –</i> The forming equipment and tools for given spring forming applications can be identified The reasons for selecting the chosen forming equipment and tools can be given
Element 6.6A.4 Form and shape material		
Criteria 6.6A.4.1 Material tapered, rolled and bent to conform with specifications	<i>Assessor guide: observe that –</i> Where appropriate, the material is tapered, rolled and bent in conformance with specifications and in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The form and shape of the spring being made/repared can be identified The procedures for tapering, rolling and bending materials can be given The specifications of the form and shape to be produced can be identified The tools, techniques and equipment required to taper, roll and bend spring materials can be identified
Criteria 6.6A.4.2 Correct procedure adopted for both hot and cold forming	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i> The applications of both hot and cold forming processes can be given The reasons for selecting hot and cold forming processes can be explained

Criteria 6.6A.4.3 Allowance made for relief and spring-back	<i>Assessor guide: observe that –</i> Appropriate allowance is made for relief and spring-back when forming and shaping materials to specification	<i>Assessor guide: confirm that –</i> The allowances to be made for relief and spring-back can be identified The reasons for making allowances for relief and spring-back can be given
Criteria 6.6A.4.4 Material lengths correctly determined	<i>Assessor guide: observe that –</i> The correct length of material is used when forming and shaping materials to specification	<i>Assessor guide: confirm that –</i> The length of material required to form and shape the spring to specification can be identified
Criteria 6.6A.4.5 Correct procedure utilised for buckling laminated springs	<i>Assessor guide: observe that –</i> Laminated springs are buckled safely and correctly in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The procedures for buckling laminated springs can be given The tools, techniques and equipment required to buckle laminated springs can be identified The safety precautions to be taken when buckling laminated springs can be identified
Element 6.6A.5 Test components		
Criteria 6.6A.5.1 Spring compression determined from specifications	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i> The spring specifications can be identified The appropriate testing techniques and equipment to be used to check for conformance to specification can be identified The procedures for testing springs for conformance to specification can be given
Criteria 6.6A.5.2 Defects and dimensional accuracy correctly determined	<i>Assessor guide: observe that –</i> The spring is tested for conformance with specifications in accordance with standard operating procedures The test results are recorded in accordance with standard operating procedures Where appropriate, defective springs are marked for repair/rework in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The procedures for recording test results can be given The procedures for marking defective springs for repair/rework can be given
Criteria 6.6A.5.3 Springs correctly nested to specification	<i>Assessor guide: observe that –</i> The springs tested are correctly nested in accordance with standard operating procedures	<i>Assessor guide: confirm that –</i> The procedures for nesting springs can be given The reasons for nesting springs can be explained

Range statement

This unit refers to the forming, shaping and setting operations for springs. Materials typically include spring and stainless steels. Equipment range includes tapering, coiling, stripping and buckling; and spring testing machines, but does not include automated spring making equipment.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with spring repair or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 6.7A A Perform basic incidental heat/quenching, tempering and annealing

Band – Specialisation band A

Field – Forging

Unit Weight 2

Element 6.7A.1 Determine job requirements

Criteria 6.7A.1.1

Job requirements determined from engineering drawing, job sheet or verbal instructions.

Assessor guide: observe that –

All relevant drawings, instructions and specifications are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The process for heating/quenching and tempering achieve the required specifications can be identified. The process for annealing to achieve the required specifications can be identified.

Element 6.7A.2 Set up equipment for heat/quenching tempering and annealing

Criteria 6.7A.2.1

Appropriate heating process and/or procedure is identified.

Assessor guide: observe that –

The process for heating/quenching and tempering selected in accordance with workplace procedures. The process for annealing selected in accordance with workplace procedures.

Assessor guide: confirm that –

The process for heating/quenching and tempering work pieces of different materials can be given. The process for annealing work pieces of different materials can be given.

Criteria 6.7A.2.2

Equipment set up according to standard operating procedures and manufacturer's instructions.

Assessor guide: observe that –

The appropriate equipment is correctly set up for the required heat treatment process in accordance with standard operating procedures and manufacturer's instructions.

Assessor guide: confirm that –

Element 6.7A.3 Operate heating equipment**Criteria 6.7A.3.1**

All safety procedures observed.

Assessor guide: observe that –

Safety glasses and protective clothing is worn at all times.
The relevant safety procedures are followed at all times.

Assessor guide: confirm that –

Safety hazards associated with heat/quenching, tempering and annealing materials can be identified.

Criteria 6.7A.3.2

Appropriate heating equipment operating procedures followed.

Assessor guide: observe that –

Heating equipment is started up and operated in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for starting up and operating heating equipment can be identified.

Criteria 6.7A.3.3

Appropriate equipment adjustments are made.

Assessor guide: observe that –

Heating equipment is adjusted in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting heating equipment can be identified.

Criteria 6.7A.3.4

Material is treated to achieve required result.

Assessor guide: observe that –

Material is treated by the processes of heating; annealing; quenching and tempering to specification.

Assessor guide: confirm that –

The specifications for heating; annealing; quenching and tempering given materials can be identified.

Range statement

This unit applies to the heat treatment of ferrous and non ferrous metals of various types and thicknesses by a range of methods, which may include Oxy acetylene, LPG gas equipment, forge etc. and used to heat/quench temper and anneal materials to specifications. Work normally would cover one off processes or processes undertaken as incidental to trade work (eg. Toolmaking, metal spinning etc.) and are undertaken autonomously or as part of a team to predetermined standards of quality and safety. All work carried out to legislative and regulatory requirements. For more comprehensive or complex heating treatment, Units 6.3A (Carry out heat treatment) and 6.4A (Select heat treatment processes and test finished product) should also be considered. For continuous or batch heat treatment of materials Unit 7.24A (Operate and monitor machine/process) should be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision mechanical measurements or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.1A A Operational maintenance of machines/equipment

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 2

Notes - This unit is to be assessed in conjunction with a production machine or equipment operation unit.

Pre-requisite units - Path 1

18.1A Use hand tools

Element 7.1A.1 Undertake programmed safety and maintenance checks

Criteria 7.1A.1.1

Checks undertaken safely and to prescribed procedure.

Assessor guide: observe that –

All maintenance and safety checks are undertaken safely and in accordance with work site procedures.

Assessor guide: confirm that –

All maintenance and safety checks to be undertaken for a specified machine/equipment can be identified.

Criteria 7.1A.1.2

Status/report recorded on proforma or reported orally.

Assessor guide: observe that –

The status of all components in the maintenance and safety checks are recorded/reported in accordance with work site procedures.

Assessor guide: confirm that –

The recording/reporting requirements associated with maintenance and safety checks can be identified.

Element 7.1A.2 Undertake programmed maintenance

Criteria 7.1A.2.1

Removal/replacement of consumable components undertaken to prescribed procedure and instructions followed.

Assessor guide: observe that –

Consumable components are removed/replaced in accordance with instructions and work site procedures. Adjustments are made in accordance with instructions and work site procedures.

Assessor guide: confirm that –

Consumable components to be removed/replaced can be identified Adjustment requirements can be identified.

Criteria 7.1A.2.2

Fluids and lubricants replaced and/or topped up to prescribed schedule.

Assessor guide: observe that –

The correct fluids are selected Fluids and lubricants are replaced and/or topped up in accordance with work site procedures.

Assessor guide: confirm that –

The fluids/lubricants to be replaced and/or topped up can be identified.

Range statement

Work undertaken in a team environment to predetermined specifications. Machines/equipment range includes manuals, semi-automatic and automatic machines of a stand-alone continuous production or process nature. Consumable replacements include air filter, oil wipers, grease containers, tool tips, indicator globes, fluids and lubricants, guides and limit switch actuators. Adjustments are of a limited nature and include safety guards, stops, wear pads and tool holders, nipping up of glands and adjustment of scrapers and aprons etc. This unit should not be selected when any of the following units are selected: Unit 18.55A (Dismantle, replace and assemble engineering components), Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components), Unit 7.5A (Perform general machining).

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit is to be assessed in conjunction with a production machine or equipment operation unit. The unit could also be assessed in conjunction with units assessing the safety, quality, communication, materials handling, recording and reporting associated with the operational maintenance of machines/equipment or other competencies requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with : - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents. - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practises at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 7.2A A Perform precision shaping/planing/slotting operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

7.5A Perform general machining

9.2A Interpret technical drawing

18.1A Use hand tools

Element 7.2A.1 Observe safety precautions

Criteria 7.2A.1.1

Correct safety procedures observed and protective clothing and safety glasses worn.

Assessor guide: observe that –

Safety glasses and protective clothing is worn at all times.
The relevant safety procedures are followed at all times.

Assessor guide: confirm that –

Safety hazards associated with the use of shapers, planers and slotting machines can be identified.

Element 7.2A.2 Determine job requirements

Criteria 7.2A.2.1

Drawings interpreted, sequence of operations determined and tools selected to produce component to specification.

Assessor guide: observe that –

All relevant drawings, job instructions and specifications are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The job requirements can be identified. The sequence of operations to achieve the job requirements can be identified. The tool type and geometry to achieve the required specifications can be identified. The effect of tool type and geometry on work pieces of different materials can be given.

Criteria 7.2A.2.2

Cutting parameters determined.

Assessor guide: observe that –

Assessor guide: confirm that –

Element 7.2A.3 Perform precision shaping operations**Criteria 7.2A.3.1**

Precision shaping operations carried out including precision flat surfaces, shoulders, slots, keyways, angles and dovetails.

Assessor guide: observe that –

The work piece is set up in accordance with specifications and standard operating procedures. Where appropriate, each of the following features is produced using a shaping machine in accordance with workplace procedures and to specifications:

- flat surfaces
- shoulders
- slots
- keyways
- angles
- dovetails

Assessor guide: confirm that –

The job set-up requirements can be identified. The tools, equipment and techniques to be used to set up the work piece can be identified. The procedures for setting up the work piece can be given. The techniques and procedures for machining the following can be given:

- flat surfaces
- shoulders
- slots
- keyways
- angles
- dovetails

Element 7.2A.4 Perform precision planing operations**Criteria 7.2A.4.1**

Precision planing operations carried out including horizontal and vertical surfaces and angles.

Assessor guide: observe that –

The work piece is set up in accordance with specifications and standard operating procedures. Where appropriate, each of the following features is produced using a planing machine in accordance with workplace procedures and to specification: - horizontal surfaces - vertical surfaces.

Assessor guide: confirm that –

The job set-up requirements can be identified. The tools, equipment and techniques to be used to set up the work piece can be identified. The procedures for setting up the work piece can be given. The techniques and procedures for machining the following can be given: - horizontal surfaces - vertical surfaces.

Element 7.2A.5 Perform precision slotting operations**Criteria 7.2A.5.1**

Precision slotting operations carried out including feathered and tapered keyways, slotting internal cavities, dovetails, slotting circular surfaces and internal splines.

Assessor guide: observe that –

The work piece is set up in accordance with specifications and standard operating procedures. Where appropriate, each of the following features is produced using a slotting machine in accordance with workplace procedures and to specification: - feathered keyways - tapered keyways - slotting internal cavities - dovetails - slotting circular surfaces - slotting internal splines.

Assessor guide: confirm that –

The job set-up requirements can be identified. The tools, equipment and techniques to be used to set up the work piece can be identified. The procedures for setting up the work piece can be given. The techniques and procedures for machining the following can be given: - feathered keyways - tapered keyways - slotting internal cavities - dovetails - slotting circular surfaces - slotting internal splines.

Element 7.2A.6 Check component for conformance to specification**Criteria 7.2A.6.1**

Component checked for conformance to specification using appropriate techniques tools and equipment.

Assessor guide: observe that –

Components are checked visually and dimensionally for conformance to specification in accordance with work site procedures. Appropriate measuring tools, techniques and equipment are used to check components for conformance to specification.

Assessor guide: confirm that –

The appropriate techniques, tools and equipment to measure machined components can be identified.

Range statement

Work is performed to established processes, practices and standards of quality, safety and workshop procedures. Work is performed to drawings or sketches, specifications and instructions as appropriate. Work applies to a range of one or more of precision shaping, planing or slotting operations where achievement of the specified tolerance and finish is mandatory. Precision measuring instruments, standard engineering materials and cutting tools are used.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of precision shaping/planing/slotting operations or other units requiring the exercise of the skills and knowledge covered by this unit. To be assessed as competent in this unit, the individual must operate at least one or more of the precision machining operations identified in elements 7.2A.3, 7.2A.4 and 7.2A.5. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.3A A Setting machines (routine)

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

7.24A Operate and monitor machine/process

9.1A Draw and interpret sketch

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

18.1A Use hand tools

7.24A Operate and monitor machine/process

9.2A Interpret technical drawing

Element 7.3A.1 Determine job requirements

Criteria 7.3A.1.1

Job sheets or equivalent instructions interpreted correctly and understood.

Assessor guide: observe that –

Job sheets and/or instructions are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified.

Element 7.3A.2 Set machine

Criteria 7.3A.2.1

Safe working practices are understood and implemented.

Assessor guide: observe that –

All work is carried out safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The relevant safety and standard operating procedures can be identified.

Criteria 7.3A.2.2

Machine set in accordance with defined procedures.

Assessor guide: observe that –

The machine is set in accordance with standard operating procedures.

Assessor guide: confirm that –

The machine setting procedures can be identified.

Criteria 7.3A.2.3

Machine adjusted to meet specifications and operational requirements.

Assessor guide: observe that –

The machine is adjusted to meet specifications and operational requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The relevant machine and operational specifications can be identified.

Criteria 7.3A.2.4

First-off samples measured for compliance with specifications.

Assessor guide: observe that –

The first-off samples are measured for compliance with specifications.

Assessor guide: confirm that –

The specifications of the part to be produced can be identified.

Element 7.3A.3 Instruct machine operator**Criteria 7.3A.3.1**

Machine operator instructed if necessary on sequencing settings and any required safety procedures.

Assessor guide: observe that –

Where appropriate, the machine operator is instructed on the sequence of operations and any required safety procedures.

Assessor guide: confirm that –

The sequence of operations of the machine can be identified. Where appropriate, required safety procedures can be identified.

Element 7.3A.4 Replace worn/damaged tooling**Criteria 7.3A.4.1**

Worn or damaged tooling identified and changed as required.

Assessor guide: observe that –

Where appropriate, worn or damaged tooling is identified and changed in accordance with standard operating procedures.

Assessor guide: confirm that –

Common examples of worn or damaged tooling can be identified. The effects of worn or damaged tooling on the component to be produced can be identified.

Range statement

This unit applies to a range of non-NC/CNC equipment which may be used for removing metal, bending, rolling, joining, extruding, pressing, moulding and die casting on a range of materials, including metals, plastics, fibre etc. If interpretation of drawings to Australian Standard 1100 or equivalent is required, Unit 9.2A (Interpret technical drawing) should be selected. For setting automated assembly processes, see Unit 3.7A (Setting multistage continuous process lines). Where setting skills for NC/CNC are required Unit 7.15A (Set NC/CNC machines/process (basic)) should be selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the routine setting of machines or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.4A A Setting machines (complex)

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
9.2A Interpret technical drawing

7.5A Perform general machining
18.1A Use hand tools

7.6A Perform lathe operations

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
9.2A Interpret technical drawing

7.5A Perform general machining
18.1A Use hand tools

7.7A Perform milling operations

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices
9.2A Interpret technical drawing

7.5A Perform general machining
18.1A Use hand tools

7.8A Perform grinding operations

Pre-requisite units - Path 4

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

7.5A Perform general machining

18.1A Use hand tools

7.13A Perform machining operations using horizontal and/or vertical boring machine

Pre-requisite units - Path 5

2.5C11 Measure with graduated devices
7.24A Operate and monitor machine/process
18.1A Use hand tools

7.1A Operational maintenance of machines/equipment
7.25A Advanced machine/process operation

7.3A Setting machines (routine)
9.1A Draw and interpret sketch

Pre-requisite units - Path 6

2.5C11 Measure with graduated devices
7.24A Operate and monitor machine/process
18.1A Use hand tools

7.1A Operational maintenance of machines/equipment
7.26A Advanced plastic processing

7.3A Setting machines (routine)
9.1A Draw and interpret sketch

Pre-requisite units - Path 7

2.5C11 Measure with graduated devices
7.24A Operate and monitor machine/process
18.1A Use hand tools

7.1A Operational maintenance of machines/equipment
7.27A Advanced press operations

7.3A Setting machines (routine)
9.1A Draw and interpret sketch

Pre-requisite units - Path 8

2.5C11 Measure with graduated devices
 7.24A Operate and monitor machine/process
 18.1A Use hand tools

7.1A Operational maintenance of machines/equipment
 7.25A Advanced machine/process operation

7.3A Setting machines (routine)
 9.2A Interpret technical drawing

Pre-requisite units - Path 9

2.5C11 Measure with graduated devices
 7.24A Operate and monitor machine/process
 18.1A Use hand tools

7.1A Operational maintenance of machines/equipment
 7.26A Advanced plastic processing

7.3A Setting machines (routine)
 9.2A Interpret technical drawing

Pre-requisite units - Path 10

2.5C11 Measure with graduated devices
 7.24A Operate and monitor machine/process
 18.1A Use hand tools

7.1A Operational maintenance of machines/equipment
 7.27A Advanced press operations

7.3A Setting machines (routine)
 9.2A Interpret technical drawing

Element 7.4A.1 Determine job requirements

Criteria 7.4A.1.1

Job sheets or equivalent instructions interpreted correctly and understood.

Assessor guide: observe that –

Job sheets and/or instructions are followed safely in accordance with work site procedures.

Assessor guide: confirm that –

The work requirements can be identified.

Element 7.4A.2 Set machine

Criteria 7.4A.2.1

Safe working practices are understood and implemented.

Assessor guide: observe that –

All work is carried out safely in accordance with work site procedures.

Assessor guide: confirm that –

The safety features of the machine can be identified. The safety precautions to be taken while setting the machine can be identified.

Criteria 7.4A.2.2

Machine sequencing set up which may include the selection of gears, cams, trip dogs, pin boards or other timing mechanisms.

Assessor guide: observe that –

The sequence of machine operations is in accordance with instructions.

Assessor guide: confirm that –

The sequencing requirements of the machine's operations can be identified. The methods of sequencing the machine's operations can be identified.

Criteria 7.4A.2.3

Machine adjusted to meet specifications and operational requirements.

Assessor guide: observe that –

The tooling, equipment and timing of the machine is adjusted to operational requirements and specifications.

Assessor guide: confirm that –

Product specifications can be identified. The operational requirements of the machine can be identified.

Criteria 7.4A.2.4

First-off samples measured and inspected for compliance with specifications.

Assessor guide: observe that –

The first-off samples are inspected visually and dimensionally for conformance to specification. Where appropriate, further adjustment is made to achieve specification requirements.

Assessor guide: confirm that –

Common product faults or defects can be identified. Methods of adjusting out given faults or defects can be given.

Element 7.4A.3 Instruct machine operator**Criteria 7.4A.3.1**

Machine operator instructed if necessary on sequencing settings and any required safety procedures.

Assessor guide: observe that –

The machine operator is instructed on the safety procedures to be followed and the sequencing of the machine. Confirmation is obtained from the machine operator that the machine sequence and safety procedures are understood.

Assessor guide: confirm that –

The consequences of not instructing the machine operator on the sequence of the machine and safety procedures can be given.

Element 7.4A.4 Replace worn/damaged tooling**Criteria 7.4A.4.1**

Tools changed and settings adjusted to specification as required.

Assessor guide: observe that –

Worn or damaged tooling is replaced and set to specification in accordance with work site procedures.

Assessor guide: confirm that –

The effects of worn/damaged tooling on product quality can be given.

Range statement

Work undertaken autonomously or in a team environment. This unit builds on the skills described in Unit 7.3A (Setting machines (routine)) and applies to the setting of a range of non-numerical control/computer numerical control production machines and processes. This may include manual, semi-automatic and automatic machines. Where numerical control/computer numerical control skills are required, Unit 7.15A (Set NC/CNC machines/process (basic)) should be selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the setting of machines, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents. - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.5A A Perform general machining

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

18.1A Use hand tools

Element 7.5A.1 Determine job requirements

Criteria 7.5A.1.1

Drawings, instructions and specifications interpreted and understood.

Assessor guide: observe that –

All relevant drawings, instructions and specifications are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The specifications pertaining to the work to be done can be identified.

Element 7.5A.2 Determine sequence of operations

Criteria 7.5A.2.1

Sequence of operations including job set up is determined for maximum efficiency and to meet job specifications.

Assessor guide: observe that –

A work plan is prepared identifying the sequence of operations to be performed.

Assessor guide: confirm that –

The operations to be performed can be identified. The reasons for selecting the chosen sequence of operations can be explained. The machines/equipment necessary to perform those operations can be identified. The method of job holding to be used can be identified.

Criteria 7.5A.2.2

Appropriate material selected and datum established as required.

Assessor guide: observe that –

Appropriate material is selected in accordance with standard operating procedures.

Assessor guide: confirm that –

The material to be used can be identified. Where appropriate, datum points/ lines can be identified.

Element 7.5A.3 Select and mount tools**Criteria 7.5A.3.1**

Appropriate tools for job selected, sharpened and shaped as required.

Assessor guide: observe that –

Where appropriate, cutting tools are sharpened and shaped to suit the materials to be cut and the operations to be performed in accordance with standard operating procedures.

Assessor guide: confirm that –

A range of cutting tools and their application can be identified. The correct geometry for cutting tools for a range of materials and applications can be identified from appropriate data sheets/texts. Worn or damaged cutting tools can be identified. The benefits of using correctly sharpened cutting tools can be given. The cutting tools appropriate to the operations to be performed can be identified.

Criteria 7.5A.3.2

Tools mounted and positioned correctly.

Assessor guide: observe that –

All tools are mounted and positioned correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The correct methods of mounting a variety of cutting tools can be given.

Element 7.5A.4 Perform machining operations**Criteria 7.5A.4.1**

Basic marking out techniques used where required.

Assessor guide: observe that –

Where appropriate, materials are marked out to facilitate machining in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for marking out materials can be given.

Criteria 7.5A.4.2

Machining parameters set for job requirements and maximum tool life.

Assessor guide: observe that –

The machining parameters are set to achieve the job requirements and maximise tool life in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 7.5A.4.3

Work held or correctly clamped without damage to product and all safety requirements met.

Assessor guide: observe that –

Appropriate and sufficient clamping/mounting is used and workpiece is not damaged or distorted.

Assessor guide: confirm that –

Safety issues can be explained with regard to correct clamping.

Criteria 7.5A.4.4

Machining performed in a safe manner utilising all guards, safety procedures and personal protective clothing and equipment.

Assessor guide: observe that –

Operations are performed according to the established machining parameters and safety procedures and requirements. Correct coolant/lubricant is used where required.

Assessor guide: confirm that –

Safety issues can be explained with regard to adequate guards, shields etc. as well as personal protective clothing and equipment.

Element 7.5A.5 Measure components**Criteria 7.5A.5.1**

Components checked with appropriate instruments or gauges to ensure compliance with specifications.

Assessor guide: observe that –

Correct measuring devices selected and used with checks against specifications.

Assessor guide: confirm that –

Operator is aware of tolerances, limits etc.

Element 7.5A.6 Adjust and maintain machine**Criteria 7.5A.6.1**

Routine maintenance and adjustments carried out as required which may include slide and collar adjustment, cleaning and lubrication and the like.

Assessor guide: observe that –

Adjustments and lubrication are made according to standard operating procedures. Machine appropriately cleaned.

Assessor guide: confirm that –

Operator can describe situations indicating the need for machine adjustment, lubrication and cleaning.

Range statement

Machining is undertaken on one or more of a range of standard machine tools. Work is undertaken to predetermined specifications. Machines are not CNC (computer numerical control) machines and may include lathes, mills, planers, shapers, drills, slotters, surface grinders etc. Materials may include standard ferrous and non-ferrous materials. Operations and set up carried out on those machines are straightforward and may include parallel cutting, slotting, planing, drilling, knurling, cutting flats, non-precision surface grinding operations etc. Surface grinding operations covered by this unit are those requiring magnetic chucks and grinding of flat surfaces. Machining parameters include speeds, feeds, stops, coolant and cutting lubricants etc. Work is carried out autonomously to predetermined standards of quality and safety. Drilling operations in this unit exclude those covered by Unit 18.2A (Use power tools/hand held operations). Where substantial marking out is required, Unit 12.6A (Mark off/out (general engineering)) should be considered. Where precision measurement is required, Unit 12.3A (Precision mechanical measurement) should also be considered. For set up and operation of EDM machines, see Unit 7.14A (Perform electro-discharge (EDM) machining operations).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with general machining or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.6A A Perform lathe operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

7.5A Perform general machining

9.2A Interpret technical drawing

Element 7.6A.1 Observe safety precautions

Criteria 7.6A.1.1

Correct safety procedures observed and protective clothing and safety glasses worn.

Assessor guide: observe that –

Safety glasses and protective clothing is worn at all times.
The relevant safety procedures are followed at all times.

Assessor guide: confirm that –

Safety hazards associated with the use of lathes can be identified.

Element 7.6A.2 Determine job requirements

Criteria 7.6A.2.1

Drawings interpreted, sequence of operation determined and tools selected to produce component to specification.

Assessor guide: observe that –

Drawings and job instructions/specifications are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The job requirements can be identified. The sequence of operations to achieve the job requirements can be identified. The tool type and geometry to achieve the required specifications can be identified. The effect on tool type and geometry for work pieces of different materials can be given.

Element 7.6A.3 Mount job

Criteria 7.6A.3.1

Job set up using instruments such as dial test indicators, and digital read-out equipment.

Assessor guide: observe that –

Work piece set up in accordance with specifications and work site procedures. Where appropriate, dial test indicators and digital read-out equipment used in accordance with work site procedures.

Assessor guide: confirm that –

The job set up requirements can be identified. Instruments available to assist in the setting up of work pieces and their application can be identified.

Element 7.6A.4 Perform turning operations

Criteria 7.6A.4.1

Speeds and feeds are calculated using appropriate mathematical techniques and reference material.

Assessor guide: observe that –

Cutting feeds and speeds appropriate to the job are used.

Assessor guide: confirm that –

The cutting speeds and feeds appropriate to the job have been calculated. The consequences of varying speeds and feeds from the optimum rates calculated can be given. The effects of different materials on cutting speeds and feeds can be identified.

Criteria 7.6A.4.2

Uses the full range of accessories on a centre lathe including three and four jaw chucks, centres, face plate, steadies, cross slide and tailstock.

Assessor guide: observe that –

Each of the following accessories on a centre lathe are used in accordance with work site procedures: -three jaw chuck - four jaw chuck - centres - face plate - steadies - cross slide - tailstock.

Assessor guide: confirm that –

The application of each of the following accessories to lathe operations on a centre lathe can be given: - three jaw chuck - four jaw chuck - centres - face plate - steadies - cross slide - tailstock.

Criteria 7.6A.4.3

Boring, drilling, reaming, single start thread cutting, parting off operations are performed to specification.

Assessor guide: observe that –

Each of the following operations is performed on a centre lathe in accordance with work site procedures and to specification: - boring - drilling - reaming - single start thread cutting - parting off.

Assessor guide: confirm that –

The operations that can be performed on a centre lathe can be identified. Typical applications for each of the following operations can be given: - boring - drilling - reaming - single start thread cutting - parting off.

Element 7.6A.5 Check components for conformance with specifications

Criteria 7.6A.5.1

Components checked for conformance to specification using appropriate techniques, tools and equipment.

Assessor guide: observe that –

Components are checked visually and dimensionally for conformance to specification in accordance with work site procedures. Appropriate measuring tools, techniques and equipment are used to check components for conformance to specification.

Assessor guide: confirm that –

Appropriate techniques, tools and equipment to measure turned components can be identified.

Range statement

Work is performed to established processes, practices and specifications. Work applies to a range of lathes and accessories, precision measuring equipment, cutting tools and standard engineering materials. Cutting tools are selected using International Standard Organisation (I.S.O.) standards or according to Standard Operating Procedure as appropriate. Work is performed to drawings, sketches, specifications and instructions as appropriate. Work is carried out autonomously to predetermined standards of quality and safety.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of lathe operations, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant drawings, manuals, codes, standards and reference material. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.7A A Perform milling operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

7.5A Perform general machining

9.2A Interpret technical drawing

18.1A Use hand tools

Element 7.7A.1 Observe safety precautions

Criteria 7.7A.1.1

Correct safety procedures are observed, protective clothing and safety glasses worn.

Assessor guide: observe that –

Safety glasses and protective clothing are worn at all times. The relevant safety procedures are followed at all times.

Assessor guide: confirm that –

The safety hazards associated with the use of milling machines can be identified.

Element 7.7A.2 Determine job requirements

Criteria 7.7A.2.1

Drawings interpreted, sequence of operations determined and tools selected to produce component to specification.

Assessor guide: observe that –

Drawings and job instructions/ specifications are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The job requirements can be identified. The sequence of operations to achieve the job requirements can be identified. The cutter type and geometry to achieve the required specifications can be identified. The effect on cutter type and geometry for work pieces of different materials can be given.

Criteria 7.7A.2.2

Cutting parameters determined.

Assessor guide: observe that –

Cutting feeds and speeds appropriate to the job are used.

Assessor guide: confirm that –

The cutting feeds and speeds appropriate to the job have been calculated. The consequences of varying speeds and feeds from the optimum rates calculated can be given. The effects of different materials on cutting speeds and feeds can be identified.

Element 7.7A.3 Perform milling operations**Criteria 7.7A.3.1**

Milling operations carried out to produce components to specification.

Assessor guide: observe that –

The milling operations are carried out in a manner to produce components to specification.

Assessor guide: confirm that –

The specifications of the components to be produced can be identified.

Criteria 7.7A.3.2

Operations are undertaken using conventional and/or climb milling techniques and a variety of cutters including slab, gang, end, shell, slot, form, slitting.

Assessor guide: observe that –

The following cutters are used in conjunction with conventional and/or climb milling techniques to produce components to specification: - slab - gang - shell - slot - form - slitting.

Assessor guide: confirm that –

Conventional and climb milling techniques and their applications can be described. The application of each of the following types of cutter can be given: - slab - gang - shell - slot - form - slitting.

Criteria 7.7A.3.3

The full range of standard accessories are used including dividing heads and rotary tables as required.

Assessor guide: observe that –

Where appropriate, the following accessories are used on a milling machine in accordance with standard operating procedures: - dividing head - rotary table.

Assessor guide: confirm that –

The procedures for using dividing heads and rotary tables on milling machines can be given. Applications requiring the use of dividing heads and rotary tables when milling components can be identified.

Element 7.7A.4 Check components for conformance to specification**Criteria 7.7A.4.1**

Component checked for conformance to specification using appropriate techniques, tools and equipment.

Assessor guide: observe that –

Components are checked visually and dimensionally for conformance to specification in accordance with work site procedures. Appropriate measuring tools, techniques and equipment are used to check components for conformance to specification.

Assessor guide: confirm that –

Appropriate techniques, tools and equipment to measure milled components can be identified.

Range statement

Work is performed to established processes, practices and specifications. Work applies to a range of milling machines including vertical, horizontal and universal types, a range of precision measuring equipment and standard engineering materials and cutting tools. Cutting tools are selected using International Standard Organisation standards or according to standard operating procedure as appropriate. Work is performed to drawings or sketches, specifications and instructions as appropriate. Work is carried out autonomously and employees take responsibility for the quality of their own work.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of milling operations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.8A B Perform grinding operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

7.5A Perform general machining

9.2A Interpret technical drawing

Element 7.8A.1 Determine job requirements

Criteria 7.8A.1.1

Job requirements determined from specifications and sequence of operations determined.

Assessor guide: observe that –

All relevant drawings, instructions and specifications are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The sequence of operations to be performed can be identified. The specifications to be achieved can be identified.

Criteria 7.8A.1.2

Correct and appropriate holding devices selected and applied.

Assessor guide: observe that –

The work is set up correctly and accurately in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

A variety of work holding devices/ accessories appropriate to grinding tasks can be identified. The reasons for selecting the chosen work holding device/accessory can be explained. The tools, techniques and equipment required to set up the work to the required accuracy can be identified. The reasons for selecting the tools, techniques and equipment to be used to set up the work can be given.

Element 7.8A.2 Observe safety precautions

Criteria 7.8A.2.1

Machine guards, coolant and dust extraction devices checked.

Assessor guide: observe that –

All machine guards, coolant and dust extraction devices are checked for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

All machine guards can be identified. The function of coolant and dust extraction devices can be identified.

Criteria 7.8A.2.2

Correct safety procedures observed, protective clothing and safety glasses worn.

Assessor guide: observe that –

The correct safety procedures are followed and personal protective clothing and equipment is worn/used throughout the grinding process.

Assessor guide: confirm that –

All relevant safety procedures can be identified. All necessary personal protective clothing and equipment can be identified. The hazards associated with tool and cutter grinding operations can be identified.

Element 7.8A.3 Select appropriate wheels and accessories**Criteria 7.8A.3.1**

Wheels selected, balanced and dressed based on knowledge of grinding wheel structure Accessories selected to facilitate production to job specifications.

Assessor guide: observe that –

The grinding wheel selected is safely dressed to form and size required to carry out the grinding task in accordance with standard operating procedures. The grinding accessories appropriate to the grinding task(s) are selected and correctly used in accordance with standard operating procedures.

Assessor guide: confirm that –

The standard grinding wheel shapes can be identified. A range of abrasive materials used in grinding wheels can be identified. The effect of the following grinding wheel features on wheel selection and application can be explained: - grain size of abrasive particles - grade or strength of bond - bond material. The appropriate grinding wheel(s) for the given task(s) can be identified. The reasons for selecting the appropriate grinding wheel can be given. The procedures for dressing grinding wheels can be correctly identified. Grinding wheel dressing tools and their application can be identified. The appropriate grinding wheel dressing tool(s) for the given task(s) can be identified. The function and application of the full range of grinding accessories can be explained.

Element 7.8A.4 Perform grinding operations**Criteria 7.8A.4.1**

Grinding machine is set up and adjusted in accordance with defined procedures.

Assessor guide: observe that –

Grinding media, coolant, machine settings are set up correctly ready for grinding operation.

Assessor guide: confirm that –

Machine setting procedures can be explained. The function of any accessories to be used in conjunction with the internal/external cylindrical grinding process can be identified.

Criteria 7.8A.4.2

Workpiece is held or clamped appropriately to avoid damage.

Assessor guide: observe that –

Appropriate and sufficient clamping/mounting is used to prevent damage or distortion to the workpiece.

Assessor guide: confirm that –

Clamping methods and accessories can be identified and the principles of effective clamping explained.

Criteria 7.8A.4.3

Grinding operations are performed safely, utilising all guards, safety procedures and personal protective clothing and equipment.

Assessor guide: observe that –

Grinding operations are performed according to the established machining parameters, safety procedures and specifications and standard operating procedures. Correct coolant/lubricant is used where required.

Assessor guide: confirm that –

Safety issues and precautions can be explained with regard to adequate guarding and personal protective clothing and equipment. Grinding operations/procedures can be explained. The function of any accessories to be used in conjunction with the grinding process can be identified.

Element 7.8A.5 Check components for conformance with specifications**Criteria 7.8A.5.1**

Components checked for conformance to specification using appropriate techniques, tools and equipment.

Assessor guide: observe that –

The ground components are checked for conformance with specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

Tools, techniques and equipment appropriate to the checking of ground components for conformance to the following specifications can be identified: - dimensions and tolerances - geometry and tolerances - surface finish. The tools, techniques and equipment to be used to check the given ground components for conformance with specifications can be identified. The reasons for selecting the tools, techniques and equipment to be used can be explained.

Range statement

Work is performed to established processes, practices and specifications. Work can apply to one or more of a range of grinding machines including surface, cylindrical and centreless machines, a range of precision measuring equipment and standard engineering materials and tooling. Work is performed to drawings or sketches, specifications and instructions as appropriate. Work is carried out autonomously to predetermined standards of quality and safety.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of grinding operations or other units requiring the exercise of the skills and knowledge covered by this unit. To be assessed as competent in this unit, the individual must operate at least one or more of the grinding machines identified in Criteria 7.8A.4.1 (Surface grinding carried out to specification as required), Criteria 7.8A.4.2 (Internal and external grinding carried out to specification as required) or Criteria 7.8A.4.3 (Centreless grinding carried out to specification as required). Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.9A A Perform precision jig boring operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

7.5A Perform general machining

12.3A Precision mechanical measurement

7.7A Perform milling operations

18.1A Use hand tools

Element 7.9A.1 Observe safety precautions

Criteria 7.9A.1.1

Correct safety procedures observed and protective clothing and safety glasses worn.

Assessor guide: observe that –

Correct safety procedures are followed and protective clothing and equipment is worn/used at all times.

Assessor guide: confirm that –

The appropriate safety procedures are identified. The appropriate personal protective clothing and equipment can be identified.

Element 7.9A.2 Determine job requirements

Criteria 7.9A.2.1

Drawings interpreted and sequence of operations determined.

Assessor guide: observe that –

All relevant drawings, instructions and specifications obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The sequence of operations to be followed in carrying out the work can be identified.

Element 7.9A.3 Select appropriate tools and accessories

Criteria 7.9A.3.1

Tools and accessories selected in accordance with standard operating procedures to meet job specifications.

Assessor guide: observe that –

Assessor guide: confirm that –

The tools and accessories necessary to perform the required operations to specification can be identified. The standard operating procedures applicable to the work can be identified.

Element 7.9A.4 Mount job**Criteria 7.9A.4.1**

Job set up using instruments such as dial test indicators and digital read out equipment.

Assessor guide: observe that –

The work is set up using precision measuring equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The precision measuring equipment appropriate to the work to be mounted can be identified.

Element 7.9A.5 Perform jig boring**Criteria 7.9A.5.1**

Holes bored relative to coordinate position and to specification.

Assessor guide: observe that –

The holes are bored in the correct coordinates and to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The coordinates of the holes to be bored can be identified.

Criteria 7.9A.5.2

Use rotary or tilting rotary table as required.

Assessor guide: observe that –

Where appropriate, rotary or tilting rotary tables are used in accordance with standard operating procedures.

Assessor guide: confirm that –

The application of rotary and tilting rotary tables to jig boring operations can be given.

Element 7.9A.6 Check components for conformance to specification**Criteria 7.9A.6.1**

Components checked for conformance to specification using appropriate techniques, tools and equipment.

Assessor guide: observe that –

The bored components are checked for conformance to specification using appropriate techniques, tools and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

A range of precision measuring techniques and their application can be identified. The appropriate measuring equipment for checking the bored components for conformance to specification can be identified.

Range statement

Work is performed to established processes, practices and standards. Work applies to precision jig boring operations using a range of machines including jig boring machines, milling machines etc. Work is performed to drawings or sketches, specifications and instructions as appropriate. Work is carried out autonomously to predetermined standards of quality and safety.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision jig boring or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.10A A Perform tool and cutter grinding operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

7.5A Perform general machining

12.3A Precision mechanical measurement

7.8A Perform grinding operations

18.1A Use hand tools

Element 7.10A.1 Observe safety precautions

Criteria 7.10A.1.1

Machine guards, coolant and dust extraction devices checked.

Assessor guide: observe that –

All machine guards, coolant and dust extraction devices are checked for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

All machine guards can be identified. The function of coolant and dust extraction devices can be identified.

Criteria 7.10A.1.2

Correct safety procedures observed, protective clothing and safety glasses worn.

Assessor guide: observe that –

The correct safety procedures are followed and personal protective clothing and equipment is worn/ used throughout the grinding process.

Assessor guide: confirm that –

All relevant safety procedures can be identified. All necessary personal protective clothing and equipment can be identified. The hazards associated with tool and cutter grinding operations can be identified.

Element 7.10A.2 Determine job requirements

Criteria 7.10A.2.1

Drawings interpreted and sequence of operations determined.

Assessor guide: observe that –

All relevant drawings, instructions and specifications are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The sequence of operations to be performed can be identified. The specifications to be achieved can be identified.

Element 7.10A.3 Select appropriate tool and cutter grinding wheels and accessories**Criteria 7.10A.3.1**

Tool and cutter grinding wheels selected, based on knowledge of grinding wheel structure, balanced and dressed. Accessories selected to facilitate production to specification.

Assessor guide: observe that –

Tool and cutter grinding accessories appropriate to the grinding task(s) are selected and correctly used in accordance with standard operating procedures. The grinding wheel selected is safely balanced and correctly dressed for the grinding task(s) to be performed in accordance with standard operating procedures.

Assessor guide: confirm that –

The standard grinding wheel shapes can be identified. A range of abrasive materials used in grinding wheels can be identified. The effect of the following grinding wheel features on wheel selection and application can be explained: - grain size of abrasive particles - grade or strength of bond - structure of grain spacing - bond material. The appropriate grinding wheel(s) for the given task(s) can be identified. The reasons for selecting the appropriate grinding wheel can be given. The function and application of the full range of tool and cutter grinding accessories can be explained. Grinding wheel dressing procedures can be correctly identified. Grinding wheel dressing tools and their application can be identified. The appropriate grinding wheel dressing tool(s) for the given task(s) can be identified.

Element 7.10A.4 Perform tool and cutter grinding**Criteria 7.10A.4.1**

Universal tool and cutter grinding machines operated to sharpen and shape the full range of tools and cutters including side and face cutters, end mill, form relieved milling cutters, flat, vee and circular form tools and hobs, slitting saws, drills and reamers.

Assessor guide: observe that –

The universal tool and cutter grinder is used to correctly sharpen and shape a range of tools and cutters in accordance with standard operating procedures.

Assessor guide: confirm that –

The source(s) of data on tool geometry for the full range of tools and cutters can be identified. The nomenclature used to describe tool geometry can be explained. The correct tool geometry for the tools/cutters to be sharpened and shaped can be identified.

Criteria 7.10A.4.2

Parallel internal and/or external grinding carried out.

Assessor guide: observe that –

The appropriate accessories are correctly set up in accordance with standard operating procedures to enable parallel internal and/or external grinding to be carried out. The parallel grinding task is completed in conformance with specifications and standard operating procedures.

Assessor guide: confirm that –

The accessories to be used when parallel grinding on a tool and cutter grinder can be identified. The procedures to be followed when parallel grinding on a tool and cutter grinder can be explained.

Criteria 7.10A.4.3

Internal and/or external taper grinding carried out to drawing specifications.

Assessor guide: observe that –

The appropriate accessories are correctly set up in accordance with standard operating procedures to enable internal and/or external taper grinding to be carried out. The taper grinding task is completed in conformance with specifications and standard operating procedures.

Assessor guide: confirm that –

The accessories to be used when grinding tapers on a tool and cutter grinder can be identified. The procedures to be followed when grinding tapers on a tool and cutter grinder can be explained.

Element 7.10A.5 Check components for conformance to specification**Criteria 7.10A.5.1**

Components checked for conformance to specification using appropriate techniques, tools and equipment.

Assessor guide: observe that –

The ground components are checked for conformance with specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

Tools, techniques and equipment appropriate to the checking of ground components for conformance with the following specifications can be identified: - dimensions and tolerances - geometry and tolerances - surface finish. The tools, techniques and equipment to be used to check the given ground components for conformance with specifications can be identified. The reasons for selecting the tools, techniques and equipment to be used can be explained.

Range statement

This unit covers a range of tool and cutter grinding machines and accessories. A range of precision measuring instruments are used. Work is performed to established processes, practices and standards. A range of precision measuring instruments and standard engineering materials are used. Work is performed to drawings or sketches, specifications and instructions as appropriate. General off hand grinding is covered by Unit 18.2A (Use power tools/hand held operations). Work is carried out autonomously to predetermined standards of quality and safety.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with tool and cutter grinding or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.11A A Complex milling operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
 2.13C5 Perform mathematical computations
 9.2A Interpret technical drawing

2.7C10 Perform computations - basic
 7.5A Perform general machining
 12.3A Precision mechanical measurement

2.8C10 Perform computations
 7.7A Perform milling operations
 18.1A Use hand tools

Element 7.11A.1 Set up work

Criteria 7.11A.1.1

Work is set up to required level of accuracy using instruments such as dial test indicators and sine bars.

Assessor guide: observe that –

The work is set up to the required level of accuracy using appropriate precision measuring equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The precision measuring equipment appropriate to the accuracy required in setting up the work can be identified. The reasons for selecting the chosen measuring equipment can be given. The procedures for accurately setting up the work can be given.

Element 7.11A.2 Identify inserts from International Standard Organisation standards

Criteria 7.11A.2.1

Correct tool is selected using International Standard Organisation standards to suit cutting parameters.

Assessor guide: observe that –

The correct milling cutter inserts are selected for the cutting parameters in accordance with ISO standards.

Assessor guide: confirm that –

The ISO standards applicable to milling cutter inserts can be identified. The cutting parameters for the work to be undertaken can be determined.

Element 7.11A.3 Perform complex milling

Criteria 7.11A.3.1

Racks and gears are cut and associated calculations performed.

Assessor guide: observe that –

The relevant rack and gear calculations are correctly completed. Racks and gears are cut to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for cutting racks and gears can be given. The calculations to be performed to enable racks and gears to be cut on a milling machine can be identified. Any accessories to be used in the manufacture of racks and gears and their function can be given.

Criteria 7.11A.3.2

Helical milling operations are performed, associated calculations are performed and relevant gear trains set up.

Assessor guide: observe that –

The relevant gear trains are correctly set up in accordance with calculations and standard operating procedures. Helical milling is performed to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for carrying out helical milling operations can be given. The calculations to be performed to enable the helical milling operation to be undertaken can be identified. Any accessories to be used in the helical milling process and their function can be given.

Criteria 7.11A.3.3

Precision complex milling operations are performed using omniversal tables, differential dividing heads and the like as required.

Assessor guide: observe that –

Where appropriate, the relevant calculations to enable complex milling using omniversal tables and differential dividing heads are completed correctly. Where appropriate, complex milling using omniversal tables and differential dividing heads is performed to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The application of omniversal tables and differential dividing heads to complex milling operations can be identified. The calculations to be performed to enable complex milling involving omniversal tables and differential dividing heads can be identified. Any other accessories to be used in conjunction with the complex milling operations to be performed and their function can be given.

Range statement

This unit applies to a range of milling operations including those requiring complex calculations and jobs requiring high precision or quality using a range of materials including non-standard metals and alloy. Work is carried out autonomously to predetermined standards of quality and safety.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of milling operations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.12A A Complex grinding operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

7.5A Perform general machining

12.3A Precision mechanical measurement

7.8A Perform grinding operations

18.1A Use hand tools

Element 7.12A.1 Determine job requirements

Criteria 7.12A.1.1

Job requirements are determined from specifications and sequence of operations determined.

Assessor guide: observe that –

All relevant drawings, instructions and specifications are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The sequence of operations to be performed can be identified. The specifications to be achieved can be identified.

Element 7.12A.2 Set up work

Criteria 7.12A.2.1

Grinding wheels are selected and dressed to form and size as required.

Assessor guide: observe that –

The grinding wheel selected is safely dressed to form and size required to carry out the grinding task in accordance with standard operating procedures.

Assessor guide: confirm that –

The standard grinding wheel shapes can be identified. A range of abrasive materials used in grinding wheels can be identified. The effect of the following grinding wheel features on wheel selection and application can be explained: - grain size of abrasive particles - grade or strength of bond - structure of grain spacing - bond material. The appropriate grinding wheel(s) for the given task(s) can be identified. The reasons for selecting the appropriate grinding wheel can be given. The procedures for dressing grinding wheels can be correctly identified. Grinding wheel dressing tools and their application can be identified. The appropriate grinding wheel dressing tool(s) for the given task(s) can be identified.

Criteria 7.12A.2.2

Work set up to required level of accuracy as per specifications.

Assessor guide: observe that –

The work is set up correctly and accurately in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

A variety of work holding devices/accessories appropriate to grinding tasks can be identified. The reasons for selecting the chosen work holding device/accessory can be explained. The tools, techniques and equipment required to set up the work to the required accuracy can be identified. The reasons for selecting the tools, techniques and equipment to be used to set up the work can be given.

Element 7.12A.3 Perform complex grinding**Criteria 7.12A.3.1**

Specialised grinding operations performed on components such as jigs, tools and dies, eccentrics, threads, gauge shapes and forms.

Assessor guide: observe that –

The specialised grinding task is completed in conformance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed when carrying out the given specialised grinding task can be identified. The purpose of any accessories to be used while carrying out the specialised grinding process can be explained. The reasons for using accessories or specialised functions of the grinder can be given.

Element 7.12A.4 Check components for conformance to specification**Criteria 7.12A.4.1**

Components checked for conformance to specification using appropriate techniques, tools and equipment.

Assessor guide: observe that –

The ground components are checked for conformance with specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

Tools, techniques and equipment appropriate to the checking of ground components for conformance with the following specifications can be identified: - dimensions and tolerances - geometry and tolerances - surface finish. The tools, techniques and equipment to be used to check the given ground components for conformance with specifications can be identified. The reasons for selecting the tools, techniques and equipment to be used can be explained.

Range statement

This unit may be applied to high precision operations such as jig grinding, grinding eccentrics, thread grinding, gauges, shapes and forms etc. Work includes the use of a range of precision measuring instruments. Grinding operations can be performed on a variety of materials to achieve high levels of precision for dimensions and finish. Work is carried out autonomously to predetermined standards of quality and safety.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with complex grinding operations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.13A A Perform machining operations using horizontal and/or vertical boring machine

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.1A Use hand tools

7.5A Perform general machining

9.2A Interpret technical drawing

Element 7.13A.1 Observe safety precautions

Criteria 7.13A.1.1

Correct safety procedures observed and protective clothing and safety glasses worn.

Assessor guide: observe that –

Safety glasses and protective clothing is worn at all times.
The relevant safety procedures are followed at all times.

Assessor guide: confirm that –

Safety hazards associated with the use of horizontal and vertical boring machines can be identified.

Element 7.13A.2 Determine job requirements

Criteria 7.13A.2.1

Drawings interpreted, sequence of operations determined and tools selected to produce component to specification using International Standard Organisation or standard operating procedures.

Assessor guide: observe that –

All relevant drawings, job instructions and specifications are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The job requirements can be identified. The sequence of operations to achieve the job requirements can be identified. The tool type and geometry to achieve the required specifications can be identified. The effect on tool type and geometry for work pieces of different materials can be given.

Criteria 7.13A.2.2

Cutting parameters determined.

Assessor guide: observe that –

Cutting feeds and speeds appropriate to the job are used.

Assessor guide: confirm that –

The cutting speeds and feeds appropriate to the job have been calculated. The consequences of varying speeds and feeds from the optimum rates calculated can be given. The effects of different materials on cutting speeds and feeds can be identified.

Element 7.13A.3 Perform boring operations**Criteria 7.13A.3.1**

Horizontal and vertical boring operations are carried out including parallel line and taper boring, facing, turning, drilling and reaming to drawing specifications.

Assessor guide: observe that –

Horizontal and/or vertical boring operations are carried out to specification in accordance with standard operating procedures for each of the following applications: - parallel boring - taper boring - facing - turning - drilling - reaming.

Assessor guide: confirm that –

The procedures and techniques for carrying out the following horizontal and vertical boring operations can be given: - parallel boring - taper boring - facing - turning - drilling - reaming. The accessories necessary to carry out the above operations and their function can be identified.

Element 7.13A.4 Check component for conformance to specification**Criteria 7.13A.4.1**

Components checked for conformance to specification using appropriate techniques, tools and equipment.

Assessor guide: observe that –

The bored components are checked for conformance to specification using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate tools, techniques and equipment to measure the bored components can be identified. The procedures for measuring bored components can be given.

Range statement

Work is performed to established processes, practices and standards of quality, safety and workshop procedures. Work is performed to drawings or sketches, specifications and instructions as appropriate. Work applies to a range of boring operations, using precision measuring instruments and standard engineering materials and cutting tools. Work is carried out autonomously to predetermined standards of quality and safety.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of horizontal and vertical boring operations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.14A A Perform electro-discharge machining operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

7.5A Perform general machining

9.2A Interpret technical drawing

Pre-requisite units - Path 2

7.24A Operate and monitor machine/process

9.2A Interpret technical drawing

18.1A Use hand tools

Element 7.14A.1 Observe safety precautions

Criteria 7.14A.1.1

Correct safety procedures observed, protective clothing and safety glasses worn.

Assessor guide: observe that –

Safety glasses and protective clothing are worn at all times. The relevant safety procedures are followed at all times.

Assessor guide: confirm that –

Safety hazards associated with the use of electro-discharge machines can be identified.

Element 7.14A.2 Determine job requirements

Criteria 7.14A.2.1

Drawings interpreted, sequence of operations determined.

Assessor guide: observe that –

All relevant drawings, job instructions and specifications are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The job requirements can be identified. The sequence of operations to achieve the job requirements can be identified.

Criteria 7.14A.2.2

Correct electrode selected to ensure finished component conforms to drawing specifications.

Assessor guide: observe that –

The correct electrode is used to ensure that the finished product conforms to specification.

Assessor guide: confirm that –

The electrode type and geometry required to achieve the specified outcome can be identified. The effects of material to be machined on the electrode material and geometry can be given.

Criteria 7.14A.2.3

Electrode surface area calculated and process parameters set to give safe, accurate and efficient operation.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for producing electrodes for the electro-discharge machining process can be given. The surface area of the electrode is calculated. The machining parameters necessary to achieve the safe, accurate and efficient machining of the work piece are calculated/determined.

Element 7.14A.3 Set up job**Criteria 7.14A.3.1**

Job set up relative to electrode to ensure required position is obtained.

Assessor guide: observe that –

The work piece and electrode are appropriately positioned to enable the safe, accurate and efficient machining of the required feature(s).

Assessor guide: confirm that –

The coordinates of the work pieces relative to the machine datum are determined. The coordinates of the feature(s) to be machined can be identified. The coordinates of the electrode relative to the machine datum can be identified.

Element 7.14A.4 Perform electro-discharge (EDM)**Criteria 7.14A.4.1**

Electro-discharge machine operated to produce components to drawing specifications.

Assessor guide: observe that –

Components are produced to specification using the electro-discharge machining process in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for operating the electro-discharge machine to produce components can be given.

Element 7.14A.5 Check components for conformance to specification**Criteria 7.14A.5.1**

Components are checked for conformance to specification using appropriate techniques, tools and equipment.

Assessor guide: observe that –

The machined components are checked for conformance with specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The tools, techniques and equipment appropriate to the checking of machined components can be identified. The procedures for checking machined components for conformance to specification can be given. The reasons for selecting the tools, techniques and equipment to be used can be explained.

Range statement

This unit covers the skills required to use an electro-discharge machine (EDM). Work is performed to established processes, practices and standards of quality, safety and workshop procedures. Work applies to a range of electro-discharge machining (EDM) operations and engineering materials. Work is performed to drawings and sketches, specifications and instructions as appropriate. For electrode manufacture other appropriate machining units should be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of electro-discharge machining operations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.15A A Set NC/CNC machine/process (basic)

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 2

This unit covers the competencies required to mount work holding fixtures/devices/tools, conduct pre-start checks, set NC/CNC machine, instruct the operator and replace worn or damaged tooling. The unit applies to the setting of any NC/CNC machines.

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
9.2A Interpret technical drawing

7.24A Operate and monitor machine/process
18.1A Use hand tools

7.28A Operate NC/CNC machine/process (basic)

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.1A Use hand tools

7.5A Perform general machining

9.2A Interpret technical drawing

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices
9.1A Draw and interpret sketch

7.24A Operate and monitor machine/process
18.1A Use hand tools

7.28A Operate NC/CNC machine/process (basic)

Element 7.15A.1 Obtain job instructions

Criteria 7.15A.1.1

Job sheets or equivalent instructions understood and correctly followed

Assessor guide: observe that –

Job sheets and/or instructions are obtained in accordance with work place procedures

Assessor guide: confirm that –

The work to be undertaken can be identified

Element 7.15A.2 Mount work holding fixtures/devices/tools

Criteria 7.15A.2.1

Machine prepared to accept work holding fixtures/devices/tools

Assessor guide: observe that –

The machine is prepared for the installation/mounting of appropriate work holding fixtures/devices/tools as required in accordance with standard operating

Assessor guide: confirm that –

The work holding fixtures/devices/ tools appropriate to the NC/CNC machine/process can be identified The correct work holding fixtures/ devices/tools for the given task(s) can be identified The reasons for selecting the work holding fixtures/devices/tools chosen can be given The procedures for mounting work holding fixtures/devices/tools can be identified

Criteria 7.15A.2.2

Pre-set tooling is mounted as required into machine/equipment

Assessor guide: observe that –

Appropriate pre-set tooling is mounted in the machine in accordance with standard operating procedures

Assessor guide: confirm that –

The pre-set tooling available for use in conjunction with the given NC/CNC machine/process can be identified The correct pre-set tooling for the given task(s) can be identified The reasons for selecting the pre-set tooling chosen can be given The procedures for mounting pre-set tooling can be identified

Criteria 7.15A.2.3

Work holding fixtures/devices are set on machine as required using standard operating procedures

Assessor guide: observe that –

Appropriate work holding fixtures/ devices/tools are located and mounted on the machine as required in accordance with specifications and standard operating procedures

Assessor guide: confirm that –

The location of the required work holding fixtures/devices/tools relative to the machine datum or zero can be correctly identified

Criteria 7.15A.2.4

Tool offset or datum settings are identified/verified against job sheet using standard operating procedures

Assessor guide: observe that –

Tool offsets and/or datum settings are verified against job sheets or instructions in accordance with standard operating procedures

Assessor guide: confirm that –

The reasons for establishing tool offsets can be explained The purpose of datum settings can be explained The tool offsets and/or datum settings for the given task(s) can be correctly identified The source(s) of information on tool offsets and datum settings can be identified

Criteria 7.15A.2.5

NC/CNC program loaded, selected and verified in accordance with job instructions

Assessor guide: observe that –

The NC/CNC program is loaded in accordance with standard operating procedures The NC/CNC program loaded is verified in accordance with standard operating procedures

Assessor guide: confirm that –

The NC/CNC program appropriate to the given task(s) is identified The source(s) of NC/CNC programs can be identified The procedures for loading NC/CNC programs can be identified The procedures for verifying loaded NC/CNC programs can be identified

Element 7.15A.3 Conduct pre-start checks**Criteria 7.15A.3.1**

Pre-start checks undertaken to standard operating procedure

Assessor guide: observe that –

All pre-start checks are undertaken safely in accordance with standard operating procedures

Assessor guide: confirm that –

The pre-start checks to be undertaken can be identified

Criteria 7.15A.3.2

Correct safety procedures are observed and all safety equipment checked for correct operation

Assessor guide: observe that –

Correct safety procedures are followed at all times All safety features and equipment are checked for correct operation in accordance with standard operating procedures

Assessor guide: confirm that –

The safety features and equipment of the NC/CNC machine/process can be identified The purpose and function of the safety features and/or equipment can be explained

Element 7.15A.4 Set NC/CNC (numerical control/computer numerical control) machine**Criteria 7.15A.4.1**

Machine set/adjusted to meet operational requirements and specifications

Assessor guide: observe that –

The NC/CNC machine/process is set in accordance with specifications and standard operating procedures Where appropriate the NC/CNC machine/process is adjusted to meet specifications and operational requirements in accordance with standard operating procedures

Assessor guide: confirm that –

The machine/process setting procedures can be identified The relevant machine and operational specifications can be identified The adjustments that can be made to the machine/process can be identified The effect of adjustments on machine and operational specifications can be explained

Criteria 7.15A.4.2

Production samples checked for compliance with specifications using standard operating procedures

Assessor guide: observe that –

The first-off samples are measured for compliance with specifications in accordance with standard operating procedures

Assessor guide: confirm that –

The specifications of the parts or product to be produced can be identified The appropriate measuring devices for use in checking the parts or product can be identified

Element 7.15A.5 Instruct machine operator**Criteria 7.15A.5.1**

Operator instructed if necessary ensuring that all safety procedures and devices are in place

Assessor guide: observe that –

Where appropriate, the machine operator is instructed on the sequence of operations, any required safety procedures and the standard operating procedures to be observed All safety procedures and devices are in place and operational

Assessor guide: confirm that –

The sequence of operations of the NC/CNC machine/process can be identified All safety features, devices and equipment associated with the NC/CNC machine/process and their function can be identified The standard operating procedures applicable to the machine/process can be identified

Element 7.15A.6 Replace worn/damaged tooling**Criteria 7.15A.6.1**

Where appropriate, preset tools are replaced, tool offsets adjusted or other corrective action taken using standard operating procedures

Assessor guide: observe that –

Where appropriate, worn or damaged tooling is identified and appropriate corrective action taken in accordance with standard operating procedures

Assessor guide: confirm that –

Common examples of worn or damaged tooling can be identified The effect of worn or damaged tooling on the part or product to be produced can be explained The corrective action to be taken when worn or damaged tools are detected can be identified The procedures for adjusting tool offsets can be given

Range statement

Work applies to setting any NC/CNC (numerical control/computer numerical control) machines. Work is performed to established processes, practices and specifications and instructions as appropriate. Technical difficulties are resolved in consultation with appropriate technical advisers. Work is carried out autonomously using predetermined standards of quality and safety. For setting non-NC/CNC machines or processes, refer to Unit 7.3A (Setting machines (routine)).

Evidence**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the

Critical aspects

Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.16A B Set and edit NC/CNC machine/process

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

This unit covers the competencies required to mount work holding fixtures/devices/tools, set tooling offsets, trial the NC/CNC program, instruct the operator and replace worn or damaged tooling. The unit applies to any NC/CNC machine or process. Editing applies to identifying and accessing NC/CNC programs in edit mode in order to make changes associated with speeds, feed and operational sequence.

Note - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

7.28A Operate NC/CNC machine/process (basic)

7.15A Set NC/CNC machines/process (basic)

9.2A Interpret technical drawing

7.24A Operate and monitor machine/process

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

7.5A Perform general machining

18.1A Use hand tools

7.15A Set NC/CNC machines/process (basic)

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices

5.9A Automated thermal cutting

5.7A Manual heating and thermal cutting

9.2A Interpret technical drawing

5.8A Advanced manual thermal cutting, gouging and shaping

18.1A Use hand tools

Element 7.16A.1 Identify job requirements

Criteria 7.16A.1.1

Instructions/plans understood and correctly followed

Assessor guide: observe that –

Job sheets and/or instructions are obtained in accordance with work place procedures

Assessor guide: confirm that –

The work to be undertaken can be identified The specifications to be achieved can be identified

Element 7.16A.2 Set work holding fixtures/devices/tools

Criteria 7.16A.2.1

Correct ancillary devices selected and attached to machine using standard operating procedures

Assessor guide: observe that –

Where appropriate, the correct ancillary devices are attached to the NC/CNC machine in accordance with standard operating procedures

Assessor guide: confirm that –

The ancillary equipment available for use in conjunction with the NC/CNC machine/process can be identified The correct ancillary equipment is selected for the task(s) to be performed The reasons for selecting the chosen equipment can be explained The procedures for attaching the ancillary device(s) to the NC/CNC machine can be given

<p>Criteria 7.16A.2.2 Machine prepared to accept work holding devices appropriate work holding devices as required in accordance</p>	<p><i>Assessor guide: observe that –</i> The machine is prepared for the installation/mounting of with standard operating procedures</p>	<p><i>Assessor guide: confirm that –</i> The work holding devices appropriate to the NC/CNC machine/process can be identified The correct work holding devices for the given task(s) can be identified The reasons for selecting the work holding device(s) chosen can be given The procedures for mounting work holding devices can be identified</p>
<p>Criteria 7.16A.2.3 Work holding fixtures/devices/tools are set to zero or a datum using appropriate setting devices</p>	<p><i>Assessor guide: observe that –</i> Appropriate work holding devices are located and mounted on the machine as required in accordance with specifications and standard operating procedures</p>	<p><i>Assessor guide: confirm that –</i> The location of the required work holding fixtures/devices/tools relative to the machine zero or datum can be correctly identified</p>
<p>Element 7.16A.3 Set tooling offsets</p>		
<p>Criteria 7.16A.3.1 Tooling offsets are measured and recorded in machine controller</p>	<p><i>Assessor guide: observe that –</i> Tool offsets are accurately measured in accordance with standard operating procedures Tool offsets entered into the NC/CNC machine/process controller are verified in accordance with standard operating procedures</p>	<p><i>Assessor guide: confirm that –</i> The reasons for establishing tool offsets can be explained The procedures for measuring tool offsets can be given The procedures for entering and verifying tool offsets in the NC/CNC machine/process controller can be given The measuring techniques/equipment to be used to determine tool offsets can be identified</p>
<p>Element 7.16A.4 Trial NC/CNC program</p>		
<p>Criteria 7.16A.4.1 Machine operated to produce first-off samples observing all safety procedures</p>	<p><i>Assessor guide: observe that –</i> First-off samples are produced safely in accordance with standard operating procedures</p>	<p><i>Assessor guide: confirm that –</i> The operating procedures applicable to the NC/CNC machine/process can be identified All safety features and equipment associated with the NC/CNC machine/process and its function can be identified</p>
<p>Criteria 7.16A.4.2 First-off samples checked for compliance with specifications</p>	<p><i>Assessor guide: observe that –</i> First-off samples are measured and checked for compliance with specifications in accordance with standard operating procedures</p>	<p><i>Assessor guide: confirm that –</i> The specifications of the parts or products to be produced can be identified The appropriate measuring devices/ techniques for use in checking the parts or product can be identified</p>
<p>Criteria 7.16A.4.3 Program editing to change speeds, feed and operational sequence requirements undertaken as required to ensure job conforms to specification</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, the NC/CNC program is edited via the machine/ process controller to ensure the part or product conforms to specification</p>	<p><i>Assessor guide: confirm that –</i> The effects of changes to cutting feeds and speeds on the part or product to be produced can be explained The impact of changes to the sequence of operations on the part or product to be produced can be explained The procedures for editing NC/CNC programs via the machine controller can be explained</p>

Element 7.16A.5 Instruct machine operator**Criteria 7.16A.5.1**

Operator instructed if necessary ensuring that all safety procedures and devices are in place

Assessor guide: observe that –

Where appropriate, the machine operator is instructed on the sequence of operations, any required safety procedures and the standard operating procedures to be observed All safety procedures and devices are in place and operational

Assessor guide: confirm that –

The sequence of operations of the NC/CNC machine/process can be identified All safety features, devices and equipment associated with the NC/CNC machine/process and their function can be identified The standard operating procedures applicable to the

Element 7.16A.6 Replace worn or damaged tooling**Criteria 7.16A.6.1**

Where appropriate, tools are replaced, tool offsets adjusted or other corrective action taken using standard operating procedures

Assessor guide: observe that –

Where appropriate, worn or damaged tooling is identified and appropriate corrective action taken in accordance with standard operating procedures

Assessor guide: confirm that –

Common examples of worn or damaged tooling can be identified The effect of worn or damaged tooling on the part or product to be produced can be explained The corrective action to be taken when worn or damaged tools are detected can be identified The procedures for adjusting tool offsets can be given

Range statement

Work is performed to established processes, practices and specifications. Work applies to any NC/CNC machine, machining process or operation. Machine operations may include welding, thermal cutting, metal cutting, forming and shaping etc. All work and work practices are performed to instructions, plans and specifications as appropriate. Technical difficulties are resolved in consultation with appropriate technical advisers. Work is carried out autonomously to predetermined standards of quality and safety. Editing applies to identifying and accessing NC/CNC programs in edit mode in order to make changes associated with speeds, feed and operational sequence. Changes are generally made in situ. Where additional machining skills in excess of Unit 7.5A (Perform general machining) are required then appropriate units should also be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the setting and editing of NC/CNC machines and/or processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.18A B Basic NC/CNC programming

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

This unit covers the competencies required to identify basic NC/CNC machine program elements, write a basic NC/CNC machine program and operation sheet and trial the program. This unit extends to writing a basic program to describe simple machine operations including tool paths using appropriate software for machines which may incorporate single spindles, single tools turrets, B axis angular, tool changers, component loaders of a pallet type but excludes multiple spindles.

Note - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
7.24A Operate and monitor machine/process
18.1A Use hand tools

7.15A Set NC/CNC machines/process (basic)
7.28A Operate NC/CNC machine/process (basic)

7.16A Set and edit NC/CNC machine/process
9.2A Interpret technical drawing

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
7.16A Set and edit NC/CNC machine/process

7.5A Perform general machining
9.2A Interpret technical drawing

7.15A Set NC/CNC machines/process (basic)
18.1A Use hand tools

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices

5.7A Manual heating and thermal cutting

5.8A Advanced manual thermal cutting, gouging and shaping

5.9A Automated thermal cutting
9.2A Interpret technical drawing

7.15A Set NC/CNC machines/process (basic)
18.1A Use hand tools

7.16A Set and edit NC/CNC machine/process

Element 7.18A.1 Identify basic NC/CNC machine program elements

Criteria 7.18A.1.1

Appropriate program elements are selected for machine controller

Assessor guide: observe that –

Assessor guide: confirm that –

The elements of a basic NC/CNC program can be identified
The function of those elements in controlling the operation of an NC/ CNC machine can be explained

Element 7.18A.2 Write basic NC/CNC machine program**Criteria 7.18A.2.1**

Engineering drawings understood and interpreted to define basic machine function and tool path geometry

Assessor guide: observe that –

All relevant engineering drawings, specifications and instructions are obtained in accordance with work place procedures

Assessor guide: confirm that –

The machining operations to be performed in the manufacture of the given part or product can be identified The appropriate type(s) of NC/CNC machine to perform the required machining operations can be identified The machining operations to be controlled by the program to be written can be identified The tool path(s) to be followed when producing the part or product can be identified The sequence of machining operations to be programmed can be identified The reasons for selecting the chosen tool path(s) and sequence of operations can be explained

Criteria 7.18A.2.2

Coordinates calculated for simple tool path or basic machining functions

Assessor guide: observe that –

The coordinates of all relevant points on the part or product to be produced are calculated accurately

Assessor guide: confirm that –

The zero point of the NC/CNC machine can be identified

Criteria 7.18A.2.3

Program written in standard code format in accordance with standard operating procedures

Assessor guide: observe that –

An appropriate NC/CNC program is written in standard code format in accordance with standard operating procedures

Assessor guide: confirm that –

The standard codes used in the writing of NC/CNC programs can be identified The applications of standard codes in NC/CNC programming can be explained The procedures for writing NC/CNC programs in standard code format can be given

Element 7.18A.3 Write NC/CNC operation sheet**Criteria 7.18A.3.1**

Operation sheets produced to specification in accordance with standard operating procedures

Assessor guide: observe that –

All relevant information is included in the NC/CNC operation sheet(s) The NC/CNC operation sheet(s) are produced in accordance with specifications and standard operating procedures

Assessor guide: confirm that –

The procedures for completing NC/CNC operation sheets can be given The information to be included in NC/CNC operation sheets can be identified

Element 7.18A.4 Trial program**Criteria 7.18A.4.1**

Machine operated in manual mode to test and prove program as required

Assessor guide: observe that –

The NC/CNC machine is operated safely in manual mode in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for manual operation of the NC/CNC machine can be identified The reasons for testing and proving the NC/CNC program can be explained

Criteria 7.18A.4.2

Program is edited if necessary to adjust operation as required

Assessor guide: observe that –

Where appropriate the NC/CNC program is edited in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for editing the NC/CNC program via the machine controller can be given The effects of editing on the operation of the NC/CNC machine and the part or product to be produced can be explained

Criteria 7.18A.4.3

Components are checked for conformance to specification as required

Assessor guide: observe that –

The parts or products produced are checked for conformance with specifications in accordance with standard operating procedures

Assessor guide: confirm that –

The specifications of the part or product can be identified The measuring equipment/techniques to be used to check for conformance to specification can be identified

Range statement

Extends to writing a basic program to describe simple machine operations, including tool paths using appropriate software, machine operations may include welding, thermal cutting, metal cutting, forming and shaping etc. Machines may incorporate single spindles, single tool turrets, B axis angular, tool changers, component loaders of a pallet type etc., but excludes multiple spindles. Programs are trialed and edited as necessary to adjust operation of machine. Technical difficulties are resolved in consultation with appropriate technical advisers. Work would be undertaken autonomously using predetermined standards of quality. The program may use common M and G codes but does not include the programming of advanced operations, using canned cycles and sub-routines. For this level of programming, see Unit 7.19A (Program NC/CNC machining centre). Where additional machining skills in excess of Unit 7.5A (Perform general machining) are required then appropriate units should also be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with basic NC/CNC programming and/or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.19A B Program NC/CNC machining centre

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 2

This unit covers the competencies required to identify basic NC/CNC machine program elements, write a basic NC/CNC machine program and operation sheet and trial

the program. This unit extends to writing a basic program to describe machine operations including tool paths using appropriate software for machines which may incorporate single spindles, single tools turrets, B axis angular, tool changers, component loaders of a pallet types but excludes multiple spindle and multiple axis.

Note - Where machining skills in excess of Unit 7.5A (Perform general machining) are required then appropriate units should also be selected This unit has dual status

and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

7.18A Basic NC/CNC programming

9.2A Interpret technical drawing

7.15A Set NC/CNC machines/process (basic)

7.24A Operate and monitor machine/process

18.1A Use hand tools

7.16A Set and edit NC/CNC machine/process

7.28A Operate NC/CNC machine/process (basic)

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

7.16A Set and edit NC/CNC machine/process

18.1A Use hand tools

7.5A Perform general machining

7.18A Basic NC/CNC programming

7.15A Set NC/CNC machines/process (basic)

9.2A Interpret technical drawing

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices

5.9A Automated thermal cutting

9.2A Interpret technical drawing

5.7A Manual heating and thermal cutting

7.16A Set and edit NC/CNC machine/process

18.1A Use hand tools

5.8A Advanced manual thermal cutting, gouging and shaping

7.18A Basic NC/CNC programming

Element 7.19A.1 Identify basic NC/CNC machine program elements

Criteria 7.19A.1.1

Appropriate program elements are selected for machine controller

Assessor guide: observe that –

Assessor guide: confirm that –

The elements of an NC/CNC program can be identified The function of those elements in controlling the operation of an NC/ CNC machine can be explained

Element 7.19A.2 Write basic NC/CNC machine program**Criteria 7.19A.2.1**

Engineering drawings understood and interpreted to define machine function and tool path geometry

Assessor guide: observe that –

All relevant engineering drawings, specifications and instructions are obtained in accordance with work place procedures

Assessor guide: confirm that –

The machining operations to be performed in the manufacture of the given part or product can be identified The appropriate type(s) of NC/CNC machine to perform the required machining operations can be identified The machining operations to be controlled by the program to be written can be identified The tool path(s) to be followed when producing the part or product can be identified The sequence of machining operations to be programmed can be identified The reasons for selecting the chosen tool path(s) and sequence of operations can be explained

Criteria 7.19A.2.2

Coordinates calculated as required for tool path or machine functions

Assessor guide: observe that –

The coordinates of all relevant points on the part or product to be produced are calculated accurately

Assessor guide: confirm that –

The zero point of the NC/CNC machine can be identified

Criteria 7.19A.2.3

Advanced operations using canned cycles and sub-routines are selected and applied appropriately

Assessor guide: observe that –

Assessor guide: confirm that –

The canned cycles and sub-routines accessible in the particular NC/CNC machine can be identified The application of each canned cycle and sub-routine available can be given Where appropriate the canned cycles and/or sub-routines to be used in the NC/CNC program can be identified The reasons for selecting the chosen canned cycles and/or sub-routines can be explained

Criteria 7.19A.2.4

Program written in standard code format in accordance with standard operating procedures

Assessor guide: observe that –

An appropriate NC/CNC program is written in standard code format and incorporating, where appropriate, canned cycles and sub-routines

Assessor guide: confirm that –

The standard codes used in the writing of NC/CNC programs can be identified The applications of standard codes in NC/CNC programming can be explained The procedures for writing NC/CNC programs in standard code format can be given

Element 7.19A.3 Write NC/CNC operation sheet**Criteria 7.19A.3.1**

Operation sheets produced to specification in accordance with standard operating procedure which includes appropriate Australian Standard where required

Assessor guide: observe that –

All relevant information is included in the NC/CNC operation sheet(s) The NC/CNC operation sheet(s) are produced in accordance with specifications and standard operating procedures

Assessor guide: confirm that –

The procedures for completing NC/CNC operation sheets can be given The information to be included in NC/CNC operation sheets can be identified Where appropriate, relevant Australian Standards can be identified

Element 7.19A.4 Trial program**Criteria 7.19A.4.1**

Machine operated in manual mode to test and prove program

Assessor guide: observe that –

The NC/CNC machine is operated safely in manual mode in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for manual operation of the NC/CNC machine can be identified The reasons for testing and proving the NC/CNC program can be explained

Criteria 7.19A.4.2

Program is edited if necessary to adjust operation accordance with standard operating procedures

Assessor guide: observe that –

Where appropriate the NC/CNC program is edited in machine controller can be given The effects of editing on

Assessor guide: confirm that –

The procedures for editing the NC/CNC program via the operation of the NC/CNC machine and the part or product to be produced can be explained

Criteria 7.19A.4.3

Components are checked to conform to specification

Assessor guide: observe that –

The parts or products produced are checked for conformance with specifications in accordance with standard operating procedures

Assessor guide: confirm that –

The specifications of the part or product can be identified The measuring equipment/techniques to be used to check for conformance with specifications can be identified

Range statement

Extends to writing programs to describe machine operations including tool paths using appropriate software for machines which may incorporate single spindles, single tool turrets, tool changers, B axis angular, component loaders of the pallet type etc., but excludes multiple spindles and multiple axis. The program may use common M and G codes and includes the programming of advanced operations, using canned cycles and sub-routines. Programs are trialed and edited as necessary to adjust operation of centre. Technical difficulties are resolved in consultation with appropriate technical advisers. Work would be undertaken autonomously using predetermined standards of quality.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the programming of NC/CNC machining centres or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.20A B Program multiple spindle and/or multiple axis NC/CNC machining centre

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 2

This unit covers the competencies required to identify basic NC/CNC machine program elements, write a basic NC/CNC machine program and operation sheet and trial

the program. This unit extends to writing a basic program to describe machine operations including tool paths using appropriate software for machines which may incorporate multiple spindles, multiple axis/B axis angular, multiple tool turrets, tool changers, component loaders of a pallet types but excludes multiple spindles and multiple axis.

Note - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

7.18A Basic NC/CNC programming

7.28A Operate NC/CNC machine/process (basic)

7.15A Set NC/CNC machines/process (basic)

7.19A Program NC/CNC machining centre

9.2A Interpret technical drawing

7.16A Set and edit NC/CNC machine/process

7.24A Operate and monitor machine/process

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

7.16A Set and edit NC/CNC machine/process

9.2A Interpret technical drawing

7.5A Perform general machining

7.18A Basic NC/CNC programming

18.1A Use hand tools

7.15A Set NC/CNC machines/process (basic)

7.19A Program NC/CNC machining centre

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices

5.9A Automated thermal cutting

7.19A Program NC/CNC machining centre

5.7A Manual heating and thermal cutting

7.16A Set and edit NC/CNC machine/process

9.2A Interpret technical drawing

5.8A Advanced manual thermal cutting, gouging and shaping

7.18A Basic NC/CNC programming

18.1A Use hand tools

Element 7.20A.1 Identify basic NC/CNC machine program elements

Criteria 7.20A.1.1

Appropriate program elements are selected for machine controller

Assessor guide: observe that –

Assessor guide: confirm that –

The elements of an NC/CNC program can be identified The function of those elements in controlling the operation of an NC/ CNC machine can be explained

Element 7.20A.2 Write basic NC/CNC machine program**Criteria 7.20A.2.1**

Engineering drawings understood and interpreted to define machine function and tool path geometry

Assessor guide: observe that –

All relevant engineering drawings, specifications and instructions are obtained in accordance with work place procedures

Assessor guide: confirm that –

The machining operations to be performed in the manufacture of the given part or product can be identified The appropriate type(s) of NC/CNC machine to perform the required machining operations can be identified The machining operations to be controlled by the program to be written can be identified The tool path(s) to be followed when producing the part or product can be identified The sequence of machining operations to be programmed can be identified The reasons for selecting the chosen tool path(s) and sequence of operations can be explained

Criteria 7.20A.2.2

Coordinates calculated as required for tool path or machine functions

Assessor guide: observe that –

The coordinates of all relevant points on the part or product to be produced are calculated accurately

Assessor guide: confirm that –

The zero point of the NC/CNC machine can be identified

Criteria 7.20A.2.3

Advanced operations using canned cycles and sub-routines are selected and applied appropriately

Assessor guide: observe that –

Assessor guide: confirm that –

The canned cycles and sub-routines accessible in the particular NC/CNC machine can be identified The application of each canned cycle and sub-routine available can be given Where appropriate the canned cycles and/or sub-routines to be used in the NC/CNC program can be identified The reasons for selecting the chosen canned cycles and/or sub-routines can be explained

Criteria 7.20A.2.4

Program written in standard code format in accordance with standard operating procedures

Assessor guide: observe that –

An appropriate NC/CNC program is written in standard code format and incorporating, where appropriate, canned cycles and sub-routines

Assessor guide: confirm that –

The standard codes used in the writing of NC/CNC programs can be identified The applications of standard codes in NC/CNC programming can be explained The procedures for writing NC/CNC programs in standard code format can be given

Element 7.20A.3 Write NC/CNC operation sheet**Criteria 7.20A.3.1**

Operation sheets produced to specification in accordance with standard operating procedure which includes appropriate Australian Standard where required

Assessor guide: observe that –

All relevant information is included in the NC/CNC operation sheet(s) The NC/CNC operation sheet(s) are produced in accordance with specifications and standard operating procedures

Assessor guide: confirm that –

The procedures for completing NC/CNC operation sheets can be given The information to be included in NC/CNC operation sheets can be identified Where appropriate, relevant Australian Standards can be identified

Element 7.20A.4 Trial program**Criteria 7.20A.4.1**

Machine operated in manual mode to test and prove program

Assessor guide: observe that –

The NC/CNC machine is operated safely in manual mode in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for manual operation of the NC/CNC machine can be identified The reasons for testing and proving the NC/CNC program can be explained

Criteria 7.20A.4.2

Program is edited if necessary to adjust operation accordance with standard operating procedures

Assessor guide: observe that –

Where appropriate the NC/CNC program is edited in machine controller can be given The effects of editing on

Assessor guide: confirm that –

The procedures for editing the NC/CNC program via the

the operation of the NC/CNC machine and the part or product to be produced can be explained

Criteria 7.20A.4.3

Components are checked to conform to specification

Assessor guide: observe that –

The parts or products produced are checked for conformance with specifications in accordance with standard operating procedures

Assessor guide: confirm that –

The specifications of the part or product can be identified

The measuring equipment/techniques to be used to check for conformance with specifications can be identified

Range statement

Extends to writing programs to describe machine operations including tool paths using appropriate software for machines which include multiple spindles and/or multiple axis/B axis angular, multiple tool turrets, tool changers and may include component loaders of a pallet type etc. The program may use common M and G codes and includes the programming of advanced operations, using canned cycles and sub-routines. Programs are trialed and edited as necessary to adjust operation of centre. Technical difficulties are resolved in consultation with appropriate technical advisers. Work would be undertaken autonomously using predetermined standards of quality. Where machining skills in excess of 7.5A (Perform general machining) are required then appropriate units should also be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the programming of multiple spindle, multiple axis NC/CNC machining centres or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.21A A Perform complex lathe operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

2.13C5 Perform mathematical computations

9.2A Interpret technical drawing

2.7C10 Perform computations - basic

7.5A Perform general machining

12.3A Precision mechanical measurement

2.8C10 Perform computations

7.6A Perform lathe operations

18.1A Use hand tools

Element 7.21A.1 Accurately set up work

Criteria 7.21A.1.1

Work is set up to required level of accuracy using precision instruments such as dial test indicators etc.

Assessor guide: observe that –

The work is set up to the required level of accuracy using appropriate precision measuring equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The precision measuring equipment appropriate to the accuracy required in setting up the work can be identified. The reasons for selecting the chosen measuring equipment can be given. The procedures for accurately setting up the work can be given.

Element 7.21A.2 Identify inserts from International Standard Organisation or other appropriate standards

Criteria 7.21A.2.1

Correct tool is selected using International Standard Organisation standards or other appropriate standards to suit cutting parameters.

Assessor guide: observe that –

The correct cutting tool inserts are selected for the cutting parameters in accordance with ISO standards.

Assessor guide: confirm that –

The ISO standards applicable to cutting tool inserts can be identified. The cutting parameters for the work to be undertaken can be determined.

Element 7.21A.3 Perform complex turning

Criteria 7.21A.3.1

Speeds and feeds are correctly calculated using appropriate mathematical techniques and reference material.

Assessor guide: observe that –

The appropriate feeds and speeds are used in performing complex turning operations.

Assessor guide: confirm that –

The appropriate feeds and speeds for complex turning operation(s) are correctly calculated. The sources of appropriate formulae and data relating to feeds and speeds can be identified.

Criteria 7.21A.3.2

Complex turning undertaken which may include single and multi-start thread cutting, internal blind hole thread cutting, eccentrics, copy and taper turning etc.

Assessor guide: observe that –

Complex turning operations are performed to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The techniques and procedures for carrying out each of the following turning operations can be given: - single start thread cutting - multi-start thread cutting - internal blind hole thread cutting - eccentrics - copy turning - taper turning.

Criteria 7.21A.3.3

Non-standard turning operations performed as required which may include counterbalancing work on face plates, mandrill work, trepanning, heavy (multi-tonne) shafts etc.

Assessor guide: observe that –

Where appropriate, the following turning operations are performed to specification in accordance with standard operating procedures: - counter balancing work on face plates - mandrill work - trepanning - heavy (multi-tonne) shafts.

Assessor guide: confirm that –

The techniques and procedures for carrying out each of the following turning operations can be given: - counter balancing work on face plates - mandrill work - trepanning - heavy (multi-tonne) shafts.

Range statement

The skills in this unit are applied to more unusual or difficult turning operations including those requiring calculations, or jobs requiring high precision or quality using a range of materials including non-standard metals and alloys. Work would be performed autonomously using predetermined standards of quality and safety. Skills in this unit are applied to complex or unusual turning operations including the use of special tools or techniques and where the outcomes require high precision. A variety of materials may be used including non-standard metals and alloys.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of complex lathe operations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.22A B Advanced programming of CNC wire cut machines

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 2

This unit covers the competencies required to write and trial a program for a range of CNC wire cut machines. Programming includes 2 axis tool paths, 4 axis conical cutting, auto multi-cavity work pieces.

Note - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
7.16A Set and edit NC/CNC machine/process
18.1A Use hand tools

7.5A Perform general machining
7.18A Basic NC/CNC programming

7.15A Set NC/CNC machines/process (basic)
9.2A Interpret technical drawing

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
7.18A Basic NC/CNC programming
9.2A Interpret technical drawing

7.15A Set NC/CNC machines/process (basic)
7.24A Operate and monitor machine/process
18.1A Use hand tools

7.16A Set and edit NC/CNC machine/process
7.28A Operate NC/CNC machine/process (basic)

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices

7.16A Set and edit NC/CNC machine/process
18.1A Use hand tools

5.8A Advanced manual thermal cutting, gouging and shaping
7.18A Basic NC/CNC programming

5.9A Automated thermal cutting
9.2A Interpret technical drawing

Element 7.22A.1 Write program

Criteria 7.22A.1.1

Engineering drawings understood and interpreted to define optimum tool path geometry

Assessor guide: observe that –

All relevant drawings, specifications and instructions are obtained in accordance with work place procedures The coordinates of all relevant points on the part or product to be produced are calculated accurately

Assessor guide: confirm that –

The operations to be performed in producing the given part or product can be identified The operations to be controlled by the program to be written can be identified The tool path(s) to be followed when producing the part or product can be identified The sequence of operations to be programmed can be identified The reasons for selecting the chosen tool path(s) and sequence of operations can be explained The zero point of the wire cut machine can be identified

Criteria 7.22A.1.2

Tool path programmed using advanced operations, canned cycles and sub-routines or other appropriate sub-routines within system

Assessor guide: observe that –

Assessor guide: confirm that –

The canned cycles and sub-routines accessible in the particular NC/CNC machine can be identified The application of each canned cycle and sub-routine available can be given Where appropriate, the canned cycles and/or sub-routines to be used in the NC/CNC program can be identified The reasons for selecting the chosen canned cycles and/or sub-routines can be explained

Criteria 7.22A.1.3

Program written in standard code format, confirmed and edited as necessary using appropriate routine and standard operating procedures

Assessor guide: observe that –

Assessor guide: confirm that –

An appropriate NC/CNC program is written in standard code format and incorporates, where appropriate, canned cycles and sub-routines The standard codes used in the writing of NC/CNC programs can be identified The applications of standard codes in NC/CNC programming can be explained The procedures for writing NC/CNC programs in standard code format can be given

Criteria 7.22A.1.4

Program stored in accordance with standard operating procedures

Assessor guide: observe that –

The program is stored in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for storing NC/CNC programs can be identified

Criteria 7.22A.1.5

Operation sheet produced to standard operating procedure

Assessor guide: observe that –

All relevant information is included in the NC/CNC operation sheet(s) The NC/CNC operation sheet(s) are produced in accordance with specifications and standard operating procedures

Assessor guide: confirm that –

The procedures for completing NC/CNC operation sheets can be given The information to be included in NC/CNC operation sheets can be identified

Element 7.22A.2 Trial program**Criteria 7.22A.2.1**

Program downloaded, machining parameters that may include wire offset, wire speed, power settings are selected

Assessor guide: observe that –

The NC/CNC program is downloaded in accordance with standard operating procedures The downloaded NC/CNC program is verified in accordance with standard operating procedures The appropriate machining parameters are entered into the machine controller in accordance with standard operating procedures

Assessor guide: confirm that –

The NC/CNC program appropriate to the given task(s) is identified The procedures for downloading NC/CNC programs can be identified The procedures for verifying downloaded NC/CNC programs can be identified The machining parameters that may be entered into the machine controller can be identified The effect of varying the machining parameters on the product or part produced can be explained

Criteria 7.22A.2.2

Machine prepared, work piece loaded, aligned, datum and reference points established in accordance with standard operating procedures

Assessor guide: observe that –

Appropriate work holding fixtures/ devices/tools are located and mounted onto the machine as required in accordance with specifications and standard operating procedures All safety features and equipment are checked for correct operation in accordance with standard operating procedures All datum and reference points are established in accordance with standard operating procedures

Assessor guide: confirm that –

The appropriate work holding fixtures/devices/tools can be identified The procedures for mounting work holding fixtures/devices tools can be given The location of the required work holding fixtures/devices/tools relative to the machine datum or zero can be correctly identified The purpose of datum setting can be explained The pre-start checks to be undertaken can be identified The safety features and equipment of the NC/CNC machine can be identified The purpose and function of the safety features and/or equipment can be explained

Criteria 7.22A.2.3

Machine operated in appropriate mode to test and prove program, work piece positioning

Assessor guide: observe that –

The NC/CNC program is tested and proven in accordance with standard operating procedures The position of the work piece is tested for conformance to specification in accordance with standard operating procedures

Assessor guide: confirm that –

The machine mode appropriate to the testing and proving of the NC/CNC program and the checking of the position of the work piece can be identified The procedures to be followed when using the machine in this mode can be identified The relative position of the work piece to the machine datum or zero can be identified

Criteria 7.22A.2.4

Finished components are checked for conformance with drawing specifications

Assessor guide: observe that –

The parts or products produced are checked for conformance with specifications in accordance with standard operating procedures

Assessor guide: confirm that –

The specifications of the part or product can be identified The measuring equipment/techniques to be used to check for conformance to specification can be identified

Range statement

This unit extends to programming a range of CNC wire cut machines. Programming includes 2 axis tool paths, 4 axis conical cutting, auto multi-cavity work pieces. Technical difficulties are resolved in consultation with appropriate technical advisers. Work is carried out autonomously using predetermined standards of quality and safety.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the programming of CNC wire cut machines or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.23B B Program and set up CNC manufacturing cell

Band – Specialisation band B

Field – Machine & process operations

Unit Weight 6

This unit covers the competencies required to program operations, set up the cell and test the operation of the cell. The unit extends to CNC machines and associated integrated equipment/robots used in flexible manufacturing cell. It may include the use of multi-spindle machines, 4 and 5 axis machines and pallet loaded machining centres.

Note - This unit can be regarded as a Specialisation band A unit from C11 onwards.

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
7.7A Perform milling operations
7.18A Basic NC/CNC programming

7.5A Perform general machining
7.15A Set NC/CNC machines/process (basic)
7.19A Program NC/CNC machining centre

7.6A Perform lathe operations
7.16A Set and edit NC/CNC machine/process
7.20A Program multiple spindle and/or multiple axis
NC/CNC machining centre

9.2A Interpret technical drawing

18.1A Use hand tools

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
7.18A Basic NC/CNC programming

7.15A Set NC/CNC machines/process (basic)
7.19A Program NC/CNC machining centre

7.16A Set and edit NC/CNC machine/process
7.20A Program multiple spindle and/or multiple axis
NC/CNC machining centre

7.24A Operate and monitor machine/process
18.1A Use hand tools

7.28A Operate NC/CNC machine/process (basic)

9.2A Interpret technical drawing

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices

5.7A Manual heating and thermal cutting

5.8A Advanced manual thermal cutting, gouging and
shaping

5.9A Automated thermal cutting
7.18A Basic NC/CNC programming

7.15A Set NC/CNC machines/process (basic)
7.19A Program NC/CNC machining centre

7.16A Set and edit NC/CNC machine/process
7.20A Program multiple spindle and/or multiple axis
NC/CNC machining centre

9.2A Interpret technical drawing

18.1A Use hand tools

Element 7.23B.1 Program operations

Criteria 7.23B.1.1

Engineering drawings and manufacturing specifications are interpreted and understood to determine equipment required

Assessor guide: observe that –

All relevant drawings, specifications and instructions are obtained in accordance with workplace procedures

Assessor guide: confirm that –

The operations to be performed in producing the given part or product can be identified The appropriate type(s) of NC/CNC machine to perform the required machining operations can be identified The appropriate means of part or product transfer between machines can be identified The reasons for selecting the chosen equipment and machinery can be explained

Criteria 7.23B.1.2

Programs equipment/cell schedule

Assessor guide: observe that –

The appropriate NC/CNC programs are loaded/downloaded into the individual machine controllers in accordance with standard operating procedures Where appropriate, NC/CNC programs are written to ensure that the components of the cell operate in the correct sequence

Assessor guide: confirm that –

The NC/CNC programs for use in each of the cell components can be identified The sequence of machining and transfer operations can be identified The means of coordinating the operations of all components within the cell can be explained The communication requirements between components of the cell can be identified

Criteria 7.23B.1.3

Links controllers for integration

Assessor guide: observe that –

The machine controllers of NC/ CNC machines and transfer devices are correctly linked in accordance with standard operating procedures

Assessor guide: confirm that –

The methods of linking machine controllers can be identified The precautions to be taken when linking machine controllers can be explained The procedures for linking machine controllers can be given

Element 7.23B.2 Set up cell**Criteria 7.23B.2.1**

Configures manufacturing cell machines and equipment to meet production specifications

Assessor guide: observe that –

The machines and equipment are appropriately located in accordance with standard operating procedures to ensure that manufacturing cell performance is optimised

Assessor guide: confirm that –

The specifications of the part or product to be produced can be identified The optimum physical relationship between the machines and equipment within the cell can be identified The reasons for selecting this configuration of machines and equipment can be explained

Criteria 7.23B.2.2

Installs and adjusts tooling and work holding devices to meet specifications

Assessor guide: observe that –

All tooling and work holding devices are installed and adjusted, where appropriate, in accordance with standard operating procedures

Assessor guide: confirm that –

The appropriate tooling for each component of the cell can be identified The reasons for tooling selection can be given The appropriate work holding devices for each component of the cell can be identified The reasons for selecting the chosen work holding devices can be given The effects of adjustments to tooling and/or work holding devices on the part or product specifications can be explained

Element 7.23B.3 Test cell operation**Criteria 7.23B.3.1**

Operates and adjusts cell to produce components to specification

Assessor guide: observe that –

The manufacturing cell is operated in accordance with standard operating procedures The part or product is checked for conformance with specifications in accordance with standard operating procedures Where appropriate the operation of the cell is adjusted in accordance with standard operating procedures to ensure the parts or products produced conform to specification The performance of the manufacturing cell is optimised

Assessor guide: confirm that –

The operating procedures for the manufacturing cell can be identified, or where appropriate, prepared The measurements to be taken to check the part or product for conformance to specification can be identified The techniques/equipment to be used to measure the part or product can be identified The effect of adjustments on cell performance can be explained The causes of non-essential dwell times can be explained Where appropriate, the action to be taken to minimise dwell times can be identified

Range statement

Extends to Computer Numerical Control machines and associated integrated equipment/robots used in a flexible manufacturing cell and other advanced operations. This may include the use of multi-spindle machines, 4 and 5 axis machines and pallet loaded machining centres. Work is performed to predetermined standards, specifications and quality. Work is carried out autonomously using predetermined standards of quality and safety. Where machining skills in excess of Unit 7.5A (Perform general machining) are required, then appropriate units should also be selected. Unit 12.3A (Precision mechanical measurement) should also be accessed when precision measurement skills are required.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the programming and set up of CNC manufacturing cells or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.24A A Operate and monitor machine/process

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Element 7.24A.1 Obtain job instructions

Criteria 7.24A.1.1

Job sheets or equivalent instructions interpreted correctly.

Assessor guide: observe that –

All relevant documentation is obtained in accordance with work place procedures.

Assessor guide: confirm that –

The job requirements can be identified.

Element 7.24A.2 Conduct pre-start checks

Criteria 7.24A.2.1

Pre-start checks undertaken to standard operating procedure.

Assessor guide: observe that –

Pre-start checks are undertaken in accordance with standard operating procedures.

Assessor guide: confirm that –

The pre-start checks to be undertaken can be identified.

Criteria 7.24A.2.2

Correct safety procedures are observed and all safety equipment checked for correct operation.

Assessor guide: observe that –

All safety equipment and guards are checked for correct operation in accordance with standard operating procedures. The correct safety procedures are followed at all times

Assessor guide: confirm that –

The safety features of the machine/process being operated can be identified. The safety equipment associated with the machine/process can be identified. The safety procedures associated with the machine/process can be identified.

Element 7.24A.3 Operate machine/process

Criteria 7.24A.3.1

Machine/process started up safely and correctly in accordance with standard operating procedures.

Assessor guide: observe that –

The machine/process is started up safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The machine/process start up procedures can be identified.

Criteria 7.24A.3.2

Machine/process is operated in accordance with job instructions or standard operating procedures.

Assessor guide: observe that –

The machine/process is operated in accordance with job requirements and standard operating procedures.

Assessor guide: confirm that –

The machine/process operating procedures can be identified.

Criteria 7.24A.3.3

Components/feed stock is loaded and maintained consistent with production requirements.

Assessor guide: observe that –

Components/feed stock are loaded in accordance with production requirements and standard operating procedures.

Assessor guide: confirm that –

The component/feed stock levels to achieve production requirements can be identified.

Criteria 7.24A.3.4

Machine/process output is unloaded safely to standard operating procedure as required.

Assessor guide: observe that –

Where appropriate the machine/process output is unloaded safely in accordance with standard operating procedures.

Assessor guide: confirm that –

Where appropriate the machine/process unloading procedures can be identified.

Criteria 7.24A.3.5

Machine/process output handled and stored in a manner not likely to cause damage as required.

Assessor guide: observe that –

Where appropriate machine/process output is handled and stored in accordance with standard operating procedures. Machine/process output is not damaged during handling or storage.

Assessor guide: confirm that –

The procedure for handling and storing finished work can be identified. The consequences of improper handling and storage of finished work can be given.

Criteria 7.24A.3.6

Production data recorded to standard operating procedure.

Assessor guide: observe that –

All production records are completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The production recording requirements can be identified.

Element 7.24A.4 Monitor machine/process**Criteria 7.24A.4.1**

Machine/process monitored for safe and correct operation, deviations and faults are identified and reported in accordance with standard operating procedures.

Assessor guide: observe that –

The operation of the machine/process is monitored in accordance with standard operating procedures. Product faults/deviations can be identified. Where appropriate, product faults/ deviations detected are reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The correct operation of the machine/process can be identified. Examples of product faults and deviations can be given. Where appropriate, the person(s) to whom faults/deviations are to be reported can be identified.

Criteria 7.24A.4.2

Emergency procedures are understood and followed in accordance with standard operating procedures.

Assessor guide: observe that –

Where appropriate, the individual correctly follows emergency procedures during drills and/or exercises.

Assessor guide: confirm that –

The emergency procedures associated with the machine/process operated and monitored can be identified. The procedures to be followed in given situations can be identified.

Range statement

This unit applies to a range of production operations or continuous processes e.g. pressing, punching, plastic moulding, extruding, bending, joining, rolling, forming, drawing, metal removal, pickling, cylinder filling, printing, painting etc. The work is performed in accordance with clear step by step instructions and procedures documented on job sheets or similar process instruction documents, operational adjustments to the machine or process by the operator are made using external controls. Where production packaging and labelling of the finished goods or product is required Unit 11.6A (Production packaging) should also be considered. Basic operation (excluding setting and tool adjustments) of CNC machines is covered by this unit. This unit should not be selected with any of the following units unless the skills of this unit are being applied to an additional and different type of machine and or process. Unit 4.1A (Operate furnaces), Unit 4.2A (Gravity die casting), Unit 4.3A (Operate pressure die casting machine), Unit 4.6A (Operate sand moulding/core moulding machines), Unit 6.1A (Hand forging), Unit 6.2A (Hammer forging), Unit 8.1A (Wire, jig and barrel load/unload work), Unit 8.8A (Operate and control surface finishing waste treatment process), Unit 8.4A (Finish work using wet, dry and vapour deposition methods).

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the operation and monitoring of a machine/process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.25A A Advanced machine/process operation

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 6

Pre-requisite units - Path 1

7.1A Operational maintenance of machines/equipment
18.1A Use hand tools

7.24A Operate and monitor machine/process

9.1A Draw and interpret sketch

Pre-requisite units - Path 2

7.1A Operational maintenance of machines/equipment
18.1A Use hand tools

7.24A Operate and monitor machine/process

9.2A Interpret technical drawing

Element 7.25A.1 Determine job requirements

Criteria 7.25A.1.1

Drawings, job instructions and specifications are interpreted and task requirements understood including machine/process selection and settings.

Assessor guide: observe that –

All relevant documentation is obtained in accordance with work site procedures.

Assessor guide: confirm that –

The job requirements can be identified.

Element 7.25A.2 Observe safety precautions

Criteria 7.25A.2.1

Check safety equipment and guards for correct position and operation.

Assessor guide: observe that –

All safety equipment and guards are checked for correct position in accordance with work site procedures. All safety equipment and guards are checked for correct operation in accordance with work site procedures.

Assessor guide: confirm that –

The safety features of the machine/process being operated can be identified. The safety equipment associated with the machine/process can be identified.

Element 7.25A.3 Conduct pre-start checks**Criteria 7.25A.3.1**

Programmed operational maintenance undertaken to standard operating procedure.

Assessor guide: observe that –

Programmed maintenance schedules are obtained in accordance with work site procedures. The programmed operational maintenance is undertaken in accordance with work site procedures and schedules.

Assessor guide: confirm that –

The programmed operational maintenance requirements of the machine/process can be identified.

Criteria 7.25A.3.2

Pre-start checks undertaken to standard operating procedure.

Assessor guide: observe that –

Pre-start checks are undertaken in accordance with work site procedures.

Assessor guide: confirm that –

Pre-start checks to be undertaken can be identified.

Criteria 7.25A.3.3

Verify equipment, raw material and tooling, match task requirement.

Assessor guide: observe that –

Equipment, raw materials and tooling are checked against job requirements.

Assessor guide: confirm that –

The equipment, raw material and tooling required to meet the product specifications can be identified.

Element 7.25A.4 Operate machine/process**Criteria 7.25A.4.1**

Machine/process started up safely and correctly.

Assessor guide: observe that –

The machine/process is started up safely in accordance with work site procedures.

Assessor guide: confirm that –

The machine/process start up procedures can be identified.

Criteria 7.25A.4.2

Machine/process is operated in accordance with job instructions or standard operating procedures.

Assessor guide: observe that –

The machine/process is operated in accordance with job requirements and work site procedures.

Assessor guide: confirm that –

The machine/process operating procedures can be identified.

Criteria 7.25A.4.3

Components/feed stock is loaded and maintained consistent with production requirements.

Assessor guide: observe that –

Components/feed stock are loaded in accordance with production requirements and work site procedures.

Assessor guide: confirm that –

The component/feed stock levels to achieve production requirements can be identified.

Criteria 7.25A.4.4

Machine/process output is unloaded safely to standard operating procedure as required.

Assessor guide: observe that –

Where appropriate the machine/process output is unloaded safely in accordance with work site procedures.

Assessor guide: confirm that –

Where appropriate the machine/process unloading procedures can be identified.

Criteria 7.25A.4.5

Machine/process output handled and stored in a manner not likely to cause damage as required.

Assessor guide: observe that –

Where appropriate machine/process output is handled and stored in accordance with work site procedures.
Machine/process output is not damaged during handling or storage.

Assessor guide: confirm that –

The procedure for handling and storing finished work can be identified. The consequences of improper handling and storing of finished work can be given.

Criteria 7.25A.4.6

Production data recorded to standard operating procedure.

Assessor guide: observe that –

All production records are completed in accordance with work site procedures.

Assessor guide: confirm that –

The production recording requirements can be identified.

Element 7.25A.5 Monitor machine/process**Criteria 7.25A.5.1**

Machine/process monitored for safe and correct operation.

Assessor guide: observe that –

The operation of the machine/process is monitored in accordance with work site procedures.

Assessor guide: confirm that –

The correct operation of the machine/process can be identified.

Criteria 7.25A.5.2

Emergency procedures are understood and followed in accordance with standard operating procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The emergency procedures associated with the machine/process operated and monitored can be identified. The procedures to be followed in given situations can be identified.

Element 7.25A.6 Recognise and rectify deviations and faults in product/output**Criteria 7.25A.6.1**

Product faults/deviations are recognised from standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of types of product fault/deviations can be given.

Criteria 7.25A.6.2

Product faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation and may be achieved by adjustment of machine/process settings within parameters.

Assessor guide: observe that –

Product faults/deviations are identified. Appropriate corrective action/adjustment is undertaken to return the product to specification in accordance with work site procedures.

Assessor guide: confirm that –

The corrective action to be undertaken to rectify types of product fault/deviations can be identified.

Element 7.25A.7 Recognise and rectify deviations and faults with raw material/feed stock**Criteria 7.25A.7.1**

Raw material faults/deviations are recognised from standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of raw material faults/deviations can be given.

Criteria 7.25A.7.2

Raw material faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Raw material faults/deviations are identified. Appropriate corrective action is undertaken to ensure that raw material/feed stock conforms to specification in accordance with work site procedures.

Assessor guide: confirm that –

The correct action to be undertaken to rectify types of raw material faults/deviations can be identified.

Element 7.25A.8 Recognise and rectify deviations and faults in process equipment**Criteria 7.25A.8.1**

Process equipment faults/deviations are identified against specifications and reported to standard operating procedure.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of process equipment faults/deviations can be given. Appropriate reporting procedures can be identified.

Criteria 7.25A.8.2

Process equipment faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Process equipment faults/deviations are identified. Appropriate corrective action is undertaken to ensure that process equipment conforms to specification in accordance with work site procedures.

Assessor guide: confirm that –

The correct action to be undertaken to rectify types of process equipment faults/deviations can be identified.

Element 7.25A.9 Recognise and rectify deviations and faults in machine/process**Criteria 7.25A.9.1**

Machine/process faults/deviations are recognised from standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of deviations and faults in machine/process can be given.

Criteria 7.25A.9.2

Machine/process faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Machine/process faults/deviations are identified. Appropriate corrective action is undertaken to ensure that the machine/process conforms to specification in accordance with work site procedures.

Assessor guide: confirm that –

The correct action to be undertaken to rectify types of machine/process faults/deviations can be identified.

Range statement

This unit relates to operations where the output of the machine/process can be varied at the discretion of the operator and where recognition/rectification skills are applied based upon product/material/process knowledge to achieve specified outcomes. Deviations and faults of the machine, raw material, process equipment and process are recognised and rectified in accordance with standard operating procedures in order to meet the specification. Work is performed autonomously or in teams. Where interpretation of a technical drawing to Australian Standard 1100/1102 or equivalent is required, Unit 9.2A (Interpret technical drawing) should also be selected. When production packaging and labelling of the finished goods or product is required then Unit 11.6A (Production packaging) should also be considered.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with units addressing the safety, quality, communication, materials handling recording and reporting associated with the competent operation, monitoring and fault rectification of production machines and processes, or other competencies requiring the exercise of the skills and knowledge covered by this unit. Competence in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures and maintenance schedules. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 7.26A A Advanced plastic processing

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 6

Pre-requisite units - Path 1

7.1A Operational maintenance of machines/equipment
18.1A Use hand tools

7.24A Operate and monitor machine/process

9.1A Draw and interpret sketch

Pre-requisite units - Path 2

7.1A Operational maintenance of machines/equipment
18.1A Use hand tools

7.24A Operate and monitor machine/process

9.2A Interpret technical drawing

Element 7.26A.1 Determine job requirements

Criteria 7.26A.1.1

Drawings, job instructions and specifications are interpreted and task requirements understood including machine/process selection and settings.

Assessor guide: observe that –

All relevant documentation is obtained in accordance with work site procedures.

Assessor guide: confirm that –

The job requirements can be identified.

Element 7.26A.2 Observe safety precautions

Criteria 7.26A.2.1

Check safety equipment and guards for correct position and operation.

Assessor guide: observe that –

All safety equipment and guards are checked for correct position in accordance with work site procedures. All safety equipment and guards are checked for correct operation in accordance with work site procedures.

Assessor guide: confirm that –

The safety features of the machine/process being operated can be identified. The safety equipment associated with the machine/process can be identified.

Element 7.26A.3 Conduct pre-start checks**Criteria 7.26A.3.1**

Programmed operational maintenance undertaken to standard operating standard procedure.

Assessor guide: observe that –

Programmed maintenance schedules are obtained in accordance with work site procedures. The programmed operational maintenance is undertaken in accordance with work site procedures and schedules.

Assessor guide: confirm that –

The programmed operational maintenance requirements of the machine/process can be identified.

Criteria 7.26A.3.2

Pre-start checks undertaken to standard operating procedure.

Assessor guide: observe that –

Pre-start checks are undertaken in accordance with work site procedures.

Assessor guide: confirm that –

Pre-start checks to be undertaken can be identified.

Criteria 7.26A.3.3

Verify equipment, raw material and tooling match task requirement.

Assessor guide: observe that –

Equipment, raw material and tooling are checked against job requirements.

Assessor guide: confirm that –

The equipment, raw material and tooling required to meet the product specifications can be identified.

Element 7.26A.4 Operate machine/process**Criteria 7.26A.4.1**

Machine/process started up safely and correctly.

Assessor guide: observe that –

The machine/process is started up safely in accordance with work site procedures.

Assessor guide: confirm that –

The machine/process start-up procedures can be identified.

Criteria 7.26A.4.2

Machine/process is operated in accordance with job instructions or standard operating procedures.

Assessor guide: observe that –

The machine/process is operated in accordance with job requirements and work site procedures.

Assessor guide: confirm that –

The machine/process operating procedures can be identified.

Criteria 7.26A.4.3

Components/feed stock are loaded and maintained consistent with production requirements.

Assessor guide: observe that –

Components/feed stock are loaded in accordance with production requirements and work site procedures.

Assessor guide: confirm that –

The component/feed stock levels to achieve production requirements can be identified.

Criteria 7.26A.4.4

Machine/process output is unloaded safely to standard operating procedure.

Assessor guide: observe that –

Where appropriate, the machine/ process output is unloaded safely in accordance with work site procedures.

Assessor guide: confirm that –

Where appropriate, the machine/ process unloading procedures can be identified.

Criteria 7.26A.4.5

Machine/process output handled and stored in a manner not likely to cause damage as required.

Assessor guide: observe that –

Where appropriate, machine/process output is handled and stored in accordance with work site procedures. Machine/process output is not damaged during handling or storage.

Assessor guide: confirm that –

The procedure for handling and storing finished work can be identified. The consequences of improper handling and storing of finished work can be given.

Criteria 7.26A.4.6

Production data recorded to standard operating procedure.

Assessor guide: observe that –

All production records are completed in accordance with work site procedures.

Assessor guide: confirm that –

The production recording requirements can be identified.

Element 7.26A.5 Monitor machine/process**Criteria 7.26A.5.1**

Machine/process monitored for safe and correct operation.

Assessor guide: observe that –

The operation of the machine/process is monitored according to work site procedures.

Assessor guide: confirm that –

The correct operation of the machine/process can be identified.

Criteria 7.26A.5.2

Emergency procedures are understood and followed in accordance with standard operating procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The emergency procedures associated with the machine/process operated and monitored can be identified. The procedures to be followed in given situations can be identified.

Element 7.26A.6 Recognise and rectify deviations and faults in product/output**Criteria 7.26A.6.1**

Product faults/deviations such as short shots, warped mouldings, dimensional errors are recognised from standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of product fault/deviations can be given.

Criteria 7.26A.6.2

Product faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation and may be achieved by adjustment of machine/process settings within parameters.

Assessor guide: observe that –

Product faults/deviations are identified. Appropriate corrective action/ adjustment is undertaken to return the product to specification in accordance with work site procedures.

Assessor guide: confirm that –

The corrective action to be undertaken to rectify types of product fault/deviations can be identified.

Element 7.26A.7 Recognise and rectify deviations and faults with raw material/feed stock**Criteria 7.26A.7.1**

Raw material faults/deviations such as contamination, colour variation are recognised from standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of raw material faults/ deviations can be given.

Criteria 7.26A.7.2

Raw material faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Raw material faults/deviations are identified. Appropriate corrective action is undertaken to ensure that raw material/feed stock conforms to specification in accordance with work site procedures.

Assessor guide: confirm that –

The correct action to be undertaken to rectify types of raw material faults/deviations can be identified.

Element 7.26A.8 Recognise and rectify deviations and faults in tooling**Criteria 7.26A.8.1**

Tooling faults/deviations resulting in blemishes, missing detail etc. are identified against specification and reported to standard operating procedure.

Assessor guide: observe that –

Tooling faults/deviations are identified.

Assessor guide: confirm that –

Examples of tooling faults/ deviations can be given.
Appropriate reporting procedures can be identified.

Criteria 7.26A.8.2

Tooling faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Appropriate corrective action is undertaken to ensure that tooling conforms to specification in accordance with work site procedures.

Assessor guide: confirm that –

The correct action to be undertaken to rectify types of tooling faults/ deviations can be identified.

Element 7.26A.9 Recognise and rectify deviations and faults in machine/process**Criteria 7.26A.9.1**

Machine/process faults/deviations such as short shots, burn marks, distortion etc. are recognised from standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Machine/process faults/deviations are identified.

Assessor guide: confirm that –

Examples of deviations and faults in machine/process can be given.

Criteria 7.26A.9.2

Machine/process faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Appropriate corrective action is undertaken to ensure that the machine/process conforms to specification in accordance with work site procedures.

Assessor guide: confirm that –

The correct action to be undertaken to rectify types of machine/process faults/deviations can be identified.

Range statement

This unit applies to a range of plastic, rubber processing including injection, blow moulding, processing of fibre reinforced composites, extrusion, thermoforming, vacuum forming, foaming etc. This unit relates to operations where the output of the machine/process can be varied at the discretion of the operator and where recognition/rectification skills are applied based upon product/material/process knowledge to achieve specified outcomes. Deviations and faults of the machine, raw material, tooling and process are recognised and rectified in accordance with standard operating procedures in order to meet the specification. Work is performed autonomously or in teams. Where interpretation of a technical drawing to Australian Standard 1100/1102 or equivalent is required, Unit 9.2A (Interpret technical drawing) should also be selected. When production packaging and labelling of the finished goods or product is required then Unit 11.6A (Production packaging) should also be considered.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with advanced plastic processing or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.27A A Advanced press operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 6

Pre-requisite units - Path 1

7.1A Operational maintenance of machines/equipment
18.1A Use hand tools

7.24A Operate and monitor machine/process

9.1A Draw and interpret sketch

Pre-requisite units - Path 2

7.1A Operational maintenance of machines/equipment
18.1A Use hand tools

7.24A Operate and monitor machine/process

9.2A Interpret technical drawing

Element 7.27A.1 Determine job requirements

Criteria 7.27A.1.1

Drawings, job instructions and specifications are interpreted and task requirements understood including machine/process selection and settings.

Assessor guide: observe that –

All relevant documentation is obtained in accordance with work site procedures.

Assessor guide: confirm that –

The job requirements can be identified.

Element 7.27A.2 Observe safety precautions

Criteria 7.27A.2.1

Check safety equipment and guards for correct position and operation.

Assessor guide: observe that –

All safety equipment and guards are checked for correct position in accordance with work site procedures. All safety equipment and guards are checked for correct operation in accordance with work site procedures.

Assessor guide: confirm that –

The safety features of the machine/process being operated can be identified. The safety equipment associated with the machine/process can be identified.

Element 7.27A.3 Conduct pre-start checks**Criteria 7.27A.3.1**

Programmed operational maintenance undertaken to standard operating procedure.

Assessor guide: observe that –

Programmed maintenance schedules are obtained in accordance with work site procedures. The programmed operational maintenance is undertaken in accordance with work site procedures and schedules.

Assessor guide: confirm that –

The programmed operational maintenance requirements of the machine/process can be identified.

Criteria 7.27A.3.2

Pre-start checks undertaken to standard operating procedure.

Assessor guide: observe that –

Pre-start checks are undertaken in accordance with work site procedures.

Assessor guide: confirm that –

Pre-start checks to be undertaken can be identified.

Criteria 7.27A.3.3

Verify equipment, raw material and tooling match task requirement.

Assessor guide: observe that –

Equipment, raw material and tooling are checked against job requirements.

Assessor guide: confirm that –

The equipment, raw material and tooling required to meet the product specifications can be identified.

Element 7.27A.4 Operate machine/process**Criteria 7.27A.4.1**

Machine/process started up safely and correctly.

Assessor guide: observe that –

The machine/process is started up safely in accordance with work site procedures.

Assessor guide: confirm that –

The machine/process start-up procedures can be identified.

Criteria 7.27A.4.2

Machine/process is operated in accordance with job instructions or standard operating procedures.

Assessor guide: observe that –

The machine/process is operated in accordance with job requirements and work site procedures.

Assessor guide: confirm that –

The machine/process operating procedures can be identified.

Criteria 7.27A.4.3

Components/feed stock is loaded and maintained consistent with production requirements.

Assessor guide: observe that –

Components/feed stock are loaded in accordance with production requirements and work site procedures.

Assessor guide: confirm that –

The component/feed stock levels to achieve production requirements can be identified.

Criteria 7.27A.4.4

Machine/process output is unloaded safely to standard operating procedure as required.

Assessor guide: observe that –

Where appropriate, the machine/ process output is unloaded safely in accordance with work site procedures.

Assessor guide: confirm that –

Where appropriate, the machine/ process unloading procedures can be identified.

Criteria 7.27A.4.5

Machine/process output handled and stored in a manner not likely to cause damage as required.

Assessor guide: observe that –

Where appropriate, machine/process output is handled and stored in accordance with work site procedures. Machine/process output is not damaged during handling or storage.

Assessor guide: confirm that –

The procedure for handling and storing finished work can be identified. The consequences of improper handling and storing of finished work can be given.

Criteria 7.27A.4.6

Production data recorded to standard operating procedure.

Assessor guide: observe that –

All production records are completed in accordance with work site procedures.

Assessor guide: confirm that –

The production recording requirements can be identified.

Element 7.27A.5 Monitor machine/process**Criteria 7.27A.5.1**

Machine/process monitored for safe and correct operation.

Assessor guide: observe that –

The operation of the machine/process is monitored according to work site procedures.

Assessor guide: confirm that –

The correct operation of the machine/process can be identified.

Criteria 7.27A.5.2

Emergency procedures are understood and followed in accordance with standard operating procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The emergency procedures associated with the machine/process operated and monitored can be identified. The procedures to be followed in given situations can be identified.

Element 7.27A.6 Recognise and rectify deviations and faults in product/output**Criteria 7.27A.6.1**

Product faults/deviations such as splits, warping, deformation, dimensional errors etc. are recognised from standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of product fault/deviations can be given.

Criteria 7.27A.6.2

Product faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation and may be achieved by adjustment of machine/process settings within parameters.

Assessor guide: observe that –

Product faults/deviations are identified. Appropriate corrective action/ adjustment is undertaken to return the product to specification in accordance with work site procedures.

Assessor guide: confirm that –

The corrective action to be undertaken to rectify types of product fault/deviations can be identified.

Element 7.27A.7 Recognise and rectify deviations and faults with raw material/feed stock**Criteria 7.27A.7.1**

Raw material faults/deviations such as gauge variation, hardness, colour variation etc. are recognised from standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of raw material faults/ deviations can be given.

Criteria 7.27A.7.2

Raw material faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Raw material faults/deviations are identified. Appropriate corrective action is undertaken to ensure that raw material/feed stock conforms to specification in accordance with work site procedures.

Assessor guide: confirm that –

The correct action to be undertaken to rectify types of raw material faults/deviations can be identified.

Element 7.27A.8 Recognise and rectify deviations and faults in tooling**Criteria 7.27A.8.1**

Tooling faults/deviations resulting in marks, missing detail, dimensional errors etc. are identified against specifications and reported to standard operating procedure.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of tooling faults/ deviations can be given.
Appropriate reporting procedures can be identified.

Criteria 7.27A.8.2

Tooling faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Tooling faults/deviations are identified. Appropriate corrective action is undertaken to ensure that tooling conforms to specification in accordance with work site procedures.

Assessor guide: confirm that –

The correct action to be undertaken to rectify types of tooling faults/deviations can be identified.

Element 7.27A.9 Recognise and rectify deviations and faults in machine/process**Criteria 7.27A.9.1**

Machine/process faults/deviations resulting in splits, distortion etc. are recognised from standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of deviations and faults in machine/process can be given.

Criteria 7.27A.9.2

Machine/process faults/deviations are rectified in accordance with standard operating procedures, job sheets or other documentation.

Assessor guide: observe that –

Machine/process faults/deviations are identified. Appropriate corrective action is undertaken to ensure that the machine/process conforms to specification in accordance with work site procedures.

Assessor guide: confirm that –

The correct action to be undertaken to rectify types of machine/process faults/deviations can be identified.

Range statement

This unit applies to a range of metal working press operations including drawing, blanking, bending, coining, sizing, extruding, forming and shaping. This unit relates to operations where the output of the machine/process can be varied at the discretion of the operator and where recognition/rectification skills are applied based upon product/material/process knowledge to achieve specified outcomes. Deviations and faults of the machine, raw material, tooling and process are recognised and rectified in accordance with standard operating procedure in order to meet the specification. Work is performed autonomously or in teams. Where interpretation of a technical drawing to Australian Standard 1100/1102 or equivalent is required, Unit 9.2A (Interpret technical drawing) should also be selected. When production packaging and labelling of the finished goods or product is required then Unit 11.6A (Production packaging) should also be considered.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with advanced press operation or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.28A A Operate NC/CNC machine/process (basic)

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 2

Pre-requisite units - Path 1

7.24A Operate and monitor machine/process

Element 7.28A.1 Obtain job instructions

Criteria 7.28A.1.1

Job sheets or equivalent instructions understood and correctly followed.

Assessor guide: observe that –

All relevant documentation is obtained in accordance with work place procedures.

Assessor guide: confirm that –

The job requirements can be identified.

Element 7.28A.2 Conduct pre-start checks

Criteria 7.28A.2.1

Pre-start checks undertaken to standard operating procedure.

Assessor guide: observe that –

Pre-start checks are undertaken in accordance with standard operating procedures.

Assessor guide: confirm that –

The pre-start checks to be undertaken can be identified.

Criteria 7.28A.2.2

Correct safety procedures are observed and all safety equipment checked for correct operation.

Assessor guide: observe that –

All safety equipment and guards are checked for correct operation in accordance with standard operating procedures. The correct safety procedures are followed at all times.

Assessor guide: confirm that –

The safety features of the machine/process being operated can be identified. The safety equipment associated with the machine/process can be identified. The safety procedures associated with the machine/process can be identified.

Element 7.28A.3 Operate NC/CNC machine/process**Criteria 7.28A.3.1**

Installed NC/CNC program selected and verified in accordance with job instructions.

Assessor guide: observe that –

That the correct NC/CNC program is selected and verified in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for accessing NC/CNC programs installed in the machine controller can be identified. The procedures for verifying that the correct NC/CNC program has been selected can be identified. The NC/CNC program to be used is correctly identified. The reasons for verifying that the correct NC/CNC program has been selected can be identified.

Criteria 7.28A.3.2

NC/CNC machine operated safely to product specifications using standard operating procedures.

Assessor guide: observe that –

The NC/CNC machine is operated safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The NC/CNC machine operating procedures can be identified.

Criteria 7.28A.3.3

Machine malfunctions identified and reported.

Assessor guide: observe that –

Where appropriate, machine malfunctions identified are reported in accordance with standard operating procedures.

Assessor guide: confirm that –

Examples of machine malfunctions can be given. The procedures for reporting machine malfunctions can be identified. Where appropriate, the person to whom machine malfunctions are to be reported can be identified.

Criteria 7.28A.3.4

Production samples checked for compliance to specification using standard operating procedures.

Assessor guide: observe that –

The parts or products produced are checked for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications of the product or part to be produced can be identified. The checks/measurement to be made can be identified. The measuring instruments/techniques to be used to check the part or product can be identified. The frequency with which parts or products are to be checked can be identified.

Element 7.28A.4 Monitor machine/process**Criteria 7.28A.4.1**

Tool wear monitored and where appropriate, preset tools are replaced, tool offsets identified in NC/CNC program and adjusted or other corrective action taken using standard operating procedures.

Assessor guide: observe that –

The machine or process is monitored for signs of tool wear in accordance with standard operating procedures. Where appropriate, corrective action is undertaken in accordance with standard operating procedures.

Assessor guide: confirm that –

Examples of tool wear and the effect on product or part specifications can be given. The corrective procedures to be followed once tool wear has been detected can be given. Where appropriate, pre-set tools that can be replaced can be identified. Where appropriate, adjustments to tool offsets that can be made can be identified. The effect of adjustments on part or product specifications can be explained.

Criteria 7.28A.4.2

Product deviation from specification reported in accordance with standard operating procedures.

Assessor guide: observe that –

Where appropriate, part or product deviations from specification are reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting deviations of the part or product from specification can be identified. Where appropriate, the person to whom part or product deviations are reported can be identified.

Range statement

The skills described in this unit are meant to apply to a range of NC/CNC machines/processes in a production environment. Work is performed to established processes, practices, specifications and instructions as appropriate. Technical difficulties are resolved in consultation with appropriate technical advisers. Work is carried out autonomously using predetermined standards of quality and safety. An appropriate level of measurement skill should be selected with this unit. Where it is required to use tools, then Unit 18.1A (Use hand tools) should also be selected. Where basic operation excludes setting and tool adjustment skills, then Unit 7.24A (Operate and monitor machine/process) should be selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the operation of NC/CNC machines/processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.29A A Perform routine sharpening/maintenance of production tools and cutters

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

Pre-requisite units - Path 1

2.4C11 Assist in the provision of on the job training
7.24A Operate and monitor machine/process

2.5C11 Measure with graduated devices
9.1A Draw and interpret sketch

7.3A Setting machines (routine)
18.1A Use hand tools

Pre-requisite units - Path 2

2.4C11 Assist in the provision of on the job training
9.2A Interpret technical drawing

2.5C11 Measure with graduated devices
18.1A Use hand tools

7.5A Perform general machining

Element 7.29A.1 Obtain job instructions

Criteria 7.29A.1.1

Job sheets or equivalent instructions interpreted correctly and understood.

Assessor guide: observe that –

All relevant drawings, instructions and specifications are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The sequence of operations to be performed can be identified. The specifications to be achieved can be identified.

Element 7.29A.2 Observe safety precautions

Criteria 7.29A.2.1

Machine guards, coolant and dust extraction devices checked for proper operation in accordance with standard operating procedures.

Assessor guide: observe that –

All machine guards, coolant and dust extraction devices are checked for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

All machine guards can be identified. The function of coolant and dust extraction devices can be identified.

Criteria 7.29A.2.2

Correct safety procedures observed, protective clothing and safety glasses worn.

Assessor guide: observe that –

The correct safety procedures are followed and personal protective clothing and equipment is worn/used throughout the grinding process.

Assessor guide: confirm that –

All relevant safety procedures can be identified. All necessary personal protective clothing and equipment can be identified. The hazards associated with tool and cutter grinding operations can be identified.

Element 7.29A.3 Production tooling disassembled in preparation for sharpening**Criteria 7.29A.3.1**

Production tooling is disassembled as required to facilitate sharpening in accordance with standard operating procedures.

Assessor guide: observe that –

Machine is isolated in accordance with standard operating procedures. Correct techniques used for disassembling.

Assessor guide: confirm that –

Basic process for disassembly can be explained, safety issues can be identified and described.

Element 7.29A.4 Set up machine**Criteria 7.29A.4.1**

Tool and cutter grinding wheels selected, balanced and dressed in accordance with job instructions.

Assessor guide: observe that –

Tool and cutter grinding accessories appropriate to the grinding task(s) are selected and correctly used in accordance with standard operating procedures. The grinding wheel selected is safely balanced and correctly dressed for the grinding task(s) to be performed in accordance with standard operating procedures.

Assessor guide: confirm that –

The standard grinding wheel shapes can be identified. A range of abrasive materials used in grinding wheels can be identified. The effect of the following grinding wheel features on wheel selection and application can be explained: - grain size of abrasive particles - grade or strength of bond - structure of grain spacing - bond material. The appropriate grinding wheel(s) for the given task(s) can be identified. The reasons for selecting the appropriate grinding wheel can be given. The function and application of the full range of tool and cutter grinding accessories can be explained. Grinding wheel dressing procedures can be correctly identified. Grinding wheel dressing tools and their application can be identified. The appropriate grinding wheel dressing tool(s) for the given task(s) can be identified.

Criteria 7.29A.4.2

Fixtures for locating tools/cutters to be sharpened are mounted in accordance with job instructions.

Assessor guide: observe that –

The appropriate accessories are correctly set up in accordance with standard operating procedures.

Assessor guide: confirm that –

The accessories and fixtures to be used can be identified.

Element 7.29A.5 Perform tool and cutter grinding**Criteria 7.29A.5.1**

Tools and cutters to be sharpened are mounted in predetermined fixtures.

Assessor guide: observe that –

Tools and cutters are mounted correctly in fixtures.

Assessor guide: confirm that –

Importance of correct mounting can be explained.

Criteria 7.29A.5.2

Tools and cutters are sharpened in accordance with defined procedures.

Assessor guide: observe that –

The universal tool and cutter grinder is used to correctly sharpen and shape a range of tools and cutters in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for sharpening can be identified.

Element 7.29A.6 Check tools/cutters for conformance to specification**Criteria 7.29A.6.1**

Tools/cutters visually inspected and checked, measured for conformance to specification in accordance with job instructions.

Assessor guide: observe that –

The ground components are checked for conformance with specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

Tools, techniques and equipment appropriate to the checking of ground components for conformance with the following specifications can be identified: - dimensions and tolerances - geometry and tolerances - surface finish. The tools, techniques and equipment to be used to check the given ground components for conformance with specifications can be identified. The reasons for selecting the tools, techniques and equipment to be used can be explained.

Element 7.29A.7 Production tooling assembled/reassembled**Criteria 7.29A.7.1**

Production tooling is reassembled, inserts installed in accordance with job instructions.

Assessor guide: observe that –

Correct procedures are followed for re-assembly.

Assessor guide: confirm that –

Critical factors for re-assembly can be identified.

Criteria 7.29A.7.2

Assembled tooling is visually inspected and checked, measure for conformance to specification in accordance with job instructions.

Assessor guide: observe that –

The assembled, tooling is checked against specifications.

Assessor guide: confirm that –

Specifications can be obtained and interpreted.

Range statement

Work is carried out autonomously to predetermined standards of quality, safety and is performed to defined procedures using fixtures to locate tools/cutters for grinding. Production tooling may include inserted boring bars, face cutters, gear cutters etc. Equipment includes using a range of tool and cutter grinding machines and accessories. General off hand grinding/sharpening of tools etc. is covered by Unit 18.2A (Use power tools/hand held operations). For more advanced tool and cutter grinding operations, see Unit 7.10A (Perform tool and cutter grinding operations). This unit should not be selected when Unit 7.10A (Perform tool and cutter grinding operations) has already been selected.

Evidence guide**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with production/process machining or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.30A B Perform metal spinning lathe operations (basic)

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 6

This unit covers the competencies required for the work which applies to a range of metal spinning lathes (excluding CNC), accessories, measuring equipment, and engineering standards. Sheet metals may include but are not restricted to steels, aluminium, monel, copper, brass, zinc, pewter, silver, gold, tin, etc., of varying thicknesses. Work is performed to drawings, sketches, specifications and instructions as appropriate. Spinning does not include hot spinning procedures.

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.1A Use hand tools

7.32A Use workshop machines for basic operations
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing

Element 7.30A.1 Observe safety precautions

Criteria 7.30A.1.1

Correct safety procedures observed and protective clothing and safety glasses worn

Assessor guide: observe that –

Appropriate coveralls and footwear are worn and in a serviceable condition. All work is carried out correctly and safely in accordance with workplace procedures

Assessor guide: confirm that –

Serviceability and appropriate of use safety wear and safe work practices are maintained at all times

Element 7.30A.2 Determine job requirements

Criteria 7.30A.2.1

Drawings are interpreted and sequence of operation determined

Assessor guide: observe that –

All drawings required are used and that the sequence of operation has been correctly adhered to in accordance with job sheet and workplace practice and procedures

Assessor guide: confirm that –

Information determined from the drawings is clearly understood and accurately applied
Each step of the sequence of operation is able to be properly explained

Criteria 7.30A.2.2

Tools are selected to produce components to specifications

Assessor guide: observe that –

The correct tools are selected throughout spinning operation
All tools selected are properly prepared for use

Assessor guide: confirm that –

The operator is able to determine that each tool has been properly prepared for use

Criteria 7.30A.2.3

Disc size is determined in accordance with appropriate procedures

Assessor guide: observe that –

The correct specifications for the job are properly selected

Assessor guide: confirm that –

The specifications are clearly understood and correctly interpreted

Criteria 7.30A.2.4

Disc is cut to the correct size and tolerance

Assessor guide: observe that –

The disc size has been properly selected and is within drawing tolerance
The correct use of the disc cutter is applied and that the finished disc is within the specified tolerance

Assessor guide: confirm that –

Element 7.30A.3 Perform spinning operations**Criteria 7.30A.3.1**

Spinning speeds are calculated for various metals and metal thicknesses using appropriate mathematical techniques and reference materials

Assessor guide: observe that –

The operator determine the appropriate speed for the material type and thickness
The lathe speed is set correctly and in accordance with operating procedures

Assessor guide: confirm that –

The operator understands why and how lathe speed is calculated

Criteria 7.30A.3.2

Correct back centre and form chucks are selected and mounted in accordance with procedures and specifications

Assessor guide: observe that –

Form chuck is selected from drawings or specifications, correctly and securely mounted by appropriate means. Back centre is selected and prepared for use in conjunction with an appropriate centre/live centre

Assessor guide: confirm that –

The operator is able to correctly determine the type of form chuck mounting required from 3 possible alternative methods

Criteria 7.30A.3.3

Prepare disc is mounted for forming

Assessor guide: observe that –

The disc is mounted and centred
The disc properly centred prior to start up to prevent departure on turning
The operator demonstrates safe working practices and ensures that they are positioned outside of the disc's travel path

Assessor guide: confirm that –

Criteria 7.30A.3.4

A full range of spinning accessories are used including: back centre, various chucks, trimming accessories, blank centre equipment and tee-rest

Assessor guide: observe that –

Accessories are appropriately utilised in accordance with operating procedures

Assessor guide: confirm that –

The function and operation of accessory is clearly understood and operated correctly in accordance with the specified procedures

Criteria 7.30A.3.5

Spinning, beading, trimming, finishing, annealing and pickling operations are performed to specifications

Assessor guide: observe that –

Operations are accurately performed using the correct tooling and accessories

Assessor guide: confirm that –

All of the processes used, are fully understood and the methods used for each process is applied safely with the correct utilisation of spinning tools

Element 7.30A.4 Check components for conformance to specifications**Criteria 7.30A.4.1**

Components are checked for conformance to specifications using appropriate techniques tools and equipment

Assessor guide: observe that –

The most appropriate method of inspection is utilised in determining conformance to specifications
All inspection tools and equipment are used in accordance with manufacturer procedures for inspection

Assessor guide: confirm that –

The operator is able to ensure all work is free from damage and defects including: tool marks, cracking, stress marks, thinning and incorrect finish etc.
The operator is able to identify the purpose and need for the use of inspection tool or equipment and is able to correctly use them as required

Element 7.30A.5 Components removed and stored**Criteria 7.30A.5.1**

Components are removed from the spinning lathe without marking or any deformation

Assessor guide: observe that –

Spinning are removed in an appropriate manner for the job at hand and are stacked in order to prevent further damage

Assessor guide: confirm that –

No damage has been incurred during removal and stacking, prior to packaging

Criteria 7.30A.5.2

Components are correctly stored and packaged as to avoid oxidation and damage

Assessor guide: observe that –

Spinning is correctly inhibited and packed in accordance with workplace procedures

Assessor guide: confirm that –

The operator is fully conversant in the workplace packing processes and understands the reasons for inhibiting and packing

Range statement

Work undertaken autonomously to predetermined specifications. Work can be carried out using hand tools or slide based tools. Work applies to a range of metal spinning lathes (excluding CNC), accessories, measuring equipment, and engineering standards. Sheet metals including but not restricted to steels, aluminium, monel, copper, brass, zinc, pewter, silver, gold, tin, etc of varying thicknesses. Work is performed to drawings, sketches, specifications and instructions as appropriate. Spinning does not include hot spinning procedures. Tool use will include either hand and/or slide tooling of varying design and materials. The correct usage of all basic metal spinning tools must be demonstrated. Where lathe maintenance to the level of dismantling and replacing components, Unit 18.55A (Dismantle, replace and assemble engineering components) should also be selected.

Evidence guide**Assessment context**

This unit should be assessed on the job.

- The competencies covered by this unit would be demonstrated by an individual working alone
- Assessment should be conducted in the individual's own work environment
- Identify colleagues who can be approached for the collection of competency evidence where appropriate
- Present evidence for credit for any off the job training related to this unit

Critical aspects

Competency in this unit cannot be claimed until pre-requisites have been satisfied

Where those pre-requisites are factored into this unit as processes etc., then if the pre-requisite is not held, it is strongly recommended that the assessment

Assessment conditions

The candidate will be provided with:

- All tools, equipment, materials and documentation required
- The candidate will be permitted to refer to the following documents
- Any relevant workplace procedures
- Any relevant product and manufacturing specifications

The candidate will be required to:

- perform 6 spinning exercises which will include 2 soft, 2 hard and 2 medium hard material types and within their range perform all of the spinning processes stipulated by this unit of competency
- orally or by other methods of communication, answer questions put by an assessor perform the tasks described by this guide, within the time frame established between the candidate's supervisor/instructor and the assessor prior to undertaking this assessment

Special notes

During assessment the individual will:-

- demonstrate safe working practices at all times
- communication information about processes, events or tasks being undertaken to ensure a safe and efficient working environment
- take responsibility for the quality of their own work
- plan tasks in all situations and review task requirements as appropriate
- perform all tasks in accordance with standard operating procedures
- perform all tasks to specification
- use accepted engineering technique, practices, processes and workplace procedures

Unit MEM 7.31A B Perform metal spinning lathe operations (complex)

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 4

This unit covers the competencies required for more unusual or difficult spinning operations, including those requiring more involved calculations and/or processes, or jobs

requiring higher precision or quality using mainly brass and brass alloys. This unit also requires the use of a greater range of spinning accessories including the use of heat.

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

7.30A Perform metal spinning lathe operations (basic)

18.1A Use hand tools

7.32A Use workshop machines for basic operations

18.2A Use power tools/hand held operations

Element 7.31A.1 Observe safety precautions

Criteria 7.31A.1.1

Correct safety procedures observed and protective clothing and safety glasses worn

Assessor guide: observe that –

Appropriate coveralls and footwear are worn and in a serviceable condition All work is carried out correctly and safely in accordance with workplace procedures

Assessor guide: confirm that –

Serviceability and appropriate of use safety wear and safe work practices are maintained

Element 7.31A.2 Determine job requirements

Criteria 7.31A.2.1

Drawings are interpreted and sequence of operation determined

Assessor guide: observe that –

All drawings required are used and that the sequence of operation has been correctly adhered to in accordance with job sheets and workplace practice and procedures

Assessor guide: confirm that –

Information determined from the drawings is clearly understood and accurately applied
Each step of the sequence of operation is able to be properly explained

Criteria 7.31A.2.2

Tools are selected to produce components to specifications

Assessor guide: observe that –

The correct tools are selected throughout spinning operation. All tools selected are properly prepared for use

Assessor guide: confirm that –

The correct tools are selected for shaping, trimming and finishing
The operator is able to determine that each tool has been properly prepared for use

Criteria 7.31A.2.3

Disc size is determined in accordance with appropriate procedures

Assessor guide: observe that –

The correct specifications for the job are properly selected

Assessor guide: confirm that –

The specifications are clearly understood and correctly interpreted

Criteria 7.31A.2.4

Disc is cut to the correct size and tolerance

Assessor guide: observe that –

The disc size has been properly selected and is within drawing tolerance
The correct use of the disc cutter is applied and that the finished disc is within tolerance as specified

Assessor guide: confirm that –

Element 7.31A.3 Prepare form chucks for spinning**Criteria 7.31A.3.1**

Metal turning lathe is set up for machining form chucks in accordance with standard operating procedures and standards

Assessor guide: observe that –

All necessary safety precautions and appropriate operating principles and practices are observed in functioning a metal turning lathe

Assessor guide: confirm that –

The operator has achieved competence on the metal turning lathe and meets the pre-requisite requirements

Criteria 7.31A.3.2

Form chuck is prepared for general spinning as per drawings and specifications

Assessor guide: observe that –

Information from specifications, are applied and any required adjustments to the chuck are appropriately recorded according to workshop and legislative processes and practices

Assessor guide: confirm that –

Any necessary preparation or adjustments are free from defect and spinings are able to be produced to existing or revised specifications, without defect

Criteria 7.31A.3.3

Form chuck is prepared for seaming/swaging joints as per drawings and specifications

Assessor guide: observe that –

Information from specifications, are applied and any required adjustments to the chuck are appropriately recorded according to workshop and legislative processes and practices

Assessor guide: confirm that –

Any necessary preparation or adjustments are free from defects and the spinning seams or swagings produced are able to provide for precise joins to existing or revised specifications, without defect

Element 7.31A.4 Perform spinning operations**Criteria 7.31A.4.1**

Spinning speeds are calculated for various metals and metal thicknesses using appropriate mathematical techniques and reference materials

Assessor guide: observe that –

The operator determine the appropriate speed for the material type and thickness. The lathe speed is set correctly and in accordance with operating procedures

Assessor guide: confirm that –

The operator understands why and how lathe speed is calculated

Criteria 7.31A.4.2

Correct back centre and form chucks are selected and mounted in accordance with procedures and specifications

Assessor guide: observe that –

Form chuck is selected from drawings or specifications, correctly and securely mounted by appropriate means
Back centre is selected and prepared for use in conjunction with an appropriate centre/live centre

Assessor guide: confirm that –

The operator is able to correctly determine the type of form chuck mounting required from 3 possible alternative methods

Criteria 7.31A.4.3

Prepare disc is mounted for forming

Assessor guide: observe that –

Disc is mounted and centred

Assessor guide: confirm that –

Disc properly centred prior to start up to prevent departure on turning

The operator demonstrates safe working practices and ensures that they are positioned outside of the disc's travel path

Criteria 7.31A.4.4

A full range of spinning accessories are used including: back centre, holding and sectional chucks, tee-rest, compound and additional slides, recessed and cranked followers, rollers and knurling wheels

Assessor guide: observe that –

Accessories are appropriately utilised in accordance with operating procedures

Assessor guide: confirm that –

The function and operation of accessory is clearly understood and operated correctly in accordance with the specified procedures

Criteria 7.31A.4.5

Spinning, beading, recessing, oval spinning, screw forming, (thread spinning) seaming, swaging, trimming finishing, annealing and pickling operations are performed to specifications

Assessor guide: observe that –

Operations are accurately performed using the correct tooling and accessories

Assessor guide: confirm that –

All of the processes used, are fully understood and the methods used for each process is applied safely with the correct utilisation of spinning tools

Element 7.31A.5 Check components for conformance to specifications**Criteria 7.31A.5.1**

Components are checked for conformance to specifications using appropriate techniques, tools and equipment

Assessor guide: observe that –

The most appropriate methods of inspection is utilised in determining conformance to specifications All inspection tools and equipment are used in accordance with manufacturer's procedures for inspection

Assessor guide: confirm that –

The operator is able to ensure all work is free from damage and defects including: tool marks, cracking, stress marks, thinning and incorrect finish etc.
The operator is able to identify the purpose and need for the use of inspection tools or equipment and is able to correctly use them as required

Element 7.31A.6 Remove and store components**Criteria 7.31A.6.1**

Components are removed from the spinning lathe without marking or any deformation

Assessor guide: observe that –

Spinning are removed in an appropriate manner for the job at hand and are stacked in order to prevent further damage

Assessor guide: confirm that –

No damage has been incurred during removal and stacking prior to packaging

Criteria 7.31A.6.2

Components are correctly stored and packaged as to avoid oxidation and damage

Assessor guide: observe that –

Spinning is correctly inhibited and packed in accordance with workplace procedures

Assessor guide: confirm that –

The operator is fully conversant in the workplace packing processes and understands the reasons for inhibiting and packing

Range statement

The skills in this unit are applied to more unusual or difficult spinning operations including those requiring more involved calculations and/or processes, or jobs requiring higher precision or quality using mainly brass and brass alloys. This unit also requires the use of a greater range of spinning accessories including the use of heat. Where there is a requirement to join spun materials or products in addition to, or instead of, (the spinning operation of) swaging, either Unit 5.3A (Soft soldering (basic)), Unit 5.6A (Perform brazing and/or silver soldering), or Unit 5.4A (Perform routine oxyacetylene welding (fuel gas welding)), or Unit 5.12A (Perform routine manual arc and/or gas metal arc welding) or all may also be required.

Evidence guide**Assessment context**

This unit should be assessed on the job.

- The competencies covered by this unit would be demonstrated by an individual working alone
- Assessment should be conducted in the individual's own work environment
- Identify colleagues who can be approached for the collection of competency evidence where appropriate.
- Present evidence for credit for any off the job training related to this unit

Critical aspects

Competency in this unit cannot be claimed until pre-requisites have been satisfied.

Where those pre-requisites are factored into this unit as processes etc., then if the pre-requisite is not held, it is strongly recommended that the assessment include the full assessment of the pre-requisite unit.

i.e.: The process of adjusting the form chucks within this unit would require a full assessment of the skills and knowledge covered in Unit 7.6A (Perform lathe

- use accepted engineering technique, practices, processes and workplace procedures

Assessment conditions

The candidate will be provided with:

- All tools, equipment, materials and documentation required
- The candidate will be permitted to refer to the following documents
- Any relevant workplace procedures
- Any relevant product and manufacturing specifications

The candidate will be required to:

- orally or by other methods of communication, answer questions put by an assessor perform the tasks described by this guide, within the timeframe established between the candidates supervisor/instructor and the assessor prior to undertaking this assessment.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times
- take responsibility for the quality for their own work
- plan tasks in all situations and review task requirements as appropriate
- perform all tasks in accordance with standard operating procedures
- perform all tasks in accordance with standard operating procedures
- perform all tasks to specification

Unit MEM 7.32A A Use workshop machines for basic operations

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 2

Pre-requisite units - Path 1

18.1A Use hand tools

Element 7.32A.1 Determine job requirements

Criteria 7.32A.1.1

Job requirements interpreted.

Assessor guide: observe that –

Any written instructions have been received and used.

Assessor guide: confirm that –

Those instructions have been interpreted correctly.

Criteria 7.32A.1.2

Appropriate machine selected to meet requirements.

Assessor guide: observe that –

The machine selected is appropriate for that machining operation.

Assessor guide: confirm that –

The range of machines and their operations can be identified.

Element 7.32A.2 Set up machine

Criteria 7.32A.2.1

Tools are selected where appropriate.

Assessor guide: observe that –

The tools selected are appropriate for that operation.

Assessor guide: confirm that –

The range of tools for different purposes can be identified.

Criteria 7.32A.2.2

Cutting tools are sharpened as required.

Assessor guide: observe that –

The cutting tools have been sharpened to meet job requirements.

Assessor guide: confirm that –

The consequences of incorrect sharpening can be identified.

Criteria 7.32A.2.3

Tools are correctly installed using standard operating procedures.

Assessor guide: observe that –

The tools holder, tools are held in by using the correct bolting/attachments, to suit the machine.

Assessor guide: confirm that –

The consequences of tool holders, tools being incorrectly secured, can be identified.

Criteria 7.32A.2.4

Appropriate guards are set and adjusted as required.

Assessor guide: observe that –
Guards have been set correctly.

Assessor guide: confirm that –

The consequences of not using guards etc., can be identified.

Element 7.32A.3 Operate machine**Criteria 7.32A.3.1**

Material to be machined is positioned and secured.

Assessor guide: observe that –
The material has been positioned correctly on the machine and that it has been securely clamped and that the clamps will not interfere with the machining operations.

Assessor guide: confirm that –

The various methods and manner of clamping can be identified.

Criteria 7.32A.3.2

Machine operated appropriately to suit job and material requirements.

Assessor guide: observe that –
The machines are used to machine the material in a clamped position, using all necessary safety measures. Appropriate machine settings are used.

Assessor guide: confirm that –

The operation of machines can be identified. Various safety problems can be identified. Consequence of incorrect speeds and feeds understood.

Element 7.32A.4 Check finished component**Criteria 7.32A.4.1**

Machined component checked against requirements and predetermined finish.

Assessor guide: observe that –
The finished component is checked for size against specifications.
The finished machine surface is acceptable.

Assessor guide: confirm that –

The necessary checking procedures have been carried out. The reason for a poorly finished surface, can be identified.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. This unit covers basic machining in a maintenance or jobbing environment. The machines include but are not limited to lathe, radial arm drill, mills etc., and covers the sharpening of tools as required. This unit should not be selected when Units 7.5A (Perform general machining) or 7.24A (Operate and monitor machine/process) have already been selected. For hand held/power tools use Unit 18.2A (Use power tools/hand held operations).

Evidence guide

Assessment context

This unit should be assessed on the job, off the job or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the routine machining, operations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to:

- All tools, equipment, materials and documentation required

The candidate will be permitted to refer to the following documents:

- Any relevant workplace procedures
- Any relevant product and manufacturing specifications
- Any relevant codes, standards, manuals and reference materials

The candidate will be required to:

- Orally, or by other methods of communication, answer questions put by the assessor
- Identify colleagues who can be approached for the collection of competency evidence where appropriate
- Present evidence of credit for any off-job training related to this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;
- take responsibility for the quality of their own work;
- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks in accordance with standard operating procedures;
- perform all tasks to specification;
- use accepted engineering techniques, practices, processes and workplace procedures.

Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 7.33A A Operate and monitor basic boiler

Band – Specialisation band A

Field – Machine & process operations

Unit Weight 6

Pre-requisite units - Path 1

2.2C11 Organise and analyse information

Pre-requisite units - Path 2

2.2C11 Organise and analyse information

18.1A Use hand tools

7.1A Operational maintenance of machines/equipment

2.5C11 Measure with graduated devices

18.2A Use power tools/hand held operations

18.1A Use hand tools

9.1A Draw and interpret sketch

18.55A Dismantle, replace and assemble engineering components

Element 7.33A.1 Select and use personnel protective equipment

Criteria 7.33A.1.1

Select and use personal protective clothing and equipment.

Assessor guide: observe that –

Personal protective clothing and equipment is selected and used, according to statutory requirements and workplace procedures.

Assessor guide: confirm that –

The reasons for selecting personal protective clothing and equipment can be given.

Element 7.33A.2 Carry out pre-operational checks

Criteria 7.33A.2.1

Conduct pre-operational checks of boiler according to plant operating procedures.

Assessor guide: observe that –

Pre-operational checks of boiler are conducted in accordance with statutory requirements, manufacturer's recommendations and plant operating procedures.

Assessor guide: confirm that –

The pre-operational checks such as feed water supply, boiler water level, fuel supply/heat source, boiler valves their operation and position, combustion air supply and combustion equipment, can be identified.

Criteria 7.33A.2.2

Identify and report maintenance requirements as required.

Assessor guide: observe that –

Maintenance requirements are identified and reported in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for identifying and reporting maintenance requirements can be given.

Element 7.33A.3 Maintain health and safety standards in work area**Criteria 7.33A.3.1**

Identify and report hazards and potential hazards in work area.

Assessor guide: observe that –

Hazards and potential hazards in work area are identified and reported in accordance with statutory requirements and work place procedures.

Assessor guide: confirm that –

The statutory requirements and work place procedures for identifying and reporting hazards in the work area such as chemical and thermal hazards, manual handling, guarding of machinery, illumination of work area, rubbish and combustibles, leakage of steam and fuel etc. can be given.

Criteria 7.33A.3.2

Select and use prevention/control measures as required.

Assessor guide: observe that –

Prevention/control measures are selected and used in accordance with statutory requirements and workplace procedures.

Assessor guide: confirm that –

The prevention/control measures can be identified. The reason for selecting the prevention/control method can be given.

Element 7.33A.4 Start boiler**Criteria 7.33A.4.1**

Start boiler and bring on line safely consistent with workplace procedures and production requirements.

Assessor guide: observe that –

Boiler is started and brought on line safely, in accordance with statutory requirements, manufacturer's recommendations and workplace procedures.

Assessor guide: confirm that –

The processes for starting a boiler such as, heat input, warm up of the reticulation system, steam traps and steam line purge, systems operation, reticulation line pressure, steam usage and supply can be identified.

Element 7.33A.5 Conduct hand over/take over procedures**Criteria 7.33A.5.1**

Confirm operating status of boiler.

Assessor guide: observe that –

Operating status of boiler is confirmed in accordance with manufacturer's recommendations and workplace procedures.

Assessor guide: confirm that –

The processes for confirming operational status of boiler can be identified.

Criteria 7.33A.5.2

Maintain operating log and communicate boiler status and operation according to workplace procedures.

Assessor guide: observe that –

Operating log is maintained clearly and accurately, in accordance with statutory requirements and workplace procedures.

Boiler status and operation is communicated in accordance with statutory requirements and workplace procedures.

Assessor guide: confirm that –

The procedures for maintaining operating log can be given. The procedures for communicating boiler status and operation can be given.

Element 7.33A.6 Operate and monitor boiler**Criteria 7.33A.6.1**

Boiler operated consistent with production and safety requirements.

Assessor guide: observe that –

Boiler is monitored in accordance with statutory requirements manufacturer's recommendations and workplace procedures.

Assessor guide: confirm that –

The procedures for monitoring a boiler such as, steam reticulation line pressure, usage, supply and quality of steam, combustion/heat source system, feed water system, fuel system combustion air supply, water level, boiler steam pressures and operation of control/safety devices etc. can be identified.

Criteria 7.33A.6.2

Conduct boiler water quality tests to manufacturer's recommendations and workplace procedures.

Assessor guide: observe that –

Boiler water quality tests are conducted in accordance with manufacturer's recommendations and workplace procedures.

Assessor guide: confirm that –

The procedures for conducting boiler water quality tests can be identified.

Criteria 7.33A.6.3

Adjust boiler water quality as required to manufacturer's recommendations and workplace procedures.

Assessor guide: observe that –

Boiler water quality is adjusted according to manufacturer's recommendations and workplace procedures.

Assessor guide: confirm that –

The procedures for adjusting boiler water quality can be identified.

Criteria 7.33A.6.4

Respond to boiler failures/emergencies and notify downstream users.

Assessor guide: observe that –

Boiler failures/emergencies are responded to in accordance with statutory requirements, manufacturer's recommendations and workplace procedures.

Assessor guide: confirm that –

The procedures such as identification of emergency isolation of heat source, operation of boiler, selection and application of appropriate fire fighting equipment and notification of downstream users etc. can be identified.

Element 7.33A.7 Carry out boiler operational shut-down**Criteria 7.33A.7.1**

Shut down boiler consistent with workplace procedures, production and safety requirements.

Assessor guide: observe that –

Operational boiler is shut down is performed in accordance with statutory requirements, manufacturer's recommendations and workplace procedures.

Assessor guide: confirm that –

The processes and procedures such as confirming water level, cooling down, boiler pressure/vacuum and fuel/heat source isolation etc. when operationally shutting down a boiler can be identified.

Element 7.33A.8 Carry out boiler shut-down for an internal inspection**Criteria 7.33A.8.1**

Shut down boiler for internal inspection manufacturer's recommendations and workplace procedures.

Assessor guide: observe that –

Boiler is shut down for internal inspection in accordance with statutory requirements, manufacturer's recommendations and workplace procedures.

Assessor guide: confirm that –

The processes and procedures such as confirming boiler cooling down, vacuum/pressure, fuel/heat source isolation, removal of combustion equipment and water from boiler, isolation from any common connection and the opening of all access points required for inspection etc. can be identified.

Criteria 7.33A.8.2

Clean boiler internally and externally to manufacturer's recommendations and workplace procedures.

Assessor guide: observe that –

Boiler is cleaned internally and externally according to statutory requirements, manufacturer's recommendations and workplace procedures.

Assessor guide: confirm that –

The procedures for cleaning the boiler internally and externally can be identified.

Element 7.33A.9 Store boiler in shut-down mode**Criteria 7.33A.9.1**

Identify the appropriate mode of storage.

Assessor guide: observe that –

Assessor guide: confirm that –

The various modes of boiler storage can be given. The reason for selecting the mode of boiler storage can be given.

Criteria 7.33A.9.2

Store the boiler in shut-down mode to manufacturer's recommendations and work place procedures.

Assessor guide: observe that –

Boiler is stored in accordance with statutory requirements, manufacturer's recommendations and work place procedures.

Assessor guide: confirm that –

The procedures for storing the boiler in shut-down mode can be identified.

Range statement

This unit covers the start up, take over/hand over and shut down of a basic boiler. Work is undertaken autonomously or as part of a team, to predetermined standards of quality and safety. Work includes inspection procedures as specified in the manufacturer's recommendations and workplace procedures, identification of maintenance requirements and hazard control measures. All work carried out to State/Territory OHS legislation, standards and codes of practice. The boilers covered by this unit would have the following features: Single fixed combustion air supply, non-modulating single heat source and fixed firing rate, and covers boilers used for all purposes including the generation of steam.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with either maintenance or production/process work, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.1A A Wire, jig and barrel load/unload work

Band – Specialisation band A

Field – Surface finishing

Unit Weight 4

Element 8.1A.1 Load barrels etc., for mass finishing processes

Criteria 8.1A.1.1

Machinery is correctly loaded regarding load mass.

Assessor guide: observe that –

The components are correctly loaded into the surface finishing machinery in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for loading machinery for mass finishing processes can be given. The distribution of the components within the machinery can be identified. The reasons for distributing the components in the manner selected can be explained.

Criteria 8.1A.1.2

Machine access openings are safely secured.

Assessor guide: observe that –

The machine access openings are correctly secured in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for securing machine access openings can be given. The consequences of not securing machine access openings can be given.

Element 8.1A.2 Jig work for non-electrolytic processes

Criteria 8.1A.2.1

Components are appropriately secured using standard operating procedures.

Assessor guide: observe that –

Where appropriate, the components to be surface finished using a non-electrolytic process are correctly secured in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for jiggling work for non-electrolytic processes can be given. The precautions to be taken when jiggling work for non-electrolytic finishing processes can be identified.

Element 8.1A.3 Wire jig and rack work for electrolytic processes**Criteria 8.1A.3.1**

Correct type and size of wire or rack is selected and inspected for conformance to specification. Damaged racks are identified for repair or replacement.

Assessor guide: observe that –

Assessor guide: confirm that –

The type and size of wire or rack appropriate for use in conjunction with surface finishing using electrolytic processes can be identified. The reasons for selecting the chosen size and type of wire or rack can be given.

Criteria 8.1A.3.2

Components are secured presenting appropriate faces according to standard operating procedure.

Assessor guide: observe that –

Where appropriate, the components to be surface finished using an electrolytic process are correctly secured in accordance with standard operating procedures.

Assessor guide: confirm that –

The faces to be surface finished/ coated can be identified. The procedures for securing the components to be surface finished using electrolytic processes can be given.

Element 8.1A.4 Unload, remove jigs after finishing**Criteria 8.1A.4.1**

Components are unloaded and stacked without causing damage to finish using standard operating procedures.

Assessor guide: observe that –

Surface finished components are unloaded and stacked in a manner to minimise damage in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for unloading and stacking surface finished components can be given. The damage that can be caused by inappropriate handling and storing of surface finished components can be identified.

Range statement

Work is undertaken autonomously or in a team environment, using predetermined standards of quality, safety and operating procedures. This unit applies to loading and unloading in preparation for a wide variety of pre-treatment and finishing processes of multiples of similar items. Typical processes include degreasing, de-scaling, surface blasting, flame cleaning, wet blasting, grinding, polishing, wet coating, powder coating, electroplating, anodising, electroless plating, electrophoretic coating and hot dip metallising.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with wiring, jiggling and loading of barrels for surface finishing processes or other units requiring the exercise of the skills and knowledge covered by this unit. To be assessed as competent in this unit, the individual must jig work for at least one of the surface finishing processes identified in elements 8.1A.2 and 8.1A.3. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.2A B Pre-treat work for subsequent surface coating

Band – Specialisation band A

Field – Surface finishing

Unit Weight 4

This unit covers the competencies required for pre-treating common ferrous and non-ferrous work. It can apply to a range of different finishing processes, such as wet coating, powder coating, electroplating, anodising, electroless plating, electrophoretic coating and hot dip metallising.

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials

Element 8.2A.1 Identify job material

Criteria 8.2A.1.1

Common metals, alloys and non-metals are recognised

Assessor guide: observe that –

Common metals, alloys and non-metals can be identified from given samples

Assessor guide: confirm that –

The characteristics of common metals, alloys and non-metals can be identified The procedures and techniques for identifying common metals, alloys and non-metals can be given Simple tests that can be used to assist in the identification of common metals, alloys and non-metals can be described

Element 8.2A.2 Identify job surface condition

Criteria 8.2A.2.1

Common surface soils and conditions are recognised

Assessor guide: observe that –

Common surface soils and conditions can be identified from given samples

Assessor guide: confirm that –

The common surface soils and conditions can be identified The procedures for identifying the type(s) of soil on surfaces to be finished can be given Simple tests that can be used to assist in identifying surface soils and conditions can be described

Element 8.2A.3 Perform pre-treatment processes in correct sequence

Criteria 8.2A.3.1

Pre-treatment processes carried out following standard operating procedures

Assessor guide: observe that –

The appropriate pre-treatment processes are carried out in accordance with standard operating procedures

Assessor guide: confirm that –

The pre-treatment processes applicable to a range of materials can be identified The pre-treatment processes applicable to a range of surface soils and conditions can be identified The procedures for carrying out pre-treatment processes can be given The pre-treatment processes most suitable for given materials, surface soils and conditions can be identified The reasons for selecting the chosen pre-treatment process can be explained

Criteria 8.2A.3.2

Pre-treatment process parameters are monitored to ensure they remain within specified limits

Assessor guide: observe that –

The pre-treatment process parameters are monitored and maintained within specified limits in accordance with standard operating procedures

Assessor guide: confirm that –

The parameters to be monitored when using different pre-treatment processes can be identified The procedures for monitoring those parameters can be given The limits within which the pre-treatment process parameters are to be maintained can be identified

Range statement

Work is undertaken autonomously or in a team environment, using predetermined standards of quality, safety and operating procedures. Typical pre-treatment processes include solvent and aqueous degreasing, pickling, de-scaling, bright dipping, rinsing, pre-plate dipping etc. This unit applies to pre-treatment of common ferrous and non-ferrous work for finishing by a wide variety of processes, typical of which are, but not limited to: wet coating, powder coating, electroplating, anodising, electroless plating, electrophoretic coating and hot dip metallising. Adjustments to apparatus/equipment/controls include temperature settings, current/voltage and solution compositions. This unit should not be selected if Unit 8.3A (Perform electroplating operations) has already been selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the pre-treating of work for subsequent surface coatings or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.3A B Perform electroplating operations

Band – Specialisation band A

Field – Surface finishing

Unit Weight 6

This unit covers the competencies required to start up, operate and monitor an electroplating process. It includes recognising and rectifying deviations and faults in product/equipment/process. It applies to production and jobbing operations in protective coating, engineering or decorative processes. A basic knowledge of electroplating solutions and handling procedures is required. This unit applies across a range of metal plating processes in the electroplating, electronics, jewellery manufacture, and metal fabrication industries.

Pre-requisite units - Path 1

7.1A Operational maintenance of machines/equipment
18.1A Use hand tools

8.1A Wire, jig and barrel load/unload work

13.3A Work safely with industrial chemicals and materials

Element 8.3A.1 Identify electroplating requirements

Criteria 8.3A.1.1

Electroplating requirements are identified

Assessor guide: observe that –

Relevant information for plating is identified from drawings, job instructions and specifications Machine/process requirements are identified, including raw materials, required finish, appropriate settings

Assessor guide: confirm that –

Information relevant to plating products, treatment baths, settings is understood

Criteria 8.3A.1.2

Untreated materials and required electroplating treatment identified

Assessor guide: observe that –

Untreated materials and treatments stages are correctly identified

Assessor guide: confirm that –

A variety of base materials that can be plated can be identified Pre-treatments, treatments and post treatments can be identified in relation to task requirements

Element 8.3A.2 Prepare for electroplating process

Criteria 8.3A.2.1

Materials and racking arrangement checked for non-conformance to specifications/job requirements

Assessor guide: observe that –

All incorrectly loaded work is rejected Job surface condition is inspected Faults and imperfections are identified and reported

Assessor guide: confirm that –

The procedures for rejecting incorrectly loaded work can be given Effects of rust, corrosion and other contaminants can be explained

Criteria 8.3A.2.2

All plant and equipment relevant to process checked for compliance with safety and operational requirements

Assessor guide: observe that –

All plant and equipment is checked for conformance to safety and operational requirements in accordance with standard operating procedures Equipment checked includes componentry, electrodes, circuitry equipment, solution temperature, agitation equipment, filtration and fume extraction

Assessor guide: confirm that –

Required equipment checks can be explained Purpose of checking equipment for correct operation can be explained The procedures for checking all plant and equipment associated with the relevant process can be given The hazards associated with electroplating processes can be identified The operational requirements of all plant and equipment associated with the relevant process can be identified

Criteria 8.3A.2.3 Instrumentation/gauges are checked for operation	<i>Assessor guide: observe that –</i> Voltage, amperage, temperature readings are checked and confirmed	<i>Assessor guide: confirm that –</i> Different instruments/gauges, their purpose and typical settings can be given
Criteria 8.3A.2.4 Condition of solution is checked	<i>Assessor guide: observe that –</i> Solution levels checked in accordance with standard operating procedure Visible contamination identified such as solution clarity, oil, surface contamination	<i>Assessor guide: confirm that –</i> Effects of contamination can be explained
Element 8.3A.3 Criteria 8.3A.3.1 Operation steps are carried out in correct sequence according to standard operating procedure or work instructions	Perform electroplating operations <i>Assessor guide: observe that –</i> Materials are moved from tank to tank in correct sequence Significant surfaces are fully immersed Satisfactory electrical contacts are maintained Correct times are observed for each tank Carry-over is minimised Correct distance from electrodes is maintained	<i>Assessor guide: confirm that –</i> Importance of avoiding carry over, fully immersing significant surfaces and maintaining treatment times understood Importance of maintaining satisfactory electrical contact is understood
Criteria 8.3A.3.2 Safety precautions are observed	<i>Assessor guide: observe that –</i> Personal protective equipment is worn when necessary Safe handling procedures are followed	<i>Assessor guide: confirm that –</i> The need for personal protective equipment and hazards associated with the electroplating process can be given
Element 8.3A.4 Criteria 8.3A.4.1 Compliance with operating parameters is ensured and treatment deviations are identified and appropriate	Recognise and rectify process deviations <i>Assessor guide: observe that –</i> Operating parameters are monitored for accuracy Product parameters can be identified, including voltage, current and adjustments made according to standard operating procedure	<i>Assessor guide: confirm that –</i> The range of adjustments permissible for given operating temperature
Criteria 8.3A.4.2 Uncontrollable variances are reported to appropriate persons	<i>Assessor guide: observe that –</i> Correct reporting procedure is followed	<i>Assessor guide: confirm that –</i> Variances outside the control of the operator can be identified and explained
Criteria 8.3A.4.3 Adjustments are made to rectify process deviation	<i>Assessor guide: observe that –</i> Product faults/deviations are rectified by adjustment of settings such as voltage, current and temperature within permissible limits and in accordance with job sheets, standard operating procedure or other documentation	<i>Assessor guide: confirm that –</i> Common faults and imperfections/deviations can be identified Adjustments to suit specific process deviations can be given

Criteria 8.3A.4.4

Finished products are visually inspected for compliance to specification

Assessor guide: observe that –

Faulty and abnormal appearance and deviations beyond the control of the operator are reported to appropriate authority Corrective actions within operator control are identified

Assessor guide: confirm that –

Faults, abnormal appearances and their causes can be given Corrective actions for specific problems can be given

Range statement

This unit covers the general operation, monitoring and adjustment of manual, semi and automatic electroplating processes. It includes volume production and "jobbing" involving rack and barrel type processes. Relevant industries include electroplating, electronics, jewellery manufacture, metal fabrication industries. Electroplating applications may typically include engineering coatings, protective finishes, decorative plating. Work may be performed autonomously, or in a team. Work is performed to established processes, practices and standards of quality, safety and workshop procedures. Straightforward adjustment to process settings relates to controllable variances within defined parameters and according to standard operating procedure. Knowledge of safe operating procedures, safety and personal protective equipment, hazards of specific solutions is required. Work instructions may include standard operating procedures, verbal and written job instructions, job cards, specifications, drawings. Basic knowledge of electroplating process, machine components, treatment solutions, process parameters is covered by this unit. This unit should not be selected if Unit 7.25A (Advanced machine/process operation) has already been selected. Where simple operating and monitoring of the electroplating process is required Unit 7.24A (Operate and monitor machine/process) should be considered.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the finishing of work using electroplating solutions or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.4A A Finish work using wet, dry and vapour deposition methods

Band – Specialisation band A

Field – Surface finishing

Unit Weight 4

Pre-requisite units - Path 1

8.2A Pre-treat work for subsequent surface coating

13.3A Work safely with industrial chemicals and materials

Element 8.4A.1 Assess preparation of work for correct coating process

Criteria 8.4A.1.1

Drawings and/or operation sheets are interpreted and understood for coating specification and components are racked accordingly.

Assessor guide: observe that –

All relevant drawings, specifications and/or instructions are obtained in accordance with work place procedures. The components to be coated are correctly racked in accordance with standard operating procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The coating process to be used can be identified. The coating specifications can be identified. The appropriate type of racking for the coating process can be identified. The reasons for selecting the chosen rack type can be explained. The procedures for racking components to be coated can be given.

Element 8.4A.2 Performs simple mixing and estimating operations

Criteria 8.4A.2.1

Mixing ratios calculated and a range of wet coatings mixed and thinned as required to standard operating procedure.

Assessor guide: observe that –

The correct mixing ratios for given wet coatings are calculated accurately. Where appropriate the given wet coatings are mixed and thinned where required in accordance with standard operating procedures.

Assessor guide: confirm that –

The source of data on mixing ratios for wet coatings can be identified. The mixing ratio for the given task(s) can be identified. The function of thinners as applied to the application of wet coatings can be explained. The procedures to be followed when mixing wet coatings can be given.

Criteria 8.4A.2.2

Quantities of wet coatings required estimated using simple surface area calculations.

Assessor guide: observe that –

The surface area to be coated is calculated correctly. Where appropriate the quantities of wet coating materials are correctly estimated in accordance with standard operating procedures.

Assessor guide: confirm that –

The surface area to be coated can be identified. The coverage rate of the coating material to be applied can be identified. The procedures for estimating quantities of coating materials can be explained.

Element 8.4A.3 Perform coating operation**Criteria 8.4A.3.1**

Equipment set up to specification using standard operating procedures.

Assessor guide: observe that –

The appropriate coating equipment is set up in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The types of equipment used for a variety of coating processes can be identified. The appropriate coating equipment for the given task(s) can be identified. The reasons for selecting the chosen equipment can be explained. The operating procedures applicable to the selected coating equipment can be identified.

Criteria 8.4A.3.2

Coating and applied curing technique monitored to standard operating procedure.

Assessor guide: observe that –

The coating is correctly applied using the appropriate technique in accordance with standard operating procedures. The coating is correctly cured using the appropriate technique in accordance with standard operating procedures. The coating and curing process are monitored for correct operation in accordance with standard operating procedures. Where appropriate, coating defects are rectified/reported in accordance with standard operating procedures.

Assessor guide: confirm that –

A range of coating techniques can be identified. A range of curing techniques can be identified. The appropriate coating and curing technique for the given task(s) can be identified. The reasons for selecting the chosen coating and curing techniques can be explained. The monitoring procedures to be followed can be identified. Examples of coating defects can be given. The causes of coating defects can be explained. Where appropriate, the procedures for rectifying coating defects can be identified. Where appropriate, the procedures for reporting coating defects can be identified.

Criteria 8.4A.3.3

Coating thickness and colour checked and maintained for compliance with specifications.

Assessor guide: observe that –

The coating thickness and colour is maintained in accordance with specifications throughout the coating operation. The coating thickness and colour is checked in accordance with standard operating procedures.

Assessor guide: confirm that –

The coating thickness and colour to be achieved can be identified. The means of checking coating thickness and colour can be identified. The frequency at which checks are undertaken can be identified.

Range statement

This unit applies to finishing work using a range of wet and dry organic coatings, typical of which are electrostatic powder coating, electrophoretic coating, industrial spray coating and lacquering, electroless" (auto catalytic) nickel or copper plating, phosphating, chromating, galvanising, hot tinning, sputter deposition, vacuum evaporation, ion plating, paints, stains and other liquid finishes. Processing may be carried out in manual, semi or fully automatic plant. Applications may be by hand or utilising a wide range of machines or plants. Where straightforward monitoring of semi or automatic machine or process is undertaken, then Unit 7.24A (Operate and monitor machine/process) should be considered.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the finishing of work using wet, dry and vapour deposition methods or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.5A A Prepare and produce specialised coatings

Band – Specialisation band A

Field – Surface finishing

Unit Weight 4

This unit covers the competencies required to prepare and produce specialised industrial films on a variety of work pieces, often on a one-off basis. Typical of the coatings are heavy (hard) chromium or nickel, heavy electroless nickel, "hard" anodising and selective (brush) plating; also included is the electrodeposition of "difficult"

metals such as iron and certain alloys.

Pre-requisite units - Path 1

8.2A Pre-treat work for subsequent surface coating

13.3A Work safely with industrial chemicals and materials

Element 8.5A.1 Mask and jig work

Criteria 8.5A.1.1

Jigs are secure and masking is adherent and stable

Assessor guide: observe that –

The electroplating jigs are secure The masking is in place and is stable

Assessor guide: confirm that –

The procedures for ensuring that jigs are secure can be given The reasons for masking work being electroplated can be given The materials that are to be used for masking purposes can be identified The procedures for securing the masking material in place can be given

Criteria 8.5A.1.2

Necessary auxiliary electrodes and shields are incorporated effectively

Assessor guide: observe that –

Where appropriate, auxiliary electrodes and shields are set up in accordance with standard operating procedures

Assessor guide: confirm that –

The reasons for using auxiliary electrodes and shields can be explained The procedures for mounting/setting up auxiliary electrodes and shields can be given

Criteria 8.5A.1.3

Necessary jigs and shields are manufactured

Assessor guide: observe that –

Where appropriate, jigs and shields are manufactured in accordance with specifications and standard operating procedures

Assessor guide: confirm that –

The specifications of the jigs and shields to be manufactured can be identified The procedures for manufacturing jigs and shields can be given

Element 8.5A.2 Determine operating parameters

Criteria 8.5A.2.1

Plating knowledge and/or specifications applied in correctly computing operating times, currents and/or voltages

Assessor guide: observe that –

The operating parameters are correctly calculated

Assessor guide: confirm that –

The procedures and formulae for calculating operating times, currents and voltages can be given The specifications of the surface finish to be achieved can be identified

Element 8.5A.3 Pre-treat and treat work

Criteria 8.5A.3.1

Work treated in accordance with specifications using standard operating procedures

Assessor guide: observe that –

The work is treated in accordance with specifications and standard operating procedures

Assessor guide: confirm that –

The procedures for pre-treating the work can be given
The procedures for treating the work after electroplating can be given
The pre and post-electroplating treatment specifications can be identified
The reasons for pre and post-electroplating treatment of surfaces can be explained

Range statement

This unit applies to specialised production of industrial films on a variety of work pieces, often on a one-off basis. Typical of the coatings are heavy (hard) chromium or nickel, heavy electroless nickel, "hard" anodising and selective (brush) plating; also included is the electrodeposition of "difficult" metals such as iron and certain alloys.

Evidence

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the production of specialised coatings electrolytically or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the Criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.6A A Produce clear and/or coloured and/or sealed anodised films on aluminium

Band – Specialisation band A

Field – Surface finishing

Unit Weight 2

Pre-requisite units - Path 1

8.2A Pre-treat work for subsequent surface coating

Element 8.6A.1 Perform a series of anodising steps

Criteria 8.6A.1.1

All steps are carried out in the correct sequence according to standard operating procedure.

Assessor guide: observe that –

All steps in the aluminium anodising process are carried out in the correct sequence in accordance with standard operating procedures.

Assessor guide: confirm that –

The steps to be carried out in anodising aluminium can be identified. The correct sequence of the steps can be identified. The procedures to be followed when anodising aluminium can be given.

Criteria 8.6A.1.2

Correct masking techniques used where required.

Assessor guide: observe that –

Where appropriate, the correct masking materials and techniques are used in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for masking surfaces during the anodising process can be given. The materials and techniques to be used for masking purposes can be identified. The procedures for masking materials during anodising can be given.

Criteria 8.6A.1.3

Correct action is taken to minimise contact marks and shielding.

Assessor guide: observe that –

The anodising process is carried out in a manner which minimises contact marks and shielding.

Assessor guide: confirm that –

The causes of contact marks and shielding during the anodising process can be identified. The procedures for minimising contact marks and shielding can be given.

Element 8.6A.2 Assess preparation of work for correct jigging/loading

Criteria 8.6A.2.1

Work is correctly connected for the required current flow and minimum contact marks and shielding.

Assessor guide: observe that –

The work is correctly connected to the required electrical current in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for connecting the work to the required electrical current can be given. The electrical current required for the anodising process can be identified.

Criteria 8.6A.2.2

All incorrectly loaded work is rejected.

Assessor guide: observe that –

All incorrectly loaded work is rejected in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for rejecting incorrectly loaded work can be given.

Element 8.6A.3 Anodise work by a series of treatment steps**Criteria 8.6A.3.1**

All steps are carried out in the correct sequence according to standard operating procedure.

Assessor guide: observe that –

All steps in the anodising process are carried out in the correct sequence in accordance with standard operating procedures.

Assessor guide: confirm that –

Element 8.6A.4 Seal or dye and seal anodised work**Criteria 8.6A.4.1**

All steps on work are carried out in the correct sequence according to standard operating procedure.

Assessor guide: observe that –

All steps in the sealing/dye and seal process are carried out in the correct sequence in accordance with standard operating procedures.

Assessor guide: confirm that –

The steps to be carried out in the seal/dye and seal process can be identified. The correct sequence of the steps can be identified. The procedures to be followed in the seal/dye and seal process can be given.

Element 8.6A.5 Monitor and control operating parameters**Criteria 8.6A.5.1**

Ensure process parameters remain within specified limits.

Assessor guide: observe that –

The process parameters are maintained within specified limits in accordance with standard operating procedures.

Assessor guide: confirm that –

The process parameters to be maintained can be identified. The limits within which each process parameter is to be maintained can be identified. The procedures for monitoring and maintaining the process parameters within the specified limits can be given.

Range statement

Applies to the production of sealed anodised films on aluminium and its alloys. Films may be clear or coloured; colouring is produced by dying or by "in bath" processes. Applications include electrical, decorative, mechanical and architectural purposes.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the anodising of aluminium or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.7A A Control surface finish production and finished product quality

Band – Specialisation band A

Field – Surface finishing

Unit Weight 4

Element 8.7A.1 Understand principles of quality assurance

Criteria 8.7A.1.1

Apply quality assurance standards as per enterprise specifications.

Assessor guide: observe that –

The quality assurance standards are applied in accordance with enterprise procedures.

Assessor guide: confirm that –

The quality assurance standards as applied to surface finish production and product quality can be identified.

Element 8.7A.2 Apply research or quality data to production process

Criteria 8.7A.2.1

Liaises with in-house/external control laboratories.

Assessor guide: observe that –

Appropriate liaison occurs between the individual and the control laboratory in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for liaising with internal/external control laboratories can be given. The role of the control laboratory can be identified.

Criteria 8.7A.2.2

Correctly interprets data and demonstrates understanding in recommending process changes.

Assessor guide: observe that –

All relevant test and/or production data is obtained in accordance with standard operating procedures. Where appropriate, changes to the process are recommended in accordance with standard operating procedures.

Assessor guide: confirm that –

Surface finish specifications can be identified. Any deviations of test/production data from specifications can be identified. The likely causes of those deviations can be explained. The procedures for recommending changes to the surface finishing process can be given.

Criteria 8.7A.2.3

Process changes are effectively implemented.

Assessor guide: observe that –

Where appropriate, the changes to the surface finishing process are implemented in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for implementing changes to the surface finishing process can be given.

Criteria 8.7A.2.4

Computes and/or makes changes/corrections to processes using laboratory/research data.

Assessor guide: observe that –

The changes to process parameters are calculated on the basis of test and production data collected.

Assessor guide: confirm that –

The procedures and formulae for determining process parameters can be given. The effect of varying process parameters on the specification of the surface finish can be explained.

Element 8.7A.3 Perform quality tests to industry standards**Criteria 8.7A.3.1**

Testing performed as required by standard operating procedures.

Assessor guide: observe that –

The surface coating is tested for conformance with specification using appropriate tests, testing equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The tests applicable to surface coatings can be identified. The equipment and techniques necessary to carry out those tests can be identified. The procedures for testing surface coatings for conformance to specification can be given.

Range statement

Finished product quality control can include tests for hardness, adhesion, deposit stress, thickness, corrosion, resistance and appearance, using standard instruments and methods. Analyses are confined to the use of basic instruments such as pH meters, hydrometers, stalagmometers, laboratory balances.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the control of surface finish production and product quality or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.8A A Operate and control surface finishing waste treatment process

Band – Specialisation band A

Field – Surface finishing

Unit Weight 3

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials

Element 8.8A.1 Load waste product

Criteria 8.8A.1.1

Waste from production process obtained via established procedures.

Assessor guide: observe that –

The waste from the production process is obtained safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for obtaining waste from the production process can be given. The hazards associated with handling waste products can be identified. The appropriate personal protective equipment and clothing can be identified.

Criteria 8.8A.1.2

Waste loaded in accordance with standard operating procedures for waste/effluent.

Assessor guide: observe that –

The waste is safely loaded in accordance with standard operating procedures.

Assessor guide: confirm that –

The storage requirements of the waste/effluent can be identified. The procedures for loading the stored waste/effluent for transport can be identified. The safety precautions to be taken when handling/loading the waste/ effluent can be identified.

Element 8.8A.2 Monitor plant for waste by-products

Criteria 8.8A.2.1

All process parameters are accurately monitored and recorded to identify waste/effluent.

Assessor guide: observe that –

All process parameters are monitored in accordance with standard operating procedures. The process parameters are accurately recorded in accordance with standard operating procedures. The condition of waste/effluent is identified from the process parameters recorded.

Assessor guide: confirm that –

The process parameters to be monitored can be identified. The procedures for monitoring process parameters and identifying waste/effluent can be given. The procedures for recording process parameters can be given.

Criteria 8.8A.2.2

Recording devices are checked for correct/continuous operation.

Assessor guide: observe that –

The recording devices are checked for correct/continuous operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The process parameter recording devices can be identified. The procedures for checking process parameter recording devices can be given.

Element 8.8A.3 Adjust process**Criteria 8.8A.3.1**

Knowledge of waste treatment processes applied in determining appropriate adjustments.

Assessor guide: observe that –

Appropriate adjustments are made to the waste treatment process in accordance with standard operating procedures.

Assessor guide: confirm that –

The adjustments that can be made to the waste treatment process and their effect on the condition of the waste can be explained. The procedures for adjusting process parameters can be given.

Criteria 8.8A.3.2

Process parameters checked to ensure they remain within specified limits.

Assessor guide: observe that –

Process parameters are checked for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking process parameters can be given. The specified limits for each process parameter can be identified.

Criteria 8.8A.3.3

All adjustments are made to accord with authority requirements with regard to waste.

Assessor guide: observe that –

The condition of the waste is maintained in accordance with the requirements of the relevant authority by making appropriate adjustments to the process parameters.

Assessor guide: confirm that –

The relevant authority with respect to the handling/disposal of waste can be identified. The authority's waste specifications can be identified.

Criteria 8.8A.3.4

In the event of mechanical failure, appropriate corrective action is undertaken.

Assessor guide: observe that –

Where appropriate, a suitable corrective action is taken in response to a mechanical failure in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for handling waste in the event of a mechanical failure can be given. The corrective action to be taken can be identified. The reasons for taking the proposed corrective action can be given. The legislative and regulatory requirements relating to waste management can be identified. The possible effects of surface finishing waste on the environment can be explained.

Range statement

This unit applies to the purification of metal finishing effluent waters which typically contain cyanides, hexavalent chromium, heavy metal cations, certain anions, greases, etc. Methods used may include chemical treatments, grease entrapment, metals precipitation and separation, ion exchange, reverse osmosis and gas scrubbing; and involve full or partial recovery of waste waters and chemicals. Process parameters may include; pH, Oxidisation Reduction Potential (REDOX) or temperature.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the operation and control of surface finishing waste treatment processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.9A B Make up solutions

Band – Specialisation band A

Field – Surface finishing

Unit Weight 2

This unit covers the competencies required to make up solutions and maintain process specific equipment, such a probes and electrodes. Maintenance of solution ratio and purity is covered by other units.

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials

Element 8.9A.1 Prepare solution

Criteria 8.9A.1.1

Identify appropriate solution for application requirements or specifications

Assessor guide: observe that –

All relevant job instructions, specifications, etc. are obtained in accordance with workplace procedures

Assessor guide: confirm that –

The application for which the solution is required can be identified The appropriate solutions for a range of applications can be identified The reason for selecting the chosen solutions can be given

Criteria 8.9A.1.2

Volumes, density and solution concentration calculated for effective operation

Assessor guide: observe that –

Assessor guide: confirm that –

The relevant areas, volumes, density and solution concentration are calculated The procedures for determining the appropriate solution concentration can be given The effect of solution concentration on the efficiency of the surface finish process can be identified

Criteria 8.9A.1.3

Suitable volume of solution made up from supplier's instructions and/or manual in accordance with standard operating procedures

Assessor guide: observe that –

A suitable volume of the appropriate solution is prepared in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for making up suitable volumes of the solution for the surface finishing process can be given The specification of the solution to be made up can be identified

Criteria 8.9A.1.4

Spent solutions are referred to waste treatment processing in accordance with standard operating procedures

Assessor guide: observe that –

Spent solutions are sent for waste treatment in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for sending spent solutions for waste treatment can be given

Element 8.9A.2 Maintain process specific equipment**Criteria 8.9A.2.1**

Inspection of probes and electrodes carried out and meter probes recalibrated as required

Assessor guide: observe that –

Probes and electrodes are inspected in accordance with standard operating procedures Where appropriate, meter probes are calibrated using appropriate equipment and techniques in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for inspecting probes and electrodes can be given The procedures for recalibrating meter probes can be given The equipment and techniques necessary to recalibrate meter probes can be given

Range statement

Work undertaken autonomously and/or in a team environment. Standard operational procedures for solution preparation include compliance with standards, codes, legislation, company and customer requirements. This unit should not be selected if Unit 18.18A (Electroplate engineering coatings), Unit 18.19A (Electroplate protective coatings) and/or Unit 18.20A (Electroplate decorative coatings) has been selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance of basic surface finishing solutions or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.10A A Manually finish/polish materials

Band – Specialisation band A

Field – Surface finishing

Unit Weight 6

Pre-requisite units - Path 1

18.1A Use hand tools

Element 8.10A.1 Select appropriate finishing procedure

Criteria 8.10A.1.1

Surface finish specifications understood and correct procedure selected.

Assessor guide: observe that –

All relevant job instructions, drawings and specifications are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The material to be finished/polished can be identified. The specifications of the surface finish can be identified. The methods of finishing/polishing materials can be identified. The applications of each finishing/ polishing method in terms of the materials to be finished/polished and the surface finished to be achieved can be identified. The most appropriate finishing/ polishing method for the work to be undertaken can be identified. The reasons for selecting the chosen finishing method can be given.

Criteria 8.10A.1.2

Appropriate finish and/or polishing equipment/media selected.

Assessor guide: observe that –

Assessor guide: confirm that –

Element 8.10A.2 Install and set up grinding and polishing devices

Criteria 8.10A.2.1

Endless belt liners fitted according to standard operating procedure.

Assessor guide: observe that –

Endless belts are fitted and correctly adjusted on finishing machines in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedure for fitting and adjusting endless belts on finishing machines can be given. The tools and techniques required to fit and adjust endless belts can be identified.

Criteria 8.10A.2.2

Grinding wheels and mops fitted and dressed according to standard operating procedure.

Assessor guide: observe that –

Grinding wheels and mops are fitted and dressed on pedestal grinders in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for fitting and dressing grinding wheels and mops can be given. The tools and techniques required to fit and dress grinding wheels and mops can be identified.

Criteria 8.10A.2.3

Polishing mops installed and set up according to standard operating procedure.

Assessor guide: observe that –

Polishing mops are installed and set up in polishing machines in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for installing and setting up polishing mops can be given. The tools and techniques required to install and set up polishing mops can be identified.

Element 8.10A.3 Identify job materials**Criteria 8.10A.3.1**

Common metals, alloys and non-metals recognised.

Assessor guide: observe that –

Assessor guide: confirm that –

Common metals, alloys and non-metals can be identified from given material samples. The appropriate polishing media to be used in finishing/polishing different types of material can be identified. The reasons for using different polishing media on different materials can be given. The effect of different types and grades of polishing media on the surface finish achieved can be explained.

Element 8.10A.4 Identify job surface condition**Criteria 8.10A.4.1**

Common surface imperfections recognised.

Assessor guide: observe that –

Assessor guide: confirm that –

Common surface imperfections/defects can be identified. Those surface imperfections/defects that can be removed/repared by manual finishing/polishing procedures can be identified. The procedures for handling components with surface imperfections/defects that cannot be removed/repared can be given.

Element 8.10A.5 Assess processing hazards associated with workpiece size and shape**Criteria 8.10A.5.1**

Hazards correctly identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The hazards associated with the manual finishing/polishing process can be identified. The appropriate personal protective clothing and equipment can be identified.

Criteria 8.10A.5.2

Correct safe working procedures followed.

Assessor guide: observe that –

All work is carried out safely in accordance with safety and standard operating procedures.

Assessor guide: confirm that –

The relevant safety procedures can be identified.

Element 8.10A.6 Grind, finish, brush and/or polish job**Criteria 8.10A.6.1**

Job surface finished to specification using standard operating procedures.

Assessor guide: observe that –

The most appropriate surface finishing/polishing method and medium is used to finish the surface to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate polishing medium for the work to be undertaken can be identified. The procedures for finishing the work to specification can be given. The specification of the surface to be finished can be identified.

Range statement

Applies to finishing work made from a variety of materials, including cast iron, steel, zinc and its alloys, copper, aluminium and its alloys, bronzes, sterling silver, gold and plastics. Equipment used includes endless belt grinders, table finishers, pedestal grinders and polishers, felt wheels, fabric mops and brushes, with underhand and overhand techniques and flexible drive appliances. The variety of media employed includes solid and liquid compositions containing alumina, silicon carbide, diamond dust, tripoli, calcium oxide and iron oxides. This unit is not intended to apply in situations where touch-up finishing related to maintenance or assembly activities is undertaken.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the manual finishing/polishing of materials or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.11A A Undertake surface preparation using solvents and/or mechanical means

Band – Specialisation band A

Field – Surface finishing

Unit Weight 2

Pre-requisite units - Path 1

9.1A Draw and interpret sketch

13.3A Work safely with industrial chemicals and materials

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 8.11A.1 Determine job requirements

Criteria 8.11A.1.1

Work requirements determined from job sheet, instructions or other pre-determined specifications in accordance with standard operating procedures.

Assessor guide: observe that –

All relevant drawings, job sheets, specifications and instructions are obtained in accordance with work place procedures. Where appropriate, the surface/s to be prepared are inspected by the individual in accordance with work place procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The specifications applying to the work can be identified and understood.

Criteria 8.11A.1.2

Where required, appropriate solvent and solvent application selected to meet job specification.

Assessor guide: observe that –

Correct solvent and application process determined from job specifications/instructions.

Assessor guide: confirm that –

A variety of surface conditions for which solvents are appropriate can be identified. The solvent/s appropriate to given conditions can be identified. The reasons for selecting the chosen solvents can be explained.

Criteria 8.11A.1.3

Where required, appropriate mechanical equipment selected to meet job specification.

Assessor guide: observe that –

Correct mechanical equipment for cleaning the job surface is selected.

Assessor guide: confirm that –

Appropriate mechanical equipment required for surface preparation to meet job specification can be identified.

Criteria 8.11A.1.4

Work site prepared for surface cleaning activities.

Assessor guide: observe that –

Site is prepared with due regard to OH&S requirements including site safety, clear working space, other materials/structures/personnel in the vicinity, isolation of work site where required.

Assessor guide: confirm that –

Safety issues can be clearly identified and explained, adequate precautions determined and identified, awareness of other site factors that could be affected by the work.

Element 8.11A.2 Set up equipment**Criteria 8.11A.2.1**

Appropriate equipment and any required consumables assembled, set up and prepared correctly and safely in accordance with manufacture's specifications and standard operating procedures.

Assessor guide: observe that –

Appropriate equipment is correctly set up in accordance with specifications and procedures. Any consumables are safely set up and prepared in accordance with specifications and procedures.

Assessor guide: confirm that –

The equipment for the selected method can be identified, assembled and set up as required. The set up procedures are clearly understood. All safety procedures are understood and applied.

Element 8.11A.3 Prepare surfaces using solvents as required**Criteria 8.11A.3.1**

Safe working environment for solvent use established according to regulatory requirements and standard operating procedures.

Assessor guide: observe that –

The work environment has been established to meet all safety requirements.

Assessor guide: confirm that –

The requirements for a safe working environment in which solvents are to be used can be identified. All relevant regulatory requirements are identified and understood.

Criteria 8.11A.3.2

Solvents applied correctly.

Assessor guide: observe that –

Solvents are used correctly and in accordance with manufacturer's specifications, safety requirements and standard operating procedures.

Assessor guide: confirm that –

The safety and operating procedures to be followed when using solvents to prepare surfaces can be identified. The specifications applying to the surface to be prepared can be identified, understood and applied.

Criteria 8.11A.3.3

Treated surface neutralised and made safe to handle.

Assessor guide: observe that –

The solvents used to prepare the surface are neutralised according to manufacture's specifications and standard operating procedures.

Assessor guide: confirm that –

The reasons and methods for neutralising solvents on completion of surface preparation can be identified and explained.

Element 8.11A.4 Prepare surfaces using mechanical means as required**Criteria 8.11A.4.1**

Safe working environment for mechanical surface preparation established according to regulatory requirements and standard operating procedures.

Assessor guide: observe that –

The work environment has been established to meet all safety requirements.

Assessor guide: confirm that –

The requirements for a safe working environment in which mechanical surface preparation means are to be used can be identified. All relevant regulatory requirements are identified and understood.

Criteria 8.11A.4.2

Surfaces prepared using mechanical means.

Assessor guide: observe that –

Mechanical equipment is used to prepare surface to specified standards in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety and operating procedures to be followed when using mechanical equipment to prepare surfaces can be identified. The specifications applying to the surface to be prepared can be identified, understood and applied.

Criteria 8.11A.4.3

Mechanical equipment cleaned and checked for damage and operational faults, in accordance with standard operating procedures.

Assessor guide: observe that –

Mechanical equipment cleaned and checked in accordance with standard operating procedures. Operational faults identified, faults are recorded and reported in accordance with standard operating procedures. Equipment is stored in good condition in accordance with standard operating procedures.

Assessor guide: confirm that –

The standards procedures and manufacturer's specifications for cleaning, checking and storing mechanical equipment are understood.

Criteria 8.11A.4.4

Equipment faults recorded and reported in accordance with standard operating procedures.

Assessor guide: observe that –

Faults are recorded and reported to appropriate personnel in accordance with standard operating procedures.

Assessor guide: confirm that –

Standard procedures for recording and reporting faulty equipment are understood.

Element 8.11A.5 Inspect prepared surface**Criteria 8.11A.5.1**

Surface preparation assessed for cleanliness and conformance with specifications.

Assessor guide: observe that –

The surface condition is checked and inspected in accordance with standard operating procedures and against job specifications.

Assessor guide: confirm that –

The standard operating procedures and job specifications for checking prepared surfaces can be identified and understood.

Criteria 8.11A.5.2

Faults or defects rectified where required and inspection results recorded and reported in accordance with standard operating procedures.

Assessor guide: observe that –

All rectification work undertaken to meet job specifications and recording/reporting undertaken using standard operating procedures.

Assessor guide: confirm that –

Appropriate rectification techniques can be described. The recording/reporting procedures for job inspection can be identified and understood.

Range statement

Work is undertaken autonomously or as part of a team environment to established predetermined processes, practices and specifications including environmental requirements. Application of surface preparations can apply to metal and non-metal materials. Solvents refer to a range of cleaning chemicals including acids, hydrocarbons etc. The application of solvents may include spraying, wiping, brushing etc. Mechanical means/equipment includes the use of hand tools and hand held tools used for surface preparation work. All work and work practices undertaken to regulatory and legislative requirements.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the preparation of surfaces using blasting processes and/or solvents or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.12A A Prepare surfaces by abrasive blasting (basic)

Band – Specialisation band A

Field – Surface finishing

Unit Weight 4

Pre-requisite units - Path 1

8.16A Control blast coating by-products, materials and emissions

13.3A Work safely with industrial chemicals and materials

Element 8.12A.1 Determine job requirements

Criteria 8.12A.1.1

Work requirements determined from job sheet, instructions or other pre-determined specifications in accordance with standard operating procedures.

Assessor guide: observe that –

All relevant drawings, job sheets, specifications and instructions are obtained in accordance with work place procedures. Where appropriate, the surface/s to be Prepared are inspected by the individual in accordance with work place procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The specifications applying to the work can be identified and understood.

Criteria 8.12A.1.2

Appropriate abrasive blasting process, equipment and media identified to meet job specification.

Assessor guide: observe that –

Correct blasting equipment and media for cleaning the job surface is selected.

Assessor guide: confirm that –

Appropriate blasting equipment and media required for surface preparation to meet job specification can be identified.

Criteria 8.12A.1.3

Work site prepared for surface cleaning activities.

Assessor guide: observe that –

Site is prepared with due regard to OH&S requirements including site safety, clear working space, other materials/structures/personnel in the vicinity, isolation of work site where required.

Assessor guide: confirm that –

Safety issues can be clearly identified and explained, adequate precautions determined and identified, awareness of other site factors that could be affected by the work.

Element 8.12A.2 Set up equipment

Criteria 8.12A.2.1

Appropriate equipment and any required consumables assembled, set up and prepared correctly and safely in accordance with manufacture's specifications and standard operating procedures.

Assessor guide: observe that –

Appropriate equipment is correctly set up in accordance with specifications and procedures. Any consumables are safely set up and prepared in accordance with specifications and procedures.

Assessor guide: confirm that –

The equipment for the selected method can be identified, assembled and set up as required. The set up procedures are clearly understood. All safety procedures are understood and applied.

Criteria 8.12A.2.2

Correct rust inhibitor for use in wet abrasive blast methods is selected where required.

Assessor guide: observe that –

Rust inhibitor for use in wet abrasive blast methods is selected where required in accordance with standard operating procedures.

Assessor guide: confirm that –

The importance of using an appropriate rust inhibitor in wet blasting operations is understood and the selection procedures can be explained.

Criteria 8.12A.2.3

Pre operational checks are carried out on equipment and faults are rectified or reported for further action.

Assessor guide: observe that –

Pre operational checks are carried out in accordance with manufacturer's specifications and standard operating procedures.

Assessor guide: confirm that –

The method and process for undertaking pre operational checks can be identified and is understood.

Element 8.12A.3 Prepare surfaces using abrasive blasting

Criteria 8.12A.3.1

Blasting equipment is operated in accordance with standard operating procedures.

Assessor guide: observe that –

The surface is cleaned in accordance with standard operating procedures. Appropriate personal protective equipment is used correctly.

Assessor guide: confirm that –

The procedure for using abrasive blasting equipment can be identified. All relevant regulatory requirements are identified and understood.

Criteria 8.12A.3.2

Emergency shut down procedures can be undertaken.

Assessor guide: observe that –

Blasting equipment can be shut down in accordance with manufacturer's specifications, safety requirements and standard operating procedures.

Assessor guide: confirm that –

The safety and standard operating procedures to be followed when shutting down equipment can be identified and are understood.

Criteria 8.12A.3.3

Work procedures undertaken to appropriate environmental requirements.

Assessor guide: observe that –

Work activities performed in accordance with standard operating procedures and relevant environmental legislation/regulations.

Assessor guide: confirm that –

The relevant environmental legislation/regulations and requirements are understood as well as the use of appropriate operating procedures.

Criteria 8.12A.3.4

Abrasive media disposal carried out in accordance with standard operating procedures.

Assessor guide: observe that –

All abrasive media disposal in carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The standard operating procedures for abrasive media disposal can be identified and are understood.

Criteria 8.12A.3.5

Blasting equipment is cleaned and disassembled and inspected in accordance with manufacturer's specifications and standard operating procedures.

Assessor guide: observe that –

Blasting equipment cleaned and checked in accordance with standard operating procedures. Operational faults identified, faults are recorded and reported in accordance with standard operating procedures. Equipment is stored in good condition in accordance with standard operating procedures.

Assessor guide: confirm that –

The standards procedures and manufacturer's specifications for cleaning, checking and storing blasting equipment are understood.

Criteria 8.12A.3.6

Equipment faults are recorded and reported in accordance with standard operating procedures.

Assessor guide: observe that –

Faults are recorded and reported to appropriate personnel in accordance with standard operating procedures.

Assessor guide: confirm that –

Standard procedures for recording and reporting faulty equipment are understood.

Element 8.12A.4 Inspect prepared surface**Criteria 8.12A.4.1**

Surface preparation assessed for cleanliness and conformance with specifications.

Assessor guide: observe that –

The surface condition is checked and inspected in accordance with standard operating procedures and against job specifications.

Assessor guide: confirm that –

The standard operating procedures and job specifications for checking prepared surfaces can be identified and understood.

Criteria 8.12A.4.2

Faults or defects are rectified where required and inspection results recorded and reported in accordance with standard operating procedures.

Assessor guide: observe that –

All rectification work undertaken to meet job specifications and recording/reporting undertaken using standard operating procedures.

Assessor guide: confirm that –

Appropriate rectification techniques can be described. The recording/reporting procedures for job inspection can be identified and understood.

Range statement

This unit is designed to be used where a basic level of skill is desired in surface preparation by abrasive blasting. Equipment used includes but is not limited to electric and diesel compressors, blast pots, blast rooms, centrifugal blast machines, water pressure washers to 35,000 kpa, air hoses and nozzles, and specified hand and power tools. Routine maintenance tasks may include cleaning, lubricating, consumable replacements, and simple equipment repairs and adjustments using engineering principles, tools, equipment and procedures to statutory and regulatory requirements. Specific health and safety issues include noise, heat stress, compressed air, high pressure water, dust full body cover and particulate matter, hazardous materials and by-products. Personal protection equipment includes blast helmets, air respirators, eye protection, safety boots, and noise protection. The majority of work is in a team environment and uses predetermined procedures and standards for safety and quality with all work and work practices undertaken to regulatory and legislative requirements. Reference is made to supplier information and specifications as well as accepted and appropriate Australian and International Standards.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with surface cleaning or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.13A A Prepare surfaces by abrasive blasting (advanced)

Band – Specialisation band A

Field – Surface finishing

Unit Weight 4

Pre-requisite units - Path 1

8.12A Prepare surfaces by abrasive blasting (basic)

8.16A Control blast coating by-products, materials and emissions

13.3A Work safely with industrial chemicals and materials

Element 8.13A.1 Determine job requirements

Criteria 8.13A.1.1

Work requirements determined from job sheet, instructions or other specifications in accordance with standard operating procedures.

Assessor guide: observe that –

All relevant drawings, job sheets, specifications and instructions are obtained in accordance with work place procedures. Where appropriate, the surface(s) to be prepared are inspected by the individual in accordance with work place procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The specifications applying to the work can be identified and understood.

Criteria 8.13A.1.2

Appropriate abrasive blasting process and equipment selected to meet job specification.

Assessor guide: observe that –

Correct blasting process and equipment for cleaning the job surface is selected.

Assessor guide: confirm that –

Appropriate blasting process and equipment required for surface preparation to meet job specification can be identified. Features of the various types of dry, vacuum automatic rotary, centrifugal and water blasting (including HP and UHP) can be described. Selection procedures for blast nozzles can be described.

Criteria 8.13A.1.3

Appropriate abrasive blasting media and equipment selected to meet job specification.

Assessor guide: observe that –

Correct blasting media for cleaning the job surface is selected.

Assessor guide: confirm that –

Appropriate blasting media required for surface preparation to meet job specification can be identified. Features of various types of blasting media can be described, including identification and comparison of size, shape, hardness, density, general composition and efficiency.

Criteria 8.13A.1.4

Work site prepared for surface cleaning activities.

Assessor guide: observe that –

Site is prepared with due regard to OH&S requirements including site safety, clear working space, other materials/structures/personnel in the vicinity, isolation of work site where required.

Assessor guide: confirm that –

Safety issues can be clearly identified and explained, adequate precautions determined and identified, awareness of other site factors that could be affected by the work.

Element 8.13A.2 Set up equipment**Criteria 8.13A.2.1**

Appropriate equipment and any required consumables assembled, set up and prepared correctly and safely in accordance with manufacture's specifications and standard operating procedures.

Assessor guide: observe that –

Appropriate equipment is correctly set up in accordance with specifications and procedures. Any consumables are safely set up and prepared in accordance with specifications and procedures. Appropriate media sample testing carried out and non-conformance rectified and reported where required and in accordance with specifications and procedures.

Assessor guide: confirm that –

The equipment for the selected method can be identified, assembled and set up as required. Correct pressures selected to suit blast nozzle, media and consumption differentials. The set up procedures are clearly understood. All safety procedures are understood and applied. Media sampling and testing procedures are identified and understood.

Criteria 8.13A.2.2

Correct rust inhibitor for use in wet abrasive blast methods is selected where required.

Assessor guide: observe that –

Rust inhibitor for use in wet abrasive blast methods is selected where required in accordance with standard operating procedures.

Assessor guide: confirm that –

The importance of using an appropriate rust inhibitor in wet blasting operations is understood and the selection procedures can be explained.

Criteria 8.13A.2.3

Pre operational checks are carried out on equipment and faults are rectified or reported for further action.

Assessor guide: observe that –

Pre operational checks are carried out in accordance with manufacturer's specifications and standard operating procedures.

Assessor guide: confirm that –

The method and process for undertaking pre operational checks can be identified and is understood.

Element 8.13A.3 Inspect surface prior to cleaning**Criteria 8.13A.3.1**

Inspect work piece prior to cleaning in accordance with standard operating procedure.

Assessor guide: observe that –

Work piece is inspected and any faults identified in accordance with standard operating procedures.

Assessor guide: confirm that –

The inspection procedure is identified and understood. Unsuitable work pieces can be determined in consideration of job specifications.

Criteria 8.13A.3.2

Identified faults/defects requiring remedial or pre treatment action are reported as required.

Assessor guide: observe that –

Identified faults/defects requiring remedial or pre treatment action are reported in accordance with standard operating procedures.

Assessor guide: confirm that –

Standard operating procedures for identifying faults/defects can be identified and are understood.

Element 8.13A.4 Prepare surfaces using abrasive blasting**Criteria 8.13A.4.1**

Blasting equipment is operated in accordance with standard operating procedures.

Assessor guide: observe that –

The surface is cleaned in accordance with standard operating procedures. Appropriate personal protective equipment is used correctly. Safe work practices are applied when working with compressed air.

Assessor guide: confirm that –

The procedure for using abrasive blasting equipment can be identified. All relevant regulatory requirements are identified and understood. Safe work practices when working with compressed air can be described.

Criteria 8.13A.4.2

Emergency shut down procedures can be carried out.

Assessor guide: observe that –

Blasting equipment can be shut down in accordance with manufacturer's specifications, safety requirements and standard operating procedures.

Assessor guide: confirm that –

The safety and standard operating procedures to be followed when shutting down equipment can be identified and are understood.

Criteria 8.13A.4.3

Work procedures undertaken to appropriate environmental requirements.

Assessor guide: observe that –

Work activities performed in accordance with standard operating procedures and relevant environmental legislation/regulations.

Assessor guide: confirm that –

The relevant environmental legislation/regulations and requirements are understood as well as the use of appropriate operating procedures.

Criteria 8.13A.4.4

Abrasive media disposal carried out in accordance with standard operating procedures.

Assessor guide: observe that –

All abrasive media disposal in carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The standard operating procedures for abrasive media disposal can be identified and are understood.

Criteria 8.13A.4.5

Blasting equipment is cleaned and disassembled and inspected in accordance with manufacturer's specifications and standard operating procedures.

Assessor guide: observe that –

Blasting equipment cleaned and checked in accordance with standard operating procedures. Operational faults identified, faults are recorded and reported in accordance with standard operating procedures. Equipment is stored in good condition in accordance with standard operating procedures.

Assessor guide: confirm that –

The standards procedures and manufacturer's specifications for cleaning, checking and storing blasting equipment are understood.

Criteria 8.13A.4.6

Equipment faults are recorded and reported in accordance with standard operating procedures.

Assessor guide: observe that –

Faults are recorded and reported to appropriate personnel in accordance with standard operating procedures.

Assessor guide: confirm that –

Standard procedures for recording and reporting faulty equipment are understood.

Element 8.13A.5 Inspect prepared surface**Criteria 8.13A.5.1**

Surface preparation assessed for cleanliness and conformance with specifications.

Assessor guide: observe that –

The surface condition is checked and inspected in accordance with standard operating procedures and against job specifications.

Assessor guide: confirm that –

The standard operating procedures and job specifications for checking prepared surfaces can be identified and understood.

Criteria 8.13A.5.2

Faults or defects are rectified where required and inspection results recorded and reported in accordance with standard operating procedures.

Assessor guide: observe that –

All rectification work undertaken to meet job specifications and recording/reporting undertaken using standard operating procedures.

Assessor guide: confirm that –

Appropriate rectification techniques can be described. The recording/reporting procedures for job inspection can be identified and understood.

Range statement

Work is undertaken autonomously or as part of a team environment using accepted standards for safety, quality and procedures. This unit is designed to be used where an advanced level of skill is desired in surface preparation using abrasive blasting. Media used includes, but is not limited to garnet, illmenite, slags, steel grit, steel shot, water, glass bead and soda. Specific environmental matters include noise, dust and particulate matter, run off, storm water and wastes. The operation and maintenance of compressed air systems and associated items, including emergency shut down procedures, is included. Reference is made to supplier information and specifications as well as accepted and appropriate Australian and International standards. All work and work practices undertaken to regulatory and legislative requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision mechanical measurements or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied. A description of the steps/stages of workplace operations observed and the skills displayed in performing the workplace tasks and the processes understanding involved and described during the assessment. This includes a date record of achievements.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.14A A Apply protective coatings (basic)

Band – Specialisation band A

Field – Surface finishing

Unit Weight 4

Pre-requisite units - Path 1

8.16A Control blast coating by-products, materials and emissions

13.3A Work safely with industrial chemicals and materials

Element 8.14A.1 Determine job requirements

Criteria 8.14A.1.1

Work requirements determined from job sheet, instructions, drawings or visual inspection.

Assessor guide: observe that –

All relevant drawings, job sheets, specifications and instructions are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified and specifications applying to the work can be identified and understood.

Criteria 8.14A.1.2

Required protective coating materials are identified according to job specification.

Assessor guide: observe that –

All relevant information and job requirements are considered.

Assessor guide: confirm that –

All relevant information is interpreted correctly.

Criteria 8.14A.1.3

Required protective coating application equipment identified according to job requirements.

Assessor guide: observe that –

All relevant information and job requirements are considered.

Assessor guide: confirm that –

All relevant information is interpreted correctly.

Criteria 8.14A.1.4

Work site prepared for application of protective coating.

Assessor guide: observe that –

Site is prepared with due regard to OH&S requirements including site safety, clear working space, other materials/structures/personnel in the vicinity, isolation of work site where required.

Assessor guide: confirm that –

Safety issues can be clearly identified and explained, adequate precautions determined and identified, awareness of other site factors that could be affected by the work.

Element 8.14A.2 Work piece prepared for application of protective coating

Criteria 8.14A.2.1

Surface condition inspected for readiness for application of protective coating according to specification.

Assessor guide: observe that –

Inspection is comprehensive and specifications are considered during inspection.

Assessor guide: confirm that –

Deviation from specified surface finish/condition can be identified.

Criteria 8.14A.2.2

Unsuitable work pieces/surfaces and fabrication defects are identified and appropriate remedial action or reporting undertaken in accordance with standard operating procedures.

Assessor guide: observe that –

Standard workplace procedures are used to identify, select and apply the appropriate treatment or actions to rectify items with surface or fabrication defects.

Assessor guide: confirm that –

Standard workplace procedures for identifying unsuitable work items can be followed and explained.

Criteria 8.14A.2.3

Components are masked where protective coating application is not specified.

Assessor guide: observe that –

Surface required as 'no paint areas' identified and protected using standard masking procedures and techniques.

Assessor guide: confirm that –

Method of locating areas to be protected from coating process and masked is understood.

Criteria 8.14A.2.4

Conditions for overspray identified.

Assessor guide: observe that –

Precautions undertaken to prevent overspray in the workplace using standard procedures.

Assessor guide: confirm that –

The areas subject to overspray and requiring protection can be identified and described.

Element 8.14A.3 Equipment prepared for application of surface coating materials

Criteria 8.14A.3.1

Required plant and equipment basic operations understood.

Assessor guide: observe that –

Assessor guide: confirm that –

Operation of plant and equipment using standard operating procedures is understood and can be described.

Criteria 8.14A.3.2

Routine maintenance is undertaken on plant and equipment in accordance with standard operating procedures.

Assessor guide: observe that –

Routine maintenance is undertaken on plant and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Standard operating procedures for plant and equipment maintenance of plant and equipment can be identified and understood.

Criteria 8.14A.3.3

Status/reports recorded by proforma or orally in accordance with standard operating procedures.

Assessor guide: observe that –

All required maintenance records/reports are prepared and details communicated.

Assessor guide: confirm that –

The requirements for completion and processing of maintenance reports are understood.

Criteria 8.14A.3.4

Conventional coating application equipment assembled in accordance with equipment requirements and standard operating procedures.

Assessor guide: observe that –

Equipment is assembled in accordance with manufacturer's specifications and standard operating procedures.

Assessor guide: confirm that –

Assembly specifications and procedures are understood and can be described.

Element 8.14A.4 Apply single pack coatings**Criteria 8.14A.4.1**

Coating product type, solvent, uses, mixing procedure, clean up and safety requirements are identified as appropriate.

Assessor guide: observe that –

Coating type and appropriate solvents identified, standard workplace procedures required for mixing processes, clean-up and safe handling are identified.

Assessor guide: confirm that –

Workplace procedures for identifying coating types and processing solvents, mixing and safe handling practices are understood and can be described.

Criteria 8.14A.4.2

Correct method of determining wet film thickness in accordance with specified dry film is demonstrated.

Assessor guide: observe that –

Workplace procedures are used for determining the wet film thicknesses of a coating from the specified dry film thickness. Required thickness is calculated in accordance with product volume solids.

Assessor guide: confirm that –

The workplace procedures for determining the wet film thickness of a coating from the specified dry film thickness are understood. Calculations can be undertaken using a specified formulation.

Criteria 8.14A.4.3

Coating material is thinned to suit the application method and to achieve required film thickness.

Assessor guide: observe that –

Standard operating procedures are applied for thinning coating materials and the application of the specified film thickness coating to a substrate.

Assessor guide: confirm that –

Standard operating procedure for thinning coating materials for use in applying the specified film thickness coating to a substrate are understood.

Criteria 8.14A.4.4

Coating applied using specified application method and standard operating procedures.

Assessor guide: observe that –

Protective coating is applied to comply with an established standard using specified methods and standard operating procedures.

Assessor guide: confirm that –

Standard operating procedures to apply protective coatings to comply with an established standard are understood.

Criteria 8.14A.4.5

Coating application and curing technique monitored according to standard operating procedure.

Assessor guide: observe that –

Coating application and curing techniques are controlled using standard operating procedures.

Assessor guide: confirm that –

The procedures for controlling coating application and curing techniques are understood.

Element 8.14A.5 Clean and store equipment**Criteria 8.14A.5.1**

Conventional coating application equipment is cleaned, disassembled and inspected for damage.

Assessor guide: observe that –

Disassembly, cleaning and checking for functionality of spraying equipment and associated items is undertaken in accordance with standard operating procedures.

Assessor guide: confirm that –

Standard operating procedure for disassembly, cleaning and checking is understood.

Criteria 8.14A.5.2

Faulty equipment is recorded and reported to appropriate personnel in accordance with standard operating procedures.

Assessor guide: observe that –

Standard operating procedures are used to report on any damage or faulty parts and communication with appropriate personnel is undertaken.

Assessor guide: confirm that –

Standard operating procedures for recording and reporting defective parts are understood.

Criteria 8.14A.5.3

Coating application equipment is stored in accordance with standard operating procedures.

Assessor guide: observe that –

Procedure for storage is followed including any hazard reduction and/or protection of equipment and components.

Assessor guide: confirm that –

Standard operating procedures for storage and protection of equipment are understood and can be described.

Element 8.14A.6 Inspect finish surface**Criteria 8.14A.6.1**

Surface finish assessed for profile size differences and uses.

Assessor guide: observe that –

Surface condition of the work piece, including profile size properties and problems is checked according to standard operating procedures and other acceptable standards.

Assessor guide: confirm that –

The standard operating procedures and other relevant standards for assessing the profile of the surface finish are understood.

Criteria 8.14A.6.2

Coating thickness is determined using appropriate instruments and results compared with job specifications.

Assessor guide: observe that –

Thickness is determined using mechanical, electronic or other appropriate instruments. Test results compared with job specifications, drawings etc.

Assessor guide: confirm that –

Dry film thickness testing instruments can be identified and used.

Criteria 8.14A.6.3

Total surface inspected for conformance to specification in accordance with standard operating procedures.

Assessor guide: observe that –

Inspection is undertaken comprehensively as required by standard operating procedures.

Assessor guide: confirm that –

Standard operating procedures for surface inspection are understood, including the extent and detail of inspection as required.

Criteria 8.14A.6.4

Inspection results are recorded and reported in accordance with standard operating procedures.

Assessor guide: observe that –

All required inspection records/reports are prepared and details communicated.

Assessor guide: confirm that –

The requirements for completion and processing of inspection reports are understood.

Element 8.14A.7 Selected and maintain personal protective equipment (PPE)**Criteria 8.14A.7.1**

Appropriate personal protective equipment for coating application selected according to job requirements and standard operating procedures.

Assessor guide: observe that –

Personal protective equipment, suitable for applying protective coatings is selected.

Assessor guide: confirm that –

The standard procedure for identifying and selecting the required personal protective equipment is understood.

Criteria 8.14A.7.2

Personal protective equipment is used appropriately in accordance with manufacturer's specifications and standard operating procedures.

Assessor guide: observe that –

Appropriate personal protective equipment is used in workplace operations in accordance with standard procedures.

Assessor guide: confirm that –

The workplace standard procedure for the use of personal protective equipment is understood.

Criteria 8.14A.7.3

Ancillary support attachments identified and used.

Assessor guide: observe that –

Select the appropriate supports to use with personal protective equipment in standard operational practices.

Assessor guide: confirm that –

The use and selection of appropriate supports to use with personal protective equipment in standard operational practices is understood.

Criteria 8.14A.7.4

Personal protective equipment is maintained in accordance with manufacturer's specification and standard operating procedures.

Assessor guide: observe that –

Personal protective equipment items are checked for serviceability in accordance with manufacturer's specifications. Faulty items are recorded and reported using standard workplace procedures to appropriate personnel for remedial action.

Assessor guide: confirm that –

The standard procedures and manufacturer's specifications for inspecting and maintaining personal protective equipment in the workplace is understood.

Range statement

This unit is designed to be used where a basic level of skill is desired to spray single pack protective coatings not limited to brush, roller and conventional spray equipment. Work is undertaken autonomously or as part of a team environment using predetermined standards of safety, quality and operating procedures. Specific health and safety matters include interpretation of MSDS warnings, materials sensitivity, hazardous goods, breathable air and introduction of compressed air into the body. Personal protective equipment includes hand protection, full body protection, respirators, air fed hoods and foot protection. Noise and heat protection may also be necessary. Specific understanding is required of given supplier information and product details. Reference is made to supplier information and specifications as well as accepted and appropriate Australian and International standards. All work and work practices undertaken to regulatory and legislative requirements. Where required, unit 11.4A (Undertake dogging/crane chasing) and unit 11.10A (Operate mobile load shifting equipment) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with surface cleaning and coating or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.15A A Apply protective coatings (advanced)

Band – Specialisation band A

Field – Surface finishing

Unit Weight 4

Pre-requisite units - Path 1

8.14A Apply protective coatings (basic)

8.16A Control blast coating by-products, materials and emissions

13.3A Work safely with industrial chemicals and materials

Element 8.15A.1 Determine job requirements

Criteria 8.15A.1.1

Work requirements determined from job sheet, instructions or other specifications in accordance with standard operating procedures.

Assessor guide: observe that –

All relevant drawings, job sheets, specifications and instructions are obtained in accordance with work place procedures. Where appropriate, the surface(s) to be coated are inspected by the individual in accordance with work place procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The specifications applying to the work can be identified and understood.

Criteria 8.15A.1.2

Appropriate coating system and material selected to meet job specification.

Assessor guide: observe that –

Correct coating system and material for the job surface and use is selected.

Assessor guide: confirm that –

Appropriate coating system and material required to meet job specification can be identified. Features of the various types of coating materials, including drying and curing requirements, can be described. Selection procedures for coating material can be described.

Criteria 8.15A.1.3

Appropriate coating process and equipment selected to meet job specification.

Assessor guide: observe that –

Correct coating process and equipment for applying the selected coating material is selected.

Assessor guide: confirm that –

Appropriate coating process and equipment required for surface coating to meet job specification can be identified. Application features of the various types of coating materials, methods, can be described. Selection procedures for coating process and equipment can be described, including conventional, airless and plural component.

Criteria 8.15A.1.4

Work site prepared for surface coating activities.

Assessor guide: observe that –

Site is prepared with due regard to OH&S requirements including site safety, clear working space, other materials/structures/personnel in the vicinity, isolation of work site where required.

Assessor guide: confirm that –

Safety issues can be clearly identified and explained, adequate precautions determined and identified, awareness of other site factors that could be affected by the work.

Element 8.15A.2 Work piece prepared for application of protective coating**Criteria 8.15A.2.1**

Surface condition inspected for readiness for application of protective coating according to specification.

Assessor guide: observe that –

Inspection is comprehensive and specifications are considered during inspection.

Assessor guide: confirm that –

Deviation from specified surface finish/condition can be identified.

Criteria 8.15A.2.2

Unsuitable work pieces/surfaces and fabrication defects are identified and appropriate remedial action or reporting undertaken in accordance with standard operating procedures.

Assessor guide: observe that –

Standard workplace procedures are used to identify, select and apply the appropriate treatment or actions to rectify items with surface or fabrication defects.

Assessor guide: confirm that –

Standard workplace procedures for identifying unsuitable work items can be followed and explained.

Criteria 8.15A.2.3

Components are masked where protective coating application is not specified.

Assessor guide: observe that –

Surfaces required as 'no paint areas' identified and protected using standard masking procedures and techniques.

Assessor guide: confirm that –

Method of locating areas to be protected from coating process and masked is understood.

Criteria 8.15A.2.4

Conditions for overspray identified.

Assessor guide: observe that –

Precautions undertaken to prevent overspray in the workplace using standard procedures.

Assessor guide: confirm that –

The areas subject to overspray and requiring protection can be identified and described.

Element 8.15A.3 Equipment prepared for application of surface coating materials

Criteria 8.15A.3.1

Required plant and equipment basic operations understood.

Assessor guide: observe that –

Assessor guide: confirm that –

Operation of plant and equipment using standard operating procedures is understood and can be described.

Criteria 8.15A.3.2

Routine maintenance is undertaken on plant and equipment in accordance with standard operating procedures.

Assessor guide: observe that –

Routine maintenance is undertaken on plant and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Standard operating procedures for routine maintenance of plant end equipment can be identified and understood.

Criteria 8.15A.3.3

Status/reports recorded by proforma or orally in accordance with standard operating procedures.

Assessor guide: observe that –

All required maintenance records/reports are prepared and details communicated.

Assessor guide: confirm that –

The requirements for completion and processing maintenance reports are understood.

Criteria 8.15A.3.4

Coating application equipment assembled in accordance with equipment requirements and standard operating procedures.

Assessor guide: observe that –

Equipment is assembled in accordance with manufacturer's specifications and standard operating procedures.

Assessor guide: confirm that –

Assemble specifications and procedures are understood and can be described.

Criteria 8.15A.3.5

Personal protective equipment is selected and maintained in accordance with manufacturer's specifications and standard operating procedures.

Assessor guide: observe that –

Appropriate personal protective equipment is selected and maintained in accordance with job requirements, manufacturer's specifications, OH&S requirements and standard operating procedures.

Assessor guide: confirm that –

The procedure for selecting and maintaining personal protective equipment is identified and understood.

Element 8.15A.4 Apply coatings using conventional, airless and plural component equipment

Criteria 8.15A.4.1

Coating product type, solvent, uses, mixing procedure, clean up and safety requirements are identified as appropriate.

Assessor guide: observe that –

Work piece is inspected and any faults identified in accordance with standard operating procedures.

Assessor guide: confirm that –

The inspection procedure is identified and understood. Unsuitable work pieces can be determined in consideration of job specifications.

Criteria 8.15A.4.2

Correct method of determining wet film thickness in accordance with specified dry film is demonstrated.

Assessor guide: observe that –

Workplace procedures are used for determining the wet film thickness of a coating from the specified dry film thickness. Required thickness is calculated in accordance with product volume solids.

Assessor guide: confirm that –

The workplace procedures for determining wet film thickness of a coating from the specified dry film thickness are understood. Calculations can be undertaken using a specified formulation.

Criteria 8.15A.4.3

Coating material is thinned to suit the application to suit the application method and to achieve required film thickness.

Assessor guide: observe that –

Standard operating procedures are applied for thinning coating materials and the application of the specified film thickness coating to a substrate.

Assessor guide: confirm that –

Standard operating procedures for thinning coating materials for use in applying the specified film thickness coating to a substrate are understood.

Criteria 8.15A.4.4

Coating applied using specified application method and standard operating procedures.

Assessor guide: observe that –

Protective coating applied to comply with an established standard using specified methods and standard operating procedures.

Assessor guide: confirm that –

Standard operating procedures to apply protective coatings to comply with an established standard are understood.

Criteria 8.15A.4.5

Coating application and curing technique monitored according to standard operating procedure.

Assessor guide: observe that –

Coating application and curing techniques are controlled using standard operating procedures.

Assessor guide: confirm that –

The procedures for controlling coating application and curing techniques are understood.

Element 8.15A.5 Clean and store equipment**Criteria 8.15A.5.1**

Coating application equipment is cleaned, disassembled and inspected for damage.

Assessor guide: observe that –

Disassembly, cleaning and checking for functionality of spraying equipment and associated items is undertaken in accordance with standard operating procedures.

Assessor guide: confirm that –

Standard operating procedure for disassembly, cleaning and checking is understood.

Criteria 8.15A.5.2

Faulty equipment is recorded and reported to appropriate personnel in accordance with standard operating procedures.

Assessor guide: observe that –

Standard operating procedures are used to report on any damage or faulty parts and communication with appropriate personnel is undertaken.

Assessor guide: confirm that –

Standard operating procedures for recording and reporting defective parts are understood.

Criteria 8.15A.5.3

Coating application equipment is stored in accordance with standard operating procedures.

Assessor guide: observe that –

Procedure for storage is followed including any hazard reduction and/or protection of equipment and components.

Assessor guide: confirm that –

Standard operating procedures for storage and protection of equipment are understood and can be described.

Element 8.15A.6 Inspect finished surface**Criteria 8.15A.6.1**

Surface finish assessed for profile size differences and uses.

Assessor guide: observe that –

Surface condition of the work piece, including profile size properties and problems is checked according to standard operating procedures and other acceptable standards.

Assessor guide: confirm that –

The standard operating procedures and other relevant standards for assessing the profile of the surface finish are understood.

Criteria 8.15A.6.2

Coating thickness is determined using appropriate instruments and results compared with job specifications.

Assessor guide: observe that –

Thickness is determined using mechanical, electronic or other appropriate instruments. Test results compared with job specifications, drawings etc.

Assessor guide: confirm that –

Dry film thickness testing instruments can be identified and used.

Criteria 8.15A.6.3

Total surface inspected for conformance to specification in accordance with standard operating procedures.

Assessor guide: observe that –

Inspection is undertaken comprehensively as required by standard operating procedures.

Assessor guide: confirm that –

Standard operating procedures for surface inspection are understood, including the extent and detail of inspection as required.

Criteria 8.15A.6.4

Inspection results are recorded and reported in accordance with standard operating procedures.

Assessor guide: observe that –

All required inspection records/reports are prepared and details communicated.

Assessor guide: confirm that –

The requirements for completion and processing of inspection reports are understood.

Element 8.15A.7 Calculate, estimate and cost application of protective coating**Criteria 8.15A.7.1**

Surface area of work piece, materials, labour and equipment assessed.

Assessor guide: observe that –

Appropriate inspection and assessment methods used.

Assessor guide: confirm that –

The standard methods and procedures for determining surface area of various shapes of materials are understood and can be described.

Criteria 8.15A.7.2

Cost of materials, labour, handling and equipment determined.

Assessor guide: observe that –

Calculations are undertaken in accordance with standard operating procedures and specifications.

Assessor guide: confirm that –

The standard procedures for calculating costs are identified and understood.

Criteria 8.15A.7.3

Results recorded and reported as an estimate for the application of a protective coating system.

Assessor guide: observe that –

Calculated costs are recorded and reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The standard operating procedures for recording and reporting calculated costs are identified and understood.

Range statement

Work is undertaken autonomously or as part of a team environment using accepted standards for safety, quality and procedures. This unit is designed to be used where an advanced level of skill is desired in all types of spray application protective coatings (including conventional, two pack, plural component). It includes inspection and interpretation of the results using all current industry knowledge and equipment. Test equipment included but not limited to Holiday and Pin Hole testing, wet and dry film thickness gauges, temperature, relative humidity and dew point, hardness, gloss, adhesion and cure testing and soluble salts. Reference is made to supplier information and specifications as well as accepted and appropriate Australian and International standards. All work and work practices undertaken to regulatory and legislative requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision mechanical measurements or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied. A description of the steps/stages of workplace operations observed and the skills displayed in performing the workplace tasks and the process understanding involved and described during the assessment. This includes a date record of achievements.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 8.16A A Control blast coating by-products, materials and emissions

Band – Specialisation band A

Field – Surface finishing

Unit Weight 1

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials

Element 8.16A.1 Apply specific health and safety matters in surface preparation

Criteria 8.16A.1.1

Products, hazardous materials and processes used in blaster cleaning and coating operations can be identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The products, hazardous materials and processes associated with surface preparation and protective coating application can be described. The by-products, materials and emissions created by the blasting and coating process including associated hazards can be described.

Criteria 8.16A.1.2

Ensure appropriate safety procedures are applied.

Assessor guide: observe that –

Control the emissions and by-products relative to the worksite by using the appropriate standard safety procedures for the worksite and the blasting industry.

Assessor guide: confirm that –

Understanding the requirements of safety procedures to be observed when handling, controlling and transporting the by-products.

Criteria 8.16A.1.3

Unsafe working conditions are identified and reported to appropriate personnel.

Assessor guide: observe that –

The workplace's standard operating procedure for reporting unsafe working conditions to appropriate personnel is applied.

Assessor guide: confirm that –

The standard procedure for reporting unsafe working conditions associated with the control of by-products can be identified and understood.

Element 8.16A.2 Control by-products, materials and emissions

Criteria 8.16A.2.1

By-products, materials and emissions are contained using established procedures.

Assessor guide: observe that –

Samples of the by-products are collected as well as the method of storage and eventual removal from site to an appropriate waste treatment facility using standard operating procedures.

Assessor guide: confirm that –

The established procedures for collecting samples and containing workplace by-products and emissions can be identified and understood.

Criteria 8.16A.2.2

By-products, materials and emissions are monitored and directed to appropriate treatment or storage area.

Assessor guide: observe that –

By-product and emissions monitoring and transfer to the specific treatment and storage area is undertaken in accordance with standard operating procedures.

Assessor guide: confirm that –

The by-product collection equipment operation methods and the standard operating procedures for their disposal are understood.

Criteria 8.16A.2.3

Monitoring devices are checked for correct/continuous operation.

Assessor guide: observe that –

The checking of monitoring devices for correct equipment operation is carried out in accordance with manufacturers and standard operating procedures to ensure their continued operation.

Assessor guide: confirm that –

The manufacturer's operational standards for workplace waste control monitoring equipment and procedures for maintenance, identification of malfunction and/or operational wear can be identified and understood.

Criteria 8.16A.2.4

Status/reports recorded and reported.

Assessor guide: observe that –

Monitoring devices checking reports are recorded and reported in accordance with standard operating procedures.

Assessor guide: confirm that –

Procedures for recording and reporting are identified and understood.

Element 8.16A.3 By-product, materials and emissions disposed

Criteria 8.16A.3.1

Waste treatment processes applied in accordance with standard operating procedures.

Assessor guide: observe that –

The waste treatment process is implemented to meet statutory authorities regulations in accordance with standard operating procedures.

Assessor guide: confirm that –

The waste treatment process can be identified and understood.

Criteria 8.16A.3.2

Treatment processes are carried out in accordance with standard operating procedures and to meet authority requirements with regards to waste.

Assessor guide: observe that –

Recording and reporting of all results of waste treatment processes undertaken to standard operating procedures.

Assessor guide: confirm that –

The requirements for accurately recording and reporting are understood and can be described.

Range statement

This unit applies to the identification, evaluation and control of blaster coating by-products, materials and emissions. Work is undertaken autonomously or as part of a team environment using accepted standards for safety, quality and procedures. It includes common containment practices and regulatory waste removal processes, documentation and implementation etc. Reference is made to supplier information and specifications as well as accepted and appropriate Australian and International standards. All work and work practices undertaken to regulatory and legislative requirements.

Evidence guide**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual alone or as part of a team. Assessment should be conducted in the individual's own work environment.

Assessment conditions

Present evidence of credit for any off-the job training related to this unit. All tools, equipment, materials and documentation required; All safety clothing and personal safety equipment. The trainee will be permitted to refer to the following documents: Any relevant workplace procedures; any relevant product and manufacturing specifications. The trainee will be required to orally or by other methods of communication: Answer all questions put by the assessor; perform the tasks described by this guide; within a time frame established between the students supervisor/instructor and the assessor prior to taking this assessment; identify colleagues who can be approached for the collection of evidence where appropriate.

Critical aspects

This unit could be assessed in conjunction with any other units involved in the workplace training which address safety, quality, communication, recording and reporting associated with the control of by-products materials and emissions produced by the blaster coater industry or other units requiring exercise of the skills and knowledge covered by this unit.

Special notes

During assessment, the individual will:- Demonstrate safe working practices at all times; communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; take responsibility for the quality of their own work; plan tasks in all situations and review task requirements as appropriate; perform all tasks in accordance with standard operating procedures; perform all tasks to specifications.

Unit MEM 8.18A A Electroplate engineering coatings

Band – Specialisation band A

Field – Surface finishing

Unit Weight 6

This unit covers the competencies required to apply engineering metallic/ceramic coatings to ferrous and non-ferrous metals and some non-metallic materials eg plastics.

Processes may include electroplating, electroforming, electroless plating. Coatings may include standard hard chroming, heavy nickel, electroless nickel, nickel composites, heavy deposits of nickel, copper, bronze up to 10mm. Straightforward operation/monitoring of electroplating processes, is covered by Unit 8.3A (Perform electroplating operations).

Pre-requisite units - Path 1

7.1A Operational maintenance of machines/equipment	8.1A Wire, jig and barrel load/unload work	8.3A Perform electroplating operations
13.3A Work safely with industrial chemicals and materials	18.1A Use hand tools	

Element 8.18A.1 Select treatments and processes/equipment for producing engineering finishes

Criteria 8.18A.1.1

Appropriate treatment processes are selected according to base metal type, surface condition and relevant job specifications

Assessor guide: observe that –

Material condition is assessed and suitability for plating is determined

Assessor guide: confirm that –

Base materials can be identified including cast iron, brass, steels with machine welded sections Effect of plating process on different materials can be given Effects of conditions that affect engineering finishes, such as porosity, hardness, corrosion, protective films, surface finish of untreated material can be given
Specialised pre-treatment processes relating to base material type, plating process used and engineering finishes can be given

Criteria 8.18A.1.2

Process parameters are selected to achieve required coating

Assessor guide: observe that –

Process parameters are calculated/determined for given task
Current densities are determined/ selected

Assessor guide: confirm that –

Process parameters for current density, temp, agitation rate where necessary, dwell times, etching times, strike times/currents, deposition rate/time can be given Surface areas calculated to apply correct current Requirements for de-embrittlement can be given Specific surface finishes are related to post machining/grinding allowances and other requirements Standards operating procedure, work instructions for pre/post treatments/processes are understood

Criteria 8.18A.1.3

Appropriate equipment is selected

Assessor guide: observe that –

Equipment is selected based on product configuration, product requirements and specifications

Assessor guide: confirm that –

Application of different types of equipment to the type of work processed can be given

Element 8.18A.2 Prepare work for engineering finishes**Criteria 8.18A.2.1**

Products are correctly masked (stopped off) for selective plating

Assessor guide: observe that –

Areas for masking are identified from drawings/instructions
Correct masking materials are selected Products are masked correctly and excess materials removed from area to be plated Masking is continuous i.e. no gaps/ holidays/ porosity/completely covers areas to be excluded from plating process

Assessor guide: confirm that –

Masking materials can be given including wax, lacquers, tapes, foils Masking techniques/ application of materials can be given

Criteria 8.18A.2.2

Where applicable, conforming anodes are constructed and fitted correctly

Assessor guide: observe that –

Anode correctly sized for given job Correct materials used and sufficient current carrying capacity Anode positioned correctly and secured

Assessor guide: confirm that –

Principles of current distribution and role of conforming/ auxiliary anodes can be given Methods of constructing/fabricating and fitting anodes can be given Current capacity of conforming/auxiliary anodes can be given

Criteria 8.18A.2.3

Where applicable shields and robbers are constructed and fitted

Assessor guide: observe that –

Shields and robbers sized correctly Appropriate materials used for given job Shields/robbers positioned/secured correctly

Assessor guide: confirm that –

Principles of current distribution and role of shields and robbers can be given Materials used to construct shields robbers and their properties, applications can be identified Methods for constructing/fabricating can be given Methods of attachment and positioning of shields/robbers in relation to workpiece, to achieve desired current distribution can be given

Criteria 8.18A.2.4

Pre-treatment processes are carried out, where applicable

Assessor guide: observe that –

Mechanical/chemical pre-treatment carried out as appropriate

Assessor guide: confirm that –

Appropriate mechanical/chemical pre-treatment processes can be given

Element 8.18A.3 Monitor and control operating conditions and processes for engineering coatings**Criteria 8.18A.3.1**

Operating parameters are set to produce required surface conditions/specifications

Assessor guide: observe that –

Dwell, etch and plating times are set correctly
Voltages/currents are set correctly for electrolytic operations Solution maintenance requirements are identified
Temperatures are maintained

Assessor guide: confirm that –

Appropriate current densities for etching, striking and plating can be given Surface areas can be calculated and required current computed Solutions can be analysed/tested using simple test including density, titration, pH Additions required to adjust solutions to required strength can be computed Acceptable temperature ranges can be given

Criteria 8.18A.3.2

Surface conditions of finished components are monitored and confirmed and abnormalities identified

Assessor guide: observe that –

Adhesion confirmed, surface appearance checked for pores, inconsistency of plate, correct thickness, hardness and ductility

Assessor guide: confirm that –

Finish requirements and permissible tolerances can be given

Criteria 8.18A.3.3

Corrective actions are taken to rectify non-conforming conditions

Assessor guide: observe that –

Appropriate corrective action is taken including adjusting/solutions/times/reprocessing or additional processing

Assessor guide: confirm that –

Types of abnormalities, their causes and related corrective actions can be given

Element 8.18A.4 Maintain solutions for engineering finishes**Criteria 8.18A.4.1**

Solution compositions are checked and confirmed to specification/operating range

Assessor guide: observe that –

pH, density and titration readings are taken correctly. Solution concentrations are determined from titration test and/or laboratory reports

Assessor guide: confirm that –

The purpose and application of simple tests including pH, titration, density can be given. Solutions, solution compositions and operating ranges for processes relative to engineering coatings can be given, including cleaning/pre-treatment, electroplating and post treatment

Criteria 8.18A.4.2

Adjustment requirements/additions are determined

Assessor guide: observe that –

Required solution additions are calculated

Assessor guide: confirm that –

Calculations for additions/adjustments to solution are understood

Criteria 8.18A.4.3

Additions are made to adjust solution composition to correct operating range

Assessor guide: observe that –

Replenishment chemicals are added correctly. Relevant OH&S requirements are applied when handling chemicals and adding to baths.

Assessor guide: confirm that –

Safe working procedures for handling chemicals relative to engineering finishes and for safely adding to baths are understood. Effects of adding chemicals too quickly (e.g. overheating) can be explained. Procedures for measuring out materials can be given eg use of scales, volumetric measurement devices. Operating parameters of solutions can be given, including temperature, agitation rate and similar parameters

Range statement

This unit covers pre-treatment and application of engineering metallic/ceramic coatings to ferrous and non-ferrous metals and some non-metallic materials eg plastics. Coatings may include hard chroming, heavy nickel, electroless nickel, nickel composites, heavy deposits of nickel, copper, bronze up to 10mm. Application of engineering coatings may relate to wear resistance, corrosion protection, reclamation of worn components, manufacture of components (electroforming). Processes may include electroplating, electroforming, electroless plating. Operating parameters can include treatment times and currents, bath pH temperatures and densities, anode conditions, addition agent content, cleanliness of contacts etc., make-up, maintenance of solution levels and purity. Applicable knowledge of basic electrical principles, basic chemistry, basic electro chemistry, metallurgy, measurement, techniques for plating, impurities and imperfections, corrective actions, solutions and compositions for engineering finishes is included in this unit. Work is performed to established processes, practices, standard operating procedures and specifications. Work is carried out autonomously using pre-determined standards of quality and safety. OHS activities are undertaken to legislative requirements where applicable. All work is undertaken to accepted industry OH&S practices and to legislative requirements where applicable. For surface preparation operations Unit 8.11A (Undertake surface preparation using solvents and/or mechanical means and Unit 8.12A (Prepare surfaces by abrasive blasting (basic)) should be selected as appropriate. Straightforward operation of electroplating process is covered by Unit (8.3A Perform electroplating operations). Where pre-treatment operations only are carried out Unit 8.2A (Pre-treat work for subsequent surface coating) should be selected. For basic inspection of completed or partly completed products produced by others Unit 15.4 (Perform inspection (basic)) should be selected. Where dogging/lifting is undertaken, the appropriate materials handling units should be selected. For construction of anodes, shields/robbars etc, the appropriate fabrication units should be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with electroplating engineering coatings or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

Unit MEM 8.19A A Electroplate protective finishes

Band – Specialisation band A

Field – Surface finishing

Unit Weight 6

This unit covers the competencies required to apply protective finishes to a range of ferrous and non-ferrous materials using processes such as electroplating, electroforming, electroless plating. Typical protective finishes may include copper, nickel, zinc, tin. Straightforward operation/monitoring of electroplating processes, is covered by Unit 8.3A (Perform electroplating operations).

Pre-requisite units - Path 1

7.1A Operational maintenance of machines/equipment

8.1A Wire, jig and barrel load/unload work

8.3A Perform electroplating operations

13.3A Work safely with industrial chemicals and materials

18.1A Use hand tools

Element 8.19A.1 Select treatments and processes/equipment for producing protective finishes

Criteria 8.19A.1.1

Appropriate treatment processes are selected

Assessor guide: observe that –

Base material is identified and appropriate treatment processes are selected according to base metal type, surface condition and relevant job specifications. Material condition is assessed and suitability for plating is determined

Assessor guide: confirm that –

Different base materials and their properties are understood, including cold rolled steel, non ferrous metals. Effect of protective treatment process on different materials can be given. Effects of conditions that affect protective finishes can be given. Different pre-treatment processes and their application can be given. Pre-treatment processes can be related to surface condition of material e.g. heavy scale

Criteria 8.19A.1.2

Process parameters are selected to achieve required finish

Assessor guide: observe that –

Correct process parameters are selected. Current and processing time is calculated and set correctly. Relevant standard operating procedures/ specifications identified and interpreted

Assessor guide: confirm that –

Process parameters can be identified and related to each other, including current density, temperature, agitation rate, process (deposition) time. Differences between chromate conversion coatings can be given. Requirements for de-embrittlement can be given. Post treatment processes can be described. Procedures for pre/process/post treatments can be given

Criteria 8.19A.1.3

Appropriate equipment is selected

Assessor guide: observe that –

Equipment selection is based on product configuration, features, process/ production requirements and specifications

Assessor guide: confirm that –

Application of different equipment to the type of work processed can be given

Element 8.19A.2 Monitor and control protective finish processes and operating conditions**Criteria 8.19A.2.1**

Operating parameters are set to produce required protective finish/specifications

Assessor guide: observe that –

Dwell and plating times are correctly controlled
Appropriate current densities are applied to electrolytic operations Current is computed from surface area of work and current densities Temperatures are controlled within operating parameters Operation of thickness measuring equipment understood

Assessor guide: confirm that –

Process parameters and their meanings can be given, including dwell time, current density, current, temperature Current computations are understood Procedures for testing plate thickness can be given

Criteria 8.19A.2.2

Surface condition of finished components is monitored and confirmed and abnormalities identified

Assessor guide: observe that –

Acceptable appearance of work at each stage of process is known and confirmed at appropriate intervals Conformance to thickness specifications is monitored and confirmed as appropriate

Assessor guide: confirm that –

Acceptable appearances for each stage of operation can be given Different abnormalities can be given Thickness specifications can be given Requirements for chromate or other post treatments can be given

Criteria 8.19A.2.3

Corrective actions are taken to rectify non-conforming conditions

Assessor guide: observe that –

Corrective action taken as appropriate including adjusting/solutions/times/reprocessing or additional processing

Assessor guide: confirm that –

Types of defects, their causes and related corrective actions can be given

Criteria 8.19A.2.4

Pre-treatment processes are carried out, where applicable

Assessor guide: observe that –

Mechanical/chemical pre-treatment carried out as appropriate

Assessor guide: confirm that –

Appropriate mechanical/chemical pre-treatment processes can be given

Element 8.19A.3 Maintain solutions for protective finishes**Criteria 8.19A.3.1**

Solution compositions are checked and confirmed to specification/operating range

Assessor guide: observe that –

Concentration and pH is determined by simple testing procedures

Assessor guide: confirm that –

The purpose and application of simple tests incl pH and concentration can be given Solutions, solution compositions and operating ranges for processes relative to protective finishes can be given, including cleaning/pre-treatment, electroplating and post treatment

Criteria 8.19A.3.2

Adjustment requirements/additions identified

Assessor guide: observe that –

Required chemical/solution additions are correctly calculated Replenishment schedule for brighteners is applied correctly

Assessor guide: confirm that –

Calculations for additions/adjustments to solution are understood Use of replenishment schedule for brighteners is understood

Criteria 8.19A.3.3

Additions made to adjust solution composition to correct operating range

Assessor guide: observe that –

Replenishment chemicals are added correctly Relevant OH&S requirements are applied when handling chemicals and adding to baths

Assessor guide: confirm that –

Safe working procedures for handling chemicals relative to protective finishes and for safely adding to baths are understood Effects of adding chemicals too quickly (e.g. overheating) can be explained Procedures for measuring out materials can be given eg use of scales, volumetric measurement devices Operating parameters of solutions can be given, including temperature, agitation rate and similar parameters

Criteria 8.19A.3.4

Purification procedures are carried out as appropriate

Assessor guide: observe that –

Purification procedures appropriate to impurities/contamination undertaken

Assessor guide: confirm that –

Purification procedures for protective finish solutions are understood, including filtration, electrolytic treatments, chemical precipitation and zinc dust treatments Level of impurities and permissible limits can be given Effects of impurities can be explained

Criteria 8.19A.3.5

Anodes are maintained to ensure correct operation

Assessor guide: observe that –

Anode baskets/bags and anode materials are replaced, replenished and sufficient anode/ cathode ratio ensured Anode checked for satisfactory working condition

Assessor guide: confirm that –

Different anode arrangements incl use of baskets & bags, conforming anodes can be given Correct performance of anodes and operating conditions understood

Element 8.19A.4 Maintain equipment for protective finishes**Criteria 8.19A.4.1**

Performance of ancillary equipment is checked and remedial actions taken as necessary

Assessor guide: observe that –

Performance of various ancillary equipment is checked, including correct operation/ control of anodes Remedial action is taken according to standard operating procedures

Assessor guide: confirm that –

Correct operation of anodes and appropriate remedial action is understood Correct operation and cleaning requirements of cleaning filters is understood Performance requirements and basic maintenance checks for rectifier, bus bars, agitation, heating/cooling, extraction and tank linings understood Effect of maintenance schedules on plant performance can be given

Criteria 8.19A.4.2

Electrical contacts are maintained

Assessor guide: observe that –

Condition of electrical contacts is checked and correct operation confirmed Corrective action is taken to rectify faults

Assessor guide: confirm that –

Methods for detecting unsatisfactory contact are understood eg heat, fluctuating current readings Importance of maintaining satisfactory electrical contact can be explained

Criteria 8.19A.4.3

Process transfer equipment is maintained

Assessor guide: observe that –

Condition of racks, jigs & barrels checked Build up on cathode contacts stripped as required and equipment maintained in serviceable condition . Condition of rack coating is monitored and racks placed out of service for recoating as per standard operating procedure

Assessor guide: confirm that –

Effects of build up on cathode contacts and damage to rack coatings can be given

Range statement

This unit covers pre-treatment and application of protective finishes to a range of ferrous and non-ferrous materials using processes such as electroplating, electroforming, electroless plating. Typical protective finishes may include copper, nickel, zinc, tin. Typical applications would include wear resistance, corrosion protection, reclamation of worn components, manufacture of components (electroforming). Processing may apply to manual, semi or fully automatic still or barrel plating environments and may include volume production and "one-off" components. Operating parameters can include calculation and setting of treatment times and currents, bath pH, temperatures and densities, solution levels and compositions, purification procedures. Maintenance of solutions includes typical tests for pH and concentration, calculation of adjustments to relevant solutions. Maintenance of process equipment includes anode condition, electrical contacts etc. Use of plating techniques, solutions and compositions for protective finishes, recognition and assessment of impurities and imperfections and associated corrective actions are integral to all applications. Basic principles of chemistry, electro chemistry and metallurgy apply to this level of work as part of this unit. Work undertaken autonomously or in a team environment using predetermined standards of quality, safety. All work is undertaken to accepted industry OH&S practices and to legislative requirements where applicable. For surface preparation operations Unit 8.11A (Undertake surface preparation using solvents and/or mechanical means) and Unit 8.12A (Prepare surfaces by abrasive blasting (basic)) should be selected as appropriate. Straightforward operation of electroplating process is covered by Unit (8.3A Perform electroplating operations). Where pre-treatment operations only are carried out Unit 8.2A (Pre-treat work for subsequent surface coating) should be selected. For basic inspection of completed or partly completed products produced by others Unit 15.4 (Perform inspection (basic)) should be selected. Where dogging/lifting is undertaken, the appropriate units materials handling units should be selected. For construction of anodes, shields/robbars etc, the appropriate fabrication units should be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with electroplating protective finishes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

Unit MEM 8.20A A Electroplate decorative finishes

Band – Specialisation band A

Field – Surface finishing

Unit Weight 6

This unit covers the competencies required to apply decorative finishes to a range of ferrous and non-ferrous materials using processes such as electroplating, electroforming, electroless plating. Typical decorative finishes may include copper, nickel, zinc, tin. Straightforward operation/monitoring of electroplating processes, is covered by Unit 8.3A (Perform electroplating operations).

Pre-requisite units - Path 1

7.1A Operational maintenance of machines/equipment	8.1A Wire, jig and barrel load/unload work	8.3A Perform electroplating operations
13.3A Work safely with industrial chemicals and materials	18.1A Use hand tools	

Element 8.20A.1 Select treatments and processes/equipment for producing protective finishes

Criteria 8.20A.1.1

Appropriate treatment processes are selected according to base metal type, surface condition and relevant job specifications

Assessor guide: observe that –

Base metal is identified, condition is assessed and suitability for plating is determined Pretreatment selected according to base metal type, surface condition and relevant job specifications

Assessor guide: confirm that –

Specific pre-treatments for common base metals and soils can be given, including degreasing, soak/cleaning, electrolytic cleaning, activating dips Pre-treatment processes can be related to surface condition of material Different base metals and their properties are understood Effect of decorative treatment process on different metals can be given Effects of conditions that affect decorative finishes can be given

Criteria 8.20A.1.2

Mass treatment processes are selected and carried out, where applicable

Assessor guide: observe that –

Surface condition assessed suitable for plating Appropriate mass treatment process selected Treatment operation carried out correctly

Assessor guide: confirm that –

Different mechanical pretreatment processes are understood

Criteria 8.20A.1.3

Pre-plating treatments identified

Assessor guide: observe that –

The need for strikes/activation treatment is identified Need for copper undercoat or equivalent is identified

Assessor guide: confirm that –

The functions of strikes/activation treatment can be given Copper or equivalent pre-plate processes can be identified for specific base metals

Criteria 8.20A.1.4

Process parameters are selected to achieve required coating

Assessor guide: observe that –

Correct process parameters are selected. Current and processing time is calculated and set correctly. Relevant standard operating procedures/ specifications performance requirement of finish identified and interpreted Plating sequence is selected to achieve desired specification and/or service requirements of the finish

Assessor guide: confirm that –

Process parameters can be identified and related to each other, including current density, temperature, agitation rate, process (deposition) time Post treatment processes can be described Procedures for pre/process/post treatments can be given Applicable Australian Standards covering selection of type, coatings and thickness requirements for interior and external service conditions can be given

Criteria 8.20A.1.5

Appropriate equipment is selected

Assessor guide: observe that –

Equipment selection is based on product configuration, features, process/ production requirements and specifications

Assessor guide: confirm that –

Application of different equipment to the type of work processed can be given

Element 8.20A.2 Monitor and control decorative finish processes and operating conditions

Criteria 8.20A.2.1

Operating parameters are set to produce required decorative finish/specifications

Assessor guide: observe that –

Appropriate current densities are applied Current is computed from surface area of work and current densities Temperatures and agitation are controlled within operating parameters

Assessor guide: confirm that –

Process parameters and their meanings can be given, including , current density, voltage, temperature and agitation Current computations are understood Effects of parameters on performance understood

Criteria 8.20A.2.2

Plate appearance and final finish is monitored and confirmed and abnormalities identified

Assessor guide: observe that –

Plate appearance is monitored and confirmed at each plating stage Acceptable appearance of work at each stage of process is known and confirmed at appropriate intervals Conformance to specifications/customer requirements is monitored and confirmed as appropriate

Assessor guide: confirm that –

Acceptable appearances for each stage of operation and for final specification/quality can be given. Different abnormalities associated with decorative plating and their causes can be given including poor/uneven brightness/texture, inadequate levelling, roughness, pitting, poor adhesion, blistering, burning poor plate coverage (particularly chromium), incorrect colour (particularly flash brass, gold) Thickness specifications can be given Requirements for post treatments can be given

Criteria 8.20A.2.3

Corrective actions are taken to rectify non-conforming conditions

Assessor guide: observe that –

Corrective action taken as appropriate including adjusting/solutions/times/reprocessing or additional processing

Assessor guide: confirm that –

Types of defects, their causes and related corrective actions can be given

Criteria 8.20A.2.4

Pre-treatment processes are carried out, where applicable

Assessor guide: observe that –

Mechanical/chemical pre-treatment carried out as appropriate.

Assessor guide: confirm that –

Appropriate mechanical/chemical pre-treatment processes can be given.

Criteria 8.20A.2.5

Racks, jigs and barrels checked for correct loading

Assessor guide: observe that –

Correct loading of racks, jigs and barrels is determined according to conditions and factors affecting plate distribution

Assessor guide: confirm that –

Factors affecting plate distribution are understood Suitability of racks/jigs can be related to different conditions

Element 8.20A.3 Maintain solutions for decorative finishes**Criteria 8.20A.3.1**

Solution compositions are checked and confirmed to specification/operating range

Assessor guide: observe that –

PH, temperature and titration is determined by simple testing procedures

Assessor guide: confirm that –

The purpose and application of simple control tests including PH, temperature and titration can be given Solutions, solution compositions and operating ranges for processes relative to decorative finishes can be given, including cleaning/pre-treatment, plating and post treatment

Criteria 8.20A.3.2

Adjustment requirements/additions identified

Assessor guide: observe that –

Test results are interpreted correctly Required chemical/solution additions are correctly calculated Replenishment schedule for brighteners/additives is applied correctly

Assessor guide: confirm that –

Calculations for additions/adjustments to solution are understood Use of replenishment schedule for brighteners/additives is understood

Criteria 8.20A.3.3

Additions made to adjust solution composition to correct operating range

Assessor guide: observe that –

Replenishment chemicals are added correctly. Relevant OH&S requirements are applied when handling chemicals and adding to baths.

Assessor guide: confirm that –

Safe working procedures for handling chemicals relative to decorative finishes and for safely adding to baths are understood Effects of adding chemicals too quickly (e.g. overheating) can be explained Procedures for measuring out materials can be given eg use of scales, volumetric measurement devices Operating parameters of solutions can be given, including temperature, agitation rate and similar parameters

Criteria 8.20A.3.4

Purification procedures are carried out as appropriate

Assessor guide: observe that –

Purification procedures appropriate to impurities/contamination undertaken

Assessor guide: confirm that –

Purification procedures/treatments, plating out, carbon and chemical treatments for decorative finish solutions are understood Level of impurities and permissible limits can be given Effects of impurities can be given

Criteria 8.20A.3.5

Anodes are maintained to ensure correct operation

Assessor guide: observe that –

Anode baskets/bags and anode materials are replaced, replenished and sufficient anode/cathode ratio ensured. Anode checked for satisfactory working condition

Assessor guide: confirm that –

Different anode arrangements incl use of baskets & bags, conforming anodes can be given. Correct performance of anodes and operating conditions understood

Element 8.20A.4 Maintain equipment for decorative finishes**Criteria 8.20A.4.1**

Performance of ancillary equipment is checked and remedial actions taken as necessary

Assessor guide: observe that –

Performance of various equipment is checked, including correct operation/ control of anodes, operation of filtration equipment, rectifier, bus bars, agitation, heating/cooling, extraction and tank linings Remedial action is taken according to standard operating procedures

Assessor guide: confirm that –

Correct operation of anodes and appropriate remedial action is understood Correct operation and cleaning requirements of cleaning filters is understood Performance requirements and basic maintenance checks for rectifier, bus bars, agitation, heating/cooling, extraction and tank linings understood Effect of maintenance schedules on plant performance can be given

Criteria 8.20A.4.2

Electrical contacts are maintained

Assessor guide: observe that –

Condition of electrical contacts is checked and correct operation confirmed. Corrective action is taken to rectify faults.

Assessor guide: confirm that –

Methods for detecting unsatisfactory contact are understood eg heat, fluctuating current readings. Importance of maintaining satisfactory electrical contact can be explained

Criteria 8.20A.4.3

Process transfer equipment is maintained

Assessor guide: observe that –

Condition of racks, jigs & barrels checked. Build up on cathode contacts stripped as required and equipment maintained in serviceable condition. Condition of rack coating is monitored and racks placed out of service for recoating as per standard operating procedure

Assessor guide: confirm that –

Effects of build up on cathode contacts and damage to rack coatings can be given.

Range statement

This unit covers the application of decorative finishes to a range of ferrous and non-ferrous materials using processes such as electroplating, electroforming, electroless plating, electrophoretic coating. Typical decorative finishes would include nickel, chrome, copper, silver, gold and rhodium. Typical applications would include household fittings, hardware, artifacts and accessories. Processing may apply to manual, semi or fully automatic still or barrel plating environments and may include volume production and "one-off" components. Operating parameters can include calculation and setting of treatment times and currents, bath pH, temperatures and densities, solution levels and compositions, purification procedures. Maintenance of solutions includes typical tests for pH density and titration, calculation of adjustments to relevant solutions. Maintenance of process equipment includes anode condition, electrical contacts etc. Use of plating techniques, solutions and compositions for decorative finishes, recognition and assessment of impurities and imperfections and associated corrective actions are integral to all applications. Basic principles of chemistry, electro chemistry and metallurgy apply to this level of work. Work undertaken autonomously or in a team environment using predetermined standards of quality, safety. For pre-treatment operations Unit 8.11 Undertake surface preparation using solvents and/or mechanical means and/or Unit 8.12 Prepare surfaces by abrasive blasting (basic) should be selected. For basic inspection of completed or partly completed products produced by others unit 15.4 Perform inspection (basic) should be selected. All work is undertaken to accepted industry OH&S practices and to legislative requirements where applicable. Where dogging/lifting is undertaken, the appropriate units materials handling units should be selected. For construction of anodes, shields/robbars etc, the appropriate fabrication units should be selected. For straightforward operation/monitoring of electroplating processes, unit 8.3A Perform electroplating operations should be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with electroplating decorative finishes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

Unit MEM 9.1A A Draw and interpret sketch

Band – Specialisation band A

Field – Drawing, drafting & design

Unit Weight 2

Element 9.1A.1 Prepare freehand sketch

Criteria 9.1A.1.1

Sketch correctly and appropriately drawn.

Assessor guide: observe that –

The sketch is correctly drawn with appropriate views where applicable.

Assessor guide: confirm that –

The object(s) to be sketched can be identified. The number of views necessary to convey all relevant information about the objects to be sketched can be identified.

Criteria 9.1A.1.2

Sketch depicts object or part.

Assessor guide: observe that –

The object is appropriately represented in the sketched view(s). Where appropriate, the objects represented in the sketch are correctly labelled and/or identified.

Assessor guide: confirm that –

Assessor guide: confirm that –

Criteria 9.1A.1.3

Dimensions obtained correctly.

Assessor guide: observe that –

The dimensions of the object are obtained correctly using appropriate measuring techniques/instruments. The units of measurement used in preparing the sketch are clearly identified.

The measuring techniques/instruments to be used to obtain the dimensions of the object can be identified. The reasons for selecting the chosen measuring techniques/instruments can be explained.

Criteria 9.1A.1.4

Dimensions shown clearly.

Assessor guide: observe that –

All necessary dimensions are shown clearly on the sketch.

Assessor guide: confirm that –

The key dimensions to be conveyed by the sketch can be identified.

Criteria 9.1A.1.5

Instructions shown clearly.

Assessor guide: observe that –

All necessary instructions/ information is conveyed by the appropriate use of notes in the sketch.

Assessor guide: confirm that –

The information/instructions to be conveyed by the sketch can be identified. Where appropriate, symbols to be used in the sketch and their purpose/meaning are identified.

Criteria 9.1A.1.6

Base line or datum point indicated.

Assessor guide: observe that –

Where appropriate, the base line, centre line and/or datum point for the object is clearly indicated on the sketch.

Assessor guide: confirm that –

The function of base lines, centre lines and datum points can be explained. The appropriate base line, centre line and/or datum point for the object being sketched can be identified.

Element 9.1A.2 Interpret details from freehand sketch**Criteria 9.1A.2.1**

Components, assemblies or objects recognised as required.

Assessor guide: observe that –

Assessor guide: confirm that –

Where appropriate, the relationship between the views contained in the sketch can be identified. The number of objects represented in the sketch can be identified. The objects represented in the sketch can be correctly identified.

Criteria 9.1A.2.2

Dimensions identified as appropriate to field of employment.

Assessor guide: observe that –

Assessor guide: confirm that –

The units of measurement used in the preparation of the sketch can be identified. The dimensions of the key features of the object(s) depicted in the sketch can be correctly identified.

Criteria 9.1A.2.3

Instructions identified and followed as required.

Assessor guide: observe that –

Assessor guide: confirm that –

The instructions contained in the sketch can be identified. The actions to be undertaken in response to those instructions can be given.

Criteria 9.1A.2.4

Material requirements identified as required.

Assessor guide: observe that –

Assessor guide: confirm that –

Where appropriate, the materials from which the object(s) are made can be identified from the sketch.

Criteria 9.1A.2.5

Symbols recognised as appropriate in sketch.

Assessor guide: observe that –

Assessor guide: confirm that –

Where appropriate, any symbols used in the sketch can be identified and correctly interpreted.

Range statement

Sketches may be applied to any of the full range of engineering disciplines. Sketches will consist of a single plane drawing with dimensions and specifications gained by hand measuring equipment. The level of symbol knowledge applied in this unit will be appropriate to the field and level of employment of the person interpreting the sketch. Where any drawing sketch, chart, diagram is only used as the technique for communication then this unit does not apply, see Unit 1.1F (Undertake interactive workplace communication).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the drawing and interpretation of sketches or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 9.2A A Interpret technical drawing

Band – Specialisation band A

Field – Drawing, drafting & design

Unit Weight 4

Element 9.2A.1 Interpret technical drawing

Criteria 9.2A.1.1

Components, assemblies or objects recognised as required.

Assessor guide: observe that –

Assessor guide: confirm that –

The relationship between the views contained in the drawing can be identified. The number of objects/components contained in the drawing can be identified. The objects represented in the drawing can be correctly identified.

Criteria 9.2A.1.2

Dimensions identified as appropriate to field of employment.

Assessor guide: observe that –

Assessor guide: confirm that –

The units of measurement used in the preparation of the drawing can be identified. The dimensions of the key features of the objects depicted in the drawing can be correctly identified.

Criteria 9.2A.1.3

Instructions identified and followed as required.

Assessor guide: observe that –

Assessor guide: confirm that –

The instructions contained in the drawing can be identified. The actions to be undertaken in response to those instructions can be given.

Criteria 9.2A.1.4

Material requirements identified as required.

Assessor guide: observe that –

Assessor guide: confirm that –

The materials from which the object(s) are made can be identified from the drawing.

Criteria 9.2A.1.5

Symbols recognised as appropriate in drawing.

Assessor guide: observe that –

Assessor guide: confirm that –

Any symbols used in the drawing can be identified and interpreted correctly.

Element 9.2A.2 Select correct technical drawing**Criteria 9.2A.2.1**

Drawing checked and validated against job requirements or equipment.

Assessor guide: observe that –

The drawing is checked against job requirements/related equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking and validating drawings against job requirements and/or the related equipment can be given. The reasons for validating the drawing against the job requirements and/or related equipment can be explained.

Criteria 9.2A.2.2

Drawing version checked and validated.

Assessor guide: observe that –

The drawing version is confirmed as being current in accordance with standard operating procedures. Where appropriate, the current version of the drawing is obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The version of the drawing can be identified. The source of information with respect to the current version of the drawing can be identified. The procedures for obtaining current versions of drawings can be given. The reasons for validating that the current version of the drawing is being used can be explained.

Range statement

Technical drawing interpretation is applied to any of the full range of engineering disciplines. Technical drawings may utilise perspective, exploded views or hidden view techniques. Drawings are provided to Australian Standard 1100 and/or Australian Standard 1102 and their equivalents from the full range of engineering disciplines. Standard symbols to Australian Standard 1100 and/or Australian Standard 1102 or equivalent as above, are recognised in field of employment. Technical drawings may include symbol glossaries. Where interpretation of any drawing sketch, chart, diagram is required and is provided at a lower level than Australian Standard 1100/Australian Standard 1102 or their equivalent then these skills are covered by Unit 9.1A (Draw and interpret sketch). Where any drawing sketch, chart, diagram is only used as the technique for communication then this unit does not apply, see Unit 1.1F (Undertake interactive workplace communication).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the interpretation of technical drawings or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 9.3A A Prepare basic engineering drawing

Band – Specialisation band A

Field – Drawing, drafting & design

Unit Weight 8

Pre-requisite units - Path 1

9.2A Interpret technical drawing

Element 9.3A.1 Identify drawing requirements

Criteria 9.3A.1.1

Requirements and purpose of drawing determined from customer and/or work specification and associated documents.

Assessor guide: observe that –

All relevant job requirements and specifications are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The requirements and purpose of the drawing to be produced can be identified. The requirements and purpose of the engineering parts list can be identified.

Criteria 9.3A.1.2

Identify and collect all data necessary to produce the drawing.

Assessor guide: observe that –

All relevant data/information necessary to produce the drawing is obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The data/information necessary to produce the drawing can be identified. The purpose(s) for which the data/information is to be obtained can be given. The sources of relevant data/ information can be identified.

Criteria 9.3A.1.3

Drawing requirements confirmed with relevant personnel and timeframes for completion established.

Assessor guide: observe that –

Assessor guide: confirm that –

The timeframe for completion of the drawing(s) can be given. The person(s) who can confirm drawing requirements can be identified.

Element 9.3A.2 Prepare or make changes to engineering drawing

Criteria 9.3A.2.1

Select drafting equipment appropriate to the drawing method chosen.

Assessor guide: observe that –

The drafting equipment used to produce the drawing is appropriate to the drawing method chosen.

Assessor guide: confirm that –

The method of drawing preparation can be identified. The reasons for selecting the chosen drawing method can be given. The drafting equipment necessary to prepare the drawing using the method chosen can be identified.

Criteria 9.3A.2.2

Apply drafting principles to produce a drawing that is consistent with standard operating procedures within the enterprise.

Assessor guide: observe that –

The drawing produced/changed is in conformance with the relevant standard.

Assessor guide: confirm that –

The procedures for producing an initial drawing can be given. The procedures for changing an existing drawing can be given. The drafting principles to be applied to the production/changing of a drawing can be given. The standards to which the drawing is to be produced can be identified.

Criteria 9.3A.2.3

Undertake all work safely and to prescribed procedure.

Assessor guide: observe that –

All work is undertaken safely and in accordance with workplace procedures.

Assessor guide: confirm that –

Criteria 9.3A.2.4

Completed drawing is approved in accordance with standard operating procedures.

Assessor guide: observe that –

The completed drawing is approved in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking and approving drawings can be given. The persons responsible for checking and approving drawings can be identified.

Element 9.3A.3 Prepare engineering parts list**Criteria 9.3A.3.1**

Components parts identified and organised by component type and/or in accordance with organisation/customer requirements.

Assessor guide: observe that –

The component parts list is produced with part name, description of part, material specification or part number, quantities and all other details specified by the customer and/or organisational procedures.

Assessor guide: confirm that –

The consequences of inappropriate/incomplete components parts lists can be explained.

Element 9.3A.4 Issue drawing**Criteria 9.3A.4.1**

Complete drawings and or parts lists records in accordance with standard operating procedures.

Assessor guide: observe that –

Completed drawings and or parts lists are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording completed drawings and or parts lists can be given. The reasons for recording completed drawings and or parts lists can be explained.

Criteria 9.3A.4.2

Copy/issue approved drawings and or parts lists to relevant personnel in accordance with standard operating procedures.

Assessor guide: observe that –

Where appropriate, approved drawings and or parts lists are copied in accordance with standard operating procedures. Where appropriate, approved drawings and or parts lists are issued to relevant personnel in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for copying approved drawings and or parts lists can be given. The procedures for issuing approved drawings and or parts lists can be given. The personnel to whom copies of approved drawings and or parts lists can be issued can be identified.

Criteria 9.3A.4.3

Approved drawings and or parts lists stored and catalogued in accordance with standard operating procedures.

Assessor guide: observe that –

The approved drawings and or parts lists is appropriately handled and stored in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for filing approved drawings and or parts lists can be given. The procedures for safe handling and storage of drawings and or parts lists can be given. The consequences of inappropriate handling and storage of approved drawings and or parts lists can be explained.

Range statement

This unit applies to any of the full range of engineering disciplines. Drafting and drawing equipment includes the use of Computer Aided Drafting systems. Where a more extensive Computer Aided Drafting System is used for design, then Unit 9.9B (Create 2D drawings using computer aided design system), should also be considered. Applied to the fields of mechanical, electrical/electronic, fabrication, fluid power. Specifications may be obtained from design information, customer ideas/concepts/expectations/requirements, sketches, preliminary layouts. Consultations may include reference to appropriate personnel including technical supervisory, manufacturers, suppliers, contractors, customers, etc. Drawing records may include cataloguing, issuing security classifications, filing, preparing distribution lists. Drawings, copies may be issued in hard copy, photographic, slide or transparency form including presentation as a single drawing and/or with other drawings, support documentation as a package.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the preparation of basic engineering drawings or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 9.4B A Electrical/electronic detail drafting

Band – Specialisation band B

Field – Drawing, drafting & design

Unit Weight 8

Pre-requisite units - Path 1

9.2A Interpret technical drawing

9.3A Prepare basic engineering drawing

Element 9.4B.1 Prepare/make changes to electrical/electronic schematics and drawings

Criteria 9.4B.1.1

Schematic drawn to indicate relative positioning of electrical/electronic components.

Assessor guide: observe that –

The electrical/electronic schematic is drawn correctly and indicates the relative position of the components.

Assessor guide: confirm that –

The relative position of the electrical/electronic components can be identified. The symbols used in electrical/electronic schematics and drawings can be correctly identified.

Criteria 9.4B.1.2

Electrical/electronic drawings produced to include all relevant specifications.

Assessor guide: observe that –

The electrical/electronic drawings produced include all relevant specifications.

Assessor guide: confirm that –

The specifications of all components can be identified. The circuit specifications can be identified.

Criteria 9.4B.1.3

Schematic/drawing completed to Australian Standard 1102 or equivalent.

Assessor guide: observe that –

Electrical/electronic schematics/drawings are produced in conformance with AS1102 or equivalent.

Assessor guide: confirm that –

The requirements of AS1102 or equivalent with respect to electrical/electronic schematics/drawings can be identified.

Element 9.4B.2 Determine component and/or material requirement

Criteria 9.4B.2.1

Components and/or materials are selected from supplier/manufacturer's catalogues using design specifications.

Assessor guide: observe that –

The circuit/component specifications are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The design specifications of the circuit/components can be identified. The appropriate components and materials are selected from supplier/manufacturers' catalogues. The reasons for selecting the chosen components and/or materials can be given.

Range statement

This unit applies to the production of drawings produced under supervision, in accordance with instructions and specifications to Australian Standard 1102 or equivalent using predetermined design specifications. Drawings include plans, schematics, layouts, circuit diagrams and charts. This unit applies to all electrical/electronic areas. Manual drafting or drawing equipment is used or where a CAD system is used, Unit 9.9B (Create 2D drawings using computer aided design system) and/or Unit 9.10B (Create 3D models using computer aided design system) should also be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the preparation of basic engineering drawings or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 9.5A A Basic engineering detail drafting

Band – Specialisation band A

Field – Drawing, drafting & design

Unit Weight 8

Pre-requisite units - Path 1

9.2A Interpret technical drawing

9.3A Prepare basic engineering drawing

Element 9.5A.1 Prepare assembly, layout and detail drafting

Criteria 9.5A.1.1

Drawings prepared in plane orthogonal, isometric projection or equivalent including auxiliary views and sections to Australian Standard 1100.

Assessor guide: observe that –

Drawings are prepared using appropriate projections and views in accordance with AS1100 or equivalent.

Assessor guide: confirm that –

The appropriate projection for the drawing purpose can be identified. The reasons for selecting the chosen projection can be given. The reasons for including auxiliary views in drawings can be given.

Criteria 9.5A.1.2

Layout, assembly and component drawings are prepared from specification.

Assessor guide: observe that –

Layout, assembly and component drawings are produced in conformance with specification.

Assessor guide: confirm that –

The specifications for the components, layout and/or assembly can be identified.

Criteria 9.5A.1.3

Drawings dimensioned and labelled using supplied tolerances in accordance with Australian Standard 1100.

Assessor guide: observe that –

All relevant dimensions, tolerances and instructions are included in the drawing.

Assessor guide: confirm that –

The dimensions, tolerances and instructions relevant to the component, layout and/or assembly can be identified. The requirements of AS1100 or equivalent with respect to dimensions, tolerances and labels can be identified.

Criteria 9.5A.1.4

Drawing produced to specification in accordance with standard operating procedures.

Assessor guide: observe that –

Drawings are produced to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for producing component, layout and/or assembly drawings can be given. The drawing specifications can be identified.

Criteria 9.5A.1.5

Standard symbols to Australian Standard 1100 or equivalent are used to specify requirements.

Assessor guide: observe that –

Standard symbols in accordance with AS1100 or equivalent are appropriately used in the drawings produced.

Assessor guide: confirm that –

The reasons for using symbols in drawings can be explained. The common symbols used in drawings to AS1100 or equivalent can be identified and interpreted correctly.

Element 9.5A.2 Determine component and/or material requirement**Criteria 9.5A.2.1**

Components and/or materials are selected from supplier/manufacturer's catalogues using design specifications.

Assessor guide: observe that –

The component specifications are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The design specifications of the component can be identified. The appropriate components and materials are selected from supplier/ manufacturers' catalogues. The reasons for selecting the chosen components and/or materials can be given.

Range statement

This unit applies to the production of drawings to Australian Standard 1100 or equivalent where the critical dimensions and associated tolerances and design specifications are predetermined. Manual drafting or drawing equipment is used or where a CAD (Computer aided design) system is used, Unit 9.9B (Create 2D drawings using computer aided design system) and/or Unit 9.10B (Create 3D models using computer aided design system) should also be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with engineering detail drafting or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 9.6B A Advanced engineering detail drafting

Band – Specialisation band B

Field – Drawing, drafting & design

Unit Weight 4

Pre-requisite units - Path 1

9.2A Interpret technical drawing

9.3A Prepare basic engineering drawing

9.5A Basic engineering detail drafting

Element 9.6B.1 Prepare assembly, layout and detail drawing

Criteria 9.6B.1.1

Specification requirements determined.

Assessor guide: observe that –

All relevant work instructions, requirements are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The specifications and/or requirements of the component, assembly or layout to be drawn can be identified.

Criteria 9.6B.1.2

Engineering calculations undertaken to determine all dimensions including limits and fits, surface texture, datum references and geometric tolerances where appropriate to ensure functional operation and suitability.

Assessor guide: observe that –

Assessor guide: confirm that –

The functional operation of the component/assembly to be drawn can be identified. Surfaces which are to be in contact or separated can be identified. The appropriate type of fit for contacting surfaces can be identified. The reasons for selecting the chosen type of fit can be given. The effect of surface finish on the performance/operation of surfaces can be identified. Appropriate datum points can be identified. All appropriate lineal, diametral and geometric tolerances are calculated in accordance with standard operating procedures. The procedures for determining tolerances can be given.

Criteria 9.6B.1.3

All drawings produced to Australian Standard 1100 or equivalent.

Assessor guide: observe that –

All drawings are produced in accordance with AS1100 or equivalent.

Assessor guide: confirm that –

The requirements of AS1100 or equivalent for the drawing(s) to be produced can be identified.

Element 9.6B.2 Interpret specifications and select material, components and/or assemblies**Criteria 9.6B.2.1**

Components, material and/or assemblies selected from data sheets or manufacturers' catalogue to meet specifications.

Assessor guide: observe that –

All relevant data sheets, catalogues, etc. are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The specifications of the components, materials and/or assemblies can be identified. The appropriate components and materials are selected from supplier/manufacturers' catalogues. The reasons for selecting the chosen components and/or materials can be given.

Element 9.6B.3 Check drawings**Criteria 9.6B.3.1**

Drawings checked to ensure compliance with specifications.

Assessor guide: observe that –

Drawings are checked for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking and approving drawings can be given. The reasons for checking drawings can be explained. The drawing specifications can be identified.

Criteria 9.6B.3.2

Drawings checked to ensure that assembly/fabrication is possible.

Assessor guide: observe that –

Drawings are checked to ensure that assembly/fabrication is possible in accordance with standard operating procedures.

Assessor guide: confirm that –

The methods of manufacture/assembly/fabrication can be identified from the drawing(s) being checked. Unnecessary or inappropriate tolerances can be identified. The reasons for checking the drawings to ensure that manufacturing/assembly is possible, efficient and cost effective can be explained.

Range statement

This unit applies to the production of assembly, layout and detail drawings to Australian Standard 1100 or equivalent. Skills covered by this unit are applied individually or in a team environment where comprehensive responsibility for the production of the drawing is exercised, critical dimensions and associated tolerances are determined where required. Manual drafting and drawing equipment is used or where a CAD (Computer aided design) system is used, Unit 9.9B (Create 2D drawings using computer aided design system) and/or Unit 9.10B (Create 3D models using computer aided design system)

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with engineering detail drafting or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 9.7B A Advanced mechanical detail drafting

Band – Specialisation band B

Field – Drawing, drafting & design

Unit Weight 4

Pre-requisite units - Path 1

- 9.2A Interpret technical drawing
- 9.6B Advanced engineering detail drafting

9.3A Prepare basic engineering drawing

9.5A Basic engineering detail drafting

Element 9.7B.1 Prepare mechanical assembly, layout and detail drawing

Criteria 9.7B.1.1

All drawings produced to Australian Standard 1100 or equivalent.

Assessor guide: observe that –

All drawings are produced in accordance with AS1100 or equivalent. The function of each component within the assembly/layout is represented in accordance with design specifications/operational requirements. All components can be manufactured, fabricated and assembled in accordance with the specifications contained in the drawings. Where appropriate, all components are correctly orientated to surrounding structures and services. Where appropriate, drawings are modified to ensure conformance to specification AS1100 or equivalent, and/or changes to production, assembly and fabrication requirements and/or the availability of standard hardware items etc.

Assessor guide: confirm that –

The function of each component within the assembly/layout can be identified. The manufacturing, fabrication and assembly procedures to be used in producing the components/assemblies can be identified. The reason for ensuring that all components are correctly orientated to existing or proposed structures and services can be explained. The reasons for updating/modifying drawings to incorporate changes to specifications, production, assembly and fabrication methods and availability of standard hardware items, etc can be explained.

Range statement

This unit applies to the production of mechanical assembly, mechanical layout and detail drawings to AS1100 or equivalent. Skills covered by this unit are applied individually or in a team environment where comprehensive responsibility for the production of the drawing is exercised, critical dimensions and associated tolerances are determined where required. Manual drafting and drawing equipment is used or where a CAD system is used, Unit 9.9B (Create 2D drawings using computer aided design system) and/or Unit 9.10B (Create 3D models using computer aided design system) should also be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with mechanical detail drafting or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 9.8B A Advanced structural detail drafting

Band – Specialisation band B

Field – Drawing, drafting & design

Unit Weight 4

Element 9.8B.1 Prepare fabrication/structural assembly, layout and detail drawing

Criteria 9.8B.1.1

All drawings produced to Australian Standard 1100 or equivalent.

Assessor guide: observe that –

All drawings are produced in accordance with AS1100 or equivalent. The function of each component within the assembly/layout is represented in accordance with design specifications/operational requirements. All components can be manufactured, fabricated and assembled in accordance with the specifications contained in the drawings. Where appropriate, all components are correctly orientated to surrounding structures and services. Where appropriate, drawings are modified to ensure conformance to specification AS1100 or equivalent, and/or changes to production, assembly and fabrication requirements and/or the availability of standard hardware items etc.

Assessor guide: confirm that –

The function of each component within the assembly/layout can be identified. The manufacturing, fabrication and assembly procedures to be used in producing the components/assemblies can be identified. The reason for ensuring that all components are correctly orientated to existing or proposed structures and services can be explained. The reasons for updating/modifying drawings to incorporate changes to specifications, production, assembly and fabrication methods and availability of standard hardware items, etc can be explained.

Range statement

This unit applies to the production of fabrication/structural assembly, fabrication/structural layout and detail drawings to AS 1100 or equivalent. Skills covered by this unit are applied individually or in a team environment where comprehensive responsibility for the production of the drawing is exercised, critical dimensions and associated tolerances are determined where required. Manual drafting and drawing equipment is used or where a CAD system is used, Unit 9.9B (Create 2D drawing using computer aided design system) and/or Unit 9.10B (Create 3D models using computer aided design system) should also be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with structural detail drafting or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 9.9B B Create 2D drawings using computer aided design system

Band – Specialisation band B

Field – Drawing, drafting & design

Unit Weight 8

Pre-requisite units - Path 1

2.9C10 Perform computer operations

9.2A Interpret technical drawing

Element 9.9B.1 Prepare CAD environment

Criteria 9.9B.1.1

System variables are customised to suit standard operating procedure.

Assessor guide: observe that –

All relevant manuals, instructions and operation procedures for the CAD software and hardware being used, are obtained in accordance with work place procedures. Where appropriate, the relevant system variables are customised to suit the applicable drafting standards/procedures.

Assessor guide: confirm that –

The CAD software system can be identified. The system variables that can be customised can be identified. The procedures for customising identified system variables can be given. The reasons for customising the system variables can be explained. The applicable drafting standards/ procedures can be identified.

Criteria 9.9B.1.2

Menus are customised to suit standard operating procedure.

Assessor guide: observe that –

Where appropriate, menus are customised to suit the applicable drafting standards/procedures.

Assessor guide: confirm that –

The procedures for customising menus can be given. The reasons for customising menus can be explained.

Criteria 9.9B.1.3

Drawing defaults are customised to standard operating procedure.

Assessor guide: observe that –

Where appropriate, the system defaults are customised to suit the applicable drafting standards/procedures.

Assessor guide: confirm that –

The procedures for customising system defaults can be given. The reasons for customising system defaults can be explained.

Criteria 9.9B.1.4

Macros are developed to standard operating procedure.

Assessor guide: observe that –

Where appropriate, macros are developed in accordance with standard operating procedures and in conformance with the applicable drafting standards/procedures.

Assessor guide: confirm that –

The procedures for developing macros can be given. The reasons for developing macros can be explained.

Element 9.9B.2 Create 2D drawings**Criteria 9.9B.2.1**

Drawings are created using the full capability of the available software system.

Assessor guide: observe that –

Drawings are created using the appropriate drawing features of the software system.

Assessor guide: confirm that –

The drawing features of the CAD software system can be identified. The reasons for using specialised software features can be explained.

Criteria 9.9B.2.2

Drawing entities are linked to database attributes to suit job requirements.

Assessor guide: observe that –

Where appropriate, drawing entities are linked to database attributes in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for linking drawing entities to database attributes can be explained.

Criteria 9.9B.2.3

Detailed views are created using various scales to meet job requirements.

Assessor guide: observe that –

Detailed views of the object being drawn are produced in accordance with standard operating procedures. Drawing files are printed at the appropriate scale in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate scale for the drawing to be printed can be identified. The procedures for printing drawing files can be given. The procedures for creating additional views of the object being drawn can be given.

Element 9.9B.3 Produce output**Criteria 9.9B.3.1**

Files are saved in various formats to standard operating procedure.

Assessor guide: observe that –

Drawing files are saved in the appropriate format in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for saving drawing files can be given. The various formats in which drawing files can be saved can be identified. The reasons for using different formats when saving drawing files can be explained.

Criteria 9.9B.3.2

Linked entities are listed in a bill of materials format to meet job requirements.

Assessor guide: observe that –

Bills of material are produced from the drawing files/database in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for producing bills of material can be given.

Criteria 9.9B.3.3

Supplementary data is extracted from drawing to meet job requirements and may include area, lengths, angles and perimeters.

Assessor guide: observe that –

Supplementary data is extracted from the drawing file to meet job requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for extracting data with respect to drawn shapes/ features can be given. The properties of shapes/sections/ features that can be extracted from the drawing file can be identified.

Range statement

This unit applies to the production of 2D drawings, linked bills of material, file management and associated customisation of installed software including the use of macros, menus and default settings; file formats may include IGES, DXF, HPGL. Entity means any single item created on the screen and includes for example: lines, arcs, circles, text, hatch and dimensions. Attribute means properties associated with an entity and includes for example: layer or level, line type, line width, colour and text. Drawings include plans, diagrams, charts and electrical/electronic circuits. Applies to the fields of mechanical, electrical/electronic, fabrication, fluid power. 2D drawings may be produced from 3D models created using computer aided design system. Where detail drafting skills are required, the following units should be considered: Unit 9.4B (Electrical/electronic detail drafting), Unit 9.5A (Basic engineering detail drafting), Unit 9.6B (Advanced engineering detail drafting).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with computer aided drafting of 2D drawings or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 9.10B B Create 3D models using computer aided design system

Band – Specialisation band B

Field – Drawing, drafting & design

Unit Weight 4

Pre-requisite units - Path 1

2.9C10 Perform computer operations

9.2A Interpret technical drawing

9.9B Create 2D drawings using computer aided design system

Element 9.10B.1 Prepare 3D environment

Criteria 9.10B.1.1

Coordinate system is established to job requirement.

Assessor guide: observe that –
The relevant job instructions, specifications, etc. are obtained in accordance with workplace procedures.

Assessor guide: confirm that –
The purpose for which the 3D model is to be developed can be identified. The appropriate coordinate system for the job can be identified. The reasons for selecting the chosen coordinate system can be given.

Criteria 9.10B.1.2

Orientation is established to job requirement.

Assessor guide: observe that –

Assessor guide: confirm that –
The orientation of the model with respect to the coordinate system can be identified.

Criteria 9.10B.1.3

Views are established to job requirement.

Assessor guide: observe that –

Assessor guide: confirm that –
The number of views required to establish the model can be identified.

Element 9.10B.2 Create and modify 3D model

Criteria 9.10B.2.1

Entities are created in 3D space to job requirement.

Assessor guide: observe that –
The appropriate entities are created in 3D space in conformance with job requirements.

Assessor guide: confirm that –
The procedures for creating entities in 3D space can be given. The entities that can be created/manipulated in 3D space can be identified.

Criteria 9.10B.2.2

Entities are manipulated in 3D space to job requirement.

Assessor guide: observe that –

The entities are manipulated in 3D space in accordance with job requirements and standard operating procedures.

Assessor guide: confirm that –

The procedures for manipulating entities in 3D space can be given.

Criteria 9.10B.2.3

Surfaces are created in 3D space to job requirement including ruled and revolved.

Assessor guide: observe that –

Ruled and revolved surfaces are created in 3D space in accordance with job requirements and standard operating procedures.

Assessor guide: confirm that –

The procedures for creating ruled and revolved surfaces in 3D space can be given. The applications of ruled and revolved surfaces can be identified.

Criteria 9.10B.2.4

Existing 3D model is modified to job requirement.

Assessor guide: observe that –

Where appropriate, existing 3D models are modified in accordance with job requirements and standard operating procedures.

Assessor guide: confirm that –

The procedures for modifying existing 3D models can be given. The reasons for modifying existing 3D models can be explained.

Element 9.10B.3 Produce output from 3D model**Criteria 9.10B.3.1**

File is saved in various formats for retrieval as per standard operating procedure.

Assessor guide: observe that –

Drawing files are saved in the appropriate format in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for saving drawing files can be given. The various formats in which drawing files can be saved can be identified. The reasons for using different formats when saving drawing files can be explained.

Criteria 9.10B.3.2

Physical properties are extracted to job requirement including volume, mass and centre of gravity.

Assessor guide: observe that –

The physical properties of shapes created in 3D space are extracted from the drawing file to meet job requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for extracting data with respect to the physical properties of shapes created in 3D space can be given. The physical properties of shapes created in 3D space that can be extracted from the drawing file can be identified.

Range statement

This unit applies to the production of 3D models utilising computer equipment. Operations at this level include, but are not limited to, the creation and manipulation of entities such as arcs and lines and primitives such as spheres, cones, cylinders and boxes using industrial software. Applies to the fields of mechanical, electrical/electronic, fabrication, fluid power.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with 3D modelling using a CAD system or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 9.11A A Apply basic engineering design concepts

Band – Specialisation band A

Field – Drawing, drafting & design

Unit Weight 6

Pre-requisite units - Path 1

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

Element 9.11A.1 Determine design requirements

Criteria 9.11A.1.1

Design requirement is established from job sheets, instructions or in consultation with appropriate people.

Assessor guide: observe that –

All relevant drawings, job sheets, instructions and specifications are obtained in accordance with workplace procedures. Where appropriate, relevant personnel are consulted as to the design requirements. Where appropriate, the object, plant or equipment to which engineering design concepts are to be applied are inspected by the individual.

Assessor guide: confirm that –

The design requirements can be identified.

Criteria 9.11A.1.2

Design concepts are established and may include consideration of process, material, quantity, cost and outcome.

Assessor guide: observe that –

Assessor guide: confirm that –

The functional requirements of the design can be identified. The material(s) appropriate to the environment in which the object(s) to be designed is to operate can be identified. The processes to be used in the manufacture of the object(s) can be identified. Where appropriate the costs associated with the manufacture of the object(s) can be calculated. The reasons for selecting the chosen design concept can be explained.

Criteria 9.11A.1.3

Where appropriate, codes, regulations and technical documentation are consulted to establish design limitations in accordance with standard operating procedures.

Assessor guide: observe that –

Where appropriate, design limitations imposed by relevant codes, standards and regulations are accurately determined.

Assessor guide: confirm that –

All relevant codes, standards and regulations applying to the object to be designed can be identified. The impact of the applicable codes, standards and regulations on the design requirements of the object can be explained.

Criteria 9.11A.1.4

Sources of expert assistance are identified and used as required.

Assessor guide: observe that –

Where appropriate, assistance is sought from relevant sources in accordance with standard operating procedures.

Assessor guide: confirm that –

Sources of expert assistance in the design process can be identified.

Element 9.11A.2 Create design**Criteria 9.11A.2.1**

Design meets end use requirement.

Assessor guide: observe that –

Assessor guide: confirm that –

The end use requirements of the design can be clearly identified.

Criteria 9.11A.2.2

Design meets all legislative and regulatory requirements.

Assessor guide: observe that –

Assessor guide: confirm that –

The design complies with the relevant codes, standards, legislative and regulatory requirements.

Criteria 9.11A.2.3

Design concept verified in accordance with standard operating procedures.

Assessor guide: observe that –

The design concept is verified in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for verifying design concepts can be identified.

Criteria 9.11A.2.4

Design outcome is produced as per job requirements and may include sketch, drawing, prototype, document, model or finished product.

Assessor guide: observe that –

The design object is presented in a form appropriate to the job requirements and in accordance with standard operating procedures.

Assessor guide: confirm that –

The means by which the design concept is to be presented can be identified.

Range statement

This unit is intended to cover in situ design skills by personnel who will then be responsible for the manufacture of the design outcome either individually or as part of a team. This unit includes the determination of requirements such as location, assembly or other parts of the manufacturing or engineering process and where the designer must consider the impact of the design on other equipment, process or personnel, for example safety aspects of the design. Design tasks undertaken include the application of design concepts to eg: the fabrication and modification of structures, plant and equipment, design of tooling and gauges, production control systems, fluid power layouts, electrical circuits etc. Applies to the fields of mechanical, production, electrical/electronic, fabrication and fluid power.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the drawing and interpretation of sketches or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other means of communication, answer questions put by an assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 9.21A A Interpret and produce curved 3-dimensional shapes

Band – Specialisation band A

Field – Drawing, drafting & design

Unit Weight 4

This unit covers the competencies required to produce and interpret lines plan drawings manually or using CAD equipment. Typical applications include marine vessel construction.

Element 9.21A.1 Identify drawing/lofting requirements

Criteria 9.21A.1.1 Requirements of lines drawing/lofting are determined *Assessor guide: observe that –*

Assessor guide: confirm that –

Criteria 9.21A.1.2 Data necessary to produce drawing/lofting are identified *Assessor guide: observe that –*

Assessor guide: confirm that –

Element 9.21A.2 Determine drawing/lofting procedure and equipment

Criteria 9.21A.2.1 Lines drawing/lofting procedures are outlined and understood *Assessor guide: observe that –*

Assessor guide: confirm that –

Criteria 9.21A.2.2 Appropriate drawing equipment/accessories are outlined *Assessor guide: observe that –*

Assessor guide: confirm that –

Element 9.21A.3 Apply drawing/lofting procedures

Criteria 9.21A.3.1 Appropriate drawing equipment/accessories are set-up to suit requirements *Assessor guide: observe that –*

Assessor guide: confirm that –

Criteria 9.21A.3.2 Drafting/lofting procedures to suit specified drawing are applied *Assessor guide: observe that –*

Assessor guide: confirm that –

<p>Criteria 9.21A.3.3 Where applicable, any alterations to offset measurements are recorded</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i></p>
<p>Criteria 9.21A.3.4 Drawings/loftings are consistent with operation procedures and industry requirements</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i></p>
<p>Element 9.21A.4 Submit lines plan drawings</p>		
<p>Criteria 9.21A.4.1 Completed drawings in accordance with industry standards are submitted</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i></p>
<p>Criteria 9.21A.4.2 Where applicable, altered offset measurements and relevant information related to drawing are supplied</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i></p>

Range statement

This unit applies to drawing and lofting principles relevant to procedures used to produce lines plan drawings and loftings. Common applications include marine vessel construction. In a marine setting, tasks may be related to a variety of hull designs, section development such as curved and raking transom, conical development and camber development methods. General arrangement plans may also be addressed to provide a greater drawing diversity. Drawing practices should be completed using manual drafting and drawing equipment. All drawings/data should comply with industry requirements. Basic lofting is covered by Unit 12.7A (Mark out structural fabrications and shapes). Where a CAD system is used for basic drawing, Unit 9.3A (Prepare basic engineering drawing) should also be selected. Where more extensive CAD system is used for design then Unit 9.9B (Create 2D drawings using computer aided design system) should also be considered. Where transfer of lines to lofting floor or other surface is carried out, Unit 12.7A (Mark off/out structural fabrications and shapes) should also be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with computer aided drafting of 2D drawings or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

 18.1A Use hand tools

Element 10.1A.1 Inspect and prepare erection site

Criteria 10.1A.1.1

Site checked for correct location, dimensions and levels.

Assessor guide: observe that –

All relevant drawings, specifications and instructions are obtained in accordance with workplace procedures. The site is checked for correct location, dimensions and, where appropriate, levels in accordance with standard operating procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The location, dimensions and levels applicable to the work to be undertaken can be identified. Where appropriate, the technique/equipment to be used to check the site levels can be identified.

Criteria 10.1A.1.2

Non-compliance with specifications reported to appropriate authority.

Assessor guide: observe that –

Where appropriate, any non-compliances with specifications detected are reported to the appropriate authority in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed if the location, dimensions and/or levels of the site do not comply with the specifications can be given. The appropriate authority to which non-compliances are to be reported can be given.

Criteria 10.1A.1.3

Minor alterations, corrections or adjustments undertaken with approval of appropriate authority.

Assessor guide: observe that –

Where appropriate, authorised alterations, corrections or adjustments are made to the site and/or structure in accordance with standard operating procedures.

Assessor guide: confirm that –

Any alterations, corrections or adjustments to be made to the site can be identified. Any alterations, corrections or adjustments to be made to the structure can be identified. The appropriate authority to approve alterations, corrections or adjustments to the site and/or structure can be identified. Approval for any alterations, corrections or adjustments to be made has been received from the appropriate authority. The methods/techniques to be utilised in carrying out the alterations, corrections can be identified. The reasons for selecting the chosen methods/techniques can be explained.

Criteria 10.1A.1.4

All surfaces and materials/components prepared for use.

Assessor guide: observe that –

Where appropriate, surfaces, materials and/or components are prepared for use in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The material and components to be used in the structure can be identified. Any preparation of surfaces required prior to commencing the erection of the structure can be identified.

Criteria 10.1A.1.5

Structure components identified and checked against specifications.

Assessor guide: observe that –

All components of the structure are checked for conformance to specification in accordance with standard operating procedure.

Assessor guide: confirm that –

The specification of the components of the structure can be identified. The procedures for checking the components of the structure can be given.

Element 10.1A.2 Erect structures**Criteria 10.1A.2.1**

All work carried out safely and in accordance with defined procedures.

Assessor guide: observe that –

All work is carried out safely to specification and in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety procedures to be followed while undertaking the work can be identified. All safety equipment and personal protective clothing to be used/worn while undertaking the work can be identified. The hazards associated with the erection of structures can be identified.

Criteria 10.1A.2.2

Structure components prepared for correct sequential erection.

Assessor guide: observe that –

All components of the structure are prepared for correct sequential erection in accordance with standard operating procedures.

Assessor guide: confirm that –

The sequence in which components of the structure are to be erected can be identified.

Criteria 10.1A.2.3

Components erected and fixed according to specifications.

Assessor guide: observe that –

All components of the structure are erected and fixed in conformance to specifications and in accordance with standard operating procedures.

Assessor guide: confirm that –

The methods of fixing/fastening the components of the structure can be identified. The methods of lifting/moving the components of the structure can be identified. The methods of locating/holding the components of the structure prior to fixing/fastening can be identified. The reasons for selecting the chosen methods of lifting/moving and locating/holding the components of the structure can be given.

Criteria 10.1A.2.4

Structure adjusted to specifications.

Assessor guide: observe that –

The structure is checked for conformance to specifications in accordance with standard operating procedures. Where appropriate, the approved adjustments are made to the structure in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed if the structure does not comply with the specifications can be identified. The authority to whom non-conformances are to be reported can be identified. The procedures for checking the structure for conformance to specification can be given. Where appropriate, adjustments to be made to bring the structure into specification can be identified. The appropriate authority to approve adjustments to the structure can be identified. Approval for any adjustments to be made has been received from the appropriate authority.

Criteria 10.1A.2.5

All reports, documentation completed correctly to required specifications.

Assessor guide: observe that –

All required reports and documentation are completed correctly and in accordance with standard operating procedures.

Assessor guide: confirm that –

The reports and/or documentation to be completed before, during and after erection of the structure can be identified.

Range statement

Work generally undertaken in team environment (but not exclusively). Structures covered by this unit are those requiring a location/erection process different to workshop assembly techniques described in Unit 5.11A (Assemble fabricated components). The structure would typically be of a substantial size and load bearing and/or building regulations may apply. Specifications for the structure would be supplied via engineering drawings or the like and would include site location information. Structures include metal frameworks, stairways, walkways, vessels, tanks, platforms, conveyors and moving lines, etc. including associated railings, foundations, footings completed prior to commencement of installation work. Levelling and alignment undertaken is of a straightforward nature using plumb bob/lines and levels. Where lifting or rigging skills are required, appropriate units should be accessed. Where design skills are required, refer to Unit 9.11A (Apply basic engineering design concepts). All work and work practices undertaken to regulatory and legislative requirements. When mark-off/out skills are required, then Unit 12.7A (Mark off/out structural fabrications and shapes) should also be selected. Where welds are required to meet legislative or regulating requirements then appropriate welding units should also be selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the erection of structures or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 10.2A A Terminate and connect electrical wiring

Band – Specialisation band A

Field – Installation & commissioning

Unit Weight 3

Pre-requisite units - Path 1

9.2A Interpret technical drawing

12.2A Electrical/electronic measurement

18.1A Use hand tools

Element 10.2A.1 Prepare for electrical wiring termination and connection

Criteria 10.2A.1.1

All work undertaken safely and to workplace procedures and state/territory regulations and legislative requirements.

Assessor guide: observe that –

All work is undertaken in accordance with work site procedures and relevant statutory requirements.

Assessor guide: confirm that –

Safety hazards associated with the termination and connection of electrical wiring can be identified. Relevant statutory requirements associated with the termination and connection of electrical wiring can be identified.

Criteria 10.2A.1.2

Materials checked for correct specifications.

Assessor guide: observe that –

Materials are checked for conformance to specifications.

Assessor guide: confirm that –

Appropriate specifications for wiring materials can be identified.

Criteria 10.2A.1.3

Preparation of work undertaken or checked/inspected for correct location and specifications eg: cable trays, brackets, trenches etc.

Assessor guide: observe that –

Where appropriate, new installation site checked for correct location and specifications in accordance with work site procedures. Where appropriate, existing installation inspected for correct location and specifications in accordance with work site procedures.

Assessor guide: confirm that –

The location of the work to be undertaken can be identified. Any wiring support and/or protection requirements can be identified. The specifications of wiring support and/or protection requirements can be identified.

Element 10.2A.2 Connect electrical wiring

Criteria 10.2A.2.1

Terminations/connections made to specifications, manufacturers' requirements and to safety and state/territory regulations and legislative requirements.

Assessor guide: observe that –

All terminations/connections made to specification and comply with manufacturers' and regulatory requirements.

Assessor guide: confirm that –

The relevant regulatory requirements can be identified. The manufacturers' requirements can be identified.

Criteria 10.2A.2.2

All brackets, clamps, holders etc. adjusted and fixed to specifications.

Assessor guide: observe that –

All wiring support requirements are adjusted and fixed to specification.

Assessor guide: confirm that –

The appropriate wiring support technique can be identified. Alternative wiring support techniques can be given.

Criteria 10.2A.2.3

All cables, wires, conductors and connections etc. marked/tagged and labelled to specification.

Assessor guide: observe that –

All cables, wires, conductors and connections are marked, tagged and labelled to specification.

Assessor guide: confirm that –

The marking, tagging and labelling requirements for cables, wires, conductors and connections can be identified.

Criteria 10.2A.2.4

All completed wiring and connections tested for compliance with specifications.

Assessor guide: observe that –

The completed wiring and connections are tested for compliance to specification, safety in accordance with work site procedures.

Assessor guide: confirm that –

Appropriate tests for wiring and connections can be identified.

Criteria 10.2A.2.5

All reports, documentation completed correctly to required specifications.

Assessor guide: observe that –

All reports/documents completed in accordance with regulatory and work site procedures.

Assessor guide: confirm that –

The data to be recorded/reported and the frequency of recording/reporting can be identified.

Range statement

Work generally undertaken as part of team, (but not exclusively). Work is to be undertaken in accordance with relevant regulations and/or legislation. Connection of wiring includes termination and connection of cords and cables, excluding specialist cables, of all types, sizes and materials. Termination and connection includes the utilisation of a range of methods including clamping, pin connection, soldered joints, plugs, sockets etc., clamping of cables and wires, sealing entry points where required. This unit covers soldering/desoldering in the context of termination, disconnection or reconnection of electrical wiring and circuits. Soldering/desoldering of electrical/electronic components may also require the selection of Unit 5.1A (Manual soldering/desoldering - electrical/electronic components) or Unit 5.2A (High reliability soldering and desoldering) as applicable. All testing undertaken on completed circuits where not connected to main supply using appropriate methods eg: continuity and resistance checks. Specifications obtained from electrical/electronic circuit drawings and data sheets. Electrical services include power supplies, control, wiring, etc. This unit does not cover the competencies required for energising and testing of the circuit. If these skills are required the competencies covered in Unit 10.3A (Install and test electrical wiring and circuits (up to 1000vAC/1500vDC)) must be satisfied. Termination and connection of specialist cables such as mineral insulated, steel wire, armoured cables etc, is covered in Unit 10.11A (Terminate and connect specialist cables).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the termination and connection of electrical wiring, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 10.3A A Install and test electrical wiring and circuits up to 1000vAC/1500vDC

Band – Specialisation band A

Field – Installation & commissioning

Unit Weight 8

This unit covers the competencies required to plan and prepare for the installation, install the wiring/enclosures and/or support systems and commission and test the installed wiring system. The installation of electrical wiring/systems and or enclosures includes the full range of installation materials and techniques. Where required work

is undertaken by or under the direction of an appropriately licensed person.

Pre-requisite units - Path 1

9.1A Draw and interpret sketch

12.2A Electrical/electronic measurement

18.49A Disconnect/reconnect fixed wired equipment which use up to 1000vAC/1500vDC

9.2A Interpret technical drawing

18.1A Use hand tools

10.2A Terminate and connect electrical wiring

18.2A Use power tools/hand held operations

Element 10.3A.1 Plan the installation

Criteria 10.3A.1.1

Special work, hazard and safety requirements determined and incorporated in plan

Assessor guide: observe that –

All relevant circuits, drawings, specifications and instructions obtained in accordance with standard operating procedures All relevant work, hazard and safety requirements are incorporated into the work plan

Assessor guide: confirm that –

The work to be undertaken can be identified The hazard and safety requirements applicable to the work to be undertaken can be correctly identified Where appropriate, work permit requirements can be identified

Criteria 10.3A.1.2

Work plan/strategy devised and confirmed in accordance with legislative and regulatory requirements and standard operating procedures

Assessor guide: observe that –

A work plan is prepared in accordance with legislative and regulatory requirements and standard operating procedures Where appropriate, the work plan is confirmed/authorised by the appropriate person/authority in accordance with standard operating

Assessor guide: confirm that –

The legislative and regulatory requirements appropriate to the work to be done can be identified The work planning procedures can be identified The sequence of operations to be performed can be given The reasons for selecting the chosen sequence of operations in the work plan can be explained Where appropriate, the person/ authority with whom the work plan is to be confirmed can be identified

Element 10.3A.2 Prepare for electrical installation

Criteria 10.3A.2.1

All work undertaken safely and to workplace procedures, state/territory regulations and legislative

Assessor guide: observe that –

All work is undertaken safely in accordance with relevant legislative and regulatory requirements and standard operating procedures

Assessor guide: confirm that –

Criteria 10.3A.2.2

Materials checked for correct specifications

Assessor guide: observe that –

All materials are checked for conformance to specification in accordance with standard operating procedures

Assessor guide: confirm that –

The specifications of all materials to be used while undertaking the work can be identified The procedures for checking materials against specifications can be given The procedures to be followed if materials do not conform to specification can be given

Element 10.3A.3 Install the wiring/enclosures and/or support systems**Criteria 10.3A.3.1**

All cables/wires/conduit/enclosures and support systems are installed to specifications using correct and appropriate techniques, tools and equipment

Assessor guide: observe that –

All cables/wires/conduit/enclosures and support systems are correctly installed in accordance with specifications using appropriate techniques, tools and equipment

Assessor guide: confirm that –

The techniques, tools and equipment required to install the following can be identified: - cables - wires - conduit - enclosures - support systems The items to be installed in carrying out the work can be identified

Criteria 10.3A.3.2

Cabling is marked or labelled for identification and to specification

Assessor guide: observe that –

The cabling is marked or labelled for identification in accordance with specifications and standard operating procedures

Assessor guide: confirm that –

The marking and/or labelling requirements of cabling can be identified The reasons for marking and/or labelling cables can be given

Element 10.3A.4 Commission and test the installed wiring system**Criteria 10.3A.4.1**

All completed wiring/systems and enclosures tested for compliance with specifications, regulations, and legislative requirements, utilising appropriate test procedures and equipment

Assessor guide: observe that –

All completed wiring/systems and enclosures are tested for compliance with specifications, relevant regulatory and legislative requirements The appropriate test equipment and procedures are carried out in conformance with standard operating procedures

Assessor guide: confirm that –

The procedures and equipment available to test wiring, systems and enclosures can be identified Appropriate test equipment and procedures for the work undertaken can be identified The reasons for selecting the chosen test equipment and procedures can be explained

Criteria 10.3A.4.2

Where appropriate, the installation may be energised and tested for compliance with specifications

Assessor guide: observe that –

Where appropriate, the installation is energised and tested for compliance with specifications in accordance with standard operating procedures

Assessor guide: confirm that –

Test procedures to be carried out on energised installations can be identified Where appropriate, the reasons for carrying out tests on energised installations can be explained

Criteria 10.3A.4.3

Any identified faults are rectified to specification

Assessor guide: observe that –

Where appropriate, identified faults are rectified to specification in accordance with standard operating procedures

Assessor guide: confirm that –

Common wiring system faults can be identified The method(s) of rectifying common faults can be given

Criteria 10.3A.4.4

All reports, documentation completed correctly to required specifications

Assessor guide: observe that –

All reports, documentation are completed correctly in accordance with standard operating procedures

Assessor guide: confirm that –

The reports/documentation to be completed during and after the work is undertaken can be identified

Element 10.3A.5 Perform emergency first aid**Criteria 10.3A.5.1**

Situation assessed to identify points of danger to the injured person and potential rescuer, including the assessment of electrical hazards

Assessor guide: observe that –

All potential points of danger are considered when planning a rescue or provision of assistance

Assessor guide: confirm that –

Dangers present in electrical rescue are identified

Criteria 10.3A.5.2

Electrical hazards are isolated in accordance with established procedures for electrical rescue

Assessor guide: observe that –

All electrical hazards are isolated in accordance with regulatory requirements, Work safe standards or site procedures

Assessor guide: confirm that –

Appropriate standards and procedures are identified

Criteria 10.3A.5.3

Rescue/recovery of injured person, or assistance to injured person undertaken in accordance with recognised standards/procedures Contact made with appropriate medical and rescue authorities

Assessor guide: observe that –

Appropriate procedures are followed for the movement/treatment of injured, including:

- clearing of airways
- CPR (cardio-pulmonary resuscitation)
- care of spinal injuries
- treatment of cuts/lesions etc
- treatment of burns/scalds
- treatment of shock

Assessor guide: confirm that –

Recognised procedures for the movement and treatment of injured persons are identified Appropriate local medical and rescue services identified

Criteria 10.3A.5.4

Details of first aid given recorded

Assessor guide: observe that –

Details of first aid are accurately recorded

Assessor guide: confirm that –

The details to be recorded of first aid given can be identified The procedures for recording first aid given can be identified The reasons for recording first aid given can be explained

Range statement

Work generally undertaken as part of a team. Work is to be undertaken in accordance with relevant regulation or legislation. Installation of electrical wiring/systems and/or enclosures, including specialist cables, includes the full range of installation materials and techniques. The installation includes the utilisation of a range of methods, tools, equipment appropriate to the work. All testing includes the use of polarity testers, phase rotation testers, insulation resistance/continuity testers and voltage testers etc. Specifications/regulations and drawings can refer to legislative Acts, SAA Wiring Rules Standards specifications, electrical and architectural drawings. Electrical installations can refer to any wiring circuits which are directly or indirectly connected to a power supply system. Where precision electrical/electronic measurement is required, see Unit 12.4A (Precision electrical/electronic measurement). For specialist cables Unit 10.11A (Terminate and connect specialist cables) should also be selected .

Evidence**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the installation and testing of electrical wiring and circuits or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. - Standards and procedures for the provision of emergency first aid. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 10.4A A Enter and change programmable controller operational parameters

Band – Specialisation band A

Field – Installation & commissioning

Unit Weight 2

Pre-requisite units - Path 1

2.9C10 Perform computer operations

9.2A Interpret technical drawing

Element 10.4A.1 Install program

Criteria 10.4A.1.1

Download software in accordance with the requirements of Unit 2.9C10.4.3.

Assessor guide: observe that –

Appropriate data transfer device(s)/procedure(s) are selected. The software is transferred accurately.

Assessor guide: confirm that –

The appropriate and correct program loading technique is selected. The reasons for selecting the chosen program loading technique can be explained.

Criteria 10.4A.1.2

Appropriate checks undertaken during and after down loading to ensure data transfer is accurate and complete.

Assessor guide: observe that –

The appropriate checks are undertaken during and after downloading in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The checks to be undertaken during and after downloading can be identified. The reasons for checking that the data transfer is accurate and complete can be given. The action to be taken if data transfer is inaccurate and/or incomplete can be identified.

Element 10.4A.2 Verify machine/system/process operation

Criteria 10.4A.2.1

Appropriate checks undertaken after downloading to ensure machine operation or process output is accurate to specification.

Assessor guide: observe that –

The machine operation or process output is verified for accuracy and conformance to specifications in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The specifications relating to the transferred data can be identified. The correct operation of the machine or process can be identified.

Criteria 10.4A.2.2

Specific problems in machine operation or process output being controlled by the programmable controller are identified in accordance with standard operating procedures

Assessor guide: observe that –

Specific problems in machine operation or process output being controlled by the programmable controller can be identified in accordance with standard operating procedures.

Assessor guide: confirm that –

Specific machine operations or process outputs being controlled by the programmable controller are understood and specific problems can be identified in accordance with standard operating procedures.

Criteria 10.4A.2.3

Specific changes required to operating parameters within the software program are derived in accordance with standard operating procedure.

Assessor guide: observe that –

Specific changes required to operating parameters within the software program can be derived in accordance with standard operating procedure.

Assessor guide: confirm that –

Operating parameters within the software program are understood and specific changes required to correct problems can be derived in accordance with standard operating procedure.

Criteria 10.4A.2.4

Adjustments/changes made to operating parameters in accordance with standard operating procedures.

Assessor guide: observe that –

Adjustments/changes are made to operating parameters in accordance with standard operating procedures

Assessor guide: confirm that –

Standard operating procedures are understood and all adjustments/changes to operating parameters are made accordingly.

Criteria 10.4A.2.5

Final check of machine operation or process output taken to ensure that these are in accordance with specifications.

Assessor guide: observe that –

Final check of machine operation or process output is taken to ensure that these are in accordance with specifications.

Assessor guide: confirm that –

The required specification to be met and functions to be controlled can be identified and machine operation or process output are verified in a final check.

Element 10.4A.3 Report on changes**Criteria 10.4A.3.1**

Changes and adjustments reported in accordance with standard operating procedures.

Assessor guide: observe that –

The report is made to standard operating procedures.

Assessor guide: confirm that –

Reporting process is known and understood.

Criteria 10.4A.3.2 Specific problems in machine operation or process output being controlled by the programmable controller are identified in accordance with standard operating procedures.	<i>Assessor guide: observe that –</i> Methodical procedure used to identify problems.	<i>Assessor guide: confirm that –</i> Methodical approach can meet a variety of situations.
Criteria 10.4A.3.3 Specific changes required to operating parameters within the software program are derived in accordance with standard operating procedures.	<i>Assessor guide: observe that –</i> Relevant and appropriate changes are made.	<i>Assessor guide: confirm that –</i> Procedures to change parameters and their implications are understood.
Criteria 10.4A.3.4 Adjustments/changes made to operating parameters in accordance with standard operating procedures.	<i>Assessor guide: observe that –</i> Changes made in accordance with standard operating procedures.	<i>Assessor guide: confirm that –</i>
Criteria 10.4A.3.5 Final check of machine operation or process output taken to ensure that these are in accordance with specifications.	<i>Assessor guide: observe that –</i> Evidence that checks are carried out is present.	<i>Assessor guide: confirm that –</i> Reasons for checks understood.

Range statement

Work undertaken autonomously or as part of team environment using predetermined standards of quality, safety and work place procedures. Work generally undertaken at location of programmable controller* but could be undertaken with data link off-site. Operational parameters include timer, counter and set point settings. All specifications and procedures gained from a range of circuit drawings, engineering data sheets, step print out, manufacturer's procedure and data books. Program languages may include ladder diagram, functional block diagram, instruction lists etc. All work and work practices undertaken to regulatory and legislative requirements. For routine downloading of PLC, CNC or NC programs from disk, tape or direct means not requiring program or data adjustment or checks against specification, see Unit 2.9C10 (Perform computer operations). Verification of machine /process/system operation includes interpreting the program, excluding multi-loop and control sequencing programs. *Programmable controllers include PLC and DCS or similar devices.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the installation and verification of programmable controller programs or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 10.5A A Commission programmable controller programs

Band – Specialisation band A

Field – Installation & commissioning

Unit Weight 4

Pre-requisite units - Path 1

2.9C10 Perform computer operations

9.2A Interpret technical drawing

10.4A Enter and change programmable controller operational parameters

Element 10.5A.1 Commission programmable controller program

Criteria 10.5A.1.1

Program format and operational intent determined and understood.

Assessor guide: observe that –

All relevant circuit drawings, ladder diagrams, engineering data sheets, manufacturer's procedures and data sheets are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The intended operation of the program can be identified. The format of the program can be identified.

Criteria 10.5A.1.2

Program instructions checked for compliance with specifications using appropriate techniques.

Assessor guide: observe that –

The program instructions are checked for compliance with specifications using appropriate techniques in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The program specifications can be identified. The procedures and techniques for checking that program instructions comply with specifications can be identified. The procedures for dealing with any non-conformances with specifications can be identified.

Criteria 10.5A.1.3

Software timers, counter set to specifications where required.

Assessor guide: observe that –

Where appropriate, software timers and/or counters are set to specifications in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The procedures for setting software timers and counters can be identified. The function of software timers and counters can be explained.

Criteria 10.5A.1.4

Program stepped through manually and outputs checked and measured for compliance with specifications.

Assessor guide: observe that –

The program is stepped through manually and all outputs checked for conformance to specifications in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The procedures for manually stepping through the program can be identified. The checks that can be made of program outputs can be identified. The techniques to be used in checking program outputs can be identified. The measurements to be taken during the checking of program outputs can be identified. The instruments to be used to take those measurements can be identified.

Criteria 10.5A.1.5

Where applicable edit program to meet specifications.

Assessor guide: observe that –

Where appropriate, the program is edited to ensure conformance to specifications in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The procedures for editing programs can be identified.

Criteria 10.5A.1.6

External inputs checked for compliance with specifications utilising correct and appropriate techniques.

Assessor guide: observe that –

The external inputs are checked for compliance with specifications using appropriate techniques and equipment in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The external inputs can be identified. The checks to be made to ensure that the external inputs comply with specifications can be identified. The techniques and equipment to be used in undertaking those checks can be identified.

Criteria 10.5A.1.7

Where applicable, program is run and total operation checked for compliance with specifications.

Assessor guide: observe that –

Where appropriate, the program is run in conformance with the manufacturer's/standard operating procedures. Where appropriate, the operation of the processes being controlled is checked for conformance to specifications in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The procedures for running the program can be identified. The operational processes controlled by the programmable logic controller can be identified. The specifications of the operational process can be identified. Where appropriate, the techniques and equipment to be used to check the operational process for conformance to specifications can be identified.

Criteria 10.5A.1.8

Where applicable, final adjustments undertaken to meet operational specifications using standard operational procedures.

Assessor guide: observe that –

Where appropriate, the program is adjusted to ensure conformance to operational specifications in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The adjustments that can be made to the program can be identified. The effects of those adjustments on the operational processes controlled by the program can be explained. The procedures to be followed when adjusting programs can be given.

Range statement

Work undertaken autonomously or as part of team environment using predetermined standards of quality, safety and work place procedures. Work undertaken on location. This unit relates to the adjustment and commissioning of the programmable controller program to specification only. All programmable controller programs include single and multi-loop programs and control sequencing of processes. All specifications and procedures gained from circuit drawings, ladder diagrams, engineering data sheets, program print-out manufacturer's procedures and data books. All work and work practices undertaken to regulatory and legislative requirements. It is assumed that this unit will normally be accessed in conjunction with units of skill that relate to the operational processes controlled by the programmable controller. Programmable controllers include PLC and DCS or similar devices.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies cover by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the installation and verification of programmable controller programs or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 10.6A A Install machine/plant

Band – Specialisation band A

Field – Installation & commissioning

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

18.9A Levelling and alignment of machines and engineering components

9.2A Interpret technical drawing

18.3A Use tools for precision work

18.55A Dismantle, replace and assemble engineering components

Element 10.6A.1 Inspect and prepare installation site

Criteria 10.6A.1.1

Site checked for correct location, dimension and levels etc utilising appropriate measuring equipment.

Assessor guide: observe that –

All relevant drawings, specifications and instructions are obtained in accordance with workplace procedures. The site is checked for correct location, dimensions and where appropriate levels, in accordance with standard operating procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The location, dimensions and levels applicable to the work to be undertaken can be identified. Where appropriate, the technique/equipment to be used to check the site levels can be identified.

Criteria 10.6A.1.2

Non-compliance with specification reported to appropriate authority.

Assessor guide: observe that –

Where appropriate, any non-compliances with specifications detected are reported to the appropriate authority in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed if the location, dimensions and/or levels of the site do not comply with the specifications can be given. The appropriate authority to which non-compliances are to be reported can be given. The specification of the machine/plant can be identified. The procedures for checking the machine/plant can be given.

Criteria 10.6A.1.3

Alteration, correction undertaken with approval of appropriate authority.

Assessor guide: observe that –

Where appropriate, authorised alterations, corrections or adjustments are made to the site and/or machine/plant in accordance with standard operating procedures.

Assessor guide: confirm that –

Any alterations, corrections or adjustments to be made to the site can be identified. Any alterations, corrections or adjustments to be made to the machine/plant can be identified. The appropriate authority to approve alterations, corrections or adjustments to the site and/or machine/plant can be identified. Approval for any alterations, corrections or adjustments to be made has been received from the appropriate authority.

Criteria 10.6A.1.4

All surfaces, materials and components prepared for use.

Assessor guide: observe that –

Where appropriate, surfaces, materials and/or components are prepared for use in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The material and components to be used in the installation of the machine/plant can be identified. Any preparation of surfaces required prior to commencing the installation of the machine/plant can be identified.

Element 10.6A.2 Install machine/plant**Criteria 10.6A.2.1**

All work carried out safely and in accordance with site procedures and to Australian Standards.

Assessor guide: observe that –

All work is carried out safely to specification and in accordance with codes, standards and standard operating procedures.

Assessor guide: confirm that –

The safety procedures to be followed while undertaking the work can be identified. All safety equipment and personal protective clothing to be used/worn while undertaking the work can be identified. All relevant codes and standards can be identified.

Criteria 10.6A.2.2

Machine components prepared for correct sequential installation.

Assessor guide: observe that –

All components of the machine/plant are prepared for correct sequential installation in accordance with standard operating procedures.

Assessor guide: confirm that –

The sequence in which components of the machine/plant are to be installed can be identified.

Criteria 10.6A.2.3

Machine/plant installed in accordance with manufacturer's and site specifications.

Assessor guide: observe that –

All components of the machine/plant are installed and fixed in conformance to specifications and in accordance with standard operating procedures.

Assessor guide: confirm that –

The methods of fixing/fastening the components of the machine/plant can be identified. The methods of lifting/moving the components of the machine/plant can be identified. The methods of locating/holding the components of the machine/plant prior to fixing/fastening can be identified. The reasons for selecting the chosen methods of lifting/moving and locating/holding the components of the machine/plant can be given.

Criteria 10.6A.2.4

Routine modifications/alterations undertaken to standard operating procedures where required.

Assessor guide: observe that –

The machine/plant is checked for conformance to specifications in accordance with standard operating procedures. Where appropriate, the approved adjustments are made to the machine/plant in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed if the machine/plant installation does not comply with the specifications can be identified. The authority to whom non-conformances are to be reported can be identified. The procedures for checking the machine/plant for conformance to specification can be given. Where appropriate, adjustments to be made to bring the machine/plant into specification can be identified. The appropriate authority to approve adjustments to the machine/plant can be identified. Approval for any adjustments to be made has been received from the appropriate authority.

Criteria 10.6A.2.5

Machine/plant levelled, aligned, coupled and connected (excluding electrical connections) in accordance with specifications.

Assessor guide: observe that –

Where appropriate, the machine/plant is levelled, aligned, coupled and connected (excluding electrical connections) to specification in accordance with manufacturer's/standard operating procedures. Where appropriate, any electrical connections are scheduled with the appropriate persons in accordance with standard operating procedures.

Assessor guide: confirm that –

All connections and couplings to be made to the machine/plant can be identified. The levelling and alignment requirements of the machine/plant can be identified. Where appropriate, the person(s) responsible for making any electrical connections can be identified.

Criteria 10.6A.2.6

Site cleaned and cleared of all debris and left in safe state.

Assessor guide: observe that –

The installation site is cleared of all debris, cleaned and left in a safe state in accordance with OH and S requirements and standard operating procedures.

Assessor guide: confirm that –

The requirements for cleaning and clearing the installation site can be identified. Where appropriate, the equipment required to clean and/or clear the site can be identified.

Criteria 10.6A.2.7

All reports, documentation completed correctly to required specifications.

Assessor guide: observe that –

All required reports and documentation are completed correctly and in accordance with standard operating procedures.

Assessor guide: confirm that –

The reports and/or documentation to be completed before, during and after the installation of the machine/plant can be identified.

Range statement

Work generally undertaken in team environment, (but not exclusively). This unit applies to installation where the equipment being installed requires substantial modification to the existing site and/or connecting equipment and excludes minor modifications. Installation covered by this unit also excludes electrical installation. Where existing machines/plant are replaced by the same or similar machine/plant, Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components) applies. Machine/plant includes rotating equipment and machinery such as pumps, compressors, drive units, blowers, etc; production equipment and plant, process equipment, plant and machinery, engineering plant and machine tools etc. Work undertaken utilising new or existing external and internal locations and sites. Foundations, footings, beds and frameworks completed prior to installation and commissioning. All specifications applied via engineering drawings, written or verbal instructions. All work and work practices undertaken to regulatory and legislative requirements. Routine modifications and alterations are of a minor nature not requiring specification changes or technical recording. Examples would be fitting of spacers, spool pieces, relocation of brackets, alignment of holes etc. If balancing skills or manufacture of gaskets are required, these should be accessed from appropriate units. Where design skills are required refer to Unit 9.11A (Apply basic engineering design concepts).

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the installation of machines and/or plant, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 10.7B B Modification of control systems

Band – Specialisation band B

Field – Installation & commissioning

Unit Weight 6

This unit covers the competencies required to plan the commissioning procedure, assess the control system performance, adjust the control system, and undertake commissioning modifications. Control loop/system components incorporate all instruments and devices that make up or control a loop/system including sensing devices, control devices, actuator and transducers. Control systems can mean closed or open loop or continuous or step processes. Loops/systems can incorporate the use of pneumatics, hydraulics, electrical/electronics or a combination of these.

Pre-requisite units - Path 1

9.1A Draw and interpret sketch
 10.3A Install and test electrical wiring and circuits (up to 1000vAC/1500vDC)
 18.1A Use hand tools
 18.49A Disconnect/reconnect fixed wired equipment which use up to 1000vAC/1500vDC

9.2A Interpret technical drawing
 12.2A Electrical/electronic measurement
 18.2A Use power tools/hand held operations
 18.51A Fault find repair/rectify complex electrical circuits

10.2A Terminate and connect electrical wiring
 12.4A Precision electrical/electronic measurement
 18.48A Fault find and repair/rectify basic electrical circuits

Pre-requisite units - Path 2

2.2C11 Organise and analyse information
 2.7C10 Perform computations - basic
 2.14C5 Use graphical techniques and perform simple statistical computations

2.5C11 Measure with graduated devices
 2.8C10 Perform computations
 9.1A Draw and interpret sketch

2.6C10 Plan a complete activity
 2.10C5 Write reports
 9.2A Interpret technical drawing

12.2A Electrical/electronic measurement
 18.2A Use power tools/hand held operations

12.3A Precision mechanical measurement
 18.3A Use tools for precision work

18.1A Use hand tools
 18.6A Dismantle/repair/replace/assemble and fit engineering components

18.10A Equipment condition monitoring and recording
 18.19A Maintain and repair pneumatic systems
 18.22A Maintain/repair/replace fluid power controls
 18.55A Dismantle, replace and assemble engineering components

18.16B Analyse plant and equipment condition monitoring results
 18.20A Maintain hydraulic system components
 18.23B Modify fluid power system operation

18.18A Maintain pneumatic system components
 18.21A Maintain and repair hydraulic systems
 18.53B Modify fluid power control systems

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices
 9.2A Interpret technical drawing
 18.2A Use power tools/hand held operations

5.1A Manual soldering/desoldering - electrical/electronic components
 12.4A Precision electrical/electronic measurement
 18.54A Fault find, test, calibrate instrumentation systems, equipment

9.1A Draw and interpret sketch
 18.1A Use hand tools
 18.55A Dismantle, replace and assemble engineering components

18.57A Maintain/service analog/digital electronic equipment	18.60A Maintain, repair control instrumentation - single & multiple loop control systems	18.62A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements
18.67A Tune control loops - multi controller or multi element systems		
Pre-requisite units - Path 4		
2.5C11 Measure with graduated devices	5.1A Manual soldering/desoldering - electrical/electronic components	5.2A High reliability soldering and desoldering
9.1A Draw and interpret sketch	9.2A Interpret technical drawing	12.4A Precision electrical/electronic measurement
18.1A Use hand tools	18.2A Use power tools/hand held operations	18.56A Diagnose and repair analog equipment and components
18.57A Maintain/service analog/digital electronic equipment	18.58A Modify electronic equipment	18.59B Modify electronic systems
18.65A Diagnose and repair digital equipment and components		
Pre-requisite units - Path 5		
2.5C11 Measure with graduated devices	9.2A Interpret technical drawing	12.2A Electrical/electronic measurement
18.1A Use hand tools	18.2A Use power tools/hand held operations	18.55A Dismantle, replace and assemble engineering components
18.86A Test, evacuate and charge refrigeration systems	18.88A Maintain and repair commercial air conditioning systems and components	18.92A Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls
Pre-requisite units - Path 6		
2.5C11 Measure with graduated devices	9.2A Interpret technical drawing	12.2A Electrical/electronic measurement
18.1A Use hand tools	18.2A Use power tools/hand held operations	18.55A Dismantle, replace and assemble engineering components
18.86A Test, evacuate and charge refrigeration systems	18.90A Maintain and repair industrial refrigeration systems and components	18.92A Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls
Pre-requisite units - Path 7		
2.5C11 Measure with graduated devices	9.2A Interpret technical drawing	12.2A Electrical/electronic measurement
18.1A Use hand tools	18.2A Use power tools/hand held operations	18.55A Dismantle, replace and assemble engineering components
18.86A Test, evacuate and charge refrigeration systems	18.89A Maintain and repair large central air handling systems	18.90A Maintain and repair industrial refrigeration systems and components
18.93B Maintain and repair integrated industrial refrigeration and/or large air handling system controls		
Pre-requisite units - Path 8		
2.5C11 Measure with graduated devices	9.1A Draw and interpret sketch	9.2A Interpret technical drawing
12.2A Electrical/electronic measurement	18.1A Use hand tools	18.2A Use power tools/hand held operations

18.54A Fault find, test, calibrate instrumentation systems, equipment
 18.62A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

18.55A Dismantle, replace and assemble engineering components
 18.64A Maintain instrumentation system components

18.60A Maintain, repair control instrumentation - single & multiple loop control systems
 18.67A Tune control loops - multi controller or multi element systems

Element 10.7B.1 Plan commissioning procedure

Criteria 10.7B.1.1

Control system format and operational intent determined and understood

Assessor guide: observe that –
 All relevant drawings, circuits, specifications, data sheets and instructions obtained in accordance with workplace procedures All necessary approvals for the work are obtained in accordance with work place procedures

Assessor guide: confirm that –
 The work to be undertaken can be identified The control system format can be identified The operational intent of the processes being controlled by the control system can be identified The specifications of the control system and the processes being controlled can be identified Any regulatory and legislative requirements associated with the commissioning procedure can be identified

Criteria 10.7B.1.2

Commissioning procedures are effectively sequenced to meet requirement of components and control application

Assessor guide: observe that –

Assessor guide: confirm that –
 The procedures for commissioning the control system can be identified The sequential requirements of the components of the systems being controlled can be identified The commissioning procedures are effectively sequenced to meet the requirements of the system components and the control application The reasons for selecting the chosen commissioning sequence can be

explained

Element 10.7B.2 Check control system installation

Criteria 10.7B.2.1

Verify that all system components are installed correctly to specifications

Assessor guide: observe that –
 All system components are checked for correct installation in conformance to specifications using standard operating procedures

Assessor guide: confirm that –
 All components of the operational processes can be identified The installation specifications for each component of the operational processes can be identified Any measurements to be taken to ensure conformance to specifications can be identified The measuring techniques and equipment appropriate to the measurements to be taken can be identified

Criteria 10.7B.2.2

Appropriate test equipment is functional and calibrated before use

Assessor guide: observe that –
 All test equipment to be used is checked for correct function and is calibrated before use in accordance with standard operating procedures

Assessor guide: confirm that –
 Test equipment and techniques appropriate to the commissioning of the control system can be identified The reasons for selecting the chosen test equipment and techniques can be explained The calibration procedures for the selected test equipment can be identified

Criteria 10.7B.2.3

Components or control loop/system powered up and checked for correct supply in accordance with specifications

Assessor guide: observe that –

The components and/or the control loop/system are energised and checked for correct supply in accordance with specifications and standard operating procedures

Assessor guide: confirm that –

The procedures for energising components and/or the control loop/ system can be identified The supply requirements of components and the control loop/system can be identified

Criteria 10.7B.2.4

All readings/measurements are correctly obtained, interpreted and recorded

Assessor guide: observe that –

All readings/measurements are correctly obtained, interpreted and recorded in accordance with standard operating procedures

Assessor guide: confirm that –

The recording requirements for readings/measurements taken can be identified

Element 10.7B.3 Adjust control system and assess performance**Criteria 10.7B.3.1**

Control loop/system components adjusted to meet control characteristics, application and process specifications utilising appropriate techniques

Assessor guide: observe that –

Where appropriate the control loop/ system components are adjusted in accordance with standard operating procedures to ensure that control characteristics, application and process specifications are achieved

Assessor guide: confirm that –

The adjustments that can be made to the control loop/system components can be identified The effects of those adjustments on the control characteristics and operational processes can be explained

Criteria 10.7B.3.2

Final verifications including any operational adjustments made to ensure required performance

Assessor guide: observe that –

The appropriate measurements/tests are undertaken in accordance with standard operating procedures to ensure the control system and process operation conforms to specification

Assessor guide: confirm that –

The appropriate measurements/tests to be undertaken to verify control system and process operation can be identified The reasons for selecting the chosen measurements/tests can be explained

Element 10.7B.4 Commissioning modifications undertaken**Criteria 10.7B.4.1**

Necessary modifications to change performance in order to meet manufacturer's or operational specifications or safety and legislative requirements are undertaken or actioned

Assessor guide: observe that –

Where appropriate, the authorised modification to the control system and/or process components carried out in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures to be followed if the operational specifications of the control system and/or process cannot be achieved can be identified The effect of changes to control system components on system performance can be explained The appropriate authority to approve any modifications to the control system and/or process components can be given Where appropriate, the relevant authority has approved any modification to be undertaken

Criteria 10.7B.4.2

Provide reports on system/process characteristics for warranty, handover, legislative, etc. purposes

Assessor guide: observe that –

All relevant reports on the commissioning of the control system are completed in accordance with standard operating procedures

Assessor guide: confirm that –

The reporting requirements associated with the commissioning of control systems can be identified

Criteria 10.7B.4.3

All modifications documented and result recorded to standard operating procedure

Assessor guide: observe that –

Where appropriate, all relevant reports on the modifications made to the control system and/or process components are completed in accordance with standard operating procedures

Assessor guide: confirm that –

The requirements for recording modifications to control systems and/or process components can be identified The reasons for recording modifications to control systems and/or process components can be identified

Range statement

Work generally undertaken in a team environment, but not exclusively. Commissioning involves the development of a commissioning procedure, testing of operation and adjustment to conform with specification. Control loop/system components incorporate all instruments and devices which make up or control a loop/system, including sensing devices, control devices, actuators and transducers. Control systems can mean closed or open loop on continuous or step process control systems. Loop/system control can incorporate the use of pneumatics, electrical, electronics, hydraulics or a combination. All specifications supplied via engineering/circuit drawings, data sheets, written or verbal instructions. All work and work practices undertaken to regulatory and legislative requirements.

Evidence guide**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the commissioning and modification of control systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 10.8B A Undertake commissioning procedures for plant and/or equipment

Band – Specialisation band B

Field – Installation & commissioning

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
10.6A Install machine/plant
18.3A Use tools for precision work

9.1A Draw and interpret sketch
18.1A Use hand tools
18.6A Dismantle/repair/replace/assemble and fit engineering components

9.2A Interpret technical drawing
18.2A Use power tools/hand held operations
18.9A Levelling and alignment of machines and engineering components

18.55A Dismantle, replace and assemble engineering components

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.1A Use hand tools

9.2A Interpret technical drawing
18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement
18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

18.90A Maintain and repair industrial refrigeration systems and components

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices
18.1A Use hand tools

9.2A Interpret technical drawing
18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement
18.55A Dismantle, replace and assemble engineering components

18.89A Maintain and repair large central air handling systems

Pre-requisite units - Path 4

2.5C11 Measure with graduated devices
10.2A Terminate and connect electrical wiring

9.1A Draw and interpret sketch
10.3A Install and test electrical wiring and circuits (up to 1000vAC/1500vDC)

9.2A Interpret technical drawing
12.2A Electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.49A Disconnect/reconnect fixed wired equipment which use up to 1000vAC/1500vDC

18.55A Dismantle, replace and assemble engineering components

Element 10.8B.1 Plan commissioning procedure

Criteria 10.8B.1.1

Commissioning procedure is undertaken and approvals obtained in accordance with standard operating procedures.

Assessor guide: observe that –

The appropriate sequence of events in the commissioning of the machine/plant can be identified.

Assessor guide: confirm that –

All necessary approvals for the work are obtained in accordance with site procedures. All procedures documentation pertaining to the commissioning procedures is obtained in accordance with work site procedures.

Element 10.8B.2 Assess system performance**Criteria 10.8B.2.1**

Correct measuring/test devices used.

Assessor guide: observe that –

The performance tests appropriate to the machine/plant to be commissioned can be identified.

Assessor guide: confirm that –

Appropriate measuring/testing devices are selected in accordance with work site procedures and machine/plant specifications.

Criteria 10.8B.2.2

All necessary measurements/readings taken at appropriate points.

Assessor guide: observe that –

The measurements to be taken to ensure conformance to specifications can be identified. The correct points at which measurements are to be taken can be identified.

Assessor guide: confirm that –

All measurements/readings are safely taken in accordance with work site procedures.

Criteria 10.8B.2.3

All variances from specifications recorded to standard operating procedure.

Assessor guide: observe that –

All variations from specification can be identified. The reasons for detected variations from performance specifications can be given.

Assessor guide: confirm that –

Variations in machine/plant performance from specification are recorded in accordance with work site procedures.

Element 10.8B.3 Adjust plant**Criteria 10.8B.3.1**

Plant/system performance adjusted to design and operational specifications utilising appropriate and correct techniques. Technical difficulties are resolved in consultation with appropriate technical advisors.

Assessor guide: observe that –

Appropriate adjustments to bring the machine/plant into line with operational specifications can be identified based on engineering principles or appropriate technical advice.

Assessor guide: confirm that –

Appropriate adjustments are made to the machine/plant to bring it into specification in accordance with work site procedures.

Element 10.8B.4 Make reports

Criteria 10.8B.4.1

Produce report/logs on completed system/plant/machinery/status/ performance as required in accordance with standard operating procedures.

Assessor guide: observe that –

The reporting requirements relevant to the machine/plant being commissioned can be identified.

Assessor guide: confirm that –

All appropriate reports in accordance with standard operating procedures.

Range statement

Work generally undertaken as part of team role. Technical difficulties are resolved in consultation with appropriate technical advisors. Plant and/or equipment includes rotating equipment and machinery, production equipment, plant and machinery, process equipment, and machine tools etc. Commissioning work, which may be of an electrical/electronic/mechanical nature, is undertaken on internally or externally located plant and/or equipment that is new, or replacement, or has been extensively modified (by people usually outside of the commissioning individual or team). This unit is not intended to be used by electrical/electronic/mechanical maintenance personnel completing their own work, including return to service work. These activities are covered in Unit 18.4A (Maintain and overhaul mechanical equipment and/or Unit 9.11A (Apply basic engineering design concepts) and/or Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components) and/or 18.48A (Fault find repair/rectify basic circuits) and/or 18.54A (Fault find test calibrate instrumentation, sensors, transmitters and final control elements). All work undertaken to specifications supplied via engineering drawings and data sheets, written and verbal instructions, regulatory and legislative requirements. Additional specialisation units may be required for some specialist applications eg: fluid power, instrumentation and PLC, electrical/electronic etc.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant drawings, manuals, catalogues, codes, standards, regulations and reference material relevant to the work. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the commissioning of machines and plant, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 10.9A A Install refrigeration and air conditioning plant and equipment

Band – Specialisation band A

Field – Installation & commissioning

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

10.10A Install pipework and pipework assemblies

18.55A Dismantle, replace and assemble engineering components

9.1A Draw and interpret sketch

18.1A Use hand tools

18.86A Test, evacuate and charge refrigeration systems

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

Element 10.9A.1 Inspect and prepare installation site

Criteria 10.9A.1.1

Site checked for correct location, dimension and levels, etc. utilising appropriate measuring equipment.

Assessor guide: observe that –

All relevant drawings, specifications and instructions are obtained with workplace procedures. The site is checked for correct location, dimensions and where appropriate, levels, in accordance with standard operating procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The location, dimensions and levels applicable to the work to be undertaken can be identified. Where appropriate, the technique/equipment to be used to check the site levels can be identified.

Criteria 10.9A.1.2

Non-compliance with specification reported to appropriate authority.

Assessor guide: observe that –

Where appropriate, any non-compliance to specifications detected are reported to the appropriate authority in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed if the location, dimensions and/or levels of the site do not comply with the specifications can be given. The appropriate authority to which non-compliances are to be reported can be given. The specification of the refrigeration/air conditioning plant and equipment can be identified. The procedures for checking the refrigeration/air conditioning plant and equipment can be given.

Criteria 10.9A.1.3

Alteration, correction undertaken with approval of appropriate authority.

Assessor guide: observe that –

Where appropriate, authorised alterations, corrections or adjustments are made to the site and/or refrigeration/air conditioning plant and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Any alterations, corrections or adjustments to be made to the site can be identified. Any alterations, corrections or adjustments to be made to the refrigeration/air conditioning plant and equipment can be identified. The appropriate authority to approve alterations, corrections or adjustments to the site and/or structure can be identified. Approval for any alterations, corrections or adjustments to be made has been received from the appropriate authority.

Criteria 10.9A.1.4

All surfaces, materials and components prepared for use.

Assessor guide: observe that –

Where appropriate, surfaces, materials and/or components are prepared or use in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The materials and components to be used in the installation of the refrigeration/air conditioning plant and equipment can be identified. Any preparation of surfaces required prior to commencing the installation of the refrigeration/air conditioning plant and equipment can be identified.

Element 10.9A.2 Install refrigeration/air conditioning plant and equipment**Criteria 10.9A.2.1**

All work carried out safely and in accordance with site procedures and to Australian Standards.

Assessor guide: observe that –

All work is carried out safely to specification and in accordance with all relevant codes, standards and standard operating procedures.

Assessor guide: confirm that –

The safety procedures to be followed while undertaking the work can be identified. All safety equipment and personal protective clothing to be used/worn while undertaking the work can be identified. All relevant codes and standards can be identified.

Criteria 10.9A.2.2

Refrigeration/air conditioning plant and equipment/components are prepared for correct sequential installation.

Assessor guide: observe that –

All components of the refrigeration/air conditioning plant are prepared for correct sequential installation in accordance with standard operating procedures.

Assessor guide: confirm that –

The sequence in which components of the refrigeration/air conditioning plant are to be installed can be identified. The reasons for selecting the chosen installation sequence can be explained.

Criteria 10.9A.2.3

Refrigeration/air conditioning plant and equipment/components are installed in conformance with manufacturers' and site specification.

Assessor guide: observe that –

All components of the refrigeration/air conditioning plant are installed and fixed in conformance to specifications and in accordance with standard operating procedures.

Assessor guide: confirm that –

The methods of fixing/fastening the components of the refrigeration/air conditioning plant can be identified. The methods of lifting/moving the components of the refrigeration/air conditioning plant can be identified. The methods of locating/holding the components of the refrigeration/air conditioning plant prior to fixing/fastening can be identified. The reasons for selecting the chosen methods of lifting/moving and locating/holding the components of the refrigeration/air conditioning plant can be given.

Criteria 10.9A.2.4

Routine modifications/alterations of the refrigeration/air conditioning plant and equipment are undertaken to standard operating procedures where required.

Assessor guide: observe that –

The refrigeration/air conditioning plant and equipment is checked for conformance to specifications in accordance with standard operating procedures. Where appropriate, the approved modifications/alterations are made to the refrigeration/air conditioning plant and equipment in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed if the refrigeration/air conditioning plant does not comply with the specifications can be identified. The authority to whom non-conformances are to be reported can be identified. The procedures for checking refrigeration/air conditioning plant and equipment for conformance to specifications can be given. Where appropriate, modifications/alterations to be made to bring the refrigeration/air conditioning plant and equipment into specification can be identified. The appropriate authority to approve modifications/alterations to the refrigeration/air conditioning plant and equipment can be identified. Approval for any modifications/alterations to be made has been received from the appropriate authority.

Criteria 10.9A.2.5

Refrigeration/air conditioning plant and equipment levelled, aligned, coupled and connected in accordance with specifications.

Assessor guide: observe that –

Where appropriate, the refrigeration/air conditioning plant and equipment is levelled, aligned, coupled and connected to specification in accordance with manufacturers'/standard operating procedures. Where appropriate, electrical connections are scheduled with the appropriate person(s) in accordance with standard operating procedures. All necessary permits and clearances associated with the connection of services to the refrigeration/air conditioning plant and equipment are obtained in accordance with the relevant legislation and regulations.

Assessor guide: confirm that –

All connections and couplings to be made to the refrigeration/air conditioning plant and equipment can be identified. The levelling and alignment requirements of the refrigeration/air conditioning plant and equipment can be identified. Where appropriate, the person(s) responsible for making electrical connections can be identified. All services to be connected to the refrigeration/air conditioning plant and equipment can be identified. All state/territory regulations and legislation relating to the services to be connected can be identified.

Criteria 10.9A.2.6

The refrigeration system is charged with refrigerant and lubricant in accordance with standard operating procedures.

Assessor guide: observe that –

The refrigeration system is charged with the correct refrigerant, to specifications in accordance with standard operating procedures. The refrigeration system is checked for leaks using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for charging refrigeration systems with refrigerant and lubricants can be given. The procedures for checking refrigeration systems for leaks can be given. The appropriate refrigerant and lubricant can be identified.

Criteria 10.9A.2.7

Site cleaned and cleared of all debris and left in a safe state.

Assessor guide: observe that –

The installation site is cleared of all debris, cleaned and left in a safe state in accordance with occupational health and safety requirements and standard operating procedures.

Assessor guide: confirm that –

The requirements for cleaning and clearing the installation site can be identified. Where appropriate, the equipment required to clean and or clear the site can be identified.

Element 10.9A.3 Start up refrigeration/air conditioning plant and equipment**Criteria 10.9A.3.1**

The refrigeration/air conditioning plant and equipment is started up in accordance with standard operating procedures.

Assessor guide: observe that –

Pre-start checks are undertaken in accordance with standard operating procedures. The refrigeration/air conditioning plant and equipment is started up safely and correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking refrigeration/air conditioning plant and equipment prior to start-up can be given. The reasons for carrying out pre-start checks can be explained. The safety procedures to be followed when starting up refrigeration/air conditioning plant and equipment can be given. All appropriate safety equipment can be identified and its application given. The procedures for starting the refrigeration/air conditioning plant and equipment can be given. The consequences of not following prescribed start-up procedures can be explained.

Criteria 10.9A.3.2

The refrigeration/air conditioning plant and equipment is operated, monitored and adjusted to specification.

Assessor guide: observe that –

The refrigeration/air conditioning plant and equipment is operated, monitored and adjusted to specification using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for operating the refrigeration/air conditioning plant and equipment can be given. The procedures, tools, techniques and equipment required to monitor the performance of the refrigeration/air conditioning plant and equipment can be identified. The procedures for adjusting the refrigeration/air conditioning plant and equipment to specification can be given.

Criteria 10.9A.3.3

All reports, documentation completed correctly to required specifications.

Assessor guide: observe that –

All reports and documentation are completed correctly and in accordance with standard operating procedures.

Assessor guide: confirm that –

The reports and/or documentation to be completed before, during and after the installation and start-up of refrigeration/air conditioning plant and equipment can be identified.

Range statement

Work is undertaken autonomously or in a team environment using predetermined standards of safety, quality and workshop procedures. Refrigeration/air conditioning systems include commercial, industrial and transport applications - Refer to Field Definitions. Refrigeration/air conditioning components include, but not limited to compressors, evaporators, condensers, valves, controllers, fans, solenoids, sensors, thermostats, switches, recorders, etc. Controls may be mechanical, pneumatic, electric, electronic and may be sequenced/controlled by programmable controllers or computer systems. All work is to be undertaken in accordance with all relevant state or territory legislation and regulatory requirements. Modifications and alterations are of a routine/minor nature and do not require specification changes or technical recording. For example, the fitting of spacers, relocation of brackets, alignment of holes, etc. Work is undertaken utilising new or existing internal or external locations and sites. Footings, foundations, beds and frameworks are completed prior to installation. This unit should not be selected with Unit 10.6A (Install machine/plant), but appropriate air conditioning/refrigeration would still be required where Unit 10.6A (Install machine/plant) is substituted for Unit 10.9A (Install refrigeration and air conditioning plant and equipment). Where any extensive fitting, alignment is required, then Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components) and Unit 18.9A (Levelling and alignment of machines and engineering components) may also need to be considered. Where modifications involve electrical disconnection and reconnection, then Unit 18.49A (Disconnect/reconnect fixed wired equipment (which use up to 1000vAC/1500vDC)), should also be considered. If brazing/silver soldering skills are required, Unit 5.6A (Perform brazing and/or silver soldering) should also be accessed.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the installation of refrigeration/air conditioning plant and equipment or other competencies requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant drawings, manuals, catalogues, codes, standards, regulations and reference material relevant to the work. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 10.10A A Install pipework and pipework assemblies

Band – Specialisation band A

Field – Installation & commissioning

Unit Weight 4

Pre-requisite units - Path 1

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 10.10A.1 Plan the installation

Criteria 10.10A.1.1

Quantity and type of pipework and pipework assemblies are selected according to specifications.

Assessor guide: observe that –
Appropriate specifications are obtained.

Assessor guide: confirm that –
Specifications are interpreted to select correct types and quantities.

Criteria 10.10A.1.2

Appropriate sequence for the installation of pipework and pipework assemblies determined.

Assessor guide: observe that –
Sequence determined with regard to type of installation, site conditions, other structures present, work integrated with other site activities.

Assessor guide: confirm that –
Sequence can be determined for a range of situations, materials and conditions.

Criteria 10.10A.1.3

Work site prepared for installation of pipework and pipework assemblies.

Assessor guide: observe that –
Site is prepared with due regard to OHS including site safety, clear working space, other materials/structures/personnel in vicinity, isolation of work site where required.

Assessor guide: confirm that –
Safety issues can be clearly identified and explained, adequate precautions determined and applied, awareness of other site factors that could be effected by the work.

Element 10.10A.2 Pipework and pipework assemblies prepared for assembly**Criteria 10.10A.2.1**

Pipework is cleaned in accordance with standard operating procedures.

Assessor guide: observe that –

All pipework and assemblies are cleaned to specifications safely, in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for cleaning pipework and assemblies can be given. The solvents/cleaning materials to be used in cleaning the pipework and assemblies can be identified. The reasons for selecting the chosen solvent/cleaning material can be explained. The solvents/cleaning materials to be used on a variety of pipe materials and piping applications can be given. The precautions to be taken when using solvents/cleaning materials can be given.

Criteria 10.10A.2.2

Pipework and assemblies are purged in accordance with standard operating procedures.

Assessor guide: observe that –

Pipework and assemblies are purged safely in accordance with standard operating procedures using appropriate tools, techniques and equipment.

Assessor guide: confirm that –

The reasons for purging pipework and assemblies can be explained. A variety of purging materials and their application can be given. The appropriate purging material for the given pipework and assemblies can be identified. The reasons for selecting the chosen purging material can be given. The precautions to be taken when purging pipework and assemblies can be given. The tools, techniques and equipment required to purge pipework and assemblies can be identified.

Criteria 10.10A.2.3

Pipework and assemblies are capped/sealed.

Assessor guide: observe that –

Pipework and assemblies are capped/sealed to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for capping/sealing pipework and assemblies can be given. The methods of capping/sealing pipework and assemblies can be identified. The reasons for selecting the chosen capping/sealing method can be given. The reasons for capping/sealing pipework and assemblies can be explained.

Element 10.10A.3 Install pipework and assemblies**Criteria 10.10A.3.1**

Enclosures/hangers/support systems are installed without damage or distortion to the surrounding environment or other services.

Assessor guide: observe that –

Appropriate enclosures/hangers/support systems are installed in the correct location, in accordance with standard operating procedures without damage or distortion to the surrounding environment or other services.

Assessor guide: confirm that –

The location/layout of pipework and assemblies can be identified. A variety of enclosures/hangers/ support systems and their application can be given. The method of attachment of the enclosures/hangers/support systems to the surrounding environment can be identified. The precautions to be taken installing enclosures/hangers/support systems can be identified. The procedures to be followed when installing enclosures/hangers/support systems can be given.

Criteria 10.10A.3.2

Pipework and assemblies are installed without damage or distortion to either pipework, assemblies or surrounding environment or other services.

Assessor guide: observe that –

Pipework and assemblies are installed in correct location in accordance with standard operating procedures without damage or distortion to pipework, assemblies, surrounding environment or other services.

Assessor guide: confirm that –

The procedures for installing pipework and assemblies can be given. The method of attachment of the pipework and assemblies to the enclosures/hangers/support systems can be identified. The precautions to be taken when installing pipework and assemblies can be explained.

Criteria 10.10A.3.3

Leak test pipework in accordance with standard operating procedures.

Assessor guide: observe that –

The installed pipework and assemblies are leak tested in accordance with standard operating procedures using appropriate tools, techniques and equipment. The installed pipework and assemblies are free of leaks and conform to specifications.

Assessor guide: confirm that –

The procedures for leak testing pipework and assemblies can be given. The precautions to be taken when leak testing is being carried out can be explained. The tools, techniques and equipment necessary to carry out leak testing of pipework and assemblies can be identified. The operational specification of the system incorporating the installed pipework and assemblies can be identified.

Criteria 10.10A.3.4

All ancillary devices and materials are installed to specification in accordance with standard operating procedures.

Assessor guide: observe that –

All required ancillary devices and materials are installed safely to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

All ancillary devices and materials to be installed in conjunction with the pipework and assemblies can be identified. The procedures for installing ancillary devices and materials can be given. The precautions to be taken when installing ancillary devices and materials can be given.

Range statement

Work is undertaken autonomously or in a team environment using predetermined standards of safety, quality and workshop procedures. Work may be undertaken at the installation site given appropriate facilities and equipment are available or at a remote location. Pipework refers to pipes and tubes made from ferrous and non-ferrous metals and plastics. Piping accessories include flanges, joints, valves, unions, collars, etc. Ancillary components include insulation materials, valve control systems, etc. Enclosures include metal and PVC ducts, etc. Support systems include pipe/tube bundle support, ties, unistrut, trays, ladder racks, etc. Where pipework and assemblies are to be part of a system/process covered by legislative/regulatory requirements, the units relating to the appropriate welding certificates for the pipe material and application must be accessed. Where pipework is to be cut by mechanical or thermal methods, or welding processes used, the appropriate unit(s) should be accessed. Where the pipework is to be formed and shaped using mechanical and/or thermal techniques, Unit 5.10A (Undertake fabrication, forming, bending and shaping), should be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.

Assessment should be conducted in an environment that the individual is familiar with.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the installation of pipework and accessories or other competencies requiring the exercise of the skills and knowledge covered by this unit.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 10.11A A Terminate and connect specialist cables

Band – Specialisation band A

Field – Installation & commissioning

Unit Weight 2

Pre-requisite units - Path 1

9.2A Interpret technical drawing

10.2A Terminate and connect electrical wiring

12.2A Electrical/electronic measurement

18.1A Use hand tools

Element 10.11A.1 Prepare for termination and connection of specialist cables

Criteria 10.11A.1.1

All work undertaken safely and to workplace procedures, appropriate regulations and legislative requirements.

Assessor guide: observe that –

All work is undertaken in accordance with work site procedures and relevant statutory requirements.

Assessor guide: confirm that –

Safety hazards associated with the termination and connection of cables, and the work environment, can be identified. Relevant statutory requirements associated with the termination and connection of specialist cables can be identified.

Criteria 10.11A.1.2

Correct cables and materials selected in accordance with job requirements.

Assessor guide: observe that –

Cables and materials are checked for condition and conformance to specifications.

Assessor guide: confirm that –

Appropriate specifications for specialist cables and materials can be identified.

Criteria 10.11A.1.3

Certification documentation obtained where appropriate.

Assessor guide: observe that –

Appropriate documentation, certifying work to be carried out, is obtained.

Assessor guide: confirm that –

Correct and appropriate documentation and approvals are identified.

Criteria 10.11A.1.4

Preparation of work undertaken or checked/inspected for correct locations and specifications.

Assessor guide: observe that –

Where appropriate, new installation site checked for correct location and specifications in accordance with work site procedures. Where appropriate, existing installation inspected for correct location and specifications in accordance with work site procedures.

Assessor guide: confirm that –

The location of the work to be undertaken can be identified. Any wiring support and/or protection requirements can be identified. The specifications of wiring support and/or protection requirements can be identified.

Element 10.11A.2 Connect specialist cables

Criteria 10.11A.2.1

Terminations/connections made to specifications, manufacturers requirements and to safety and state/territory regulations and legislative requirements.

Assessor guide: observe that –

All terminations/connections made to specification and comply with manufacturer's and regulatory requirements.

Assessor guide: confirm that –

The relevant statutory requirements can be identified.
The manufacturers' requirements can be identified.

Criteria 10.11A.2.2

Equipment and wiring are installed in a manner that does not reduce the type of protection afforded by the equipment design.

Assessor guide: observe that –

All installations are undertaken to ensure that the full protection provided by the specialist cable installation is maintained.

Assessor guide: confirm that –

The purpose of the use of the specialist cable installation is identified. The installation meets the manufacturers' requirements.

Criteria 10.11A.2.3

All cabling, connections and terminations are tested for compliance with specifications.

Assessor guide: observe that –

All cabling, connections and terminations tested in accordance with specifications.

Assessor guide: confirm that –

Appropriate tests for specialist cables can be identified.

Criteria 10.11A.2.4

All cables, wires, conductors and connections are marked/tagged and labelled to specifications.

Assessor guide: observe that –

All cables, wires, conductors and connections are marked, tagged and labelled to specification.

Assessor guide: confirm that –

The marking, tagging and labelling requirements for cables, wires, conductors and connections can be identified.

Criteria 10.11A.2.5

All reports, documentation completed correctly in accordance with relevant specifications and regulatory requirements.

Assessor guide: observe that –

All reports/documents completed in accordance with regulatory and work site procedures.

Assessor guide: confirm that –

The data to be recorded/reported and the frequency of recording/reporting can be identified.

Range statement

Specialist cables include, but not confined to

- Mineral insulate cables (MIMS)
- Steel wire (SWA - normally described as Steel Wire Armoured cables)
- Other sheathed cables such as piloted cables, composite screened cables, braided cables
- Cable installations requiring specialised glands, fittings and enclosures

Work undertaken autonomously or as part of a team environment. Work undertaken in the field or workshop environment. Work undertaken in accordance with relevant regulations, legislation and specifications. All testing undertaken on completed circuits where not connected to main supply using appropriate methods eg: continuity and resistance checks. Specifications obtained from electrical/electronic circuit drawings, data sheets and manufacturers' manuals. Special fittings must be used for each type of specialist cable. The cables are often rigid and require the use of bending tools and techniques which do not deform the cable, thus causing damage to the insulation etc. Also compounds such as resins may be required for sealing purposes. Most types of specialist cable are designed to either exclude or minimise the ingress of gas or liquids, or to minimise the danger of flash. Termination and connection therefore requires particular techniques, and, in some cases testing. All specifications and procedures are obtained from circuit drawings, data sheets, instructions and regulatory requirements. All work is to be conducted in accordance with relevant legislative and regulatory requirements. For termination and connection of signal and data cables Unit 18.63A (Terminate signal and data cables) should be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the termination and connection of specialist cables, or other units requiring the exercise of skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all pre-requisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 10.13A A Assemble and install equipment and accessories/ancillaries

Band – Specialisation band A

Field – Installation & commissioning

Unit Weight 2

This unit covers the competencies required for assembling and installing equipment and ancillaries/accessories. It does not cover installation requiring substantial modification to the existing site or where components are replaced by the same or similar, type. Typical applications may include marine vessel manufacture.

Installation

and testing within manufacturer specifications is covered by Unit 25.12A (Install and test operations of marine auxiliary systems).

Pre-requisite units - Path 1

9.2A Interpret technical drawing

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 10.13A.1 Inspect and prepare the installation site

Criteria 10.13A.1.1

Site checked for location, dimension, levels, etc. utilising appropriate measuring equipment.

Assessor guide: observe that –

Site is checked and dimensions and measurements taken according to job requirements and industry standards.

Assessor guide: confirm that –

Appropriate leveling and measuring equipment can be identified and benefits of choice explained.

Criteria 10.13A.1.2

Non compliance with specification reported to appropriate authority.

Assessor guide: observe that –

Non compliance reported according to procedural standards.

Assessor guide: confirm that –

Procedural standards can be identified. Non compliance and the impact of such can be explained.

Criteria 10.13A.1.3

Alteration, correction undertaken with approval of appropriate authority.

Assessor guide: observe that –

Where required, alterations or corrections undertaken as directed.

Assessor guide: confirm that –

Requirement for adherence to procedures can be stated.

Criteria 10.13A.1.4

All surfaces, materials and components prepared for use.

Assessor guide: observe that –

Surfaces, materials and components prepared for use. Component parts checked against specification where necessary.

Assessor guide: confirm that –

Preparatory requirements and processes can be explained.

Element 10.13A.2 Install machinery/plant and equipment

Criteria 10.13A.2.1

Work carried out safely and in accordance with site procedures, standard operating procedures and legislative requirements.

Assessor guide: observe that –

All work is carried out safely and in accordance with manufacturer's, site and legislative requirements.

Assessor guide: confirm that –

Hazards are identified and safe working procedures can be stated. Legislative requirements can be explained.

Criteria 10.13A.2.2

Machine/equipment components prepared for correct sequential installation.

Assessor guide: observe that –

Machinery/plant or equipment is prepared according to specifications and established procedures.

Assessor guide: confirm that –

All parts can be identified and sequence of installation can be stated.

Criteria 10.13A.2.3

Install machinery/plant or equipment in accordance with manufacturer's and site specifications.

Assessor guide: observe that –

Machinery/plant or equipment is installed in accordance with manufacturer's and site specific requirements.

Assessor guide: confirm that –

Installation procedures can be explained

Criteria 10.13A.2.4

Routine modification/alterations undertaken to operating procedures where required.

Assessor guide: observe that –

Modifications/alterations, where necessary, are carried out to industry standard without jeopardising structural or watertight integrity.

Assessor guide: confirm that –

Reasons for modifications/alterations are identified and impact of modifications/alterations can be stated.

Criteria 10.13A.2.5

Machine/equipment levelled, aligned, connected or coupled where required (excluding electrical connections)

Assessor guide: observe that –

Machine/equipment levelled, aligned, connected or coupled according to specifications. Through hull fittings are packed/sealed to make watertight.

Assessor guide: confirm that –

Procedures for leveling and aligning can be explained. Impacts of mis-allignment can be stated.

Criteria 10.13A.2.6

Site cleaned and cleared of all debris and left in safe state.

Assessor guide: observe that –

Site is cleaned to an acceptable level in terms of safety and cleanliness and all debris removed.

Assessor guide: confirm that –

Cleaning procedures can be identified and hazards stated.

Range statement

Work undertaken autonomously and/or as part of a team where appropriate. Applies to installation to pre-determined positions/locations using drawings, instructions etc. Equipment and accessories/ancillaries may include toe rails, cleats, bollards, bow-rollers, fairleads, staunchions, railings, non-powered and powered winches, engines and driving mechanisms, auxiliary power plants, desalinating units, stabiliser units, , powered/non-powered davits, pumps and compressors etc. Work undertaken utilising new external and internal locations and sites. Foundations, footings, beds and framework completed prior to installation practices. All specifications applied via engineering drawings, written or verbal instructions. All work and work practices undertaken to regulatory and legislative requirements. Where positions are determined, alignments undertaken, testing within manufacturer specifications is required etc. Unit 25.12A (Install and test operations of marine auxiliary systems) should be selected. Where installation requires substantial modification to the existing site, and is being replaced by the same or similar, type Unit 10.6A (Install machine/plant), Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components), Unit 18.9A (Levelling and alignment of machines and engineering components) and Unit 18.55A (Dismantle, replace and assemble engineering components) should be accessed. For production-related assembly work, Unit 3.2A (Precision assembly) should be selected. Do not select this unit if Unit 3.2A (Precision assembly) has already been selected. Where load shifting equipment such as ride on fork lifts/pallet trucks is used, Unit 11.10A (Operate mobile load shifting equipment) should also be considered.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the assembly and installation of equipment and accessories/ancillaries or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.1A B Erect/dismantle scaffolding and equipment

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Pre-requisite units - Path 1

18.1A Use hand tools

Element 11.1A.1 Erect scaffold/equipment

Criteria 11.1A.1.1

All work undertaken safely and to prescribed procedures.

Assessor guide: observe that –

All relevant job instructions, specifications and procedures are obtained in accordance with work place procedures. All work is undertaken safely and in accordance with standard operating procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The safety procedures to be followed can be identified.

Criteria 11.1A.1.2

Erection site prepared to meet job requirements.

Assessor guide: observe that –

The erection site is prepared in accordance with standard operating procedures.

Assessor guide: confirm that –

The erection site can be identified. The procedures for preparing a site for the erection of scaffolding and equipment can be given.

Criteria 11.1A.1.3

Necessary signage and barriers placed in appropriate position.

Assessor guide: observe that –

All necessary signage and barriers are appropriately placed in accordance with standard operating procedures.

Assessor guide: confirm that –

The signs and barriers to be put in place and their location can be identified. The reasons for placing signs and barriers in appropriate positions can be given.

Criteria 11.1A.1.4

Scaffolding/equipment is erected to plan and in accordance with acceptable safe work practices, Australian Standards and equipment manufacturer's requirements.

Assessor guide: observe that –

The scaffolding/equipment is erected in the planned sequence and in accordance with relevant codes, standards, regulations and manufacturer's requirements.

Assessor guide: confirm that –

The procedures for erecting scaffolding/equipment can be given. The relevant codes, standards and regulatory requirements can be identified. The sequence of operations in erecting the scaffolding/equipment can be identified.

Criteria 11.1A.1.5

Scaffolding/equipment checked for safety and operational requirements.

Assessor guide: observe that –

The scaffolding/equipment is checked for conformance to safety and operational requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking the scaffolding/equipment for conformance to safety and operational requirements can be given.

Element 11.1A.2 Dismantle scaffold/equipment**Criteria 11.1A.2.1**

Work undertaken safely and to prescribed procedure.

Assessor guide: observe that –

All work is undertaken safely and in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety procedures to be followed when dismantling scaffolding/equipment can be identified.

Criteria 11.1A.2.2

Scaffolding/equipment dismantled in accordance with site procedures and critical structural and safety requirements.

Assessor guide: observe that –

The scaffolding/equipment is dismantled safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for dismantling scaffolding/equipment can be given. The critical structural requirements of scaffolding/equipment can be identified.

Criteria 11.1A.2.3

Site cleaned and cleared of all tools, excess material and debris and left in a safe state.

Assessor guide: observe that –

The site is cleaned and cleared of all tools, excess material and debris and left in a safe state in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for cleaning and clearing the site can be given. The reasons for cleaning and clearing the site can be explained.

Range statement

Work is undertaken to state or territory legislative requirements. Equipment range includes: standing prefabricated tower scaffolds and bracket scaffolds. Work undertaken with supervision or in a team environment.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the erection/dismantling of scaffolding and equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.2A B Erect/dismantle complex scaffolding and equipment

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Pre-requisite units - Path 1

11.1A Erect/dismantle scaffolding and equipment

18.1A Use hand tools

Element 11.2A.1 Erect scaffold/equipment

Criteria 11.2A.1.1

All work undertaken safely and to prescribed procedures.

Assessor guide: observe that –

All relevant job instructions, specifications and procedures are obtained in accordance with work place procedures. All work is undertaken safely and in accordance with standard operating procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The safety procedures to be followed can be identified.

Criteria 11.2A.1.2

Erection site prepared to meet job requirements.

Assessor guide: observe that –

The erection site is prepared in accordance with standard operating procedures.

Assessor guide: confirm that –

The erection site can be identified. The procedures for preparing a site for the erection of scaffolding and equipment can be given.

Criteria 11.2A.1.3

Necessary signage and barriers placed in appropriate position.

Assessor guide: observe that –

All necessary signage and barriers are appropriately placed in accordance with standard operating procedures.

Assessor guide: confirm that –

The signs and barriers to be put in place and their location can be identified. The reasons for placing signs and barriers in appropriate positions can be given.

Criteria 11.2A.1.4

Scaffolding/equipment is erected to plan and in accordance with acceptable safe work practices, Australian Standards and equipment manufacturer's requirements.

Assessor guide: observe that –

The scaffolding/equipment is erected in the planned sequence and in accordance with relevant codes, standards, regulations and manufacturer's requirements.

Assessor guide: confirm that –

The procedures for erecting scaffolding/equipment can be given. The relevant codes, standards and regulatory requirements can be identified. The sequence of operations in erecting the scaffolding/equipment can be identified.

Criteria 11.2A.1.5

Scaffolding/equipment checked for safety and operational requirements.

Assessor guide: observe that –

The scaffolding/equipment is checked for conformance to safety and operational requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking the scaffolding/equipment for conformance to safety and operational requirements can be given.

Element 11.2A.2 Alter and/or repair scaffolding/equipment**Criteria 11.2A.2.1**

Alterations/repairs coordinated in accordance with safety work practices, Australian Standards and equipment manufacturer's requirements.

Assessor guide: observe that –

The alterations/repairs being undertaken are coordinated in accordance with relevant codes, standards, regulations, safety and operating procedures.

Assessor guide: confirm that –

The alterations/repairs to be carried out on the scaffolding/equipment can be identified. The safety procedures to be followed when altering/repairing scaffolding/equipment can be given. The relevant codes, standards and regulations can be identified.

Criteria 11.2A.2.2

Alterations/repairs inspected for safety and operational requirements.

Assessor guide: observe that –

The alterations/repairs undertaken are inspected for conformance to safety and operational requirements.

Assessor guide: confirm that –

The procedures for inspecting the alterations/repairs can be given. The safety and operational requirements of the scaffolding/ equipment can be identified.

Criteria 11.2A.2.3

Scope of alteration/repair confirmed and understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The scope of the alteration/repair to be undertaken can be identified. The reasons for undertaking the alteration/repair can be given.

Criteria 11.2A.2.4

Existing scaffold/equipment is inspected for suitability of alterations/repair requirements.

Assessor guide: observe that –

The existing scaffolding/equipment is inspected to ensure that the proposed alteration/repair will not adversely affect the safety and operational performance of the scaffolding/equipment.

Assessor guide: confirm that –

The requirement of the alteration/ repair with respect to the existing scaffolding/equipment can be identified. The likely effect of the alteration/ repair on the safety and operational performance of the scaffolding/ equipment can be given.

Criteria 11.2A.2.5

Materials, equipment and tools required for alteration determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The tools, equipment and techniques required to alter/repair the scaffolding/equipment can be identified. The reasons for selecting the chosen tools, equipment and techniques can be given.

Criteria 11.2A.2.6

Work completion recorded/reported to appropriate authority.

Assessor guide: observe that –

Work completion is reported/recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording/reporting work completion can be given. The authority to whom work completion is to be reported/ recorded can be given.

Element 11.2A.3 Dismantle scaffold/equipment**Criteria 11.2A.3.1**

Work undertaken safely and to prescribed procedure.

Assessor guide: observe that –

All work is undertaken safely and in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety procedures to be followed when dismantling scaffolding/equipment can be identified.

Criteria 11.2A.3.2

Scaffolding/equipment dismantled in accordance with site procedures and critical structural and safety requirements.

Assessor guide: observe that –

The scaffolding/equipment is dismantled safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for dismantling scaffolding/equipment can be given. The critical structural requirements of scaffolding/equipment can be identified.

Criteria 11.2A.3.3

Site cleaned and cleared of all tools, excess material and debris and left in a safe state.

Assessor guide: observe that –

The site is cleaned and cleared of all tools, excess material and debris and left in a safe state in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for cleaning and clearing the site can be given. The reasons for cleaning and clearing the site can be explained.

Range statement

Work to be undertaken to state/territory legislative requirements. Equipment range includes: prefabricated scaffolds, tube and fittings scaffolds, cantilevered hoists, bracket scaffolds, and catch platforms, fall protection devices, cantilevered and spurred scaffolds, platforms and course-ways. Work undertaken with assistants as required or in a team environment with supervision.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the erection/dismantling of scaffolding and equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.3A A Coordinate erection/dismantling of complex scaffolding/equipment

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Pre-requisite units - Path 1

11.1A Erect/dismantle scaffolding and equipment

11.2A Erect/dismantle complex scaffolding and equipment

18.1A Use hand tools

Element 11.3A.1 Coordinate erection of scaffold/equipment

Criteria 11.3A.1.1

All work undertaken safely and to prescribed procedures.

Assessor guide: observe that –

All relevant job instructions, specifications and procedures are obtained in accordance with work place procedures. All work is undertaken safely and in accordance with standard operating procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The safety procedures to be followed can be identified.

Criteria 11.3A.1.2

Erection site prepared to meet job and safety requirements.

Assessor guide: observe that –

The erection site is prepared in accordance with standard operating procedures.

Assessor guide: confirm that –

The erection site can be identified. The procedures for preparing a site for the erection of scaffolding and equipment can be given.

Criteria 11.3A.1.3

Necessary signage and barriers placed in appropriate position.

Assessor guide: observe that –

All necessary signage and barriers are appropriately placed in accordance with standard operating procedures.

Assessor guide: confirm that –

The signs and barriers to be put in place and their location can be identified. The reasons for placing signs and barriers in appropriate positions can be given.

Criteria 11.3A.1.4

Scaffolding/equipment erection coordinated in accordance with acceptable safe work practices, Australian Standards and equipment manufacturer's requirements.

Assessor guide: observe that –

The scaffolding/equipment is erected in the planned sequence and in accordance with relevant codes, standards, regulations and manufacturer's requirements.

Assessor guide: confirm that –

The procedures for erecting scaffolding/equipment can be given. The relevant codes, standards and regulatory requirements can be identified. The sequence of operations in erecting the scaffolding/equipment can be identified.

Criteria 11.3A.1.5

Completed scaffolding/equipment inspected for safety and compliance with design, operational and statutory requirements.

Assessor guide: observe that –

The scaffolding/equipment is checked for conformance to design, safety and operational requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking the scaffolding/equipment for conformance to design, safety and operational requirements can be given.

Element 11.3A.2 Alterations, repairs of scaffolding/equipment coordinated**Criteria 11.3A.2.1**

Scope of alteration/repair confirmed and understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The scope of the alteration/repair to be undertaken can be identified. The reasons for undertaking the alteration/repair can be given.

Criteria 11.3A.2.2

Existing scaffolding/equipment is inspected and alterations/repairs determined.

Assessor guide: observe that –

The existing scaffolding/equipment is inspected to ensure that the proposed alteration/repair will not adversely affect the safety and operational performance of the scaffolding/equipment.

Assessor guide: confirm that –

The requirement of the alteration/repair with respect to the existing scaffolding/equipment can be identified. The likely effect of the alteration/repair on the safety and operational performance of the scaffolding/equipment can be given.

Criteria 11.3A.2.3

Materials, equipment and tools required for alterations determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The tools, equipment and techniques required to alter/repair the scaffolding/equipment can be identified. The reasons for selecting the chosen tools, equipment and techniques can be given.

Criteria 11.3A.2.4

Existing or new load requirements determined using load tables.

Assessor guide: observe that –

The new or existing load requirements for the scaffolding/equipment are correctly determined in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for determining/ calculating load requirements can be given. The new/existing load requirement can be identified using load tables.

Criteria 11.3A.2.5

Alteration/repairs coordinated in accordance with safety work practices, Australian Standards and equipment manufacturer's requirements.

Assessor guide: observe that –

The alterations/repairs being undertaken are coordinated in accordance with relevant codes, standards, regulations, safety and operating procedures.

Assessor guide: confirm that –

The alteration/repair to be carried out on the scaffolding/equipment can be identified. The safety procedures to be followed when altering/repairing scaffolding/equipment can be given. The relevant codes, standards and regulations can be identified.

Criteria 11.3A.2.6

Alterations/repairs inspected for safety and operational requirements.

Assessor guide: observe that –

The alteration/repair undertaken is inspected for conformance to safety and operational requirements.

Assessor guide: confirm that –

The procedures for inspecting the alteration/repair can be given. The safety and operational requirements of the scaffolding/equipment can be identified.

Criteria 11.3A.2.7

Work completion reported to appropriate personnel and recorded.

Assessor guide: observe that –

Work completion is reported/recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording/reporting work completion can be given. The authority to whom work completion is to be reported/recorded can be given.

Element 11.3A.3 Inspect completed scaffolding/equipment**Criteria 11.3A.3.1**

The critical structural and safety areas of the scaffolding/equipment are inspected for damage, corrosion and wear.

Assessor guide: observe that –

The critical structural and safety areas of the scaffolding/equipment are inspected for faults/defects in accordance with standard operating procedures.

Assessor guide: confirm that –

The critical structural and safety areas of the scaffolding/equipment can be identified. The procedures for inspecting the scaffolding/equipment can be given. Common faults/defects in scaffolding/equipment can be described.

Criteria 11.3A.3.2

Scaffolding/equipment and structure is checked against the type of scaffolding/equipment and structure specified in plan.

Assessor guide: observe that –

The scaffolding/equipment is inspected for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The scaffolding/equipment and structure specified in the plan can be identified. Any variation of the erected scaffolding/equipment from specification can be identified.

Criteria 11.3A.3.3

Inspection log is completed.

Assessor guide: observe that –

The inspection log is completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The details of the inspection to be recorded in the inspection log can be identified. The procedures for recording inspection details can be given.

Criteria 11.3A.3.4

Potential safety and design/structural hazards are reported for rectification.

Assessor guide: observe that –

Where appropriate, potential safety and design/structural hazards are reported for rectification in accordance with standard operating procedures.

Assessor guide: confirm that –

Common hazards associated with scaffolding/equipment can be identified. The means of rectifying those hazards can be identified. The hazard reporting procedures can be given.

Element 11.3A.4 Dismantling of scaffold/equipment coordinated**Criteria 11.3A.4.1**

Work is coordinated safely and to standard operating procedure.

Assessor guide: observe that –

All work is undertaken safely and in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety procedures to be followed when dismantling scaffolding/equipment can be identified.

Criteria 11.3A.4.2

Scaffolding/equipment dismantling is coordinated and removed from site in accordance with standard operating procedures and critical structural and safety requirements.

Assessor guide: observe that –

The scaffolding/equipment is dismantled safely in accordance with standard operating procedures. The dismantled scaffolding/equipment is removed from the site in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for dismantling scaffolding/equipment can be given. The critical structural requirements of scaffolding/equipment can be identified. The procedures for removing scaffolding/equipment from the site can be given.

Criteria 11.3A.4.3

Site clearance is co-ordinated. Surplus material, equipment, tools and debris are removed and site left in safe and operational state.

Assessor guide: observe that –

The site is cleaned and cleared of all tools, excess material and debris and left in a safe state in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for cleaning and clearing the site can be given. The reasons for cleaning and clearing the site can be explained.

Criteria 11.3A.4.4

Work completion reported to appropriate authority.

Assessor guide: observe that –

Work completion is reported to the appropriate authority in accordance with standard operating procedures.

Assessor guide: confirm that –

Range statement

Work to be undertaken to state/territory legislative requirements. Equipment range includes: suspended scaffolds, cantilevered cranes, loading platforms, hung scaffolds etc. Unit applies to individuals coordinating a scaffolding team or employed in a supervisory capacity.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the coordination of the erection/dismantling of scaffolding/equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.4A A Undertake dogging/crane chasing

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Pre-requisite units - Path 1

18.1A Use hand tools

Element 11.4A.1 Attach lifting gear to loads

Criteria 11.4A.1.1

All work undertaken safely and to prescribed procedures.

Assessor guide: observe that –

All work is undertaken safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety procedures to be followed when attaching lifting gear to loads can be given. The work to be undertaken can be identified.

Criteria 11.4A.1.2

Load is inspected and best lifting method determined.

Assessor guide: observe that –

The load to be lifted is inspected.

Assessor guide: confirm that –

A variety of lifting methods and their application can be identified. The most appropriate lifting method for a particular load can be identified. The reasons for selecting the chosen lifting method can be given.

Criteria 11.4A.1.3

Appropriate load shifting equipment is selected.

Assessor guide: observe that –

Assessor guide: confirm that –

A range of load shifting equipment and their application can be identified. The most appropriate load shifting device for a particular load can be identified. The reasons for selecting the chosen load shifting equipment can be given.

Criteria 11.4A.1.4

Lifting gear is inspected and damaged or worn items are labelled and rejected.

Assessor guide: observe that –

The lifting gear is examined for faults or wear in accordance with standard operating procedures. Where appropriate, faulty or worn items are labelled and rejected in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for inspecting lifting gear can be given. Common faults in lifting gear can be identified. The procedures for rejecting faulty lifting gear items can be given.

Criteria 11.4A.1.5

Where appropriate, safe working loads are calculated to Australian Standards.

Assessor guide: observe that –

Where appropriate, the safe working load of the lifting gear is calculated in accordance with Australian Standards and standard operating procedures.

Assessor guide: confirm that –

The procedures for determining/ calculating safe working loads can be given.

Criteria 11.4A.1.6

Lifting gear is attached to load in most appropriate and safe manner and to specifications where required.

Assessor guide: observe that –

The load is safely attached to the lifting gear in the most appropriate way in accordance with specifications and/or standard operating procedures.

Assessor guide: confirm that –

A variety of methods of attaching lifting gear to loads can be identified. The most appropriate means of attaching lifting gear to particular loads can be identified. The reasons for selecting the chosen means of attaching the lifting gear to the load can be given. The lifting specifications for the load to be lifted can be identified.

Element 11.4A.2 Move loads**Criteria 11.4A.2.1**

Load moving is performed to acceptable safe working practices, Australian Standards, codes of practice and specifications.

Assessor guide: observe that –

The load is moved in accordance with the relevant standards, codes, regulations and safety procedures.

Assessor guide: confirm that –

The relevant standards, codes and regulations pertaining to the movement of loads can be identified. The safety procedures to be followed when moving loads can be given.

Criteria 11.4A.2.2

Lifting gear is connected to load mover using safe and appropriate techniques.

Assessor guide: observe that –

The load shifting gear is safely attached to the load mover in the most appropriate way in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for attaching lifting gear to load movers can be given. The methods of attaching lifting gear to load movers can be identified. The most appropriate method of attaching lifting gear to the load mover can be identified. The reasons for selecting the chosen method of attachment can be given.

Criteria 11.4A.2.3

Appropriate communication and signal methods are used to coordinate the load movement in a safe manner.

Assessor guide: observe that –

The load movement is coordinated using appropriate communication and signal methods.

Assessor guide: confirm that –

The procedures for coordinating the movement of loads can be given. The applications of hand, verbal and whistle signals can be identified. The meaning of each hand, verbal and whistle signal to be used in coordinating the movement of loads can be correctly given.

Criteria 11.4A.2.4

Load is grounded or put down in accordance with prescribed procedure, in a safe and stable manner.

Assessor guide: observe that –

The load is lowered and grounded safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for grounding lifted loads can be given. The reasons for ensuring the load is in a stable position when grounded can be given.

Criteria 11.4A.2.5

All lifting gear is detached from load mover and load.

Assessor guide: observe that –

All lifting gear is detached from the load mover and the load in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing lifting gear from the load mover and the load can be given.

Range statement

Work is undertaken to state/territory legislative requirements. Equipment range may include: slings, ropes, shackles, eye bolts, spreader beams, chain blocks etc. Signals include: stop, raise, lower, slew, luff, extend boom and retract boom, using hands, verbal and whistles. Signals are given both within sight and out of sight of equipment operators. This unit is not intended to apply to machine loading and simple straight lifts where knowledge of codes and signals is not required.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with crane chasing and dogging or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.5A A Pick and process order

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Element 11.5A.1 Receive order

Criteria 11.5A.1.1

Order to be picked is received and checked for errors.

Assessor guide: observe that –

The order to be picked is received and checked for errors in accordance with standard operating procedures. Where appropriate, errors detected in orders received are dealt with in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for receiving orders can be given. Common errors in given orders can be identified. The procedures to be followed when errors are detected in the orders received can be given.

Criteria 11.5A.1.2

Product to be picked is identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The product(s) to be picked and the quantities to be picked can be identified from the order.

Element 11.5A.2 Pick order

Criteria 11.5A.2.1

Appropriate materials handling equipment selected and used, if required.

Assessor guide: observe that –

Where appropriate, the most suitable materials handling equipment is used in accordance with standard operating procedures.

Assessor guide: confirm that –

The materials handling equipment available to assist in order picking can be identified. The application of each type of materials handling equipment available can be identified. The procedures for using materials handling equipment can be given. The reasons for selecting the chosen materials handling equipment to pick given orders can be explained.

Criteria 11.5A.2.2

Products to be picked are located using standard operating procedures.

Assessor guide: observe that –

The ordered products are located and picked in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for locating products can be given. The location of given products can be correctly identified.

Criteria 11.5A.2.3

Order is picked accurately either by manual handling or the use of materials handling equipment.

Assessor guide: observe that –

The order is picked accurately using the appropriate handling technique.

Assessor guide: confirm that –

Criteria 11.5A.2.4

Product is handled according to storage and handling requirements identified from standard operating procedure regulations.

Assessor guide: observe that –

All products are handled and stored in accordance with the product requirements and standard operating procedures.

Assessor guide: confirm that –

The safe handling procedures for products within the store or warehouse can be identified. The source of storage and handling requirements for individual products can be identified. The consequences of using inappropriate handling and storage techniques can be given.

Element 11.5A.3 Finalise order picking**Criteria 11.5A.3.1**

Picked order is checked against documentation.

Assessor guide: observe that –

The picked order is checked against documentation in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking orders can be given.

Criteria 11.5A.3.2

Picked order is placed in correct area for consolidation.

Assessor guide: observe that –

The picked order is placed in the correct area for consolidation in accordance with standard operating procedures.

Assessor guide: confirm that –

The area for order consolidation can be identified. The procedures for consolidating orders can be given.

Criteria 11.5A.3.3

Enterprise documentation is completed.

Assessor guide: observe that –

The relevant documentation is completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The documentation to be completed once the order has been picked can be identified. The procedures for recording picked orders can be given.

Range statement

Work undertaken autonomously in a store or warehouse environment or as part of a team. If materials handling equipment skills are needed, Unit 11.10A (Operate mobile load shifting equipment) should be accessed. This unit applies where the employee has to exercise knowledge of the enterprise product range and the procedures, practices and standards for the storage and handling of a product. Simple handling of goods not requiring the ability to identify different products or to interact with inventory records and stock location systems is covered by Units 11.10A (Operate mobile load shifting equipment) or Unit 11.11A (Manual handling). All work undertaken to legislative and regulatory requirements.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the picking and processing of orders or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.6A A Production packaging

Band – Specialisation band A

Field – Materials handling

Unit Weight 2

Element 11.6A.1 Undertake packaging

Criteria 11.6A.1.1

Packaging requirements identified from instructions or determined by safety, storage conditions, site and legislative requirements.

Assessor guide: observe that –

All relevant job instructions, specifications, procedures, etc. are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The packaging requirements can be identified. Any relevant legislative requirements can be identified.

Criteria 11.6A.1.2

Packaging undertaken to standard operating procedures.

Assessor guide: observe that –

The finished products are packaged in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for packaging the finished product can be given. The packaging materials to be used can be identified.

Element 11.6A.2 Label packaged items

Criteria 11.6A.2.1

Ensure identification labels, tags and stickers are correct and appropriately placed and attached.

Assessor guide: observe that –

The appropriate identification labels, tags and stickers are correctly placed and attached in accordance with standard operating procedures.

Assessor guide: confirm that –

All relevant identification labels, tags and stickers can be identified. The placement requirements for identification labels, tags and stickers can be identified. The procedures for attaching identification labels, tags and stickers can be given.

Criteria 11.6A.2.2

Packaged items stored in safe, orderly and retrievable manner and the location in the warehouse/store recorded.

Assessor guide: observe that –

The packaged products are correctly stored in accordance with standard operating procedures. The location of the packaged products is recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for storing packaged products can be given. The location in which the packaged products are to be placed can be identified. The procedures for recording the placement of packaged products in the store/warehouse can be given. The procedures for handling packaged products can be given. The consequences of inappropriate handling and storing of packaged products can be explained.

Range statement

This unit covers the packaging of finished goods for storage or transport. Finished goods include assemblies, sub-assemblies, individual or multiple components. Work undertaken autonomously and/or in a team environment. Procedures undertaken include standards, codes, legislative, company and customer requirements. Packaging material generally determined from instructions, written or verbal. Packaging methods include manual processes, semi-automated or fully automated packaging equipment. Competencies in this unit are typically performed in a production/process environment. This unit is not intended to apply in situations where simple interim packing, storage and/or stacking are undertaken in context of a production function.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with production packaging or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.7A A Administer inventory procedures

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Pre-requisite units - Path 1

2.7C10 Perform computations - basic

Element 11.7A.1 Use inventory procedures

Criteria 11.7A.1.1

Inventory procedures understood and carried out to standard operational procedures.

Assessor guide: observe that –

Inventory procedures carried out in accordance with work site requirements.

Assessor guide: confirm that –

The tasks to be completed in following inventory procedure can be identified.

Criteria 11.7A.1.2

Requisition, purchase, shipping and invoice documentation used as required to standard operational procedures.

Assessor guide: observe that –

Requisition, purchase, shipping and invoice documents completed, where appropriate, in accordance with work site procedures.

Assessor guide: confirm that –

The documents to be completed for requisition, purchase, shipping and invoice purposes can be identified. Applications for each of the requisition, purchase, shipping and invoice documents can be given.

Criteria 11.7A.1.3

Inward/outward recording/filing system understood, accessed and maintained to standard operational procedures.

Assessor guide: observe that –

All goods inward and outward from the store are recorded and filed in accordance with work site procedures. Information about inward/outward goods movements can be accessed from filing system in accordance with work site procedures.

Assessor guide: confirm that –

The information to be recorded for inward/outward goods can be identified. The filing procedures for inward/outward goods can be identified.

Criteria 11.7A.1.4

Customer orders maintained to standard operational procedures.

Assessor guide: observe that –

Customer's order filled in accordance with work site procedures.

Assessor guide: confirm that –

Customer requirements can be identified from orders.

Criteria 11.7A.1.5

Returned orders booked back using standard operational procedures.

Assessor guide: observe that –

Returned orders are booked back in accordance with work site procedures.

Assessor guide: confirm that –

The procedures for booking back return orders can be identified.

Element 11.7A.2 Requisition goods**Criteria 11.7A.2.1**

Requisition procedures understood and carried out to standard operational procedures.

Assessor guide: observe that –

Goods are requisitioned in accordance with work site procedures.

Assessor guide: confirm that –

The procedures for requisitioning goods can be identified.

Criteria 11.7A.2.2

Goods requisitioned on time.

Assessor guide: observe that –

Requisitioned goods are received on time.

Assessor guide: confirm that –

The required delivery time for the goods can be identified. The lead time from requisitioning to delivery of the goods can be identified.

Criteria 11.7A.2.3

All recording completed and filed correctly in accordance with site procedures.

Assessor guide: observe that –

All records completed and filed in accordance with work site procedures.

Assessor guide: confirm that –

The recording requirements for requisitioned goods can be identified. The procedure for filing requisition documents can be identified.

Range statement

Work undertaken autonomously or in a team environment. Standard operational procedures undertaken include Just-in-Time, Kan Ban etc. All work and work practices undertaken to regulatory and legislative requirements. This unit refers to administering inventory procedures using manual or electric systems to support and/or maintain stores or inventory systems, for example, Just-in-Time or Kan Ban system. Where routine activity within standard operating procedure is undertaken, refer to Unit 2.2C11 (Organise and analyse information) or Unit 2.9C10 (Perform computer operations).

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with inventory procedures, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documents required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 11.8A A Package materials (stores and warehouse)

Band – Specialisation band A

Field – Materials handling

Unit Weight 2

Element 11.8A.1 Determine packaging requirements

Criteria 11.8A.1.1

Determine safety or special requirements.

Assessor guide: observe that –

All relevant work instructions, material and safety data sheets are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The material to be packaged can be identified. The source of information on the characteristics of the material to be packaged can be identified. Any safety or special requirements to be taken into account when packaging the material can be identified.

Criteria 11.8A.1.2

Determine storage requirements to meet safety, storage conditions, site and legislative requirements.

Assessor guide: observe that –

Assessor guide: confirm that –

The storage requirements of the material can be identified. Any relevant legislative requirements can be identified.

Criteria 11.8A.1.3

Determine transport and store requirements.

Assessor guide: observe that –

Assessor guide: confirm that –

The requirements for transporting the packaged material can be identified. The requirements of the store/warehouse with respect to the material to be packaged can be identified.

Element 11.8A.2 Undertake packaging**Criteria 11.8A.2.1**

Undertake most appropriate packaging method.

Assessor guide: observe that –

The material is packaged using the most appropriate method in accordance with standard operating procedures.

Assessor guide: confirm that –

The methods of packaging available and their application can be identified. The packaging materials and techniques required for each packaging method can be identified. The procedures for packaging materials can be given.

Criteria 11.8A.2.2

Ensure seal, compression and correct packaging material used.

Assessor guide: observe that –

The correct packaging materials have been used, the package has been sealed and movement of materials within the package minimised in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for sealing packaged materials can be given. The use of packing to prevent movement of materials within a package can be explained. The reasons for selecting the chosen packaging materials can be given.

Element 11.8A.3 Label packaged items**Criteria 11.8A.3.1**

Ensure labels, identification stickers are attached and describe accurately content of package and are placed in appropriate location.

Assessor guide: observe that –

The packaged products are correctly labelled in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for labelling packaged products can be given. The information to be included in the label can be identified. The method of attaching the label to the package can be identified. The appropriate location for the label can be identified. The consequences of incomplete or inaccurate labelling of packaged products can be given.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workplace procedures. Major areas of consideration in selecting appropriate packaging include stacking, storage, weight, size, material type and expected life and transport requirements. Packaging includes sequenced packaging and point of pick up packaging, packaging materials and methods. All work and work practices undertaken to regulatory and legislative requirements. Competencies covered by this unit are typically performed in a store or warehouse and often relate to receive or despatch functions.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the packaging of materials in stores and warehouses or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.9A A Handle/move bulk fluids/gases

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Element 11.9A.1 Determine handling methods

Criteria 11.9A.1.1

Type of material determined from labels, colour codes, signage.

Assessor guide: observe that –

Assessor guide: confirm that –

The labels, colour codes and signs used to identify bulk fluids and gases can be identified. Given examples of labels, colour codes and signs, the type of material can be correctly identified.

Criteria 11.9A.1.2

Material properties understood.

Assessor guide: observe that –

All relevant instructions, charts, manufacturer's specifications and information sheets are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The properties of a range of materials can be identified.

Criteria 11.9A.1.3

All relevant uncertainties and unknowns clarified with appropriately qualified and authorised authority.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for dealing with unknown materials and/or materials whose properties are unknown can be identified. The source(s) of appropriate information about the unknown materials can be identified. Where appropriate, the relevant authorisations have been received before handling/moving unknown materials. All relevant uncertainties and unknowns about the material(s) have been clarified by the appropriate authority.

Criteria 11.9A.1.4

All relevant safety and emergency procedures understood and implemented as required.

Assessor guide: observe that –

All safety procedures are followed at all times in accordance with standard operating procedures. Where appropriate, emergency and safety procedures are followed correctly during drills and exercises.

Assessor guide: confirm that –

All relevant safety and emergency procedures can be identified. All relevant personal protective clothing and equipment can be identified. The function of personal protective equipment and clothing can be explained.

Criteria 11.9A.1.5

All relevant codes of practice and regulations understood and observed.

Assessor guide: observe that –

All work is carried out in conformance to the relevant codes of practice and regulatory requirements.

Assessor guide: confirm that –

The relevant codes of practice and regulatory requirements can be identified.

Criteria 11.9A.1.6

Correct and appropriate handling methods undertaken.

Assessor guide: observe that –

All materials are handled using correct and appropriate methods in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for handling a range of materials can be identified. The reasons for using these procedures when handling the range of materials can be explained.

Element 11.9A.2 Store bulk fluids/gases**Criteria 11.9A.2.1**

Correct storage conditions determined from instructions/manufacturer's specifications/directions.

Assessor guide: observe that –

The storage instructions, manufacturer's specifications and/or directions are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The storage conditions for a range of materials can be identified.

Criteria 11.9A.2.2

Containers checked for safe and clean use.

Assessor guide: observe that –

The storage container is checked for cleanliness and safety before use, in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking storage containers before use can be identified. The cleaning requirements of storage containers for a range of materials can be identified. The safety requirements of storage containers for a range of materials can be identified.

Criteria 11.9A.2.3

Containers filled/emptied in accordance with standard operating procedures, regulations/legislative requirements.

Assessor guide: observe that –

Storage containers are filled/ emptied in accordance with standard operating procedures and relevant regulatory/legislative requirements.

Assessor guide: confirm that –

The procedures for filling/emptying storage containers for a range of materials can be identified. The relevant regulatory/legislative requirements applying to the filling and emptying of storage containers for a range of materials can be identified.

Criteria 11.9A.2.4

Containers handled and moved in accordance with site procedures, regulations/legislative requirements.

Assessor guide: observe that –

Where appropriate, the storage containers are handled and moved in accordance with standard operating procedures and relevant regulatory/legislative requirements.

Assessor guide: confirm that –

Criteria 11.9A.2.5

Containers correctly labelled and stored to standard operational procedures, regulations/legislative requirements.

Assessor guide: observe that –

All containers are correctly labelled and stored in accordance with standard operating procedures and relevant regulatory/legislative requirements.

Assessor guide: confirm that –

The labelling requirements of bulk fluids and gases can be identified. The procedures for labelling and storing a range of materials can be identified. The relevant regulatory/legislative requirements applying to the storage of a range of materials can be identified.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workplace practices. Emergency procedures predetermined by appropriately qualified and authorised personnel. Material properties determined from instructions, charts, manufacturers' specifications and information sheets. All work and work practices undertaken to regulatory and legislative requirements. Refers to all vessels used to store bulk fluids/gases. Bulk refers to commercial quantities of fluids and gases greater than the quantities required by individuals to do their own jobs.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the handling and movement of bulk fluids and gases or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.10A A Operate mobile load shifting equipment

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Element 11.10A.1 Conduct routine operation and safety checks of load shifting equipment

Criteria 11.10A.1.1

Routine pre-use checks undertaken in accordance with manufacturer's specifications and regulatory safety requirements.

Assessor guide: observe that –

Routine pre-use checks carried out in accordance with manufacturer's, regulatory and work site requirements.

Assessor guide: confirm that –

The pre-use checks to be undertaken for the particular load shifting device can be identified.

Criteria 11.10A.1.2

Non-compliance with specification reported for repair/replacement using standard operating procedure.

Assessor guide: observe that –

Variations of the load shifting device from manufacturer's specifications reported to appropriate person for repair/replacement.

Assessor guide: confirm that –

The manufacturer's specifications for the load shifting device can be identified. The person to whom variations from specification are to be reported can be identified.

Element 11.10A.2 Shifts loads

Criteria 11.10A.2.1

Most appropriate load shifting device selected.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of load shifting devices appropriate to the loading task and lift can be given. The most appropriate load shifting device can be identified.

Criteria 11.10A.2.2

Load shifting device operated within design specifications and safe working load in accordance with standard operating procedures.

Assessor guide: observe that –

The load shifting device is operated within design specifications and safe working loads.

Assessor guide: confirm that –

The safe working load and any design limitations applying to the selected load shifting device can be identified.

Criteria 11.10A.2.3

Load is lifted, ensuring balance, vision of operation and protection of load.

Assessor guide: observe that –

The load lifted is balanced, the operator has good vision of the area of operation and the load is adequately protected in accordance with work site procedures.

Assessor guide: confirm that –

The hazards with respect to the load, the operator and others when loads are being lifted can be identified.

Criteria 11.10A.2.4

Safe and efficient path of movement selected and used.

Assessor guide: observe that –

The load is moved safely and efficiently to its destination in accordance with work site procedures.

Assessor guide: confirm that –

The hazards associated with the movement of loads can be identified. The most direct, safe path for movement of the load can be identified.

Criteria 11.10A.2.5

Path of movement is checked and monitored for obstacles and hazards and safely maintained.

Assessor guide: observe that –

The path of movement is checked and monitored for obstacles and hazards and safely maintained.

Assessor guide: confirm that –

Potential obstacles and hazards that would affect the safety of the path of movement of the load can be identified.

Element 11.10A.3 Place loads**Criteria 11.10A.3.1**

Loads are placed ensuring safety, stability, protection of material and avoidance of hazards on site.

Assessor guide: observe that –

All loads are placed safely and the stability and protection of the load material is ensured at all times in accordance with work site procedures.

Assessor guide: confirm that –

The requirements for load protection can be identified. The hazards to the load, the operator and others during the placing of loads can be identified.

Range statement

Work undertaken autonomously or in a team environment. Load shifting equipment includes front end loaders/back hoe, ride on fork lifts/pallet trucks, scissor lifts/boom lifts. Load shifting equipment is operated within limits of manufacturer's recommended procedures and safe working loads. All work and work practices undertaken to regulatory and legislative requirements. This unit applies to loading tasks and lifts where knowledge of codes and signals is not required. If the use of hand tools is required, see Unit 18.1A (Use hand tools).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the operation of load shifting equipment, or other units requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. - The type of data and the frequency with which data is to be accessed/recorded. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 11.11A A Manual handling

Band – Specialisation band A

Field – Materials handling

Unit Weight 2

Element 11.11A.1 Lift materials manually

Criteria 11.11A.1.1

Material weight determined correctly utilising most appropriate technique.

Assessor guide: observe that –

The weight of the material to be lifted/moved is determined correctly by using the most appropriate procedure/technique.

Assessor guide: confirm that –

The procedures/techniques for determining the weight of materials to be moved and/or lifted can be identified. Any limitations on the weight of materials to be moved and/or lifted can be identified. Where appropriate, the equipment to be used to determine the weight of materials can be identified.

Criteria 11.11A.1.2

Lifting techniques undertaken to Worksafe Australia Standards and standard operating procedures. Types of movement, methods, storage, height and position considered.

Assessor guide: observe that –

All lifting is carried out safely in accordance with Worksafe Australia Standards and standard operating procedures.

Assessor guide: confirm that –

Worksafe Australia Standards for lifting can be identified. The effect of types of movement methods, storage height and position on the lifting techniques to be used can be explained. Where appropriate, the procedures for manual handling of materials can be identified.

Element 11.11A.2 Move/shift materials manually

Criteria 11.11A.2.1

Appropriate equipment selected where required.

Assessor guide: observe that –

Where appropriate, the correct equipment is selected to manually move materials.

Assessor guide: confirm that –

A range of moving/shifting equipment and its application can be identified. The reasons for selecting the chosen moving/shifting equipment can be given.

Criteria 11.11A.2.2

Material is placed safely and securely on moving equipment.

Assessor guide: observe that –

Where appropriate, the material to be moved is placed safely and securely onto the moving equipment.

Assessor guide: confirm that –

The loading procedures for a range of moving/shifting equipment can be identified. The safe handling requirements of the materials to be placed on the moving/shifting equipment can be identified. Where appropriate, the procedures for fastening materials onto moving/ shifting equipment can be identified.

Criteria 11.11A.2.3

Material is relocated ensuring safety of personnel and security of material.

Assessor guide: observe that –

The material is relocated safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The path to be traversed with the material/moving equipment can be identified. The hazards associated with the movement of the material/moving equipment amongst other personnel, equipment and materials can be identified. The safety procedures to be followed when moving materials/equipment can be identified.

Criteria 11.11A.2.4

Material is unloaded from moving equipment and placed in a safe and secure manner.

Assessor guide: observe that –

Where appropriate, the material is unloaded from the moving equipment and placed in a safe and secure manner in accordance with standard operating procedures.

Assessor guide: confirm that –

The storage requirements of the material being moved can be identified.

Range statement

Work undertaken autonomously or in a team environment. Material weight is determined utilising scales or interpreting signage. Moving/shifting equipment includes hand trolleys wheelbarrows, motorised/hand pallet trucks (not sit on), hand carts, dedicated production or process lifting equipment eg: baskets, spreader bars, cradles or the like attached to lifting equipment etc. Maximum manual lifting weight limited to Worksafe Australia Standards. All work and work practices undertaken to regulatory and legislative requirements and standard operating procedures where applicable.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with manual handling or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.12A A Purchase materials

Band – Specialisation band A

Field – Materials handling

Unit Weight 6

Element 11.12A.1 Determine purchasing requirements

Criteria 11.12A.1.1

Consult with client, customer, user as appropriate.

Assessor guide: observe that –

Appropriate consultation occurs with the client/customer/user.

Assessor guide: confirm that –

The client, customer and/or user can be identified.

Criteria 11.12A.1.2

Material specifications determined from orders, instructions and/or technical drawings.

Assessor guide: observe that –

All relevant instructions, orders, requisitions, technical drawings and/or bills of material obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The material/component specifications can be identified. The source(s) of additional information/advice with respect to material/component specification can be identified.

Criteria 11.12A.1.3

Quantities, price limitations and delivery requirements determined from orders, instructions.

Assessor guide: observe that –

Assessor guide: confirm that –

The quantities of materials/ components to be purchased can be identified. The price limitations on materials/ components to be purchased can be identified. The delivery requirements can be identified.

Element 11.12A.2 Prepare purchase order/list

Criteria 11.12A.2.1

Purchase order/list developed to standard operational procedure.

Assessor guide: observe that –

Purchase orders/lists are prepared in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for ordering materials/components can be identified. The appropriate purchase order forms can be identified.

Element 11.12A.3 Purchase material**Criteria 11.12A.3.1**

Standard operational procedures followed.

Assessor guide: observe that –

Materials are purchased in accordance with standard operating procedures.

Assessor guide: confirm that –

Where appropriate, preferred/ contracted suppliers of materials/ components can be identified. The procedures for purchasing materials/components can be identified.

Criteria 11.12A.3.2

Supplier/vendor informed of requirements and specifications.

Assessor guide: observe that –

The supplier/vendor is informed of the material/component requirements and specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate supplier(s)/ vendor(s) of a range of materials/components can be identified. The procedures to be followed in informing supplier(s)/vendor(s) of the purchase requirements can be given.

Criteria 11.12A.3.3

Purchasing schedules adjusted where required to standard operational procedures.

Assessor guide: observe that –

Where appropriate, purchasing schedules are adjusted in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting purchasing schedules can be identified. The reasons for adjusting purchasing schedules can be explained. Where appropriate, approval to adjust the purchasing schedule is received from the relevant authority. The personnel affected by a change in purchasing schedules can be identified. Where appropriate, all relevant personnel are informed of the adjustment to the purchasing schedule.

Criteria 11.12A.3.4

Appropriate paperwork/contracts exchanged to standard operational procedure.

Assessor guide: observe that –

Assessor guide: confirm that –

All paper work/contracts associated with the purchasing of materials/components can be identified and their application given. The appropriate paper work/contracts are exchanged in accordance with standard operating procedures.

Criteria 11.12A.3.5

Records/files maintained accurately using standard operating procedures.

Assessor guide: observe that –

All relevant records/files are completed/maintained accurately in accordance with standard operating procedures.

Assessor guide: confirm that –

The records/files to be completed/maintained of purchases made can be identified. The recording/filing procedures can be identified.

Range statement

Purchasing schedules developed to site procedures and for pre-contracted suppliers/vendors. Contracts/paperwork generated manually or electronically utilising on-site system. Purchasing can cover one-off or multiple quantities of raw materials, components, equipment etc. Purchasing specifications are determined from standard engineering drawings and data sheets, instructions written or verbal. All work and work practices undertaken to regulations or legislative requirements.

Evidence guide**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the purchasing of materials or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.13A A Undertake warehouse receipt process

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Pre-requisite units - Path 1

11.11A Manual handling

Element 11.13A.1 Check supplier documentation

Criteria 11.13A.1.1

Supplier documentation checked against order according to standard operating procedure.

Assessor guide: observe that –

The order is obtained in accordance with workplace procedures. The supplier's documentation is checked against the initiating order in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking supplier documentation against the order can be given.

Element 11.13A.2 Confirm the quality and quantity of received goods

Criteria 11.13A.2.1

Quality and quantity of goods checked against order and supplier documentation.

Assessor guide: observe that –

The quality and quantity of goods received is checked against the order and supplier documentation in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking the quality and quantity of goods received can be given.

Criteria 11.13A.2.2

Incorrect and damaged goods identified and appropriate action taken according to standard operating procedure.

Assessor guide: observe that –

Where appropriate, the required action is taken with respect to incorrect and/or damaged goods identified in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed when incorrect and/or damaged goods are detected can be given.

Element 11.13A.3 Unloading of goods arranged

Criteria 11.13A.3.1

Goods requiring special unloading procedures are identified..

Assessor guide: observe that –

Assessor guide: confirm that –

The unloading requirements of the goods can be identified from the relevant documentation.

Criteria 11.13A.3.2

Goods unloaded using manual handling or appropriate lifting equipment.

Assessor guide: observe that –

The goods are unloaded safely using the most appropriate unloading method in accordance with standard operating procedures.

Assessor guide: confirm that –

The most appropriate means of unloading the goods can be identified. The reasons for selecting the chosen unloading method can be given. The procedures for unloading goods can be given.

Criteria 11.13A.3.3

Carrier or supplier documentation signed or processed according to standard operating procedure.

Assessor guide: observe that –

The carrier or supplier documentation is signed/processed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for signing carrier or supplier documentation can be given. The reasons for ensuring the accuracy of the documentation being processed can be explained.

Element 11.13A.4 Prepare, locate and store received goods**Criteria 11.13A.4.1**

Goods are prepared for storage according to standard operating procedure.

Assessor guide: observe that –

Goods are prepared for storage in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for preparing goods for storage can be given.

Criteria 11.13A.4.2

Signs, codes or labels applied according to standard operating procedure.

Assessor guide: observe that –

The appropriate signs, codes or labels are applied to the goods to be stored in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for identifying goods to be stored can be given. The method of identification to be applied to the goods can be given.

Criteria 11.13A.4.3

Inventory records documentation completed.

Assessor guide: observe that –

Inventory records are accurately completed.

Assessor guide: confirm that –

The records to be completed can be identified.

Criteria 11.13A.4.4

Storage location identified.

Assessor guide: observe that –

The storage location is accurately recorded.

Assessor guide: confirm that –

The procedures for locating goods in the store/warehouse can be given.

Criteria 11.13A.4.5

Goods stored in correct location using appropriate materials handling techniques.

Assessor guide: observe that –

The goods are stored in the correct location in the store/warehouse using the most appropriate materials handling technique.

Assessor guide: confirm that –

The correct location of the store/ warehouse in which given goods are to be stored can be identified. The materials handling technique to be used can be identified. The reasons for selecting the chosen materials handling technique can be given.

Range statement

Work undertaken autonomously or in a team environment. This unit applies to the receipt of goods in a store or warehousing environment applying knowledge of the warehouse and systems and procedures. Complementary communication, planning and quality skills are described in the appropriate core units. If load shifting equipment operation skills are required, Unit 11.10A (Operate mobile load shifting equipment) should be accessed. If hazardous goods are received and handled, Unit 13.3A (Work safely with industrial chemicals and materials) should also be accessed. If the received goods are bulk fluids or gases (i.e. large commercial quantities), then Unit 11.9A (Handle/move bulk fluids/gases) may also apply. All work undertaken to legislative and regulatory requirements.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the undertaking of warehouse receipt processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.14A A Undertake warehouse dispatch process

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

This unit covers the competencies required to arrange and consolidate orders, prepare the goods and dispatch them. This unit applies to the dispatch of goods in a store or

warehousing environment and the application of the knowledge of warehouse systems and procedures.

Pre-requisite units - Path 1

11.6A Production packaging

11.11A Manual handling

Pre-requisite units - Path 2

11.8A Package materials (stores and warehouse)

11.11A Manual handling

Element 11.14A.1 Arrange and consolidate orders

Criteria 11.14A.1.1

Packed orders are consolidated into customer or carrier batches according to standard operating procedure

Assessor guide: observe that –

The packaged orders are consolidated into customer or carrier batches in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for consolidating orders can be given
The reasons for consolidating orders into customer/carrier batches can be explained

Criteria 11.14A.1.2

Consolidated goods placed into correct dispatch area

Assessor guide: observe that –

The consolidated goods are placed in the correct dispatch area

Assessor guide: confirm that –

The correct dispatch area for the given customer/carrier can be identified

Element 11.14A.2 Goods prepared for dispatch

Criteria 11.14A.2.1

Goods packed, shrink-wrapped and/or palletised

Assessor guide: observe that –

Goods for dispatch are packed, shrink-wrapped and/or palletised in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for packing goods for dispatch can be given
The materials and techniques used for packing goods for dispatch can be identified

Criteria 11.14A.2.2

Goods labelled and appropriate documentation attached according to standard operating procedure

Assessor guide: observe that –

The goods for dispatch are correctly labelled and the appropriate documentation attached in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for labelling goods for dispatch can be given
The method of attaching the label and appropriate documentation can be identified
The documentation to be included with the dispatched goods can be identified

<p>Criteria 11.14A.2.3 Goods placed in dispatch area ready for loading according to pick-up schedule and carrier requirements</p>	<p><i>Assessor guide: observe that –</i> The goods are placed in the dispatch area ready for loading in accordance with pick-up schedule and carrier requirements</p>	<p><i>Assessor guide: confirm that –</i> The goods pick-up schedule and any special carrier requirements can be identified</p>
<p>Element 11.14A.3 Dispatch goods</p>		
<p>Criteria 11.14A.3.1 Carrier and customer documentation checked</p>	<p><i>Assessor guide: observe that –</i> Carrier and customer documentation is checked in accordance with standard operating procedures</p>	<p><i>Assessor guide: confirm that –</i> The procedures for checking customer and carrier documentation can be given</p>
<p>Criteria 11.14A.3.2 Loading and transportation requirements are accurately communicated to driver and received from the driver</p>	<p><i>Assessor guide: observe that –</i> The loading and transportation requirements are accurately communicated to the driver and received from the driver</p>	<p><i>Assessor guide: confirm that –</i> The loading and transportation requirements can be identified</p>
<p>Criteria 11.14A.3.3 Goods loaded onto vehicle using appropriate materials handling techniques</p>	<p><i>Assessor guide: observe that –</i> The goods are loaded onto the vehicle using appropriate materials handling techniques</p>	<p><i>Assessor guide: confirm that –</i> The appropriate materials handling technique is selected to load the goods onto the transport vehicle The reasons for selecting the chosen materials handling technique can be given</p>
<p>Criteria 11.14A.3.4 Inventory records documentation completed</p>	<p><i>Assessor guide: observe that –</i> The inventory records are accurately completed</p>	<p><i>Assessor guide: confirm that –</i> The inventory records to be completed can be identified The consequences of inaccurate or incomplete inventory records can be explained</p>

Range statement

Work undertaken autonomously or in a team environment. This unit applies to the dispatch of goods in a store or warehouse environment applying knowledge of warehouse systems and procedures. Complementary communication, planning and quality skills are described in appropriate core units. If load shifting equipment operation skills are required, Unit 11.10A (Operate mobile load shifting equipment) should be accessed. If hazardous goods are dispatched, Unit 13.3A (Work safely with industrial chemicals and materials) should also be accessed. If the dispatched goods are bulk fluids and gases (i.e. large commercial quantities), then Unit 11.9A (Handle/move bulk fluids/gases) may also apply. All work undertaken to legislative and regulatory requirements.

Evidence**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the undertaking of warehouse dispatch processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.15A A Manage warehouse inventory system

Band – Specialisation band A

Field – Materials handling

Unit Weight 6

Pre-requisite units - Path 1

2.1C12 Apply quality systems

2.7C10 Perform computations - basic

11.7A Administer inventory procedures

Element 11.15A.1 Monitor warehouse record keeping processes

Criteria 11.15A.1.1

Monitoring procedures developed for requisition, purchase, shipping and invoice documentation.

Assessor guide: observe that –

Warehouse record keeping processes are monitored in accordance with relevant procedures.

Assessor guide: confirm that –

The documentation to be completed for requisition, purchase, shipping and invoice purposes can be identified. The reasons for monitoring the above documentation can be explained. The frequency at which the above documentation should be monitored can be identified. Document monitoring procedures have been developed and implemented.

Criteria 11.15A.1.2

Discrepancy reporting procedures established for warehouse and other personnel in accordance with standard operating procedure.

Assessor guide: observe that –

Discrepancy reporting procedures are being followed by warehouse and other relevant personnel.

Assessor guide: confirm that –

The reasons for reporting discrepancies between warehouse records can be explained. The person(s) responsible for reporting detected discrepancies can be identified. Discrepancy reporting procedures have been developed and implemented.

Criteria 11.15A.1.3

Audit and achieve procedures followed according to standard operating procedure.

Assessor guide: observe that –

The records of audits of warehouse record keeping processes have been appropriately maintained in accordance with established audit procedures. Warehouse and other relevant personnel comply with the requirements of the warehouse record keeping procedures.

Assessor guide: confirm that –

The reasons for auditing record keeping procedures can be explained. The frequency with which audits are to be conducted can be identified. The audit procedures can be identified. Where appropriate, the actions undertaken to ensure warehouse record keeping procedures are followed can be identified and explained. Warehouse and other relevant personnel can identify the relevant warehouse record keeping procedures.

Element 11.15A.2 Supervise production of inventory system reports**Criteria 11.15A.2.1**

Regular inventory reports prepared in accordance with standard operating procedure.

Assessor guide: observe that –

Regular inventory reports are prepared in accordance with standard operating procedures.

Assessor guide: confirm that –

The inventory reporting requirements can be identified. The frequency with which inventory reports are to be completed can be identified.

Criteria 11.15A.2.2

Special stock level and other inventory reports prepared as required.

Assessor guide: observe that –

Where appropriate, special stock level and other inventory reports are prepared in accordance with standard operating procedures.

Assessor guide: confirm that –

Where appropriate, the requirements of the special reports can be identified. The sources of stock/inventory information for inclusion in reports can be identified. Customer satisfaction with inventory system reports is sought.

Criteria 11.15A.2.3

Adjustments to inventory reporting procedures made to meet internal and external customer requirements.

Assessor guide: observe that –

Changes in procedures are discussed with relevant workplace staff Any adjustment produce a positive outcome.

Assessor guide: confirm that –

Where appropriate, the adjustments to be made to the inventory reporting procedures can be identified. Where appropriate, the reasons for making the adjustments to the inventory reporting procedures can be explained. The procedures for implementing the adjustments to the inventory reporting procedures can be given.

Element 11.15A.3 Analyse inventory reports**Criteria 11.15A.3.1**

Reconciliation of inventory records against production or purchase of sales records undertaken in accordance with standard operating procedure.

Assessor guide: observe that –

Inventory records are reconciled in accordance with standard operating procedures.

Assessor guide: confirm that –

The inventory reconciliation procedures can be identified. The sources of information/data necessary to enable the inventory records to be reconciled can be identified.

Criteria 11.15A.3.2

Major trends, not requiring sophisticated statistical analysis, identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The trends that can be identified/ interpreted from inventory records can be identified. The reasons for monitoring trends contained in inventory records can be explained. Given sample inventory reports, major trends can be identified.

Criteria 11.15A.3.3

Inventory system relationship to manufacturing process e.g J.I.T. (Just-in-time) understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The inventory requirements of manufacturing processes can be identified. The effects of insufficient/excessive inventory on the manufacturing process and organisational viability can be explained.

Range statement

This unit applies to the supervision of a warehouse inventory system used by other warehouse, production, maintenance or management personnel. Records can be computer based or manual. If computer based records are used, relevant computer units may also need to be accessed. Where skills are required to maintain/supervise application of quality procedures, then Unit 15.12B (Maintain/supervise application of quality procedures) should be selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the management of warehouse inventory systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.16A A Order materials

Band – Specialisation band A

Field – Materials handling

Unit Weight 2

Element 11.16A.1 Prepare purchase order/list

Criteria 11.16A.1.1

Purchase order/list prepared to standard operating procedure.

Assessor guide: observe that –

Purchase orders/lists are prepared in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for ordering materials/components can be identified. The appropriate purchase order forms can be identified.

Criteria 11.16A.1.2

Material specifications, price limitations, quantities and delivery requirements determined from instructions, requisitions etc.

Assessor guide: observe that –

All relevant instructions, requisitions, technical drawings and/or bills of material are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The material/component specifications can be identified. The sources of additional information/advice with respect to the material/component specification can be identified. The quantities of materials/components to be ordered can be identified. The price limitations on materials/components to be purchased can be identified. The delivery requirements can be identified.

Element 11.16A.2 Purchase order

Criteria 11.16A.2.1

Supplier/vendor informed of requirements and specifications according to standard operating procedure.

Assessor guide: observe that –

The supplier/vendor is informed of the material/component requirements and specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate supplier(s)/ vendor(s) of a range of materials/components can be identified. The procedures to be followed in informing supplier(s)/vendor(s) of the purchase requirements can be given.

Criteria 11.16A.2.2

Supplier/vendor followed up to achieve delivery as required.

Assessor guide: observe that –

Where appropriate, the supplier/vendor is contacted to ensure the materials/components are delivered as required. Where appropriate, the relevant personnel are informed of the supplier/vendor's inability to supply the materials/components as required.

Assessor guide: confirm that –

The delivery requirements can be identified. The procedures to be followed if the required delivery cannot be achieved can be given. The person(s) to be informed of the inability of a supplier/vendor to supply the materials/components by the required time.

Criteria 11.16A.2.3

Where appropriate, goods directly received and checked for damage.

Assessor guide: observe that –

Where appropriate, goods are received in accordance with standard operating procedures. Where appropriate, goods are checked visually for faults and/or damage. Where appropriate, faults and/or damaged goods are rejected in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for receiving goods can be identified. The checks to be undertaken of materials/components delivered can be identified. Common defects/damage to materials/components can be identified. The procedures for dealing with faulty or damaged materials/ components can be identified.

Criteria 11.16A.2.4

Records/files completed accurately according to standard operating procedure.

Assessor guide: observe that –

All relevant records/files are accurately completed/maintained in accordance with standard operating procedures.

Assessor guide: confirm that –

The records/files of ordered goods to be completed/maintained can be identified. The recording/filing procedures can be identified.

Range statement

This unit applies to purchasing activities carried out by other than the purchasing officer eg: maintenance, service, stores, warehouse personnel. The work is undertaken autonomously or as part of team.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the ordering of materials or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.17A A Organise and lead stocktakes

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Pre-requisite units - Path 1

2.7C10 Perform computations - basic

11.7A Administer inventory procedures

Element 11.17A.1 Plan stocktake

Criteria 11.17A.1.1

Inventory lists prepared and distributed.

Assessor guide: observe that –

Inventory lists are prepared and distributed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for printing and distributing inventory lists can be given. The personnel participating in the stocktake can be identified.

Criteria 11.17A.1.2

Warehouse and/or production areas allocated to each individual or team assisting in stocktake.

Assessor guide: observe that –

Each individual/team is assigned a section of the warehouse/production area in which to undertake the stocktake.

Assessor guide: confirm that –

The areas of the warehouse and/or production areas to which individuals or teams are to be assigned can be identified.

Element 11.17A.2 Brief participants in stocktake

Criteria 11.17A.2.1

Clear directions and appropriate documentation and equipment provided to each individual or team participating in stocktake.

Assessor guide: observe that –

All participants in the stocktake are briefed on the requirements of the stocktake. All participants are provided with the appropriate documentation and equipment to undertake the stocktake.

Assessor guide: confirm that –

The directions to participants can be identified. The necessary documentation and equipment to carry out the stocktake can be identified.

Element 11.17A.3 Generate stocktake reports

Criteria 11.17A.3.1

Written or computer reports collected from individuals or teams on stock counts.

Assessor guide: observe that –

The stock counts are collected from the individuals/teams.

Assessor guide: confirm that –

The information to be collected from individuals/teams can be identified.

Criteria 11.17A.3.2

Inventory data is confirmed to match stock levels.

Assessor guide: observe that –

The inventory data is compared with stock counts in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for comparing inventory data with stock counts/levels can be given.

Criteria 11.17A.3.3

Stock discrepancy report prepared and distributed according to standard operating procedure.

Assessor guide: observe that –

Where appropriate, stock discrepancy reports are prepared and distributed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for preparing and distributing stock discrepancy reports can be given.

Element 11.17A.4 Adjust inventory documentation**Criteria 11.17A.4.1**

Inventory documentation is reconciled to match physical stock in accordance with regulatory and operating procedures.

Assessor guide: observe that –

Inventory documentation is reconciled with physical stock levels in accordance with regulations and standard operating procedures.

Assessor guide: confirm that –

The regulatory requirements with respect to inventory reconciliation can be identified. The procedures for reconciling inventory documentation with physical stock levels can be given.

Criteria 11.17A.4.2

Stocktake information is reconciled with audit requirements.

Assessor guide: observe that –

Stocktake information is reconciled with audit requirements.

Assessor guide: confirm that –

The audit requirements with respect to stock levels can be identified.

Range statement

This unit covers the skills involved in organising and leading stocktakes in accordance with enterprise stocktaking policies, practices and procedures. Stocktakes can be undertaken using a variety of equipment including calculators, scanners and portable computers. All work undertaken to legislative and regulatory requirements.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with stocktaking or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.18A A Organise and maintain warehouse stock receipt and/or dispatch system

Band – Specialisation band A

Field – Materials handling

Unit Weight 6

Pre-requisite units - Path 1

11.6A Production packaging

11.11A Manual handling

11.13A Undertake warehouse receipt process

Pre-requisite units - Path 2

11.8A Package materials (stores and warehouse)

11.11A Manual handling

11.13A Undertake warehouse receipt process

Pre-requisite units - Path 3

11.6A Production packaging

11.11A Manual handling

11.14A Undertake warehouse despatch process

Pre-requisite units - Path 4

11.8A Package materials (stores and warehouse)

11.11A Manual handling

11.14A Undertake warehouse despatch process

Element 11.18A.1 Allocate/coordinate work activities in receipt and/or despatch areas

Criteria 11.18A.1.1

Equipment and/or staff are allocated to meet receipt and/or despatch schedules.

Assessor guide: observe that –

Appropriate staff and equipment are allocated to stock receipt and despatch areas to meet the work schedules.

Assessor guide: confirm that –

The receipt and despatch schedules can be identified. The staff and equipment required to meet those schedules can be identified.

Criteria 11.18A.1.2

Appropriate documentation distributed and collected.

Assessor guide: observe that –

The appropriate documentation is distributed and collected.

Assessor guide: confirm that –

The appropriate documentation and its purpose can be identified.

Criteria 11.18A.1.3

Contingency procedures developed and implemented for receipt and despatch problems.

Assessor guide: observe that –

Contingency procedures are in place to overcome receipt and despatch problems. Where appropriate, the contingency procedures are implemented to overcome receipt and/or despatch problems.

Assessor guide: confirm that –

The contingency procedures to overcome receipt and despatch problems can be given. The reasons for having contingency plans can be explained. The types of receipt and despatch problems that the contingency plans are developed to overcome can be identified.

Element 11.18A.2 Maintain stock receipt and/or dispatch system**Criteria 11.18A.2.1**

Information is provided and extracted accurately according to standard operating procedure.

Assessor guide: observe that –

The relevant information is accurately put into the stock receipt and dispatch system in accordance with standard operating procedures. The relevant information can be extracted from the receipt and dispatch system in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for the input and extraction of information can be given. The information to be input and/or extracted can be identified.

Criteria 11.18A.2.2

Receipt and dispatch reports produced as required.

Assessor guide: observe that –

Where appropriate, receipt and dispatch reports are produced in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for preparing receipt and dispatch reports can be given.

Criteria 11.18A.2.3

Modifications to dispatch and/or receipt system are made according to standard operating procedure.

Assessor guide: observe that –

Where appropriate, the dispatch and/or receipt systems are modified in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for modifying the dispatch/receipt system can be given. The reasons for modifying the dispatch/receipt system can be identified.

Criteria 11.18A.2.4

Major problems with receipt and/or dispatch system identified and reported according to standard operating procedure.

Assessor guide: observe that –

Where appropriate, major problems with the receipt/dispatch system are reported to the appropriate authority in accordance with standard operating procedures.

Assessor guide: confirm that –

Typical problems experienced in stock receipt/dispatch systems can be identified. The person to whom major problems with stock receipt/dispatch systems are to be reported can be identified.

Criteria 11.18A.2.5

Participates in continuous improvement of dispatch and/or receipt systems.

Assessor guide: observe that –

The implementation of improvements in the stock receipt/dispatch system is planned in accordance with standard operating procedures.

Assessor guide: confirm that –

Improvements in the stock receipt and dispatch system can be identified. The procedures for changing the stock receipt and dispatch system can be given.

Range statement

Organising and maintaining warehouse receipt and dispatch areas includes the configuration of receipt and dispatch areas, taking into account customer and supplier needs, documentation and system requirements and enterprise quality practices and procedures. All work undertaken to legislative and regulatory requirements. Special requirements of products, materials and location are taken into account.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with warehouse stock receipt and dispatch systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.19A A Undertake tool store procedures

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Pre-requisite units - Path 1

2.7C10 Perform computations - basic

11.13A Undertake warehouse receipt process

11.7A Administer inventory procedures

11.11A Manual handling

Element 11.19A.1 Order tooling

Criteria 11.19A.1.1

Tooling requirements are identified and consolidated from order documentation and liaison with trade and production personnel according to standard operating procedure.

Assessor guide: observe that –

Where appropriate, order documents are obtained in accordance with workplace procedures. Relevant trade and production personnel are consulted and their tooling requirements identified in accordance with work place procedures. The tooling requirements identified are consolidated in accordance with standard operating procedures.

Assessor guide: confirm that –

The relevant order documents can be identified. The relevant personnel to be consulted with respect to their tooling requirements can be identified. The procedures for determining tooling requirements can be given.

Criteria 11.19A.1.2

Appropriate tooling identified from supplier catalogues and manuals, including correct tooling range by size, hardness, quality etc.

Assessor guide: observe that –

All relevant manuals, data sheets, supplier catalogues, tooling specifications and instructions are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The appropriate tooling can be identified. The tooling specifications can be identified.

Criteria 11.19A.1.3

Tooling order placed according to standard operating procedure.

Assessor guide: observe that –

Tooling orders are placed with appropriate suppliers in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for ordering tooling can be identified. Preferred/contracted suppliers can be identified. Where appropriate, ordering limitations and/or authorisation requirements can be identified. Where appropriate, orders are authorised by the relevant authority.

Element 11.19A.2 Tooling orders received**Criteria 11.19A.2.1**

Tooling orders received from main receipt warehouse or direct from supplier according to standard operating procedure.

Assessor guide: observe that –

Tooling orders are received in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for the receipt of ordered tooling can be identified.

Criteria 11.19A.2.2

Tooling unpacked and placed in correct location.

Assessor guide: observe that –

Tooling is unpacked and checked for conformance to order and specifications in accordance with standard operating procedures. The tooling is appropriately stored in the correct location in accordance with standard operating procedures.

Assessor guide: confirm that –

The storage requirements and location of a range of tools can be identified.

Element 11.19A.3 Tooling maintained**Criteria 11.19A.3.1**

Tooling cleaned and protected where appropriate.

Assessor guide: observe that –

Where appropriate, tooling is cleaned and protected in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for cleaning a range of tooling can be given. The procedures for applying protective coatings, packaging etc. for a range of tooling can be identified. The reasons for cleaning and protecting tooling can be explained.

Criteria 11.19A.3.2

Tooling supplies monitored to ensure maintenance of contingency stock.

Assessor guide: observe that –

Tooling stock levels are maintained to ensure adequacy of supply to trade and production personnel by monitoring tool store records and stock levels in accordance with standard operating procedures.

Assessor guide: confirm that –

Where appropriate, minimum stock levels of tools can be identified. The rate of consumption of a range of tooling can be identified from tool store records. The lead time for the supply of a range of tooling can be identified from tool store records.

Element 11.19A.4 Tooling distributed**Criteria 11.19A.4.1**

Tooling issued to users according to standard operating procedure.

Assessor guide: observe that –

Tooling is issued in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for issuing tooling to trade and production personnel can be identified.

Criteria 11.19A.4.2

Enterprise documentation procedures followed.

Assessor guide: observe that –

Where appropriate, enterprise documentation is completed in accordance with standard operating procedures.

Assessor guide: confirm that –

Where appropriate, documentation to be completed on tooling issued can be identified.

Criteria 11.19A.4.3

Procedures against unauthorised use of tooling established and/or followed.

Assessor guide: observe that –

Where appropriate, procedures to prevent unauthorised use of tooling are developed and implemented. Tooling is issued ensuring that procedures aimed at preventing unauthorised use of tooling are followed.

Assessor guide: confirm that –

The persons authorised to access tooling from the tool store can be identified. Where appropriate, any limitations on access to tooling can be identified. Where appropriate, procedures to prevent unauthorised use of tooling can be identified.

Range statement

This unit applies to the management and storage of enterprise owned tooling and associated consumable items used in engineering. Tooling includes hand tools, cutting tips for lathes, mills and other metal removal machines, grinding wheels, special steel etc. Tooling can be permanent or disposable. The work would normally be undertaken in a specialist store or warehouse. Engineering knowledge and drawing interpretation skills would often be required and should be accessed from appropriate units.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with tool store procedures or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.20A A Perform advanced warehouse computer operations

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Pre-requisite units - Path 1

2.9C10 Perform computer operations

Element 11.20A.1 Identify programs appropriate to purpose

Criteria 11.20A.1.1

Range of programs available on system identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The range of programs available on the computer system can be identified. The application of each program can be identified.

Criteria 11.20A.1.2

Correct selection of word processing, spreadsheet, database or special purpose program made.

Assessor guide: observe that –

The correct program can be selected for a range of given applications/requirements.

Assessor guide: confirm that –

Element 11.20A.2 Manipulate data for analysis and/or report generation

Criteria 11.20A.2.1

Data manipulated through merging of files, transfer of information between programs or other strategies to generate desired outcome.

Assessor guide: observe that –

Data is manipulated in accordance with standard operating procedures for analysis and/or report generation.

Assessor guide: confirm that –

The data required for analysis or report generation can be identified. The procedures for performing the following operations can be given: - merging of files - transfer of information between programs.

Element 11.20A.3 Edit program

Criteria 11.20A.3.1

Categories in warehouse information system created/deleted to cater for changes in stock lines.

Assessor guide: observe that –

Categories are created/deleted in the warehouse information system in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for creating/deleting categories within the warehouse information system can be given. The reasons for creating/deleting categories within the warehouse information system can be given.

Criteria 11.20A.3.2

Report formats generated and/or modified.

Assessor guide: observe that –

Report formats are generated and/or modified in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for generating reports can be given. The procedures for modifying reports can be given. The reasons for modifying report formats can be identified.

Criteria 11.20A.3.3

Access control requirements identified.

Assessor guide: observe that –

Access to the warehouse information system is controlled in accordance with standard operating procedures.

Assessor guide: confirm that –

The requirements for controlling access to the information system can be identified. The procedures for controlling access to the warehouse information system can be given.

Range statement

This unit applies to operations on warehouse computer information systems beyond that covered by Unit 2.9C10 (Perform computer operations) and relevant material handling units; it identifies the level of computer skills needed rather than inventory system or product knowledge required. There is to be further development of units covering computer competencies which may result in this unit being broadened to cover a wider range of areas or being changed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with warehouse computer operations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.21A A Advanced operation of load shifting equipment

Band – Specialisation band A

Field – Materials handling

Unit Weight 2

Pre-requisite units - Path 1

11.10A Operate mobile load shifting equipment

Element 11.21A.1 Determine lifting and loading requirements

Criteria 11.21A.1.1

Load is identified and checked against safe working load of final position/location and/or relevant specifications or regulations.

Assessor guide: observe that –

The load is checked against safe working loads, specifications and/or regulations in accordance with work site procedures.

Assessor guide: confirm that –

The safe working load of truck and/or containers can be identified. The load is identified and its weight confirmed.

Criteria 11.21A.1.2

Special handling requirements of load identified, if applicable.

Assessor guide: observe that –

Assessor guide: confirm that –

Any special handling requirements of the load can be identified.

Criteria 11.21A.1.3

Load is lifted correctly and placed in final position/location to achieve specified balance of load.

Assessor guide: observe that –

The load is placed in such a manner that the required load balance across the length of the truck or container is achieved in accordance with work site procedures.

Assessor guide: confirm that –

Load distribution requirements of the truck or container can be identified.

Element 11.21A.2 Work in confined spaces or conditions of restricted visibility

Criteria 11.21A.2.1

Load is collected and manoeuvred without damage to load or collision with obstacles according to standard operating procedure.

Assessor guide: observe that –

The load is raised and manoeuvred without damage to the load or collision with obstacles in accordance with work site procedures.

Assessor guide: confirm that –

The hazards associated with moving loads in confined spaces can be identified.

Element 11.21A.3 Identify and carry loads that require special care**Criteria 11.21A.3.1**

Loads requiring special care are identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The special handling requirements of loads are identified.
Examples of loads requiring special care can be given.

Criteria 11.21A.3.2

Loads are carried in accordance with special requirements of product according to standard operating procedures and/or regulations.

Assessor guide: observe that –

The loads are moved in accordance with any special handling requirements, regulatory requirements and work site procedures.

Assessor guide: confirm that –

Element 11.21A.4 Operate forklifts in special traffic conditions**Criteria 11.21A.4.1**

Forklifts are operated in areas of heavy traffic.

Assessor guide: observe that –

Loads are moved safely and efficiently in areas of heavy traffic in accordance with work site procedures.

Assessor guide: confirm that –

The hazards associated with the operation of fork lifts in areas of heavy traffic can be identified.

Criteria 11.21A.4.2

Forklifts are operated over difficult or uneven surfaces.

Assessor guide: observe that –

Loads are moved safely and efficiently over difficult or uneven terrain in accordance with work site procedures.

Assessor guide: confirm that –

The hazards associated with the operation of fork lifts over difficult or uneven terrain can be identified.

Criteria 11.21A.4.3

Forklifts operated in areas shared with the general public, as required.

Assessor guide: observe that –

Loads are moved safely and efficiently in areas shared with the general public in accordance with regulatory requirements and work site procedures.

Assessor guide: confirm that –

The hazards associated with the operation of fork lifts in areas shared with the general public can be identified.
The regulatory requirements associated with the operation of fork lifts in areas shared with the general public can be identified.

Range statement

This unit applies to advanced forklift and loadshifting skills above those required for general operation. To be credited with this unit it is expected that an employee would be competent in situations indicated by all elements and performance criteria. This unit is intended to cover load shifting applications where special purpose equipment/accessories requiring advanced operational skills, eg: heavy, out of balance, awkward and irregular shaped loads traversing over rough, broken or uneven surfaces, high rise situations, are used. All work undertaken to regulatory and legislative requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the operation of load shifting equipment, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 11.22A A Operate fixed/moveable load shifting equipment

Band – Specialisation band A

Field – Materials handling

Unit Weight 4

Element 11.22A.1 Conduct routine operation and safety checks of load shifting equipment

Criteria 11.22A.1.1

Operational principles of load shifting equipment understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The operational principles of the load shifting equipment can be explained.

Criteria 11.22A.1.2

Routine pre-use checks undertaken in accordance with manufacturer's specifications and regulatory safety requirements.

Assessor guide: observe that –

Routine pre-use checks are carried out in accordance with manufacturer's and regulatory requirements and standard operating procedures.

Assessor guide: confirm that –

The pre-use checks to be undertaken for the particular load shifting device can be identified.

Criteria 11.22A.1.3

Non-compliance with specification reported using standard operating procedures.

Assessor guide: observe that –

Variations of the load shifting device from manufacturer's specifications are reported to the appropriate person in accordance with standard operating procedures.

Assessor guide: confirm that –

The manufacturer's specifications for the load shifting device can be identified. The person to whom variations from specifications are to be reported can be identified.

Element 11.22A.2 Pick up loads

Criteria 11.22A.2.1

Appropriate load shifting device selected.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of load shifting devices appropriate to the loading task and lift can be given. The most appropriate load shifting device can be identified. The reasons for selecting the chosen load shifting device can be explained.

Criteria 11.22A.2.2

Load shifting device operated within design specifications and safe working load.

Assessor guide: observe that –

The load shifting device is operated within design specifications and safe working loads.

Assessor guide: confirm that –

The safe working load and any design limitations applying to the selected load shifting device can be identified.

Criteria 11.22A.2.3

Load is lifted/rolled, ensuring balance, vision of operation, safety of personnel and protection of load.

Assessor guide: observe that –

The load lifted/rolled is balanced, the operator has good vision of the area of operation and the load is adequately protected in accordance with standard operating procedures.

Assessor guide: confirm that –

The hazards with respect to the load, the operator and others when loads are being lifted can be identified. Methods of protecting the load during the relocation of the load can be identified.

Element 11.22A.3 Shift load**Criteria 11.22A.3.1**

Where required, load moved at appropriate and safe speed using safe and efficient path.

Assessor guide: observe that –

The load is moved safely and efficiently to its destination in accordance with standard operating procedures.

Assessor guide: confirm that –

The hazards associated with the movement of loads can be identified. The most direct, safe path for movement of the load can be identified.

Criteria 11.22A.3.2

Path of movement is monitored for obstacles and hazards during shifting process.

Assessor guide: observe that –

The load is always moved along a path that is free of obstacles and hazards.

Assessor guide: confirm that –

Potential obstacles and hazards that would affect the safety of the path of movement of the load can be identified.

Element 11.22A.4 Place load**Criteria 11.22A.4.1**

Loads are lowered at appropriate and safe rate.

Assessor guide: observe that –

Loads are lowered at an appropriate and safe rate in accordance with standard operating procedures.

Assessor guide: confirm that –

The effect of load lowering rates on the safety of the load, the individual and other personnel can be explained.

Criteria 11.22A.4.2

Loads are placed ensuring stability, protection of material and avoidance of hazards on site.

Assessor guide: observe that –

All loads are placed safely and the stability and protection of the load material is ensured at all times in accordance with standard operating procedures.

Assessor guide: confirm that –

The requirements for load protection can be identified. The hazards to the load, the individual and other personnel during the placing of loads can be identified.

Range statement

Work undertaken autonomously or in a team environment. Load shifting equipment is operated within the limits of manufacturer's recommended procedures and safe working loads. Movable and fixed load shifting equipment may include pendant cranes, yard, workshop and store travelling overhead cranes, monorail hoists and chain blocks (manual, air or electric etc.), pivoting slewing jib rails etc. All work and work practices undertaken to regulatory and legislative requirements. This unit applies to load shifting/lifting where knowledge of codes and signals is not required. When using dedicated lifting equipment or devices where decisions regarding loads and methods of attachment are not required, Unit 11.11A (Manual handling) should be selected.

Evidence guide**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the operation of fixed/moveable load shifting equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 12.1A A Use comparison and basic measuring devices

Band – Specialisation band A

Field – Measurement

Unit Weight 2

Element 12.1A.1 Select and use comparison and/or basic measuring devices

Criteria 12.1A.1.1

Identify and select appropriate measuring devices to undertake required comparison or measurement using standard operating procedures.

Assessor guide: observe that –

The correct device is selected to sort or categorise items in accordance with standard operating procedures.

Assessor guide: confirm that –

The correct device for comparison or measurement to be undertaken can be identified and justified as meeting comparison or measurement need.

Criteria 12.1A.1.2

Undertake measurement or sorting of items using comparison and/or basic measuring device.

Assessor guide: observe that –

All devices are correctly handled and appropriately applied in undertaking the comparison or measurement.

Assessor guide: confirm that –

The application of the device can be identified. The procedures for the correct use of devices can be identified.

Element 12.1A.2 Maintain comparison and/or basic measuring devices

Criteria 12.1A.2.1

Ensure basic care and storage to manufacturer's standards or standard operating procedures.

Assessor guide: observe that –

The preset device is stored and maintained in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The procedures for maintaining and storing the preset device can be identified.

Range statement

Work undertaken autonomously or as part of team work. Comparison measurements undertaken in production environment or at work station. These may include length, angle, size, temperature, pressure, weight, voltage, resistance and amperage. Comparison devices may include go-no-go, thread angle and taper gauges, temperature gauges, pressure gauges, measuring gauges, weight scales, overlay indicator, digital devices, preset verniers and micrometers. All comparative measurements undertaken to standard operating procedures and to regulatory and legislative requirements. Basic measuring devices may include linear measuring devices, measuring to within 1mm graduation. This may include rules, tapes and retractable tapes. This unit should not be selected if Unit 2.5C11 (Measure with graduated devices) has already been selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the use of preset comparison measuring devices or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 12.2A A Electrical/electronic measurement

Band – Specialisation band A

Field – Measurement

Unit Weight 2

Element 12.2A.1 Use electro-measuring devices to measure variables

Criteria 12.2A.1.1

Appropriate device or equipment and setting selected to achieve required outcome.

Assessor guide: observe that –

The appropriate electro-measuring device and setting is selected and used in accordance with standard operating procedures to obtain specified electrical measurements.

Assessor guide: confirm that –

The applications of a range of electro-measuring devices can be given. The application of the settings on each electro-measuring device can be explained. For a given range of measurements to be taken, the appropriate device and setting can be identified. The procedures for obtaining electrical measurements can be identified.

Criteria 12.2A.1.2

Appropriate connections made to achieve required outcome according to standard operating procedure.

Assessor guide: observe that –

The appropriate connections are made between the electro-measuring device(s) and the circuitry in accordance with standard operating procedures for taking specified electrical measurements.

Assessor guide: confirm that –

The connections to be made between the electro-measuring device and the circuitry to be tested can be identified for each type of electrical measurement. The procedures for connecting electro-measuring devices to circuitry can be identified.

Criteria 12.2A.1.3

Readings obtained and interpreted correctly Conversion made where necessary, into the units of measurement required.

Assessor guide: observe that –

The specified electrical measurements are obtained and correctly interpreted in accordance with standard operating procedures. Where appropriate, the readings taken are converted into the units of measurement required.

Assessor guide: confirm that –

The correct scale for each setting on the electro-measuring device can be identified. Where appropriate, the scale factor to be applied to readings taken from the electro-measuring device can be identified. The units applying to electrical and electronic measurements can be identified.

Element 12.2A.2 Maintain electro devices**Criteria 12.2A.2.1**

Routine care and storage of devices undertaken to manufacturer's specifications or standard operating procedures.

Assessor guide: observe that –

All electro-measuring devices are maintained and stored in accordance with manufacturer's specifications and standard operating procedures.

Assessor guide: confirm that –

The maintenance and storage requirements of a range of electro-measuring devices can be identified. The procedures for maintaining and storing a range of electro-measuring devices can be identified. The specifications of selected electro-measuring devices can be identified.

Range statement

This unit covers the measurement of voltage, current, resistance, power, frequency etc. on AC and DC circuits up to 1000v, using appropriate measuring devices. Measuring devices may include analogue/digital multimeters, tong testers, oscilloscopes, potentiometers, etc. Electrical/electronic measuring devices may require the connection or disconnection of circuitry. Adjustment of measuring devices may include zero and linear adjustment. Work may be undertaken autonomously or as part of a team. For simple measurement tasks such as reading of fixed devices, testing continuity, and tasks requiring the use of devices mounted in measuring jigs etc. Unit 2.5C11 (Measure with graduated devices) and/or Unit 12.1A (Use comparison and basic measuring devices) should be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the taking of electrical/electronic measurements or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 12.3A A Precision mechanical measurement

Band – Specialisation band A

Field – Measurement

Unit Weight 2

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Element 12.3A.1 Use precision measurement equipment

Criteria 12.3A.1.1

Select appropriate precision equipment to achieve specified outcome.

Assessor guide: observe that –

Assessor guide: confirm that –

The application of a range of precision mechanical measuring equipment can be given. For a given range of measurements to be taken the appropriate precision mechanical measuring device can be identified. The reasons for selecting the chosen precision mechanical measuring device can be explained.

Criteria 12.3A.1.2

Correct and appropriate measuring techniques used.

Assessor guide: observe that –

The appropriate precision mechanical measuring device is selected and used in accordance with standard operating procedures/techniques to obtain specified mechanical measurements.

Assessor guide: confirm that –

The procedures/techniques for obtaining a range of mechanical measurements can be identified.

Criteria 12.3A.1.3

Measure accurately to finest graduation of instrument.

Assessor guide: observe that –

A range of precision mechanical measuring devices can be read accurately to the finest graduation of the device in accordance with standard operating procedures.

Assessor guide: confirm that –

The accuracy to which a range of precision mechanical measuring devices can be read can be identified. The procedures for reading graduated mechanical measuring devices can be given.

Criteria 12.3A.1.4

Readings and measurements are interpreted correctly and accurately.

Assessor guide: observe that –

For a range of precision mechanical measuring devices, all readings and measurements are interpreted correctly and accurately.

Assessor guide: confirm that –

The units of measurement used in conjunction with precision mechanical measurement can be identified.

Element 12.3A.2 Set comparative measuring devices**Criteria 12.3A.2.1**

Equipment set to specifications utilising manufacturer's or standard operating procedures and techniques.

Assessor guide: observe that –

Where appropriate, measuring devices are set to specification using appropriate tools and equipment, in accordance with manufacturer's/ standard operating procedures.

Assessor guide: confirm that –

The procedures for setting comparative measuring devices can be identified. The specifications of the equipment to be set can be identified. The tools and equipment to be used in setting comparative measuring devices can be identified.

Element 12.3A.3 Maintain precision equipment**Criteria 12.3A.3.1**

Measuring equipment adjusted and maintained to required accuracy, utilising manufacturer's or standard operating procedures and techniques.

Assessor guide: observe that –

All precision mechanical measuring devices are maintained and adjusted, where appropriate, in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The adjustments that can be made to a range of precision mechanical measuring devices can be identified. The procedures for adjusting and maintaining a range of precision mechanical measuring devices can be given.

Criteria 12.3A.3.2

Care and storage of equipment undertaken to manufacturer's specifications or standard operating procedures.

Assessor guide: observe that –

All precision mechanical measuring devices are stored in accordance with manufacturer's specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for storing precision mechanical measuring devices can be given. The specifications of precision mechanical measuring devices can be identified.

Range statement

Work undertaken autonomously or as part of team environment. Work undertaken in field (in situ) or workshop/laboratory environment. This unit covers comprehensive measuring skills where judgement is required in the selection of the most appropriate techniques/devices and results interpreted/analysed. Measurement undertaken may include length, circular, straightness, flatness, hardness, angles, finishes, textures, roundness, squareness, alignment and coordinate measurement on equipment where equipment is fabricated, maintained or repaired. Applications may include precision and/or complex use of slip gauges, engineering squares, angle deckers, sine bars, angle gauges, polygons, dividing heads, rotary tables, precision levels, micrometers, height gauges, hardness testers, and texture measuring equipment etc. All specifications obtained from engineering drawings and data sheets and/or manufacturer's instructions/data. All measurement/test procedures undertaken to standard operating procedures or manufacturer's recommended procedure. All work and work practices undertaken to regulatory and legislative requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision mechanical measurements or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 12.4A A Precision electrical/electronic measurement

Band – Specialisation band A

Field – Measurement

Unit Weight 4

Notes - It is recommended that this unit be assessed in conjunction with electric and/or electronic competency units. This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C

Element 12.4A.1 Use equipment for precision measurement

Criteria 12.4A.1.1

Specifications interpreted accurately from drawings, instructions.

Assessor guide: observe that –

All relevant drawings, specifications, data sheets and instructions obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications of the circuitry and/or components to be tested can be identified.

Criteria 12.4A.1.2

Appropriate equipment selected to achieve specified outcome.

Assessor guide: observe that –

Assessor guide: confirm that –

The application of a range of precision electrical/electronic measuring devices can be given. The appropriate precision electrical/ electronic measuring device(s) to undertake the required measurements can be identified. The reasons for selecting the chosen precision electrical/electronic measuring device can be explained.

Criteria 12.4A.1.3

Correct and appropriate measuring technique used.

Assessor guide: observe that –

The appropriate precision electrical/ electronic measuring device is selected and used in accordance with standard operating procedures/ techniques to obtain specified electrical/electronic measurements.

Assessor guide: confirm that –

The procedures/techniques for obtaining a range of electrical/ electronic measurements can be given.

Criteria 12.4A.1.4

Readings and measurements are interpreted correctly and accurately.

Assessor guide: observe that –

For a range of precision electrical/ electronic measuring devices, all readings and measurements are interpreted correctly and accurately.

Assessor guide: confirm that –

The units of measurement used in conjunction with precision electrical/electronic measurement can be identified.

Element 12.4A.2 Set measuring devices**Criteria 12.4A.2.1**

Equipment set up to specifications utilising manufacturer's or standard operating techniques.

Assessor guide: observe that –

Precision electrical/electronic measuring devices are set to specification using appropriate tools and equipment, in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The procedure for setting a range of precision electrical/electronic measuring devices can be identified. The specifications of the equipment to be set can be identified. The tools and equipment to be used in setting precision electrical/ electronic measuring devices can be identified.

Element 12.4A.3 Maintain precision equipment**Criteria 12.4A.3.1**

Measuring equipment adjusted and maintained to required accuracy, utilising manufacturer's specifications or standard operating techniques.

Assessor guide: observe that –

All precision electrical/electronic measuring devices are maintained and adjusted, where appropriate, in accordance with manufacturer's/ standard operating procedures.

Assessor guide: confirm that –

The adjustments that can be made to a range of precision electrical/ electronic measuring devices can be identified. The procedures for adjusting and maintaining a range of precision electrical/electronic measuring devices can be given.

Criteria 12.4A.3.2

Care and storage of equipment undertaken to manufacturer's specifications or standard operating procedures.

Assessor guide: observe that –

All precision electrical/electronic measuring devices are stored in accordance with manufacturer's specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for storing precision electrical/electronic measuring devices can be given. The specifications of precision electrical/electronic measuring devices can be identified.

Range statement

Work undertaken autonomously or as part of team environment. Work undertaken in field (in situ) and/or workshop/laboratory environment. This unit covers the definition of what needs to be measured, the selection of appropriate measuring devices and calibration and care of devices to obtain accurate, precision measurements. Measurements may include peak and transient voltages, transient frequencies, digital wave form analysis etc. Measurements include a range of frequencies and may be undertaken on full range of electrical/electronic equipment including A.C., D.C. analog and digital equipment, microwave etc. Precision measuring/test equipment may include analog and digital meters, cathode ray oscilloscope, bridges and potentiometers, wattmeters and digital probes etc. All specifications obtained from circuit drawings, engineering data sheets and/or manufacturer's instructions/data. All measurement test procedures undertaken to standard operating procedures or manufacturer's recommended procedures. All work and work practices undertaken to regulatory and legislative requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision electrical/electronic measurement or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 12.5B A Calibrating measuring equipment

Band – Specialisation band B

Field – Measurement

Unit Weight 6

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

12.3A Precision mechanical measurement

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

12.4A Precision electrical/electronic measurement

Element 12.5B.1 Check equipment for correct operation

Criteria 12.5B.1.1

Appropriate checks made of components, leads, fasteners, etc. for wear, loose connections or other faults.

Assessor guide: observe that –

The measuring equipment is checked for faults using appropriate tools and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The correct operation of the measuring equipment can be identified. All wearing parts, connections and components of the measuring equipment can be identified. The checks that are to be made of wearing parts, connections and components can be identified. The procedures for checking the equipment for correct operation can be given. Where appropriate, the fault(s) in the measuring equipment can be identified. Where appropriate, the effects of the detected faults on the performance/accuracy of the measuring equipment can be explained. The tools and equipment to be used when checking the measuring equipment can be identified.

Element 12.5B.2 Validate/calibrate precision measuring equipment**Criteria 12.5B.2.1**

Assess calibration of precision measuring equipment to manufacturer's specifications and/or standard operating procedures.

Assessor guide: observe that –

The calibration of the measuring equipment is checked for conformance to specifications using appropriate techniques in accordance with standard operating procedures and all relevant codes, standards and legislative/regulatory requirements.

Assessor guide: confirm that –

The specifications of the measuring equipment can be identified. The tools and equipment required to check the calibration of the measuring equipment can be identified. The procedures for checking the calibration of the measuring equipment can be given. Any codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or its calibration can be identified.

Criteria 12.5B.2.2

Equipment is calibrated against appropriate physical standards using correct calibration devices, equipment, techniques and procedures.

Assessor guide: observe that –

The measuring equipment is calibrated against the appropriate physical standard in accordance with standard operating procedures and all relevant codes, standards and legislative/regulatory requirements.

Assessor guide: confirm that –

The appropriate physical standard against which the measuring equipment is to be calibrated can be identified. The procedures for calibrating the measuring equipment can be given. The tools and equipment required to calibrate the measuring equipment can be identified.

Criteria 12.5B.2.3

Equipment is recommissioned in accordance with standard operating procedure.

Assessor guide: observe that –

The measuring equipment is recommissioned in accordance with standard operating procedures and all relevant codes, standards and legislative/regulatory requirements.

Assessor guide: confirm that –

The procedure for commissioning the measuring equipment can be identified. The calibration records to be kept/ maintained can be identified.

Range statement

This unit applies to the calibration skills used in the setting, adjustment, validation or verification of precision mechanical and/or electrical, electronic measuring instruments using reference standards in accordance with predetermined procedures. Recommissioning may include sealing, tagging, identification or storage in accordance with standard operating procedure. This unit is not meant to apply to simple zeroing, external adjustment or manual adjustment for size range e.g. micrometers etc., these skills are covered by Unit 2.5C11 (Measure with graduated devices), Unit 12.3A (Precision mechanical measurement) or Unit 12.4A (Precision electrical/electronic measurement) as appropriate. Procedures may involve use of electronic setting equipment and the selection or determination of an appropriate external standard calibration involves the use of techniques, tools and equipment to meet manufacturer's specifications and/or national standards or equivalent.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the calibration of measuring equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 12.6A A Mark off/out (general engineering)

Band – Specialisation band A

Field – Measurement

Unit Weight 4

Pre-requisite units - Path 1

9.2A Interpret technical drawing

Element 12.6A.1 Determine job requirements

Criteria 12.6A.1.1

Drawings, job instructions and specifications are interpreted and understood.

Assessor guide: observe that –

All relevant job instructions, drawings, specifications and procedures are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The work to be marked off/out can be identified. The specifications of the work can be identified. The proposed manufacturing process can be identified.

Criteria 12.6A.1.2

Appropriate methods and sequencing selected consistent with proposed manufacturing process using standard operating procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for marking off/out work can be given. The appropriate method and sequence of marking out can be identified. The tools, equipment and techniques required to mark out the work can be identified. The reasons for selecting the chosen marking off/out method and sequence can be explained.

Element 12.6A.2 Transfer dimension

Criteria 12.6A.2.1

Using appropriate tools and equipment all marking off/out carried out to specifications.

Assessor guide: observe that –

All marking off/out is carried out to specification using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 12.6A.2.2

Datum points correctly established.

Assessor guide: observe that –

The datum points are established correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The purpose of establishing datum points when marking off/out work can be explained.

Criteria 12.6A.2.3

Dimensions transferred and correct and appropriate calculations are used where required.

Assessor guide: observe that –

The dimensions transferred to the work are correct and in accordance with specifications. Where appropriate, additional dimensions required for marking off/out purposes are correctly calculated.

Assessor guide: confirm that –

The method of determining/ calculating dimensions required for marking out purposes can be given.

Element 12.6A.3 Make templates as required**Criteria 12.6A.3.1**

Appropriate template material selected.

Assessor guide: observe that –

The appropriate template material is selected.

Assessor guide: confirm that –

Materials suitable for the manufacture of templates and their application can be given. The most appropriate template material is selected for given work requirements. The reasons for selecting the chosen template material can be given.

Criteria 12.6A.3.2

Templates produced to specifications and appropriate to desired use.

Assessor guide: observe that –

Templates are produced to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for producing templates appropriate to their application can be given.

Criteria 12.6A.3.3

Correct storage procedures followed including labelling and identification to standard operating procedures.

Assessor guide: observe that –

Templates are stored and handled correctly in accordance with standard operating procedures. Templates are appropriately labelled and marked for identification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for storing and handling templates can be given. The labelling and identification to be placed on templates can be identified. The consequences of inappropriate handling and storing of templates can be explained.

Range statement

This unit applies to the marking off/out techniques used for the transfer of dimensions from engineering drawings, prints or plans. This unit covers marking out on engineering components, jigs and fixtures, castings, templates, dies and tooling etc. Work is undertaken autonomously using predetermined standards of quality, safety and workshop procedures. The task may be performed in the workshop or in situ. Marking off/out is undertaken using appropriate tools and equipment; templates are produced as required. Equipment may include marking out tables, surface tables, rotary tables, dividing heads etc., vee blocks, cylinder squares, sine bars and the like, vernier height gauges, protractors, straight edge and set squares etc. Marking off/out techniques may apply to a range of materials and shapes. This unit is not intended to cover the skills used in a simple transfer of a dimension or marking a location point associated with general engineering and maintenance functions. For these skills see Unit 7.5A (Perform general machining), Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components) or Unit 18.14A (Tool, gauge and die manufacture). Where a higher level of calculation, measurement or precision work is required see Unit 2.13C5 (Perform mathematical computations), Unit 12.3A (Precision mechanical measurement) or Unit 18.3A (Use tools for precision work) respectively. For marking out structural fabrications and shapes refer Unit 12.7A (Mark off/out structural fabrications and shapes).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the marking off/out of components or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 12.7A B Mark off/out structural fabrications and shapes

Band – Specialisation band A

Field – Measurement

Unit Weight 4

This unit covers the competencies required to transfer the dimensions from the detail drawing to work, make templates as required, develop patterns and or transfer measurements to structures, interpret relevant codes, standards and symbols and estimate quantities of material from drawings. The unit applies to the marking off/out of general fabrications and shapes using appropriate tools and equipment.

Element 12.7A.1 Transfer dimensions from a detail drawing to work or surface

Criteria 12.7A.1.1

Specifications and work requirements determined and understood using correct and appropriate calculations

Assessor guide: observe that –

Job instructions and specifications are obtained in accordance with work site procedures All necessary calculations are performed correctly and accurately

Assessor guide: confirm that –

The work to be undertaken can be identified The specifications applicable to the work to be done can be identified

Criteria 12.7A.1.2

Marking out carried out to specifications or standard operating procedures using appropriate tools and equipment

Assessor guide: observe that –

The marking off/out is carried out accurately using appropriate techniques, procedures and equipment Marking off/out is checked against specifications

Assessor guide: confirm that –

The tools and equipment to be used in the preparation of the marking off/out can be identified

Criteria 12.7A.1.3

Datum points correctly established

Assessor guide: observe that –

All datum points are correctly established and appropriately marked

Assessor guide: confirm that –

The datum points can be identified

Element 12.7A.2 Make templates/patterns as required

Criteria 12.7A.2.1

Appropriate template/pattern material chosen

Assessor guide: observe that –

Assessor guide: confirm that –

Materials that can be used for the preparation of templates and their application can be given The appropriate template material for the given application can be

Criteria 12.7A.2.2

Templates produced to specifications

Assessor guide: observe that –

The template is produced to specification in accordance with standard operating procedures All manufacturing allowances are correctly and accurately calculated

Assessor guide: confirm that –

The manufacturing allowances that have to be considered when developing patterns can be identified

Criteria 12.7A.2.3

Correct storage procedures followed including labelling and identification to standard operating procedures

Assessor guide: observe that –

Templates are labelled and stored in accordance with standard operating procedures

Assessor guide: confirm that –

Template labelling and identification procedures can be identified The appropriate storage requirements of templates can be identified

Element 12.7A.3 Develop patterns and/or transfer measurements to structures**Criteria 12.7A.3.1**

Most appropriate development and/or measurement sequence chosen and applied

Assessor guide: observe that –

Patterns are developed/lay out equipment assembled and structures are marked off/out using the appropriate method(s) in accordance with standard operating procedures

Assessor guide: confirm that –

The three development methods and their application can be identified The appropriate method(s) of development/marking off/out of a range of given objects can be identified

Criteria 12.7A.3.2

Allowances for fabrication and assembly correctly determined and transferred

Assessor guide: observe that –

Fabrication and assembly allowances are correctly determined and transferred to the pattern

Assessor guide: confirm that –

The appropriate fabrication and assembly allowances can be identified The effects of material type and thickness on fabrication and assembly allowances can be identified The sources of data on fabrication and assembly allowances can be identified

Criteria 12.7A.3.3

Measurement transfer/layout of components is checked to ensure accuracy/set out

Assessor guide: observe that –

Assessor guide: confirm that –

Element 12.7A.4 Interpret relevant codes, standards and symbols**Criteria 12.7A.4.1**

Relevant standards/codes and symbols interpreted meaning of symbols used in the standards/codes can be given

Assessor guide: observe that –

Assessor guide: confirm that –

All relevant standards and codes can be identified The

Criteria 12.7A.4.2

Requirements of standards/codes interpreted and applied to materials and processes

Assessor guide: observe that –

Where applicable, the requirements of the codes/standards are correctly applied during the geometric development/marketing off/out process

Assessor guide: confirm that –

The requirements of the codes/ standards applicable to the work to be done can be identified

Element 12.7A.5 Estimate quantities of materials from detail drawings**Criteria 12.7A.5.1**

Materials correctly identified

Assessor guide: observe that –

Assessor guide: confirm that –

The material(s) from which the component/assembly is to be manufactured can be identified

Criteria 12.7A.5.2

Quantities estimated from drawing

Assessor guide: observe that –

Material and component quantities are correctly determined from drawings and job specifications

Assessor guide: confirm that –

Criteria 12.7A.5.3

Material wastage minimised

Assessor guide: observe that –

Material wastage is minimised during the development of patterns/ templates and the marking off/out of structures

Assessor guide: confirm that –

The benefits of minimising material wastage can be given

Range statement

This unit applies to marking out of general fabrications and shapes. In a marine setting, it includes basic lofting/set out for construction of marine vessels and may include items such as stem and transom development and use of tables of offsets that reflect chine and hull configuration. Where more extensive lofting practices are used, Unit 9.21A (Interpret and produce curved 3 dimensional shapes) should be considered. Work is undertaken autonomously using predetermined standards of quality, safety and workshop procedures. All work and work practices carried out to industry, regulatory and legislative requirements. The task may be performed in the workshop or in-situ. Marking out is undertaken using appropriate tools and equipment. Templates and patterns are produced as required. Equipment may include marking out and surface tables, dividers, protractors, squares etc. In a marine setting this may include lofting surfaces, straightedges, stringlines, french curves, templates, etc. Marking out techniques may apply to a range of materials and shapes. For marking out general engineering components refer to Unit 12.6A (Mark off/out (general engineering)).

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the marking off/out of structural fabrications and shapes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

activities

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace

Unit MEM 12.19A A Measure components using coordinate measuring machine

Band – Specialisation band A

Field – Measurement

Unit Weight 4

Element 12.19A.1 Identify job requirements

Criteria 12.19A.1.1

Job sheets or equivalent instructions interpreted correctly.

Assessor guide: observe that –

All information for loading, setting probes and measuring components is interpreted.

Assessor guide: confirm that –

The operator can identify and explain all the required information on job sheets or equivalent.

Element 12.19A.2 Load components

Criteria 12.19A.2.1

Pre-start checks undertaken to standard operating procedures.

Assessor guide: observe that –

Pre-start check procedure is correctly identified.

Assessor guide: confirm that –

The pre-start checks to be undertaken can be identified and each step/check can be explained.

Criteria 12.19A.2.2

Correct safety procedures are observed and all safety equipment checked for correct operation.

Assessor guide: observe that –

Operator follows safety procedures at all times.

Assessor guide: confirm that –

All safety issues pertaining to the equipment setup can be outlined.

Criteria 12.19A.2.3

Correct fixture/clamping device selected.

Assessor guide: observe that –

The correct fixture/clamping device is selected in accordance with the standard operating procedure.

Assessor guide: confirm that –

The procedure for selecting fixture/clamping device can be explained. Different fixtures/clamping devices and their uses can be explained. Storage location and condition can be outlined.

Criteria 12.19A.2.4

Component and fixtures loaded and clamped in accordance with standard operating procedures.

Assessor guide: observe that –

Component is correctly positioned and clamped using suitable techniques/accessories.

Assessor guide: confirm that –

Different fixing/clamping methods can be outlined.

Element 12.19A.3 Set probes**Criteria 12.19A.3.1**

Pre-measurement manual hits are taken for manual alignment in accordance with standard operating procedures.

Assessor guide: observe that –

The correct number/position of hits is taken and alignment determined.

Assessor guide: confirm that –

The procedure for undertaking pre-measurement manual hits for manual alignment is identified. The reason for taking pre-measurement manual hits can be explained.

Criteria 12.19A.3.2

Probe configuration is checked for compliance to specification.

Assessor guide: observe that –

The probe/s configuration is verified as correct according to specifications.

Assessor guide: confirm that –

The procedure for checking probe configuration can be explained.

Element 12.19A.4 Measure components**Criteria 12.19A.4.1**

Part program selected, run and verified according to standard operating procedure.

Assessor guide: observe that –

Correct part program is selected. Part program is activated correctly. Program is verified and correct operation confirmed.

Assessor guide: confirm that –

The procedure for running and verifying part program is identified. The reasons for verifying part program can be explained.

Criteria 12.19A.4.2

Components are measured according to standard operating procedure.

Assessor guide: observe that –

The correct measuring techniques are used.

Assessor guide: confirm that –

The reason for location and number of measurements taken can be explained.

Criteria 12.19A.4.3

Results interpreted and non-conforming/out of tolerance measurements identified and reported.

Assessor guide: observe that –

Results are correctly interpreted and explained. Out of tolerance measurements reported correctly. Required changes to process machine identified.

Assessor guide: confirm that –

Methods/techniques for interpreting results can be outlined. The meaning of different results can be explained. Reporting procedures and recommendations for adjustment can be explained.

Criteria 12.19A.4.4

Part program correct shut down and components removed according to standard operating procedure.

Assessor guide: observe that –

Operator demonstrates how to shut down the part program. Operator removes components safely and without damage.

Assessor guide: confirm that –

Key aspects of shutting down part program can be explained. The main steps to removing a component safely can be explained.

Criteria 12.19A.4.5

Coordinate measuring machine, accessories and surrounds left in a clean, safe condition.

Assessor guide: observe that –

Operator cleans machine and site correctly. Operator leaves machine in a safe condition.

Assessor guide: confirm that –

All required cleaning tasks can be outlined and the importance of cleaning the CMM outlined. Effects of excess contamination can be explained. Requirements for leaving CMM in safe condition can be outlined.

Range statement

The skills described in this unit apply to a range of Co-ordinate Measuring Machines (CMM) used mainly in a production environment. The operator is responsible for determining requirement for adjustment of the manufacturing process after measurement of components with the CMM. Work is performed to established processes, practices, standard operating procedures and specifications. Work is carried out autonomously using pre-determined standards of quality and safety. Operators would be expected to have competence in basic setting and adjusting machines. An appropriate level of measurement skill should be selected with this unit. Where it is required to use tools then unit 18.1A (Use hand tools) should also be selected. Where basic operation excludes setting up components and manually aligning probes, Unit 7.24A (Operate and monitor machine/process) should be selected. Where other machines/processes are to be adjusted as a consequence of the CMM operation, appropriate machining/process operation units should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with basic operation of a coordinate measuring machine and/or processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 12.20A A Set and operate coordinate measuring machine

Band – Specialisation band A

Field – Measurement

Unit Weight 2

Element 12.20A.1 Determine job requirements

Criteria 12.20A.1.1

Instructions/plans and relevant job specifications understood and correctly followed.

Assessor guide: observe that –

All necessary information is interpreted from job sheets, instructions.

Assessor guide: confirm that –

The operator can identify and explain all of the required information on job sheets/instruction.

Criteria 12.20A.1.2

Drawing information interpreted correctly and the range of tolerances applying to components is understood.

Assessor guide: observe that –

The required information is identified from the drawing and the tolerance range applying to the component is identified.

Assessor guide: confirm that –

Typical information and tolerances can be identified and explained.

Element 12.20A.2 Set up/orient components

Criteria 12.20A.2.1

Pre-start checks undertaken to standard operating procedures.

Assessor guide: observe that –

Pre-start check procedure is correctly identified.

Assessor guide: confirm that –

The pre-start checks to be undertaken can be identified and each step can be explained.

Criteria 12.20A.2.2

Correct safety procedures are observed and all equipment checked for safe operation.

Assessor guide: observe that –

Operator follows safe procedures at all times.

Assessor guide: confirm that –

Safety issues pertaining to the equipment and setup can be explained.

Criteria 12.20A.2.3

The most appropriate method of clamping is determined to minimise clamping and maximise measuring access.

Assessor guide: observe that –

The correct fixture/clamping device/method is selected from a range of fixtures/devices/methods. The location of the clamping device allows maximum access for measurement.

Assessor guide: confirm that –

The procedure for selecting the appropriate fixture/clamping device/method can be explained. The principles and functions of various fixtures/clamping devices/methods is explained. The setting up/orientation procedure selected is the most efficient, safe and accurate method. Storage location and condition can be outlined.

Criteria 12.20A.2.4

Component/fixture/clamping devices correctly set up and oriented.

Assessor guide: observe that –

The component to be measured is correctly and accurately positioned and secured.

Assessor guide: confirm that –

The reasons for the location of the component and fixtures/clamping devices can be explained. The reasons for each step in the setup procedure can be explained. Alternative methods of fixing/clamping can be outlined.

Element 12.20A.3 Select and activate part programs**Criteria 12.20A.3.1**

Part program is identified according to standard operating procedure.

Assessor guide: observe that –

Correct part program is selected by number or name.

Assessor guide: confirm that –

The procedure for determining the correct part program from list is identified according to standard operating procedures.

Criteria 12.20A.3.2

Part program is verified.

Assessor guide: observe that –

The program selected reflects any upgrades in the drawing/plan.

Assessor guide: confirm that –

The procedure for verifying changes/upgrades to part programs can be explained.

Criteria 12.20A.3.3

Selected part program is activated according to standard operating procedure.

Assessor guide: observe that –

Part program is activated correctly.

Assessor guide: confirm that –

The procedure for activating the selected part program can be explained.

Element 12.20A.4 Prepare CMM**Criteria 12.20A.4.1**

Determine probe configuration according to specifications.

Assessor guide: observe that –

The probe configuration is correctly determined according to specifications.

Assessor guide: confirm that –

Different probe configurations can be identified and explained. Various probes and their uses can be explained.

Criteria 12.20A.4.2

Probe configuration is adjusted on CMM according to standard operating procedures.

Assessor guide: observe that –

The method for adjusting probes is correctly demonstrated.

Assessor guide: confirm that –

The procedure for adjusting probes configuration can be explained.

Criteria 12.20A.4.3

Probe angles checked for compliance and adjusted as required.

Assessor guide: observe that –

Probe angles are checked for compliance and adjusted as required.

Assessor guide: confirm that –

The reasons for setting probe angles can be explained. The procedure for checking probe angles can be outlined.

Criteria 12.20A.4.4

Re-set/re-calibrate CMM.

Assessor guide: observe that –

The CMM is correctly re-set/re-calibrated to specifications.

Assessor guide: confirm that –

The procedure for re-setting/re-calibration can be outlined. The reasons for re-setting/re-calibration can be explained. The precautions to be taken to reduce the need for re-setting/re-calibration can be outlined.

Criteria 12.20A.4.5

Manually align probes for one off components.

Assessor guide: observe that –

The correct number and positions of manual hits is taken.

Assessor guide: confirm that –

The procedure for undertaking pre-measurement manual hits for manual alignment is identified. The reasons for taking pre-measurement manual hits can be explained.

Element 12.20A.5 Edit part programs**Criteria 12.20A.5.1**

Part program edited to compensate for errors or changes to component specifications.

Assessor guide: observe that –

Problems/errors in program identified. Program correctly edited to ensure accurate operation.

Assessor guide: confirm that –

The procedure used for editing can be outlined. The reasons for editing can be explained.

Element 12.20A.6 Measure components**Criteria 12.20A.6.1**

Components measured and checked for conformance to specification.

Assessor guide: observe that –

Results are checked against drawings/ specifications and non conformance identified.

Assessor guide: confirm that –

Procedure for interpretation of results can be outlined.

Criteria 12.20A.6.2

Produce data/report.

Assessor guide: observe that –

The component report is printed/stored in computer as required. Report forwarded to the appropriate personnel.

Assessor guide: confirm that –

The procedure for maintaining records is explained. The details required by various personnel and the procedure for forwarding reports is explained.

Range statement

The skills described in this unit apply to a range of Co-ordinate Measuring Machines (CMM). Work is performed to established processes, practices, standard operating procedures and specifications. Work is carried out autonomously using pre-determined standards of quality and safety. The procedures apply to both one off and multiple components. Appropriate levels of measurement, computer operations and drawing skills should be selected with this unit. Where a range of hand tools is required Unit 18.1A (Use hand tools) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating and setting coordinate measuring machines and/or processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 12.21A A Program coordinate measuring machine

Band – Specialisation band A

Field – Measurement

Unit Weight 4

Pre-requisite units - Path 1

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.3A Precision mechanical measurement

Element 12.21A.1 Identify part program parameters

Criteria 12.21A.1.1

Job specifications and requirements correctly established.

Assessor guide: observe that –

All specifications/drawings/instructions are correctly interpreted and the parameters of the part program understood.

Assessor guide: confirm that –

The procedure for producing the part program can be explained. The specifications for the program can be outlined.

Criteria 12.21A.1.2

Appropriate units are selected to comply with specifications.

Assessor guide: observe that –

The correct units for the part program are selected according to standard operating procedures.

Assessor guide: confirm that –

The criteria for selecting specific units can be identified.

Criteria 12.21A.1.3

Part program name is specified according to standard operating procedures.

Assessor guide: observe that –

The part program name complies with current identification/quality system.

Assessor guide: confirm that –

The procedures and parameters for naming programs can be outlined.

Element 12.21A.2 Establish single probe configurations

Criteria 12.21A.2.1

Single probe configuration is determined according to standard operating procedures.

Assessor guide: observe that –

The probe configuration is correctly determined.

Assessor guide: confirm that –

The procedure for determining probe configuration can be outlined. The reasons for selecting single probe configuration can be explained.

Criteria 12.21A.2.2

Probe angles are determined and qualified in accordance with standard operating procedure.

Assessor guide: observe that –

Probe angles are correctly calculated/determined and qualified.

Assessor guide: confirm that –

The procedure for determining/calculating probe angles can be explained. The correct procedure and parameters for qualification can be outlined.

Element 12.21A.3 Position/align component**Criteria 12.21A.3.1**

Component/part positioned and oriented correctly.

Assessor guide: observe that –

The component/part is positioned/aligned/secured to appropriate orientation on CMM table and complies with probe configuration and calibrated angles.

Assessor guide: confirm that –

The reasons for the specific location and aligning/securing the component/part can be explained. The method of securing/clamping can be justified.

Criteria 12.21A.3.2

Manual alignment created according to standard operating procedure.

Assessor guide: observe that –

An appropriate number of hits taken to create an accurate manual alignment.

Assessor guide: confirm that –

The methodology used to create manual alignment for the part can be explained.

Criteria 12.21A.3.3

Single Direct Computer Control (DCC) alignment is created according to standard operating procedure.

Assessor guide: observe that –

The correct procedure for creating DCC alignment is demonstrated.

Assessor guide: confirm that –

The procedure and reasons for creating a single DCC alignment can be explained.

Element 12.21A.4 Measure features**Criteria 12.21A.4.1**

Features are measured correctly.

Assessor guide: observe that –

The part features are measured in the correct sequence and location in a single work plane.

Assessor guide: confirm that –

The correct procedure for measuring component/part features in a single plane can be explained.

Criteria 12.21A.4.2

Probe movement parameters are defined in accordance with standard operating procedures.

Assessor guide: observe that –

The parameters are correctly defined and verified.

Assessor guide: confirm that –

The criteria for defining probe movement can be outlined. The procedure for verifying correct probe movement can be outlined.

Criteria 12.21A.4.3 Basic features dimensioned according to specifications.	<i>Assessor guide: observe that –</i> Basic feature such as circles, points etc are correctly dimensioned.	<i>Assessor guide: confirm that –</i> Dimensioning techniques can be explained Standard dimensioning techniques are followed.
Criteria 12.21A.4.4 Operator notes reported.	<i>Assessor guide: observe that –</i> Explanatory notes for the operator are produced and inserted.	<i>Assessor guide: confirm that –</i> The operator notes are logical, clear and relevant. The reasons for explanatory operator notes can be outlined.
Criteria 12.21A.4.5 Dimension descriptions are inserted.	<i>Assessor guide: observe that –</i> All necessary dimension descriptions are inserted in accordance with standard operating procedures.	<i>Assessor guide: confirm that –</i> Dimension descriptions are adequate for the task. The procedure and parameters can be outlined. References are made to relevant standards.
Element 12.21A.5 Verify and backup the program		
Criteria 12.21A.5.1 Execution and accuracy of program verified according to standard operating procedure.	<i>Assessor guide: observe that –</i> The part program is run and the accuracy of the results verified.	<i>Assessor guide: confirm that –</i> The procedure for running the program can be outlined. The program runs without fault and within the parameters required. The procedure for verifying the results can be explained.
Criteria 12.21A.5.2 Edit program if required.	<i>Assessor guide: observe that –</i> Where non-conformance is identified from verification procedure, appropriate editing is undertaken.	<i>Assessor guide: confirm that –</i> Editing process and reasons can be explained. Final program is free from errors.
Criteria 12.21A.5.3 Results output to various formats according to standard operating procedure.	<i>Assessor guide: observe that –</i> Results output to printer, disc or other format as required.	<i>Assessor guide: confirm that –</i> The procedures used to output results to various formats can be explained.

Criteria 12.21A.5.4

Archive and backup program.

Assessor guide: observe that –

Part program correctly archived and backup copies produced according to standard operating procedures.

Assessor guide: confirm that –

The method used to archive the program is outlined. The procedure used to backup is outlined. Access limitations by personnel and quality control guidelines can be explained.

Range statement

The skills in this unit extend to writing basic programs to measure features of a part in a single work plane using a single probe. The program produced may be used on a range of Coordinate Measuring Machines and would be suitably archived and backed up. Programs are trialed and edited as necessary. Work would be undertaken autonomously using predetermined standards of quality. For programming using multiple probes and more than one plane Unit 12.22A (Program coordinate measuring machine (advanced)) should be selected. Appropriate levels of measuring, computer and engineering drawing skills should be selected with this unit.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with basic programming of coordinate measuring machines and/or processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 12.22A A Program coordinate measuring machine (advanced)

Band – Specialisation band A

Field – Measurement

Unit Weight 2

Pre-requisite units - Path 1

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.3A Precision mechanical measurement

Element 12.22A.1 Determine program requirements

Criteria 12.22A.1.1

Part parameters and measurement requirements determined.

Assessor guide: observe that –

Job sheets, drawings and/or instructions correctly interpreted, job requirements established and the required parameters of the program are understood.

Assessor guide: confirm that –

The program specifications can be outlined. The procedure for producing the program can be explained.

Criteria 12.22A.1.2

Program attributes are determined and established according to standard operating procedures.

Assessor guide: observe that –

The part program name complies with current identification system. The correct units are selected.

Assessor guide: confirm that –

The parameters for selecting attributes can be outlined.

Element 12.22A.2 Determine probe configuration for multiple probes

Criteria 12.22A.2.1

Probe configuration determined according to standard operating procedure.

Assessor guide: observe that –

Suitable probes are selected and probe configuration is correctly determined.

Assessor guide: confirm that –

The reason for selecting multiple probes can be explained. The procedure for determining multiple probe configuration can be outlined.

Criteria 12.22A.2.2

Determine probe angles and qualify multiple probes.

Assessor guide: observe that –

The probe angles for each probe are correctly determined and qualified.

Assessor guide: confirm that –

The procedure for determining probe angles can be explained. The qualification procedure can be outlined.

Element 12.22A.3 Create multiple Direct Computer Control (DCC) alignment**Criteria 12.22A.3.1**

Multiple DCC alignment is created according to standard operating procedure.

Assessor guide: observe that –

Multiple DCC alignment is correctly created.

Assessor guide: confirm that –

The procedure for creating DCC alignment can be outlined. The critical differences between single and multiple DCC alignment can be explained.

Criteria 12.22A.3.2

DCC sub-routines are integrated.

Assessor guide: observe that –

New and/or existing DCC sub-routines are integrated into the program.

Assessor guide: confirm that –

Problems due to integrating sub-routines can be explained. Advantages to be gained through integration of DCC sub-routines can be outlined.

Element 12.22A.4 Construct advanced geometric features**Criteria 12.22A.4.1**

Geometric features determined and constructed.

Assessor guide: observe that –

The geometric features for the program are correctly constructed in a logical sequence.

Assessor guide: confirm that –

The procedure for constructing geometric features can be explained. The reasons for constructing features in the sequence followed can be explained.

Criteria 12.22A.4.2

Features dimensioned according to standard operating procedures.

Assessor guide: observe that –

All necessary dimensions/notes/instructions are included in the program.

Assessor guide: confirm that –

The dimensioning techniques comply with relevant standards. All notes/instructions are clear and logical.

Element 12.22A.5 Review and maintain part programs/system**Criteria 12.22A.5.1**

Part programs are reviewed/edited to comply with changes to specifications.

Assessor guide: observe that –

The program is reviewed against specifications and correctly edited.

Assessor guide: confirm that –

The procedures and parameters for editing, archiving and backing up programs can be explained. The effects of editing particular sections of the program can be outlined.

Criteria 12.22A.5.2

System wide options are changed.

Assessor guide: observe that –

System wide operations are changed to ensure the most efficient operation of the program. Appropriate checks are made to ensure the integrity of the system is maintained.

Assessor guide: confirm that –

The effects on other programs of changing software or hardware options can be explained. The procedures for changing system-wide options can be outlined.

Criteria 12.22A.5.3

Programs are archived and backed up according to standard operating procedures.

Assessor guide: observe that –

Archive and backing up procedures are correctly followed.

Assessor guide: confirm that –

Archive and backup procedures can be given. The procedures for archiving can be explained. Backup options can be outlined. The list of recipients or those with access rights to the programs can be outlined.

Criteria 12.22A.5.4

Results output to various formats according to standard operating procedure.

Assessor guide: observe that –

Results output to printer, disc or other format as required
Appropriate personnel notified.

Assessor guide: confirm that –

The procedures for producing/storing results/reports can be explained. The list of recipients or those with access to the programs can be outlined. The procedure for notifying personnel of completion of the program is explained.

Range statement

The skills in this unit extend to writing programs to measure features of parts in multiple planes using multiple probes. The program produced may be used on a range of Coordinate Measuring Machines and would be suitably archived and backed up. Programs are trialed and edited as necessary. Work would be undertaken autonomously using predetermined standards of quality. For programming using single probes in a single plane Unit 12.21A (Program coordinate measuring machine) should be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with programming of coordinate measuring machines and/or processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 13.1A A Perform emergency first aid

Band – Specialisation band A

Field – Occupational health & safety

Unit Weight 1

Notes - Competencies for recognised first aid qualifications are determined by such bodies as St Johns Ambulance etc. and are not covered within these standards.

Element 13.1A.1 Perform emergency first aid

Criteria 13.1A.1.1

Correct procedures for CPR (cardio pulmonary resuscitation) demonstrated on a mannequin.

Assessor guide: observe that –

The correct procedures for CPR are demonstrated on a mannequin.

Assessor guide: confirm that –

The instances where CPR should be applied can be given. The procedures for preparing a person for the administration of CPR can be identified. The procedures to be followed when performing CPR on a child and an adult can be given. The dangers and precautions to be taken when administering CPR can be explained.

Criteria 13.1A.1.2

First aid treatment of injuries carried out.

Assessor guide: observe that –

The appropriate first aid treatment for the full range of injuries can be demonstrated during simulated exercises.

Assessor guide: confirm that –

The first aid procedures to be applied in situations where the following injuries have occurred can be identified: - burns/scalds - fractures - cuts and abrasions - poisoning - foreign bodies in eyes - concussion - shock.

Criteria 13.1A.1.3

Details of first aid given recorded.

Assessor guide: observe that –

Assessor guide: confirm that –

The details to be recorded of first aid given can be identified. The procedures for recording first aid given can be identified. The reasons for recording first aid given can be explained.

Criteria 13.1A.1.4

Understanding of relevant regulatory and legislative requirements demonstrated.

Assessor guide: observe that –

Assessor guide: confirm that –

The relevant regulatory and legislative requirements with respect to emergency first aid can be identified. The impact of those regulatory/ legislative requirements on the individual and others can be explained.

Range statement

This unit covers basic first aid and the management of life threatening situations where an unconscious person requires breathing and cardiac emergency resuscitation (EAR and CPR). The competencies required for situations involving isolation of persons from hazardous electrical situations are covered in Unit 18.49A (Disconnect/reconnect fixed wired equipment up to 1000 volts AC and 1500 volts DC) and Unit 10.3A (Install and test electrical wiring and circuits (up to 1000 volts AC and 1500 volts DC)). This unit does not meet all of the requirements expected of designated First Aid Officers.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of first aid or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 13.2A A Undertake occupational health and safety activities in the workplace

Band – Specialisation band A

Field – Occupational health & safety

Unit Weight 3

This unit covers the competencies required to apply the principles of OHS in the workplace and undertake a safety audit for the employee's area of responsibility. It applies to those who need OHS competencies beyond those inherent in their jobs.

Element 13.2A.1 Apply principles of OHS in a workplace

Criteria 13.2A.1.1

Understanding of basic OHS principles of hazard identification, assessment and control demonstrated

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of hazard identification, assessment and control as applied to the workplace can be given The procedures for hazard identification, assessment and control can be given

Criteria 13.2A.1.2

Understanding of OHS legislation as it is applied in the workplace is demonstrated

Assessor guide: observe that –

Assessor guide: confirm that –

The application of the OHS legislation in the workplace can be explained

Element 13.2A.2 Carry out safety audit

Criteria 13.2A.2.1

Regular safety audit in the area of responsibility is carried out in accordance with appropriate standards

Assessor guide: observe that –

Regular safety audits of the individual's area(s) of responsibility are carried out in accordance with the relevant standards and standard operating procedures

Assessor guide: confirm that –

The procedures for conducting safety audits can be given The safety standards applicable to the individual's area(s) of responsibility can be identified The frequency at which safety audits should be conducted can be identified

Element 13.2A.3 Identify health and safety improvements

Criteria 13.2A.3.1

On the basis of safety audit or as required, formulate recommendations and identify hazards to be rectified

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for implementing OHS improvements can be given The means of rectifying given or identified hazards can be stated The reasons for selecting the chosen means of rectifying the hazard can be given The authority to whom recommended OHS improvements are to be reported can be identified

Criteria 13.2A.3.2

Make safety improvements using standard operating procedures

Assessor guide: observe that –

Where appropriate, safety improvements are made in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for making safety improvements can be given

Criteria 13.2A.3.3

OHS training needs identified

Assessor guide: observe that –

Where appropriate, OHS training is initiated in accordance with standard operating procedures

Assessor guide: confirm that –

The requirement for OHS training in the individual's area(s) of responsibility can be identified The objectives of the training can be identified The procedures for initiating OHS training can be given

Element 13.2A.4 Follow requirements of enterprise OHS program including emergency procedures**Criteria 13.2A.4.1**

Ensure that requirements of OHS program satisfied in the area of responsibility, for example, accident investigation, emergency procedures

Assessor guide: observe that –

The requirements of the OHS program and procedures in the individual's area(s) of responsibility are being met

Assessor guide: confirm that –

The procedures for accident investigation can be given The emergency procedures can be given The role of the individual in carrying out accident investigations and emergency procedures can be explained

Range statement

This unit is intended to apply to employees requiring additional Occupational Health and Safety (OHS) competencies beyond those inherent in their job.

Evidence**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the undertaking of occupational health and safety activities in the workplace or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 13.3A A Work safely with industrial chemicals and materials

Band – Specialisation band A

Field – Occupational health & safety

Unit Weight 2

Element 13.3A.1 Use personal protection equipment

Criteria 13.3A.1.1

Correct and appropriate safety clothing and personal safety equipment is selected and used correctly.

Assessor guide: observe that –

Appropriate safety clothing and personal safety equipment is used correctly in accordance with work site procedures.

Assessor guide: confirm that –

The hazards associated with the industrial chemicals/materials being used can be identified. The appropriate safety clothing and personal safety equipment required to safely handle the industrial chemicals/materials being used can be identified.

Element 13.3A.2 Identify emergency procedures

Criteria 13.3A.2.1

Emergency procedures are understood and demonstrated as laid down in approved safety instructions.

Assessor guide: observe that –

Emergency procedures are demonstrated during a simulated emergency or drill.

Assessor guide: confirm that –

The procedures to be followed in the event of an emergency can be identified.

Element 13.3A.3 Observe safe working practices

Criteria 13.3A.3.1

Hazardous areas and materials are identified and special handling procedures identified and understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The hazardous areas and materials can be identified. Any special handling requirements for the industrial chemicals/materials being used can be identified. The consequences of inappropriate handling of hazardous materials can be given.

Criteria 13.3A.3.2

All equipment and hazardous materials are used in accordance with specifications and correct procedures.

Assessor guide: observe that –

All equipment and hazardous materials are used in accordance with specifications and work site procedures.

Assessor guide: confirm that –

The correct use of equipment and hazardous materials can be identified.

Criteria 13.3A.3.3

All safety signs, symbols and labels are correctly identified and understood.

Assessor guide: observe that –

Assessor guide: confirm that –

Common safety signs, symbols and labels can be interpreted correctly. The sources of additional information with respect to hazardous materials can be identified.

Criteria 13.3A.3.4

Material safety data sheets understood and applied.

Assessor guide: observe that –

The appropriate material safety data sheets are obtained in accordance with work site procedures. The requirements of the material safety data sheets are followed while handling hazardous materials in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate material safety data sheet for hazardous materials used can be identified.

Criteria 13.3A.3.5

Safe manual handling procedures are used.

Assessor guide: observe that –

All manual handling undertaken safely and in accordance with work site procedures.

Assessor guide: confirm that –

Safe manual handling procedures can be identified.

Criteria 13.3A.3.6

Housekeeping duties are performed according to standard operating procedure to maintain a safe working environment.

Assessor guide: observe that –

Housekeeping duties are performed in accordance with work site procedures.

Assessor guide: confirm that –

The consequences of not maintaining a clean and safe working environment can be given.

Range statement

This unit may be applied in a workplace in which materials and chemicals which are subject to codes and regulations are stored and used, for example, chemicals, explosives, solvents, dangerous materials, acids, noxious waste products etc. Personal protection includes goggles, filter masks, air helmets, safety boots and appropriate clothes/garments. This unit describes the competencies which are beyond those safety requirements normally applied in the workplace as described in Unit 1.2F (Apply principles of Occupational Health & Safety (OH&S) in work environment) or specifically described in individual units such as Welding.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with working with industrial chemicals and materials, or other units requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. - All safety clothing and personal safety equipment. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 13.4A A Work safely with molten metals/glass

Band – Specialisation band A

Field – Occupational health & safety

Unit Weight 2

Element 13.4A.1 Use personal protection equipment

Criteria 13.4A.1.1

Appropriate safety clothing used correctly, as specified in Standard Operating Procedure (SOP).

Assessor guide: observe that –

Appropriate safety clothing and personal safety equipment is used correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The hazards associated with molten metal/glass can be identified. The appropriate safety clothing and personal safety equipment required when working with molten metal/glass can be identified.

Element 13.4A.2 Identify emergency procedures

Criteria 13.4A.2.1

Emergency procedures demonstrated as laid down in approved safety instructions.

Assessor guide: observe that –

Emergency procedures are demonstrated during a simulated emergency or drill.

Assessor guide: confirm that –

The procedures to be followed in the event of an emergency can be identified.

Element 13.4A.3 Observe safe working practices

Criteria 13.4A.3.1

Hazardous areas and materials identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The hazardous areas and materials can be identified.

Criteria 13.4A.3.2

Safety signs and symbols identified and understood.

Assessor guide: observe that –

Assessor guide: confirm that –

Common safety signs and symbols can be interpreted correctly.

Criteria 13.4A.3.3

Equipment used according to specifications and standard operating procedures.

Assessor guide: observe that –

All equipment is used in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The correct use of equipment can be identified. The procedures for using the equipment can be given.

Criteria 13.4A.3.4

Equipment is maintained in good order.

Assessor guide: observe that –

All equipment is maintained in good order in accordance with standard operating procedures.

Assessor guide: confirm that –

The routine maintenance procedures for equipment used in conjunction with molten metal/glass can be identified. The frequency with which routine maintenance should be carried out can be identified.

Criteria 13.4A.3.5

Hazardous items identified and removed from hot material area.

Assessor guide: observe that –

Where appropriate, all hazardous items are removed from hot material areas in accordance with standard operating procedures.

Assessor guide: confirm that –

Items that are likely to be a hazard if encountered in a hot material area can be identified. The procedures for removing hazardous items from hot material areas can be identified. Where appropriate, the person(s) to be notified of hazardous items in a hot material area can be identified.

Criteria 13.4A.3.6

Housekeeping duties performed according to standard operating procedure to maintain a safe working environment.

Assessor guide: observe that –

Housekeeping duties are performed in accordance with standard operating procedures.

Assessor guide: confirm that –

The consequences of not maintaining a clean and safe working environment can be given.

Element 13.4A.4 Identify hazardous conditions operating in a heavy engineering environment**Criteria 13.4A.4.1**

Hazards identified and planning undertaken to maintain safe work environment.

Assessor guide: observe that –

Where appropriate, hazardous conditions are identified and reported/actioned in accordance with standard operating procedures. The work environment is maintained free of hazards at all times.

Assessor guide: confirm that –

The hazards associated with working in a heavy engineering environment can be explained. All hazardous areas and materials can be identified. The procedures for rectifying identified hazards can be given. The planning necessary to maintain a safe work environment can be identified.

Range statement

This unit may be applied in all workplaces in which there is molten metal or molten glass, for example, foundries, die casting operations, glass operations or molten glass etc. All work and work practices undertaken to regulatory and legislative requirements.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with working with molten metal/glass or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 13.5B A Manage occupational health and safety for a workplace or section of a workplace

Band – Specialisation band B

Field – Occupational health & safety

Unit Weight 12

This unit covers the competencies required to assist in the development of OHS policy, understand and implement OHS principles for prevention of injury and disease through progressive use of the hierarchy of control, perform safety audits of the workplace, and maintain accident/incident records and statistics.

Pre-requisite units - Path 1

13.2A Undertake Occupational Health & Safety activities in the workplace

Element 13.5B.1 Assist in development and implementation of OHS policy

Criteria 13.5B.1.1

Discussions with consultative forums on OHS matters facilitated

Assessor guide: observe that –

Records/minutes of discussions with consultative forums on OHS matters are kept Meetings with the relevant consultative forums to discuss OHS matters are scheduled The individual participates appropriately in consultation forum discussions

Assessor guide: confirm that –

The procedures for initiating discussions with the relevant consultative forums can be given The relevant consultative forums can be identified The frequency of discussions to be held with the relevant consultative forums can be identified

Criteria 13.5B.1.2

Healthy and safe work practices and procedures developed

Assessor guide: observe that –

Appropriate records are kept for monitoring the effectiveness of work practices and procedures with respect to the safety of the working environment

Assessor guide: confirm that –

The work practices and procedures developed in conjunction with the relevant consultative forums can be identified The effect of those work practices and procedures on the safety of the working environment can be explained The procedures for monitoring the success of the work practices and procedures developed can be given The variables to be recorded during the monitoring process can be identified The sources of information on occupational health and safety issues can be identified

Element 13.5B.2 Understand and implement OHS principles of prevention of injury and disease through progressive use of hierarchy of control of hazards

Criteria 13.5B.2.1

Accident investigations conducted with view to discovering cause

Assessor guide: observe that –

Where appropriate, accidents are investigated in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for conducting accident investigations can be given The hierarchy of control of hazards can be identified The reasons for progressively implementing the hierarchy of control of hazards can be explained Where appropriate, the likely causes of accidents investigated can be identified

Element 13.5B.3 Perform safety audit of workplace in accordance with relevant regulations and codes of practice

Criteria 13.5B.3.1

Areas requiring hazard rectification identified

Assessor guide: observe that –

The results of safety audits are obtained in accordance with work place procedures

Assessor guide: confirm that –

The hazards to be rectified can be identified

Criteria 13.5B.3.2

Preferred hazard control mechanisms in context of good OHS principles identified

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of hazard control can be given The mechanisms for controlling hazards can be identified

Criteria 13.5B.3.3

The need for expert advice to identify and control hazards identified

Assessor guide: observe that –

Where appropriate, expertise external to the workplace is obtained to assist in the identification and control of workplace hazards

Assessor guide: confirm that –

The areas of occupational health and safety for which the workplace lacks acknowledged expertise can be identified The procedures for accessing expertise external to the workplace can be given

Element 13.5B.4 Maintain accident records and statistics

Criteria 13.5B.4.1

Accident/incident records maintained

Assessor guide: observe that –

Accident and incident records are maintained in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for recording accidents and incidents can be given

Criteria 13.5B.4.2

Records analysed for trends or particular problem areas identified

Assessor guide: observe that –

Assessor guide: confirm that –

The accident and incident reports are analysed and any trends or problem areas are identified The probable causes of the trends or problem areas detected can be explained

Range statement

This unit applies to a person who requires the skill and knowledge to manage the Occupational Health and Safety (OHS) of a workplace or section of a workplace.

Evidence**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the management of occupational health and safety in the workplace or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 13.6A A Monitor occupational health and safety factors for an enterprise or section of an enterprise

Band – Specialisation band A

Field – Occupational health & safety

Unit Weight 4

This unit covers the competencies required to carry out standard OHS measurements, evaluate data, maintain records and report hazards. The measurements would be of a

routine type and data collected would typically relate to factors associated with temperature, noise (noise meter) and dust (draeger tubes).

Element 13.6A.1 Carry out standard OHS measurement

Criteria 13.6A.1.1

Data collected using standard equipment in accordance with manufacturer's specifications

Assessor guide: observe that –

The required measurements are accurately taken and recorded in accordance with manufacturer's specifications and standard operating procedures

Assessor guide: confirm that –

The measurements to be taken and recorded can be identified The procedures for taking each type of measurement can be given The tools, techniques and equipment required to carry out the measurements can be identified

Element 13.6A.2 Evaluate data

Criteria 13.6A.2.1

Data from measurements taken evaluated to identify non-conformance with OHS standards

Assessor guide: observe that –

Assessor guide: confirm that –

The OHS standards for each factor being measured can be identified Any variations between the data collected and the appropriate OHS standard can be identified Where appropriate, the probable causes of the variation of the data collected from the OHS standard can be explained

Element 13.6A.3 Maintain records

Criteria 13.6A.3.1

Records are maintained in accordance with standard operating procedures

Assessor guide: observe that –

The records of the OHS factors monitored are maintained in accordance with standard operating

Assessor guide: confirm that –

The procedures for maintaining records of OHS factors measured can be given

Element 13.6A.4 Hazards reported

Criteria 13.6A.4.1

Results requiring remedial action are reported to appropriate personnel using standard operating procedures

Assessor guide: observe that –

Where appropriate, hazards detected are reported in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for reporting hazards detected can be given The authority to whom hazards are to be reported can be identified

Range statement

Measurements taken would be of a routine type. Where complex procedures or complex analysis are required, the services of an Occupational Health and Safety (OHS) hygienist should be accessed. Data collected would typically relate to factors associated with temperature, noise (noise meter), dust (draeger tubes). This unit should not also be selected where Unit 15.10B (Perform laboratory procedures) has been selected.

Evidence**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the monitoring of occupational health and safety factors for the enterprise, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 13.7A A Maintain water cooling towers and treatment systems

Band – Specialisation band A

Field – Occupational health & safety

Unit Weight 2

Pre-requisite units - Path 1

18.1A Use hand tools

Element 13.7A.1 Apply principles of Australian Standard 3666 or equivalent

Criteria 13.7A.1.1

Causes of corrosion, scale, algae and treatment/prevention understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The causes of corrosion, scale and algae can be explained. Appropriate methods of treating/preventing occurrence of corrosion, scale and/or algae in water cooling towers and treatment systems can be identified.

Criteria 13.7A.1.2

Psychometrics of cooling towers, legionella precautions and AS3666 and/or other relevant regulations understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The psychometrics of cooling tower operation can be explained. The requirements of AS3666 and/or other relevant regulations pertaining to water cooling towers and treatment systems can be identified. The precautions to be taken to prevent contamination of the systems by legionella bacteria can be explained.

Element 13.7A.2 Assess reticulation system

Criteria 13.7A.2.1

Relevant water conditions assessed against specifications using standard procedures and test equipment.

Assessor guide: observe that –

The condition of the water in the cooling tower/treatment system is tested in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing the condition of the water in the cooling tower and/or treatment system can be given. The specifications of the water condition can be identified. The test equipment and techniques required to test the condition of the water can be identified.

Criteria 13.7A.2.2

Condition of water circulation system assessed and appropriate action determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The results of the water condition tests are compared with the water specifications. Variations of the test results from specification can be identified. The procedures to be followed when variations of water condition from specification are detected can be given.

Criteria 13.7A.2.3

Regulating, filtering, conditioning/dosing, pumping systems performance tested.

Assessor guide: observe that –

The reticulation system components are tested for correct operation/performance using appropriate equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The correct operation/performance of the following reticulation system components can be described: - regulators - filters - conditioners - pumps. The tests to be applied to each of the system components to check their performance can be identified. The procedures for testing reticulation system components can be given. The test equipment and techniques can be identified.

Element 13.7A.3 Measure water properties**Criteria 13.7A.3.1**

Test equipment correctly used and applied.

Assessor guide: observe that –

The water properties are tested using appropriate techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The water properties to be tested can be identified. The procedure for testing water properties can be given. The appropriate test equipment and techniques can be identified.

Criteria 13.7A.3.2

Relevant water properties accurately determined and recorded.

Assessor guide: observe that –

The test results are determined and accurately recorded.

Assessor guide: confirm that –

Element 13.7A.4 Maintain reticulation/treatment systems**Criteria 13.7A.4.1**

Water temperature control system correctly adjusted to specification.

Assessor guide: observe that –

The water temperature control system is adjusted to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The water temperature specifications can be identified.
The procedures for adjusting the water temperature can be given.

Criteria 13.7A.4.2

System flow adjusted to specification and sub-systems correctly balanced.

Assessor guide: observe that –

The water flow in the system is adjusted to specification and sub-systems correctly balanced in accordance with standard operating procedures.

Assessor guide: confirm that –

The water flow specifications can be identified. The procedures for adjusting water flow and balancing sub-systems can be given.

Criteria 13.7A.4.3

Faults reported to appropriate personnel according to standard operating procedure.

Assessor guide: observe that –

Where appropriate, system faults are reported to appropriate personnel in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting system faults can be given.
The person to whom faults are to be reported can be identified.

Range statement

This unit refers to maintenance activities associated with large water reticulation systems. Work is carried out within specifications of State Health regulations or equivalent, or Australian Standard - AS3666.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance of water cooling towers and treatment systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 13.13A A Work safely with ionizing radiation

Band – Specialisation band A

Field – Occupational health & safety

Unit Weight 4

Element 13.13A.1 Identify the hazards and effects of ionizing radiation in the workplace

Criteria 13.13A.1.1

Production of x-rays and gamma rays is explained in relation to radiographic testing activities.

Assessor guide: observe that –

Assessor guide: confirm that –

Properties of x-rays and gamma rays and principal radioactive sources used in industrial radiography can be explained.

Criteria 13.13A.1.2

Attenuation factors of ionizing radiation and the biological effects on living tissue are outlined.

Assessor guide: observe that –

Assessor guide: confirm that –

Attenuation factors can be explained.

Criteria 13.13A.1.3

The biological effects of radiation are identified.

Assessor guide: observe that –

Effects of radiation are recognised.

Assessor guide: confirm that –

The known biological effects of radiation can be explained.

Element 13.13A.2 Apply radiation exposure limits and controls

Criteria 13.13A.2.1

S. I. units of radiation are explained as per the National Health and Medical Research Council/ statutory requirements.

Assessor guide: observe that –

Assessor guide: confirm that –

The different SI units of radiation can be explained, including:

- becquerel
- sievert
- gray

Criteria 13.13A.2.2

Exposure limits for personnel as laid down by the radiation authorities in Australia are stated and adhered to.

Assessor guide: observe that –

Assessor guide: confirm that –

Exposure limits for personnel as laid down by the radiation authorities in Australia can be stated.

Criteria 13.13A.2.3

Minimum exposure rates/distances are determined from calculations and charts.

Assessor guide: observe that –

Calculations are performed and charts interpreted correctly.

Assessor guide: confirm that –

The three exposure reduction factors can be explained, including:

- time
- distance
- shielding

Element 13.13A.3 Select and use radiation monitoring equipment**Criteria 13.13A.3.1**

The tools and equipment necessary to monitor radiation are selected and used as required.

Assessor guide: observe that –

Correct monitoring equipment is utilised.

Assessor guide: confirm that –

The procedures for establishing safe working barriers can be explained.

Criteria 13.13A.3.2

Techniques and system verification checks necessary to monitor radiation are selected and applied.

Assessor guide: observe that –

Radiation is monitored effectively.

Assessor guide: confirm that –

Relevant techniques and checks can be explained.

Element 13.13A.4 Respond to emergency situations**Criteria 13.13A.4.1**

Procedures for dealing with both x-ray and gamma-ray emergency situations are demonstrated.

Assessor guide: observe that –

Emergency response procedures are carried correctly and in a logical sequence.

Assessor guide: confirm that –

Emergency procedures can be explained. Emergency situations, causes and appropriate responses can be fully explained.

Range statement

This unit describes the underpinning safety knowledge and skills required that must be applied when working with ionizing radiation in open or closed sites; on fabrications, structures and components across a wide range of industries. It is a pre-requisite to undertaking any other radiographic competency standards unit. The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific radiographic testing equipment as specified in maintenance documentation, testing procedures or operators instructions.

All testing must be completed with particular attention to personal and OH&S regulations. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals, which are subject to codes and regulations, for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products safe work habits must be stored and used in accordance with safe work practices.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

- any relevant workplace procedures;
- any relevant product and manufacturing specifications;
- any relevant codes, standards, manuals and reference materials.

The candidate will be required to:

- orally, or by other methods of communication, answer questions put by the assessor about processes, events or tasks being undertaken;
- identify colleagues who can be approached for the collection of competency evidence, where appropriate;
- present evidence of any off-job training related to this unit
- perform the tasks within the time frames established between the candidates supervisor/instructor and the assessor, prior to the assessment;

Assessors must be satisfied that the candidate can competently and consistently perform all elements of this unit as specified by the criteria, including required knowledge.

Activities should closely simulate a workplace environment and conditions due to the critical nature of this work.

Critical aspects

The candidate should demonstrate sufficient underpinning knowledge of:

- OH&S requirements
- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;
- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 14.1B A Schedule material deliveries

Band – Specialisation band B

Field – Planning

Unit Weight 8

Notes - This unit can be regarded as a Specialisation band A unit from C11 onwards

Element 14.1B.1 Identify material requirements

Criteria 14.1B.1.1

Materials required are identified from appropriate documentation including type and quality.

Assessor guide: observe that –

The appropriate documentation for a given product is obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The material type(s) and quality required can be identified.

Criteria 14.1B.1.2

Quantities required are estimated in accordance with standard operating procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The material requirements and specifications can be identified. The procedures for estimating quantities can be given. The quantities of material required are estimated in accordance with standard operating procedures.

Element 14.1B.2 Schedule material delivery

Criteria 14.1B.2.1

Delivery requirements and dates are determined from production plans, or job sequencing requirements.

Assessor guide: observe that –

Material deliveries are scheduled in accordance with the requirements of the job/process/production targets and standard operating procedures.

Assessor guide: confirm that –

The material ordering/requisitioning procedures can be identified. The material delivery requirements can be identified. The effects of non-availability of materials on production plans and/or job sequencing can be explained. The procedures for determining lead times for material supply can be given. The procedures for determining material stock levels can be given.

Criteria 14.1B.2.2

Material supply followed up and problems reported

Assessor guide: observe that –

Material supply orders/requisitions are followed up in accordance with standard operating procedures. Where appropriate, problems with material supply are reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The material supply procedures can be given. The persons responsible for material supply can be identified. The persons to whom material supply problems are to be reported can be identified.

Criteria 14.1B.2.3

Material orders are processed in accordance with established organisational practice and procedures.

Assessor guide: observe that –

Material orders are processed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for requisitioning/ ordering materials can be given. The consequences of not following organisational procedures for material supply can be explained.

Range statement

This unit applies to the estimating, planning, scheduling of material delivery requirements for production process purposes so that materials are available in quantities and specifications required. Scheduling is undertaken in accordance with established organisational practices and procedures, based on familiar processes. If scheduling is based on engineering drawings and supporting engineering data, appropriate skill units should be accessed. This unit is not intended to be used by personnel carrying out maintenance and installation.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the scheduling of material deliveries or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 14.2B A Basic process planning

Band – Specialisation band B

Field – Planning

Unit Weight 8

Notes - Appropriate technical units relating to the process being planned are also required.

Element 14.2B.1 Review process specifications

Criteria 14.2B.1.1

Supporting engineering and production data is examined, where required.

Assessor guide: observe that –

Where appropriate, relevant engineering and production data is obtained in accordance with work place procedures.

Assessor guide: confirm that –

The role of engineering and production data in process planning can be explained.

Criteria 14.2B.1.2

The production processes to be used are determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The production processes to be used can be identified.

Criteria 14.2B.1.3

Specifications are obtained and examined.

Assessor guide: observe that –

All relevant job instructions, drawings, specifications and procedures are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The specifications of the product to be produced can be given.

Element 14.2B.2 Determine production sequence

Criteria 14.2B.2.1

Steps required for the process are identified and flow charts produced where required.

Assessor guide: observe that –

Where appropriate, the production process is represented by a flow chart in accordance with workplace procedures.

Assessor guide: confirm that –

The individual steps in the production process can be identified. The reasons for selecting the chosen steps and sequence of operations can be explained. The reasons for producing flow charts of production processes can be given.

Criteria 14.2B.2.2 Material and parts lists are prepared.	<i>Assessor guide: observe that –</i> Material and parts lists are prepared for the production process in accordance with standard operating procedures.	<i>Assessor guide: confirm that –</i> The procedures for preparing material and parts lists can be given.
Criteria 14.2B.2.3 Tooling and/or equipment requirements are documented.	<i>Assessor guide: observe that –</i> Tooling and/or equipment requirements are documented in accordance with standard operating procedures.	<i>Assessor guide: confirm that –</i> The procedures for documenting tooling and equipment requirements can be given.
Criteria 14.2B.2.4 Quality assurance steps and specifications are identified.	<i>Assessor guide: observe that –</i> Where appropriate, the quality assurance steps are included in the process flow chart in accordance with workplace procedures.	<i>Assessor guide: confirm that –</i> The quality assurance procedures can be given. The specifications of the product can be identified. The quality assurance steps in the production process can be identified.
Criteria 14.2B.2.5 Process steps are documented and clearly represented.	<i>Assessor guide: observe that –</i> The process steps are clearly documented in accordance with standard operating procedures.	<i>Assessor guide: confirm that –</i> The procedures for documenting process plans can be given.

Range statement

Applies to one of a range of processes in manufacturing eg: machining, pressing, assembly. Applies to a stage of the overall production process. Does not apply to interfacing between processes. Work for the process element is planned over the specified timeframe taking into account resources available and required. Process plan establishes detailed steps required, and milestones against which progress can be checked. Plan is developed in accordance with accepted organisation practice and procedures. If planning is based on engineering drawings and supporting engineering data, appropriate skills units should be accessed.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with process planning or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 14.3B A Undertake basic production scheduling

Band – Specialisation band B

Field – Planning

Unit Weight 8

Notes - This unit can be regarded as a Specialisation band A unit from C11 onwards. Appropriate technical units relating to the production/manufacturing process also required.

Element 14.3B.1 Identify production requirements and capacities

Criteria 14.3B.1.1

Engineering production data is identified.

Assessor guide: observe that –

All relevant production data is obtained in accordance with work place procedures.

Assessor guide: confirm that –

The source of engineering production data can be identified.

Criteria 14.3B.1.2

Inventory capacities and requirements are identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The inventory capacity can be identified. The inventory requirements can be identified. The persons responsible for determining inventory levels can be identified.

Criteria 14.3B.1.3

Procurement and supply requirements and constraints are identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The materials required to produce the given product can be identified. The material supply procedures can be given. The material supply lead times can be identified. The effect of material supply lead times on production scheduling can be explained.

Criteria 14.3B.1.4

Production capacity and constraints are identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The production capacity for given products can be identified. The factors affecting production capacity can be explained.

Criteria 14.3B.1.5
Standard times are identified.

Assessor guide: observe that –

Assessor guide: confirm that –
The sources of information on standard times can be identified. The standard times for given manufacturing processes can be identified.

Element 14.3B.2 Prepare schedule for production of a component/part

Criteria 14.3B.2.1
Production of component is scheduled in accordance with production, inventory, procurements, time constraints, supply capacities and requirements.

Assessor guide: observe that –
The production schedule for given component(s) is produced in accordance with standard operating procedures.

Assessor guide: confirm that –
The procedures for scheduling production can be given. The factors to be considered when scheduling production and their impact on the schedule produced can be explained. The persons to be consulted during the scheduling process can be identified. The procedures for revising production schedules to take account of unforeseen occurrences can be given.

Criteria 14.3B.2.2
Schedule is documented in accordance with accepted organisation procedures.

Assessor guide: observe that –
The production schedule is documented in accordance with standard operating procedures.

Assessor guide: confirm that –
The procedures for documenting production schedules can be given.

Range statement

Applies to the scheduling of the manufacture of a single component; the scheduling of a single assembly function; or for a single small production work unit or production cell, or work station or work unit; or a single production process where there are only a small number of constraints or variables. The scheduling applies to only a part of the overall production process.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with production scheduling or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 15.1A A Perform basic statistical quality control

Band – Specialisation band A

Field – Quality

Unit Weight 2

Element 15.1A.1 Take samples

Criteria 15.1A.1.1

Difference between population and sample understood and various sampling schemes applied in accordance with standard operating procedures.

Assessor guide: observe that –

The appropriate sampling scheme is applied to the given production process in accordance with standard operating procedures.

Assessor guide: confirm that –

The difference between population and sample can be explained. A variety of sampling schemes and their application can be given. The sampling scheme to be applied to a given situation can be identified. The reasons for selecting the chosen sampling scheme can be given. The sampling procedures to be followed can be given.

Element 15.1A.2 Apply statistical process to monitor production

Criteria 15.1A.2.1

Concept of variation in terms of average and spread understood. Data used to produce relevant statistical information eg: average and range and the plotting of charts such as tally, run or control charts.

Assessor guide: observe that –

Data produced from samples taken in conformance to sampling procedures is obtained in accordance with standard operating procedures. Where appropriate, tally, run or control charts are produced from sampling data.

Assessor guide: confirm that –

The concept of variation can be explained in terms of average and spread. The procedures for obtaining sampling data can be given. The average and range of given sampling data can be determined. The types of charts that can be produced to assist in the monitoring of products can be identified.

Criteria 15.1A.2.2

Data interpreted accurately and information presented to appropriate authority utilising standard operating procedure.

Assessor guide: observe that –

Information identified from sampling data is reported to the appropriate authority in accordance with standard operating procedures.

Assessor guide: confirm that –

The information contained in given sampling data can be interpreted accurately. The procedures for reporting information obtained from sampling data can be given. The person to whom information obtained from sampling data is to be reported can be identified.

Range statement

This unit is intended to apply to the collation and interpretation of statistical data in the context of statistical quality control, for example, tally, run or control charts. When the production and interpretation of charts and graphs not dependent on knowledge and understanding of the implications for quality are required, Unit 2.8C10 (Perform computations) should be accessed. Uncontrolled variations are reported to appropriate authority.

Evidence guide**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with statistical quality control or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.3A A Use improvement processes in team activities

Band – Specialisation band A

Field – Quality

Unit Weight 4

Pre-requisite units - Path 1

2.3C11 Operate in a work based team environment

Element 15.3A.1 Identify areas for improvement and/or solve problems

Criteria 15.3A.1.1

Participate in team selection of improvement tools and methods appropriate to the situation.

Assessor guide: observe that –

The individual participates in the team's selection of the improvement tools and methods to be used.

Assessor guide: confirm that –

Improvement tools and methods that may be applied to the situation/ problem can be identified. A preferred improvement tool and/or method can be identified. The reasons for selecting the preferred improvement tool and/or method can be explained.

Criteria 15.3A.1.2

Working in teams, process improvement tools are used to identify improvements and/or solve problems.

Assessor guide: observe that –

The process improvement tools are used by the team to identify improvements and/or solve problems.

Assessor guide: confirm that –

The procedures to be followed when using process improvement tools in the team environment can be explained. The individual's role in identifying improvements and/or solving problems can be identified.

Element 15.3A.2 Implement improvement strategy

Criteria 15.3A.2.1

Working in teams, improvement strategies are implemented as required in accordance with standard operating procedures.

Assessor guide: observe that –

The individual participates in the implementation of improvement strategies in accordance with standard operating procedures.

Assessor guide: confirm that –

The improvement strategies to be implemented can be identified. The reasons for implementing the improvement strategies can be explained. The procedures for implementing the improvement strategies can be given. The individual's role in implementing the improvement strategies can be identified.

Criteria 15.3A.2.2

In conjunction with work team further action recommended where required using standard operating procedure.

Assessor guide: observe that –

Where appropriate, further action is recommended in accordance with standard operating procedures.

Assessor guide: confirm that –

Where appropriate, further action to be taken by the individual and/or the work team can be identified. The procedures for initiating further action can be identified.

Element 15.3A.3 Monitor implementation of improvement**Criteria 15.3A.3.1**

Performance monitored for change utilising feedback data.

Assessor guide: observe that –

The appropriate feedback data is collected and collated in accordance with standard operating procedures.

Assessor guide: confirm that –

The data necessary to measure the results of the implementation of the improvement strategy can be identified. The procedures for collecting and collating feedback data can be identified. The desired performance can be identified. Any discrepancies between desired and actual performance can be identified. The performance trends can be identified from the data collected.

Element 15.3A.4 Evaluate improvement**Criteria 15.3A.4.1**

Analytical tools used to evaluate improvement as required.

Assessor guide: observe that –

Where appropriate, analytical tools are used to evaluate the improvement strategy implemented in accordance with standard operating procedures.

Assessor guide: confirm that –

The analytical tools to be used to evaluate the improvement strategy implemented can be identified. The procedures for evaluating improvement can be given.

Criteria 15.3A.4.2

In conjunction with work team further action recommended where required using standard operating procedure.

Assessor guide: observe that –

Where appropriate, further action is recommended in accordance with standard operating procedures.

Assessor guide: confirm that –

Where appropriate, further action to be taken by the individual and/or the work team can be identified. The procedures for initiating further action can be identified.

Range statement

This unit applies to the skills required for quality circle participation using problem solving techniques. Techniques should include flow charts, cause and effect diagrams, pareto charts, histograms, run charts and graphs, control charts, scattergrams etc. as required.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the use of improvement processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.4A A Perform inspection (basic)

Band – Specialisation band A

Field – Quality

Unit Weight 2

Element 15.4A.1 Inspect products

Criteria 15.4A.1.1

Products tested for conformance to specifications in accordance with standard operating procedures.

Assessor guide: observe that –

Products are tested for conformance to specifications in accordance with work site procedures.

Assessor guide: confirm that –

The product specifications can be identified. The appropriate measurements/tests to check conformance to specifications can be identified.

Element 15.4A.2 Keep records

Criteria 15.4A.2.1

Test status identification is made on conforming and non-conforming products and records accurately kept using standard operating procedures.

Assessor guide: observe that –

Inspection results are recorded accurately in accordance with work site procedures. Individuals producing parts/products informed of part/product conformance/non-conformance to specification in accordance with work site procedures.

Assessor guide: confirm that –

The data to be recorded and the frequency of recording required can be identified. The consequences of not keeping accurate records can be given.

Element 15.4A.3 Provide feedback

Criteria 15.4A.3.1

Products tested/inspected/measured after rework or repair.

Assessor guide: observe that –

Reworked/repared products are tested for conformance to specification in accordance with work site procedures.

Assessor guide: confirm that –

The non-conformances of a product that can be removed by rework/repair can be identified.

Criteria 15.4A.3.2

Deficiencies or deviations reported to standard operating procedures.

Assessor guide: observe that –

Inspection results are recorded accurately in accordance with work site procedures. Individual reworking/repairing part informed of conformance/non-conformance of reworked/repared product to specification in accordance with work site procedures.

Assessor guide: confirm that –

The data to be recorded with respect to reworked/repared products can be identified.

Range statement

This unit applies to those whose duties include the basic inspection of completed or partly completed products produced by others. Inspection is carried out according to site quality plan or specifications, and applies to a range of manufacturing enterprises. Uses a range of measuring equipment/devices/tools. Location and frequency of checks/tests and measurements undertaken to standard operating procedures. In general, verification should be made as close as possible to the point of production of the feature or characteristic. Inspection may involve "first piece inspection", fixed interval, sample etc. Depending on the inspection process other technical units may need to be accessed, for example, appropriate measurement units. This unit is not intended to be applied to maintenance personnel carrying out their day-to-day activities, for example, fault finding, remedial and checking activities, these skills are covered by other units, eg. Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components).

Evidence guide

Assessment context

This unit should be assessed in the workplace. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the inspection process, or other units requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 15.5A A Perform inspection (advanced)

Band – Specialisation band A

Field – Quality

Unit Weight 4

Pre-requisite units - Path 1

15.4A Perform inspection (basic)

Element 15.5A.1 Select inspection/test procedures

Criteria 15.5A.1.1

Appropriate methods of inspection selected and implemented.

Assessor guide: observe that –

Where appropriate, the relevant inspection method for the product/process is implemented in accordance with standard operating procedures.

Assessor guide: confirm that –

A range of inspection methods and their application can be identified. The appropriate inspection method for the process/product can be identified. The reasons for selecting the chosen inspection method can be explained. The procedures for implementing inspection methods can be identified.

Criteria 15.5A.1.2

Inspection/test procedures monitored to ensure desired outcomes.

Assessor guide: observe that –

The inspection/test procedures are monitored in accordance with standard operating procedures to ensure desired outcomes are achieved.

Assessor guide: confirm that –

The desired/target outcomes of the inspection/test procedures can be identified. The actual outcomes of the inspection/test procedures can be identified. Any discrepancies/trends detected from the inspection/test results can be identified. The reasons for any discrepancies/ trends detected can be explained. The procedures for monitoring inspection/test procedures can be identified.

Element 15.5A.2 Control inspection/test environment and equipment

Criteria 15.5A.2.1

Environmental conditions monitored to ensure reliability of tests and results.

Assessor guide: observe that –

Environmental conditions are monitored in accordance with standard operating procedures.

Assessor guide: confirm that –

The effects of environmental conditions on test equipment and the results obtained can be explained. The procedures for monitoring environmental conditions can be identified. The acceptable range of variations to environmental conditions can be identified.

Criteria 15.5A.2.2

Equipment/instruments checked for correct calibration.

Assessor guide: observe that –

The calibration of measuring equipment is checked for conformance to specifications using appropriate techniques in accordance with standard operating procedures and all relevant codes, standards and legislative/regulatory requirements.

Assessor guide: confirm that –

The correct operation of the measuring equipment can be identified. The specifications of the measuring equipment can be identified. The procedures for checking the calibration of the measuring equipment can be given. Any codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration can be identified.

Criteria 15.5A.2.3

Calibration of equipment/instruments is initiated or undertaken against appropriate standard as required.

Assessor guide: observe that –

Where appropriate, the calibration of measuring equipment is initiated in accordance with standard operating procedures. Where appropriate, the measuring equipment is calibrated against the appropriate standard in accordance with standard operating procedures and all relevant codes, standards and legislative, regulatory requirements.

Assessor guide: confirm that –

Where appropriate, the procedures for initiating the calibration of measuring equipment can be identified. Where appropriate the physical standard against which the measuring equipment is to be calibrated can be identified. Where appropriate, the procedures for calibrating the measuring instrument can be given. Where appropriate, the tools and equipment required to calibrate the measuring equipment can be identified.

Criteria 15.5A.2.4

Calibration records maintained to standard operating procedure.

Assessor guide: observe that –

Calibration records are maintained in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording calibration details can be identified. The reasons for keeping calibration records can be explained.

Criteria 15.5A.2.5

If equipment/instruments are found to be out of calibration validity of previous results checked and reported to standard operating procedure.

Assessor guide: observe that –

Where appropriate, out of calibration equipment is detected and reported to the appropriate authority in accordance with standard operating procedures. Where appropriate, the results obtained with out of calibration measuring equipment are checked for validity in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed when measuring equipment is found to be out of calibration can be identified. The reasons for checking results obtained with out of calibration measuring equipment can be explained. The authority to whom out of calibration measuring equipment is to be reported can be identified.

Range statement

This unit applies to a range of manufacturing enterprise. Inspection involves working autonomously and taking responsibility for overseeing inspection processes and environment. Uses a wide range of equipment/instruments and takes responsibility for the reliability of inspection results to ensure conformance to specifications. This unit is not intended to be applied to maintenance personnel carrying out their day-to-day activities, for example, fault finding, remedial and checking activities, these skills are covered by other units, eg Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components).

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the inspection process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.7B A Conduct product and/or process capability studies

Band – Specialisation band B

Field – Quality

Unit Weight 6

Pre-requisite units - Path 1

2.7C10 Perform computations - basic

2.8C10 Perform computations

2.14C5 Use graphical techniques and perform simple statistical computations

15.1A Perform basic statistical quality control

15.8B Perform advanced statistical quality control

Element 15.7B.1 Conduct process capability studies

Criteria 15.7B.1.1

Procedure for conducting capability study selected.

Assessor guide: observe that –

Assessor guide: confirm that –

The process to be studied can be identified. The procedure for conducting the process capability study can be given. The reasons for selecting the chosen procedure can be explained.

Criteria 15.7B.1.2

Instructions for personnel conducting trial run prepared.

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 15.7B.1.3

Data analysed and the process capability calculated

Assessor guide: observe that –

All relevant data is accurately collected and collated

Assessor guide: confirm that –

The data is used to calculate the process capability The procedures for calculating process capability can be given

Criteria 15.7B.1.4

Possible number of product defects from a particular process estimated

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for estimating the possible number of product defects can be given The possible number of product defects for given situations can be identified

Criteria 15.7B.1.5

Reports listing various options from process capability studies prepared

Assessor guide: observe that –

Reports listing the various options identified from the process capability study are prepared in accordance with workplace procedures

Assessor guide: confirm that –

The various options for improving the process can be identified The benefits of each option can be explained

Element 15.7B.2 Set control limits**Criteria 15.7B.2.1**

Optimum target mean to suit process capability determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for determining the optimum target mean can be given. The optimum target mean can be identified.

Criteria 15.7B.2.2

Control limits for subgroup average, range and standard deviation calculated.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for setting control limits can be given. The control limits can be calculated.

Criteria 15.7B.2.3

Warning limits for subgroup average, range and standard deviation calculated.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for setting warning limits can be given. The warning limits can be calculated.

Criteria 15.7B.2.4

Course of action resulting from out of control situation and documented to standard operating procedure.

Assessor guide: observe that –

Assessor guide: confirm that –

The concept of "out of control" situations can be explained. The action to be taken when an "out of control" situation is detected can be identified. The procedures for documenting "out of control" situations can be given.

Criteria 15.7B.2.5

Design specifications based on an analysis of data recommended.

Assessor guide: observe that –

Process design specifications can be determined from process capability data.

Assessor guide: confirm that –

Element 15.7B.3 Select sampling plans**Criteria 15.7B.3.1**

Acceptable quality level determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The acceptable level of quality can be identified.

Criteria 15.7B.3.2

Appropriate sampling plan to suit production schedule selected and acceptable quality limits determined, taking into account specified producer and consumer risks.

Assessor guide: observe that –

Assessor guide: confirm that –

A variety of sampling plans and their application can be given. The sampling plan to be applied to a given situation can be identified. The reasons for selecting the chosen plan can be given. The acceptable quality limits can be identified. The risks associated with identifying acceptable quality limits for the producer and customer can be explained.

Criteria 15.7B.3.3

Sampling plan documented including implementation strategy.

Assessor guide: observe that –

The sampling plan and implementation strategy are documented in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for documenting sampling plans can be given. The procedures for implementing sampling plans can be given.

Range statement

This unit includes the analysis of data from a production section or processes using appropriate statistical techniques. Consultation may be required with production or process personnel and is undertaken within the enterprise's total quality plan.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the conduct of product or process capability studies or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.8B A Perform advanced statistical quality control

Band – Specialisation band B

Field – Quality

Unit Weight 2

Pre-requisite units - Path 1

2.7C10 Perform computations - basic

2.8C10 Perform computations

2.14C5 Use graphical techniques and perform simple statistical computations

15.1A Perform basic statistical quality control

Element 15.8B.1 Construct control charts

Criteria 15.8B.1.1

Control charts/proformas including the determination of control limits from sample data completed.

Assessor guide: observe that –

Control charts, including control limits are constructed from sample data in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for constructing control charts and control limits can be given.

Criteria 15.8B.1.2

State of controlled and uncontrolled variables understood and identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The state of controlled and uncontrolled variables can be identified from given data.

Criteria 15.8B.1.3

Uses 1, 2 and 3 sigma limits to measure and describe population dispersion.

Assessor guide: observe that –

Assessor guide: confirm that –

Population dispersion can be described in terms of 1, 2 and 3 sigma limits. The population dispersion for given data can be calculated in terms of 1, 2 and 3 sigma limits.

Range statement

This unit involves the understanding of statistical processes and the application of these processes to the maintenance and improvement of a quality system.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with statistical quality control or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.10B A Perform laboratory procedures

Band – Specialisation band B

Field – Quality

Unit Weight 8

Element 15.10B.1 Work under laboratory conditions

Criteria 15.10B.1.1

Conduct independent tests under controlled conditions.

Assessor guide: observe that –

All relevant drawings, circuits, specifications, instructions and data are obtained in accordance with standard operating procedures. Tests are conducted independently under controlled conditions in accordance with standard operating procedures.

Assessor guide: confirm that –

The tests to be undertaken can be identified. The conditions under which the tests are to be undertaken can be identified. The testing procedures to be followed are established. The reasons for conducting tests under controlled conditions can be explained. The need for tests to be conducted independently can be explained.

Element 15.10B.2 Perform calibration

Criteria 15.10B.2.1

Equipment verified and calibrated to meet agreed quality standards.

Assessor guide: observe that –

The measuring equipment is checked for correct calibration against the agreed quality standards in accordance with standard operating procedures and the relevant codes, standards, legislative and regulatory requirements. Where appropriate, the measuring equipment is calibrated in accordance with standard operating procedures and relevant codes, standards, legislative and regulatory requirements.

Assessor guide: confirm that –

The quality standards against which the measuring equipment is to be calibrated can be identified. The correct operation of the measuring equipment can be identified. The specifications of the measuring equipment can be identified. The tools and equipment required to check the calibration of the measuring equipment can be identified. The procedures for checking the calibration of the measuring equipment can be given. Any codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration can be identified.

Criteria 15.10B.2.2

Calibration status safeguarded against unauthorised adjustment of equipment.

Assessor guide: observe that –

The calibration status of the equipment is safeguarded against unauthorised adjustment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for preventing unauthorised adjustment of equipment can be identified. The reasons for protecting equipment against unauthorised adjustment can be explained.

Criteria 15.10B.2.3

Accurate records kept for reference purposes.

Assessor guide: observe that –

Accurate records of measuring equipment calibrated are kept and maintained in accordance with standard operating procedures.

Assessor guide: confirm that –

The records to be kept with respect to the calibration of measuring equipment can be identified. The reasons for keeping accurate calibration records can be explained.

Criteria 15.10B.2.4

Test equipment periodically recalled for adjustment, repair and re-calibration.

Assessor guide: observe that –

Test equipment is recalled for adjustment, repair and re-calibration in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recalling test equipment for adjustment, repair and re-calibration can be identified. The frequency of test equipment recall can be identified. The reasons for recalling test equipment can be explained.

Criteria 15.10B.2.5

Documentary evidence covering identification of equipment, frequency of re-calibration, calibration status and procedures for recall, handling and storage, adjustment, repair, calibration, installation and use maintained.

Assessor guide: observe that –

All relevant records are completed and maintained in accordance with standard operating procedures. All relevant documented procedures are maintained in accordance with standard operating procedures.

Assessor guide: confirm that –

All relevant documentation relating to the calibration/re-calibration of test equipment can be identified. The procedures for completing the relevant documentation can be identified. The procedures for the recall, handling, storage, adjustment, repair, installation and use of test equipment can be identified.

Criteria 15.10B.2.6

Calibration to reference standards of known accuracy such as national or international standards traced, or where these do not exist, to specifically developed criteria.

Assessor guide: observe that –

Reference standards or specific criteria are used as the basis for calibration.

Assessor guide: confirm that –

Sources of reference standards can be described, as well as procedures to be used in the absence of reference standards.

Element 15.10B.3 Write reports**Criteria 15.10B.3.1**

Results documented and reports provided as required.

Assessor guide: observe that –

All test results are documented in accordance with standard operating procedures. Where appropriate, reports are prepared/provided on the tests carried out on the test equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The reports to be prepared/provided with respect to the test equipment being tested can be identified. The procedures for preparing/ providing reports on tests carried out on test equipment can be identified.

Element 15.10B.4 Verify quality status**Criteria 15.10B.4.1**

Independent inspections, tests and audits conducted
Design and servicing process monitored.

Assessor guide: observe that –

Where appropriate, inspections, tests and audits are conducted in accordance with standard operating procedures. Where appropriate, the results of inspections, tests and audits are used to inform the design and servicing process.

Assessor guide: confirm that –

The auditing processes to be applied to testing procedures can be identified. The use of information from the inspections, tests and audits conducted in the development of design and servicing of products/equipment can be explained.

Range statement

This unit would apply to an individual working autonomously and following scientific procedures under controlled conditions. A range of sophisticated equipment used to provide independent feedback on quality processes and procedures. All work would be carried out to predetermined standard operating procedures. This unit would be taken in conjunction with appropriate technical units.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of laboratory procedures or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.11B A Exercise external quality assurance

Band – Specialisation band B

Field – Quality

Unit Weight 6

Pre-requisite units - Path 1

15.4A Perform inspection (basic)

15.5A Perform inspection (advanced)

Element 15.11B.1 Liaise with external suppliers

Criteria 15.11B.1.1

The exact quality requirements communicated to suppliers.

Assessor guide: observe that –

The exact quality requirements are communicated to the supplier in accordance with standard operating procedures.

Assessor guide: confirm that –

The exact quality requirements of the product/material to be supplied can be identified. The procedures to be followed to ensure the supplier understands the quality requirements can be given.

Criteria 15.11B.1.2

Agreed quality assurance system negotiated.

Assessor guide: observe that –

The agreed quality assurance system is negotiated with the supplier in accordance with standard operating procedures.

Assessor guide: confirm that –

The requirements of a quality assurance system to ensure the supplied product/material conforms to the quality requirements can be given. The procedures for negotiating agreements with suppliers can be given.

Criteria 15.11B.1.3

Verification method and systems and procedures for dispute settlement established and agreed.

Assessor guide: observe that –

An appropriate system for recording and tracing products or services procured is implemented in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for verifying that the agreed quality assurance system is being utilised by the supplier can be given. The procedures for dispute resolution can be given.

Criteria 15.11B.1.4

Recording system of procured products or services which ensures traceability established.

Assessor guide: observe that –

An appropriate system for recording and tracing products or services procured is implemented in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording procured products or services can be given. The means of tracing procured products or services can be identified. The reasons for tracing procured products or services can be explained.

Element 15.11B.2 Check for conformance to specifications

Criteria 15.11B.2.1

The requirements of all relevant documentation including contract specifications, drawings and purchase orders obtained and understood.

Assessor guide: observe that –

All relevant drawings, specifications, documentation etc. are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The specifications of the product/material to be supplied or service to be provided can be identified.

Criteria 15.11B.2.2

The conformance of the procured product or service to all of the documented requirements is established.

Assessor guide: observe that –

The product/material or service provided is checked for conformance to documented requirements/specifications.

Assessor guide: confirm that –

Any variations from documented requirements/specifications can be identified.

Element 15.11B.3 Assess external suppliers

Criteria 15.11B.3.1

Assessment and evaluation of suppliers' capability and/or quality system conducted.

Assessor guide: observe that –

Suppliers' capability to provide the required product/material or service is assessed in accordance with standard operating procedures. Suppliers' quality systems are evaluated in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for assessing/ evaluating a supplier's capability to supply the required product/material or service can be given. The procedures for evaluating a supplier's quality system can be given.

Criteria 15.11B.3.2

Suppliers' goods or services evaluated.

Assessor guide: observe that –

Suppliers' goods or services are evaluated in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for evaluating a supplier's goods or services can be given. Any equipment and techniques required to carry out the evaluation procedures can be identified.

Range statement

This standard is applied to a wide range of supplier enterprises so that purchased supplies meet quality standards and that adequate documents are prepared and maintained to standard operating procedures.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the exercise of external quality assurance or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.12B A Maintain/supervise application of quality procedures

Band – Specialisation band B

Field – Quality

Unit Weight 4

Element 15.12B.1 Improve quality system

Criteria 15.12B.1.1

Specifications interpreted to meet customer needs (internal and external).

Assessor guide: observe that –

The specifications of the product or service to be provided are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The specifications to be achieved in providing the service or producing the product can be identified. The team's supplier(s) and customer(s) can be identified. The possible effects of supplying products and/or services to customers that do not comply with specifications can be explained.

Criteria 15.12B.1.2

Leadership role as a supplier in ensuring quality within a customer chain is taken.

Assessor guide: observe that –

The products and/or services supplied to the team's customer(s) conform to specifications at all times.

Assessor guide: confirm that –

The procedures to be followed in producing the product and/or supplying the service can be given. The checks to be undertaken to ensure the product/service complies with specifications can be identified. The personnel responsible for the quality of the product/service provided can be identified. The actions to be taken when a non-conformance to specifications is detected can be identified. The reasons for taking those actions can be explained.

Element 15.12B.2 Collect and summarise data**Criteria 15.12B.2.1**

Data recorded and interpreted accurately in accordance with standard operating procedures.

Assessor guide: observe that –

All data collected is accurately recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording data collected can be given. The possible trends that can be identified from the collected data can be identified. The actual trends indicated by given samples of data can be correctly identified.

Criteria 15.12B.2.2

Data is used to produce relevant statistical information eg: average and range or the production of charts such as tally, run or control charts.

Assessor guide: observe that –

Where appropriate, relevant statistical information is correctly calculated from the collected data. Where appropriate, tally, run and control charts are produced from the collected data.

Assessor guide: confirm that –

The reasons for collecting data can be given. The statistical information to be calculated can be identified. The use of statistics in interpreting production data can be explained. The functions of tally, run or control charts in representing production data can be given. The trends indicated by the statistical information calculated and/or the charts produced can be correctly identified. The action to be taken in response to any trends identified can be stated. The reasons for taking the action proposed can be explained.

Range statement

Standards are applicable to the supervision or maintenance of a quality improvement system either individually or in a team situation. The definition of customer is wide and applies to the next person or organisation receiving the product or service.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the supervision and maintenance of the application of quality procedures or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by an assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 15.15A A Examine trading practices

Band – Specialisation band A

Field – Quality

Unit Weight 5

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

12.1A Use comparison and basic measuring devices

16.2A Participate in formal interviews and negotiations

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

16.4A Perform internal/external customer service

Element 15.15A.1 Explain the requirements of Trade Measurement legislation relating to trading practices

Criteria 15.15A.1.1

Legislation requirements that apply to trading practices are explained.

Assessor guide: observe that –

Relevant sections of the legislation relating to trading practices are identified and explained.

Assessor guide: confirm that –

The term “trading practices” is defined. Relevant sections of legislation across a range of trading environments can be applied. The range of trading environments is understood and can be described.

Criteria 15.15A.1.2

Policy guidelines that apply to trading practices are explained.

Assessor guide: observe that –

Relevant organisational policy and procedures can be identified and applied in regard to trading practices.

Assessor guide: confirm that –

Relevant policy and procedures across a range of trading environments can be applied.

Element 15.15A.2 Inspect trading practices for compliance

Criteria 15.15A.2.1

Trading practice methods employed on premises are examined for compliance with legislative requirements

Assessor guide: observe that –

Methods utilised for advertising and the sale of goods employed on the premises are examined for compliance with legislative requirements The manner in which a measuring instrument is used on the premises is examined for compliance

Assessor guide: confirm that –

Trading practices relevant to a range of business types are identified

Criteria 15.15A.2.2

Incidents of non-compliance are identified and, where appropriate, activities are undertaken to prove the breach of legislation

Assessor guide: observe that –

Incidents of non-compliance in a range of trading environments can be identified Action to be undertaken is determined by the organisation's enforcement policy Sufficient and relevant evidence is gathered to prove a breach

Assessor guide: confirm that –

Processes for evidence collection are explained
Processes for evidence handling are explained

Criteria 15.15A.2.3

Results of inspection are documented

Assessor guide: observe that –

All results of the inspection are recorded accurately

Assessor guide: confirm that –

Any specific reporting procedures can be identified and explained

Element 15.15A.3 Finalise inspection and take appropriate action**Criteria 15.15A.3.1**

Trading practice information relevant to the inspection is communicated to the trader

Assessor guide: observe that –

The trader is advised of the results of the inspection The trader's enquiries and concerns are discussed Legislative requirements and obligations are explained to the trader where appropriate The trader is advised of reporting procedures and possible outcomes for any breaches detected The trader is provided with relevant information brochures

Assessor guide: confirm that –

The trader's concerns are responded to satisfactorily
The trader has been given relevant advice

Criteria 15.15A.3.2

Determine and apply approved procedures to remedy non-compliance

Assessor guide: observe that –

Notices are completed in accordance with organisational guidelines Follow-up activities are planned as required

Assessor guide: confirm that –

Wording of notices issued is accurate Legislative requirements and obligations for the issuing of notices are understood Organisation's policy guidelines for return visits are understood and can be explained

Criteria 15.15A.3.3

Complete inspection documentation in accordance with organisational procedures

Assessor guide: observe that –

All results of the inspection are recorded accurately in the organisation's information files All breach reports are completed in accordance with organisational guidelines Recommendations are clear and accurate

Assessor guide: confirm that –

Any specific reporting procedures can be identified and explained

Range statement

The range of variables provides information about the context in which the unit of competency is carried out. It allows for differences between States and Territories and the Commonwealth and between organisations and workplaces. It allows for different work requirements, work practices, and knowledge. The range of variables also provides a focus for assessment and relates to the unit as a whole.

Range Name	Description
Legislation and policies	Enabling legislation, organisational procedures and policies, workplace, health & safety, enforcement policies
Trading practices	Methods of sale of goods, advertising, use of measuring instrument, position of measuring instruments, misrepresentations, environmental factors, suitability of instrument, over pricing, incorrect measurement
Activities used to prove a breach of legislation	Trial purchases, observation/surveillance, photographs, seizure of documentations, articles, measuring instruments, testing the measuring instruments
Marketplace intelligence	Complaints, other state jurisdiction, organisational directives, product history, trader history, individual's observation

Evidence guide

Assessment context

This unit may be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge. Assessment is to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) is required.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the conduct of routine field inspections, inspecting pre-packed articles, investigating consumer complaints, using and maintaining equipment and standards, performing verification/certification or in-service inspection and the safety, quality, communication, materials handling, recording and reporting associated with examining trading practices, or other units requiring the exercise of the skills and knowledge covered by this unit.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted trade measurement techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

The unit requires integrated demonstration of all elements and their related performance criteria. Compliance with inspection procedures, audit procedures, test procedures and legislative requirements.

Assessment to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) required.

Unit MEM 15.16A A Inspect pre-packed articles

Band – Specialisation band A

Field – Quality

Unit Weight 8

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

12.1A Use comparison and basic measuring devices

16.2A Participate in formal interviews and negotiations

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

16.2A Participate in formal interviews and negotiations

Element 15.16A.1 Explain the requirements of Trade Measurement legislation relating to pre-packed articles

Criteria 15.16A.1.1

Legislative requirements that apply to pre-packed articles are explained.

Assessor guide: observe that –

Relevant sections of the legislation relating to pre-packed articles can be identified and explained. Procedures for measurement determination are adhered to.

Assessor guide: confirm that –

The term “pre-packed articles” is defined. Relevant sections of legislation across a range of pre-packed articles can be applied. The range of packing types can be described.

Criteria 15.16A.1.2

Approved markings as they apply to all pre-packed articles offered for sale are described.

Assessor guide: observe that –

Assessor guide: confirm that –

Quantity statement or measurement marking form, size and position are explained. Pre-packed articles exempted from the requirements of legislation are outlined.

Element 15.16A.2 Inspect pre-packed articles for compliance with marking requirements

Criteria 15.16A.2.1

Pre-packed articles are examined for the marking of quantity statements and unit pricing in accordance with legislative requirements.

Assessor guide: observe that –

Quantity and unit pricing statements, size, position and form are assessed correctly for compliance with legislation.

Assessor guide: confirm that –

All symbols for units of measurement can be described accurately. Qualifying statements are used appropriately.

Criteria 15.16A.2.2

Pre-packed articles are examined for the marking of packer identification.

Assessor guide: observe that –

Marking of packer identification, size, position and form are compared correctly against legislation.

Assessor guide: confirm that –

Pre-packed articles exempted from the requirements of packer identification are outlined.

Criteria 15.16A.2.3

Results of examination are documented for further action.

Assessor guide: observe that –

Any marking non-compliance is recorded accurately for further action when finalising the inspection.

Assessor guide: confirm that –

Sufficient details are obtained to identify the article when it has been packed elsewhere.

Element 15.16A.3 Measure pre-packed articles**Criteria 15.16A.3.1**

Articles are selected for check-measuring in accordance with marketplace intelligence, legislative requirements and organisational procedures.

Assessor guide: observe that –

Articles to be check-measured are selected in accordance with organisational guidelines.

Assessor guide: confirm that –

Marketplace intelligence, legislative requirements and organisational procedures are used in relation to selecting pre-packed articles. The impact of environmental factors on pre-packed articles can be explained.

Criteria 15.16A.3.2

Product handling and disposal requirements are assessed and complied with in accordance with Workplace, Health and Safety requirements, environmental considerations and public sector auditor's requirements.

Assessor guide: observe that –

Products are handled in a safe manner. Disposal of products is completed in a safe manner. Consideration is given to any impact on the environment. Articles seized or purchased with public monies, are disposed of in accordance with auditor's instructions or organisational guidelines.

Assessor guide: confirm that –

Use of protective clothing and equipment is identified and understood. Checking of hazardous product data sheet can be undertaken.

Criteria 15.16A.3.3

Specialised equipment and measuring devices are selected in accordance with organisational procedures.

Assessor guide: observe that –

The most appropriate equipment and measuring devices are selected for the measurement of the pre-packed articles.

Assessor guide: confirm that –

The organisation's policy and procedures can be understood and explained. The accuracy and suitability of the measuring devices used to check pre-packed articles can be described.

Criteria 15.16A.3.4

Articles are check-measured in accordance with organisation's procedures to determine compliance with legislation.

Assessor guide: observe that –

The most appropriate methods for determining the measurement of pre-packed articles are used. The number of articles to check-measure are selected in accordance with legislative requirements.

Assessor guide: confirm that –

Procedures for determining the measurement method of pre-packed articles are used in accordance with organisational guidelines and best practice.

Criteria 15.16A.3.5

Results of check-measurements are documented for further action.

Assessor guide: observe that –

The check-measurement results are documented in accordance with organisational guidelines. Measurement non-compliance is recorded for further action.

Assessor guide: confirm that –

Sufficient details of the article are obtained, including samples where appropriate. Methods of determining the tare weight of packages can be described.

Element 15.16A.4 Finalise inspection and take appropriate action**Criteria 15.16A.4.1**

Trading practice information relevant to the inspection is communicated to the trader.

Assessor guide: observe that –

The trader is advised of the results of the inspection. The trader's enquiries and concerns are discussed. Legislative requirements and obligations are explained to the trader where appropriate. The trader is advised of reporting procedures and possible outcomes for any breaches detected. The trader is provided with relevant information brochures.

Assessor guide: confirm that –

The trader's concerns are responded to satisfactorily. The trader has been given relevant advice.

Criteria 15.16A.4.2

Determine and apply approved procedures to remedy non-compliance.

Assessor guide: observe that –

Notices are completed in accordance with organisational guidelines. Follow-up activities are planned as required.

Assessor guide: confirm that –

Wording of notices issued is accurate. Legislative requirements and obligations for the issuing of notices are understood. Organisation's guidelines for return visits are understood and can be explained.

Criteria 15.16A.4.3

Complete inspection documentation in accordance with organisational procedures.

Assessor guide: observe that –

Results of the inspection are recorded accurately in organisation's information files. Breach reports are completed in accordance with organisational guidelines. Recommendations are clear and accurate.

Assessor guide: confirm that –

Any specific reporting procedures can be identified and explained.

Range statement

The range of variables provides information about the context in which the unit of competency is carried out. It allows for differences between States and Territories and the Commonwealth and between organisations and workplaces. It allows for different work requirements, work practices, and knowledge. The range of variables also provides a focus for assessment and relates to the unit as a whole.

Range Name	Description
Legislation and policies	Enabling legislation, organisational policies and procedures, workplace, health and safety, environmental legislation, enforcement policies, auditor's instructions
Marketplace intelligence	Complaints, other state jurisdiction, organisational directives, product history, trader history, individual's observation
Specialist equipment	Reference standards and test equipment, safety equipment, product handling equipment, measuring equipment
Incorrect packages	Incorrect measurement, over pricing, incorrect marking of packages
Documentation	Organisational forms, notices, field books, product handling sheets, evaluation form or report
Workplace, health & safety considerations	Storage of test equipment, site/premise conditions, handling of dangerous materials, safety clothing, manual handling techniques, product disposal, transportation of test equipment
Reference material	International handbook, Australian standards, organisational policies and procedures, AQS guidelines
Environmental considerations	Disposal of hazardous materials, weather conditions, storage methods and conditions

Evidence guide

Assessment context

This unit may be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge. Assessment is to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) required

Critical aspects

This unit could be assessed in conjunction with any other units addressing the conduct of routine field inspections, examining trading practices, investigating consumer complaints, using and maintaining equipment and standards, performing verification/certification or in-service inspection and the safety, quality, communication, materials handling, recording and reporting associated with inspecting pre-packed articles, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

The unit requires integrated demonstration of all elements and their related performance criteria. Compliance with inspection procedures, audit procedures, test procedures and legislative requirements is required. Assessment to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) is required.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted trade measurement techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.17B A Use and maintain reference standards

Band – Specialisation band B

Field – Quality

Unit Weight 3

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

12.4A Precision electrical/electronic measurement

18.2A Use power tools/hand held operations

11.11A Manual handling

12.5B Calibrating measuring equipment

12.3A Precision mechanical measurement

18.1A Use hand tools

Element 15.17B.1 Identify the appropriate class of reference standard suitable to verify a range of trade measuring instruments

Criteria 15.17B.1.1

Tolerances required for reference standards are researched in relation to testing a range of trade measuring instruments.

Assessor guide: observe that –

Correct reference manuals are accessed to gain appropriate information concerning tolerances for reference standards.

Assessor guide: confirm that –

Legal metrology is defined. The hierarchy of reference standards in relation to legal metrology is explained. Australian legal units of measurement used for trade are described. The organisations involved in legal metrology in Australia can be identified.

Criteria 15.17B.1.2

The correct classes of reference standards are selected to test a range of trade measuring instruments.

Assessor guide: observe that –

Correct class of reference standard is identified and matched with the appropriate trade measuring instrument.

Assessor guide: confirm that –

Application of different classes of reference standards used to test measuring instruments is explained.

Element 15.17B.2 Use reference standards and test equipment in a safe and metrologically sound manner

Criteria 15.17B.2.1

Standards Laboratory purpose and function are explained.

Assessor guide: observe that –

Assessor guide: confirm that –

Major function and purpose of the Standards Laboratory can be outlined.

Criteria 15.17B.2.2

An operational assessment on reference standards and test equipment is performed prior to use.

Assessor guide: observe that –

Operational assessment on reference standards and test equipment is completed in accordance with organisational procedures.

Assessor guide: confirm that –

The actions to be taken if reference standards and test equipment are found to be defective can be described.

Criteria 15.17B.2.3

Documented operating procedures for reference standards and test equipment are accessed and followed.

Assessor guide: observe that –

Documented operating procedures for reference standards and test equipment are accessed. Reference standards and test equipment is operated correctly during instrument tests.

Assessor guide: confirm that –

The actions to be taken if reference standards and test equipment are found to be defective can be described.

Criteria 15.17B.2.4

Safety requirements for the use of reference standards and test equipment within the work environment are demonstrated.

Assessor guide: observe that –

Workplace, health and safety requirements relating to reference standards and test equipment are identified and followed.

Assessor guide: confirm that –

Personal responsibility for workplace, health and safety requirements can be described.

Element 15.17B.3 Store and transport reference standards and test equipment to maintain their integrity**Criteria 15.17B.3.1**

Specialised equipment and reference standards are stored in accordance with organisational procedures.

Assessor guide: observe that –

Test equipment and reference standards storage specifications and procedures are researched prior to storage. Storage specification and procedures are followed.

Assessor guide: confirm that –

Variations from storage specifications and procedures requiring appropriate approval can be explained.

Criteria 15.17B.3.2

Specialised equipment and reference standards are transported in accordance with organisational procedures.

Assessor guide: observe that –

Specialised equipment, reference standards and transport specifications and procedures are researched prior to transportation. Transport specifications and procedures are followed.

Assessor guide: confirm that –

Variations from transport specifications and procedures requiring appropriate approval can be explained.

Element 15.17B.4 Perform required maintenance of reference standards and test equipment**Criteria 15.17B.4.1**

Maintenance requirements of reference standards and test equipment are identified.

Assessor guide: observe that –

Maintenance requirements for reference standards and test equipment are researched.

Assessor guide: confirm that –

Maintenance required for test equipment where manufacturer's requirements are unavailable, can be explained.

Criteria 15.17B.4.2

Regular maintenance of reference standards and test equipment is undertaken in accordance with maintenance register.

Assessor guide: observe that –

Minor calibration/maintenance is completed according to manufacturer's specification. Maintenance register is maintained as required.

Assessor guide: confirm that –

A range of maintenance and calibration procedures can be described.

Criteria 15.17B.4.3

Defective reference standards and test equipment are identified and reported for repair.

Assessor guide: observe that –

Malfunction of or damage to reference standards or test equipment is identified and reported for repair.

Assessor guide: confirm that –

Procedure for reporting faults can be outlined.

Element 15.17B.5 Interpret documentation relating to the use of maintenance of reference standards and test equipment**Criteria 15.17B.5.1**

Information contained in the Certificate of Verification is checked and compared with reference standards and test equipment being used.

Assessor guide: observe that –

The class of a reference standard and its duration of validity are identified from a Certificate of Verification. Certificate documentation is used to prove legal traceability.

Assessor guide: confirm that –

Action to be taken where legal traceability can not be confirmed, can be described. The purpose of Certificates of Verification issued under the national legislation is explained.

Criteria 15.17B.5.2

Reference standards are used in accordance with documented instructions and certificates.

Assessor guide: observe that –

The interpretation of Certificates of Verification in relation to the use of reference standards is applied.

Assessor guide: confirm that –

Graphs and tables within Certificates are understood and can be used accurately.

Range statement

The range of variables provides information about the context in which the unit of competency is carried out. It allows for differences between States and Territories and the Commonwealth and between organisations and workplaces. It allows for different work requirements, work practices, and knowledge. The range of variables also provides a focus for assessment and relates to the unit as a whole.

Range Name	Description
Legislation and policies	Enabling legislation, organisational policies and procedures, workplace, health and safety, environmental legislation
Reference material	Australian standards, verifying authorities handbook, manufacturers operating manuals, organisational procedures, quality assured manual
Specialists equipment	Reference standards, measuring devices, safety equipment
Operating procedures	Manufacturers specifications, industry guidelines, Australian Standards, legislation, organisational procedures and guidelines
Reference standards	Mass, volume, density, area, length, master meters, temperature
Maintenance of test equipment and reference standards	Cleaning and painting, electrical safety testing and tagging, continuity and pressure testing, manufacturers service requirements
Workplace Health & Safety Considerations	Storage and transportation of test equipment, handling of test equipment, handling of hazardous materials, safety clothing, manual handling techniques, site/premises conditions

Evidence guide

Assessment context

This unit may be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge. Assessment is to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) required

Critical aspects

This unit could be assessed in conjunction with any other units addressing the skills and knowledge covered by this unit.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

accordance with standard operating procedures; - perform all tasks to specification; - use

The unit requires integrated demonstration of all elements and their related performance criteria. Compliance with inspection procedures, audit procedures, test procedures and legislative requirements.

Assessment to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) is required.

and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in

accepted trade measurement techniques, practices, processes and workplace procedures.

Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.18B A Investigate consumer complaints

Band – Specialisation band B

Field – Quality

Unit Weight 6

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

12.4A Precision electrical/electronic measurement

15.5A Perform inspection (advanced)

15.17B Use and maintain reference standards

18.1A Use hand tools

11.11A Manual handling

12.5B Calibrating measuring equipment

15.15A Examine trading practices

16.2A Participate in formal interviews and negotiations

18.2A Use power tools/hand held operations

12.3A Precision mechanical measurement

15.4A Perform inspection (basic)

15.16A Inspect pre-packed articles

16.4A Perform internal/external customer service

Element 15.18B.1 Receive and document the complaint

Criteria 15.18B.1.1

Allegations are recorded in accordance with organisational procedures.

Assessor guide: observe that –

All relevant information is sought from complainant. Complaint details are recorded accurately. Interpersonal communication and listening skills are used while communicating with the complainant.

Assessor guide: confirm that –

The different methods of complaint lodgements can be described.

Criteria 15.18B.1.2

Complaints are screened to ensure that they are relevant to trade measurement and are assessed to determine priority.

Assessor guide: observe that –

Complaint information is assessed for its relevance to trade measurement. Allocation of priority and planning of a number of complaints and other work activities is undertaken.

Assessor guide: confirm that –

Organisational policy guidelines concerning complaints can be explained.

Criteria 15.18B.1.3

Complainant is advised of investigative process and timeframes for feedback.

Assessor guide: observe that –

Information is given to complainant in regards to the investigative process and appropriate timelines for feedback.

Assessor guide: confirm that –

Organisational guidelines in regard to timelines are described.

Element 15.18B.2 Plan the investigation**Criteria 15.18B.2.1**

The information received is assessed for possible breaches in relation to the legislation.

Assessor guide: observe that –

Potential breaches are identified from available information.

Assessor guide: confirm that –

Relevant legislation can be researched and applied to the complaint investigation.

Criteria 15.18B.2.2

Trader history and complaint precedence is researched.

Assessor guide: observe that –

Organisational information systems are accessed and relevant information obtained.

Assessor guide: confirm that –

The organisation's information database can be accessed to research complaint precedence.

Criteria 15.18B.2.3

Suitable equipment and personnel are organised to undertake the investigation.

Assessor guide: observe that –

Suitable equipment and personnel are determined and organised. Personnel are briefed concerning the requirements of the investigation.

Assessor guide: confirm that –

The equipment required to investigate a range of complaints is described. The organisation's guidelines for the deployment of personnel are explained.

Criteria 15.18B.2.4

Enforcement policies and procedures are researched to ascertain appropriate action to be implemented.

Assessor guide: observe that –

The organisation's enforcement policies and procedures are accessed and appropriate course of action is established.

Assessor guide: confirm that –

The range of possible investigation activities available can be described.

Element 15.18B.3 Investigate the complaint**Criteria 15.18B.3.1**

Preliminary investigation to gather prima facie evidence is conducted in accordance with organisational procedures.

Assessor guide: observe that –

Surveillance of trading premises is conducted. Information is gathered to verify the complainant's allegations.

Assessor guide: confirm that –

Elements of offence can be identified. Available surveillance methods for a range of complaints and premises can be explained.

Criteria 15.18B.3.2

Evidence is gathered to substantiate a breach in accordance with investigative practices.

Assessor guide: observe that –

Evidence is gathered to prove all elements of a breach. Appropriate investigative techniques are used. The integrity of evidence is maintained.

Assessor guide: confirm that –

The evidence required to prove a range of breaches of legislation can be described. A range of investigation methods is outlined. The required procedures for the handling of evidence to maintain its integrity can be explained.

Criteria 15.18B.3.3

The relevant components of a routine field inspection are conducted in accordance with organisational procedures.

Assessor guide: observe that –

All appropriate aspects of a routine field inspection are undertaken.

Assessor guide: confirm that –

The reasons for selecting relevant components of a routine field inspection are understood.

Element 15.18B.4 Finalise the complaint investigation**Criteria 15.18B.4.1**

Information relevant to the inspection is communicated to the trader.

Assessor guide: observe that –

The trader is advised of the results of the inspection. The trader's enquiries and concerns are discussed. Legislative requirements and obligations are explained to the trader where appropriate. The trader is advised of reporting procedures and possible outcomes for any breaches detected. The trader is provided with relevant information brochures.

Assessor guide: confirm that –

Traders' concerns are responded to satisfactorily.

Criteria 15.18B.4.2

Determine and apply approved procedures to remedy non-compliance.

Assessor guide: observe that –

Notices are completed in accordance with organisational guidelines. Follow-up activities are planned as required.

Assessor guide: confirm that –

Wording of notices issued is accurate. Legislative requirements and obligations for the issuing of notices can be explained. Organisation's policy guidelines for return visits can be explained.

Criteria 15.18B.4.3

Complete inspection documentation in accordance with organisational procedures.

Assessor guide: observe that –

All results of the inspection are recorded accurately in organisation's information files. Breach reports are completed in accordance with organisational guidelines
Recommendations are clear and accurate.

Assessor guide: confirm that –

Specific reporting procedures can be identified and explained.

Element 15.18B.5 Complete complaint file documentation**Criteria 15.18B.5.1**

Complainant is advised of outcome of the investigation.

Assessor guide: observe that –

Outcomes of the investigation are communicated to the complainant within specified organisational timeframes.
Interpersonal communication and listening skills are used while communicating with the complainant.

Assessor guide: confirm that –

Complaint outcome classifications are correctly used and understood.

Criteria 15.18B.5.2

Complaint documentation is completed in accordance with organisational guidelines.

Assessor guide: observe that –

All activities including the results of the investigation are recorded accurately in the complaint file.

Assessor guide: confirm that –

Complaint documentation procedures can be explained.
Specific reporting procedures can be explained.

Range statement

The range of variables provides information about the context in which the unit of competency is carried out. It allows for differences between States and Territories and the Commonwealth and between organisations and workplaces. It allows for different work requirements, work practices, and knowledge. The range of variables also provides a focus for assessment and relates to the unit as a whole.

Range Name	Description
Legislation and policies	Enabling legislation, organisational policies and procedures, workplace, health and safety, environmental legislation, enforcement policies
Documentation	Organisational forms, notices, field books, product handling sheets, educational material/brochures
Reference material	Uniform test procedures, International handbook, Australian standards, Investigation method guidelines
Environmental considerations	Disposal of hazardous materials, weather conditions, storage methods and conditions
Complaints may include reference to:	Measuring instruments, pre-packed articles, trading practices, servicing licensees, public weighbridge licensees, fair trading matters relating to trade measurement
Organisational procedures covering preliminary investigation	Trial purchase, surveillance, witness statements, verification/in-service inspection procedures, pre-packed articles inspection procedures, trading practices inspection procedures, routine field inspection procedures
Sources of information	Business/company details, organisational database, searches from other government agencies
Specialists equipment	Reference standards, test equipment, safety equipment
Workplace, Health and Safety Considerations	Storage and transportation of test equipment, site/premises conditions, disposal of dangerous materials, storage of seized equipment/products, specific safety equipment and clothing, manual handling techniques, product handling equipment

Evidence guide

Assessment context

This unit may be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge. Assessment is to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) required

Critical aspects

This unit could be assessed in conjunction with any other units addressing the conduct of routine field inspections, examining trading practices, inspecting pre-packed articles, using and maintaining equipment and standards, performing verification/certification or in-service inspection and the safety, quality, communication, materials handling, recording and reporting associated with investigating consumer complaints, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

The unit requires integrated demonstration of all elements and their related performance criteria. Compliance with inspection procedures, audit procedures, test procedures and legislative requirements. Assessment to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) is required.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted trade measurement techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.19B A Conduct a field inspection

Band – Specialisation band B

Field – Quality

Unit Weight 12

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
 11.11A Manual handling
 12.5B Calibrating measuring equipment
 15.5A Perform inspection (advanced)
 15.17B Use and maintain reference standards
 16.4A Perform internal/external customer service

9.1A Draw and interpret sketch
 12.3A Precision mechanical measurement
 13.3A Work safely with industrial chemicals and materials
 15.15A Examine trading practices
 15.18B Investigate consumer complaints
 18.1A Use hand tools

9.2A Interpret technical drawing
 12.4A Precision electrical/electronic measurement
 15.4A Perform inspection (basic)
 15.16A Inspect pre-packed articles
 16.2A Participate in formal interviews and negotiations
 18.2A Use power tools/hand held operations

Element 15.19B.1 Develop a work plan to conduct field inspections

Criteria 15.19B.1.1

Traders are identified for inspection in accordance with organisational priorities.

Assessor guide: observe that –

The organisation's information system is accessed correctly and interrogated for relevant trader information. Information is collected in accordance with the organisation's inspection priorities. Trading environments and instruments to be tested are identified and selected.

Assessor guide: confirm that –

The organisation's inspection priorities are understood and applied.

Criteria 15.19B.1.2

Routine field inspections are scheduled to compliment other inspection activities whilst maximising organisational efficiencies and effectiveness.

Assessor guide: observe that –

Appropriate strategies are used to schedule inspection activities. Identification of priorities and their integration into routine field inspections are undertaken.

Assessor guide: confirm that –

A range of options can be developed for dealing with conflicting priorities.

Criteria 15.19B.1.3

Appropriate equipment is identified and accessed.

Assessor guide: observe that –

Equipment required to undertake scheduled work activities identified. The test equipment is accessed correctly.

Assessor guide: confirm that –

A range of equipment used for various tasks can be identified.

Criteria 15.19B.1.4

Specific inspection arrangements are made with the trader.

Assessor guide: observe that –

Arrangements for the provision of test equipment are negotiated with the trader. Awareness of the operational needs of the trader is demonstrated.

Assessor guide: confirm that –

Arrangements are made only when necessary. Alternative contact arrangements are explained.

Criteria 15.19B.1.5

Relevant reference and/or technical information and trader history is researched.

Assessor guide: observe that –

The criteria for selection of instruments for test such as previous individual instrument history, environmental factors, and performance problems of various models of instruments are used.

Assessor guide: confirm that –

A range of environmental factors that impinge on measuring instruments is explained.

Element 15.19B.2 Maintain test equipment during a field inspection**Criteria 15.19B.2.1**

Test equipment is transported in accordance with manufacturer's specifications and organisational procedures.

Assessor guide: observe that –

Test equipment transportation specifications and procedures are accessed and complied with prior to transportation.

Assessor guide: confirm that –

Variations from transport specifications and procedures requiring appropriate approval can be explained.

Criteria 15.19B.2.2

Test equipment is operated within manufacturers' specifications and organisational procedures.

Assessor guide: observe that –

Test equipment operating specifications and procedures are accessed and complied with.

Assessor guide: confirm that –

Variations from operating specifications and procedures requiring appropriate approval can be explained.

Criteria 15.19B.2.3

Failures and repairs of test equipment are reported in accordance with organisational procedures.

Assessor guide: observe that –

Minor calibration/repairs are completed according to manufacturer's specifications. Faults are recognised and reported in accordance with organisational procedures.

Assessor guide: confirm that –

Types of failure that might occur and possible remedies in a range of test equipment are described. Preventative work practices to maintain equipment in good working order is described. Preventative maintenance of equipment is described.

Element 15.19B.3 Conduct initial on-site assessment of the trading premises

Criteria 15.19B.3.1

Surveillance of the trading premises is undertaken to evaluate the trading practices in use.

Assessor guide: observe that –

Surveillance of trading premises is conducted Information gathered during surveillance is evaluated accurately to identify non-compliance.

Assessor guide: confirm that –

Methods of surveillance that can be undertaken are described.

Criteria 15.19B.3.2

Officer establishes their identity with the trader or responsible person and explains the purpose of the inspection.

Assessor guide: observe that –

The organisation's identification procedure is used (e.g., ID card). The purpose of the inspection is explained and clarified with the trader.

Assessor guide: confirm that –

Legislative requirements for the inspection are explained.

Criteria 15.19B.3.3

Local workplace, health and safety issues relevant to the premises are identified and appropriate action is taken to comply.

Assessor guide: observe that –

Workplace, health and safety information specific to the trading environment is obtained from the trader. All specific workplace, health and safety requirements are complied with.

Assessor guide: confirm that –

Personal responsibility for workplace, health and safety is understood. Workplace, health and safety issues relating to a range of occupational and business environments can be identified.

Criteria 15.19B.3.4

Measuring instruments used for trade are identified and the inspection planned with minimal disruption to the trader.

Assessor guide: observe that –

Considerations concerning the operational efficiency of the trader are made in determining the inspection strategy.

Assessor guide: confirm that –

Operational efficiency of the trader does not compromise the inspection effectiveness. A range of contingencies can be developed to facilitate minimal disruption to the trader.

Criteria 15.19B.3.5

Locations for product return or disposal are identified for later use.

Assessor guide: observe that –

Advice is sought from the trader concerning the method of product return/disposal. Inspection and confirmation of the correct return/disposal point are undertaken.

Assessor guide: confirm that –

Action that would be taken if incorrect disposal occurs can be described.

Element 15.19B.4 Inspect instruments and/or trading practices

Criteria 15.19B.4.1

Measuring instruments are selected for inspection in accordance with organisational guidelines.

Assessor guide: observe that –

Organisational information system is interrogated accurately for individual instrument history at trader's premises. Performance trends of particular models of instruments are considered.

Assessor guide: confirm that –

The organisation's information system can be used to access information such as certification and inspection records. Research methods used to determine instrument performance trends are described.

Criteria 15.19B.4.2

Test equipment is used in accordance with organisational procedures taking into consideration workplace health and safety factors.

Assessor guide: observe that –

Organisational procedures are complied with in the use of test equipment. All relevant workplace, health and safety requirements are implemented.

Assessor guide: confirm that –

Workplace, health and safety requirements can be described for a range of test procedures and working environments.

Criteria 15.19B.4.3

Relevant test procedures for verification and in-service inspection are conducted in accordance with organisational procedures.

Assessor guide: observe that –

Relevant test procedures are followed. Data plate information and instrument errors are recorded in accordance with organisation's procedures. Environmental and operational factors adversely influencing the accuracy of instruments are identified and action taken to remedy their effect.

Assessor guide: confirm that –

A range of environmental and operational factors that may adversely influence the accuracy of instruments and action required to remedy their effect can be identified.

Criteria 15.19B.4.4

Inspection of pre-packed articles is conducted in accordance with organisational procedures.

Assessor guide: observe that –

Pre-packed articles are identified for inspection. Packaging information and check-measurement results are recorded in accordance with organisation's guidelines. Incorrect packages are identified and action taken to remedy their non-compliance.

Assessor guide: confirm that –

Pre-packed articles legislation can be applied across a range of trading environments. Organisational guidelines for the selection of pre-packed articles for inspection can be explained.

Criteria 15.19B.4.5

Trading practices are identified and action taken to remedy any non-compliance.

Assessor guide: observe that –

Sales transactions conducted on the premises are monitored. Advertising used on or outside the premises is assessed. Incorrect trading practices are identified and action taken to remedy non-compliance.

Assessor guide: confirm that –

A range of non-compliance issues for trading practices can be described.

Element 15.19B.5 Undertake an investigation where a breach is detected**Criteria 15.19B.5.1**

Evidence relating to the breach is gathered.

Assessor guide: observe that –

Sufficient evidence can be gathered to prove a breach. All elements of an offence are considered and proved.

Assessor guide: confirm that –

Strategies used to prove breaches of trading practices including trial purchases, can be described.

Criteria 15.19B.5.2

Trader and witnesses are interviewed for supporting evidence.

Assessor guide: observe that –

Interview questions are prepared in a logical manner to cover all elements of an offence. Appropriate recording methods are used during the interviews and the taking of statements. Assertive communication and active listening skills are used to maintain control of the interview. Strategies for managing and reducing conflict are used. Awareness of cultural and gender issues are demonstrated.

Assessor guide: confirm that –

The format and procedure for conducting an interview in accordance with organisational guidelines can be explained. The principles of natural justice, requirements of appropriate legislation, judges or court rules, the organisation's code of conduct are understood and applied. Assertive communication and active listening skills can be applied in a range of interviewing situations. Strategies for handling conflict can be described. Sensitivity to cultural and gender issues that influence the communication/interviewing process is explained.

Criteria 15.19B.5.3

Chain of evidence is maintained.

Assessor guide: observe that –

Evidence can be identified/labelled and/or secured as required by organisational procedures. Possession of the evidence is monitored to maintain its integrity.

Assessor guide: confirm that –

Maintenance of evidence integrity can be explained. Recording and secure storage of evidence in accordance with organisational procedures can be explained.

Element 15.19B.6 Complete documentation for inspection**Criteria 15.19B.6.1**

Instrument and trader information is recorded accurately for the organisation's information system.

Assessor guide: observe that –

Ownership details and instrument information is recorded accurately.

Assessor guide: confirm that –

Types of ownership entities for legal responsibilities can be described.

Criteria 15.19B.6.2

Inspection documentation is completed in accordance with organisational procedures.

Assessor guide: observe that –

All inspection data is recorded accurately, clearly and concisely. Recording of information is consistent with organisational procedures.

Assessor guide: confirm that –

Appropriate forms can be identified and used for inspection outcomes including non-compliance and rejection notices, instrument performance records, fees and trader's files.

Element 15.19B.7 Advise trader of inspection outcomes**Criteria 15.19B.7.1**

The trader is advised of instrument test, pre-packed article and trading practice results where appropriate.

Assessor guide: observe that –

Relevant information is communicated to the trader. Information is provided in a timely manner. Assertive communication and active listening skills are used to explain information to the trader. Strategies for managing and reducing conflict are used. Awareness of cultural and gender issues are demonstrated.

Assessor guide: confirm that –

Suitable environment to communicate inspection outcomes with trader can be identified. Assertive communication and active listening skills can be applied in a range of trader environments. Strategies for handling conflict situations can be described. Sensitivity to cultural and gender issues that influence the communication process is explained.

Criteria 15.19B.7.2

The trader's enquiries and concerns are discussed.

Assessor guide: observe that –

Accurate product knowledge is presented to the trader. Questions requiring clarification are researched for further advice to the trader. Assertive communication and active listening skills are used to explain information to the trader. Strategies for managing and reducing conflict are used. Awareness of cultural and gender issues are demonstrated.

Assessor guide: confirm that –

Verbal and non-verbal communication strategies can be identified to ensure comprehension of information being discussed.

Criteria 15.19B.7.3

Legislative requirements, obligations and possible corrective solutions are explained to the trader where appropriate.

Assessor guide: observe that –

Discussion of information between the trader and inspector is clear and accurate.

Assessor guide: confirm that –

Corrective solutions for a range of scenarios can be identified. Legislative requirements for a range of trading environments are explained.

Criteria 15.19B.7.4

The trader is advised of reporting procedures and possible outcomes for any detected breaches.

Assessor guide: observe that –

Discussion of reporting procedures and outcome options in relation to detected breaches is clear and accurate.

Assessor guide: confirm that –

Reporting processes and outcomes can be outlined in accordance with organisational procedures. Accurate interpretation of enforcement guidelines can be explained.

Criteria 15.19B.7.5

Plan follow-up activities if required.

Assessor guide: observe that –

The need for follow-up activities is identified Follow-up activities are planned.

Assessor guide: confirm that –

Methods for conducting a follow-up activity can be explained.

Range statement

The range of variables provides information about the context in which the unit of competency is carried out. It allows for differences between States and Territories and the Commonwealth and between organisations and workplaces. It allows for different work requirements, work practices, and knowledge. The range of variables also provides a focus for assessment and relates to the unit as a whole.

Range Name	Description
Legislation and policies	Enabling legislation, uniform test procedures, organisational policies and procedures and policies, workplace, health and safety and enforcement policies
Specialist equipment	Specific test equipment, reference standards, safety equipment, product handling equipment
Incorrect packages	May include short measure, over pricing, incorrect marking of packages
Trading practices	May include advertising, over the counter sales, correct use of measuring instruments, method of sale of goods, positioning of instruments, environmental factors, suitability of instrument, over pricing, incorrect measurement
Documentation	May include organisational forms, notices, field books, evaluation form or report, fees, servicing licensee forms, educational material/brochures
Information systems	May include organisation's databases, business/company details
Workplace, health & safety considerations	May include storage of test equipment, site/premises conditions, disposal of dangerous materials, storage of seized equipment, specific safety equipment and clothing

Unit MEM 15.20B B Perform verification/certification or in-service inspection

Band – Specialisation band B

Field – Quality

Unit Weight 12

This unit is designed for those performing trade measurement inspection/certification activities in public or private enterprises. The unit covers the competency required

to test a range of measuring instruments used for trade.

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

11.11A Manual handling

12.5B Calibrating measuring equipment

16.2A Participate in formal interviews and negotiations

9.1A Draw and interpret sketch

12.3A Precision mechanical measurement

13.3A Work safely with industrial chemicals and materials

18.1A Use hand tools

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

15.17B Use and maintain reference standards

18.2A Use power tools/hand held operations

Element 15.20B.1 Describe the design and application of basic components in trade measuring instruments

Criteria 15.20B.1.1

The fundamental operating features for a range of measuring instruments are identified

Assessor guide: observe that –

Operating features of instruments are correctly identified and used

Assessor guide: confirm that –

The major components and functions of an instrument can be explained

Criteria 15.20B.1.2

The purpose of major components within the range of measuring instruments is described

Assessor guide: observe that –

Components are correctly identified and located on an instrument

Assessor guide: confirm that –

The purpose of major components and functions of an instrument can be explained

Element 15.20B.2 Determine the type of inspection required for a range of measuring instruments

Criteria 15.20B.2.1

Instrument is assessed to determine whether a verification/certification or in-service tolerance is to be applied for inspection

Assessor guide: observe that –

The instrument is examined for existing verification/certification marks

Assessor guide: confirm that –

Differences in the application of tolerances being applied are explained

Criteria 15.20B.2.2

The processes required for both the verification/certification and in-service of a range of measuring instruments are explained

Assessor guide: observe that –

Process variations between verification/ certification and in-service inspection are identified

Assessor guide: confirm that –

Process variations between verification/ certification and in-service inspection are explained

Criteria 15.20B.2.3

Appropriate tolerances are identified for the determined inspection

Assessor guide: observe that –

Appropriate tolerances are applied to the measuring instruments being inspected

Assessor guide: confirm that –

Appropriate tolerances are explained for a range of measuring instruments

Element 15.20B.3 Perform inspection of measuring instruments to determine compliance**Criteria 15.20B.3.1**

The operating environment of the instrument is analysed to determine its impact on the instrument

Assessor guide: observe that –

Environmental factors are identified for the instrument being tested

Assessor guide: confirm that –

Environmental factors that may not result in an instrument rejection but other remedial actions are identified

Criteria 15.20B.3.2

Sources of any possible operational error in the use of measuring instruments/systems are identified

Assessor guide: observe that –

Identification of operational errors relevant to the type of instrument being tested is demonstrated

Assessor guide: confirm that –

Criteria 15.20B.3.3

Specialised equipment is selected and used in the prescribed manner for the inspection

Assessor guide: observe that –

Suitable test equipment is selected and correct use of the test equipment is demonstrated

Assessor guide: confirm that –

Specialised equipment that may be required from other organisations are identified

Criteria 15.20B.3.4

Conduct inspection of measuring instrument in accordance with appropriate test procedures and workplace, health and safety guidelines

Assessor guide: observe that –

Measuring instruments are tested in accordance with the appropriate test procedures Workplace, health and safety issues are identified and appropriate action taken

Assessor guide: confirm that –

The action to be taken where a conflict occurs between uniform test procedures and those test procedures contained in Certificates of Approval can be explained

Element 15.20B.4 Finalise inspection and take appropriate action**Criteria 15.20B.4.1**

Determine and implement the appropriate action to be undertaken

Assessor guide: observe that –

Where non-compliance is identified, existing verification/certification marks are removed and appropriate notices and instructions are provided to the trader Advice for resolving detected problems is provided to the trader

Assessor guide: confirm that –

Removal of verification/certification marks is impractical on some instruments and the appropriate action to be taken in these circumstances is explained

Criteria 15.20B.4.2

Performance trends of particular models of measuring instruments are identified and reported

Assessor guide: observe that –

Performance information can be identified and a technical report prepared

Assessor guide: confirm that –

Criteria 15.20B.4.3

The information is recorded in the organisation's information system

Assessor guide: observe that –

The organisation's information files are completed

Assessor guide: confirm that –

Methods to monitor performance trends can be explained

Range statement

The range of variables provides information about the context in which the unit of competency is carried out. It allows for differences between States and Territories and the Commonwealth and between organisations and workplaces. It allows for different work requirements, work practices, and knowledge. The range of variables also provides a focus for assessment and relates to the unit as a whole. The following measuring instruments are indicative of the level, complexity and range of instruments applicable to this unit: simple measuring instruments and auxiliary devices, alcohol measuring instruments, fuel dispensers - retail, bulk flowmeters, miscellaneous measuring instruments, weighing instruments less than 100kg, high-capacity measuring instruments, vehicle tanks, milk tanks. Where work requires measuring instruments of a lower level of complexity and range, and lower scope relating to uniform test procedures, reference material etc. Unit 15.4A (perform inspection (basic)) or Unit 15.5A (Perform inspection (advanced)) should

Range Name**Description**

Legislation and policies	Enabling legislation, organisational policies and procedures, workplace, health and safety, environmental legislation, enforcement policies, conditions of licence
Monitoring	Specific test equipment, random inspections, surveillance, complaint inspection, comparison/analysis of data over time, collation of statistical information, auditing of servicing licensees
Specialist equipment	Reference standards, safety equipment, product handling equipment, test equipment, specialised test equipment vehicles
Range of measuring instruments	Length of measures and measuring instruments, area measuring instruments, measures of volume, liquor measuring instruments, liquid measuring instruments, weighing instruments, milk tanks, vehicle tanks, liquefied gas flow meters, electronic metering systems, natural gas flow meters, dimensional measuring instruments, supplementary measuring instrument, auxiliary devices
Reference material	NSC Certificates of Approval, manufacturers product specifications, Australian standards, WHS Legislation, Uniform Test Procedures, organisational procedures and guidelines, Certificates of Verification
Forms of documentation used	Non-compliance notices, reflect/incorrect notices, fees, organisational reporting forms
Workplace, Health and Safety Considerations	Storage and transportation of test equipment, site/premises conditions, specific safety equipment and clothing, manual handling techniques

Evidence guide**Assessment context**

This unit may be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge. Assessment is to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) required

Critical aspects**Special notes**

This unit could be assessed in conjunction with any other units addressing the conduct of routine field inspections, conducting audits on servicing licensees and ensure a safe public weighbridges, examining trading practices, inspecting pre-packed articles, investigating consumer complaints, using and maintaining equipment and standards and the safety, quality, communication, materials handling, recording and reporting associated with verification/certification or in-service inspection, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

The unit requires integrated demonstration of all elements and their related performance criteria. Compliance with inspection procedures, audit procedures, test procedures and legislative requirements. Assessment to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) required.

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted trade measurement techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.21B B Conduct audits of servicing licensees and public weighbridge licensees

Band – Specialisation band B

Field – Quality

Unit Weight 4

This unit is designed for those performing trade measurement inspection/certification activities in public or private enterprises. The unit covers the competency required

to audit the work undertaken by servicing licensees/certifiers and the operations undertaken by public weighbridge licensees.

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

11.11A Manual handling

12.5B Calibrating measuring equipment

15.20B Perform verification/certification or in-service inspection

18.1A Use hand tools

9.1A Draw and interpret sketch

12.3A Precision mechanical measurement

13.3A Work safely with industrial chemicals and materials

16.2A Participate in formal interviews and negotiations

18.2A Use power tools/hand held operations

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

15.17B Use and maintain reference standards

16.4A Perform internal/external customer service

Element 15.21B.1 Explain the licensing system for servicing licensees and public weighbridges

Criteria 15.21B.1.1

Major components of the licensing system for certification of measuring instruments are described

Assessor guide: observe that –

Assessor guide: confirm that –

Major components of the licensing system for certification of measuring instruments such as legislative requirements, eligibility, conditions of licence including provision of competent employees, provision of reference standards, use of test procedures, and use of reporting documentation and quality assurance systems can be explained

Criteria 15.21B.1.2

Major components of the licensing system for public weighbridges are described

Assessor guide: observe that –

Assessor guide: confirm that –

Major components of the licensing system for public weighbridge such as legislative requirements, eligibility, conditions of licence including provision of competent employees, maintaining accuracy of the public weighbridge, weighing methods and obligations, and use of reporting documentation, can be explained

Criteria 15.21B.1.3

The requirements for issuing servicing and public weighbridge licences in accordance with legislation and organisational procedures are described

Assessor guide: observe that –

Assessor guide: confirm that –

The process for issuing servicing and public weighbridge licences specifically the activities undertaken by trade measurement personnel can be described

Element 15.21B.2 Identify measuring instruments for audit of certifiers**Criteria 15.21B.2.1**

Servicing licensee's documentation is monitored for compliance with organisational requirements

Assessor guide: observe that –

Servicing licensee's documentation is evaluated for its completeness of information. Lodgement of servicing licensee's documentation is monitored for compliance with the specific timeframes required by the administering authority.

Assessor guide: confirm that –

The process for handling incomplete forms can be described.

Criteria 15.21B.2.2

Organisational procedures are used to generate a list of measuring instruments to be audited.

Assessor guide: observe that –

Selection of instruments for auditing is conducted in accordance with organisational procedures. Audits are scheduled to compliment other inspection activities whilst maximising organisational efficiencies and effectiveness.

Assessor guide: confirm that –

Certifier's performance history has been considered when selecting instruments.

Element 15.21B.3 Conduct performance audits on certifiers**Criteria 15.21B.3.1**

Inspection of measuring instruments is performed to determine compliance in accordance with legislation and organisational procedures.

Assessor guide: observe that –

Measuring instruments are tested in accordance with organisational procedures and legislative requirements. Instrument errors are recorded.

Assessor guide: confirm that –

Inspection variations between verification inspection and an audit inspection can be identified and explained.

Criteria 15.21B.3.2

The certifier's procedures and documentation are assessed to ensure legislative requirements are met.

Assessor guide: observe that –

The certifier's documentation is assessed for accuracy against the instrument certified and legislative requirements.

Assessor guide: confirm that –

Criteria 15.21B.3.3

Results of audit are recorded in the organisation's information system.

Assessor guide: observe that –

Audit reports are completed accurately and in a timely manner.

Assessor guide: confirm that –

Reporting variations for a range of instruments can be outlined.

Criteria 15.21B.3.4

Action required to remedy non-compliance is determined and applied.

Assessor guide: observe that –

Appropriate remedial action to be undertaken is determined and implemented. Where non-compliance is identified, existing identification marks are removed and appropriate notices and instructions are provided to the trader. Advice for resolving detected problems is provided to the trader. Any detected breach is investigated and reported in accordance with organisational guidelines.

Assessor guide: confirm that –

Element 15.21B.4 Examine public weighbridge licensee's operations for compliance with legislation**Criteria 15.21B.4.1**

Licensee's documentation is assessed for compliance with legislation and organisational requirements

Assessor guide: observe that –

The licensee's documentation is assessed for accuracy against the public weighbridge instrument certified and legislative requirements. Signage, certificates and public weighbridge tickets are assessed for accuracy and completeness. Public weighbridge operator's authorisation is

Assessor guide: confirm that –

Requirements to complete a public weighbridge ticket can be described. Methods to complete a public weighbridge ticket can be described. Requirements for authority to operate a public weighbridge are described.

Criteria 15.21B.4.2

The operator's ability to undertake public weighbridge duties is observed for compliance with legislation

Assessor guide: observe that –

The evaluation of the operator's ability to perform the duties of a public weigher is undertaken

Assessor guide: confirm that –

"Duties of Operator of Public Weighbridge" can be explained

Criteria 15.21B.4.3

Action required to remedy non-compliance is determined and applied.

Assessor guide: observe that –

Appropriate action to be undertaken is determined and implemented. Advice for resolving any non-compliance is provided to the trader including any written notices. Any detected breach is investigated and reported in accordance with organisational guidelines

Assessor guide: confirm that –

A range of options to remedy non-compliance can be explained

Range statement

The range of variables provides information about the context in which the unit of competency is carried out. It allows for differences between States and Territories and the Commonwealth and between organisations and workplaces. It allows for different work requirements, work practices, and knowledge. The range of variables also provides a focus for assessment and relates to the unit as a whole.

Range Name**Description**

Legislation and policies	Enabling legislation, workplace, health & safety practices, organisational policies and procedures Licensing conditions, enforcement policies
Recommendations for further action	Oral and written instructions, warnings, cautions, infringement notices, non-compliance notices, legal action
Reference material	Uniform test procedures, inspectors handbook, NSC certificates of approval, organisational procedures and guidelines
Documentation	Application forms, certification forms, non-compliance forms, public weighbridge tickets, documents as specified by Legislation, educational material/brochures, batch test histograms
Workplace Health and safety considerations	Storage of test equipment, site/premises conditions, manual handling techniques, specific safety equipment and clothing

Evidence guide**Assessment context**

This unit may be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge. Assessment is to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) is required.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the conduct of routine field inspections, examining trading practices, investigating consumer complaints, using and maintaining equipment and standards, performing verification/certification or in-service inspection and the safety, quality, communication, materials handling, recording and reporting associated with conducting audits of servicing licensees and public weighbridge licensees, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted trade measurement techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

of servicing licensees and public weighbridge licensees, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

The unit requires integrated demonstration of all elements and their related performance criteria. Compliance with inspection procedures, audit procedures, test procedures and legislative requirements. Assessment to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) required.

Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 15.22A A Verify reference standards

Band – Specialisation band A

Field – Quality

Unit Weight 8

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.3A Precision mechanical measurement

18.1A Use hand tools

Element 15.22A.1 Identify the categories and levels of verification for reference standards

Criteria 15.22A.1.1

The categories of reference standards that the organisation is authorised to verify is identified.

Assessor guide: observe that –
Verifying status for the organisation is checked.

Assessor guide: confirm that –
Relevant categories of reference standards for which the organisation is authorised to verify can be identified.

Criteria 15.22A.1.2

The classes of reference standards required to verify a range of standards are identified.

Assessor guide: observe that –
Suitable reference standards within standards hierarchy are researched and identified for verification.

Assessor guide: confirm that –
A range of classes for reference standards can be identified.

Criteria 15.22A.1.3

Tolerances for a range of reference standards are identified.

Assessor guide: observe that –
Correct reference manuals are accessed to gain appropriate information concerning tolerances for reference standards.

Assessor guide: confirm that –
Appropriate tolerance can be explained for a range of reference standards.

Criteria 15.22A.1.4

Tolerances for a range of reference standards are described.

Assessor guide: observe that –

Assessor guide: confirm that –
Appropriate tolerance can be explained for a range of reference standards.

Element 15.22A.2 Maintain suitable environmental conditions to facilitate verification of reference standards

<p>Criteria 15.22A.2.1 Reference standard details are recorded in accordance with organisational guidelines.</p>	<p><i>Assessor guide: observe that –</i> The organisation's information tracking documentation is completed.</p>	<p><i>Assessor guide: confirm that –</i> Current status of client's reference standards can be identified.</p>
<p>Criteria 15.22A.2.2 Sources of possible operational error in the verification of reference standards are identified.</p>	<p><i>Assessor guide: observe that –</i> Identification of operational error relevant to the verification is demonstrated.</p>	<p><i>Assessor guide: confirm that –</i></p>
<p>Criteria 15.22A.2.3 Required atmospheric conditions for the verification of a range of reference standards are applied.</p>	<p><i>Assessor guide: observe that –</i> Appropriate atmospheric conditions are identified for the verification to be conducted. Where atmospheric conditions are found to be unsuitable for verification, remedial action is determined and undertaken.</p>	<p><i>Assessor guide: confirm that –</i> Atmospheric factors required for verifying a range of reference standards can be described. Remedial action for atmospheric deficiencies can be described.</p>
<p>Criteria 15.22A.2.4 Environmental conditions are assessed to determine whether a verification can be conducted.</p>	<p><i>Assessor guide: observe that –</i> Environmental conditions are identified for the verification to be completed. Where environmental conditions are found to be unsuitable for verification, remedial action is determined and undertaken.</p>	<p><i>Assessor guide: confirm that –</i> Environmental factors that may adversely influence the integrity of the reference standards can be identified. Remedial action for a range of environmental deficiencies can be described.</p>

Element 15.22A.3 Examine the design and required markings for a range of reference standards

<p>Criteria 15.22A.3.1 The identification marking required for reference standards is located and explained.</p>	<p><i>Assessor guide: observe that –</i> Identification marks on reference standards are located.</p>	<p><i>Assessor guide: confirm that –</i> Requirements for identification marking on reference standards are understood and can be explained.</p>
<p>Criteria 15.22A.3.2 Design features of a range of reference standards are correctly identified and applied.</p>	<p><i>Assessor guide: observe that –</i> Design features are researched in appropriate reference material and identified on a range of reference standards.</p>	<p><i>Assessor guide: confirm that –</i> The purpose of design specifications can be explained.</p>

Criteria 15.22A.3.3

The function of major components for a range of reference standards is described and applied.

Assessor guide: observe that –

Major components are correctly identified and located on a range of reference standards.

Assessor guide: confirm that –

The purpose of the major components and functions of reference standards can be explained.

Criteria 15.22A.3.4

The fundamental features of a range of reference standards are identified and explained.

Assessor guide: observe that –

Fundamental features are correctly identified and located on a range of reference standards.

Assessor guide: confirm that –

The fundamental features of reference standards can be explained.

Element 15.22A.4 Perform verification of reference standards**Criteria 15.22A.4.1**

A variety of reference standards are verified.

Assessor guide: observe that –

Verification processes are undertaken in relation to various types of reference standards. Test equipment used in the verification processes is used in accordance with organisational guidelines. Methodology for verification is applied in accordance with organisational guidelines.

Assessor guide: confirm that –

The process for maintaining integrity of results including calculations is understood and can be explained.

Criteria 15.22A.4.2

Uncertainty and tolerances for reference standards are applied.

Assessor guide: observe that –

Uncertainty requirements and maximum permissible errors at verification are researched for reference standards. Uncertainty and maximum permissible errors for reference standards are applied.

Assessor guide: confirm that –

The reference material for uncertainty and maximum permissible errors for a variety of reference standards can be accessed and explained.

Criteria 15.22A.4.3

Results of verification are documented and Certificate of Verification issued in accordance with organisational procedures.

Assessor guide: observe that –

Verification work sheets are completed. Verification results are recorded accurately. Certificates of Verification are completed and issued in accordance with organisational procedures.

Assessor guide: confirm that –

The process for producing Certificates of Verification in accordance with verifying authority status can be explained.

Range statement

The range of variables provides information about the context in which the unit of competency is carried out. It allows for differences between States and Territories and the Commonwealth and between organisations and workplaces. It allows for different work requirements, work practices, and knowledge. The range of variables also provides a focus for assessment and relates to the unit as a whole.

Range Name	Description
Reference material	Australian standards, verifying authorities handbook, manufacturers operating manuals, organisational procedures, ISO guide, quality control manuals
Forms of documentation used	Fees, verification work sheets, Certificate of Verification
Operating procedures	Manufacturer's specifications, industry guidelines, Australian Standards, Legislation, Organisational procedures and guidelines
Reference standards	Mass, volume, density, area, length, master meters, temperature
Legislation and Policies	Enabling legislation, Workplace Health and Safety legislation, organisational procedures and guidelines
Specialist Equipment	Reference Standards, measuring devices, safety equipment
Workplace Health & Safety Considerations	Storage and transportation of test equipment, handling of test equipment, handling of hazardous materials, safety clothing, manual handling techniques, site/premises conditions

Evidence guide

Assessment context

This unit may be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge. Assessment is to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) required

Critical aspects

This unit could be assessed in conjunction with any other units addressing the use and maintenance of equipment and standards, or other units requiring the exercise of the skills and knowledge covered

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; -

by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

accepted trade measurement techniques, practices, processes and workplace procedures.

The unit requires integrated demonstration of all elements and their related performance criteria. Compliance with inspection procedures, audit procedures, test procedures and legislative requirements.

Assessment to be conducted over time across a range of workplace scenarios; continuous learning/assessment (re-qualification) is required.

plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use

Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 16.1B A Give formal presentations and take part in meetings

Band – Specialisation band B

Field – Communication

Unit Weight 2

Notes - This unit can be regarded as a Specialisation band A unit from C11 onwards

Element 16.1B.1 Participate in formal meetings

Criteria 16.1B.1.1

A set agenda is understood and followed.

Assessor guide: observe that –

The agenda is followed during the meeting.

Assessor guide: confirm that –

The topics for discussion during the meeting can be identified.

Criteria 16.1B.1.2

Meeting conventions are followed.

Assessor guide: observe that –

The meeting rules/conventions are followed at all times.

Assessor guide: confirm that –

Meeting conventions can be identified.

Criteria 16.1B.1.3

Discussion is focussed on the objectives of the meeting.

Assessor guide: observe that –

Discussions are focussed on the objectives of the

Assessor guide: confirm that –

The objective of the meeting can be identified.

Element 16.1B.2 Give formal presentations

Criteria 16.1B.2.1

Presentation of a technical, job related or trade nature is given.

Assessor guide: observe that –

A prepared technical/job related presentation is given clearly and concisely. Where appropriate, visual aids and/or handout materials are used.

Assessor guide: confirm that –

The topic/subject on which a presentation is to be made can be identified.

Criteria 16.1B.2.2

Presentations are accurate and structured and all necessary content is included.

Assessor guide: observe that –

The information presented in the presentation is accurate and factual. The presentation is logically structured. All relevant material is included in the presentation.

Assessor guide: confirm that –

The structure of the presentation can be identified. The information to be conveyed can be identified. Any conclusions, recommendations are made on the basis of information contained in the presentation.

Criteria 16.1B.2.3

Sources are acknowledged.

Assessor guide: observe that –

The sources of information used in the presentation are acknowledged.

Assessor guide: confirm that –

The sources of information used in the presentation can be identified.

Range statement

This unit is intended to cover the communication skills needed when individuals are required to make formal presentations and participate in meetings governed by formal rules or well-established conventions. For example, meetings which have a formal chairperson, minutes are recorded, and where roles are relatively well-defined.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units applicable to the individual's work and/or units requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will be provided with : - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 16.2A B Participate in formal interviews and negotiations

Band – Specialisation band A

Field – Communication

Unit Weight 4

Element 16.2A.1 Plan and conduct interviews

Criteria 16.2A.1.1

Plan and initiate interview to achieve a specified purpose.

Assessor guide: observe that –

The interview is appropriately planned and initiated.

Assessor guide: confirm that –

The purpose of the interview can be given. The need to initiate the interview can be explained. The procedures to be followed in planning the interview can be identified.

Criteria 16.2A.1.2

Suitable questions appropriate to the purpose are used.

Assessor guide: observe that –

Suitable questions appropriate to the purpose of the interview are used to obtain details and/or information.

Assessor guide: confirm that –

The detail/information to be obtained from the interview can be identified. Questions appropriate to the detail/information to be obtained can be prepared.

Criteria 16.2A.1.3

Discretion and confidentiality are exercised where appropriate.

Assessor guide: observe that –

Where appropriate, detail and/or information obtained is treated discreetly and confidentially.

Assessor guide: confirm that –

The need to treat details and/or information discreetly and confidentially can be explained.

Element 16.2A.2 Participate in interviews

Criteria 16.2A.2.1

Appropriate preparation is undertaken.

Assessor guide: observe that –

Appropriate preparation for the interview is undertaken.

Assessor guide: confirm that –

All necessary preparations for the interview can be identified.

<p>Criteria 16.2A.2.2 Active listening skills are employed.</p>	<p><i>Assessor guide: observe that –</i> Active listening skills are utilised during the interview.</p>	<p><i>Assessor guide: confirm that –</i> Active listening techniques that can be applied in interview situations can be described.</p>
<p>Criteria 16.2A.2.3 Self-presentation is appropriate to the purpose.</p>	<p><i>Assessor guide: observe that –</i> The individual's presentation during the interview is appropriate to the purpose of the interview.</p>	<p><i>Assessor guide: confirm that –</i> The effect(s) of the individual's presentation during the interview upon the interview, can be explained.</p>
<p>Criteria 16.2A.2.4 Questions are asked where appropriate.</p>	<p><i>Assessor guide: observe that –</i> Questions are asked at appropriate times during the interview.</p>	<p><i>Assessor guide: confirm that –</i> The effect(s) of the timing of questions on the interviewee can be explained.</p>
<p>Criteria 16.2A.2.5 Follow-up activities are clarified and reported in accordance with standard operating procedure.</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, follow-up activities to be undertaken are clarified. Where appropriate, follow-up activities are reported in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The need to follow-up issues raised during the interview can be explained. The procedures for reporting the outcomes of follow-up activities can be identified.</p>
<p>Element 16.2A.3 Take part in negotiations</p>		
<p>Criteria 16.2A.3.1 Language appropriate to the other party is used.</p>	<p><i>Assessor guide: observe that –</i> Language appropriate to the other party(s) is used throughout the negotiations.</p>	<p><i>Assessor guide: confirm that –</i> The parties to be involved in the negotiations can be identified. The reasons for using appropriate language can be explained.</p>
<p>Criteria 16.2A.3.2 Own and others needs/wants are stated and clarified.</p>	<p><i>Assessor guide: observe that –</i> The individual's needs/wants are stated. The needs/wants of others are clarified.</p>	<p><i>Assessor guide: confirm that –</i> The reasons for clarifying the needs/ wants of others can be explained. The needs/wants of the individual can be identified.</p>

Range statement

This unit covers the skills needed for effective communication in more formal on-site or small group situations where ideas are defined and specific outcomes are sought. The topics covered are often formally identified and records may be kept. Interviews could include job recruitment and progression, performance reviews, grievance, etc. This unit does not cover the skills needed for participation in formal group processes such as meetings which are covered by Unit 16.1B (Give formal presentations and take part in meetings). For interviews associated with assessment, see Unit 17.2A (Conduct workplace assessment).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with formal interviews and/or negotiations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 16.3B A Advanced customer service

Band – Specialisation band B

Field – Communication

Unit Weight 2
